# Preface

This is a Version Description Document (VDD) which accompanies the delivery of the Earth Observing System (EOS) Flight Operations Segment (FOS) Release B Version 2.00.01 software for the ECS project. It is not a formal deliverable and does not require Government approval. However, the preliminary VDD is released through the FOS Change Control Board (CCB). The final document shall be placed under configuration control and released by the EOSDIS Core System (ECS) CCB. Changes to this document shall be made by document change notice (DCN) or by complete revision.

Both the preliminary and final VDD documents shall be submitted to the Data Management Office (DMO) for processing and posting. Any questions regarding distribution should be addressed to:

Data Management Office
The ECS Project Office
Hughes Information Technology Systems
1616 McCormick Dr.
Upper Marlboro, MD 20774

This page intentionally left blank.

# Abstract

This document describes the delivery contents of the FOS components including commercial off-the-shelf (COTS) software and Version 2.00.01 of Custom FOS software, and accompanying documentation.

The purpose of this document is to describe the contents of the FOS delivery. It briefly describes the capabilities of the product, provides an inventory of the delivery, addresses unresolved and fixed problems, and addresses issues such as special operating instructions, and disclaimer notices for public domain software used in the product.

**Keywords:** CCB, CSR, deliver, EOC, ECL, description, instructions, inventory, FOT, FOS, manual, NCR, operations, problems, release, RRR, software, tools, user's, version, 1ST

# 1. Introduction

## 1.1 Identification of Document

This is a Version Description Document (VDD) prepared using NASA-STD-2100-91 (NASA-DID-P500, NASA form DD250) as a guide. It is submitted as part of Flight Operations Segment (FOS) delivery for the Earth Observing System Data and Information System (EOSDIS) Core System (ECS), contract number NAS5-60000.

## 1.2 Scope of Document

This document describes the contents of the FOS Release B Version 2.00.01 software delivery including any new or modified COTS, custom FOS ECS software, and accompanying documentation.

## 1.3 Purpose and Objectives of Document

The purpose of this document is to describe the contents of the FOS delivery. It briefly describes the capabilities of the product, provides an inventory of the delivery, lists unresolved problems, and addresses issues such as special operating instructions, system limitations, and disclaimer notices for public domain software used in the product.

## 1.4 Document Status and Schedule

The preliminary version of the VDD was used for Acceptance Testing of Release B Version 2.00.01 for FOS.

## 1.5 Document Organization

The format and contents of this document comply with NASA-DID-P500 and NASA-DID-999 as defined in NASA-STD-2100-91.

- Introduction - Introduces the VDD scope, purpose, objectives, status, schedule and document organization.
- Related Documentation - Provides a bibliography of reference documents for the VDD organized by parent and binding subsections.
- Product Description - Describes the general capabilities and product contents.
- Inventory - Lists product inventory including COTS and custom FOS software (contents of tar file) as appropriate.
- Non-conformance Status - Discusses known problems with the FOS software that are fixed with this delivery.

- Configuration Change Request (CCR)/Enhancement Status - Discusses CCRs and enhancements that are implemented with this delivery.
- Appendices - Contain supplemental information such as: build and installation instructions, problem reporting, and public software disclaimer notices.
- Abbreviations and Acronyms - Contains an alphabetized list of the definitions for abbreviations and acronyms used in this volume.

# 2. Related Documentation

## 2.1 Parent Document

The parent documents are the documents from which the scope and content of this document is derived.

| | |
|---|---|
| 423-42-01 | EOSDIS Core System Statement of Work - CN10 |
| 423-41-02 | Goddard Space Flight Center, Functional and Performance Requirements Specification for the Earth Observing System Data and Information System (EOSDIS) Core System (ECS) |
| NASA-STD-2100-91 | NASA Software Documentation Standard, Software Engineering Program |

## 2.2 Applicable Documents

The following documents are referenced within this document, or are directly applicable, or contain policies or other directive matters that are binding upon the content of this volume.

| | |
|---|---|
| 194-207-SE1-001 | System Design Specification for the ECS Project |
| 304-CD-001-003 | Flight Operations Segment (FOS) Requirement Specified for the ECS Project, Volume 1: General Requirements |
| 305-CD-040-002 | Flight Operations Segment (FOS) Release B Design Specification for the ECS Project (Segment Level Volume) |
| 307-CD-001-003<br>329-CD-001-003 | Flight Operations Segment (FOS) Release Plan and Development Plan for the ECS Project |
| 709-CD-003-001 | FOS Release B Test Readiness Review Presentation Package |

## 2.3 Information Documents

The following documents are referenced herein and, amplify or clarify the information presented in this document. These documents are not binding on the content of the Version Description Document.

| | |
|---|---|
| 222-TP-003-008 | Release Plan Content Description for the ECS Project |
| 360-TP-001-002 | Flight Operation Segment (FOS) Commercial-off-the-Shelf (COTS) Hardware for Release B, Technical Paper |
| 604-CD-001-004 | Operations Concept for the ECS Project: Part 1: - ECS Overview |

| | |
|---|---|
| 604-CD-004-001 | ECS Operations Concept for the ECS Project: Part 2, FOS |
| 609-CD-005-003 | Flight Operations Segment (FOS) Operations Tool Manual |
| SD-1-014 | Software Nonconformance Reporting Project Instruction |

# 3. Product Description

This section describes the product capabilities of the FOS ECS software.

## 3.1 Product Description and General Capabilities

FOS is responsible for mission operations, including the planning, scheduling, commanding, and monitoring of US EOS spacecraft and US EOS instruments onboard the US and International Partner (IP) series of spacecraft. FOS is composed of the EOS Operations Center (EOC) located at Goddard Space Flight Center (GSFC) and Instrument Support Toolkit (IST) associated with the Principal Investigations (PIs) and Team Leaders (TLs).

FOS Release B Version 2.00.01 capabilities include:

- Expanded system based on Release B capabilities
- Additional Management and Communication Services

For more detailed information on Release 2.00.01 capabilities refer to ***FOS Release B Test Readiness Review Presentation Package*** (709-CD-003-001). The following sections describe the product general capabilities in further detail.

Nine subsystems have been defined to support flight operations. Individually these subsystems perform specific, unique functions; collectively, they provide a set of interrelated services for the Flight Operations Team (FOT) and the IST user community. These subsystems are:

1. Analysis Subsystem (ANA)
2. Command Subsystem (CMD)
3. Command Management Subsystem (CMS)
4. Data Management Subsystem (DMS)
5. FOS User Interface Subsystem (FUI)
6. Planning and Scheduling Subsystem (PAS)
7. Real-Time Contact Management Subsystem (RCM)
8. Resource Management Subsystem (RMS)
9. Telemetry Subsystem (TLM)

### 3.1.1 Analysis Subsystem (ANA)

The ANA subsystem provides statistics generation, User Supplied Algorithm processing, a Decision Support System (DSS), Routine Request Processing, Carryout Data, and Clock Correlation Process. The ANA subsystem is responsible for managing the on-board systems and for the overall mission monitoring. Its functions include performance analysis and trend analysis. It also cooperates with Telemetry to support fault detection and isolation.

### 3.1.2 Command Subsystem (CMD)

The CMD subsystem consists of three processes: Format Command, Frame Operation Procedure (FOP) Command, and Transmit Command. Format Command receives and validates command directives. FOP Command builds command link transmission units (CLTUs) according to the Consultative Committee for Space Data Systems (CCSDS) standard. Transmit command forwards the CLTUs at a specified uplink rate. CMS is responsible for transmitting command data (i.e., Real-Time commands or command loads) to EDOS for uplink to the spacecraft during each real-time contact. Command data can be received in real-time by the operational staff or as preplanned command groups generated by Command Management. The CMD subsystem is also responsible for verifying command execution on-board the spacecraft.

### 3.1.3 Command Management Subsystem (CMS)

The CMS subsystem contributes a Schedule Controller process, a Command Model process, a Spacecraft Model process, a Ground Schedule process, and a Load Catalog process. CMS manages the preplanned command data for the spacecraft and instruments. Based on inputs received from Planning and Scheduling, Command Management collects and validates the commands, software memory loads, tables loads, and instrument memory loads necessary to implement the instrument and spacecraft scheduled activities.

### 3.1.4 Data Management Subsystem (DMS)

This subsystem provides the Project Data Base Management processes, Event Processing, Telemetry Archive Process, Ground Telemetry Archive Process, and External Interface Processes. DMS is responsible for maintaining and updating the Project Data Base (PDB) and the FOS history log.

### 3.1.5 FOS User Interface Subsystem (FUI)

This provides graphical user interface services for all of the FOS subsystems. FUI provides character-based and graphical display interfaces for FOS operators interacting with all of the aforementioned FOS subsystems.

### 3.1.6 Planning and Scheduling (PAS)

This produces a conflict-free schedule of activities for spacecraft resources. PAS integrates plans and schedules for spacecraft, instruments, and ground operations. Planning and Scheduling provides the operational staff with a common set of capabilities to perform "what-if" analyses and to visualize plans and schedules.

### 3.1.7 Real-Time Contact Management Subsystem (RCM)

This receives and processes messages from NCC during contact. It also sends request messages to NCC during contact. Status messages are also received and processed from EDOS during contact. RCM is responsible for managing the real-time interface with the NCC and EDOS, as well as with the DSN station, as applicable.

### 3.1.8 Resource Management Subsystem (RMS)

This provides multiple operators access to the same data stream. It also ensures a single point of command for a specific spacecraft. RMS provides the capability to manage and monitor the configuration of the EOC. This includes configuring the EOC resources for multi-mission support; facilitating operational failure recovery during real-time contacts.

### 3.1.9 Telemetry Subsystem (TLM)

This provides telemetry decommutation. It also provides for memory dump and spacecraft state checks. TLM receives and processes housekeeping telemetry (in CCSDS packets) from EDOS. After the packet decommutation, the telemetry data is converted to engineering units and checked against boundary limits.

This page intentionally left blank.

# 4. Product Inventory

Delivery of FOS generally consists of commercial-off-the shelf (COTS) software, shareware software and custom ECS software. This section provides details of these components.

## 4.1 Inventory of Materials

### 4.1.1 Documentation

The following document is being provided with this VDD:

360-TP-001-002 Flight Operation Segment (FOS) Commercial-off-the-Shelf (COTS) Hardware for Release B

### 4.1.2 Archive Tapes

The following magnetic tapes are used to archive the delivered baseline configuration of the developed software. The executables on the tape were compressed by the UNIX command "gzip" and the Dec alpa drive was used to tar the tape. The files must be untared and unzipped in order to use it.

**904-PR-049-002**
Tape label:EXE_FOSBv2.00.01
Distribution Date: 092597
>>> 5.0gbyte format (high density) <<<
Filenames:

ECS_COPYRIGHT_Hughes.asc
FOS_2.0.1_SUN_exe.tar
FOS_2.0.1_DEC_exe.tar
README_SUN.txt
README_DEC.txt

**904-PR-050-002**
Tape label:SRC_FOSBv2.00.01
Distribution Date: 092597
>>> 5.0gbyte format (high density) <<<
Filenames:

ECS_COPYRIGHT_Hughes.asc
FOS_2.0.1_src.tar

Files in the .tar format are:

ana.tar
cmd.tar
cms.tar
dms.tar
foscommon.tar
fui.tar

pas.tar
rcm.tar
rms.tar
tlm.tar

### 4.1.3 Utility and Support Software

This software is not a part of the version software, but is required by the FOS environment at GSFC.

**Software:** **DNS Server Tables**

Description: The machines designated as DNS master/slaves at the EOC have files in here which contain the DNS tables used for hostname/IP address resolution. Panda (Ops) and kodiaks (Support) are the two DNS master servers for the EOC

Location: host - giraffe, path - */var/named/**

host - panda, path - */var/named/**

host - kodiak, path - */var/named/**

**Software:** **switchlan**

Description: Used by some of the workstations to move the necessary configuration files to allow the workstations between the Operational and Support LANs

path - /bin/switchlan

**Software:** **backup directory**

Location: /usr/backup/*

Description: Some of the fileservers and workstations have a /usr/backup directory which contain backup scripts used to perform various backups of the system to tape or disk.

### 4.1.4 COTS Software Inventory

Table 4-1 summarizes the deployed COTS software at GSFC. The physical mapping of software to a specific hardware platform can be accomplished by using “Class” (column header) as a cross-reference between tables. The information under Class is grouped by hardware type and vendor (e.g., Servers, DEC). When the hardware has a unique software configuration, an additional category (host name) is also provided (e.g., DEC File Servers, DEC, cheetah). For actual hardware names (or aliases) *see* Table 4-3.

Due to the number of the Solaris patches, Table 4-1a was created as a subset of Table 4-1 to display the Solaris patch list.

### 4.1.5 Shareware Inventory

Table 4-2 summarizes the deployed Shareware at GSFC EOC. Refer to section 4.1.4 to learn how the physical mapping of software to hardware is accomplished.

## 4.2 FOS Custom Software

FOS custom software consists of a number of components. Ten subsystems are required to make a complete FOS build. The software is available for the following architectures:

- DEC
  OSF 3.2
- SUN
  Solaris 2.5.1 (5.5.1)

A file listing may be generated from the delivered tar file using the tar -tvf command.

### 4.2.1 FOS Custom Software Version 2.00.01 File Listing

This is a new release of the FOS Custom Software. The software version 2.00.01on and is available from the TAR tape. Since, this is new release the specific source code which changed succeeding FOS Release B version 200.00 is not identified in a separate listing. Identification of source code changes shall occur for interim releases and patch deliveries.

The executable code for Version 2.00.01 is embedded with the version identifier FOS_2.. The version identifier uniquely identifies an executable. The version can be extracted by invoking the UNIX command “what”. For more information on versioning refer to PI CM-1-030, Software Versioning. The following example displays the output received when the “what” command is invoked.

```
## =================  ECS SOFTWARE  =================

## VERSION:  2.00.01

##  Build date: 10/17/97 @ 08:33:01

# 5. Non-Conformance Status

## 5.1 Non-Conformance Status Overview

This section contains a status report of the problems closed (section 5.2) as of 09/25/97 with this delivery. These problems were found and recorded during development and integration testing and captured in the formal problem tracking system, Distributed Defect Tracking System (DDTS). These NCRs have been reviewed by HITC management and the FOS system is considered to be acceptable for delivery at this time. The status report list the Close NCRs by subsytem and severity. DDTS problem severity definitions, on a 1-3 scale, are defined as follows:

1. Catastrophic bug without workaround that causes total failure or unrecoverable data loss.
   Example: system crash or lost user data.
2. Bug that causes failure of noncritical system aspects. There is a reasonably satisfactory workaround, test can continue.
   Example: user data must be modified to work.
3. Very minor defect. Workaround exists or the problem can be ignored.
   Example: bad layout or misuse of grammar in manual.

### 5.1.1 Installed Changes

This VDD addresses the additional capabilites of FOS Release 2.00.01 and contains modifications to problems found in the Release B software.

The status of the NCRs corrected for this release is included in section 5.2. This NCR report reflects the information obtained from DDTS on November 6, 1997. These NCRs were submitted starting 042696 and ending 090897. The total number of opened NCRs is 992, and the total number of closed NCRs for this delivery is 6.

## 5.2 FOS Non-Conformance Reports (Closed Status)

Table 5-1 provides the status of NCRs which were closed for FOS Release B version 2.00.01 as of November 13, 1997.

*Table 5-1. NCRs Closed in Patch 2.0.1Ä*

| P | Identifier | S | Title | Subsystem | Related DR | When Fixed |
|---|---|---|---|---|---|---|
| 2 | ECSed07781 | C | Display Pages (SYS Parameters) not always updating | FUI | | 2.0.1 |
| 1 | ECSed08156 | C | Backup string creation fails due to Activity Log Monitor process | ANA | | 2.0.1 |
| 2 | ECSed08622 | C | Failure Initializing communciations contact scheduler | PAS | | 2.0.1 |
| 2 | ECSed08625 | C | Incorrect message length on CODA not rejected | RCM | | 2.0.1 |
| 3 | ECSed08822 | C | PCA: FOS Rel B VDD, Table 4-1 | INT | | 2.0.1 |
| 3 | ECSed08916 | C | PCA: FOS Rel B VDD, v. 2.00.00/Table 4-1 | INT | | 2.0.1 |

P = Priority
S = State:
N = New
A = Assigned for evaluation
O = Assigned for fix
R = fixed, ready for verification
T = Assigned to the Test Team
V = Test Team has verified the fix
C = NCR Board has meet and approved closure of NCR.

## 5.3 FOS Non-Conformance Reports (Opened Status)

Table 5-2 provides the status for Opened NCRs for FOS Release B version 2.00.01. To obtain a detailed description of the Opened NCRs, the DDTS system can be accessed from the following WEB page:

*http://newsroom.sit/ddts/ddts.html*

***Table 5-2. FOS Opened NCR SummaryÄ***

| **Subsystem -------- Severity** | **ANA** | **CMD** | **CMS** | **DMS** | **Total by Severity** |
|---|---|---|---|---|---|
| **1** | 2 | 2 | 1 | 2 | 7 |
| **2** | 31 | 15 | 49 | 64 | 159 |
| **3** | 23 | 13 | 8 | 46 | 90 |
| **Total by Subsystem** | 56 | 30 | 58 | 112 | |
| | | | | | |

# 6. Configuration Change Request (CCR)/Enhancement Status

## 6.1 CCR/Enhancement Status Overview

This VDD addresses the additional capabilities of FOS Release 2.00.01 and contains modifications to problems found in the Release B software. This section contains a status report of the configuration change requests (CCRs) implemented with this delivery. The status of the CCRs and enhancements implemented for this release is included in section 6.2.

## 6.2 FOS CCR/Enhancement Status

Table 6-1 provides the status of CCRs and enhancements which were implemented for FOS Release B version 2.00.01.

***Table 6-1. CCRs/Enhancements Implemented in Patch 2.0.1***

| Functional Area | Description | CCR # | New Requirements |
|---|---|---|---|
| NCC ICD Updates | NCC TCP/IP fix;<br>Name server update for NCC communication;<br>Initialization of contact scheduler with NCC driver | NASA CCRs<br>530/991<br>530/996<br>530/997 | F-PAS-10406<br>F-PAS-10407<br>F-RMS-01430<br>F-RMS-01435 |
| PDB Validation Updates | PDB restore of FOT data;<br>Equal red/yellow limits pass validation | FOT-9707 | F-DMS-00370<br>F-DMS-00375 |

# Appendix A. Build InstructionsÄ

This appendix describes the necessary build procedures which will be used for installing the FOS custom software released by the Configuration Management Organization (CMO) at the EOC. The system build takes place at the ECS development facility (EDF) utilizing the ClearCase CM tool. Configuration management of the source files used to build executables is maintained at the EDF. Executables produced as a result of the build process are delivered to the EOC. Installation of the executables and supporting data/configuration files are discussed in Appendix B.

## A.1 Build Process

The FOS custom software build process is performed in order to generate a new set of executables. These files are subsequently loaded into specific workstations and file servers in order to meet the functional requirements of the FOS program.

The build process inputs consist of the following:

1. ClearCase views for each sub-system
2. The correct file versions dictated by the views' configuration specification
3. The pertinent NCRs that were addressed by the build

Scripts are invoked in order to perform the builds. There are two ways of actually doing this. One is by using an enhanced version of ClearCase's Graphical User Interface (GUI). The other is by keying in commands and executing them in a Command Line Interface (CLI). The GUI performs the same commands as the CLI, however the GUI executes the scripts by pointing and clicking a mouse, rather than keying in all of the detail UNIX and Cleartool commands.

The FOS custom software is partitioned into ten (10) areas. The first partition is known as FOSCOMMON, and is comprised of common code that is referenced by the remaining nine subsystems. The nine subsystems are:

- Analysis Subsystem (ANA)
- Command Subsystem(CMD)
- Command Management Subsystem (CMS)
- Data Management Subsystem (DMS)
- FOS User Interface Subsystem (FUI)
- Planning and Scheduling Subsystem (PAS)
- Real-Time Contact Management Subsystem (RCM)
- Resource Management Subsystem (RMS)
- Telemetry Subsystem (TLM)

FOSCOMMON is built *first*. DMS is built *last*. Other than these two constraints, the build order is arbitrary.

The CLI interface commands are located in the /scripts/ area. The xclearcase GUI enhanced menu, Configuration Management/Change Control (CM/CC), performs all of the housekeeping for building FOS custom software.

## A.2 Scope

This procedure provides the instructions necessary to successfully build all formal custom software that is under Configuration Management control.. This document demonstrates to others who may not have the knowledge of how the FOS system is built and can use this procedure to perform a software build.

## A.3 Purpose

To establish procedures for performing FOS formal software builds and installation for custom software developed under Configuration Management control on the FOS ECS project.

## A.4 Process

1. Log on, as foscm, on the machine you want the build to be done on
2. **Note**: When building FOS software only log into FOS assigned machines
3. In /home/foscm/builds, create a config spec file containing the ClearCase configuration spec to be used in the build
4. Create a view to be used for the build
5. Issue the command *source /home/foscm/cmbin/submit_build.sh*

This script will prompt you for the information you'll need to supply. This information includes the following (all default values are displayed for you to override if you desire):

1. The name of the config spec created in step 2 above.
2. The name of the view created in step 3 above.
3. When to start the build. If you do not specify a time it defaults to immediately. If you specify a time it must be in a format acceptable to the Unix **at** command, which includes ***noon***, ***midnight***, ***h***, ***hh***, ***hhmm***, ***h:m***, ***h:mm***, ***hh:m***, ***hh:mm*** (where h is hours, m is midnight, and ***am*** or ***pm*** must be appended if a 24 hour clock wasn't used).
4. The clearmake command to use. If you do not specify, a default of 'clearmake -u -i -C gnu' is used. If you specify a command, the entire string must be specified (e.g., 'clearmake -i -C gnu').
5. The VOBs to build. If you do not specify, all VOBs will be built. If you do specify, you may specify any subset, you must use the VOB directory names (e.g., ana2 tlm2, not ana,

tlm), you must supply them all on the same line, separated by spaces (i.e., don't do a carriage return after each VOB), and they will be built in the order you specified them.

## A.5 Build Results

The build will generate log files in directory /home/foscm/builds/<SunOS>/<job timestamp>. <SunOS> is the operating system - currently SunOS or OSF1 - under which the build occurred. <job timestamp> is a timestamp of when the build was started, so that all log files for a build are in a common, separate directory. Both additional <SunOS> and <job timestamp> directories are created by the script as needed.

The following log files are generated:

- **/home/foscm/builds/<SunOS>/<job timestamp>/<id>.<host>.log** contains high-level results from the overall build; it does not contain any VOB-specific information. It will contain any setup or script error messages; it also contains the start and stop times for the build of each VOB. <id> is the file root name of the config spec specified for the build. <host> is the name of the host the build ran on. For example, log file A2_P5.googoo.log is the log file for a build using config spec /home/foscm/builds/A2_P5.cs, run on googoo.
- **/home/foscm/builds/<SunOS>/<job timestamp>/<id>.<VOB>.build** contains the build results (the information normally displayed by clearmake) for a particular VOB. For example, A2_P5.tlm2.build.Oct_17_21_12_32 contains the results from the build of tlm2, using config spec /home/foscm/builds/A2_P5.cs, which started at 9:12:32 PM on Oct 17.
- **/home/foscm/builds/<SunOS>/<job timestamp>/Errors** and **Warnings** contain the error and warning messages, respectively, extracted from all of the <id>.<VOB>.build.<timestamp> logs. **Errors** contains the results of a search for strings indication errors; **Warnings** contains the results of a search for the string "Warning". For both errors and warnings, if additional strings are identified in the future they should be added to the searches in this script. With some error/warning messages these searches do not extract all relevant text - there may be additional information before or after the extracted line - so the actual build logs may need to be manually scanned to garner the additional information.

This page intentionally left blank.

# Appendix B. Installation ProcedureÄ

This section outlines the installation procedure for the FOS custom software. The following procedures are performed following the successful build of the FOS system.

1. Login as foscm
2. Type “x &” to invoke the xclearcase tool
3. Select view from which system builds were performed
4. Select the FOS-S/W pull-down window option
5. Select target platform to install to (i.e., dec_osf_3-2)
6. Select Environment (CM Release, /cm environment)
7. Select Install Software menu
8. Select Install everything

Using the above procedures, a */fos/cm/am1* directory structure is populated with all the deliverable executables and support files required to support the delivery.

Execution of the following UNIX commands results in a tape being generated for delivery to the EOC.

1. cd /net/tick/fosb/cm
2. tar cvf /net/tick/fosb/<patch_name>.tar am1
3. compress <patch_name>.tar
4. cd /net/tick/fosb
5. Insert a tape into the machine you are logged on to
6. tar cf /dev/rmt0h <patch_name>.tar

Take the delivery tape to the EOC at GSFC and perform the following functions.

1. login, as root, on the Support LAN DEC machine where the delivery tape has been inserted
2. cd /fosb/test
3. tar xf /dev/rmt0h
4. cp am1 am1P#, where # is the number of the previous patch
5. tar xvf /fosb/test/<patch_name>.tar

6. chown -R root am1
7. chgrp -R fosusers am1
8. chmod -R g+w am1
9. cd /fosb/test/am1/scripts
10. chmod-Rq-w setup
11. cd fosb/test/am1
12. chmod -Rq-w bin

# Appendix C.  Special Operating InstructionsÄ

The README_DEC.txt and README_SUN.txt files available with this delivery are located on the EXE_FOSBv2.00.01 tar tape.  The README files have not been verified. However, it does contain valid and useful information concerning the installation instructions and the NCRs fixed by this delivery.

This page intentionally left blank.

# Appendix D. User Feedback ProceduresÄ

**Feedback from the Users**

Collating user feedback is one of the primary goals of FOS. Collected user feedback will be provided directly to the subsequent release teams for further assessment and action. Several feedback channels will be provided for effective collection of data.

**Non Conformance Reports (NCR)**

NCRs for FOS are submitted using the FOS NCR WEB page (URL http://newsroom.gsfc.nasa.gov/sit/ddts/ddts.html). This page provides a direct link to the EDF DDTS database which tracks the FOS NCRs. The access is allowed only to authorized ECS users. The procedure for submitting NCRs is explained in detail in the Project Instruction (PI) SD-1-014, Software Nonconformance Reporting.

**Trouble Tickets**

Trouble tickets are submitted by FOS Instrument Support Toolkit (IST) users by accessing the Remedy COTS package. The remedy Trouble Ticketing application is accessed using the FOS Web Page (URL http:/eagle.hitc.com/am1/index1.html).

**Feedback to the Users**

Keeping the users of the system informed about the status and operational aspects of the system is also as important as collecting feedback from the users. Consistent with this approach, users will be able to get FOS data from the following channels:

*ECS Web Page*

ECS documentation, including FOS user documentation such as the FOS Operations/Tools Manual and White Pages related to IST functionality and installation procedures, are accessible via the ECS Home page at http://edhs1.gsfc.nasa.gov.

*FOS Web Page*

Information about current FOS and IST schedules and schedules will be posted to he FOS Web page at http://eagle.hitc.com/am1/index.html.

This page intentionally left blank.

# Appendix E.  FOS Source Code ListingÄ

The tar-file “FOS_2.0.1_src.tar” contains the Source code required to support the EOC operation and is available from the delivered TAR tape. The source files provided are identified by FOS subsystems as follows:

- foscommon2 — FOS Common Subsystem
- ana2 - Analysis Subsystem
- dms4 - Data Management Subsystem
- fui3 - FOS User Interface Subsystem /fui3
- cms - Command Management Subsystem cms.tar
- cmd3 - Command Subsystem cmd
- pas - Planning and Scheduling Subsystem
- rcm - Real-Time Contact Management Subsystem
- tlm2 - Telemetry Subsystem tlm
- rms2 - Resource Management Subsystem

This source code can be further separated by the following categories:

- Executables
- Service Files
- Data Files
- Database Files
- Scripts/Setup Files
- Source Files

The contents of the tar file “FOS_2.0.1_src.tar” is provided in the following listing:

```
1506     ./.buildrct

# Appendix F. FOS Directory Structure

## F.1 Directory Names

The FOS directory names are provided to aid in locating the files listed in the complete FOS directory listing (contains the CM and GSFC specific files) provided in section F.2. Section F.3 contains the the GSFC specific files which are put in ClearCase by CM at the EDF.

## F.2 FOS Directory Listing
