

## 4. Release B Requirements

---

### 4.1 Release B Capabilities

This section summarizes the content of Release B as described in the Release Plan Content Description for the ECS Project (222-TP-003-007).

#### 4.1.1 Mission Support/Ground System Testing

Landsat-7 is currently scheduled for late-1998 launch and relies on ECS for support. Per the EOS Ground System Integration Plan, ECS full function capabilities must be available for ground system testing by launch time. The following capabilities must be operational and include all data handling and processing support such as all the communication, system security, network and monitoring services must be operational. Others include ingest, search, data access, client, data server management functions which must all be operational for ground system testing.

EOS AM-1 is currently scheduled for June 1998 launch and relies on ECS for support. Driven by the launch date, ECS capabilities must be operational in order for the Flight Operations Segment (FOS) to support ground system testing of the EOS AM-1 platform. The testing includes data analysis, telemetry and command data processing, command management, mission data processing, OBC data management, scheduling/planning support, telemetry tracking, AM-1 launch site readiness, and ground data system tests.

The following missions will also be supported in Release B for data handling and processing support functions:

- SAGE III - August 1998
- ADEOS II - February 1999
- ALT RADAR - August 1998
- ACRIMSAT - August 1998

#### 4.1.2 Major Enhancements in Release B

This section lists the major enhancements in release B:

- Two way interoperability with NOAA; Increased access capability to GCMD and GCDIS.
- More robust multi-DAAC planning and scheduling, including support for inter-DAAC resource conflict resolution via access to common planning data; support to Targets of Opportunity (TOOs).
- Greatly increased (by at least an order of magnitude) maximal network data rates, data processing and required data product storage, especially for AM-1 mission support.

- Replacement of V0 client capability with Version 1 ECS client.
- System & Network Management to include additional security features and DAACs interfaces (especially the ASTER GDS support).
- SMC integrated with LSM. SMC capabilities for the security management, fault management and performance management are automated.
- Completion (by end of Release B operations) of data migration from V0; increased capability to translate data to HDF and other standard formats.
- Increased automated data accounting and handling of Data Availability Notices (DANs) from EDOS and from the ASTER GDS.
- Enhanced Local Information Manager (LIM) capabilities and implementation of Distributed Information Manager (DIM) capabilities; enhanced management reporting capabilities.
- More complex data searches, including multiple dataset coincident search capability. Enhanced processing on demand versus simply storage and retrieval from archive.
- Robotic control of file servers; enhanced attached storage capability; APIs for scientists to gain access to data storage and retrieval services. Enhanced metadata capabilities - expandable metadata attributes and geographic metadata search, including World Reference System parameter.
- Continued full TRMM support plus support for LANDSAT-7, AM-1, ADEOS II, SAGE III, ALT RADAR, and ACRIMSAT. Support for ERS and JERS. Support for DAO at GSFC.
- Mode Management.
- Enhanced DCE services, including OO support.
- DAO data assimilation processing.

#### **4.1.3 V0/ADC Interoperability**

ECS will provide two-way interoperability with V0 and migration and/or access of Version 0 data archives. Two-way interoperability with National Oceanic and Atmospheric Administration (NOAA) and the Consortium for International Earth Science Information Network (CIESIN) will also be provided.

#### **4.1.4 Science Software Support**

If new hardware is required for Version 1 algorithms, the hardware installations for a site must be in place several months in advance of an algorithm's Version 1 integration at that site.

In addition, to support full end-to-end testing of the algorithms, ECS infrastructure software (auxiliary/auxiliary data ingest and preparation, DAAC-to-DAAC data transfers, level 0 data validation, algorithm delivery, and algorithm product QA services) must be in place at the end of

Version 1 I&T for each instrument. Version 1 I&T for EOS AM-1 instruments MODIS(GSFC), CERES (LaRC), MISR (LaRC), MOPITT (LaRC), and MODIS (NSIDC) is scheduled for mid-1997. The tested Version 1 algorithms will be integrated with other ECS components at that time. SDP toolkit deliveries must be made twelve months prior to the Beta reviews for each AM-1 algorithm.

#### **4.1.5 Core Functionality**

This section presents areas where Release B will provide functionality based on the user community interaction.

ECS capabilities will provide capabilities such as generation handling and tracking of DARs for ASTER, enhanced DCE object services (including automated SMC reporting and inter-DAAC configuration management), accounts payable/receivable management, credit tracking, price estimation for data, invoicing and billing functions, and support periods of unstaffed DAAC operation.

Other ECS functions will include: conditional product generation activation based upon metadata analysis, support to geo- and mathematical data transformations, unstaffed DAAC operations support, data size reduction before distribution to the client via subsetting and subsampling, subscriptions for distribution and processing, DAO processing capability, accommodation of heterogeneous storage components, and On-Demand production. Application programming interfaces (APIs) will be supported for update, query, and data base administration utilities. Storage system resource management, tracking of specific data granules, and automated authentication for data distribution will be enhanced. In addition, full functionality and performance of information management archive functions, science processing, networks, and system management.

Full functionality and performance, launch ready for EOS AM-1, LANDSAT 7, COLOR, and ADEOS II. All V0 data migrated to ECS archive, information management services to ORNL, support migration of V0 data to archive sites, and data distribution/access.

#### **4.1.6 New Externals**

All of the new externals supported in release B are

- DARs for ASTER
- FOS Operational for Launch
- ADEOS II, SAGE III, COLOR, LANDSAT 7, AM-1, ALT RADAR, ACRIMSAT
- Added/enhanced ingest interfaces: FDF, IPs, EDOS. ASTER GDS.
- New DAAC sites have been added: NSIDC, ORNL and JPL.
