Category Name DMS Design

Actionee ECS

Sub Category

Subject CM for Command Procedures

### Description of Problem or Suggestion:

There isn't a CM method to trace a command procedure to any other procedures which call it. If the invoked procedure is changed, any calling procedure which is affected by the change is not identified.

### Originator's Recommendation

Implement capability to trace invoked procedures to calling procedures.

HAIS Response Date 11/10/95

Agree. Metadata about procedures will be maintained in Sybase. The metadata will allow the FOS to trace a command procedure to other procedures which call it. If other procedures are linked to a command procedure that is changed, an event message will be generated and displayed.
