Preface

This document accompanies the delivery of Release 6A SCF Toolkit 5.2.7, Version 1.00. It is a formal deliverable and has been placed under configuration control by the EOSDIS Core System (ECS) Science Data Processing Segment. Changes to this document shall be made by document change notice (DCN) or by complete revision.

This Toolkit version is directed at Earth Observing System (EOS) instrument data providers who will deliver code to the ECS Release 6A Distributed Active Archive Centers (DAACs). It is an update to Toolkit 5.2.6, delivered in February of 2000. The user calling interface of the current version is the same as that of Toolkit 5.2.6. ***Note:*** This software release matches ECS Drop 6A software delivered to the DAACs in mid-2001.

Any questions regarding distribution should be addressed to:

Data Management Office
ECS Project Office
Raytheon Systems Company
1616 McCormick Dr.
Upper Marlboro, MD 20774-5301

1. Introduction

1.1 Identification of Document

This document is a Version Description Document (VDD) prepared using NASA-STD-2100-91 as a guide. It is submitted as required for the Earth Observing System Data and Information System (EOSDIS) Core System (ECS) contract number NAS5-60000.

1.2 Scope of Document

This VDD specifies the delivery contents of the ECS Release 6A SCF Toolkit 5.2.7 Version 1.00 software and accompanying documentation.

1.3 Purpose and Objectives of Document

The purpose of this VDD is to describe the contents of the delivery of Release 6A SCF Toolkit 5.2.7 Version 1.00. The document briefly describes all tools that incorporate the delivery, provides an inventory of the delivery, lists unresolved problems, and addresses special issues such as special operating instructions, system limitations, and disclaimer notices for public domain software used in the library.

1.4 Document Status and Schedule

This Version Description Document for Release 6A SCF Toolkit 5.2.7 Version 1.00 is submitted as a final document. Any changes to Release 6A SCF Toolkit 5.2.7 Version 1.00 that require a subsequent version to be released will be described in a new Version Description Document.

1.5 Document Organization

The format and contents of this document comply with NASA-DID-P500 and NASA-DID-999 as defined in NASA-STD-2100-91.

- Introduction — Introduces the VDD scope, purpose, objectives, status, schedule and document organization.
- Related Documentation — Provides a bibliography of reference documents for the VDD organized by parent and binding subsections.
- Product Description — Describes the general capabilities and product contents.
- Inventory — Tar file listings for Release 6A SCF Toolkit 5.2.7 source and test drivers, documentation, and archive tape.

- Non-conformance Status — Discusses known problems with Release 6A SCF Toolkit 5.2.7 Version 1.00 and lists Non-conformance Reports with open status.
- Appendices — Contain supplemental information such as: Build/installation instructions, special operating instructions, system limitations, user feedback procedures, public software disclaimer notices, and the test baseline configuration.

2. Related Documentation

2.1 Parent Documents

The following documents are the parent from which this document's scope and content derive:

423-41-01	EOSDIS Core System Statement of Work
423-16-02	Science Data Processing (SDP) Toolkit Requirements Specification for the ECS Project

2.2 Applicable Documents

The following documents are directly applicable to this plan to the extent referenced herein. In the event of conflict between any of these documents and this plan, the plan shall take precedence.

170-TP-600	HDF-EOS Library Users Guide for the ECS Project, Volume 1: Overview and Examples
170-TP-601	HDF-EOS Library Users Guide for the ECS Project Volume 2: Function Reference Guide
333-CD-600	Release 6A SDP Toolkit Users Guide for the ECS Project
814-RD-601	HDF-EOS 2.7 Version Description Document (VDD) for the ECS Project
NASA-STD-2100-91	NASA Software Documentation Standard, Software Engineering Program

This page intentionally left blank.

3. Product Description

This section describes the general capabilities of Release 6A SCF Toolkit 5.2.7, Version 1.00, and the tools and test drivers provided.

3.1 Product Description and General Capabilities

The Release 6A SCF Toolkit 5.2.7 will be used by data production software developers and scientists to develop code at their Science Computing Facilities and later encapsulate that code in DAAC computing facilities. The purpose of the Toolkit is to provide an interface between instrument processing software and the production system environment. It sets up the context and environment for the execution of production processes and the transfer of data sets and information to those processes. This interface will be implemented in the SCF development environment along with additional utilities that will be used to emulate production environment services.

An important goal of the Toolkit is to facilitate the smooth transition and integration of code into the DAAC by abstracting out science process dependencies on external system architecture. Another goal is the provision of an interface into which application modules can be incorporated. This may include, for example, geo-location packages, other specialized routines that can be Commercial-Off-The-Shelf freeware or user supplied modules.

See Appendices A and F for further description of the installation scripts and the test baseline configuration.

The Toolkit Utilities and Ancillary data files are not part of the tool set but are part of this software delivery. The Toolkit Utilities are ancillary data creation and file management utilities. They are provided to enhance the SCF development environment in lieu of an operational production environment. Additionally, the Ancillary/Auxiliary (AA) data access tools are provided. It is not necessary to install these files if users do not plan to use these tools.

3.2 Release 6A SCF Toolkit 5.2.7 Routine Listing

The Release 6A SCF Toolkit 5.2.7 Routine listing provides a description of the tools. The following table provides a description of the tools:

Tool Name	Description
pccheck	Use to verify that a process control file (PCF) is syntactically correct
PGS_AA_2Dgeo	Allows access to 2 dimensional data sets e.g., sea–ice
PGS_AA_2DRead	Allows access to 2 dimensional data sets e.g., sea–ice
PGS_AA_3Dgeo	Allows access to 3 dimensional data sets, e.g., atmospheric humidity
PGS_AA_3DRead	Allows access to 3 dimensional data sets, e.g., atmospheric model
PGS_AA_dcw	Returns the surface types (land, sea, coast), and nation–state to be determined (TBD) for a user defined set of locations

Tool Name	Description (continued)
PGS_AA_dem	Locates heights from specified digital elevation model (DEM) corresponding to each of the locations specified
PGS_AA_PeVA_integer	Searches in a specified file for the parameter and returns the value of that parameter which is an integer
PGS_AA_PeVA_real	Searches in a specified file for the parameter and returns the value of that parameter which is a real(float)
PGS_AA_PeVA_string	Searches in a specified file for the parameter and returns the value of that parameter which is a text string
PGS_CBP_body_inFOV	Given instrument parameters, returns a flag to indicate whether any of the user–selected major celestial bodies (sun, moon, etc.) are in the instrument field–of–view.
PGS_CBP_Earth_CB_Vector	Computes the Earth centered inertial (ECI) frame vector from the Earth to the sun, moon, or planets at a given time, or range of time(s)
PGS_CBP_Sat_CB_Vector	Computes the ECI vector from the spacecraft to the sun, moon, or planets at a given time or range of time(s)
PGS_CBP_SolarTimeCoords	Computes local solar time, and right ascension and declination of the sun, for a given standard time and position on the surface of the Earth
PGS_CSC_DayNight	Determines whether a given point on the Earth is in day, night or twilight, at a given time
PGS_CSC_Earthpt_FixedFOV	For a fixed field of view obtains the Coordinated Universal Time (UTC) time interval and the starting time that an Earth point is within the field-of-view, within a specified time window
PGS_CSC_Earthpt_FOV	For a field of view defined by a table of coordinates (accessed externally), and a known motion of the boresight vector as a function of time, obtains the Coordinated Universal Time (UTC) time interval and the starting time that an Earth point is within the field–of–view, within a specified time window
PGS_CSC_ECItoECR	Frame change tool
PGS_CSC_ECItoORB	Transforms a vector in the ECI Coordinate system to a vector in the Orbital Coordinate System
PGS_CSC_ECItoSC	Frame change tool
PGS_CSC_ECRtoECI	Frame change tool
PGS_CSC_ECRtoGEO	Frame change tool
PGS_CSC_GEOtoECR	Frame change tool
PGS_CSC_GetFOV_Pixel	Computes the projection of (geolocates) the instrument field–of–view on the Earth, optionally, geolocates the center of each pixel in the footprint
PGS_CSC_GreenwichHour	Returns the Greenwich Hour Angle of the vernal equinox, which is equal to Greenwich sidereal time, in the ECI frame, at a given time.
PGS_CSC_J2000toTOD	Transform from ECI J2000 to ECI True Date
PGS_CSC_nutate2000	Transforms a vector under nutation from Celestial Coordinates of date in Barycentric Dynamical Time (TDB) to J2000 coordinates or from J2000 coordinates to Celestial Coordinates of date

Tool Name	Description (continued)
PGS_CSC_ORBtoECI	Transforms vector in orbital coordinate system to vector in ECI coordinate system
PGS_CSC_ORBtoSC	Frame change tool
PGS_CSC_precs2000	Processes a vector from Celestial Coordinates of date in Barycentric Dynamical Time (TDB) to J2000 coordinates or from J2000 coordinates to Celestial Coordinates of date in Barycentric Dynamical Time (TDB)
PGS_CSC_SCtoECI	Frame change tool
PGS_CSC_SCtoORB	Frame change tool
PGS_CSC_SpaceRefract	Estimate the refraction for a ray incident from space or a line of sight from space to the Earth's surface, based on the unrefracted zenith angle
PGS_CSC_SubSatPoint	Returns the position and velocity vector of the sub–satellite point ("pierce point"), or nadir of the satellite on the Earth's surface. Optionally returns the nadir vector also.
PGS_CSC_TODtoJ2000	Transform from ECI True of Date to ECI J2000 Coordinates
PGS_CSC_wahr2	Calculates nutation angles
PGS_CSC_ZenithAzimuth	Returns zenith and azimuth angles of spacecraft
PGS_CUC_Cons	Accesses constant values from a predetermined input file
PGS_CUC_Conv	Accesses conversion slope and intercept values, needed to convert between units
PGS_DEM_Close	Close a DEM dataset
PGS_DEM_DataPresent	Check for Valid DEM Data Point
PGS_DEM_GetMetadata	Extract Metadata from the DEM
PGS_DEM_GetPoint	Return Data at Specified DEM Point
PGS_DEM_GetQualityData	ACCESS DEM Quality Data
PGS_DEM_GetRegion	Return Data from a Specified Region of the DEM
PGS_DEM_GetSize	Return Size of Specified DEM Region
PGS_DEM_Open	Open a DEM dataset
PGS_DEM_SortModels	Check for Data in a Specified Region of the DEM
PGS_EPH_EphemAttit	Provides access to spacecraft ephemeris and attitude data for a given time range, interpolates the state vectors and spacecraft attitude to a specified time
PGS_EPH_GetEphMet	Returns the metadata associated with spacecraft ephemeris files
PGS_GCT_Init	Performs Geo–coordinate transformation initialization for the given projection with the given parameters
PGS_GCT_Proj	Performs Geo–coordinate transformations for the given projection in the forward and inverse directions
PGS_IO_Gen_Close	Close non–HDF file
PGS_IO_Gen_CloseF	Close non–HDF file FORTRAN
PGS_IO_Gen_Open	Open non–HDF file
PGS_IO_Gen_OpenF	Open non–HDF file FORTRAN 77 & 90
PGS_IO_Gen_Temp_Delete	Permanently delete a temporary file
PGS_IO_Gen_Temp_Open	Open temporary file
PGS_IO_Gen_Temp_OpenF	Open temporary file FORTRAN 77 & 90

Tool Name	Description (continued)
PGS_IO_L0_Close	Closes a virtual data set that was opened with a call to PGS_IO_L0_Open.
PGS_IO_L0_File_Sim	Creates a file of simulated Level 0 data
PGS_IO_L0_GetHeader	Gets the header and footer data for the currently open physical file
PGS_IO_L0_GetPacket	Gets a single packet from the specified Level 0 Virtual Data Set
PGS_IO_L0_Open	Open a Virtual Level 0 Data Set
PGS_IO_L0_SetStart	Sets the specified open virtual data set so that the next call to PGS_IO_L0_GetPacket will read the first packet at or after the specified time
PGS_IO_L0_SetStartCntPkts	Sets the specified open virtual data set so that the next call to PGS_IO_L0_GetPacket will read the first packet at or after the specified time and tracks the number of packets skipped in the current file.
PGS_MEM_Calloc	Allocates an array of arbitrarily sized elements, initializing them to zero, in memory
PGS_MEM_Free	Deallocates memory that was previously allocated
PGS_MEM_FreeAll	Deallocates all memory that was previously allocated within a process
PGS_MEM_Malloc	Allocates an arbitrary number of bytes in memory
PGS_MEM_Realloc	Reallocates the number of bytes requested
PGS_MEM_ShmAttach	Used by an executable to attach to an existing shared memory segment
PGS_MEM_ShmCreate	Used to create a shared memory segment
PGS_MEM_ShmDetach	Used to detach a shared memory segment from a process that attached it
PGS_MEM_ShmRead	FORTRAN Read from Shared Memory
PGS_MEM_ShmWrite	FORTRAN Write to Shared Memory
PGS_MEM_Zero	Initializes a memory block or structure to zero
PGS_MET_GetConfigData	Enables the user to get the values of Config data parameters held in the PC table
PGS_MET_GetPCAttr	Retrieves parameter values from the PC table which are either located as HDF attributes on product files or in separate ASCII files
PGS_MET_GetSetAttr	Enables the user to get the values of metadata parameters which are already set by the initialization procedure
PGS_MET_Init	Initializes a metadata configuration file (MCF)
PGS_MET_Remove	Contains PGS_MET_Remove() which frees the memory held by the metadata configuration file (MCF) and data dictionary object description language (ODL) representations
PGS_MET_SetAttr	Enables the user to set the value of metadata parameters
PGS_MET_Write	Enables the user to write different groups of metadata to separate HDF attributes
PGS_PC_GenUniqueID	Used to generate a unique product identifier. May be attached to file metadata to facilitate tracking of production output
PGS_PC_GetConfigData	May be used to access run–time parameters in the PGE
PGS_PC_GetConfigDataCom	May be used to access run–time parameters at the shell level
PGS_PC_GetFileAttr	Used to retrieve the attribute string that contains the metadata for a Product file

Tool Name	Description (continued)
PGS_PC_GetFileAttrCom	Used at the shell level to retrieve an attribute "stream" that contains the metadata for a Product file
PGS_PC_GetFileByAttr	Used to retrieve the specific instance of a product file that satisfies the search criteria, defined by a user–supplied method, applied to the metadata of each product file instance
PGS_PC_GetFileSize	Get the size of a file in the PCF.
PGS_PC_GetFileSizeCom	Get the size of a file in the PCF at the shell level.
PGS_PC_GetNumberOfFiles	May be used to query the number of file instances that are associated with a particular product file
PGS_PC_GetNumberOfFilesCom	May be used, at the shell level, to query the number of file instances that are associated with a particular product file
PGS_PC_GetReference	Used to obtain a physical file pathname from a logical identifier for a particular Product file
PGS_PC_GetReferenceCom	Used at the shell level to obtain a physical file pathname from a logical identifier for a particular Product file
PGS_PC_GetReferenceType	Tool may be used to ascertain the type of file reference which is associated with a logical identifier within the science software
PGS_PC_GetTempReferenceCom	Used at the shell level to obtain a physical file pathname from a logical identifier for a particular Temporary, or Intermediate file
PGS_PC_GetUniversalRef	Used to obtain a universal reference from a logical identifier
PGS_PC_InitCom	Used, prior to PGE execution, to establish a working environment for the SDP Toolkit
PGS_PC_Shell.sh	Provides an integrated environment for the SDP Toolkit and a PGE
PGS_PC_TempDeleteCom	Used at the shell level to delete the Temporary file currently associated with a particular logical identifier
PGS_PC_TermCom	Used, following PGE termination, to cleanup the resources used by the SDP Toolkit
PGS_SMF_Begin	Signal SMF that function has started
PGS_SMF_CreateMsgTag	May be used to generate a unique message identifier
PGS_SMF_End	Signal SMF that function has ended
PGS_SMF_GenerateStatusReport	Used to add user–defined status reports to the Status Report Log file
PGS_SMF_GetActionByCode	Provide the means to retrieve an action string associated with a specific mnemonic code
PGS_SMF_GetInstrName	Used to retrieve the instrument name from a given error/status code
PGS_SMF_GetMsg	Provide the means to retrieve a previously set message from the static buffer PGS_SMF__Set....
PGS_SMF_GetMsgByCode	Provide the means to retrieve the message string corresponding to a specific mnemonic code
PGS_SMF_GetToolkitVersion	This function returns a string describing the current version of the Toolkit.
PGS_SMF_SendRuntimeData	Provide a means for the user to transmit a package of runtime data to the SCF in the event of an unhandled system exception
PGS_SMF_SetArithmeticTrap*	Used to specify a signal handling function to perform in the event that an error arithmetic operation has occurred.
PGS_SMF_SetDynamicMsg	Provide the means to set a user–defined error/status message in response to the outcome of some segment of processing.

Tool Name	Description (continued)
PGS_SMF_SetHDFMsg*	Provide the means to retain the HDF–EOS error message as a result of an HDF–EOS error.
PGS_SMF_SetStaticMsg	Provide the means to set a predefined error/status message in response to the outcome of some segment of processing.
PGS_SMF_SetUNIXMsg	Provides the means to retain UNIX error messages for later retrieval
PGS_SMF_TestErrorLevel	Will return a Boolean value indicating whether or not the returned code has status level 'E'
PGS_SMF_TestFatalLevel	Will return a Boolean value indicating whether or not the returned code has status level 'F'
PGS_SMF_TestMessageLevel	Will return a Boolean value indicating whether or not the returned code has status level 'M'
PGS_SMF_TestNoticeLevel	Will return a Boolean value indicating whether or not the returned code has status level 'N'
PGS_SMF_TestStatusLevel	Will return a defined status level constant
PGS_SMF_TestSuccessLevel	Will return a Boolean value indicating whether or not the returned code has status level 'S'
PGS_SMF_TestUserInfoLevel	Will return a Boolean value indicating whether or not the returned code has status level 'U'
PGS_SMF_TestWarningLevel	Will return a Boolean value indicating whether or not the returned code has status level 'W'
PGS_TD_ASCIItime_AtoB	Converts binary time values to ASCII Code B time values of the form year_month_day_time_of_day in the Consultative Committee on space Data Systems (CCSDS) format
PGS_TD_ASCIItime_BtoA	Converts binary time values to ASCII Code A time values of the form year_month_day_time_of_day in the CCSDS format
PGS_TD_GPStoUTC	Converts to Coordinated Universal Time (UTC) time value from Global Positioning System (GPS) time by converting to internal time, adding the GPS_minus_UTC_leapseconds from the leapseconds file, and converting to GPS format following CCSDS ASCII standard A
PGS_TD_LeapSec	Find Leap second value
PGS_TD_SCtime_to_UTC	Converts spacecraft clock time to UTC for EOS platforms or for foreign spacecraft
PGS_TD_TAItoGAST	Converts International Atomic Time (TAI) (toolkit internal time) to Greenwich apparent sidereal time (GAST) expressed as the hour angle of the true vernal equinox of date at the Greenwich meridian (in radians)
PGS_TD_TAIjdtoTAI	Converts TAI Julian date to time in TAI seconds since 12 AM UTC 1-1-1993
PGS_TD_TAItoTAIjd	Converts time in TAI seconds since 12 AM UTC 1-1-1993 to TAI Julian date
PGS_TD_TAItoUTC	Converts TAI time value to UTC time
PGS_TD_TimeInterval	Computes the elapsed TAI time in seconds between any two epochs after January 1, 1958
PGS_TD_UTCtoGPS	Converts UTC time value to GPS time by converting to internal time, adding the GPS_minus_UTC_leapseconds from the leapseconds file, and converting to GPS format following CCSDS ASCII standard A

Tool Name	Description (continued)
PGS_TD_UTCtoTAI	Converts UTC time to TAI time by first converting UTC to internal time and then adding the TAI_minus_UTC_leapseconds from the leapseconds file
PGS_TD_UTCtoTDBjed	UTC to Barycentric Dynamical Time (TDB) time conversion
PGS_TD_UTCtoTDTjed	UTC to Terrestrial Dynamical Time (TDT) time conversion
PGS_TD_UTCtoUT1	Converts UTC to UT1 time
PGS_TD_UTCtoUT1jd	Converts UTC time in CCSDS ASCII Time Code to UT1 time as a Julian date
PGS_TD_UTCjdtoUTC	Converts UTC as a Julian date to UTC in CCSDS ASCII Time Code A format
PGS_TD_UTCtoUTCjd	Converts UTC in CCSDS ASCII Time Code A format to UTC as a Julian date
PGS_TD_UTC_to_SCtime	Converts UTC to Spacecraft clock time for EOS standard of Foreign Spacecraft
smfcompile	Provides means to store messages in files that are accessed at runtime to get the message text.

*Undelivered at this time; please see the Release 6A SCF Toolkit Users Guide.

3.3 Release 6A SCF Toolkit 5.2.7 Test Tools and Drivers

Included in the delivery of Release 6A SCF Toolkit 5.2.7 Version 1.00 are sample drivers for each toolkit routine or set of routines. These drivers are provided “as is” as an aid to the Toolkit Users. These drivers have been used during the integration and test process and may be useful to verify installation, debug errors encountered while using the toolkit, or as sample routines for calling the toolkit functions. They are provided as a service to the toolkit users and will not be maintained or updated.

The drivers are contained in a separate tar file named SDPTK5.2.7v1.00_TestDrivers.tar.Z. The file contains a driver for each tool or set of related tools (such as Generic I/O), a “Readme file” describing how to compile and use the drivers for each tool group, a makefile for each tool group, sample output files and sample input files for the drivers. In addition to the “Readme file”, the drivers and sample files are well commented to aid the user in correct usage. This is the only documentation that will be delivered for the drivers. To access the sample drivers, untar the file, read the desired readme, set the environment, make the desired driver and run. The files in the sample driver directory (test_drivers) follow the following naming convention:

1) Driver Name:

   C Driver: tool_name_Driver_c.c

   Fortran Driver: tool_name_Driver_f.f

   (Example: PGS_CBP_Earth_CB_Vector_Driver_c.c)

   or for a tool group with one driver: tool_group_name_Driver_c.c and tool_group_name_Driver_f.f (ex: PGS_GCT_Driver_f.f)

The _c and _f in the name prevents name conflicts between the C and FORTRAN in the executables.

2) README file: README.<tool group name>.

   The README file explains how to use drivers. The README file also contains all the environment variables needed to be set to run the driver, with some examples of values for those variables.

   The make instruction assumes the Toolkit Libraries are available and the Toolkit environmental variable have been set, for example:

   $PGSLIB points to the toolkit library

   $PGSINC points to the include files

3) Sample output: <Driver_Name>.out_sample

4) Sample input file: Driver_Name.in

The drivers have been implemented to be used either interactively (requiring user inputs) or driven by an input file. All of the tools can operate in both modes. The sample output was obtained by running the tool from the provided input file. Repeating this process and comparing the output with the sample file may be useful in validating proper installation or porting of the toolkit. Using the interactive capabilities or modifying the input file to fit the values encountered during your integration may help to debug errors encountered while using the toolkit.

3.4 Release 6A SCF Toolkit 5.2.7 Hierarchical Data Format

The Hierarchical Data Format (HDF) has been selected by the EOSDIS Project as the format of choice for standard product distribution. HDF is a *disk format* and *subroutine library* for storage of most kinds of scientific data. As a *disk format*, HDF files consist of a directory and an unordered set of binary data objects. Each directory entry describes the location, the type, and the size of these binary objects.

The *HDF subroutine library* is designed to be easy for C and Fortran programmers to use. The HDF library consists of callable routines, each of which belongs to a particular *interface*. Each interface within these layers address a particular HDF function or a particular HDF data structure, such as arrays, tables, and annotations.

3.5 Release 6A SDP Toolkit Users Guide

The purpose of the ***Release 6A SDP Toolkit Users Guide*** is to provide EOS instrument data processing software developers and scientists with knowledge of Release 6A SCF Toolkit 5.2.7 functionality, and to provide a listing of routine calling sequences, detailed descriptions, and examples of usage. This document accompanies the software delivery described in Sections 3.2, 3.3, and 3.4 above.

5. Non-Conformance Status

5.1 Known Problems with Release 6A SCF Toolkit 5.2.7

This section contains the list of problems closed (Section 5.2) and known problems (Section 5.3) as of 11/10/2000 in the Release 6A SCF Toolkit 5.2.7 Version 1.00 delivery. These problems were found and recorded during unit and integration testing or discovered by users of the previous version of the Toolkit and captured in the formal problem tracking system, Distributed Defect Tracking System (DDTS). The DDTS system generated the attached list of "closed" NCRs. This list has been reviewed by HITC management and is considered to be acceptable for delivery at this time. The list includes the NCR ID, Title, Description, and Status. DDTS Problem Severity Definitions, on a 1-5 scale, are defined as follows:

1 Catastrophic and unrecoverable!
Example: system crash or lost user data.

2 Severely broken and no workaround.
Example: can't use major product function.

3 A defect that needs to be fixed but there is a workaround.
Example: user data must be modified to work.

4 A defect that causes small impact. Easy to recover or workaround.
Example: error messages aren't very clear.

5 An enhancement request.
Example: bad layout or misuse of grammar in manual.

This NCR report reflects the information obtained from DDTS on November 10, 2000. To obtain a detailed description of the NCRs, the DDTS system can be accessed from the following WEB page:

http://newsroom.gsfc.nasa.gov/ddts/

5.2 Release 6A SCF Toolkit 5.2.7 Non-Conformance Reports (Close Status)

The following Toolkit open problems were closed with the Release 6A SCF Toolkit 5.2.7 delivery:

NCR ID: ECSed27009

Title: Toolkit should respect Data_Location for ProductionDateTime

Severity: 2

Problem: The ASTER IT has requested that the ProductionDateTime attribute be set to date and time when the data granule is produced instead of the date and time when it is ingested. The ProductionDateTime is currently being set by the Toolkit when the data is ingested into ECS. This value cannot be overridden. The Toolkit should be modified to respect the Data_Location in the MCF for the ProductionDateTime attribute. If the Data_Location is set to "PGE", the Toolkit should not generate its own value for ProductionDateTime.

Resolution: Modified the files /ecs/formal/TOOLKIT/src/MET/tools/PGS_MET_Write.c and /ecs/formal/TOOLKIT/message/PGS_MET_13.t Now PGS_MET_Write.c calls PGS_MET_GetSetAttr to check that whether the ProductionDateTime is set by PGE. If not it will set it to the time of writing metadata.

NCR ID: ECSed28404

Title: Toolkit fails to add temporary reference to the PCF

Severity: 2

Problem: While exercising the AM-1 DPREP unit test, it was discovered that DPREP could not add a temporary reference to the PCF using Toolkit version DAAC B.0 TK5.2.6.2. (DPREP writes its ephemeris data products to a temporary file on which DPREP then performs the gap-fill operation. Once the gap-fill is done on the temporary files, the gap-filled files are copied to the product data sets.)

Resolution: Create temporary PCF file name with "tempPCS.fil.ProcessID" instead of "tempPCS.fil.ProcessID.timestamp"

NCR ID: ECSed28218

Title: During the building TOOLKIT library some object files do get into lib

Severity: 2

Problem: When the creation dates of object files are older than the libPGSTK.a file (the same applies to cpp and treadsafe versions) those object files are not added to the library (even though they are not already in the library).

Resolution: Changed mkpgslib file in the directory /ecs/formal/TOOLKIT/bin/sun5 directory and makefiles in the DEM, MEM, and SMF sudirectories of /ecs/formal/TOOLKIT/src directory to have all object files updated in the TOOLKIT library.

NCR ID: ECSed24539

Title: PGS_CSC_SpaceRefract() can cause a core dump in calling program

Severity: 2

Problem: When passed an invalid altitude (such as deep inside the earth) PGS_CSC_SpaceRefract() returns a warning return but fails to set the values of the outputs. These should be set to PGSd_GEO_ERROR_VALUE

Resolution: Values that might have been unset in failure cases were set to PGSd_GEO_ERROR_VALUE. Also one cast operation was added for the altitude variable to make it a double.

NCR ID: ECSed28041

Title: orbsim and DPREP s/c tags don't agree

Severity: 2

Problem: The orbsim ephemeris and attitude simulator in the Toolkit allows the user to create simulated ephemeris and attitude files. A spacecraft tag is loaded into the file header. For Aqua, orbsim supports spacecraft tags of either EOSPMGIIS or EOSPMGIRD, in parallel with the tags that the L0 tools support.

In order to access ephemeris or attitude files, the end-user needs to supply the correct spacecraft ID in the toolkit EPH tools. If an incorrect ID is supplied, the tool returns an error, as it should.

Unfortunately, Aqua DPREP has been coded to use EOSPM1 in the file header.

This means that instrument teams which are coding based on what orbsim produces are not coding to what DPREP is currently slated to produce.

Resolution: `Modified the files`

```
/ecs/formal/TOOLKIT/database/common/EPH/sc_tags.dat
/ecs/formal/TOOLKIT/src/EPH/PGS_EPH_GetSpacecraftData.c
/ecs/formal/TOOLKIT/src/EPH/orbsim/PGS_EPH_orbitalElements.c@
/ecs/formal/TOOLKIT/src/EPH/orbsim/orbsim.c
```

to change spacecraft name from EOSPMGIIS to EOSPM1.

NCR ID: ECSed27090

Title: Need to modify PGS_TD_EOSPMGIRDtoTAI.c for miicrosec accuracy

Severity: 3

Problem: The TAI time needs to be accurate up to 6 digits after the decimal point. Currently TAI time can have more than 6 digits after the decimal point. The digits beyond the 6th digit are not required (since the time needs to have microsec accuracy). Functions such as PGS_TD_EOSPMGIRDtoTAI() needs to be

modified to get rid of digits beyond the 6th after the decimal point in the output TAI time.

Resolution: The files

```
/ecs/formal/TOOLKIT/src/TD/PGS_TD_UTCtoEOSPMGIRD.c
/ecs/formal/TOOLKIT/src/TD/PGS_TD_EOSPMGIRDtoUTC.c
/ecs/formal/TOOLKIT/src/TD/PGS_TD_EOSPMGIRDtoTAI.c

were modified to have microsecond accuracy for the time after the
decimal point. Also the file
/ecs/formal/TOOLKIT/src/IO/L0/L0sim/PGS_IO_L0_EDOS_hdr_Sim.c

was modified so that the times in the simulated header and packet
files produced for the GIRD agree with each other.
```

NCR ID: ECSed27053

Title: Need to modify DEM tools to include 3km resolution

Severity: 3

Problem: Because of request for 3km resolution we need to modify DEM tools in the TOOLKIT to include this reolution. We also need to convert 3km resolution elevation binary data to HDF format and provide it to users.

Resolution: Modified the files

```
/ecs/formal/TOOLKIT/include/PGS_SMF.h
/ecs/formal/TOOLKIT/src/DEM/PGS_DEM_ExtractRegion.c
/ecs/formal/TOOLKIT/src/DEM/PGS_DEM_Lookup.c
/ecs/formal/TOOLKIT/src/DEM/PGS_DEM_Open.c
/ecs/formal/TOOLKIT/src/DEM/PGS_DEM_RecursiveSearchDeg.c
/ecs/formal/TOOLKIT/src/DEM/PGS_DEM_RecursiveSearchPix.c
/ecs/formal/TOOLKIT/src/DEM/PGS_DEM_Subset.c
/ecs/formal/TOOLKIT/src/DEM/PGS_DEM_WriteDegreeToPixel.c
/ecs/formal/TOOLKIT/src/DEM/PGS_DEM_WriteSubgridCalculator.c
/ecs/formal/TOOLKIT/include/PGS_DEM.h
/ecs/formal/TOOLKIT/message/PGS_DEM_14.t
/ecs/formal/TOOLKIT/include/PGS_DEM.f
/ecs/formal/TOOLKIT/include/PGS_TSF.h

to incorporate access to 3km data set. Now the 3km dem data can
be accessed using the resolution tag PGSd_DEM_90ARC. The binary
data file sent by Tom Logan at JPL was converted to HDF format.
This HDF file(dem90ARC_W180N90.hdf) contains only elevation data,
Geoid data, and metadata (for the whole world).
```

NCR ID: ECSed26997

Title: Need to modify TOOLKIT INSTALL scripts to exclude AA tools

Severity: 3

Problem: Need to modify TOOLKIT install scripts so that users have option not to install AA tools during TOOLKIT installation.

Resolution: Modified the following files to exclude AA tools:

1. /ecs/fromal/TOOLKIT/bin/sun5/INSTALL
2. /ecs/fromal/TOOLKIT/bin/sun5/INSTALL.Toolkit
3. /ecs/fromal/TOOLKIT/src/makefile

4. /ecs/fromal/TOOLKIT/src/makefile.cpp

NCR ID: ECSed28529

Title: INSTALL script on hp changes shell when typed bin/INSTALL

Severity: 3

Problem: On the HP machine, when we try to install toolkit by typing bin/INSTALL, the shell script changes shell. This results in error during the installation.

There is also a typo in makefile in the src/MET/support directory. Although it is not causing problem for installing toolkit, it better be corrected for having consistent object and source code names.

Resolution: This appeared to have occurred as a result of a corrupted install script on the HP machine. No changes were made to fix it, but the script was replaced on the machine and the installation worked.

NCR ID: ECSed25924

Title: Need to change Install scripts to include HDF4.1r3

Severity: 3

Problem: To integrate HDF4.1r3 version of HDF we need to change TOOLKIT's INSTALL script, and add Install scripts for HDF4.1r3

Resolution: In the directory /ecs/formal/TOOLKIT/bin/sun5 modified INSTALL, INSTALL-HDFEOS-Wrap, and INSTALL-Toolkit. Also added files INSTALL-HDF4.1r3 and INSTALL-4.1r3_aix to the directory.

NCR ID: ECSed25200

Title: file PGS-dev-env.csh.tmp has problem

Severity: 3

Problem: In the directory /ecs/formal/TOOLKIT/bin/sun5/tmp the file pgs-dev-env.csh.tmp has problem. An endif is missing. Because of that the env is not set correctly.

Resolution: Added an endif in the file /ecs/formal/TOOLKIT/bin/sun5/tmp/pgs-dev-env.csh.tmp where it was missing.

NCR ID: ECSed25287

Title: Driver Run output shows errors for DEM tools

Severity: 3

Problem: The make for Fortran Driver within DEM group needs fix to include missing library for include flag which is required with HDF4.1r3.

Resolution: In the directory /ecs/sdps/sdps_test/pgstk/test_drivers/DEM added $(HDFLIB)/libjpeg.a to makefile and makefile.f90

NCR ID: ECSed26778

Title: Errors compiling C drivers for MET Tools and locating HDF lib on DEC

Severity: 3

Problem: During testing of the MTD Toolkit on DEC. it was detected that (1) C drivers weren't compiling for MET tools, and (2) HDF library could not be located for Fortran compilation.

Resolution: Fix has been made to the makefile of the MET tool and was merged 5/17/00. Also, the HDF lib. problem has been corrected. HDF4.ir3 has been installed.

NCR ID: ECSed24972

Title: Level Zero tools need to be changed to support EOS PM spacecraft

Severity: 3

Problem: Current PM tools for L0 do not support new PM time stamps. It was assumed that for PM the time will be only in CCSDS Unsegemented Time Code format and that there will be only one physical file containing both header and packets.

However, new documents on PM indicates that instruments will use two types of Time stamps, one the same as AM (i.e. CCSDS Day Segemented Time Code format) referred to as GIIS format and another one in CCSDS Unsegemented Time Code format referred to as GIRD format. Moreover,

the PM L0 data will be contained in two files, one as Header file and another as Packet file (the same as AM L0 data).

Because of new requirements we need to change the following files and add some new ones to handle both formats.

Resolution: The PM spacecraft processing part of the TOLLKIT in L0 tools modified to handle two different time stamps that are used in PM spacecraft. Along with the changes in L0 tools we also changed L0sim tools to generate test data for the new formats, and modified L0 testdrivers to accommodate the new formats, and added a few TD tools to handle time conversions. (see the NCR to see the actual files that were changed)

NCR ID: ECSed24649

Title: Modifying L0sim directory makefile

Severity: 3

Problem: A clean target needs to be added to L0sim directory makefile to try correcting a long-standing problem with L0sim.

Resolution: Modified makefile that is under L0sim directory to remove executable file L0simfrom process. A clean target added to L0sim directory makefile to solve this problem

NCR ID: ECSed27016

Title: Merge [new] leapsec.dat and utcpole.dat files [for release in the new SCF release]

Severity: 3

Problem: These files in the Toolkit become out of date in 83 days

Resolution: These files were updated by running the scripts

NCR ID: ECSed23948

Title: PGS_EPH_GetEphMet fails to warn when it finds no metadata

Severity: 3

Problem: When the tool PGS_EPH_GetEphemMet() fails to find the metadata for a user-input time, but there is

nevertheless an ephemeris data file present, and included in the proper way in the PCF, it returns PGS_S_SUCCES but no metadata! MODIS has complained that a warning return should be given, and I concur.

This situation can only happen with defective input data, but this can occur, since ECS is not in control of the ephemeris data.

Resolution: Huge blocks of code were added to validate that the order of orbit numbers followed the time ordering, that differences in ascending and descending node crossing times were reasonable (one half orbit is required to take at least 2500 seconds but not more than 45000 seconds), etc.

A new warning message was created, and smfcompile was run to create the altered include and message files from the seed (*.t) file.

NCR ID: ECSed24746

Title: orbsim returns degrees instead or radians

Severity: 3

Problem: The Toolkit simulator provides Euler angles in degrees instead of radians.

This has probably not been noticed before because normally the angles are all zero; only if the user enters special parameters are they nonzero.

Resolution: Modified lines in PGS_EPH_attitudeNoise.c such as

```
ypr_rate[0] = ypr_rate[0] + (rand()/(pow(2.,15) - 1)*2-
1)*std2/3600.0;
```

to read

```
ypr_rate[1] =  ypr_rate[1] + (rand()/(pow(2.,15) - 1)*2-
1)*((std2/3600.0)*DEGtoRAD
```

where "DEGtoRAD" is a conversion factor #defined as

```
#define DEGtoRAD .0174532925199433
```

NCR ID: ECSed28557

Title: Need to add land/sea mask to hdf data file for 3km resolution and TOOLKIT

Severity: 3

Problem: Land/sea mask data was provided for 3km resolution. We need to convert it to hdf format. This shall need modifying DEM tools in TOOLKIT.

Resolution: Modified a line in PGS_DEM_Open.c to accomodate land/sea mask layer for 3 km resolution. Also converted 3km resolution data for land/sea mask (that recently provided by EDC) along with elevation data and geoid data into hdf format. The converted file will be put on ftp site for users.

NCR ID: ECSed28397

Title: For MET/support group need to change makefile.cpp

Severity: 3

Problem: Filename PGS_MET_GetSetAttrTD.c is misspelled in the makefile.cpp for MET/support group.

Resolution: changed file name in

ecs/formal/TOOLKIT/src/MET/support/makefile.cpp from

PGS_MET_GetSetAtrrTD.c to PGS_MET_GetSetAttrTD.c

NCR ID: ECSed28173

Title: In setting PRDUCTIONDATETIME attribute some warning messages are unnecessary

Severity: 3

Problem: In setting PRODUCTIONDATETIME attribute in most circumstances there is no need for TOOLKIT to issue warnings.

Resolution: Added a file called PGS_MET_GetSetAttrTD.c to the directory /ecs/formal/TOOLKIT/src/MET/support and modified PGS_MET_Write.c in the directory /ecs/formal/TOOLKIT/src/MET/tools. The function PGS_MET_GetSetAttrTD() called by PGS_MET_Write checks to see whether PRODUCTIONDATETIME is set before. It returns error only if the data location for PRODUCTIONDATETIME is "PGE", its Mandatory field is "TRUE", and has not been set before calling PGS_MET_Write(). If the data location for the attribute is "TK", TOOLKIT sets the time itself, Otherwise, if it has not been set, TOOLKIT does not set it at all.

NCR ID: ECSed27912

Title: Users unable to retrieve attributes in INVENTORYMETADATA section of ASCII metadata file

Severity: 3

Problem: Users are unable to retrieve attributes in the INVENTORYMETADATA section of an ASCII metadata file using PGS_MET_GetPCAttr function. This contradicts the statements in the TOOLKIT Users Guide concerning this special case.

Resolution: Addes few lines to the file /ecs/formal/TOOLKIT/src/MET/tools/PGS_MET_GetPCAttr.c

to set a flag to PGS_TRUE if user intends to retrieve attribute from the INVENTORYMETADATA section of an ASCII metadata file. i.e.

```
/* set metflag to PGS_TRUE if attribute to be retrieved from an
ASCII file from INVENTORYMETADATA section */

if(hdfAttrName != NULL && *hdfAttrName != '\0')
{
if(strlen(hdfAttrName) > (strlen(PGSd_MET_GROUP_STR) + 1))
{
if(strncmp(hdfAttrName, PGSd_MET_GROUP_STR,
strlen(PGSd_MET_GROUP_STR)) ==
0)
{
metflag = PGS_TRUE;
}
}
/* set metflag to PGS_TRUE if attribute to be retrieved from an
ASCII metadata file of landsat7 */

else if(strlen(hdfAttrName) > (strlen(PGSd_MET_LSAT_GRP_STR) +
1))
{
if(strncmp(hdfAttrName, PGSd_MET_LSAT_GRP_STR,
strlen(PGSd_MET_LSAT_GRP_STR)) == 0)
{
metflag = PGS_TRUE;
}
}
}
```

The flag is used to direct the code for using ASCII metadata file for the source of attribute.

NCR ID: ECSed24090

Title: PGS_TD_LeapSec.c needs graceful exit when file is corrupt

Severity: 4

Problem: MODIS reports that the function PGS_TD_LeapSec.c can core dump or enter an infinite loop if leap seconds file becomes corrupt. While this is a remote possibility, a more graceful exit with an error return is highly desirable.

Resolution: The function fscanf was replaced throughout with a combination of fgets followed by sscanf, usually with some length checking in between.

Numerous branches were created to produce error messages and exit gracefully when the data lines in the leap seconds file did not conform to standard.

NCR ID: ECSed26862

Title: Remove excess telephone numbers from scripts

Severity: 4

Problem: The Toolkit scripts update_utcpole.sh, update_leapsec.sh, update_leapsec.sh, and update_leapsec_CC.sh all send messages including text advising users to telephone

(301) 925-0764, 0760, or 0752, or (301) 614-5475

in case of failure. The first of these is Larry Klein's phone, (Toolkit lead) and he should not get such calls; the next 2 are people who have left the project and the last is mine (pnoerdli) but we need a generic number in there. The existent numbers should be deleted

Resolution: I deleted the old telephone list from the e-mails that are sent when the scripts fail and substituted 1-800-ECS-DATA

NCR ID: ECSed26861

Title: Speedup for PGS_CSC_ECRtoGEO.c

Severity: 5

Problem: The tool PGS_CSC_ECRtoGEO.c uses trigonometric functions, which are slow, in several places. On complaint of an instrument team, a Toolkit programmer (Xin-Min Hua) found a different algorithm, which enables considerable (about 25 to 30 percent) speedup.

Although at present this function occupies only about 7% of MODIS' time , it was higher fpr another team, and as usual, when other "bottlenecks" are beaten down, this one will stand taller - its importance will rise.

Therefore the code should be replaced. At present the change will give a very few per cent speedup and no loss of accuracy in geolocation and similar uses. As other "bottlenecks" are reduced by programming improvements, this will represent a larger improvement.

Resolution: Source code requiring trig. functions was replaced by code of the same functionality using only algebraic code.

NCR ID: **ECSed15195**

Title: Improve smfcompile

Severity: 3

Problem: I would like to propose a few quick, easy changes to smfcompile which would improve its utility:

1) The usage note should describe the "-c" option.

2) If the application was intended to be used like:

```
smfcompile   [ -c | -f77 | -all | -ada ]   [-r] [-i]    file...
```

Then it could process a list of files in one pass, making life a little easier. And easier is better (at least in this case).

A disadvantage of this change is that it would break any makefiles which currently call smfcompile. (Improvement often has its little pains.)

3) In its usage note, smfcompile outputs the following information which did not make any sense to me:

```
BNF: allowed_ascii_char ::= {[\n \t sp]
                             [! " # % & ' ( ) * + , - . /]
                             [DIGIT]
                             [: ; < > = ? @ ]
                             [UPPER_CASE_LETTER]
                             [LOWER_CASE_LETTER]
                             [[ \ ] ^ _ ` { | } ~]}
```

BNF: The %INSTR, %LABEL and %SEED tokens in the SMF text file must appear in this order and that it must be specify before any of the mnemonic/action labels are defined. Proper usage of the tokens are as follows: %INSTR = instrument

```
                                %LABEL = label
                                %SEED  = seed_number
BNF: instrument ::= 3{UPPER_CASE_LETTER}10
BNF: label ::= 3{UPPER_CASE_LETTER}10
BNF: mnemonic ::= 1{[_][DIGIT]UPPER_CASE_LETTER}17
BNF: mnemonic_label ::= label + _ + level + _ + mnemonic
BNF: level ::= SH | S | M | U | N | W | E | F
BNF: action_label ::= label + _ + A | C + _ + mnemonic
BNF: status_definition ::= mnemonic_label + indentation +
                           message_str [+ :: + action_label]
BNF: indentation ::= {[\n] [\t] [ ]}
BNF: message_str ::= 1{[ ] [allowed_ascii_char]}240
BNF: action_definition ::= action_label + indentation +
     message_str + action_str
BNF: action_str ::= message_str
```

Resolution: Under ~/TOOLKIT/src/SMF, inside the file PGS_SMF_Comp.c, I have added the following lines into the following parts:

```
-Author:
        Phuong T. Nguyen/Emergent Information Technologies, Inc.
-History:
         30-Jun-2000 PN NCR#: 15195, improve smfcompile
```

```
-SYNOPSIS (about line# 175):
         smfcompile -f textfile -c [-r] [-i]

-INPUTS (about line# 193):
         -c       - create C include file

-EXAMPLES (about line# 212):
          smfcompile -f PGS_IO_100.t -c
          (produces PGS_IO_100.h and PGS_100)

-/* Parse the input parameter.*/ (about line# 293):
           if (strcmp(argv[i],"-c") == 0)
           {
               global_var->C = PGS_TRUE;
           }

-  switch (errmsg_no) (about line# 4715):
             strcat(msg, "       smfcompile -f textfile -c\n");

This change will improve smfcompile for C.
```

NCR ID: **ECSed25133**

Title: PGS_IO_L0_Open: Documentation incorrect for spacecraft tag options

Severity: 3

Problem: The options listed in the Release 5A SDP Toolkit Users Guide dated June 1999 for the function PGS_IO_L0_Open, parameter "spacecraft_tag", do not match the function as implemented (page 6-8).

The user's guide says the spacecraft tag must be:

```
PGSd_TRMM
PGSd_EOS_AM
PGSd_EOS_PM
PGSd_ADEOS_II.
```

The function will accept the following as valid spacecraft tags:

```
PGSd_TRMM
PGSd_EOS_AM
PGSd_EOS_PM_GIIS
PGSd_EOS_PM_GIRD
PGSd_ADEOS_II
```

The documentation should be in sync with the function.

Resolution: In TOOLKIT Users guide changed PGSd_EOS_PM to PGSd_EOS_PM_GIIS and PGSd_EOS_PM_GIRD to refer to correct spacecraft tag for PM spacecraft.

NCR ID: **ECSed25771**

Title: PGS_AA_dcw has no FORTRAN binder

Severity: 3

Problem: PGS_AA_dcw has no FORTRAN wrapper. Therefore the FORTRAN testdriver cannot be tested.

Resolution: Added FORTRAN binder for PGS_AA_dcw in the file /ecs/formal/TOOLIT/src/AA/DCW/PGS_AA_bindFortran.c

Also removed Fortran wrapers that had been defined in PGS_AA_bindFortran.c functions. Added two lines to PGS_AA_DCW.h file so that if PGSd_AA_MAXNOCHARS defined before we do not redefine it.

2. Added an endif in the file /ecs/formal/TOOLKIT/bin/sun5/tmp/pgs-dev-env.csh.tsf.tmp

3. Moved a few declarations from the middle of the code to the top in the files PGS_AA_dem.c and PGS_AA_demF.c

NCR ID: **ECSed25785**

Title: On the HP, FORTRAN testdrivers for AA tools cannot be compiled

Severity: 3

Problem: On HP machine RELBHPMS the FORTRAN AA testdrivers cannot be complied. The Errors have not been seen in other platforms. We have a high suspicion that the problem is with the compiler version on the machine.

Resolution: 1. Added the following two lines in function

/ecs/formal/TOOLKIT/src/DCW/PGS_AA_bindFORTRAN.c:

```
#define pgs_aa_dcw_STRV_A1 NUM_ELEMS(4)
FCALLSCFUN6( INT, PGS_AA_dcw, PGS_AA_DCW, pgs_aa_dcw, STRINGV,
INT, \
DOUBLEV, DOUBLEV, INT, PVOID)
```

2. Commented out FORTRAN wrapers in the file /ecs/formal/TOOLKIT/src/generic/PGS_AA_PeVA.c

3. Added two lines in the file /ecs/formal/TOOLKIT/include/DCW/PGS_AA_DCW.h changing

```
#define PGSd_AA_MAXNOCHARS 80
```

to

```
#ifndef PGSd_AA_MAXNOCHARS
#define PGSd_AA_MAXNOCHARS 80
#endif

4. Made two PGS_AA_bindFORTRAN.c in the DCW and generic
directories identical.
```

NCR ID: **ECSed24650**

Title: Need to update copyright notice in Toolkit for Raytheon

Severity: 4

Problem: Just need to update the copyright notice for Raytheon.

Resolution: Copyright was changed to Raytheon.

NCR ID: **ECSed24305**

Title: PGS_IO_Gen_Open() should write user file ID to log file when it fails

Severity: 3

Problem: This problem causes a small increase in size of the LogStatus file, but the excessive message can be suppressed in the usual way if necessary.

Resolution: Many lines of code were added in the C, FORTRAN77 and FORTRAN90 file opening software (for permanent files) so that when a file cannot be opened, the user receives in the Log Status file an indication of the file name.

NCR ID: ECSed28572

Title: Modification on INSTALL, INSTALL-HDFEOS-Wrap files

Severity: 2

Problem: The presence of old version number instances of HDF, HDF-EOS files in the INSTALL file is affecting proper installation of the toolkit

Resolution: The files were updated with the latest version numbers (5.2.7 and 2.7)

NCR ID: ECSed26773

Title: Improve Toolkit error messages

Severity: 3

Problem: Providing the problematic LID and file name would be most beneficial.

Resolution: The LID and filename are now provided.

NCR ID: ECSed27974

Title: PM1 Time formats change for DPREP

Severity: 2

Problem: In response to the change of time formats for the Aqua platform, the toolkit L0 interface was modified. There are two time formats on Aqua GISS and GIRD. Two functions: PGSd_EOS_PM_GIRD() and PGSd_EOS_PM_GIIS() were added to replace the original PGSd_EOS_PM(). The ORBSIM program was also modified to add these functions. A problem arises in that DPREP still uses the old function: PGSd_EOS_PM().

A patch to the toolkit containing the new functions was delivered to the SCFs previously.

There is a discrepancy between DPREP and the toolkit which needs to be dealt with.

Resolution: This issue was resolved with the fix to ECSed28041 (see above).

NCR ID: **ECSed06151**

Title: DEM bilinear interpolation not available in SCF B.0 TOOLKIT5.2

Severity: 5

Problem: DEM Tools presently will not support bilinear interpolation. Awaiting feed-back from instrument teams about particular algorithm to deal with following technical problems:

1.) the issue of weighting pixels from 3 arc resolution versus data pixels from 30 arc resolution.

2.) the number of pixels to iterate before progressing to the next, lower resolution data pixels.

3.) boundary problems at the edge of large fill value section and at the geographic extent of the world.

Resolution: DEM Tools now support bilinear interpolation. Alexis Zubrow modified the PGS_DEM_Interpolate.c and PGS_DEM_RecursiveSearchBil.c files to include this capability. PGS_DEM_GetPoint.c, PGS_DEM_ReplaceFillPointsFlt32.c, PGS_DEM_ReplaceFillPointsInt16.c, PGS_DEM_FillPointsInt8.c were modified. (Note: oblem on DEC machine. Now that toolkit uses HDF4.1r3 the problem has been resolved on DEC machines)

NCR ID: **ECSed08922**

Title: PGS_DEM_SortModels does not step to lower resolution when data is not available in higher resolution.

Severity: 4

Problem: PGS_DEM_SortModels does not step to lower resolution when data is not available in higher resolution.

Resolution: Modified PGS_DEM_SortModels so that it does not return error on first resolution if the data is incomplete in that resolution. We let for loop to continue to examine next resolution. if we run out of resolutions we may get fatal error message. (Note: At the time of submitting this NCR the HDF4.1r1 is used for DEM tools, which had problem on the DEC machine. We have switched to HDF4.1r3 which has no problem on DEC. Therefore, the problem seen with HDF has been resolved)

5.3 Release 6A SCF Toolkit 5.2.7 Non-Conformance Reports (Open Status)

The following NCRs are liens against the Toolkit 5.2.7 delivery.

NCR ID: **ECSed28969**

Title: IBM platform not available for Toolkit Testing

Severity: 3

Problem: There is an open RTSC trouble ticket on the fact that there are problems with the Toolkit IBM testing platform (cle9ibm). The trouble ticket number is 000913009.

This NCR is to document the fact that the SCF Toolkit 5.2.7 was not tested on the IBM platform prior to its release.

Note: Testing on all other platforms (DEC, HP, SUN, SGI) was successful and the release is certified on those platforms with this open NCR against the IBM platform (in order not to hinder the majority of users on those other platforms).

NCR ID: **ECSed22934**

Title: ODL Parser does not handle errors in datetime format

Severity: 2

Problem: PDPS was inserting granules of type SSAPC. The metadata generated by PDPS had a value for PGEDATELASTMODIFIED which had an invalid format; the date and time in the string were separated by a blank.

The ODL parser expected the date and time in the string to be separated by 'T' (current convention), or if not, to be separated by '-' (old convention).

No provision was made in the ODL parser code for error cases, so when PDPS attempted to insert the SSAPC granule with bad metadata, ScienceDataServer coredumped.

Although it is unlikely that metadata will be incorrectly formatted, it is possible (e.g., manually generated metadata). The ODL parser should handle error cases without causing ScienceDataServer coredump.

NCR ID: **ECSed17632**

Title: LOCALDISK not cleaned up completely when ingesting converted data types

Severity: 3

Problem: When ingesting the following data type with the SAVEONEXIT parameter set to false the LOCALDISK is not being completely cleaned up:

GDAS_0ZF and GDAS0ZFH
SNOWICEN and SNOWICEH
OZ_DAILY and OZ_DLYH

The following file remains in LOCALDISK for each converted file after all data has been ingested and archived and the Requests have been completed:

xxxxxxxxxxxxxxxxxx.hdfeos.met

These files are being created by TOOLKIT per the developer. Either TOOLKIT cleans these files up or Ingest should clean them up.

NCR ID: **ECSed18134**

Title: PGS_EPH_GetEphMet fails to return requested metadata.

Severity: 3

Problem: AM-1 DPREP attitude preprocessor tags the Toolkit attitude dataset with orbit metadata deduced by the AM-1 DPREP ephemeris preprocessor. A problem was encountered with PGS_EPH_GetEphMet where the orbit metadata could not be retrieved by PGS_EPH_GetEphMet because the Toolkit attitude dataset time-span did not fall COMPLETELY inside the corresponding Toolkit ephemeris dataset time-span. PGS_EPH_GetEphMet returns an error complaining to the effect that the requested timespan does not fall entirely inside the ephemeris timespan.

This is routinely expected to happen because the ephemeris deduced from EDOS datasets and attitude deduced from FDD datasets do not keep the same time-line. For example the last attitude data point can trail the last ephemeris data point (from the same two hour data interval) by a fraction of one second. Querying PGS_EPH_GetEphMet with such an attitude timespan causes
PGS_EPH_GetEphMet to return the error condition described above.

It appears that the requirement for the PGS_EPH_GetEphMet query time to fall entirely within the Toolkit ephemeris dataset is too restrictive. Perhaps PGS_EPH_GetEphMet could return an error if the requested timespan falls entirely outside the Toolkit ephemeris timespan. Or perhaps a warning could be issued to the LogStatus file and no error condition be generated.

NCR ID: **ECSed12018**

Title: Shortfall in orbit metadata determination

Severity: 5

Problem: This is not really a "bug" but rather a shortfall in the software capability.

ECS (Toolkit) ephemeris files contain metadata for all orbits spanned by the ephemeris data in the file. This metadata consists of the equator northward crossing time (orbit start), equator southward crossing time and equator southward crossing longitude. Because ephemeris files are split on time boundaries and not orbit boundaries it is typical that the first record of ephemeris data in the file is somewhere in the middle of an orbit (as defined by equator crossings). This means that typically the time span of orbit METADATA in a give file is greater than the time span of the actual ephemeris data contained in the file.

Currently the Toolkit ephemeris metadata extraction tool PGS_EPH_GetEphMet() uses an algorithm based on file ephemeris data time span to retrieve the metadata. For example if a single ephemeris file has been staged and the user requests orbit metadata for a given time range, the Toolkit will open the staged ephemeris file and check the time range of the EPHEMERIS data stored in the file. An error will be returned stating that no metadata is available for the requested times if the requested times fall outside the range of the EPHEMERIS data contained in the file. The shortfall here is that the METADATA contained in the file may extend beyond the boundaries of the actual ephemeris data contained in the file (since each metadata record is information for a complete orbit and as mentioned earlier the ephemeris data in the file may--most often will--begin in the middle of an orbit).

Therefore it would be useful if the PGS_EPH_GetEphMet() would respond to requests for metadata based on the actual metadata times in the file and not just the times of the ephemeris data itself. This could prevent the failure of PGEs that are processing times around the time boundaries of a staged ephemeris file if the these time boundaries are not exactly aligned with the ephemeris record boundaries and the previous or following ephemeris files have not been staged.

NCR ID: **ECSed21811**

Title: Fortran90 IO/GEN files require connection specifiers action=' '

Severity: 5

Problem: When the files on a cross mounted host (with READ ONLY access) are targeted for opening by f90 IO interfaces, error is returned.

NCR ID: ECSed07450

Title: DEM tools error at international date line

Severity: 4

Problem: If attempt to extract a region which crosses the international date line (180degrees W/E), the DEM tools will return an error. It is conceivable that such regions may be requested.

NCR ID: ECSed28385

Title: PGS_CSC_RectToGeoCen makes only latitudes >= 0

Severity: 2

Problem: PGS_CSC_RectToGeoCen contains an arc cosine that always returns latitude > 0 or =0, even for points in the Southern hemisphere

NCR ID: ECSed28223

Title: loss of precision in output metadata

Severity: 2

Problem: GRINGPOINTLONGITUDE is double precision float. MODIS writes values with 6 digits to the right of the decimal. The .met file that is delivered along with the data file upon distribution, however, has only 4 digits to the right of the decimal. This loss of precision is unacceptable.

NCR ID: ECSed28535

Title: MISRQA file LOCALGRANULEID displayed in the core metadata

Severity: 2

Problem: MISRQA file LOCALGRANULEID displayed in the core metadata of the file does not match the LOCALGRANULEID of the file name. Several MISQA files from PGE 1 have localgranuleid's displayed in the core metadata that do "not" match the external file name. These files do not ingest properly into the MISR QA DMS database because of the incorrect core metadata localgranuleid.

NCR ID: ECSed26769

Title: no notice of no processing logs

Severity: 3

Problem: a problem was encountered with a PCF that resulted in no Toolkit processing logs (LogStatus, LogReport, LogUser) being created. Additionally, no notice of this Problem was received.

NCR ID: ECSed26280

Title: Inputting a wrong leap second to PGS_TD_UTCtoUTCjd can cause error

Severity: 3

Problem: Ordinarily, the seconds field in UTC can't be as large as 60. But during a leap second, it is allowed to be any number in the range 0<= seconds <61 . Unfortunately, if the user (or a data error) causes a number >60 to appear in the seconds field of UTC, the function PGS_TD_UTCtoUTCjd() accepts that value, whether it is in a legitimate leap second interval or not. In any case it sets the message and return status: PGS_TD_M_LEAP_SEC_IGNORED. If this is not the case of a legitimate leap second, other functions such as PGS_TD_UTCtoTAI() will become confused, and return PGS_E_TOOLKIT. This error will then be difficult to trace. The function PGS_TD_UTCtoUTCjd() should be fixed to trap this error and return PGSTD_E_TIME_VALUE_ERROR.

NCR ID: ECSed26703

Title: An issue with comparing float and double variables for strict equality ESDIS

Severity: 3

Problem: Comparing float and double variables for strict equality (i.e. using == or !=) is against the ESDIS software standards (423-16-01 p. 3-3, section 3.3.13). At several places in TD, CSC, and CBP tools variables have been compared for equality with PGSd_GEO_ERROR_VALUE which is a defined float constant.

NCR ID: ECSed26770

Title: Toolkit PCF: default directory almost white space delimited

Severity: 3

Problem: The default directory in the PCF appears to be white-space delimited. This is only partially true. Variable amounts of white space are allowed between the "!" and the directory name, but none is (currently) allowed after the directory name. If white space is allowed before the directory name, then it should also be allowed afterward.

Appendix A. Build/Installation Instructions-

Build/installation instructions for Release 6A SCF Toolkit 5.2.7 are located in Section 5 of the Release 6A SDP Toolkit Users Guide (333-CD-600-001) and the README file available with the Toolkit for delivery.

This page intentionally left blank.

Appendix B. Special Operating Instructions

The test drivers are provided "AS IS" without warranty of any kind. They are provided for example purposes only. The following disclaimer applies to the README files provided with the Test Drivers. These *readme files have not been verified. They do, however, contain valid and useful information concerning the setting of environment variables and compile instructions. However, should there be any errors or discrepancies between the instructions contained in the *README files and the Users Guide, the Users Guide should take precedence.

This page intentionally left blank.

Appendix C. System Limitations

None.

This page intentionally left blank.

Appendix D. User Feedback Procedures

Please refer to the Release 6A SDP Toolkit Users Guide for a description of user feedback procedures.

This page intentionally left blank.

Appendix E. Public Software Disclaimer Notice

This package, i.e., cfortran.h, and the cfortran.h example programs are property of the author who reserves all rights. This package and the code it produces may be freely distributed without fees, subject to the following restrictions:

- You must accompany any copies or distribution with this (unaltered) notice.
- You may not receive money for the distribution or for its media (e.g., tape, disk, computer, paper).
- You may not prevent others from copying it freely.
- You may not distribute modified versions without clearly documenting your changes and notifying the author.
- You may not misrepresent the origin of this software, either by explicit claim or omission.

The intent of the above terms is to ensure that the cfortran.h package not be used for profit making activities unless some royalty arrangement is entered into with its author.

This software is provide "as is" without warranty or any kind, either expressed or implied. The entire risk as to the quality and performance of the software is with you. Should the software prove defective, you assume the cost of all servicing, repair or correction. The author is not responsible for any support or service of the cfortran.h package.

Abbreviations and Acronyms

A.A.	Astronomical Almanac
AA	Ancillary Data Access
AIRS	Atmospheric Infrared Sounder
API	Application Program Interface
APID	Application Process Identifier
ASTER	Advanced Spaceborne Thermal Emission and Reflection Radiometer
BNF	Bachus-Nauer Form
CBP	Celestial Body Position
CCR	Configuration Change Request
CCSDS	Consultative Committee on Space Data Systems
CDRL	Contract Deliverable Requirements List
CERES	Clouds and Earth Radiant Energy System
COTS	Commercial off-the-shelf Software
CSMS	Communications and Systems Management Segment (ECS)
CRC	Cyclic Redundancy Code
CSC	Coordinate System Conversion
CUC	Constant and Unit Conversions
DAAC	Distributed Active Archive Center
DCE	Distributed Computing Environment
DCN	Document Change Notice
DCW	Digital Chart World
DDF	Data Distribution Facility
DEM	Digital Elevation Model
DDTS	Distributed Defect Tracking System
DPFT	Data Processing Focus Team
DTM	Digital Terrain Model
ECI	Earth Centered Inertial

ECR	Earth Centered Rotating
ECS	EOSDIS Core System
EDHS	ECS Data Handling System
EDOS	EOS Data and Operations System
EOS	Earth Observing System
EOSAM	EOS AM Project (morning spacecraft series)
EOSDIS	EOS Data and Information System
EOSPM	EOS PM Project (afternoon spacecraft series)
EPH	Ephemeris Data Access
ESDIS	Earth Science Data and Information System
ET	Ephemeris Tool
FDF	Flight Dynamics Facility
FOV	Field-of-View
ftp	file transfer protocol
GAST	Greenwich Apparent Sidereal Time
GCT	Geo-Coordinate Transformation
GMST	Greenwich Mean Sidereal Time
GPS	Global Positioning System
GSFC	Goddard Space Flight Center
HAIS	Hughes Applied Information Systems
HDF	Hierarchical Data Format
HITC	Hughes Information Technology Company
http	hypertext transport protocol
I&T	Integration & Test
I/O	Input/Output
IEEE	Institute of Electrical and Electronic Engineers
IMS	Information Management System (ECS)
IWG	Investigator Working Group
JPL	Jet Propulsion Laboratory

LaRC	Langley Reseaarch Center
M&O	Maintenance and Operation
MCF	Metada Configuration File
MDUE	Missing Data Unit Entry
MEM	Memory Management
MET	Metadata
MODIS	Moderate-Resolution Imaging Spectroradiometer
MSFC	Marshall Space Flight Center
NASA	National Aeronautics and Space Administration
NCR	Nonconformance Report
NCSA	National Center for Supercomputer Applications
netCDF	network Common Data Format
NMC	National Meteorological Center
PACOR	Packet Processor
PC	Process Control
PGE	Product Generation Executive
PCF	Process Control File
PDS	Production Data Set
PDPS	Planning & Data Production System
PCF	Process Control File
PDR	Preliminary Design Review
PGE	Product Generation Executive (formerly Product Generation Executable)
PGS	Product Generation System (ECS)
PGSTK	Product Generation System Toolkit
POSIX	Portable Operating System Interface for Computer Environments
QA	Quality Assurance
QAC	Quality and Accounting Capsule
RDBMS	Relation Data Base Management System
RPC	Remote Procedure Calls

RRDB	Recommended Requirements Database
SCF	Science Computing Facility
SDP	Science Data Production
SES	Scheduling and Execution Subsystem
SDPS	Science Data Processing Segment
SDPF	Science Data Processing Facility
SGI	Silicon Graphics International
smf	Collection of utilities and library routines used for generating SMFs and manipulating SMF-defined status values and messages
SMF	Status Message File
SPSO	Science Processing Support Office
SSM/I	Special Sensor for Microwave Imaging
TAI	International Atomic Time
TBD	To Be Determined
TD	Time Date Conversion
TDB	Barycentric Dynamical Time
TDRSS	Tracking and Data Relay Satellite System
TDT	Terrestrial Dynamical Time
TLCF	Team Leader Computing Facility
TRMM	Tropical Rainfall Measuring Mission (joint US - Japan)
TSS	(TDRSS) Service Session
UARS	Upper Atmosphere Research Satellite
URL	Universal Research Locator
US	United States
USNO	U.S. Naval Observatory
UT	Universal Time
UTC	Universal Coordinated Time
UTCF	Universal Time Correlation Factor
UTM	Universal Transverse Mercator
VCDU	Virtual Channel Data Unit

VDD	Version Description Document
VPF	Vector Product Format
WWW	World Wide Web
