Abstract

This is Volume 5 of a series of lessons containing the training material for the Earth Observing System Data and Information System (EOSDIS) Evaluation and Development (EED) Contract. This lesson provides a detailed description of the process required to perform the tasks associated with archive functions.

Keywords: training, instructional design, course objective, archive, granule deletion tool, Spatial Subscription Server, Data Pool, Data Pool maintenance, Release 8.0

Introduction

Identification

Training Material Volume 5 is part of Contract Data Requirements List (CDRL) Item 23, which is a required deliverable under the Earth Observing System Data and Information System (EOSDIS) Evaluation and Development (EED) Contract (NNG10HP02C).

Scope

Training Material Volume 5 describes the process and procedures associated with Archive Processing. It describes archive hardware, software, and data. In addition, it addresses starting and shutting down the tape archive control software, monitoring archive requests, and performing archive management tasks. This lesson is designed to provide the operations staff with sufficient knowledge and information to satisfy all lesson objectives.

Purpose

The purpose of this Student Guide is to provide a detailed course of instruction that forms the basis for understanding data archiving. Lesson objectives are developed and will be used to guide the flow of instruction for this lesson. The lesson objectives will serve as the basis for verifying that all lesson topics are contained within this Student Guide and slide presentation material.

Status and Schedule

This lesson module provides detailed information about training for the current baseline of the system. Revisions are submitted as needed.

Organization

This document is organized as follows:

- | | |
|------------------------|---|
| Introduction: | The Introduction presents the document identification, scope, purpose, and organization. |
| Related Documentation: | Related Documentation identifies parent, applicable and information documents associated with this document. |
| Student Guide: | The Student Guide identifies the core elements of this lesson. All Lesson Objectives and associated topics are included. Slide Presentation is reserved for all slides used by the instructor during the presentation of this lesson. |

Archive Processing Overview

Lesson Overview

This lesson reviews the process of archiving data, including a description of processing for working with the StorNext Storage Manager (SNSM) software, monitoring the ingest/archiving/distribution performance, managing archive content and capacity, maintaining configuration of peripherals and data servers, backing up and restoring archived data, documenting and troubleshooting archive errors, maintaining the archive processing queue (storage and retrieval), and providing archive status.

Lesson Objectives

Overall Objective - The overall objective of this lesson is proficiency in the methodology and procedures for archive processing in the Earth Observing System Data and Information System (EOSDIS) Core System (ECS) during maintenance and operations. The lesson includes a description of processing for monitoring the ingest/archival/distribution performance, maintaining configuration of peripherals and data servers, documenting archive errors, maintaining the archive processing queue (both storing and retrieval), managing archive content and capacity, submitting new data archive requests to the Science Coordinator, and providing archive status.

Specific Objective 1 - The student will list DAAC operator positions for Archive Manager personnel interfaces and identify responsibilities associated with each interface.

Condition - The student will be given a list of DAAC operators.

Standard - The student will select four personnel positions with which the Archive Manager interfaces and list at least one major area of responsibility for each selected position.

Specific Objective 2 - The student will identify the major hardware facility for archival storage, the tape drives, storage networking blades and the associated storage cartridges.

Condition - The student will be given a copy 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract*, and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract*, a working system archive facility, and an LTO 4 tape cartridge.

Standard - The student will correctly point out the Quantum Scalar iSeries library, identify the tape drives, storage networking blade and the LTO 4 tape cartridge.

Specific Objective 3 - The student will name the major parts of the Operator's Panel on the Scalar Library and explain how each is used.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract*, and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract*.

Standard - The student will identify the Operator's panel, each section, and how each is used.

Specific Objective 4 - The student will describe the StorNext Storage Manager (SNSM) software.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract*, and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract*.

Standard - The student will identify the SNSM software as the StorNext File System and the Storage Manager, and correctly describe its host platform as an HP Proliant computer.

Specific Objective 5 - The student will start the StorNext tape archive system.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract*, and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract*, and a working system archive facility.

Standard - The student will operate the StorNext control panels, power up the archive hardware, vary the partition online, then boot StorNext host and start StorNext without error and in accordance with documented procedures.

Specific Objective 6 - The student will shut down the StorNext tape archive system.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract*, and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract*, and a working system archive facility with StorNext started.

Standard - The student will terminate StorNext and vary the partition offline, and shutdown the library without error and in accordance with documented procedures.

Specific Objective 7 - The student will use manual mode to bring the partition online.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract*, and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract*, and a working system archive facility with StorNext started.

Standard - The student will vary the partition offline, and vary the partition back online, without error, in accordance with documented procedures, and following all required safety precautions.

Specific Objective 8 - The student will describe the relationships between Earth Science Data Types (ESDTs), Logical Volume Groups (LVGs) in the Archive, and physical archive volume groups.

Condition - The student will be given a diagram depicting the relationships.

Standard - The student will correctly explain the logical and physical structure of archive storage for the system.

Specific Objective 9 - The student will describe the process of, and monitor the progress of, inserting new data into the archive.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract*, and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract*, and a working system archive facility with StorNext started.

Standard - The student will describe without error the process of inserting new data into the archive.

Standard - The student will perform without error and in accordance with documented procedures the procedures relating to monitoring retrieval of data from the archive.

Specific Objective 10 - The student will use the granule deletion capability to delete granules from the archive and inventory.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract* and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract* and a working system archive facility with StorNext started.

Standard - The student will perform without error and in accordance with documented procedures the procedure for deleting granules from the archive and inventory.

Specific Objective 11 - The student will perform automatic and manual loading of archive storage cartridges.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract* and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract* a working system archive facility with StorNext started, and tape cartridges.

Standard - The student will perform procedures for automatic and manual loading of the proper cartridges for the library without error and in accordance with documented procedures.

Specific Objective 12 - The student will create a backup for archived data.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract* and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract* and a working system archive facility with StorNext started.

Standard - The student will correctly and in accordance with documented procedures perform a backup of archived data.

Specific Objective 13 - The student will replace a full Backup Volume.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract* and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract* and a working system archive facility with StorNext started.

Standard - The student will perform without error and in accordance with documented procedures the procedures for replacing the Backup Volume (Volume 1).

Specific Objective 14 - The student will manually create a replacement backup for an archive data tape.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract* and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract* and a working system archive facility with StorNext started.

Standard - The student will perform without error and in accordance with documented procedures the procedures for manually creating a replacement backup for an archive data tape.

Specific Objective 15 - The student will “restore” archive data by inserting a backup copy cartridge.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract* and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract* and a working system archive facility.

Standard - The student will perform without error the procedure for inserting a backup copy cartridge to replace a lost archive data tape.

Specific Objective 16 - The student will display what is in the StorNext queue.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract* and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract* and a working system archive facility.

Standard - The student will perform without error and in accordance with documented procedures the procedure for viewing what is in the StorNext queue.

Specific Objective 17 - The student will display StorNext messages from the system log file.

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract* and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract* and a working system archive facility.

Standard - The student will perform without error and in accordance with documented procedures the procedure for using the *StorNext_log* script to display StorNext messages from the system log file.

Specific Objective 18 - The student will launch and use the StorNext Graphical User Interface (GUI).

Condition - The student will be given a copy of 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract* and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract* and a working system archive facility.

Standard - The student will successfully start the StorNext GUI, display icons and data for volume groups and volumes, and execute procedures for modifying volume groups and volumes without error and in accordance with documented procedures.

Specific Objective 19 - The student will perform the functions required to maintain the Data Pool, including tasks with the Data Pool Maintenance (DPM) GUI (monitor Data Pool active insert processes; monitor/cancel data pool insert actions; suspend and resume Data Pool actions; check the Data Pool insert queue; toggle the state of the NoFreeSpace flag; configure the number of allowed active insert processes; configure the default retention period and the default retention priority; view and update collection groups in the Data Pool database; list/add/delete a theme), tasks with utilities and scripts (extend the period of retention for selected science granules already in the Data Pool; set up a schedule and cron job for Data Pool cleanup; manually invoke Data Pool cleanup; set up a schedule and cron job for Data Pool access statistics accumulation; manually invoke the Data Pool access statistics utility), and tasks with the Spatial Subscription Server (NBSRV) GUI; update a subscription; view/add/cancel a bundling order; view statistics on processing of events and actions by the Spatial Subscription Server).

Condition - The student will be given a copy 609-EED-001, *Release 8.0 Operations Tools Manual for the EED Contract* and a copy of 611-EED-001, *Release 8.0 Mission Operation Procedures for the EED Contract* and a working system archive facility.

Standard - The student will use the GUI tools, scripts, and utilities without error in accordance with applicable procedures to perform the required Data Pool maintenance functions.

Importance

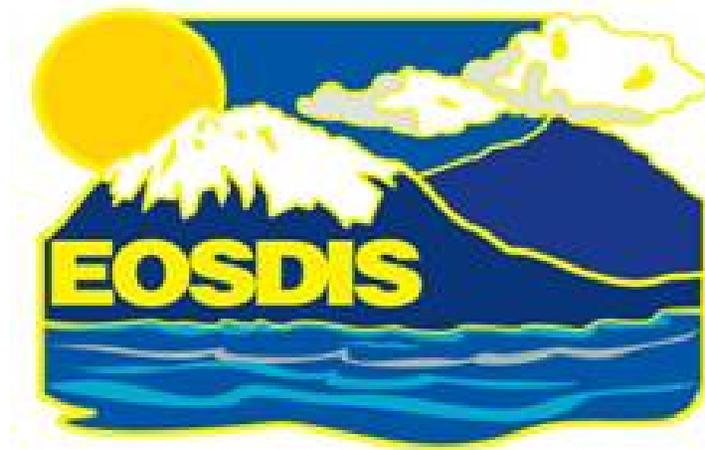

The Archive Manager's role in maintaining the archive data is key to the successful implementation and operation of the system. Ensuring the smooth operation of the archive is crucial for system core functionality.

Slide Presentation

Slide Presentation Description

The following slide presentation represents the slides used by the instructor during the conduct of this lesson.

This page intentionally left blank.

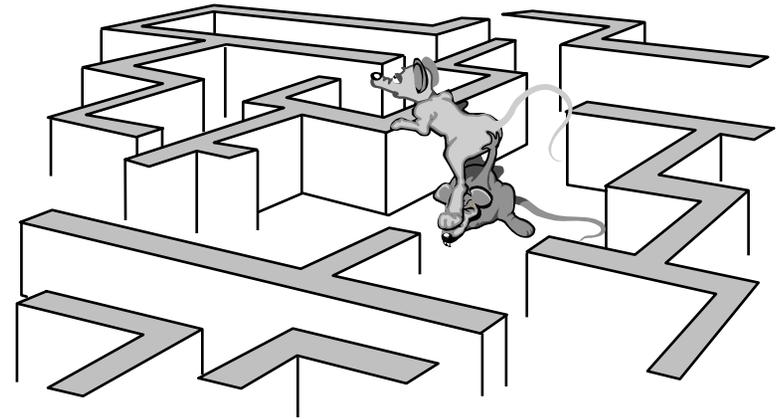

Archive Processing

March 2011

Overview of Lesson

- **Introduction**
- **Archive Processing Topics**
 - **Archive Hardware and Software**
 - **Delete Granules**
 - **Data Pool Management and Maintenance**

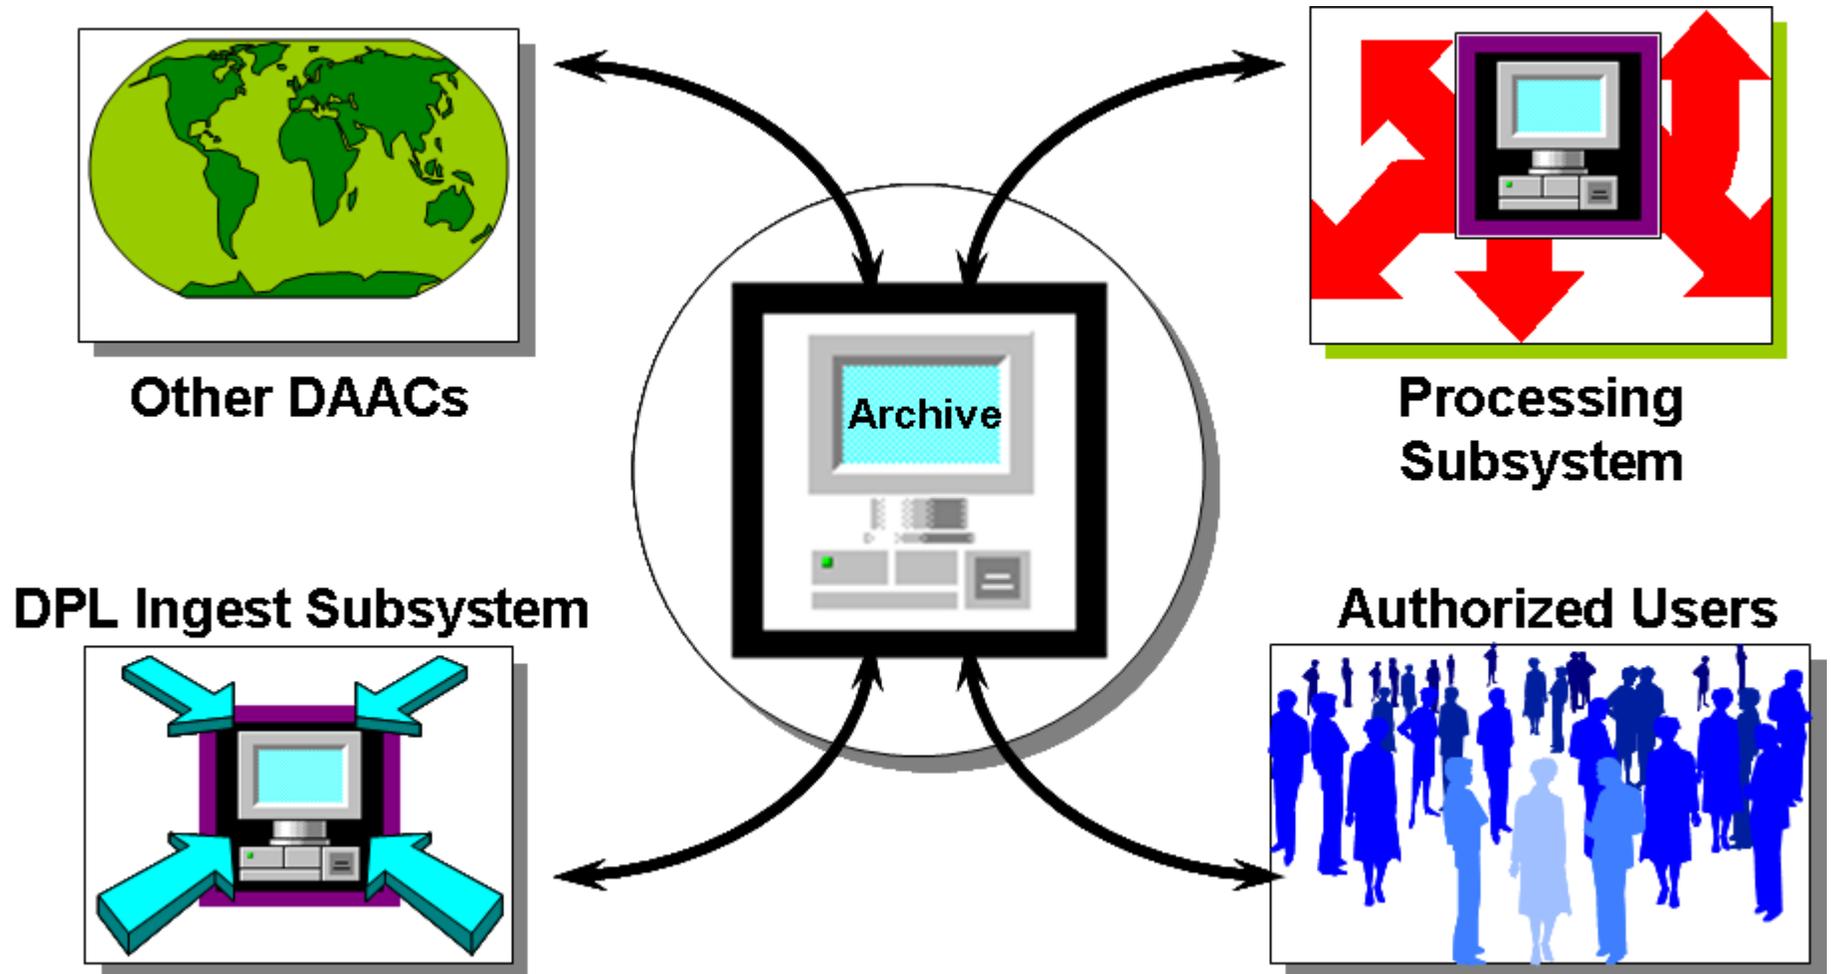

Objectives

- **Overall: Proficiency in Archive Processing**
 - Describe Archive Manager roles and responsibilities
 - Identify and describe Archive storage resources
 - Describe archive storage element relationships and archive resource management
 - Use Granule Deletion tool to delete granules
 - Delete files from the archive
- **Overall: Proficiency in Archive Processing (Cont.)**
 - Use GUIs, utilities, and scripts for Data Pool maintenance

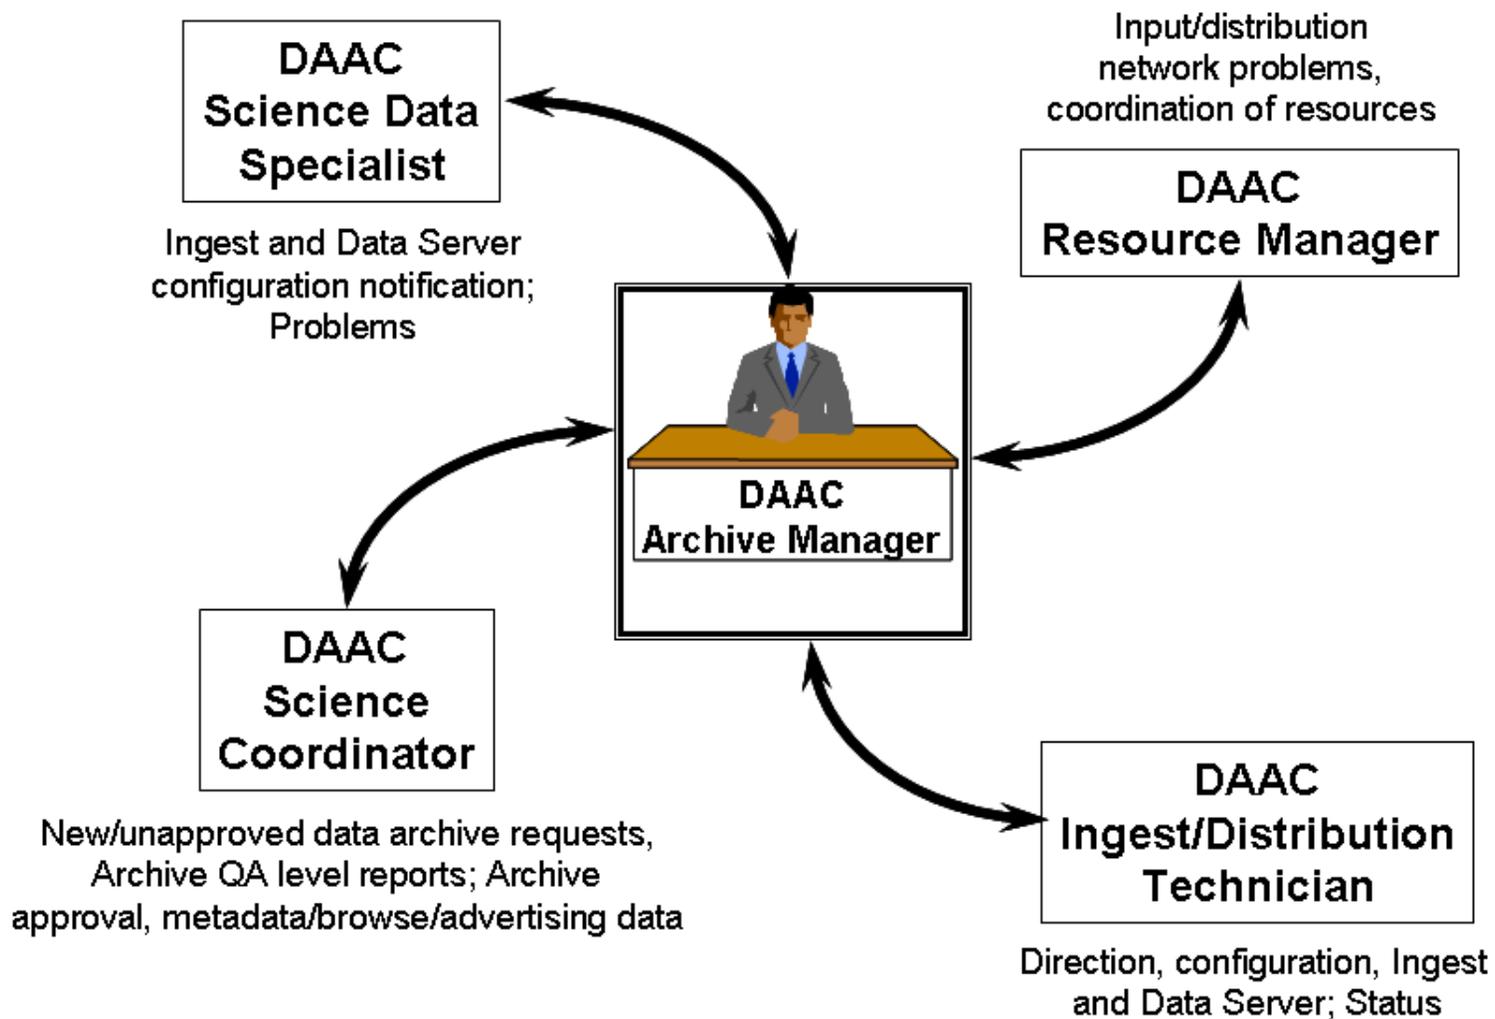

Objectives (Cont.)

- **STANDARDS:**
 - Lesson content (procedures in the lesson)
 - Mission Operation Procedures for the EED Contract (611-EED-001)

Sources and Uses of Archive Data

DAAC Archive Manager Interfaces

Quantum Scalar i2000 Library

- Operator panel, a touch screen display device, located on front of the control module used to perform library operations and service functions.

Quantum Scalar i2000 Library

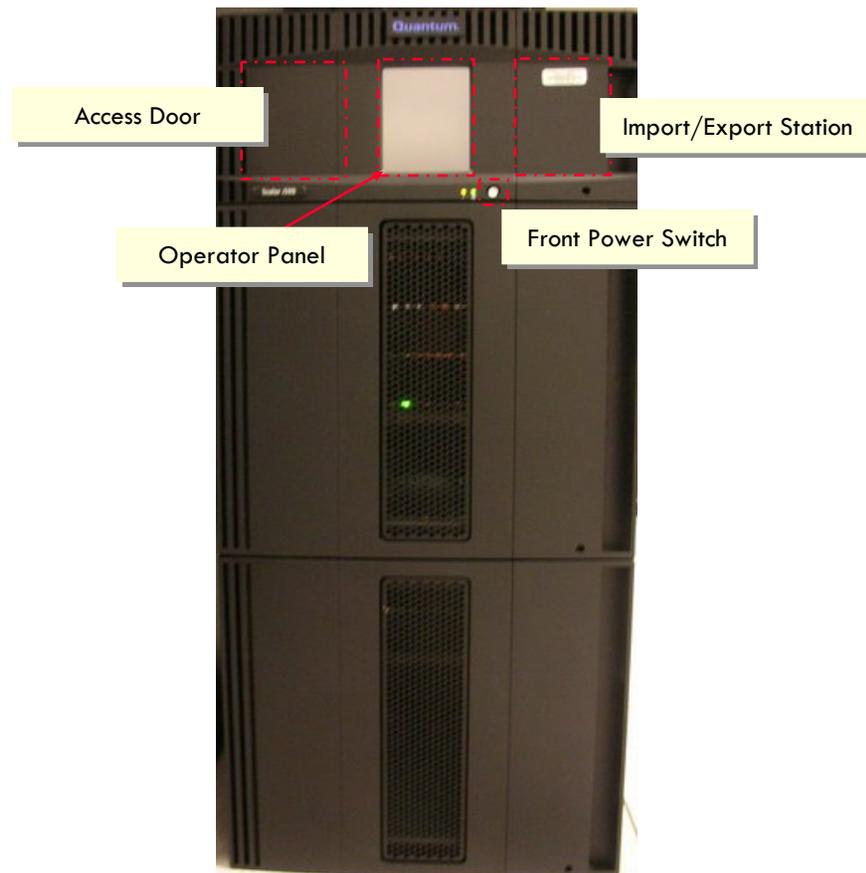

Storage Networking Blades

LTO 4 Tape Drives

Quantum Scalar i500 Library

- **Operator panel, a touch screen display device, located on the access door of the control module used to perform library operations and service functions.**

Quantum Scalar i500 Library

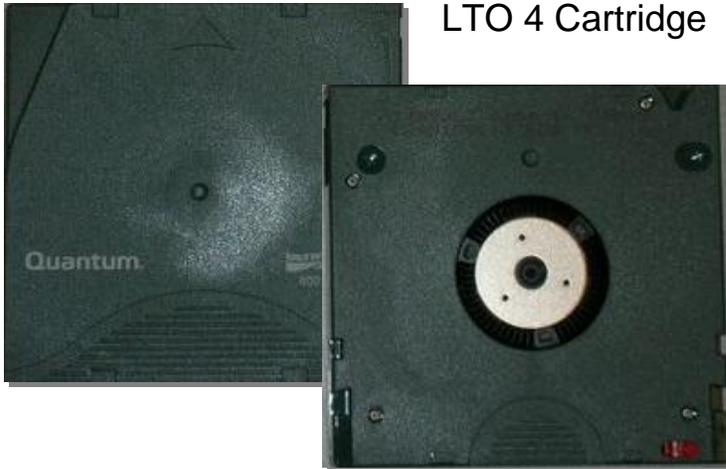

Network Connection

LTO 4 Tape Drives

Redundant Power Supplies

LTO 4 Tape Drives and SN Blades

LTO 4 Cartridge

- 120 MB/sec native transfer rate
- 800GB capacity per cartridge (uncompressed)
- Writes LTO 3 and 4
- Reads LTO 2, 3 and 4

Cleaning Cartridge

Media type

Barcode

Scalar i2000 Operators Panel

The screenshot shows the Scalar i2000 Library Management Console interface. The components are as follows:

- Title Bar:** Scalar i2000 Library Management Console
- Menu Bar:** Operations Monitor Setup Tools View Connection Help
- Tool Bar:** Includes icons for Home, Refresh, Tickets, Explorer, and Log Off.
- Library Name:** Name: Physical Library: p4sm201s, Status: Online
- Current Activity:** Activity: Idle, Date: Feb 12, 2009, Time: 10:20:00 AM. A callout box labeled "Current Date/Time" points to the Date and Time fields.
- Data Transfer:** A bar chart showing read and write activity over the last 24 hours. A callout box labeled "Data Statistics" points to this chart.
- Slots Utilized:** A vertical bar chart showing 42% utilization of 117 out of 276 slots. A callout box labeled "Media Slots Usage" points to this chart.
- Mounts:** A bar chart showing the number of mounts per hour over the last 24 hours.
- Configuration:**
 - Tape Drives: 8
 - Drive Types: LT04
 - Licensed Storage Slots: 200
 - Total Storage Slots: 276
 - Library Type: Scalar i2000
A callout box labeled "Configuration Summary" points to this section.
- Overall System Status:** A grid of status indicators:
 - Drives:
 - Connectivity:
 - Control:
 - Robotics:
 - Power:
 - Cooling:
A callout box labeled "System Status Buttons" points to this section.

Scalar i500 Operators Panel

The image shows a screenshot of the Quantum Scalar i500 Operators Panel interface. The interface is divided into several sections:

- Header:** Displays "Quantum Scalar i500" and includes icons for Home, Help, and Logout.
- Title Bar:** Shows the current library name "library_a" with navigation arrows.
- Navigation:** Includes tabs for "Setup", "Operations", and "Tools".
- Main Body:** Contains four data panels:
 - I/E Station Slots: 6**

Total	Full	Empty	Progress
6	2	4	33%
 - Drives: 3**

Library	Act	Avail	Progress
library a	3	0	100%
 - Storage Slots: 65**

Library	Full	Empty	Progress
library a	41	24	63%
Unassigned	0		
 - Cleaning Slots: 4**

Full	Empty	Progress
0	4	0%
- Health/Navigation Bar:** Features three buttons: "Library" (with a red X icon), "Drives" (with an orange warning icon), and "Media" (with a green checkmark icon).

Annotations in the image include a red box around the Header, Title Bar, and Health/Navigation Bar, and a yellow box labeled "Main Body" pointing to the central data panels.

StorNext Application

- **Archive operations rely on both custom and commercial off the shelf (COTS) software for complete mass storage archive management, providing the capability to accept Graphical User Interface (GUI) and command line interface inputs, and to interpret them to the appropriate level needed to control and monitor archive operations. The StorNext Storage Manager (SNSM) software is a product of Quantum. Quantum, which acquired ADIC, is the vendor for both the StorNext File System and the StorNext Storage Management products.**
- **The purpose of SNSM in the system is to provide an easy-to-use interface to a large tape archive. StorNext manages files, volumes (media), drives and jukeboxes. It allows UNIX File System (UFS) access methods to be employed (e.g., ftp, rcp, uucp, nfs, RPC, cp, mv and native commands) while removing some of the limitations of the UFS. Primary among these is reliance on UNIX Index Node (inode) structures. StorNext maintains all inode information in database files rather than in associated disk structures. This minimizes or eliminates many of the file search problems inherent in searching large numbers of files in multiple directories.**

StorNext Application

Starting and Stopping StorNext

- **The ECS System contains**
 - managed (Hierarchical Storage Manager) and
 - unmanaged StorNext File Systems.
- **In order for the ECS System to function properly both must be start/stop.**
- **They can be started/stopped from the Linux command line or from the GUI provided by the vendor.**

StorNext Application

To start StorNext Manager Server (*this must be started first*) from the command line prompt: (as superuser or root)

- Logon to the active metadata server (x4smvaa). Using x4smvaa log into the active (x4sml01 (primary) or x4sml02 (failover/secondary))

service start

- Verify that the StorNext Manager Server is active with the command

ps -ef | grep cvfs

To start StorNext Manager Clients from the command line prompt: (as superuser or root)

- Logon to each of the clients.

service start

- Verify that the StorNext Manager Server is active with the command

ps -ef | grep cvfs

StorNext Application

To shutdown the StorNext System, you must stop both the server and its clients. The Clients must all be stopped first.

To Stop the StorNext Clients

- Log in as root (system administrator) into each StorNext Metadata Client.
service stop
- Check to ensure client has been stopped
ps -ef | grep cvfs
(NOTE : MAKE SURE THAT ALL CLIENTS ARE STOPPED)

To Stop the StorNext Server

- Log in as root (system administrator) into the active StorNext Metadata Server (x4smvaa).
- To stop StorNext Server, type:
service stop
- Check to ensure server has been stopped
ps -ef | grep cvfs

StorNext GUI Home Page

- The StorNext Home Page is Web based, and can be accessed by any Web enabled machine with the proper Java libraries, to start the StorNext Manager and its Clients from the GUI.

The screenshot displays the StorNext GUI Home Page. The interface includes a navigation menu with options like Home, SNFS, and SNSM. The main content area is divided into two primary monitoring sections: File System Monitor and Library Monitor. Both sections include a 'Refresh' button and a 'Refresh Rate' dropdown menu set to 'No Refresh'.

File System Monitor

State	File System	Total Space (GB)	Used Space (GB)	Free Space (GB)	Used Inodes	# Store Candidates	# Trunc Candidates	# SAN Clients	# LAN Clients	Status
✓	BIG	8254.26	6426.24	1828.03	51497	N/A	N/A	1	0	
✓	ops_fs1	1150.57	1150.51	0.06	4893	N/A	N/A	1	0	
✓	snfs1	534.56	185.93	348.64	10708	Refresh	Refresh	1	0	

Library Monitor

State	Library Name	Library Type	Number of Drives	Capacity	Fill Level
✓	I2K_Proto	SCSI	2	408	0
✗	I2K_dr1	Free		ON	
✗	I2K_dr2	Free		ON	
✓	ProtoLib	ACSLs	2	22026	6
✓	00_1015	In use		P30614	ON
✗	00_1016	Free		ON	
✓	vault1	Vault	0	5000000	0

No StorNext Storage Disks Configured
Click here to configure a Storage Disk

System Status: Admin Alert:

ptsml01 Active

StorNext GUI Admin Drop Down

The screenshot displays the StorNext GUI Admin interface. At the top, there is a navigation bar with 'Quantum' on the left, 'StorNext' in the center, and 'Home Help' on the right. Below this is a secondary navigation bar with 'Config', 'Admin', 'Reports', 'Service', and 'Help'. A dropdown menu is open under the 'Admin' tab, listing various administrative actions such as 'Access StorNext Logs', 'User Access Control', and 'Start/Stop StorNext'. The 'Start/Stop StorNext' option is highlighted in green.

The main content area is divided into several sections:

- File System:** A table showing the status of file systems. The 'snfs1' entry is highlighted.

File System	Used Inodes	# Store Candidates	# Trunc Candidates	# SAN Clients	# LAN Clients	Status
BIG	51497	N/A	N/A	1	0	[Progress Bar]
ops_fs1	4893	N/A	N/A	1	0	[Progress Bar]
snfs1	534.56	185.93	348.64	10708	Refresh	Refresh
- Library Monitor:** A section with a 'Refresh' button and a 'Refresh Rate' dropdown. It contains two tables:

State	Library Name	Library Type	Number of Drives	Capacity	Fill Level
✓	I2K_Proto	SCSI	2	408	0

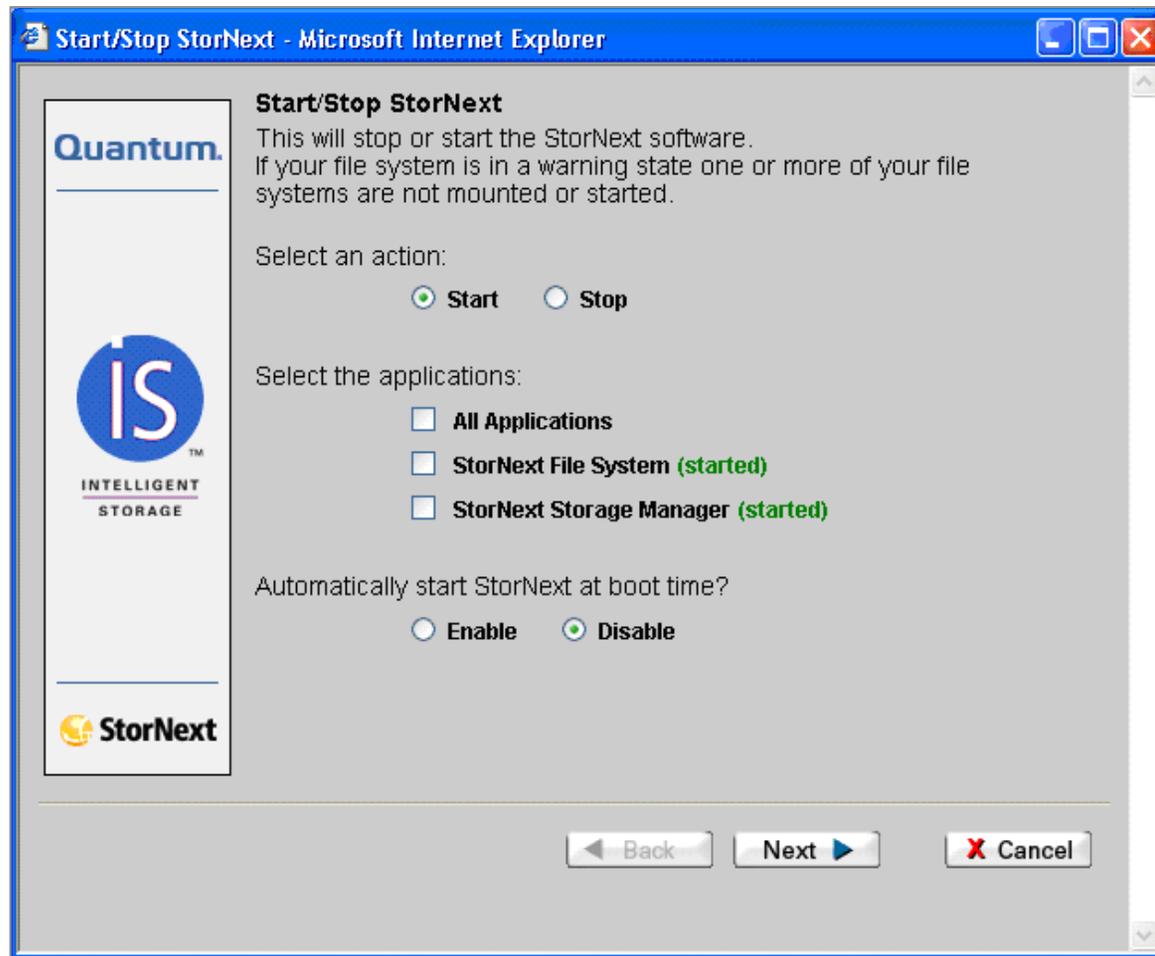

State	Drive Name	Status	Mounted Media	Compression
✗	I2K_dr1	Free		ON
✗	I2K_dr2	Free		ON

State	Library Name	Library Type	Number of Drives	Capacity	Fill Level
✓	ProtoLib	ACSLs	2	22026	6

State	Drive Name	Status	Mounted Media	Compression
✓	00_1015	In use	P30614	ON
✗	00_1016	Free		ON
- No StorNext Storage Disks Configured:** A message with a link to configure a storage disk.

At the bottom of the interface, there is a status bar with 'StorNext' logo, 'System Status' (with a red X), 'Admin Alert' (with an 'i' icon), 'ptsm101', and 'Active' (with a green circle).

StorNext Stop/Start GUI

Granule Deletion

- **Phases of Granule Deletion**
 - **Logical deletion [marking or flagging granules as “deleted” or as DFA (Delete From Archive) only in the AIM database]**
 - **Physical deletion [the actual deletion of marked/flagged granules from the inventory database with removal of XML metadata from the Small File Archive and the Science Granules from the Large File Archive]**
 - **Actual deletion from the inventory of the granules marked for physical deletion (not DFA only)**

Granule Deletion (Cont.)

Phase 1, Logical Deletion

- A GeoID file can be created by using a command-line utility (BulkSearch.pl). The GeoID file is the granule identification file used to mark granules for deletion.
- For the first phase, a command-line Bulk Delete utility (EcDsBulkDelete.pl) responds to operator-specified criteria for the deletion of granules by "logically" deleting from the inventory (Inventory database) those granules that meet the criteria

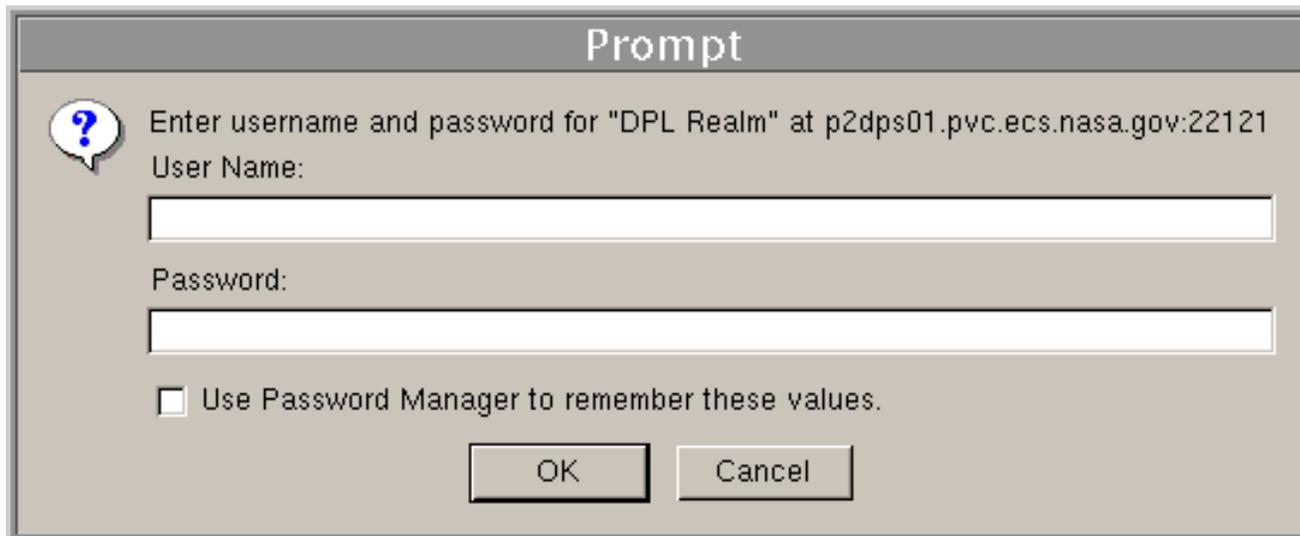

• Phase 2, Physical Deletion

- Physical deletion occurs when the operations staff runs the Deletion Cleanup utility (EcDsDeletionCleanup.pl). The utility removes all inventory rows (in the Inventory database) for granules that were flagged as “deleted,” including rows referencing related information (e.g., BR, PH, and QA) as well as Granules marked for deletion, the XML file for the granule is removed from the XML Archive, and all data files for the granule are removed from the Large File Archive.

Data Pool Management

- **Features of the Data Pool Maintenance GUI**
 - **Most Archive or support personnel tasks for monitoring and maintaining the Data Pool require the use of the Data Pool Maintenance (DPM) GUI**
 - **The DPM GUI permits an operator to perform tasks in the following general areas:**
 - **Monitoring Data Pool Active Insert Processes**
 - **Monitoring Data Pool Insert Queue**
 - **Managing Data Pool File Systems**
 - **Managing Cloud Cover Information**
 - **Checking the Status of Batch Inserts**
 - **Managing Data Pool Configuration Parameters and Data Pool Tuning**
 - **Managing and Adding New Data Pool Collection Groups (ECS and Non-ECS)**
 - **Managing Data Pool Collections within Collection Groups**
 - **Managing Existing and Adding New Data Pool Collection Themes**

DPM GUI: Security Login Prompt

The image shows a standard Windows-style dialog box titled "Prompt". On the left side, there is a blue question mark icon inside a white speech bubble. To the right of the icon, the text reads: "Enter username and password for 'DPL Realm' at p2dps01.pvc.ecs.nasa.gov:22121". Below this text are two input fields. The first is labeled "User Name:" and the second is labeled "Password:". At the bottom of the dialog, there is a checkbox with the label "Use Password Manager to remember these values." and two buttons: "OK" and "Cancel".

Data Pool Management (Cont.)

- **Features of the Data Pool Maintenance GUI (Cont.)**
 - **Full-capability operators have the ability to configure parameters and perform all other actions that can be accomplished with the DPM GUI**
 - **Limited-capability operators are able to view a lot of information**
 - **However, on the limited-capability GUI some buttons and links have been disabled so it is not possible to perform certain actions or access certain pages**

Data Pool Management (Cont.)

- **Features of the Data Pool Maintenance GUI (Cont.)**
 - **This lesson provides instruction in the full-capability version of the DPM GUI**
 - **However, the functions that are available to limited-capability operators as well as the functions that are not available to limited-capability operators are identified**

DPM GUI: File System Information Page (Add New File & Link to Modify File System)

The screenshot displays the 'Data Pool Maintenance' interface. At the top, there are navigation links: Home Page, Cloud Cover, Batch Summary, Configuration Parameters, List Insert Queue, Aging Parameters, Collection Groups, Help, Themes, and Data Pool File Systems. A 'Screen Refresh Rate' dropdown is set to 'Never', with the last refresh on 'Mon Aug 18 12:21:59 EDT 2008'. Below this is a table titled 'File System Information' with columns for File System Path, Ingest Status, DPL Insert Status, Free Space, Used Space Updated, Free Space Flag, Availability, and Min Free Space (in MB). Two file systems are listed: 'DEFAULT' and 'FS2'. Below the table are two buttons: 'Add New File System' and 'Modify File System'. A red box highlights the 'Modify File System' button, with a red arrow pointing to a yellow callout box that says 'Click to Edit File System'. Another red arrow points from the 'Add New File System' button to a yellow callout box that says 'Add New File System Input Page'. This callout points to a modal dialog box titled 'Add New File System' which contains the following fields: Label (text input), Absolute Path (text input with '/datapool/OPS/user/' prefix), Free Space Flag (dropdown menu set to 'ON'), Availability (dropdown menu set to 'YES'), Min Freed Space (in Megabytes) (text input with 'MB' suffix), and a 'Return to previous page' link. An 'Apply Change' button is located at the bottom right of the dialog.

File System Path	Ingest Status	DPL Insert Status	Free Space	Used Space Updated	Free Space Flag	Availability	Min Free Space (in MB)
DEFAULT /datapool/OPS/user/FS1/	Active	Active	972 GB	11% Aug 18 2008 12:20PM	State : Y Last Changed: Apr 3 2008 11:22AM	State : Y Last changed:

DPM GUI: Batch Summary Page

The screenshot shows the 'Data Pool Maintenance' web interface. At the top, there is a teal header with the title 'Data Pool Maintenance' and the user identifier 'DEV08'. On the left and right sides of the header are logos for 'EOS DIS'. Below the header is a navigation menu with links: 'Home Page', 'Batch Summary' (highlighted), 'List Insert Queue', 'Collection Groups', 'Themes', and 'Data Pool File Systems'. Underneath these are secondary links: 'Cloud Cover', 'Configuration Parameters', 'Aging Parameters', and 'Help'. The main content area is titled 'Batch Summary' and contains a 'Screen Refresh Rate' control set to '1' (in Minutes) with an 'ApplyRefreshRate' button and a timestamp 'Last Screen Refresh on: Mon Aug 27 11:42:02 EDT 2007'. Below this is a table with columns for 'Batch Label', 'New', 'Completed', 'Failed', 'Retry', and 'Canceled'. The table contains one row for 'Crit100_1' with values 0, 0, 1, 0, and 0 respectively.

Batch Label	New	Completed	Failed	Retry	Canceled

DPM GUI: List of Configuration Parameters Page

The screenshot displays the 'Data Pool Maintenance' web interface. At the top, there is a navigation menu with links for Home Page, Batch Summary, List Insert Queue, Collection Groups, Themes, and Data Pool File Systems. Below the navigation menu, a table titled 'List of Configuration Parameters' is shown. The table has three columns: Parameter Name, Parameter Value, and Click on Box to Modify Parm. The parameters listed include ActionQueueCleanupFrequency, AlertCleanupInterval, AlertNotifyEmailAddress, AlertRetentionPeriod, AlertRetryInterval, and BatchSummaryAutoRefresh. Each parameter value is displayed in a text input field, and a checkbox is provided for modification.

Parameter Name	Parameter Value	Click on Box to Modify Parm
ActionQueueCleanupFrequency	600 Frequency in seconds when the action queue is checked for completed actions and those older than the configured retention are removed.	<input type="checkbox"/>
AlertCleanupInterval	5 The time interval, in minutes, between checks to remove closed alerts from the database	<input type="checkbox"/>
AlertNotifyEmailAddress	peter_leon_s_smith@raytheon.com Email address to which alert messages will be sent	<input type="checkbox"/>
AlertRetentionPeriod	48 The retention time, in hours, for closed alerts to remain in the database	<input type="checkbox"/>
AlertRetryInterval	1 The retry interval, in minutes, in between attempts to automatically clear an alert condition	<input type="checkbox"/>
BatchSummaryAutoRefresh	1 Auto Refresh Rate for Batch Summary Screen	<input type="checkbox"/>

DPM GUI: Help Page

Data Pool Maintenance [Return to previous page](#)

- The Data Pool Maintenance (DPM) GUI provides an operator interface to monitor the current status of Data Pool Inserts and to maintain specific Data Pool configuration parameters. Specifically, the DPM GUI allows the full capability operator to:
 - Suspend and Resume Data Pool Inserts
 - Configure parameters used by Data Pool Action Driver (DPAD) and Data Pool Insert Utility (DPIU)
 - Monitor the active insert processes
 - Monitor the Data Pool Insert Queue
 - Monitor Batch inserts
 - Manage existing Data Pool Collection Groups
 - Manage existing Data Pool Themes
 - Add new ECS Data Pool Collection Groups
 - Add new NON-ECS Data Pool Collection Groups
 - Add new Data Pool Themes
 - Delete Data Pool Themes
 - Manage Cloud Cover information in data pool
 - Manage data pool file system(s)
 - Manage compression algorithm configuration
 - End web server session (this can be done by read-only and full capability operators)
- The **DPM Home Page** gives the operator an overview of current Data Pool insert operations and file system availability. The home page screen is refreshed automatically, or can be immediately refreshed by clicking on the Refresh Home Page link. Tab buttons at the top of the home page may be used to navigate to the Batch Summary, List Insert Queue, Collection Groups, Themes, Data Pool File Systems, Compression Algorithms, Cloud Cover, Configurations Parameter, and Help pages. The End Session tab may be used to end the GUI session. The home page is divided into four sections: 1) home page tailoring parameters; 2) a summary of space usage and availability for the Data Pool file system(s); 3) a summary of active insert process statistics; and 4) a list of active insert processes. Two tailoring parameters are shown: the screen refresh rate and the number of active insert processes shown at one time in the List of Active Insert Processes table described below. The operator may adjust the values of these parameters by entering a new value in the input box and then clicking on the Apply button to initiate the changes. The Summary of Data Pool File System table shows the values of the free space status flag, the file system availability status flag, and the minimum free space in MB for each configured Data Pool file system. The Summary of Active Processes table shows the configured values for maximum number of total insert processes, maximum number of insert processes from AMASS cache, and maximum number of insert processes from AMASS tape. This table also shows the actual numbers of insert processes which are active in each of these categories. The List of Active Insert Processes table shows detailed information about each active insert process. The number of rows displayed at a time is controlled by the Active Insert Processes tailoring parameter.
- The **Batch Summary** tab gives an operator the status summary of batch inserts per batch label. This screen is refreshed automatically. The operator is shown the current refresh rate which is configurable.
- The **List Insert Queue** tab allows the operator to monitor the Data Pool Inserts that are in the queue and are not yet being processed. The operator can cancel one or more queued Inserts by clicking on the checkbox adjacent to the queued insert process. After selecting all inserts to be cancelled, click on the **Apply Change** button. The Data Pool Inserts will be marked as "CANCELED". The DPAD driver will clean up all cancelled inserts at a configured interval.
- The **Collection Groups** tab allows all operator to view information about all collection groups in the Data Pool database. Full capability operators may perform the following operations:
 - The operator can add a new ECS or NON-ECS collection group by clicking on the **Add Collection Group** link. This link will take the operator to the **Add Collection Group** screen. This screen displays three required input fields and one optional: 1) Data Source : a toggle button which has ECS and NON-ECS for values; 2) Group ID: a text area to enter the name of a collection groups. This input will be checked for duplication against all existing collection group names. This group name must be 12 characters or less. Valid characters include A-Z, 0-9, and underscores; 3) Display Name: a text area to enter the name displayed for this collection group on the Data Pool Webaccess drill down GUI. This field is optional. The display name must be 12 characters or less. Valid characters include A-Z, 0-9, underscores and spaces. If the Display name is not entered, it will default to the GroupID; 4) Description: a text area to enter a description for the collection group. The description can be up to 255 characters in length. The operator can enter one new collection group at a time. After entering the new collection group information, click on the **Apply Change** button. The new collection group will be added to the Data Pool database and the List of Collection Groups screen will be refreshed with the latest addition.
 - The operator can modify the display name and/or description for a Collection Group by clicking on the **Modify Collection Group** link. This link will take the operator to the Modify Collection Group screen. After making a change, click on the checkbox adjacent to the collection group. After making all changes, click on the **Apply Change** button. The changes will be applied to the Data Pool database and the List of Collection Groups screen will be refreshed with the current list of collection groups.
 - The operator can view the collections associated with a collection group by clicking on the link for the **GroupID** values. This link will take the operator to the List of Collections screen.
 - On the List of Collections screen the operator can view the detailed information of a collection by clicking on the link for the **Collection** name values. This link will take the operator to the **Detail Information** screen which will display the detailed description including -- Name, Version, Description, File System, Compression Algorithm Command Label, Science Granules and/or Metadata, Data Pool Insertion, HEG

Document: Done (0.754 secs)

Number of Drivers to Run

- **Recommended initial configuration**
 - 3 event drivers
 - 3 action drivers
 - 1 recovery driver
 - 1 deletion driver
- **EcNbDriverStart <MODE> d_e d_a d_r d_d**
- **Increase throughput by doubling number of event and action drivers (i.e., 6 each)**
- ***isql* query to identify a condition in which action processing lags behind event processing**
 - **select max(actionDateTime from EcNbActionQueueLog where actionStatus = 'Acquire' or actionStatus = 'ActionNotification'**
 - **if delay is an hour, try increasing number of action drivers to one and one-half times the number of event drivers (e.g., 6 event drivers and 9 action drivers)**

Data Pool Scripts

- **Data Pool Cleanup Utility**
 - **Script which removes granules in input file, regardless of whether it's public or hidden; will not remove granules in open orders.**
 - **Script to recover unprocessed granules left in tables DIBcpGransToDelete and DIBatchGransToDelete from the failure of previous running.**

Data Pool Scripts (Cont.)

- **Data Pool Cleanup Orphan/Phantom Validation**
 - Validates the Data Pool inventory and disk content by checking for the existence of orphans and/or phantoms and removing or simply logging them depending on the command line options specified.
- **Data Pool SoftLink Check Utility**
 - Used to find or delete ‘broken’ symbolic links, i.e., softlinks that do not point to a valid files.
- **Data Pool Publish Utility**
 - Publishes specified granules from a file, command line or collection. It is primarily designed to publish granules that already exist in the Data Pool, but it can also be used to move granules into the publicData Pool from AIM.

Data Pool Scripts (Cont.)

- **Data Pool Unpublish Utility**
 - Unpublishes specified granules and remove associated browse granule if permitted from the Data Pool to hidden Data Pool.
 - Unpublish granules which are marked for deletion in the AIM database (deleteEffectiveDate is set, or DFA flag is set to “Y” or “H”), for example, as would occur after a run of the Granule Deletion Utility.
- **Data Pool Inventory Validation Utility**
 - Script that compares Online Archive inventory (DPL db) with AIM inventory (AIM db); compares checksum in Online Archive with checksum in AIM inventory.
- **Validation Tool: Archive Checksum Verification Utility (ACVU)**
 - Script that identifies corrupt files in the tape Archive; uses a copy of the file in the Online Archive for validation.

Data Pool Scripts (Cont.)

- **Data Pool Checksum Verification Utility (DPCV)**
 - Utility was replaced by the Data Pool Checksum Verification Service (CVS) due to performance issues.
 - *Script that compares checksum in DPL database with checksum on disk in Online Archive.*
- **Restore Online Archive from Tape Utility**
 - Repairs individual granules or files that are lost or damaged in the on-line archive provided that the inventory entries of the corresponding granules are completely intact in DPL database.
- **Restore Tape from Online Archive Utility**
 - The RestoreTapeFromOla utility, repairs individual files that are lost or corrupted on tape based on the primary file instance that is present in the on-line archive. Files must be inventoried in both the AIM and DPL databases.

Data Pool Scripts (Cont.)

- **Data Pool Access Statistics Utility (DPASU) – Rollup Script**
 - Extract and summarize statistics from access logs produced by the Data Pool FTP server and the web access to data in the Data Pool.
 - Statistics are stored in the Data Pool database that can be used to produce tabular reports for loading/manipulation by a spreadsheet application program.
- **Data Pool Access Statistics Utility (DPASU) – Maintenance Script**
 - This script will backup, restore, and delete data in the related Data Pool database tables.
 - An operational support tools used for archiving, deleting, and backing up granule access data in the Data Pool database.

Data Pool Scripts (Cont.)

- **Batch Insert Utility**
 - This utility was replaced by **Publish Utility**.
 - *Script for inserting non-ECS data and ECS data that are already in the archive into the Data Pool.*
- **XML Check Utility (XCU)**
 - **Script to periodically check corruption in the XML files in datapool.**
 - **The XML Check utility is started by entering the following command: `EcDIXcu.pl <mode> <command line parameters>`**

Data Pool Scripts (Cont.)

- **Most Recent Data Pool Inserts Utility**
 - Runs as a cron, lists the most recent additions to the Data Pool
- **Data Pool Collection-to-Group Remapping Utility**
 - Command-line utility that reassigns a Data Pool collection to a collection group other than one to which it was originally assigned
- **Data Pool Move Collections Utility**
 - Command-line interface that moves collections from one file system to another.
- **Data Pool Hidden Scrambler Utility**
 - Command-line utility that makes the transition to or renames (with encrypted names) hidden directories for order-only granules in the Data Pool.

Data Pool Scripts (Cont.)

- **Data Pool Band Backfill Utility**
 - Command line tool that can correct band extraction problems that occurred during DPL registrations. Granule registrations cannot fail if band extraction problems are encountered but the subsequent publications on convert-enabled data types must fail if the band information is not present in the DPL database at publication time.
- **Data Pool Remove Collection Utility**
 - Provides a mechanism by which ECS Operations staff can remove collections from the Data Pool database that are no longer of interest to the end users.
- **Data Pool Cloud Cover Utility:**
 - Command-line that enables DAAC to correct the cloud cover (CC) information stored in Data Pool database for public science granules. This is based on the cloud cover source associated with the desired collection via the DPL Maintenance GUI. The file, *EcDICloudCoverUtility.properties*, contains the script's configuration parameters.

Data Pool Cleanup Granules Utility

- **The CleanupGranules Utility (EcDICleanupGranule.pl) replaces EcDICleanupDataPool “cleanup only”**
- **Removes files and database entries for specified granules from the Data Pool**
- **Propagates AIM Granule Deletions to Data Pool**
- **Removes expired nonECS granules from the Data Pool**
- **To specify new granules to be cleanup, one of the following five parameters can be used:**
 - **-file <filename>**
 - **-geoidfile <filename>**
 - **-grans “<gran1><gran2><gran3>...”**
 - **-ecsgrandel**
 - **-expired**

Data Pool Cleanup Orphan/Phantom Validation Utility

- **The CleanupFilesOnDisk Utility (EcDICleanupFilesOnDisk.pl) replaces EcDICleanupDataPool “validation” functionality**
- **Identifies orphans (on disk, not in database) and phantoms (in database, not on disk) in Data Pool (public and hidden)**
 - **Science phantoms**
 - **Browse phantoms**
 - **Browse files with no cross reference to science granules**
 - **Science orphans**
 - **Browse orphans**
- **Always does both orphan and phantom checking (no –orphan or –phantom option)**

Data Pool Cleanup Orphan/Phantom Validation Utility (Cont.)

- **Deletes orphan files if `-fix` option is used**
- **Does not repair phantoms**
 - Phantom repair is via `RestoreOlaFromTape` in 7.22
 - Phantom cleanup is via `EcDlCleanupDataPool -file` in 7.21
- **If `-fix` option is used, also**
 - Removes files in temporary directories older than `MAX_ORPHAN_AGE`
 - Removes “DpRecentInserts” files older than 7 days

Data Pool SoftLink Check Utility

- **The EcDILinkCheck.ksh script finds ‘broken’ links in the Data Pool directories, i.e., links whose targets do not exist**
 - **Public Data Pool: Browse links (from science directory to browse directory)**
 - **Hidden Data Pool: links to granules in public Data Pool for order purposes**
 - **Pulldir: links to granules in public Data Pool for order purposes**
- **Removes the broken links, if –fix option is used**

Data Pool Inventory Validation Utility

- **The Online Archive Validation Tool (EcDIInventoryValidationTool.pl) provides the EED Operations Staff with a command-line interface to identify the discrepancies between AIM and DPL databases**
- **-mode is a required parameter to specify the mode of operation. The MODE parameter is mandatory as the first parameter**
- **-outputDir is a optional parameter to specify the relative path under base directory
/usr/ecs/<MODE>/CUSTOM/data/DPL/Validation.**

Data Pool Inventory Validation Utility (Cont.)

- **-suppressLDeleted** is a optional parameter when identifying granules that are missing in the DPL database, don't include the ones that have been logically deleted (**deleteEffectiveDate** is not null) in the AIM database.
- **-suppressDFAed** is a optional parameter when identifying granules that are missing in the DPL database, don't include the ones that have been DFAed (**DeleteFromArchive = "Y"**) in the AIM database.
- **EcDIInventoryValidationTool.pl <command line parameters>**

Data Pool Checksum Verification Utility (DPCV)

- **The DataPool Checksum Verification Utility (EcDIDpcvStart) provides a mechanism by which the ECS Operations Staff can perform checksum verification for files in the Data Pool. It can be scheduled and run as a background process to proactively verify the integrity of files in the Data Pool.**
- **The utility is capable of performing checksum verification by sampling files based on ESDT and insert date range, or elapsed time since the last time checksum was verified, or a given granule list.**
- **According to the sampling options specified, the utility scans the appropriate files and verify their checksum values.**
- **Upon successful checksum verification, the utility will update the time when checksum was verified for each file in the DataPool database.**

Data Pool Access Statistics Utility (DPASU) Rollup

- **Processes logs of web access and FTP access and stores results in tables in the Data Pool database**
- **Two versions, each with configuration file**
 - **EcDIRollupWebLogs.pl (EcDIRollupWebLogs.CFG)**
processes web access logs
 - **EcDIRollupFtpLogs.pl (EcDIRollupFtpLogs.CFG)**
processes SYSLOG for FTP entries
- **Captured data are written to a flat file and exported to Sybase**
- **Associated shell scripts**
 - **% EcDIRollupWebLogs.pl <command line parameters>**
 - **% EcDIRollupFwFtpLogs.pl <command line parameters>**
 - **% EcDIRollupWuFtpLogs.pl <command line parameters>**

Data Pool Access Statistics Utility (DPASU) Maintenance

- **The Maintenance scripts are operational support tools used to backup, restore, and delete data in the related Data Pool database tables.**
- **These scripts can be run on the command line and connects to the Data Pool database to process data contained therein**
- **Associated shell scripts**
 - **DIDbArchiveAccessStat**
 - **DIDbDeleteAccessStat**
 - **DIDbRestoreAccessStat**

Data Pool Hidden Scrambler Utility

- **Running the Data Pool Hidden Scrambler Utility in Rename Mode**
 - **The Data Pool Hidden Scrambler Utility (EcDIHiddenScrambler.pl) can be run in either of the following two modes:**
 - Transition
 - Rename
 - **In transition mode the utility generates hidden directory names and corresponding database entries for every collection defined for Data Pool in the affected operating mode**
 - The transition mode can be used while Data Pool is up
 - The utility should be run in transition mode only once; i.e., the first time the utility is run in any given operating mode
 - Because transition mode is not used during normal operation, it is not described in any detail in this lesson

Data Pool Hidden Scrambler Utility (Cont.)

- **Running the Data Pool Hidden Scrambler Utility in Rename Mode (Cont.)**
 - **In rename mode the utility renames all of the scrambled names to a new scrambled name**
 - This involves updates to the directory in the file system and to the database
 - Links from the FtpPull area (and elsewhere) are preserved
 - Renaming is done during DAAC downtime only
 - **If the Data Pool Hidden Scrambler Utility is interrupted during execution, upon restart it detects failures from the previous run and continues processing whatever was left unprocessed**
 - The operator is given no choice as to recovery
 - Either recovery proceeds or the Data Pool inventory and disk files are in a corrupted state

Data Pool Hidden Scrambler Utility (Cont.)

- **Running the Data Pool Hidden Scrambler Utility in Rename Mode (Cont.)**

WARNING

The Data Pool Hidden Scrambler Utility should be run in transition mode only once; i.e., the first time the utility is run in any given operating mode. In normal operations, the Data Pool Hidden Scrambler Utility is run in rename mode.

Most Recent Data Pool Inserts Utility

- **The Most Recent Data Pool Insert Utility (EcDIMostRecentInsert) lists the most recent additions to the Data Pool. The output of the utility is a set of files that a user could download and quickly inspect to identify recent additions to the Data Pool.**
- **The utility takes in a date command-line parameter indicating the day of interest to the user.**
- **The Most Recent Data Pool Insert Utility normally runs as a cron job. However, if it is necessary to run the utility from the command line it is possible to do so.**
- **The procedure for running the Most Recent Data Pool Insert Utility is based on the following assumptions:**
 - **Data Pool database server is running.**
 - **Data Pool database is available.**
 - **Stored procedures are present.**

Data Pool Collection-to-Group Remapping Utility

- **The Data Pool Collection-to-Group Remapping Utility (EcDIRemap.pl) is a command-line utility interface that is used for reassigning a Data Pool collection to a collection group other than the one to which it was originally assigned.**
- **The procedure for running the Data Pool Collection-to-Group Remapping Utility is based on the following assumptions:**
 - **“Insert Enabled Flag” for the source collection has been turned off using the Data Pool Maintenance GUI**
 - **The group to which the user is mapping the collection already exists in the Data Pool database.**
 - **The group to which the user is mapping the collection is not the BRWS (browse) group.**

Data Pool Collection-to-Group Remapping Utility (Cont.)

- **The collection to be remapped is not the Browse (Browse.001) collection.**
- **Data Pool database server is running.**
- **Data Pool database is available.**
- **Stored procedures are present.**
- **There are several assumptions expected of the Data Pool Collection-to-Group Remapping Utility. The utility expects the exists of the collection in the Data Pool to which the user is mapping; it assumes that the browse collection is always located in the group “BRWS”; it also assumes the stored procedures are present. The Group Mapping utility runs only if the Data Pool database server is running and if the database is available.**

Data Pool Move Collections Utility

- **The Move Collections Utility (EcDIMoveCollection.pl) provides the EED Operations Staff with a command-line interface to move collections from one file system to another.**
- **The utility relies on the fact that symbolic links will be set from the collection's old filesystem to its new filesystem.**

For example, before a move, a collection might be located here: /datapool/OPS/user/FS1/MOAT/AIRABRAD.007. After invoking the utility with a target filesystem of FS2, it will be moved to /datapool/OPS/user/FS2/MOAT/AIRABRAD.007 with a symbolic link from its old location, i.e.

**/datapool/OPS/user/FS1/MOAT/AIRABRAD.007
→/datapool/OPS/user/FS2/MOAT/AIRABRAD.007**

Data Pool Band Backfill Utility

- The DPL Backfill Utility (`EcDIBandBackfillUtilityStart`) is a command line tool that can correct band extraction problems that occurred during DPL registrations. Granule registrations cannot fail if band extraction problems are encountered but the subsequent publications on convert-enabled data types must fail if the band information is not present in the DPL database at publication time.
- The Band Backfill utility was developed to correct the problems above. It will:
 - - backfill the band information in the DPL database for the registered granules specified in its input file.
 - - request the publication of the backfilled granules via the new Data Pool Action driver.
- The DAAC Operations staff can identify the granules that need band backfill via the Data Pool Maintenance GUI or by inspecting the `EcDINewInsertUtilityDPAD.log` file. In both cases, the type of error encountered is:
 - ***ERROR publreg operation encountered a convertEnabled granule with no band information, granuleState***

Data Pool Remove Collection Utility

- The Data Pool Remove Collection utility provides a mechanism by which ECS Operations staff can remove collections from the Data Pool database that are no longer of interest to the end users.
- -debug parameter helps developers debug the app by printing copious debug information
- -ShortName parameter is the short name of the collection to be deleted
- -VersionId parameter is the version Id of the collection being deleted
- -infile parameter is the full path to an input file specifying multiple collections. Please note that either an input file or a ShortName/VersionId combination should be used but not both
- **EcDIRemoveCollection.pl <MODE> -ShortName <SHORTNAME> -VersionId <VERSIONID> [-debug]**

OR

EcDIRemoveCollection.pl <MODE> -infile <INPUTFILENAME> [-debug]

Archive Checksum Verification Utility (ACVU)

- **The Archive Checksum Validation utility (EcDsAmAcvu.pl) provides a mechanism by which the ECS Operations Staff can perform checksum verification of files in the AIM archive.**
- **According to the sampling criteria specified, the utility will identify the files to be verified, organize the result by location on tape, verify their checksum values, and update the last checksum verification time and status in the AIM Inventory database. The utility will need to verify that an LTO tape is in the near-line archive (i.e. not off-line) and alert the operator if the tape is off-line.**

Archive Checksum Verification Utility (Cont.)

- **Upon detection of checksum verification failure after a configurable number of retry attempts (`NUM_RETRIES` in configuration file), the utility will log detailed information about the failure.**
- **The log will also include statistical summary information including total number of files checked, number of files that failed checksum, percentage of files that failed checksum, categorized by ESDT.**

XML Check Utility (XCU)

- The XML Check utility (EcDsAmXcu.pl) provides a mechanism by which the ECS Operations Staff can periodically check for corruption in the XML Archive.
- In order to detect corruption, the utility verifies the contents of the files are well formed using xmllint.
- There are eight command line parameters that may be used:
- -days is a optional parameter to specify days since last checked.
- -percent is a optional parameter to specify percentage of files to check.
- -ESDT is required if granuleid or file parameters are not present. This parameter is used to specify which ESDTs to check. This is a comma separated list (no spaces). Can also specify “ALL” to include all ESDTs.

XML Check Utility (Cont.)

- **-startdate** is a optional parameter used with **-ESDT** option. Specifies starting insert date to use for ESDTs.
- **-enddate** is a optional parameter used with **-ESDT** option. Specifies ending insert date to use for ESDTs.
- **-granuleid** is required if ESDT or file parameters are not present. This parameter is used to specify which granules to check. This is a comma separated list (no spaces).
- **-file** is required if ESDT or granuleid parameters are not present. This parameter is used to specify which granules to check. Granule ids should be listed in a file separated by newlines.
- **-outputDir** is a optional parameter to specify directory for error files under **/workingdata/emd/<MODE>/Xcu**.

Data Pool Non-ECS Action Driver Insert Tool

- **Running the Data Pool Non-ECS Action Driver Insert Tool**
 - The Non-ECS Action Driver (EcDINdActionDriver) tool provides the DAAC Operations Staff with a command-line interface for inserting Non ECS granules into the Data Pool
 - The command is found in the `/usr/ecs/OPS/CUSTOM/bin/DPL` directory.
 - This tool runs only if the Data Pool database server is running and if the database is available.

Data Pool Non-ECS Action Driver Insert Tool (Cont.)

- **Running the Data Pool Non-ECS Action Driver Insert Tool (Cont.)**
 - Log in at the host where the Non-ECS Action Driver is installed
 - Type `cd /usr/ecs/<MODE>/CUSTOM/bin/DPL` and then press the Return/Enter key
 - Type `EcDINdActionDriver <MODE> [configFile <filename>]` and then press the Return/Enter key
 - `<MODE>` is the mode in which the utility is being executed (e.g., OPS, TS1, or TS2)
 - `<filename>` is the name of a specific configuration file to be used as input to the utility. This field is optional. The default is `/usr/ecs/<MODE>/CUSTOM/cfg/EcDINonECSActionDriverCFG`
 - The Non-ECS ActionDriver tool queues Non-ECS data for insertion in the Data Pool. Insertions may be viewed using DPL Maintenance GUI List Insert Queue tab

Using the Spatial Subscription Server GUI

- **The Spatial Subscription Server (NBSRV) GUI provides a convenient means of associating a Data Pool insert action with a subscription and designating a subscription for secure distribution**
 - **This can be done by User Services and/or science personnel, but the archive support personnel should also be familiar with the GUI and its use**
 - **Other tasks done with the Spatial Subscription Server GUI may also be of use to archive personnel**
 - **For example, viewing the acquire and notification actions currently being processed by the Spatial Subscription Server and viewing statistics on the processing of events and actions by the Spatial Subscription Server**

Using the Spatial Subscription Server GUI (Cont.)

- **The Spatial Subscription Server GUI permits an operator to perform the following kinds of activities:**
 - **View subscribable events**
 - **Review existing subscriptions in the Spatial Subscription Server (NBSRV) database**
 - **Add a subscription specifying Data Pool qualification and retention criteria, thus adding a subscription for Data Pool insert to the database**
 - **Create a standard subscription for notification and/or distribution of ECS data products**
 - **Designate a subscription for secure distribution**

Using the Spatial Subscription Server GUI (Cont.)

- **The Spatial Subscription Server GUI permits an operator to perform the following kinds of activities (Cont.):**
 - **View the acquire and notification actions currently being processed by the Spatial Subscription Server**
 - **View statistics on the processing of events and actions by the Spatial Subscription Server**

Using the Spatial Subscription Server GUI (Cont.)

- **New operator GUI security standards require the following two levels of permissions for the Spatial Subscription Server GUI:**
 - **Full Capability**
 - **Limited Capability**
- **An operator's level of permission is determined when the operator logs in to the GUI using the security login prompt**

Using the Spatial Subscription Server GUI (Cont.)

- **Full-capability operators have the ability to configure parameters and perform all other actions that can be accomplished with the Spatial Subscription Server GUI**
- **Limited-capability operators are able to view a lot of information**
 - **However, on the limited-capability GUI some buttons and links have been disabled so it is not possible to perform certain actions or access certain pages**

Using the Spatial Subscription Server GUI (Cont.)

- **This lesson provides instruction in the full-capability version of the Spatial Subscription Server GUI. In general, both full-capability operators and limited-capability operators can view the following items:**
 - **Subscribable events**
 - **Subscriptions**
 - **Bundling orders**
 - **Action queue**
 - **Statistics relating to Spatial Subscription Server performance**

Using the Spatial Subscription Server GUI (Cont.)

- **Full-capability operators only may perform the actions:**
 - Add, update, or delete (cancel) a subscription
 - Configure defaults for a bundling order
 - Add, update, or cancel a bundling order
- **The Spatial Subscription Server GUI is a web application certified for use with Mozilla Firefox**

Use Password Manager to remember these values.

Using the Spatial Subscription Server GUI (Cont.)

- **The Spatial Subscription Server GUI Home Page provides four links for access to pages supporting various tasks:**
 - **List Events:** access to pages for listing subscribable events
 - **Manage Subscriptions:** access to pages for managing subscriptions
 - **Manage Bundling Orders:** access to pages for managing bundling orders
 - **Monitor Queues:** access to pages for monitoring the action queue and listing statistics
- **There is also a Help link providing descriptions of the Spatial Subscription Server functions to provide the operator with assistance in navigating through the GUI**

Add Subscriptions Page

The screenshot shows the 'Add Subscriptions' page of the Spatial Subscription Server GUI. The page has a teal header with the title 'Spatial Subscription Server OPS' and navigation links: Home Page, List Events, Manage Subscriptions, Add Subscriptions (highlighted), List Themes, Monitor Queues, and Help. The main content area contains a form with the following fields:

- User Id:
- Status:
- Start Date (mm/dd/yyyy hh:mm):
- Expiration Date (mm/dd/yyyy hh:mm):

Below the form, there is a section titled 'Subscribe to Event' with a 'Collection Short Name' and an 'Apply' button.

Spatial Subscription Server GUI

Add Bundling Order Page

The screenshot shows the Spatial Subscription Server GUI. The header is teal with the title "Spatial Subscription Server OPS" and two logos. A navigation bar contains links: "Home Page", "List Events", "Manage Subscriptions", "Manage Bundling Orders" (highlighted), "Monitor Queues", and "Help". Below the navigation bar, there are three links: "Bundling Order List", "Add Bundling Order", and "Configure Defaults". The main content area features a grey box titled "Add Bundling Order" with the following form fields:

UserID	<input type="text"/>
Expiration Date	<input type="text" value="02/20/2005"/> (mm/dd/yyyy)
Media Type	<input type="text" value="CDROM"/>

At the bottom of the form are two buttons: "continue" and "clear".

Spatial Subscription Server GUI Update Bundling Order Page

The screenshot shows the 'Update Bundling Order' page in the Spatial Subscription Server GUI. The page has a teal header with the title 'Spatial Subscription Server OPS' and navigation links: 'Home Page', 'List Events', 'Manage Subscriptions', 'Manage Bundling Orders' (highlighted), 'Monitor Queues', and 'Help'. The main content area features the title 'Update Bundling Order 0400079209' and a link to return to the Bundling Order list. Below this are three input fields: 'UserID' with the value 'cmshared', 'Expiration Date (MM/DD/YYYY HH:MM)' with the value '10/21/2004 12:00', and 'Physical Media Type' with a dropdown menu set to 'scp'. At the bottom are two buttons: 'Update Bundling Order' and 'reset'.
