

## 4.3 Configuration Management

This section describes the configuration management tools used by DAAC operators:

- ClearCase
- DDTS
- XRP-II (Baseline Manager)
- XRP-II (Inventory Logistical Management {ILM})
- Tivoli/Courier
- FLEXlm
- iFOR/LS

This page intentionally left blank.

### **4.3.1 ClearCase**

ClearCase, a COTS product, is used to perform the Software Change Manager functions. It provides the M&O staffs at the SMC and the DAAC sites the capability to organize and store software in a software library, to control software changes and versions, and to assemble sets of software for release purposes. Specifically, ClearCase is to regulate access to these files; to control and log file changes; to perform builds of software and keep a record of the build's content (files, compiler, and other resources used).

ClearCase is used to perform a variety of operator functions. The most frequently used functions are listed in Table 4.3.1-1.

**Table 4.3.1-1. Common ECS Operator Functions Performed with-ClearCase-**

<b>Operating Function</b>	<b>Command/ Script or GUI</b>	<b>Description</b>	<b>When and Why to Use</b>
Establish a View	setview /GUI (View Menu, Set Option) selection	The command or the GUI selection activates a view and allows user access to controlled files.	(1) used to activate a reproducible workspace for a developer for working with specific file versions and directories for a task (2) used to assemble sets of software for release purposes
Checkout Software	Checkout/GUI (Checkout) selection	The command or the GUI creates a view private, modifiable copy of a file version	Used when a developer/maintainer needs to modify an existing version of software
Checkin Software	checkin/GUI (Checkin) selection	The command or the GUI selection creates a permanent new version of a file	Used when a developer/maintainer needs to return a modified file version to the ClearCase software library
perform software builds	ClearMake/GUI (Building menu)	(1) ClearCase build utility that automates the process of software builds (2) facilitates derived object sharing (3) creates a record of the build so that it can be repeated	Used when it's time to build, integrate and/or test developed/ revised software
display the mount-point and storage directory of all VOBs on the system	cleartool lsvob/GUI (Admin menu)	ClearCase utility that will determine and display default/ specified information about all of the VOBs that have been established	(1) Used to list one or more VOBs (2) Used to determine which VOBs are mounted (3) Used to determine which VOBs are private or public (refer to <i>ClearCase Reference Manual</i> for details)

#### **4.3.1.1 Quick Start Using ClearCase**

This section presents an orientation of ClearCase. ClearCase terminology such as VOB (versioned object base, public storage area for files) and views (operator private storage), etc., is used throughout this section. Refer to the *ClearCase User's Manual* for both a more detailed overview of ClearCase and an explanation of the terminology used. Refer to the *ClearCase User's, Administrative, and Reference Manuals* for detailed explanations of ClearCase functionality.

#### 4.3.1.1.1 Command Line Interface

To invoke ClearCase from the command line prompt type:

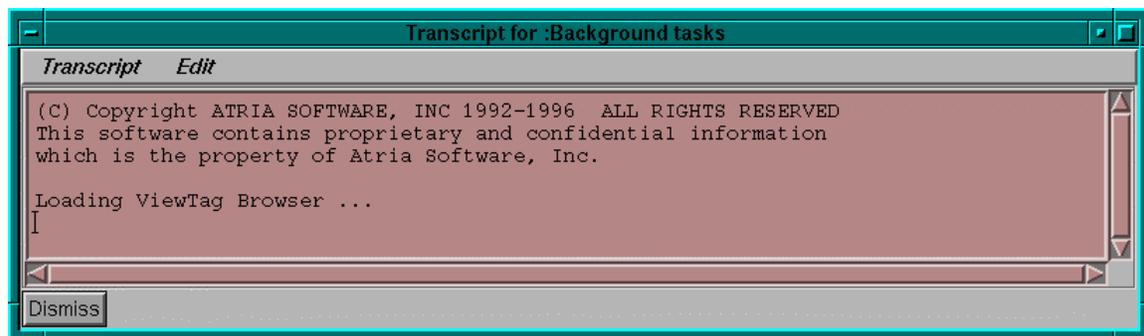

```
/usr/atria/bin/xclearcase.
```

#### 4.3.1.1.2 Invoke ClearCase

There is no icon available on the ECS desktop to start ClearCase. Currently, ClearCase is invoked at the command line as previously described.

#### 4.3.1.2 ClearCase Graphical User Interface

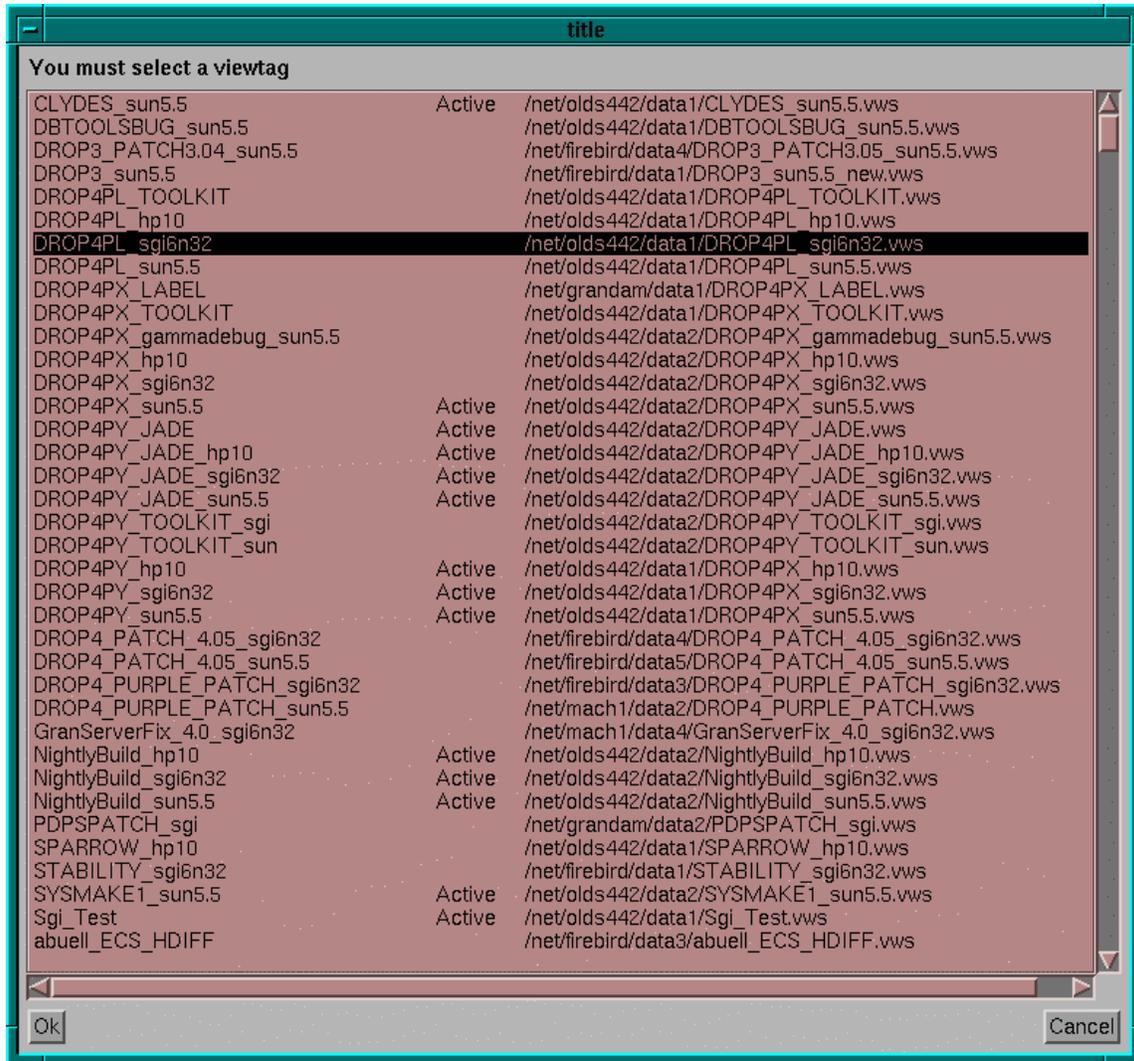

ClearCase has a command line interface (CLI) and a graphical user interface (GUI). The GUI enables execution of all the common functions and facilitates graphical examination of the version history of objects in VOBs. When ClearCase is invoked, a Transcript screen as shown in Figure 4.3.1-1 appears. The Transcript screen displays status of functions executed and displays warning and error messages. It automatically appears when the status of an activity needs to be displayed.

**Figure 4.3.1-1. ClearCase Transcript Screen**

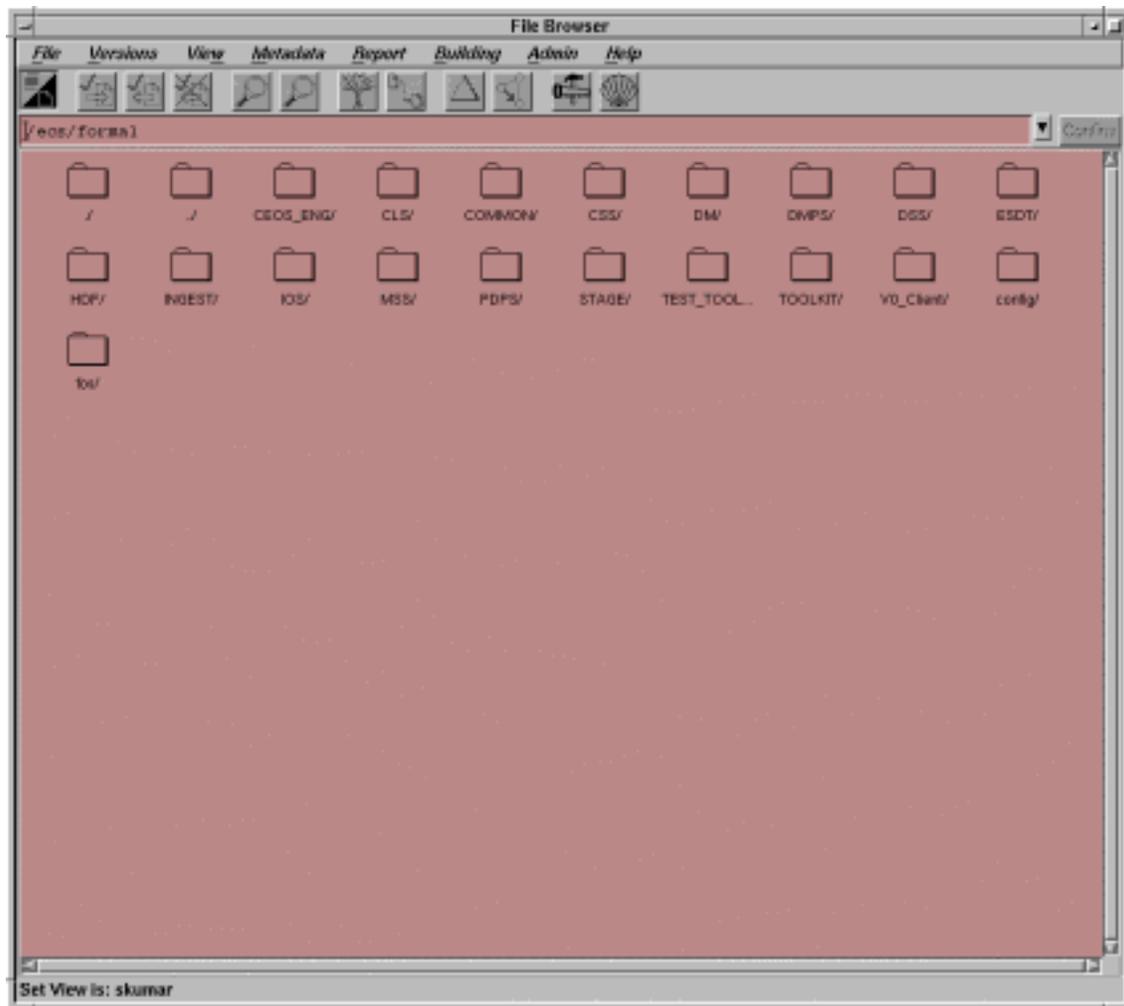

#### 4.3.1.2.1 Establish View

Operator access to versions of files in a VOB is facilitated by a view. When ClearCase is initiated, the operator is asked to select a view. Available views are displayed in the View Tag Browser Screen as shown in Figure 4.3.1-2. Select a view by highlighting the desired view and clicking the "Ok" button at the bottom of the screen.

**Figure 4.3.1-2. View Tag Browser Screen**

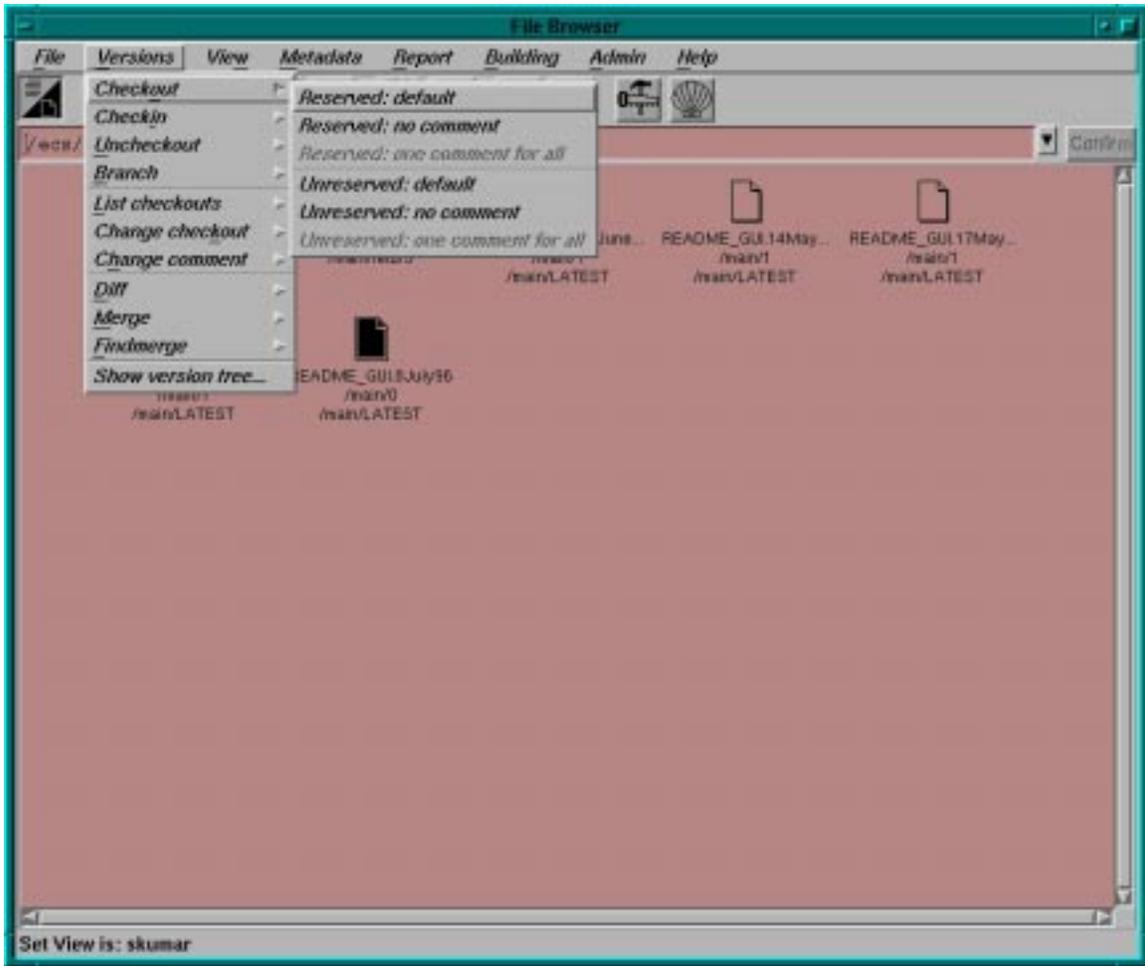

After a View is selected the ClearCase File Browser screen, the main GUI screen, appears as shown in Figure 4.3.1-3. The File Browser screen displays the current directory name just below the toolbar and displays the contents of the directory in the space below the directory's name. A variety of GUI-oriented functions can be initiated from this screen. Explanations of the menu bar and the toolbar items are provided in Chapter 3 of the *ClearCase User's Manual*.

**Figure 4.3.1-3. ClearCase File Browser Screen (Main Screen)**

#### **4.3.1.2.2 Checkout Software**

Software file versions in a ClearCase VOB are in a read-only state. An operator must check a file version out of the VOB before any editing of the file version can be accomplished. Check out a file version by selecting the file and clicking the checkout icon  on the toolbar; another way is to select the file, click the Version menu, the Version's menu "Checkout" option, then one of the "Reserved or Unreserved" options shown in Figure 4.3.1-4.

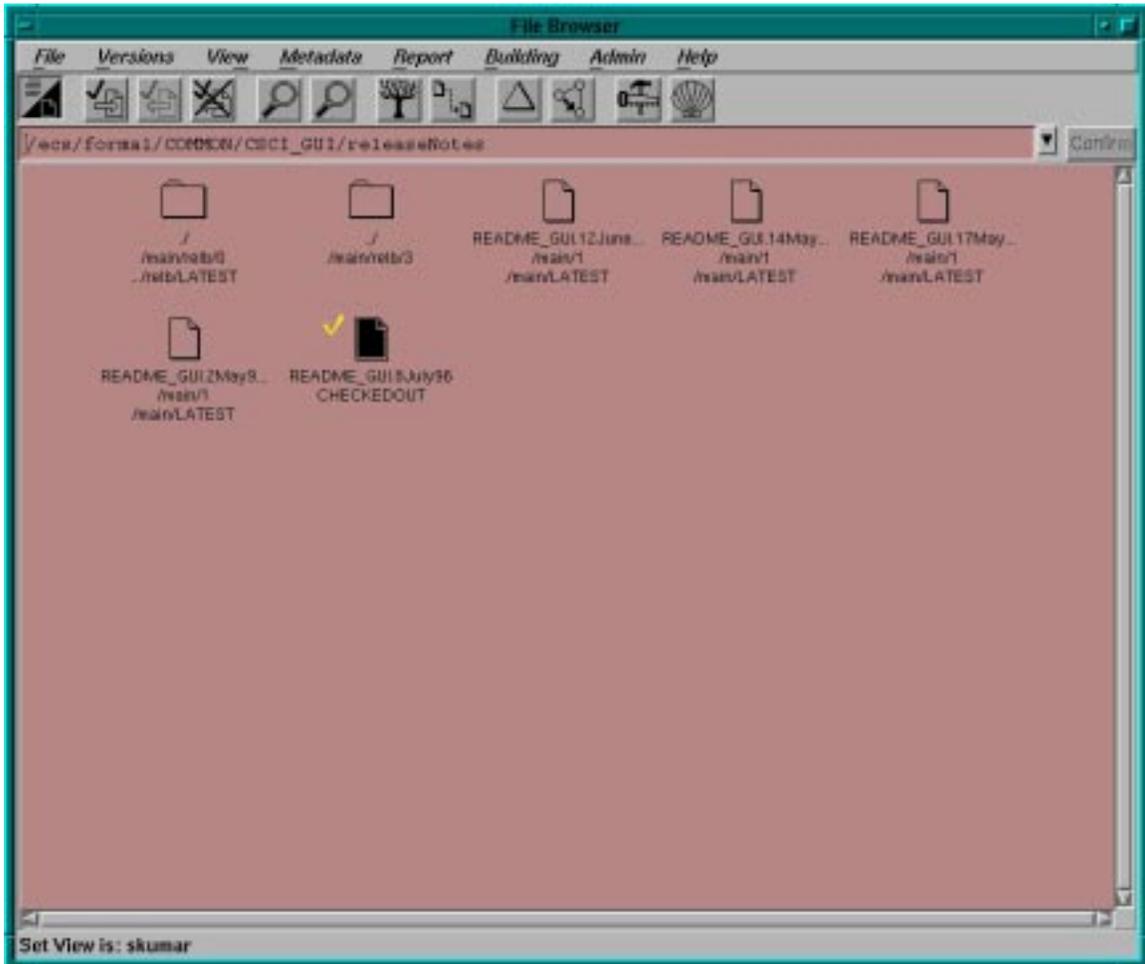

**Figure 4.3.1-4. ClearCase File Browser Screen (Checkout Software)**

If the operator is authorized and the view is set up to checkout files, then the checkout process continues and the ClearCase Prompt screen appears as shown in Figure 4.3.1-5. This screen gives the operator the opportunity to enter an explanation of why the file version is being checked out.

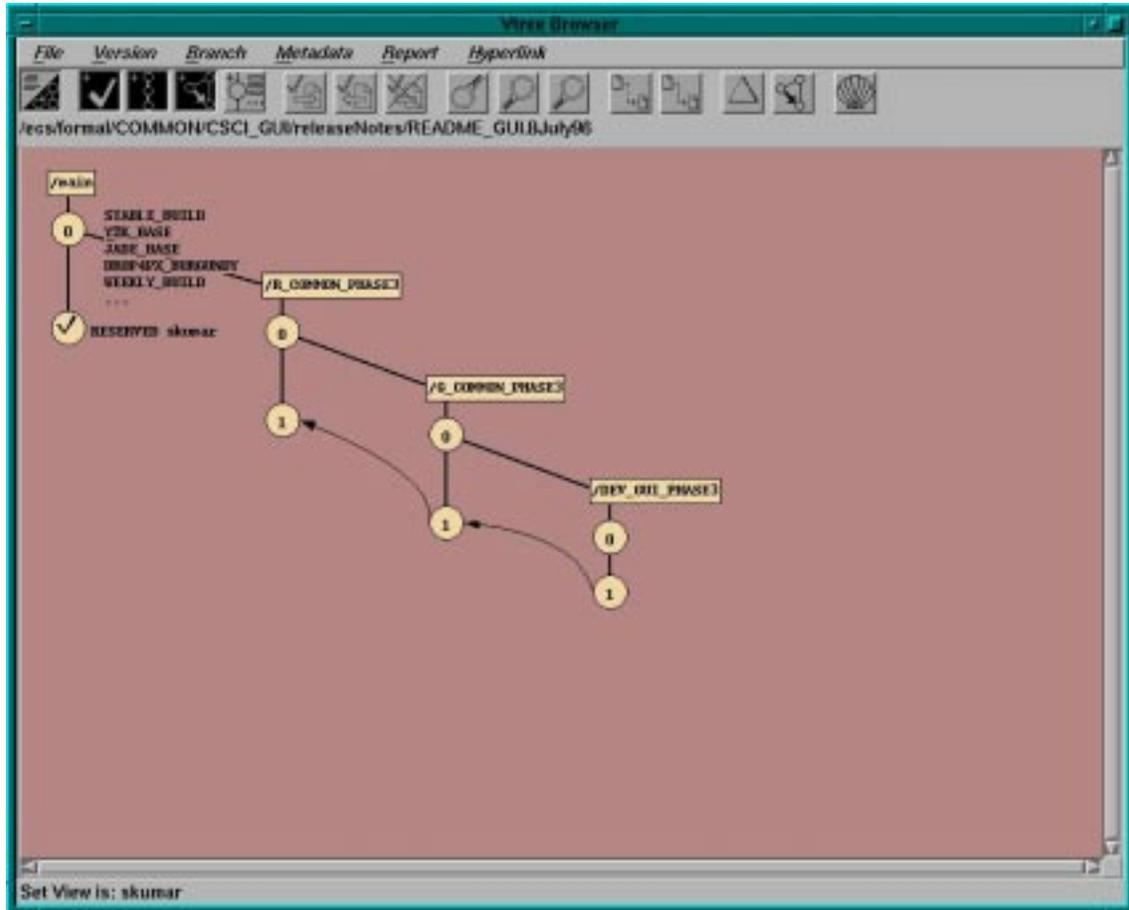

**Figure 4.3.1-5. ClearCase Prompt Screen (Checkout Comment)**

After appropriate comments are entered, click the “Ok” button and ClearCase adds the comments to the historical record for the file version.

**Figure 4.3.1-6. File Browser Screen (File Version Checked-Out)-**

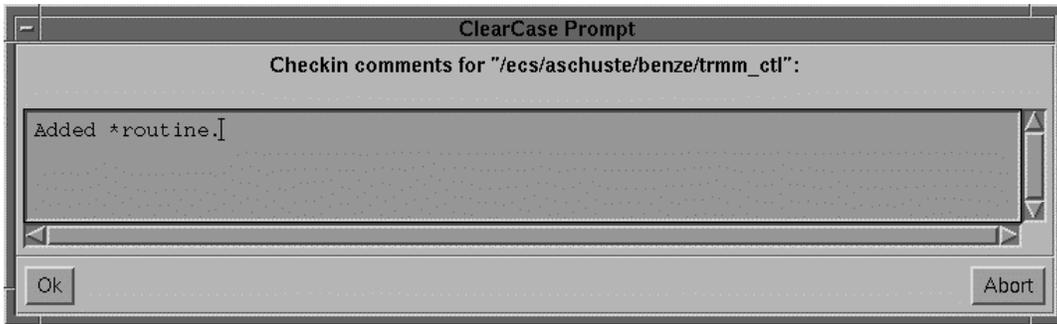

To verify that the file version has been checked out on a branch, click the Vtree icon  on the File Browser toolbar. This activates the Version Tree Browser and it displays a graphical image of the branching as shown in Figure 4.3.1-10. Note, the checked out file version has been placed on the main branch “/main” in the example below.

**Figure 4.3.1-10. ClearCase Version Tree Screen**

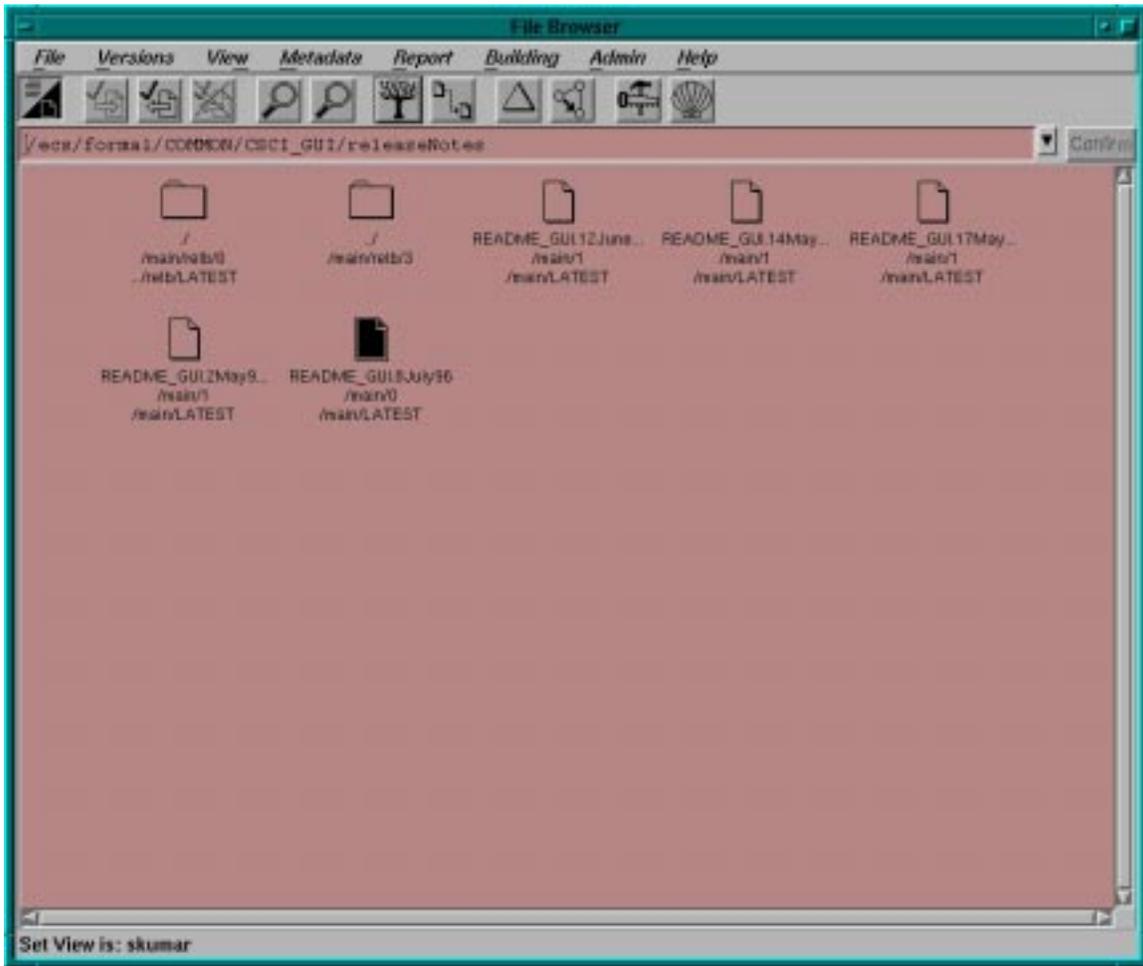

#### 4.3.1.2.3 Checkin Software

A software file version checked out of the ClearCase library for editing must be checked in to the library for it to become a new version of the original file. Click the checkin icon  on the File Browser toolbar to initiate the check-in process. A ClearCase Prompt box appears as shown in Figure 4.3.1-12 to facilitate the adding of comments at check in to the file version’s record. Enter a comment and click the “Ok” button to continue or just click the “Ok” button to continue the check-in process.

**Figure 4.3.1-12. ClearCase Prompt Screen (Checkin Comment)**

The File Browser screen reappears as shown in Figure 4.3.1-14 and it shows that the file version has been checked in. Note, the check mark for file, README\_GUI.8July96, has been removed. Removal of the check mark is an indication of a successful checkin.

**Figure 4.3.1-14. ClearCase File Browser Screen (File Checked-In)-**

### 4.3.1.2.5 Perform Build

The Building menu on the File Browser as shown in Figure 4.3.1-26 is used to produce derived objects. The Building menu is the GUI version of the command line interface build utility called clearmake. Reference the *ClearCase User's Manual* and the clearmake section of the *ClearCase Reference Manual* for information on the use of this capability.

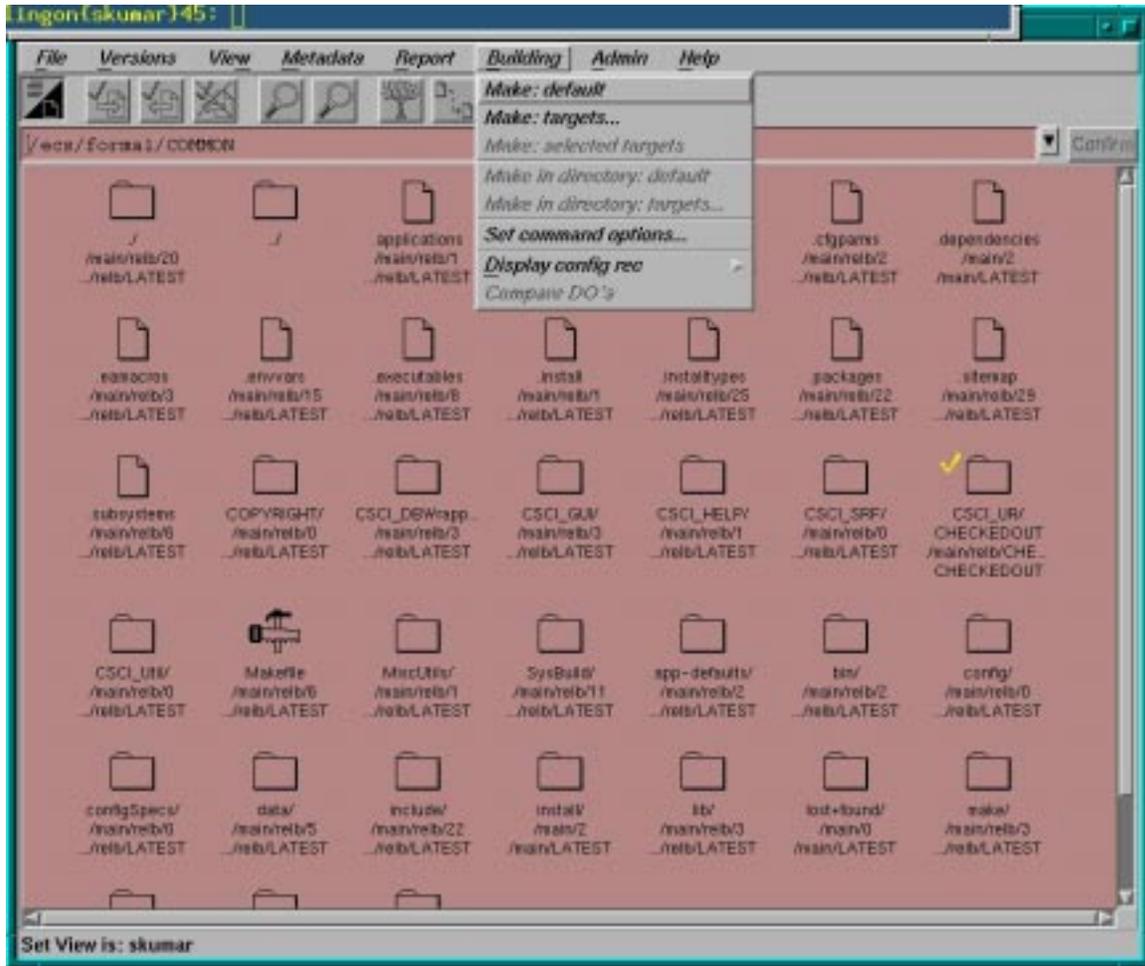

Figure 4.3.1-26. File Browser Screen (Build Menu)

### 4.3.1.3 Required Operating Environment

For all COTS packages, appropriate information on operating system environments, tunable parameters, environment variables, and a list of vendor documentation can be found in a CM controlled ReadMe file for each product. To find the ReadMe file for ClearCase, use the XRP Baseline Manager to determine where in ClearCase the ReadMe file resides.

#### **4.3.1.4 Databases**

ClearCase data is stored in versioned object bases (VOB) and views. Reference the *ClearCase Administrator's Manual* for a detailed description of the ClearCase databases.

#### **4.3.1.6 Outputs**

Reference the *ClearCase User's Manual* for a description of the ClearCase outputs.

#### **4.3.1.7 Event and Error Messages**

ClearCase creates an event record for most of the processing activities that modify the VOB and stores it in the VOB database. These records are linked to the derived objects. These records provide a chronological event history for the objects. Reference the *ClearCase Reference Manual* for detailed information about logging of ClearCase events. The reference manual describes the contents of an event record, VOB objects that will have event histories, and ClearCase operations that cause event records to be written.

ClearCase error messages indicate that a problem has occurred. Some errors are user correctable and others require correction by the operations staff. In both cases, ClearCase records error and status information in its log files. Reference the *ClearCase Reference Manual* for a description of the error logs, the ClearCase programs that use them, error logs location, and their format.

This page intentionally left blank.

### 4.3.2 Distributed Defect Tracking System (DDTS)

The Distributed Defect Tracking System (DDTS), is the COTS product serving as the ECS Change Request Manager (CRM). DDTS provides the functionality necessary to compose, submit, report, and track status of proposals to change the ECS baseline. It provides the capability to register Configuration Change Requests (CCR) electronically. A CCR is a document that requests, justifies a need for, and defines a change to a configuration item (CI). A CI is an aggregation of hardware, firmware, software, or any of its discrete portions, which satisfies an end use function and is designated for configuration control.

DDTS prompts for relevant information, assigns an identifier, and mails notification of the newly submitted requests to designated personnel. As the CCRs advance through approval and implementation processes, DDTS maintains status, disposition, resolution, and closure information as entered by the M&O staff. It sends notification to designated personnel when the status of the CCR record changes and makes data available for viewing by designated staff members. DDTS also keeps track of Non-Conformance Reports (NCRs) for M&O Sustaining Engineers. DDTS is used to perform the operator functions listed in Table 4.3.2-1.

Refer to the *PureDDTS User's Manual* for additional information about DDTS.

**Table 4.3.2-1. Common ECS Operator Functions Performed with DDTS**

Operating Function	GUI	Description	When and Why to Use
Viewing CCR	PureDDTS Main Screen	Operator views the contents of the selected CCR by highlighting the CCR in the CCR Index.	To quickly view the contents of CCRs in the Index.
Submit CCR	PureDDTS Main Screen	<ul style="list-style-type: none"> <li>Operator initiates CCR record submission process by clicking the "Submit" button.</li> <li>An initial set of data fields appears for entry of data.</li> </ul>	Whenever there is a new CCR to be entered.
Change the Status (state) of the CCR	PureDDTS Main Screen	<ul style="list-style-type: none"> <li>Operator changes the status of a CCR as it moves through its lifecycle states by clicking Change_State" menu and selecting the state desired.</li> <li>Each state transition causes a new set of data fields to appear for entry of data.</li> </ul>	Whenever the activities of a particular state have been completed and it is time to move to the next state.
Modify CCR	PureDDTS Main Screen	Operator updates a previously entered CCR by clicking the "Modify" menu and selecting the "modify record" option.	To change previously entered data and/or to enter data into fields previously left blank.
Print CCR	PureDDTS Main Screen	Operator sends a copy of CCR(s) to a monitor screen, printer, or to a designated file by clicking "Print" button and selecting print options.	To obtain a hard or soft copy of a CCR or all of the CCRs in the CCR index.

### **4.3.2.1 Quick Start Using DDTS**

This section presents an orientation of DDTS. Additional information can be found in the *PureDDTS User's Manual*.

#### **4.3.2.1.1 Command Line Interface**

To invoke DDTS from the command line prompt, type

```
/usr/ecs/OPS/COTS/ddts/bin/xddts
```

#### **4.3.2.1.2 Invoking DDTS From the ECS Desk top**

There is no icon available on the ECS Desktop for DDTS. Currently DDTS is invoked at the command line as described above.

### **4.3.2.2 DDTS Main Screen**

The PureDDTS screen (Figure 4.3.2-1) is the main screen. It consists of three major areas: the CCR Index Display, which shows an index of CCRs; the CCR Record page, which displays some of the content of the highlighted CCR in the Index; and the Enclosure Display, which shows the initial set of enclosures for a CCR. All DDTS functions are initiated from this screen.

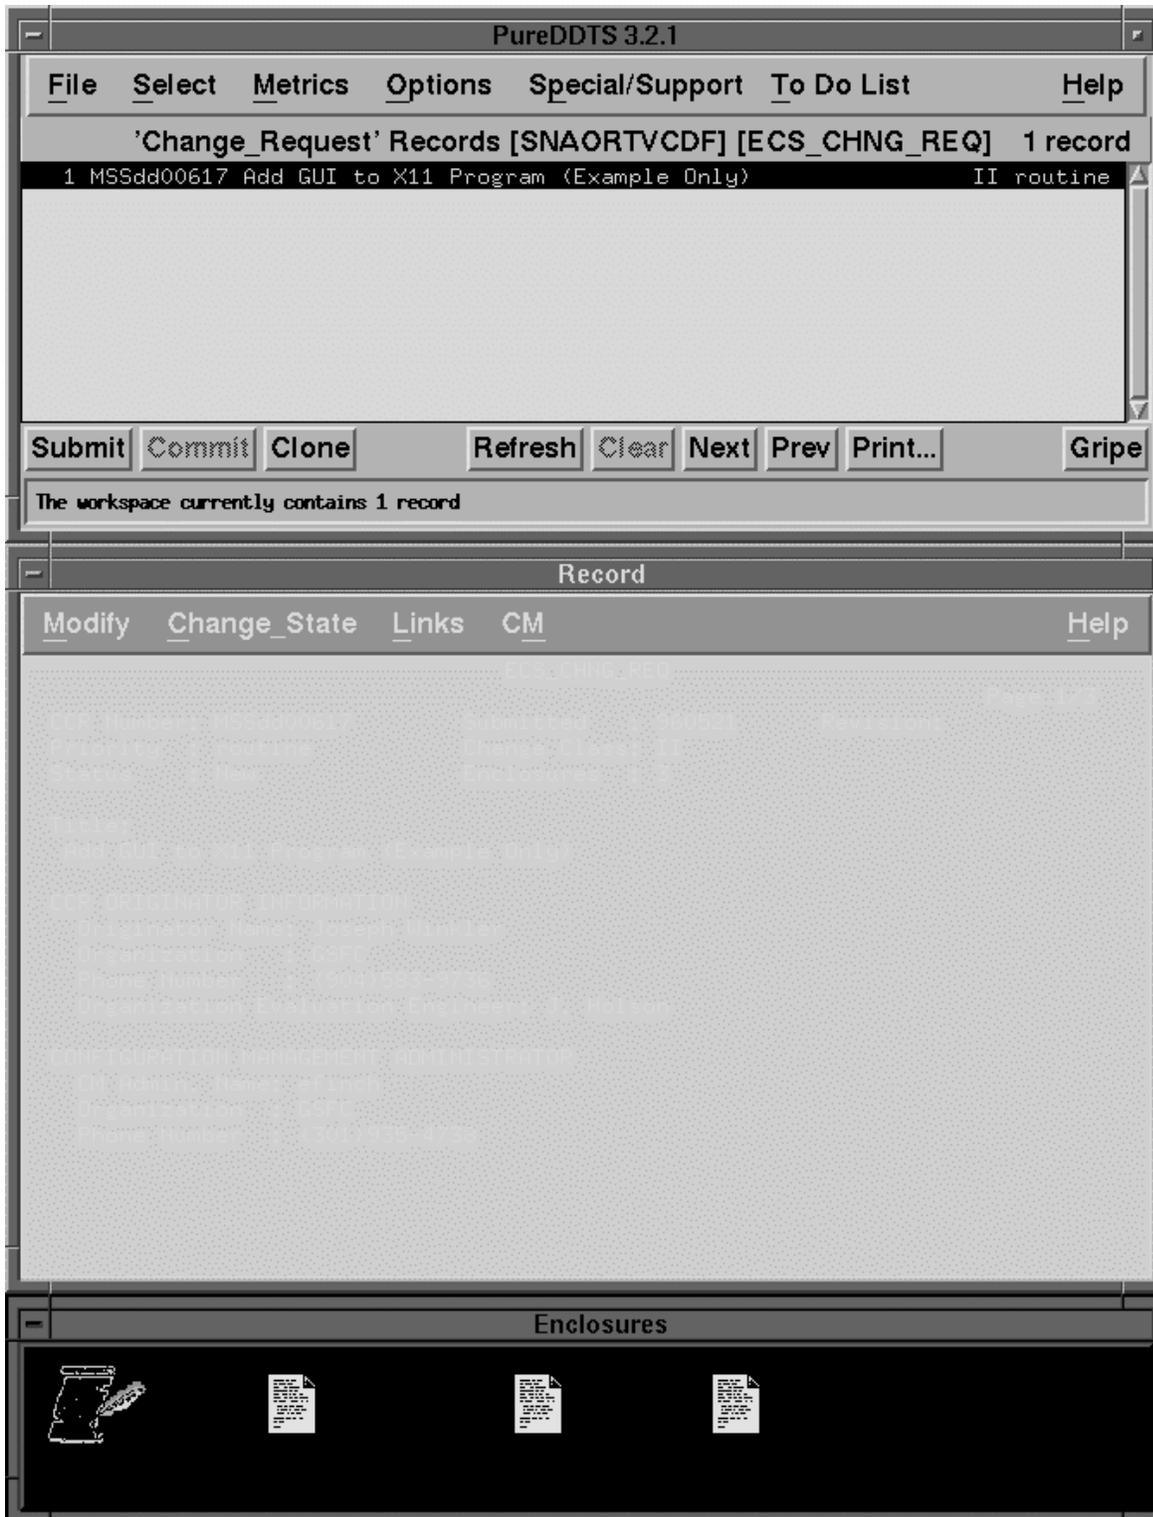

Figure 4.3.2-1. DDTS Main Screen-

Reference Chapter 3 of the *PureDDTS User's Manual* for information concerning the menus and buttons on the DDTS Main Screen.

### **4.3.2.3 Required Operating Environment**

For all COTS packages, appropriate information on operating environments, tunable parameters, environment variables, and a list of vendor documentation can be found in a CM controlled ReadMe file for each product. To find the ReadMe file for the DDTS, use the XRP Baseline Manger to determine where in ClearCase the ReadMe file resides.

### **4.3.2.4 Databases**

The PureDDTS database is a proprietary database that supports the SQL 89 standard. The database is customized only to the extent that some additional fields have been added. Reference Appendixes F and G of the *PureDDTS Administrator's Manual* for detailed information about the DDTS database layout, the schema file, how to modify the database schema, and other information required to maintain or revise the DDTS database.

### **4.3.2.5 Special Constraints**

None

### **4.3.2.6 Outputs**

DDTS emails notification to designated personnel of newly submitted CCRs and when the status of the CCR changes.

### **4.3.2.7 Event and Error Messages**

Standard DDTS event and error messages are used. There are no messages unique to the ECS implementation. A list of the PureDDTS event and error messages is not provided in the *PureDDTS User's* and *Administrator's* manuals. However, messages provided during execution of DDTS are self explanatory.

### **4.3.2.8 Reports**

Standard DDTS reports are to be used. Reference Chapter 3 of the *DDTS User's Manual* (Setting PureDDTS Options) for information concerning the printing of a CCR report and a description of the available report formats.

#### **4.3.2.8.1 Sample Reports**

Examples of DDTS reports are presented in the sections below.

#### 4.3.2.8.1.1 Sample Report (Full Page Format)

Below is a sample CCR report resulting from the use of the DDTS Printing Option (full page format).

#### 4.3.2.8.2 Report Customization

Refer to Chapter 8 of the *PureDDTS Administrator's Manual* for an explanation of how to customize DDTS reports. Chapter 8 explains how to customize reports provided by DDTS and how to create and add new reports.

### 4.3.3 XRP-II (Baseline Manager)

XRP-II is a commercially available manufacturing management system specially configured to serve as the ECS Baseline Manager.<sup>1</sup> It helps the M&O staff at the DAACs, EOC, and SMC maintain records that describe what comprises baselined operational system configurations. These records identify baselined versions of hardware and software items as well as their assembly structures and interdependencies. XRP-II keeps chronological histories of baseline changes and traceability of items to predecessor versions and system releases.

XRP-II does this primarily by maintaining a catalog of version-controlled items, called control items, along with data about how they relate. Control items encompass physical resources such as software packages and hardware devices assembled to form an operational system, as well as logical artifacts such as baselines, configuration items, processing strings, and logical disk partitions. They are designated to relate system entities directly to discrete responsibilities and actions associated with configuration management of the system. XRP-II's catalog of control items is called Control Item Master.

The most significant relationship maintained among control items is product structure. Product structure is the XRP-II term for the parent-component pairings that define the ingredients – or bill of material -- for an assembly. Product structures have corresponding active and inactive dates that establish the timeframe during which the pairing is in effect, and they can reference engineering change notices. XRP-II's engineering change notices enable product structure changes to be grouped, reported, checked, and approved before they go into effect. They also facilitate tracking control item changes by a related configuration change request and/or trouble ticket. Sections 1.6.2 and 4.1 of the XRP-II Product Information Manual discuss product structures in more detail.

XRP-II is installed as a separate system at each ECS site, where it manages baseline data about resources deployed to and established at that site. At the SMC, it also offers a consolidated view of baseline data system-wide. XRP-II generates a variety of reports that can be viewed, printed, or saved in a file. These reports draw on data stored at the site where the report is run. The DAACs, EOC, and SMC can export and electronically exchange baseline records among the sites via formatted files. Additionally, each site can produce a file identifying the resources of an operational, production baseline needed for the Planning Subsystem and its operators doing resource planning.

---

<sup>1</sup> Baseline Manager employs and extends a subset of XRP-II's standard, product information capabilities described in Section 1 of the XRP-II Product Information Manual. Added features include use of configuration management-related terminology and item classifications in describing parts and assemblies of parts; maintenance of item dependency and implementation status data; and synchronizing of databases across ECS sites to form a consolidated, system baseline view. Baseline Manager omits XRP-II's cost accounting, stock location, and part planning features; they are not required for baseline management.

Table 4.3.3-1 summarizes the operator functions that XRP-II supports. The sections that follow present how to use XRP-II features that were customized for ECS' Baseline Manager. Refer to the following manuals for a full understanding of XRP-II itself:

- *XRP-II System Reference Manual* - presents an overview of XRP-II and describes system-related functions associated with using it.
- *XRP-II Product Information Manual* - presents a full description of XRP-II's product information module in context of XRP-II's integrated set of manufacturing-oriented applications.
- *XRP-II Datalook/Datarite Reference Manual* - presents a technical reference for the on screen database editor (DATALOOK) and report generator (DATARITE) incorporated in XRP-II for creating custom screens and reports.
- *XRP-II Tools, Techniques, and Conventions Manual* - presents a description of methods and utilities an XRP-II support engineer would use to perform low-level maintenance on XRP-II's database, screens, and reports.
- *UNIFY Developer's Reference* - presents a guide with examples for using UNIFY's tools for developing database applications and interacting directly with the database. It also describes many UNIFY messages.
- *UNIFY Direct HLI Programmer's Manual* - presents a technical reference for programmers of UNIFY RDBMS applications. It contains a summary of UNIFY's error log file and common error messages.
- *UNIFY Developer's Tutorial* - a practical tutorial and functional reference for using UNIFY.
- *ACCELL Publication Package* – describes how to install ACCELL.
- *ACCELL Release Notes* – describes software changes that occurred after the ACCELL and UNIFY manuals were printed.

Refer to ESDIS and ECS configuration management plans and procedures for definitions of such terms as baseline, configuration item, control item, and configured article used in this document.

**Table 4.3.3-1. Common ECS Operator Functions Performed with XRP-II  
(1 of 3)**

<b>Operating Function</b>	<b>Character-based User Interface</b>	<b>Description</b>	<b>When and Why to Use</b>
Catalog control items (section 4.3.3.2.1)	Control Item Master menu; Implementation Status Maintenance screen	Operators select and use a data entry screen to update records identifying individual control items and to identify the sites at which each is (to be) deployed	Used whenever a new control item is to be added or deleted, or when the characterization of an existing one needs changing
Define/Update what comprises baselines and other control item assemblies	Bill Of Material menu	Operators select and use data entry screens to record engineering change notices and maintain product structure records for control.	Used whenever the component structure of a control item has to be defined or changed (section 4.3.3.2.2)
Distribute baseline change records for a release (section 4.3.3.2.3)	Export Release Records screen	Operators select one or more control items and initiate creation of formatted files which they can ftp to one or more sites. The files contain all appropriate, related records.	Used whenever a baseline change is to be released from one site for distribution to others.
Incorporate release records at a site (section 4.3.3.2.4)	Import Data screen	Operators at the sites import data from tar files ftp'ed from the SMC (or other site)	Used any time an XRP-II formatted file containing database updates is available at a site
Provide site baseline change records to the SMC (section 4.3.3.2.5)	Export Site-Unique Changes screen	Operators at the sites create files containing site-unique records changed since the last data export, and can ftp the files to the SMC (and other sites if desired.)	Used as required so the SMC can maintain a current, consolidated database of what comprises operational site baselines system-wide.
Incorporate site baseline change records at the SMC (section 4.3.3.2.4)	Import Data screen	Operators at the sites import data from tar files ftp'ed from a site	Used any time an XRP-II formatted file containing database updates is available at the SMC

**Table 4.3.3-1. Common ECS Operator Functions Performed with XRP-II  
(2 of 3)**

Operating Function	Character-based User Interface	Description	When and Why to Use
Maintain control item implementation status data (section 4.3.3.2.6)	Implementation Status Maintenance screen	Operators maintain records describing the implementation status and installation dates of control items at a site	Used whenever the installation date or implementation status of a control item is established or changed. (Note: Records in the bill of materials for site "production" baselines are used by Resource Planning to maintain its resource inventory.)
Update dependencies among control items (section 4.3.3.2.7)	Control Item Interdependency Maint screen	Operators maintain records that define operator-specifiable relationships between any two control items	Used primarily to identify resources that are version-dependent and to correlate documents with the resources they describe
Query Control Item Records (section 4.3.3.2.8)	Query menu	Operators browse and print a variety of baseline data records	Used to retrieve information about control items, product structures, and change histories, primarily by operators not authorized to change it
Generate Pre-defined Reports (section 4.3.3.2.9)	Report menu	Operators run pre-defined reports using record selection criteria they specify	Used whenever a hard or soft copy of a report is desired
Perform baseline management master files maintenance (section 4.3.3.2.10)	Utilities menu	Operators maintain data that supports local Baseline Manager operation	Used whenever changes are needed to reference files for baseline management and to force recalculation of certain underlying codes and dates.

**Table 4.3.3-1. Common ECS Operator Functions Performed with XRP-II  
(3 of 3)**

Operating Function	Character-based User Interface	Description	When and Why to Use
Perform XRP-II master files maintenance (section 4.3.3.2.11)	System Utilities menu	Operators maintain data and generate files that sustain XRP-II operations system-wide	Used whenever changes are needed to parameters that affect multiple XRP-II functional areas; also used when exporting or importing baseline data being exchanged with other sites.
Perform XRP-II system and database administration (section 4.3.3.2.12)	System Tools menu	Operators regulate user access, administer the database and, if necessary, customize XRP-II	Used whenever changes are needed to screens, menus, printers, and user permissions or when data must be dumped or loaded in bulk

#### 4.3.3.1 Quick Start Using XRP-II

XRP-II has a character-based user interface which employs screens for data entry and report generation, and menus for navigating to the screens. Data is entered via the keyboard in fields that are traversed from left to right row by row. On data entry screens, labels for fields whose values can be modified while viewing the screen are displayed in upper case; labels for the remaining fields are displayed in initial caps. The database is updated every time a field's value changes, and a record of that change is written to a transaction log. The System Reference Manual describes how to use XRP-II's menus and screens.

Most data entry screens have a form and a table view. Form views offer full screen layouts of a data record's fields, whereas table views offer rows of records in a window that is panned to see columns of fields. Some screens' table views, however, contain fewer fields than their corresponding form views caused by system limitations on a table view's panes.

Numerous functions can be performed by data entry screens. Commands available to an operator are screen-dependent and are listed near the bottom of each screen (hence their name: bottom-line commands). The **More** command helps the operator cycle through them. Most bottom-line functions are described in the System Reference Manual and Product Information Manual. Any that were added for Baseline Manager are described in the sections below along with the screens to which they pertain.

It is important to note that the UNIFY relational database management system XRP-II uses does not support rules requiring entries in specific fields<sup>2</sup>. Baseline Manager attempts some enforcement via the data entry screens, either by establishing default values where feasible when new records are created, or by blocking an operator from cursoring past a null field when in Add or Insert modes. However, database updates can occur in ways that bypass these mechanisms, so operators must ensure required data gets entered. The sections below identify the few fields which require entries.

#### **4.3.3.1.1 Command Line Interface**

To run XRP-II as Baseline Manager from the command line prompt, type either:

a) `<principal dir name>/scripts/pcs,`

where `principal dir name` is the directory at which XRP-II is accessed (nominally, `/usr/ecs/OPS/COTS/xrp`);

or,

b) `pcs`, if XRP's scripts directory has been added to your path

The “`pcs`” script determines the operator's terminal type from the environment, prompts for a terminal id, and reads a configuration file to establish a Baseline Manager operating environment. The script then starts XRP-II, passing the operator's userid which it obtains from the system.

#### **4.3.3.1.2 Invoking XRP-II From the ECS Desktop**

There is no icon for XRP-II on the ECS Desktop. The tool must be invoked through a command line as discussed in section 4.3.3.1.1.

#### **4.3.3.2 XRP-II Main Screen**

The first screen<sup>3</sup> an operator sees upon invoking<sup>4</sup> XRP-II varies depending on the entry menu and screen group assigned to the operator. These assignments are made in the “users” section of the XRP-II Tools Manual.

---

<sup>2</sup> XRP-II uses the UNIFY RDBMS bundled in the product, “ACCELL Integrated Development System”.

<sup>3</sup> By convention, XRP-II uses the term “screen” when referring to a window containing a Datalook data entry form or table. Other windows, like the one described here, are called “menus” and are navigation paths to screens.

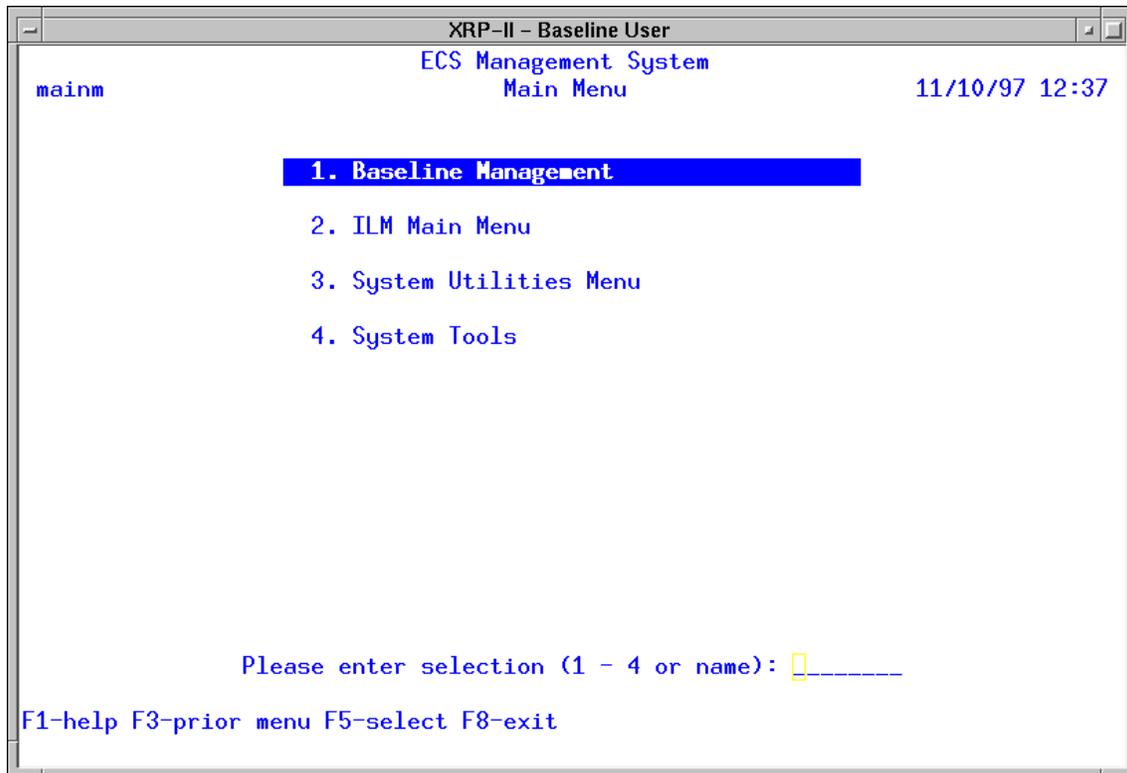

<sup>4</sup> An ECS customization bypasses XRP-II's standard login screen, normally the first screen an XRP-II system user would see.

All XRP-II menus are similar in appearance and function the same way. Only the titles and selections vary. Read the *System Reference Manual* to familiarize yourself with using the menus and screens before proceeding further in this section.

XRP-II's top-level menu is the ECS Management System Main Menu (Figure 4.3.3-1). For Baseline Manager, it lets operators navigate to the following submenus:

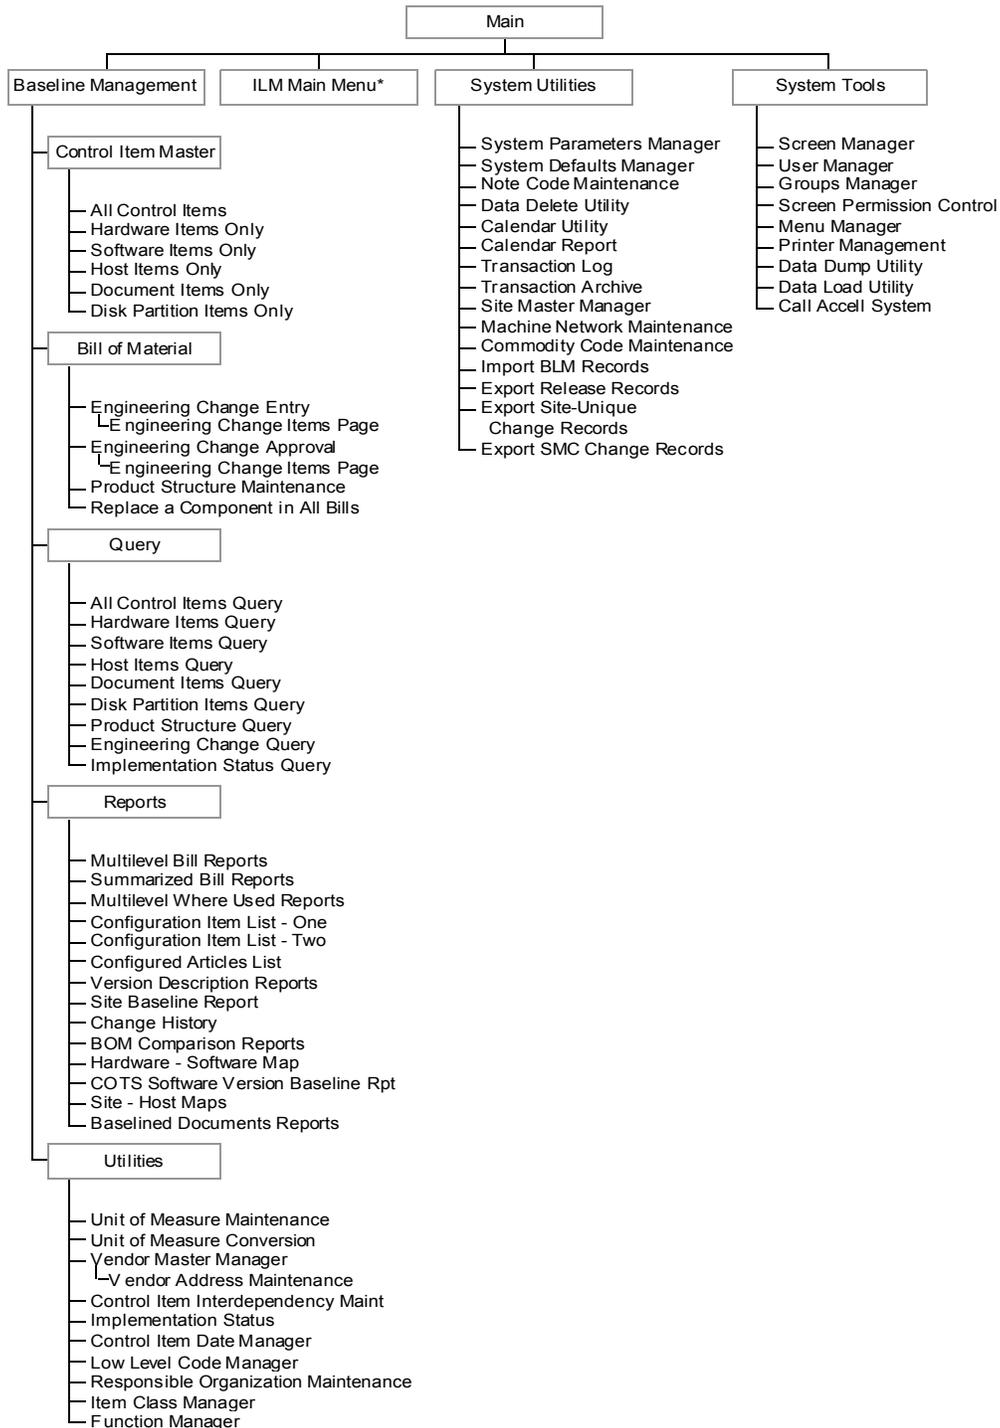

- Baseline Management menu - provides access to XRP-II functions for maintaining control item and bill of material information;
- ILM Main menu - provides access to XRP-II functions for maintaining inventory, logistics, and maintenance information.
- System Utilities menu - provides access to XRP-II functions for maintaining system information that spans functional domains;
- System Tools menu - provides access to aids for registering XRP-II users, assigning permissions, customizing data entry screens and menus, and performing general-purpose database dumps and loads.

These submenus, in turn, navigate to others that lead to XRP-II's data entry screens.

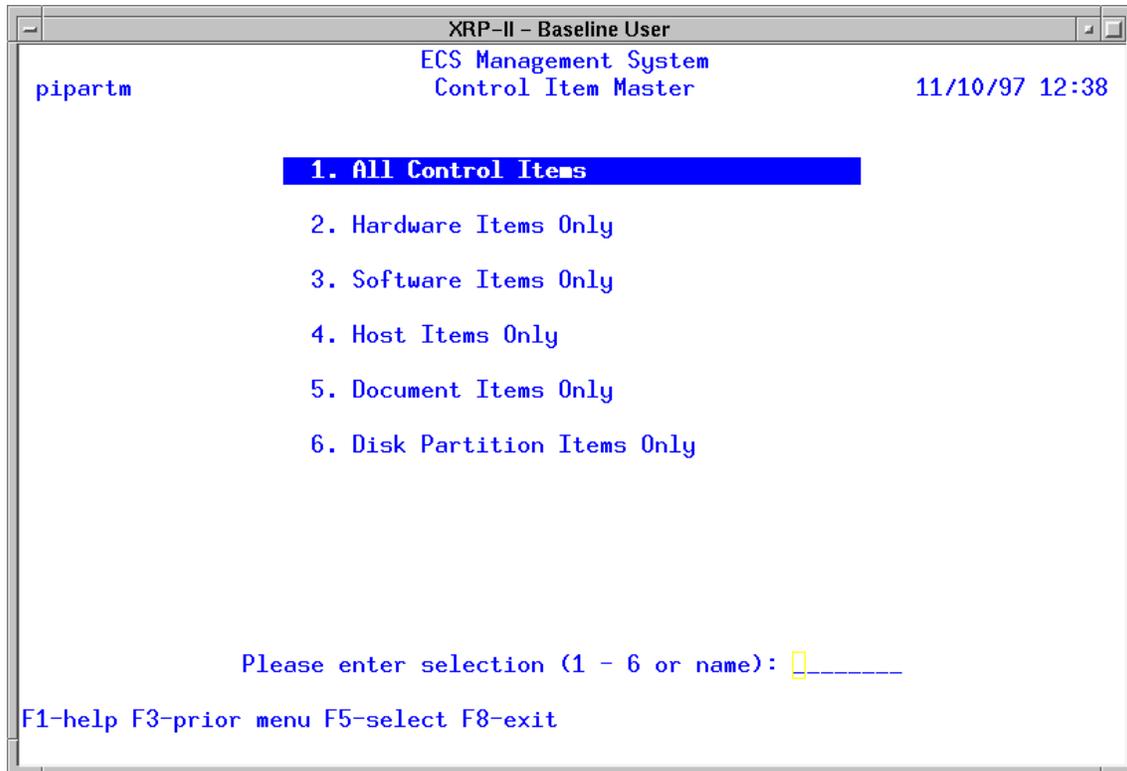

**Figure 4.3.3-1. XRP-II Main Screen**

Figure 4.3.3-2 depicts Baseline Manager's full menu structure. XRP-II data entry screens configured for ECS baseline management are described in the sections that follow.

**Figure 4.3.3-2. ECS Baseline Management System Menu Structure**

\* ILM Main Menu is discussed in section 4.3.4.2.

**Figure 4.3.3-3. Control Item Master Menu**

#### 4.3.3.2.1 Catalog the Control Items

Data about one or more control items can be added, modified, or deleted by selecting an appropriate data entry screen from the Control Item Master menu (Figure 4.3.3-4). These screens modify the control item master file, Baseline Manager's control item "catalog". This is the XRP-II file that describes individual control items. Each screen accesses a particular set of records and contains a unique set of fields corresponding to a control item's class. However, all screens function the same, and all but one has identical bottom-line commands.

Control item master screens are Baseline Manager equivalents of the Part Master Maintenance screen described in Section 3.4 of the Product Information Manual. Their fields are tailored for baseline management, and the following bottom-line commands are added:

- **Bom** - navigates the operator to a Product Structure Component Query screen for the current item. There, an operator can examine the historical record of first-level components for the item, then exit back to the previous screen.
- **Where** - navigates the operator to a Product Structure Parent Query screen for the current control item. There, an operator can determine where the item (or any other item) is used in any bill of material, then exit back to the All Control Items screen.

- **Ec** - navigates the operator to an Engineering Change Query screen for the current item, where an operator can view each historical engineering change recorded for the item.

Using control item master screens, operators can add or modify control item data at any time, without affecting any bills of materials. However, these screens can not delete an item if the item is referenced by another database record; the Data Delete utility must be used instead (see section 6.12 of the System Reference Manual).

**Note:** XRP-II may take a minute or more to select and arrange Baseline Manager records the first time a session accesses a control item master screen.

Most fields in a control item's master record are for information only. However, the following play a role in XRP-II processing.

- **Control item identifier** - Every item in the catalog has its own record and must have a unique identifier. By convention, core and site-specific control items – those centrally developed and/or maintained on behalf of one or more sites -- are assigned designators of the form “bnnnnnnnnn”; site-unique control items (those established by a site or on behalf of a site) are given a 3-character site prefix. XRP-II relies on this differentiation when synchronizing site baseline changes with the database at the SMC (see Sections 4.3.3.2.5, 4.3.3.2.6, and 4.3.3.5). The “b” in control item identifiers is a convention that stands for “baseline”. The convention helps operators visually distinguish between identifiers used for baseline and inventory items, which are otherwise similar and both stored in the same XRP-II database.
- **Item class** - as previously mentioned, the class to which a control item is assigned determines the set of characteristics or details that can be recorded about the item and the screens to be used to update and view the data (see Section 4.3.3.2.10.6).
- **Planning resource** - items marked as planning resources will be reported when Baseline Manager receives requests from resource planners for resource configuration data.
- **Config article** - items marked as configuration articles form the basis for several custom ECS reports, including the Configured Articles List and the Version Description Report.
- **Implementation status** - implementation status data recorded for a control item influences:
  - the contents of several ECS custom reports which use deployment site data for selecting and ordering data;
  - the data that is reported to resource planners about resources that comprise operational baselines whose implementation status is “production”.

The next few sections describe specific XRP-II screens and fields an operator would use when updating the control item catalog.

#### 4.3.3.2.1.1 All Control Items Screen

The All Control Items screen (Figure 4.3.3.3-5) adds, modifies, and deletes general identification information about individual control items. It accesses every control item record, but does not contain fields describing an item's detailed characteristics. Details are handled by class-specific data entry screens described in sections 4.3.3.2.1.1- 4.3.3.2.1.6.

Figure 4.3.3-4. All Control Items CHUI

Fields on this screen serve as a template for all control item master screens, and are described in Table 4.3.3-2. The following bottom-line command, however, is unique to this screen:

- **.Details** - navigates the operator to a control item update screen where details can be recorded about the current control item record. Detail screens are available only for hardware, software, document, host, and disk partition classes of control items.

Use bottom-line commands such as **Select**, **Find**, **Next**, and **Prior** to locate a record, and use **/Add**, **/Insert**, **/Modify**, and **/Delete** to switch to an update mode<sup>5</sup>. Then edit the catalog via the keyboard, or use the **/Zoom** command (on fields where it is active) to pick values from a list; XRP-II updates the database automatically when the cursor leaves a field, eliminating the need to “save” your work. To save time, use **Copypart** to create a new control item with data from some

<sup>5</sup> Commands used to enter an update mode are not initially visible on a data entry screen. Use the **More** command to cycle through lists of commands available to the screen.

existing one, and use /Copy to replicate data fields over a range of control item records. When finished, type <F3> to exit database update mode. Then either proceed to other records or type “Q” (quit) or <F3> to exit the screen.

**Note:** The Config Article field must be set to “Y” if the control item is to appear in a Configured Article List or a Version Description Report.

**Note:** The Planning Resource field must be set to “Y” if the control item is to be included in formatted files of production baseline data generated for resource planners.

**Note:** The Item Class field must be set to either “host”, “string”, “hardware”, “software”, or “partition” if a control item marked as a planning resource is to be included in formatted files of production baseline data generated for resource planners.

**Table 4.3.3-2. All Control Items Field Description (1 of 3)**

Field Name	Data Type	Size	Entry	Description
control item id	string	20	required	Unique code for a version- or configuration-controlled item
name/doc #	string	24	optional	Name by which a specific control item is known
mnemonic	string	8	optional	Code (or short name) by which item is referenced (e.g., MLCI)
description/title	string	54	optional	Textual characterization of an entity
item class	string	16	optional; zoom to select from a list of valid classes	Link to the group name for control items having common attribute types (e.g., software, hardware, design, document, host, network, site, baseline, partition, project, other,...)
item subclass	string	16	optional	Group name that distinguishes among types of control items within a class
model/version	string	24	optional	Textual identifier for a level of functional capability for a control item
pred item	string	20	optional	Identifier of the previous version of a control item

**Table 4.3.3-2. All Control Items Field Description (2 of 3)-**

Field Name	Data Type	Size	Entry	Description
oem part	string	34	optional; zoom to select from a list of numbers maintained in inventory	Manufacturer's part number for an item
>>	N/A		optional; zoom to a list of EIN records for the part named in field "oem part"	Link to a set of XRP-II records related to the current record
oem description	string	40	optional; defaults to inventory description for item named in "oem part"	Manufacturer's description of an item
current revision	string	3	system supplied	Identifier for the currently-active revision level of the item's product structure
highest revision	string	3	system supplied	Identifier for a control item's latest product structure revision
config article	string	1	required; Y, N	Code for distinguishing between control items that are configured articles and those that are not
planning resource	string	1	required; Y, N	Code for distinguishing between control items that are reportable for PDPS resource planning and those that are not
source CI	string	8	optional	Mnemonic of the HWCI or CSCI that owns the control item
function	string	30	optional; zoom to select from a list of standard functions	Name for the primary job of the control item
scope	string	1	optional ; c, s, u	Code indicating whether an item is core, site-specific or site-unique
implementation status	N/A		optional; zoom to add or update implementatio n status records	Link to the control item implementation status table containing the list of sites to which a control item is deployed together with the installation date and implementation status of the control item at each site

**Table 4.3.3-2. All Control Items Field Description (3 of 3)-**

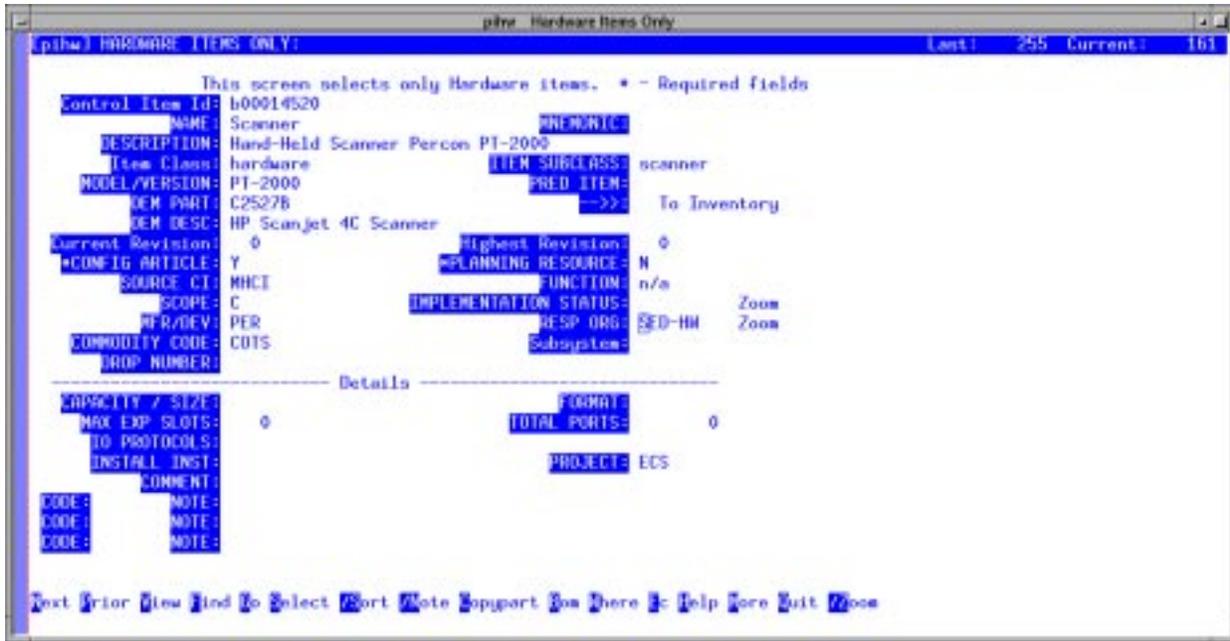

Field Name	Data Type	Size	Entry	Description
mfr/dev	string	3	optional; zoom to select from a list of manufacturer and developer codes	Coded name of the company/organization that produced a hardware control item
resp org	string	6	optional; zoom to select from a list of organizations	Code of the organization responsible for the item
commodity code	string	8	optional; zoom to select from a list of standard codes	Classification for how the item was produced or obtained (e.g., COTS, custom, mod-COTS, GFE, shareware, freeware, other)
subsystem	string	24	system-supplied	Name of the subsystem that owns the item; namely, the parent of the item's source CI
project	string	10	optional; defaults to "ECS"	Name of the principal project under which the item was procured or developed
drop number	string	16	optional	Identifier for the incremental baseline/release in which the item was delivered from development
comment	string	60	optional	Miscellaneous information specific to the control item
code	string	2	optional	Identifier for a type or category of message that can be associated with a control item
note	string	30	optional	A message, used in conjunction with a code, that can be associated with a control item

#### **4.3.3.2.1.2 Hardware Items Only Screen**

The Hardware Items Only screen (Figure 4.3.3-5) adds, modifies, and deletes information that identifies and characterizes hardware control items. These would typically be processor units, tape drives, disk systems, CD-ROM drives, and other similar system and network equipment. Only those catalog records whose Item Class field contains the value "hardware" are accessed.

Fields on this screen that identify a control item correspond to the fields on the All Control Items screen discussed in section 4.3.3.2.1.1. Additional fields store detailed characteristics applicable only to hardware items and are described in Table 4.3.3-3.

Use this screen the same way as described earlier for the All Control Items screen.

**Figure 4.3.3-5. Hardware Items Only CHUI**

**Table 4.3.3-3. Hardware Items Only Field Description**

Field Name	Data Type	Size	Entry	Description
mfr	string	6	optional; zoom to list of manufacturers and developers	Coded name of the company/ organization that produced a hardware control item
capacity/size	string	10	optional	Total capacity (e.g., storage) for a control item
format	string	10	optional	Classification that distinguishes hardware control items according to some technical specification
max exp slots	numeric	4	optional	Number of expansion slots an item contains
total ports	numeric	8	optional	Number of ports (e.g., serial ports, network connections) a control item has
io protocols	string	60	optional	List of protocols a hardware control item supports
install inst	text	N/A	optional	Text containing/specifying where to find instructions for installing the control item

#### 4.3.3.2.1.3 Software Items Only Screen

The screen depicted in Figure 4.3.3-6 adds, modifies, and deletes information that identifies and characterizes software control items. These would typically be application clients, application

servers, databases, and patches whether custom or COTS. It accesses only those catalog records whose Item Class field contains the value “software”.

Fields on this screen that identify a control item correspond to the fields on the All Control Items screen discussed in Section 4.3.3.2.1.1. Additional fields store detailed characteristics applicable only to software items and are described in Table 4.3.3-4.

Use this screen the same way as described earlier for the All Control Items screen.

**Figure 4.3.3-6. Software Items Only CHUI**

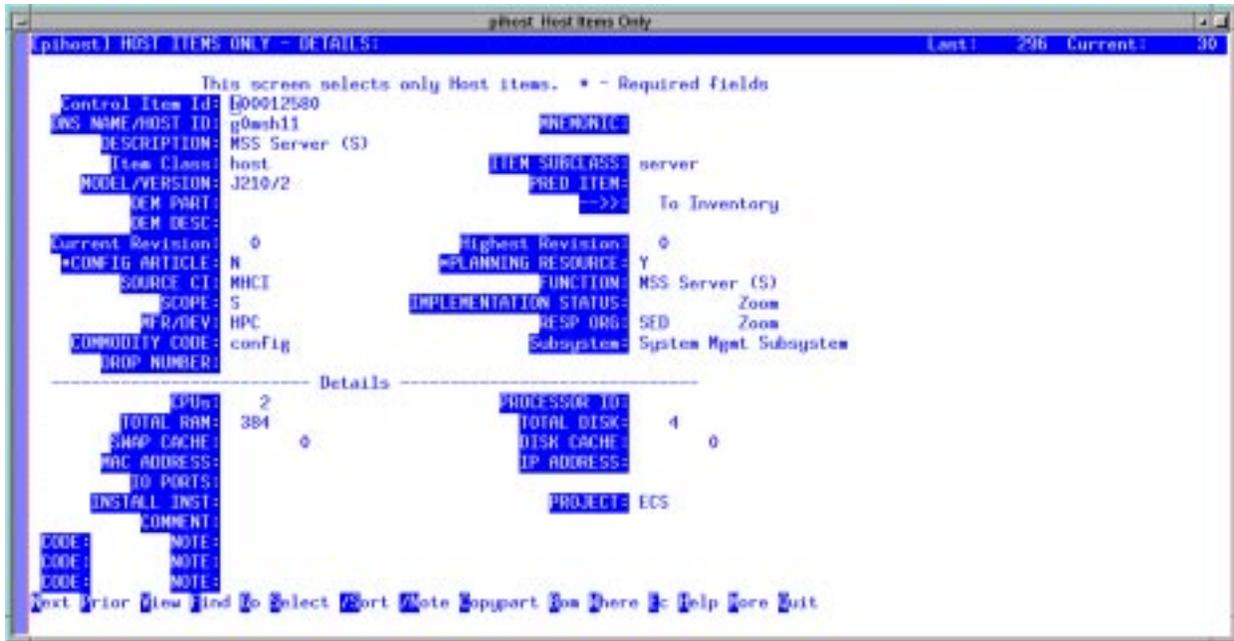

**Note:** The installation instructions field is a text field. It is displayed in a text box window via the /Zoom command, which appears on the bottom-line command list whenever the cursor is at a text field. The “T” shown in Figure 4.3.3-7 indicates that data exists in the text box.

**Table 4.3.3-4. Software Items Only Field Description-**

Field Name	Data Type	Size	Entry	Description
variant	string	4	optional	Name of the type of computer on which a software control item has been built to run
tcp/udp port	numeric	8	optional	Numeric identifier of port used for communicating with control item
principal dir	string	50	optional	Pathname(s) at which the item is stored
application id	string	8	optional	Designator used for monitoring and controlling a family of software programs during execution
program id	string	8	optional	Designator used for monitoring and controlling a software program during execution
license type	string	10	optional	Method by which software licenses are assigned (floating, user, machine, site...)
total licenses	numeric	4	optional	Number of seats, computers, or persons authorized to use a COTS application concurrently
install inst	text	N/A	optional	Text containing, or specifying where to find, instructions for installing the control item

#### **4.3.3.2.1.4 Host Items Only Screen**

The Host Items Only screen (Figure 4.3.3-7) adds, modifies, and deletes information that identifies and characterizes control items that are system hosts. These would be assemblies of processors, software and peripherals such as fully configured servers and workstations, but may include other network-addressable resources for which the data fields on this screen are suited, including routers and switches. The screen accesses only those catalog records whose Item Class field contains the value "host".

**Figure 4.3.3-7. Host Control Items Only CHUI**

Fields on this screen that identify a control item correspond to the fields on the All Control Items screen discussed in Section 4.3.3.2.1.1. Additional fields store detailed characteristics applicable only to host items and are described in Table 4.3.3-5.

Use this screen the same way as described earlier for the All Control Items screen.

**Table 4.3.3-5. Host Items Only Field Description-**

Field Name	Data Type	Size	Entry	Description
DNS name/host id	string	24	optional	Local name by which a host is accessed; its Domain Name System name
# cpu's	numeric	4	optional	Number of CPUs in a host
processor id	string	20	optional	Vendor-provided name for a family of processors
total ram	numeric	4	optional	Amount of main memory (in MB) a host contains
total disk	numeric	4	optional	Amount of usable disk space (in GB) for a host
swap cache	numeric	8	optional	Total swap space (in blocks) allocated on a host
disk cache	numeric	8	optional	Total disk cache (in blocks) for a host
MAC address	string	17	optional	Machine's Media Access Control number
IP address	string	15	optional	Network address for a host
IO ports	string	60	optional	List of ports and associated services on a host
install inst	text	N/A	optional	Text containing, or specifying where to find, instructions for installing the control item

#### **4.3.3.2.1.5 Document Items Only Screen**

The Document Items Only screen (Figure 4.3.3-8) adds, modifies, and deletes information that identifies and characterizes baselined documents, such as specifications, manuals, and version-controlled forms. The screen accesses only catalog records whose Item Class field contains the value "document".

Fields on this screen that identify a control item correspond to the fields on the All Control Items screen discussed in Section 4.3.3.2.1.1. Additional fields store detailed characteristics applicable only to document items and are described in Table 4.3.3-6.

Use this screen the same way as described earlier for the All Control Items screen.

**Figure 4.3.3-8. Document Items Only CHUI**

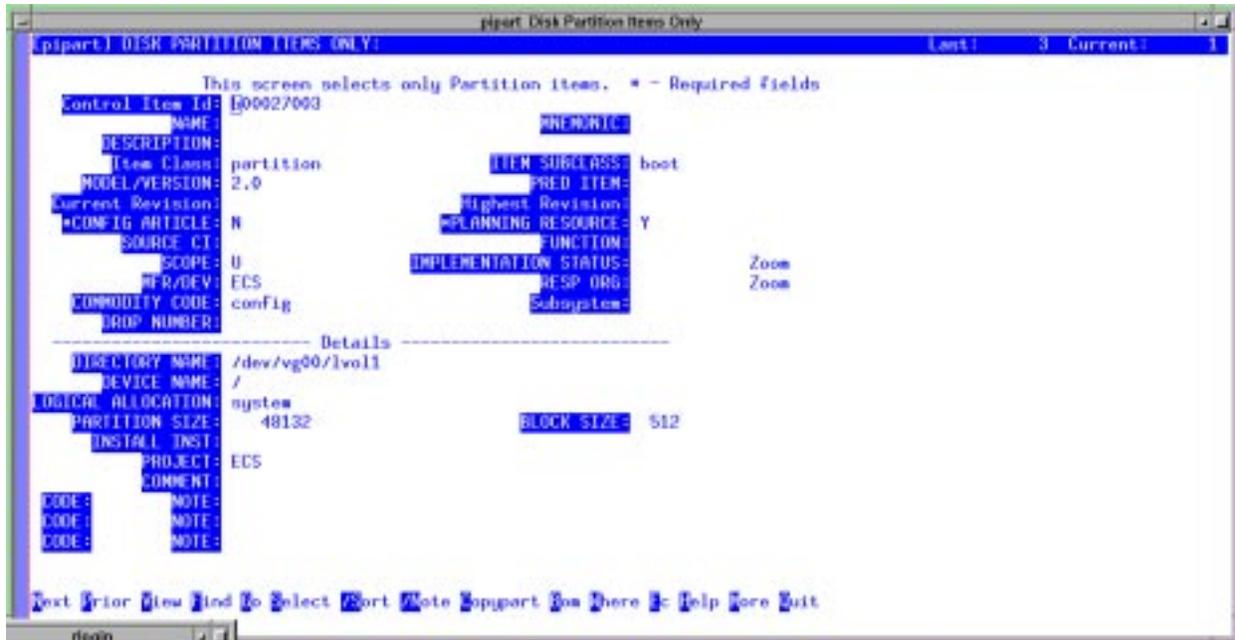

**Table 4.3.3-6. Document Items Only Field Descriptions**

Field Name	Data Type	Size	Entry	Description
title	string	54	optional	Nomenclature used to identify document volumes
document number	string	24	optional	Code by which a document is known
issue	string	8	optional	Nomenclature used to distinguish among versions of a single edition of a document (e.g., draft, final, ...)
publ date	date	N/A	optional	Date associated with a document
latest chg notice	string	6	optional	The most recent change notice or the list of change notices issued for a document
refs	N/A	N/A	optional; zoom to a list of related control items	List of other, associated control items
repository	string	32	optoal	Name for the location where the document is officially kept
format	string	10	optional	Nomenclature for the protocol used to encode the document

#### 4.3.3.2.1.6 Disk Partition Items Only Screen

The Disk Partition Items Only screen (Figure 4.3.3-9) adds, modifies, and deletes information that identifies and characterizes boot and data disk partitions associated with a host computer. It accesses only those catalog records whose Item Class field contains the value “partition”.

Fields on this screen that identify a control item correspond to the fields on the All Control Items screen discussed in Section 4.3.3.2.1.1. Additional fields store detailed characteristics applicable only to disk partition items and are described in Table 4.3.3-7.

**Figure 4.3.3-9. Partition Items Only CHUI**

Use this screen the same way as described earlier for the All Control Items screen.

**Table 4.3.3-7. Partition Items Only Field Descriptions-**

Field Name	Data Type	Size	Entry	Description
directory name	string	50	optional	Logical name used to access a device
device name	string	32	optional	Physical name used by a machine to access the device
logical allocation	string	32	optional; usually either "system" or "user"	Classification that distinguishes between disk partitions used by the system and those available for use by applications
partition size	numeric	8	optional	Number of blocks for a device
block size	numeric	4	optional	Size of a block (in bytes) on a device
install inst	text	N/A	optional	Text containing, or specifying where to find, instructions for installing the control item

#### **4.3.3.2.2 Define/Update What Comprises Baselines and Other Control Item Assemblies**

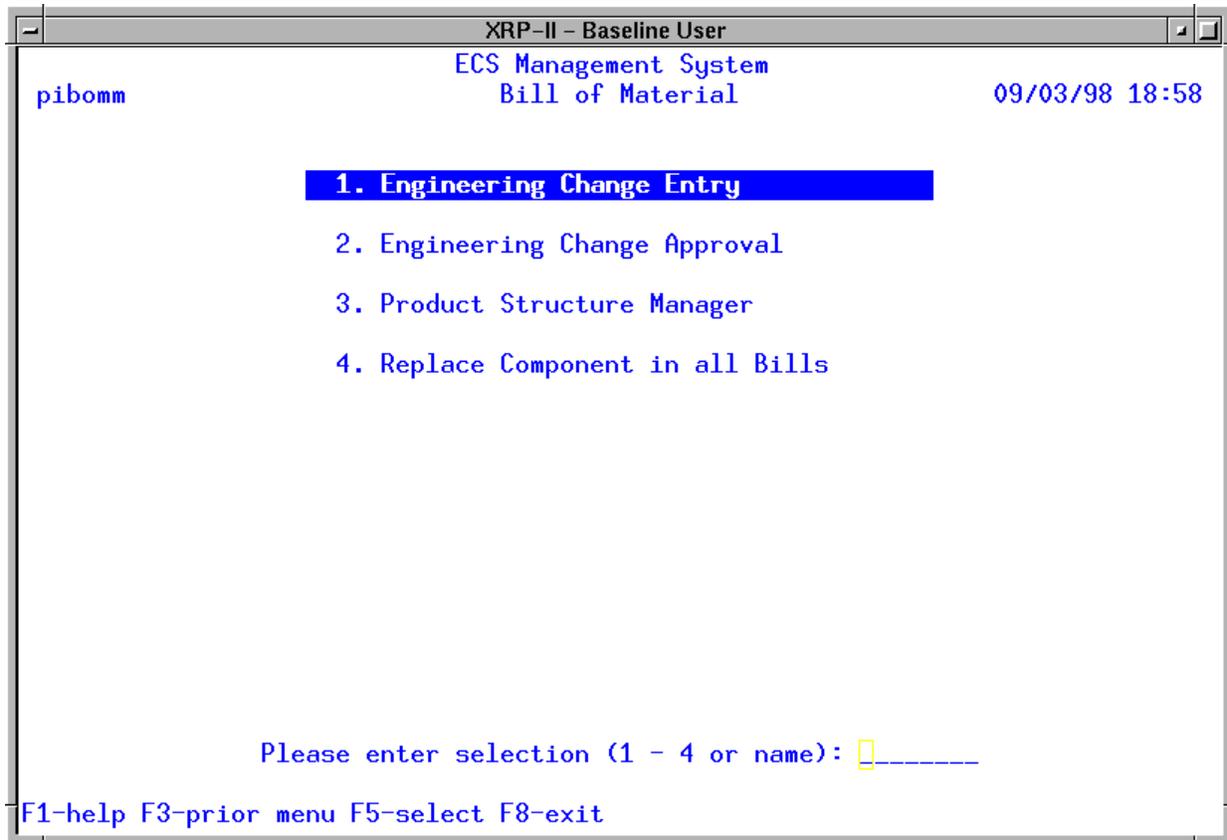

Baselines are control items that consist of other control items. They are logical assemblies.

XRP-II uses product structure records to describe assemblies. Each such record defines a single parent-component control item pair and contains data pertinent to the pairing, such as its effective dates and the quantity of the component needed to form the parent.

Product structure records are the basis for XRP-II's bill of material processing. They are used to generate most ECS reports, to extract data for resource planning, and to select control item records to distribute when a baseline change is released. Once the component structure of a baseline (or other configuration assembly) has been recorded, operators can generate multilevel bill of material reports to determine what comprised the baseline on any given date.

Baseline changes entail making product structure changes in XRP-II. The XRP-II construct for this is the engineering change. An engineering change defines for a control item either an initial set of first-level components or a change in the quantity, unit of measure, or effective dates for one or more of the item's components. One engineering change can affect many control items' product structures, and the product structure of any control item can be affected by many engineering changes. Operators can associate a revision code with an engineering change to an item. Unlike version codes (which connote a level of form, fit, and function and thus remain unchanged once assigned to a control item), revision codes help distinguish among changes in the composition of a control item that do not warrant defining a new item. Operators also can associate a configuration change request and/or trouble ticket number with an engineering change in order to document the basis for implementing it. Engineering changes can be recorded in Baseline Manager at any time, but they must be marked "approved" before any effective dates can be recorded.

The four data entry screens operators use to maintain product structure data are each accessed from the Bill of Material menu shown in Figure 4.3.3-10. The first two screens are presented in the sections below. The last two are described in section 4.4 of the Product Information Manual.

**Figure 4.3.3-10. Bill of Material Menu**

**Note:** Each engineering change to a control item can redefine more than one of the pairings between it and a component but can include only one new definition per component. Each definition specifies a contiguous timespan during which the affected relationship is in effect. XRP-II adjusts all previously defined dates for any pairings with which the new definitions conflict.

**Note:** A revision code reflects the set of component-level changes to a control item that are associated with a specific engineering change. If revision codes are also to be used to differentiate all the bills of material for the control item over time, each engineering change for the item must define at most one new bill. This happens only when all the component changes it defines for the item carry the same effective dates.

**Note:** XRP-II uses two fields -- Active Date and Inactive Date -- to represent effectivity dates for individual product structure records. Valid values for these fields include the code “\*\*/\*\*/\*\*” and the dates Jan 1, 1920 through Dec 31, 2019. XRP-II interprets the code “\*\*/\*\*/\*\*” as first system date when it is used as a product structure’s Active Date, and as last system date when it is used as an Inactive Date.

**Note:** Site-unique engineering changes should be assigned numbers having the site's designated 3-character prefix so the changes can be exported for consolidation at the SMC (see Section 4.3.3.2.11.9).

#### 4.3.3.3.2.1 Engineering Change Entry Screen

Operators use the screen shown in Figure 4.3.3-11 whenever an engineering change for a control item is to be defined or modified but has not yet been approved. It allows new product structures to be created but prevents processing of effectivity dates. Consequently, bills of material for approved assemblies remain unaffected. The screen is similar to the Engineering Change Maintenance screen described in the Section 4.3 of the Product Information Manual, differs as follows:

- Fields for project, CCR #, TT, baseline/release and approval date appear in lieu of certain other fields not pertaining to baseline management. Each is an information only field that is described in Table 4.3.3-8.
- Values for the approval code and date and for the active and inactive dates are system supplied by the system; they can only be changed via the Engineering Change Approval screen (see Section 4.3.3.3.2.2). This allows operators to record new product structure data without causing premature adjustments to effective dates of existing bills of material. Active and inactive dates default to the last system date: December 31, 2019.
- The **Items** bottom-line command can be used irrespective of the approval code's value.

**Figure 4.3.3-11. Engineering Change Entry CHUI**

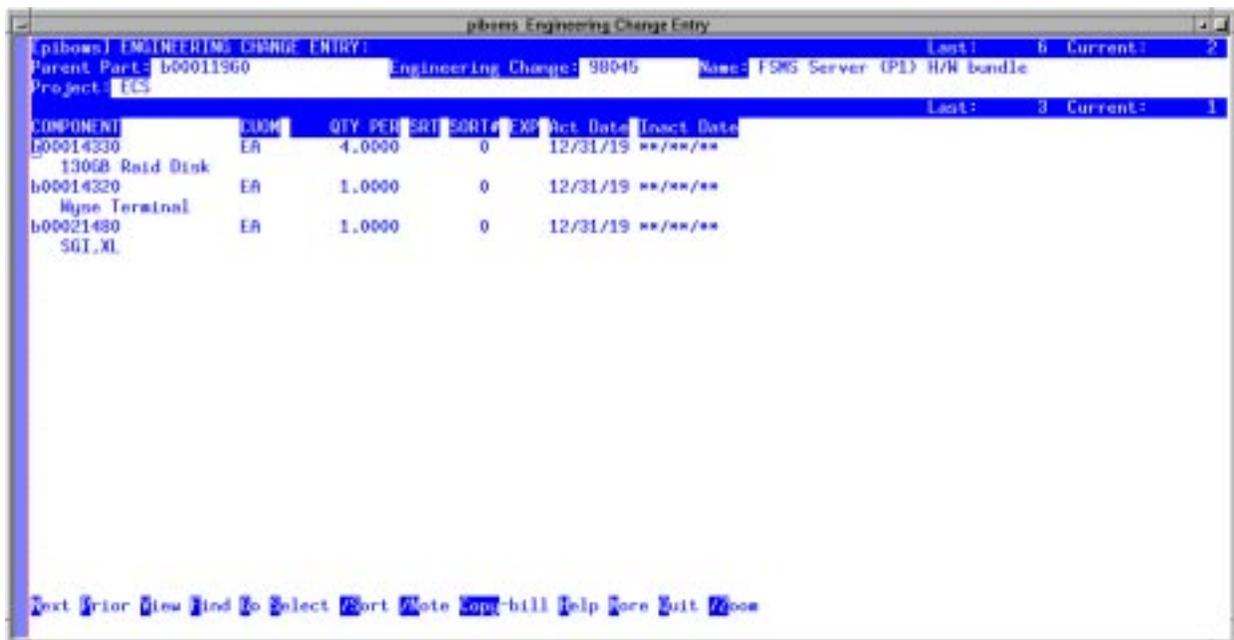

Enter information about an engineering change using Table 4.3.3-8 as a guide, then use the **Items** bottom-line command to create or modify the list of components for the parent control item's product structure. The Items page (Figure 4.3.3-12) is the same as that described in Section 4.3 of the Product Information Manual, but without the "offset" field which is not used in Baseline Manager. Be sure to enter an appropriate quantity for each component. Components having zero quantity will not appear in their parent's bill of materials.

**Table 4.3.3-8. Engineering Change Entry Field Descriptions (1 of 2)**

Field Name	Data Type	Size	Entry	Description
parent part	string	20	required; zoom to a list of control items	Identifier of the control item associated with the engineering change
engineering change	string	8	required	Number that uniquely identifies every product structure change action
name	string	24	system supplied	Name by which a specific control item is known
project	string	10	optional; defaults to "ECS"	Name of the principal project under which the item was procured or developed
date entered	date		system supplied	Date that the ECN was created
operator id	string		system supplied	Identifier of the operator who created the ECN
approval date	date	N/A	system supplied	Date an engineering change is formally sanctioned by an approval authority
approval code	string	1	system supplied; defaults to "E" for entered	Code that distinguishes among lifecycle stages for engineering changes; must be "A" (approved) for active date to be set
ccr #	string	30	optional	Reference to the CCR authorizing the configuration change
tt	string	15	optional	Reference to the trouble ticket authorizing the configuration change
sort order	string	1	optional ; P, R, or S	Code that specifies how component parts are to be sorted on an engineering change screen's items page
drawing	string	20	optional	Control item identifier of a drawing associated with a control item and engineering change
revision	string	3	optional	Change level for a control item that has undergone a product structure change
implementation code	string	2	optional	Code that distinguishes between permanent and temporary changes

**Table 4.3.3-8. Engineering Change Entry Field Description (2 of 2)-**

Field Name	Data Type	Size	Entry	Description
baseline/release	string	24	optional	Name, version, description, or identifier of a baseline with which an engineering change is associated
active date	date	N/A	system supplied	Date on which a product structure relationship between two control items is effective
inactive date	date	N/A	system supplied	Date on which the subject product structure is to be obsoleted or superseded

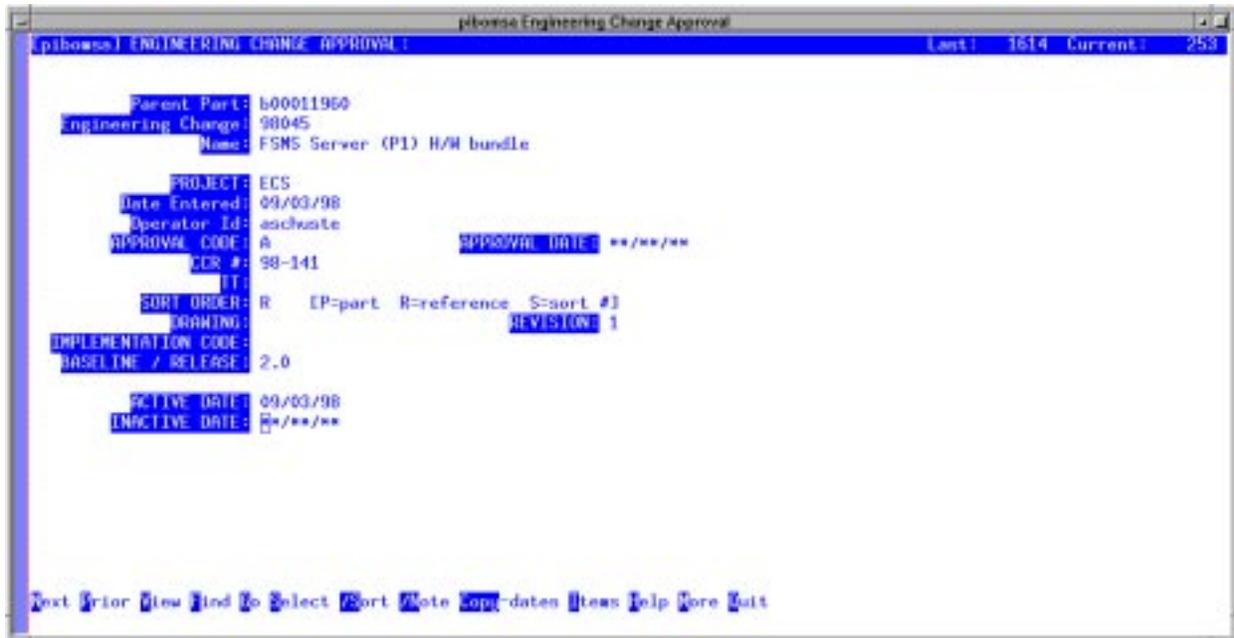

**Figure 4.3.3-12. Engineering Change Entry's Items CHUI**

#### 4.3.3.2.2.2 Engineering Change Approval Screen

Operators use the Engineering Change Approval screen to define or update approved engineering changes or to upgrade the status of a previously entered one to “approved”. As shown in Figure 4.3.3-13, this screen is the same as the Engineering Change Entry screen, except that it can modify the approval code and date. Changing the approval code to “A” for approved enables active and inactive date fields, allowing operators to set effectivity dates for new product structures.

Enter the new approval code and optional approval date, then add an active and inactive date. These active and inactive entries are used as defaults on the Items page (Figure 4.3.3-12 above) when

adding records to the parent's component list. The Copy-dates bottom-line command, described in Section 4.3.9.1 of the Product Information Manual, can be used to propagate active and inactive dates to component items already in the list.

**Figure 4.3.3-13. Engineering Change Approval CHUI-**

**Table 4.3.3-9. Engineering Change Approval Field Descriptions (1 of 2)-**

Field Name	Data Type	Size	Entry	Description
parent part	string	20	required	Identifier of the control item associated with the engineering change
engineering change	string	8	required	Number that uniquely identifies every product structure change action
name	string	24	system supplied	Name by which a specific control item is known
project	string	10	optional	Name of the principal project under which the item was procured or developed
date entered	date	N/A	system supplied	Date that the ECN was created
operator id	string	8	system supplied	Identifier of the operator who created the ECN
approval date	date		optional	Date an engineering change is formally sanctioned by an approval authority
approval code	string	1	optional; default is "E" (entered)	Code that distinguishes among lifecycle stages for engineering changes; must be "A" (approved) for active date to be set
ccr #	string	30	optional	Reference to the CCR authorizing the configuration change
tt	string	15	optional	Reference to the trouble ticket authorizing the configuration change
sort order	string	1	P, R, or S	Code that specifies how component parts are to be sorted on an engineering change screen's items page
drawing	string	20	optional	Control item identifier of a drawing associated with a control item and engineering change
revision	string	3	optional	Change level for a control item that has undergone a product structure change
implementation code	string	2	optional	Code that distinguishes between permanent and temporary changes
baseline/release	string	24	optional	Name, version, description, or identifier of a baseline with which an engineering change is associated
active date	date	N/A	optional; default is the latest specifiable system date	Date on which a product structure relationship between two control items is effective. The code **/**/** means first system date when used with this field

**Table 4.3.3-9 . Engineering Change Approval Field Description (2 of 2)-**

Field Name	Data Type	Size	Entry	Description
inactive date	date	N/A	optional; default is last system date (**/**/**)	Date on which the subject product structure is to be obsoleted or superceded. The code **/**/** means last system date when used with this field

#### **4.3.3.2.2.3 Product Structure Maintenance**

This function is a standard XRP-II function described in the documentation referenced in Section 4.3.3.

#### **4.3.3.2.2.4 Replace a Component in All Bills**

This function is a standard XRP-II function described in the documentation referenced in Section 4.3.3.

#### **4.3.3.2.3 Distribute Baseline Change Records for a Release**

Appropriate baseline management data can be distributed to affected sites whenever a new baseline, configuration item, or other control item is released. This data includes control item catalog, product structures, engineering changes, and implementation status records pertaining to the control item being released and all the items in its bill of materials.

Operators use the Export Release Records utility to generate and tar formatted files that can be shipped to any ECS site for loading into XRP-II there. The program is accessed via the System Utilities menu and is described in Section 4.3.3.2.11.8.

#### **4.3.3.2.4 Incorporate Release/Baseline Change Records Into XRP-II**

Occasionally, Baseline Manager data must be loaded into XRP-II in bulk. The data, stored as a tar file, is usually received in support of a new release being distributed to the sites or a consolidation of site baseline changes at the SMC.

Operators load this data using XRP-II's Import BLM Records utility. This program is accessed via the System Utilities menu and is described in Section 4.3.3.2.11.7.

#### **4.3.3.2.5 Provide Site Baseline Change Records to the SMC**

The Baseline Manager at the SMC can maintain consolidated records about operational baselines system-wide. Records created at local sites are shipped to the SMC where they are added to records centrally created at the SMC. To distinguish among them, centrally-created records begin with a number, while records originating at a site have a 3-character site prefix.

Baseline Manager supports this cross-site database synchronization with a transaction log and a program accessed via the System Utilities menu. XRP-II automatically logs a transaction whenever the contents of a Baseline Manager field changes. Operators at the sites periodically use the Export Site-Unique Change Records utility to generate a formatted data file based on transactions logged

but not previously reported. Operators can have XRP-II ftp the file to the SMC where SMC operators can load the data into the Baseline Manager there. Details about the transaction log and the Export Site-Unique Change Records utility can be found in the discussions about system utilities within Section 4.3.3.2.11.

#### **4.3.3.2.6 Maintain Control Item Implementation Status Data**

Baseline Manager can maintain status information about the implementation of control items. For each item, an operator can create a record for a site and specify its implementation status and installation date. Deployment records about core and site-specific control items would normally be maintained at the SMC and distributed whenever a set of release records is shipped to the sites. The implementation status of these items is maintained at the sites, as are like records about site-unique control items (those established at a site). Status updates for the site-unique control items are shipped to the SMC whenever site-unique changes are reported (see Sections 4.3.3.2.5 and 4.3.3.2.11.9). However, status updates that the sites make locally to release records maintained centrally by the remain at the sites so that SMC deployment data is preserved.

Operators must maintain implementation status records because several Baseline Manager functions depend on them. For example, reports that list control items according to site are generated using these records to determine the site(s) under which the item should appear. This includes the Configuration Item List reports, the Configured Article List report, and the Version Description report. Also, the resource configuration file created for resource planners is built using these records to determine which of the site's operational baseline records has "production" status.

Operators use the Implementation Status Maintenance data entry screen to create and update these records. This screen can be accessed via the Utilities menu and is described in Section 4.3.3.2.10.3.

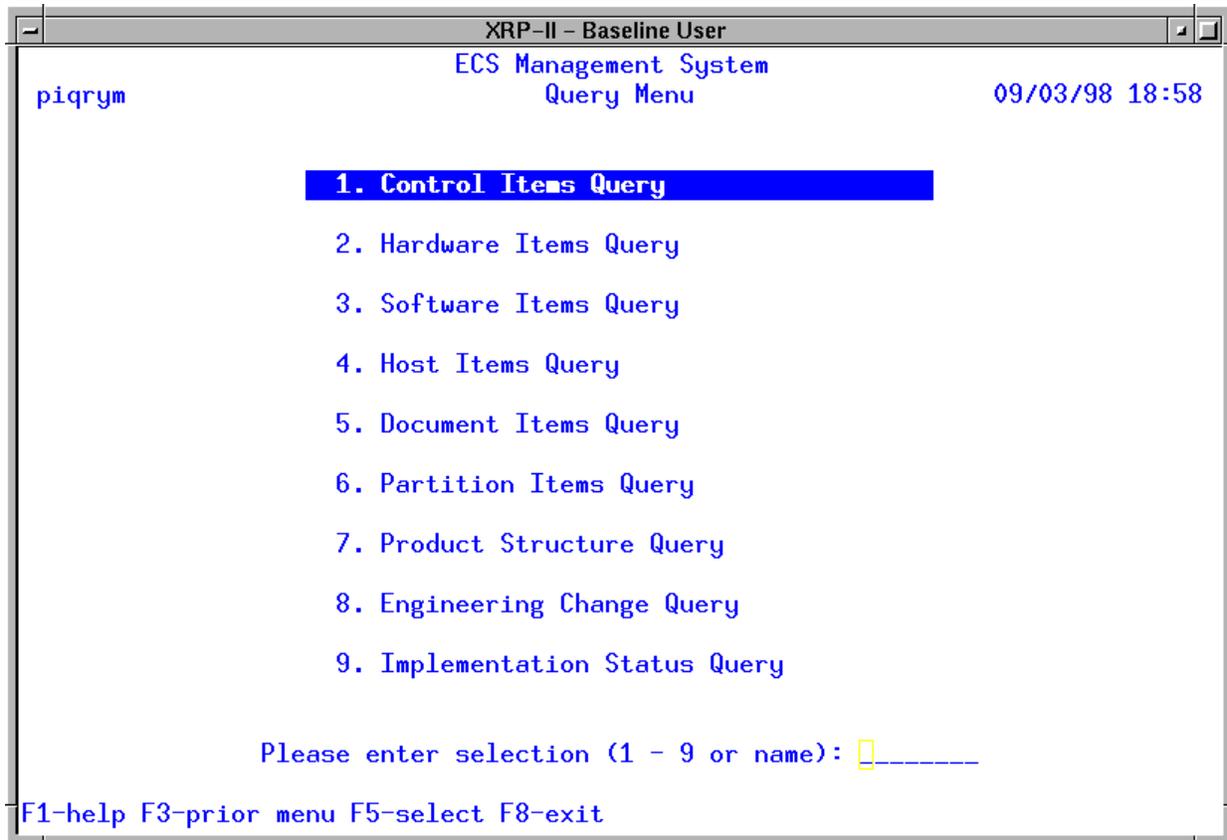

#### **4.3.3.2.7 Update Dependencies Among Control Items**

Individual control items can have relationships -- or interdependencies -- among each other that need to be tracked. For example, application software needs certain operating system versions in order to function correctly, specification documents are associated with specific subsystems and configuration items, certain manuals describe particular configured articles, and each operational baseline derives from a specific release baseline.

XRP-II correlates interdependent pairs of control items via the Control Item Interdependency Maint(enance) screen. The screen is accessible from the Utilities menu and is described along with other baseline management utilities within Section 4.3.3.2.10.

#### **4.3.3.2.8 Query Control Item Records**

Operators granted read only permissions to Baseline Manager can retrieve, sort, filter and generate ad hoc reports of XRP-II database records using eight screens accessed from the Query menu (Figure 4.3.3-14). The six "items" screens closely mirror database update screens described earlier (Section 4.3.3.1.3), with an added field to display an item's local implementation status. The menu also has two screens for querying product structure and engineering change records, respectively.

**Figure 4.3.3-14. Query Menu**

Use the Control Items Query screen to browse the entire control item catalog minus its configuration details. To view full configuration details, use the individual query screens designed specially for hardware, software, document, host, and disk partition items.

Use the Product Structure Query screen to browse historical product structure records and display information about any parent-component control item pair. This is helpful, for example, when trying to determine why a control item is not appearing in a bill of materials as expected. Descriptions of this screen's fields can be found in Section 4 of the Product Information Manual.

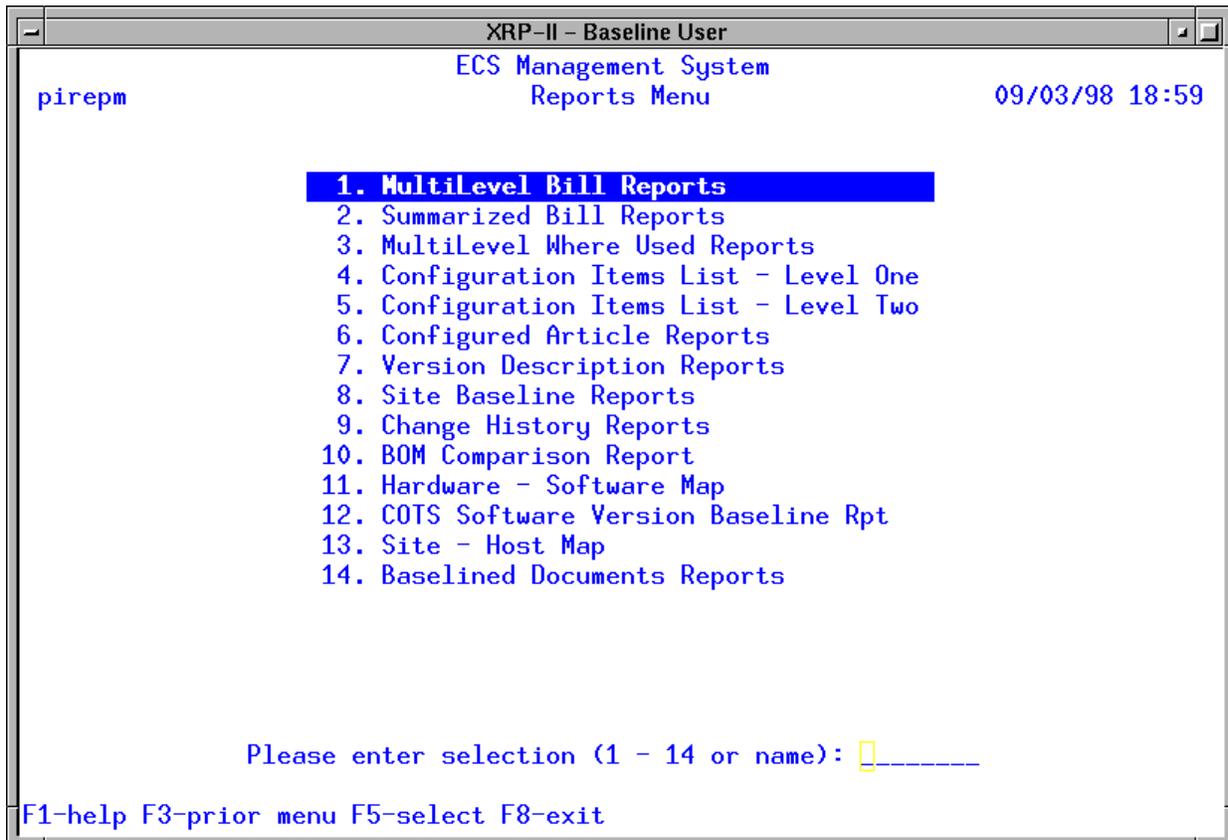

Use the Engineering Change Query screen to browse the chronology of changes to a particular control item and examine which control items were affected by each engineering change. The fields on this screen match those on the Engineering Change Entry screen. Refer to Section 4 of the Product Information Manual and Section 4.3.3.1.4.1 above for descriptions of these fields.

### 4.3.3.2.9 Generate Pre-defined Reports

XRP-II produces several reports specifically tailored to support ECS configuration management activities. All contain information derived from records stored only in the XRP-II database on the host where the report is requested. Reports can be written to the default printer in effect via the operator's environment settings when XRP-II is started, unless XRP-II has been configured to recognize specific print device destinations (see Section 4.3.3.2.11.7).

Some reports accept a range of control items on which to report. Ranges are specified the same way as when using the Select and Find bottom-line commands on data entry screens. Section 3.4.5 in the System Reference Manual explains how to enter range selection specifications.

All pre-defined reports available to the operator are accessed via XRP-II's Report menu (Figure 4.3.3-15). Screens for generating multilevel bill, summarized bill, and multilevel where-used reports are fully described in Sections 6.5, 6.7, and 6.9 of the Product Information Manual. The remaining reports are described in the sections below. Section 4.3.3.8.1 contains samples.

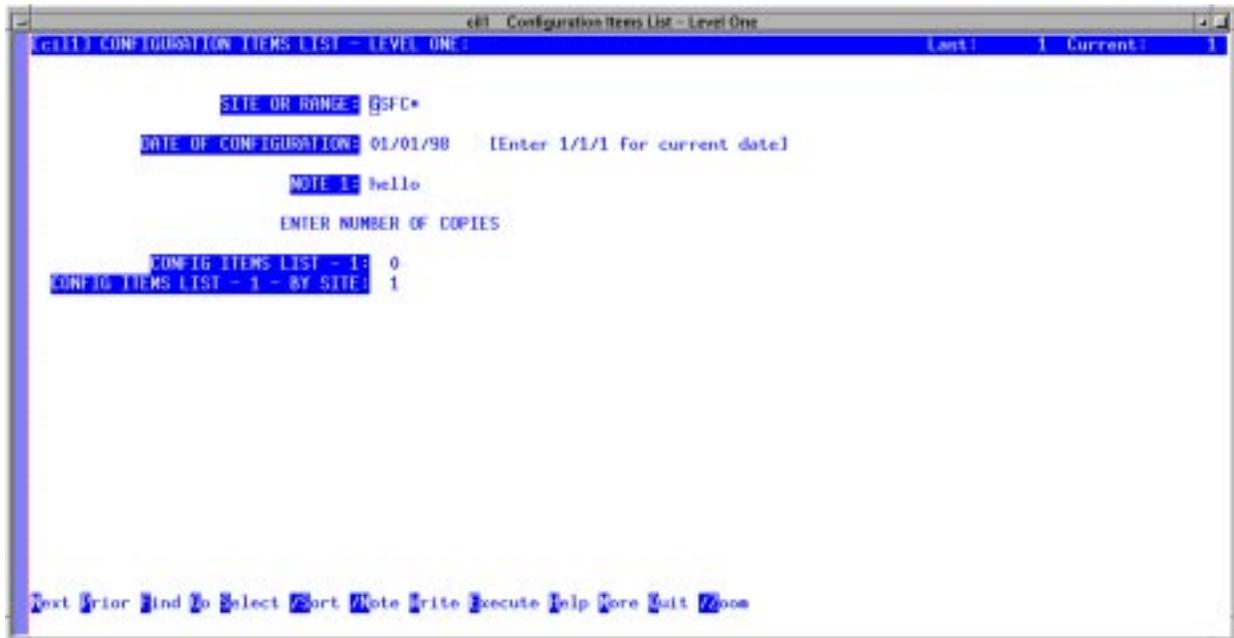

**Figure 4.3.3-15. Reports Menu**

#### 4.3.3.2.9.1 Configuration Items List - Level One Screen

Operators use the screen depicted in Figure 4.3.3-16 to produce a list of ECS hardware and computer software configuration items (HWCI and CSCI) grouped by subsystem. Table 4.3.3-10 describes the screen's fields.

Specify a site or range of sites, a date for the configuration, and the number of copies of the report wanted. Then enter "E" for execute. XRP-II will report all ECS configuration items active and deployed at the specified sites as of the specified date.

**Note:** An implementation status record corresponding to the specified site or sites must exist in order for a HWCI or CSCI control item to appear in the report.

**Figure 4.3.3-16. Configuration Items List - Level One CHUI**

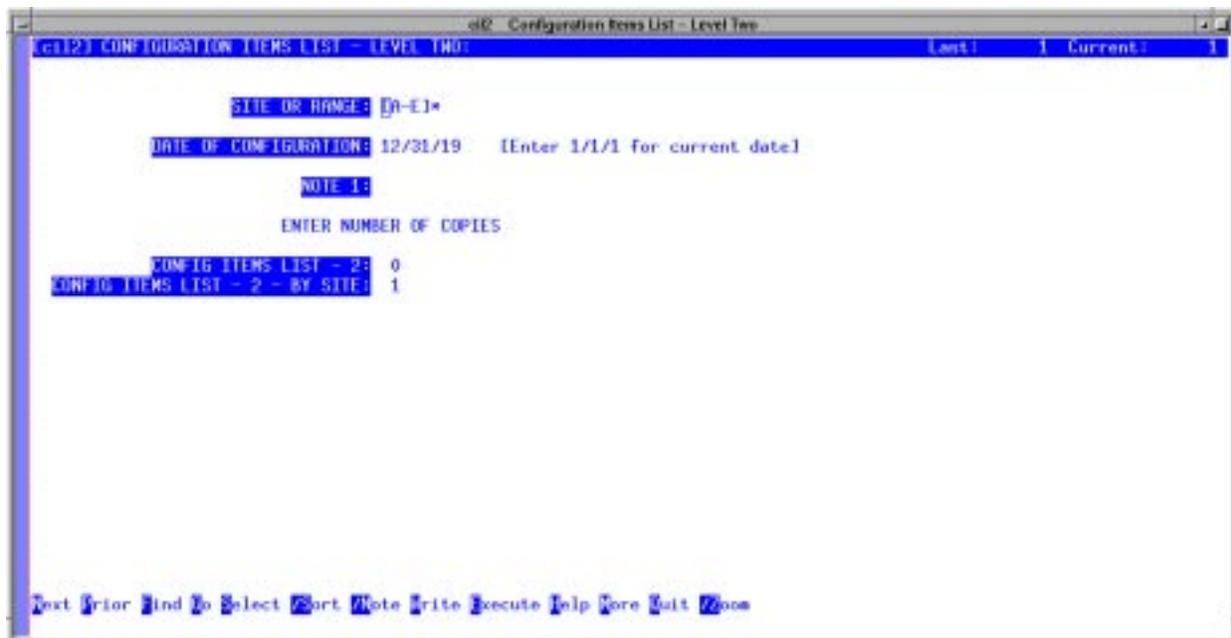

**Table 4.3.3-10. Configuration Items List - Level One Field Descriptions-**

Field Name	Data Type	Size	Entry	Description
site or range	string	16	required; zoom to select from a list of sites	Short name for an ECS site
date of configuration	date	N/A	required	"As of " date used in selecting records from the configuration history of the site(s)
note 1,2	string	40	optional	Textual information to be added to the header of the report
configuration items list-1	numeric	2	required	Number of copies wanted
config items list -1-by site	numeric	2	required	Number of copies wanted

#### 4.3.3.2.9.2 Configuration Items List - Level Two Screen

Operators use the screen in Figure 4.3.3-17 to produce a consolidated list of the ECS HWCI and CSCI design components deployed at a specified site(s). Components are grouped by subsystem and configuration item that own them.

This screen's fields are the same as those used to generate the Configuration Items List - One report, except the label for the number of copies reflects the name of this report. Table 4.3.3-10 above describes the fields.

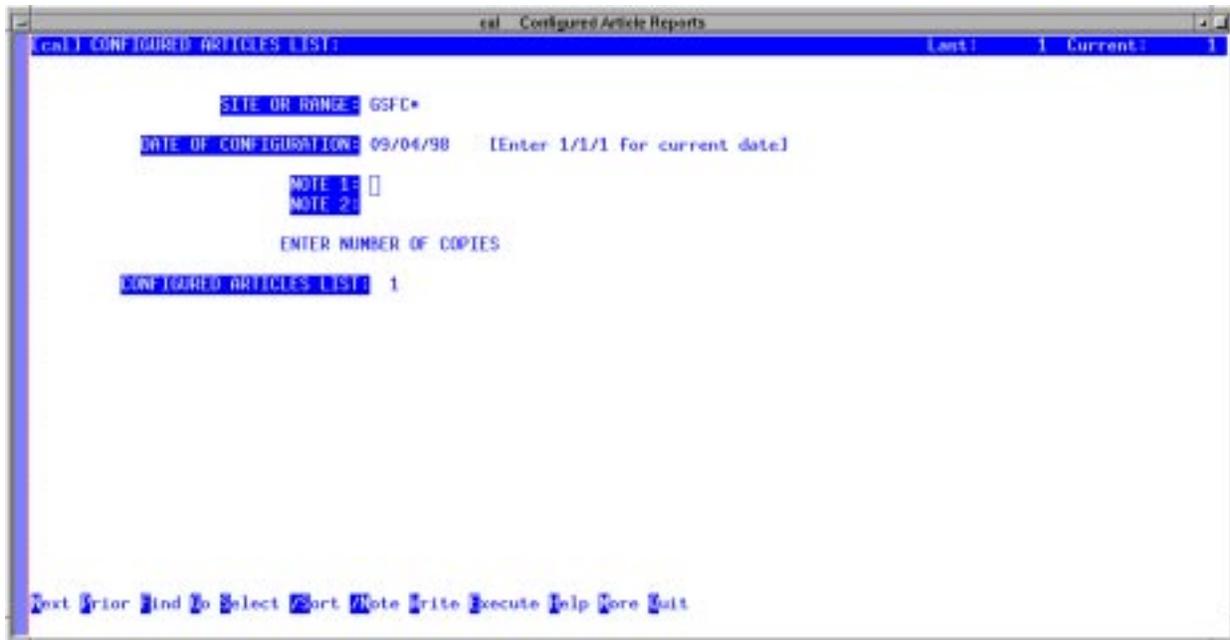

**Figure 4.3.3-17. Configuration Items List - Level Two CHUI**

Specify a site or range of sites, a date for the configuration, and the number of copies of the report wanted. Then enter “E” for execute. XRP-II will report all ECS design components active and deployed at the specified sites as of the specified date.

**Note:** An implementation status record corresponding to the specified site or sites must exist in order for a component to appear in the report.

#### 4.3.3.2.9.3 Configured Articles Reports Screen

This screen (Figure 4.3.3-18) generates a list of the approved set of ECS configured articles in effect on a specified date at a specified site or sites, grouping the articles by parent configuration item. Its fields are the same as those used to generate the Configuration Items List - One report, except the label for the number of copies reflects the name of this report. Table 4.3.3-10 above describes the fields.

**Figure 4.3.3-18. Configured Articles Reports CHUI**

Specify a site or range of sites, a date for the configuration, and the number of copies of the report wanted. Then enter “E” for execute. XRP-II will report all active ECS configured articles for the specified sites as of the specified date.

**Note:** A corresponding implementation status record must exist in order for a configured article to appear in the list of articles for a site.

#### 4.3.3.2.9.4 Version Description Reports Screen

The Version Description Reports screen (Figure 4.3.3-19) is used to generate a summarized bill of the approved set of ECS configured articles for a specified configuration item, subsystem, or release. This screen's fields are the same as those used to generate the Configuration Items List - One report, except the label for the number of copies reflects the name of this report. Table 4.3.3-10 above describes the fields.

Specify a site or range of sites, a date for the configuration, and the number of copies of the report wanted. Then enter "E" for execute. XRP-II will report all active ECS configured articles for the specified sites as of the specified date.

Note: A corresponding implementation status record must exist in order for a configured article to appear in the list of articles for a site.

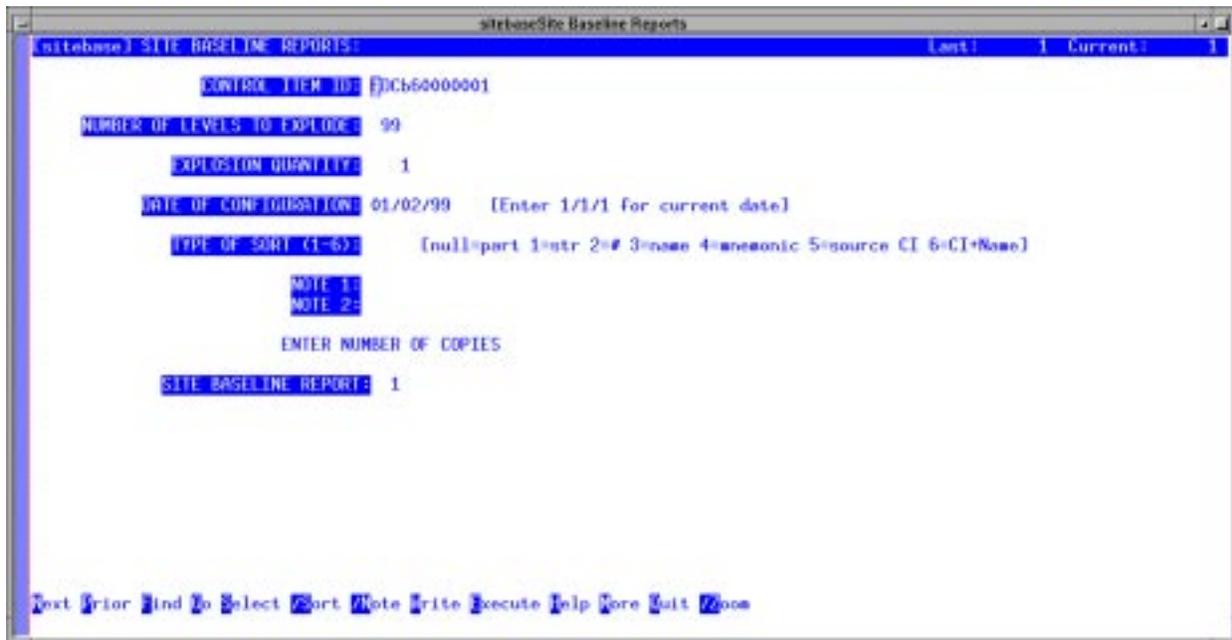

**Figure 4.3.3-19. Version Description Reports CHUI**

#### 4.3.3.2.9.5 Site Baseline Reports Screen

Operators use the Site Baseline Report screen to produce an indented bill of materials that lists what comprises one or more sites' operational baselines down to the configured article level. The screen works the same as the multilevel bill screen described in Section 6.5 of the Product Information Manual, except it rejects identifiers for items that are not members of class "baseline".

Specify the identifier of the baseline control item and date of bill, then set the remaining parameters for the report. Enter “E” for execute. XRP-II will report all ECS configured articles active and deployed as part of the specified baseline.

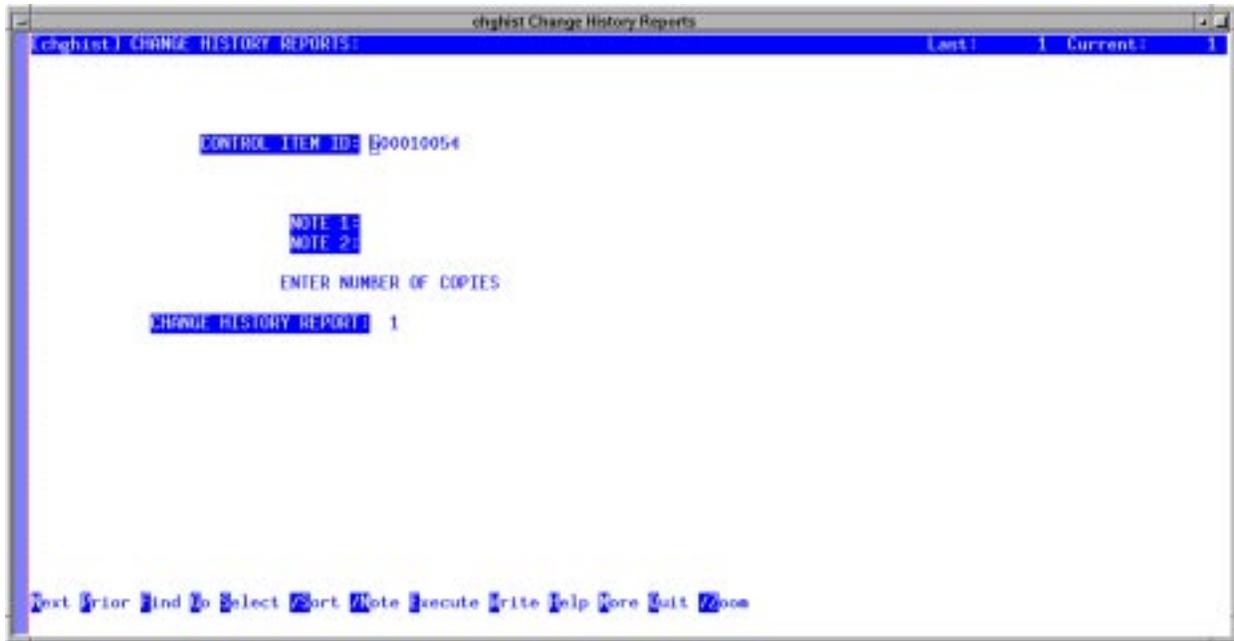

**Figure 4.3.3-20. Site Baseline Reports CHUI**

#### **4.3.3.2.9.6 Change History Reports Screen**

The Change History Reports screen (Figure 4.3.3-21) generates a list containing the revision history of an ECS control item. Table 4.3.3-11 describes the screen’s fields.

Specify the control item’s identifier, then enter “E” for execute. XRP-II will report all versions and product structure revisions for the specified item together with details associated with the item change.

**Figure 4.3.3-21. Change History Reports CHUI**

**Table 4.3.3-11. Change History Reports Field Descriptions**

Field Name	Data Type	Size	Entry	Description
control item id	string	20	required; zoom to select from a list of control items	Unique code for a version- or configuration-controlled item
note	string	40	optional	Textual information to be added to the header of the report
change history report	numeric	2	required	Number of copies wanted

#### 4.3.3.2.9.7 BOM Comparison Reports Screen

The BOM Comparison Reports screen (Figure 4-3.3-22) generates a list of the differences in the bills of material for any two control items. Operators use it, for example, to determine how approved operational baselines at two sites differ. Table 4.3.3-12 describes the screen's fields.

Specify identifiers for the two control items whose bills are to be compared. Next, indicate a bill of materials date for the comparison and the number of report copies wanted. Then enter "E" for execute, and XRP-II will produce a four-part report. For each of the two control items, XRP-II will first list all the control items that are in its bill and in the other's, then all the control items in its bill that are not in the other's.

**Figure 4.3.3-22. BOM Comparison Reports CHUI**

**Table 4.3.3-12. BOM Comparison Reports Field Descriptions**

Field Name	Data Type	Size	Entry	Description
control item id	string	20	required; zoom to select from a list of control items	Unique code for a version- or configuration-controlled item
date of bill	date		required	"As of " date used in selecting records from the configuration history of the control item
note	string	40	optional	Textual information to be added to the header of the report
bom comparison reports	numeric	2	required	Number of copies wanted

#### 4.3.3.2.9.8 Hardware - Software Map Screen

The Hardware - Software Map screen (Figure 4-3.3-23) is used to produce a list of software and firmware items needed for a host for a specified baseline. Accordingly, it is only useful for reporting on baselines or assemblies containing host and software/firmware components. The

report can list data sorted various ways, but the layout assumes items will be sorted by name. Table 4.3.3-nn describes the screen's fields.

Specify the control item identifier and date of bill for the baseline or assembly of interest. . Next, specify "3" (name) for type of sort and a document number and/or note to be included on each page. Specify the number of report copies wanted, then enter "E" for execute. XRP-II will report, by subsystem and host, all software and firmware the host should contain.

**Figure 4.3.3-23. Hardware - Software Map CHUI**

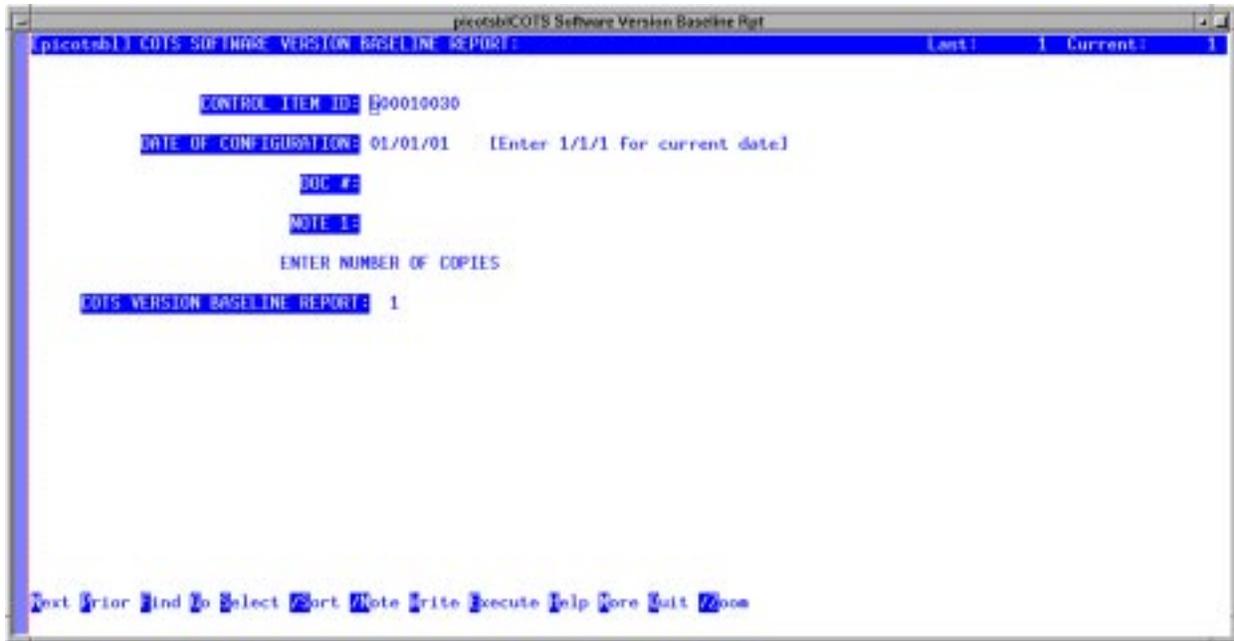

**Table 4.3.3-13. Hardware - Software Map Field Descriptions-**

Field Name	Data Type	Size	Entry	Description
control item id	string	20	required; zoom to select from a list of control items	Unique code for a version- or configuration-controlled item
date of bill	date		required	“As of “ date used in selecting records from the configuration history of the control item
type of sort	string	1	optional	Code that specifies the field(s) to be used in sorting the data for the report
doc #	string	40	optional	Textual information to be printed as the document number in the header of the report
note 1	string	40	optional	Textual information to be printed as a note in the header of the report
hardware - software map	numeric	2	required	Number of copies wanted

#### **4.3.3.2.9.9 COTS Software Version Baseline Rpt Screen**

Operators use the COTS Version Baseline Rpt screen (Figure 4-3.3-24) to generate a list of the software and firmware in a specified baseline or assembly. The list is ordered by function each item performs and provides key details about each item. Table 4.3.3-14 describes the screen’s fields.

Specify the control item identifier and date of bill for the baseline or assembly of interest. Add a document number and/or note to be included on each page, as well as the number of report copies wanted. Enter “**E**” for execute, and XRP-II will report all the software and firmware items in the baseline or assembly.

**Figure 4.3.3-24. COTS Software Version Baseline Rpt CHUI**

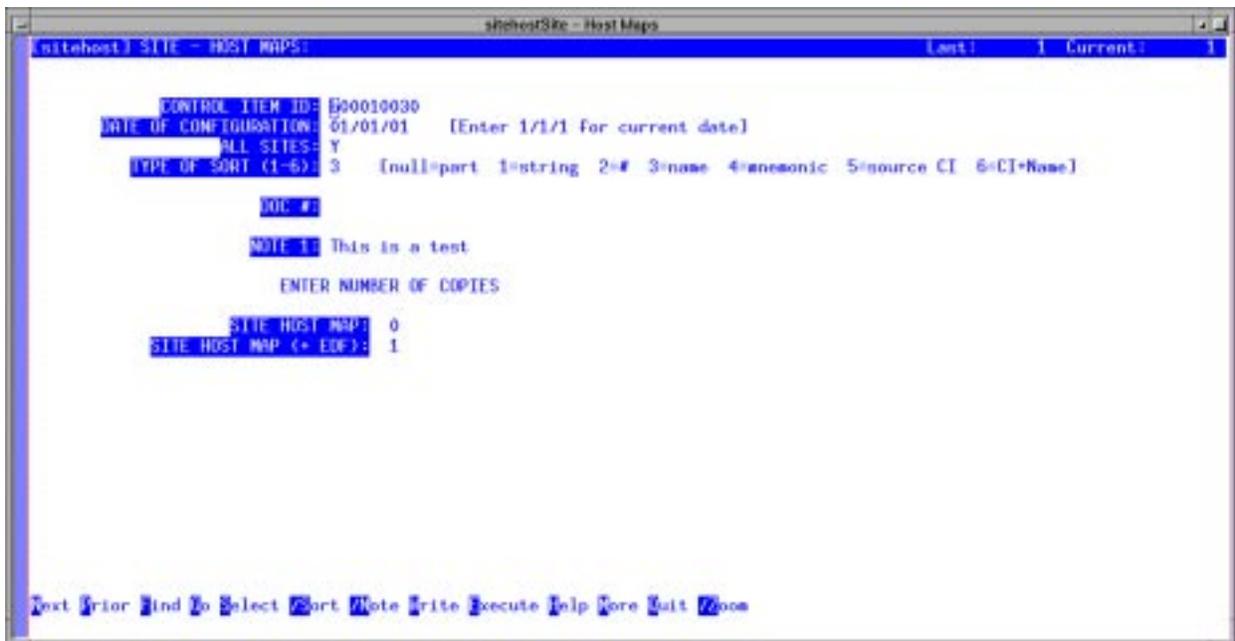

**Table 4.3.3-14. COTS Software Version Baseline Rpt Field Descriptions**

Field Name	Data Type	Size	Entry	Description
control item id	string	20	required; zoom to select from a list of control items	Unique code for a version- or configuration-controlled item
date of bill	date		required	"As of " date used in selecting records from the configuration history of the control item
doc #	string	40	optional	Textual information to be printed as the document number in the header of the report
note	string	40	optional	Textual information to be added to the header of the report
COTS version baseline report	numeric	2	required	Number of copies wanted

#### 4.3.3.2.9.10 Site - Host Maps Screen

Operators use the Site - Host Maps screen (Figure 4-3.3-25) to generate a report identifying which ECS hosts perform the same primary function at each ECS site for a specified baseline. The screen allows the operator to specify an order in which data is to be presented. However, the report's layout is best suited to reporting by name. Table 4.3.3-15 describes the screen's fields.

Specify the control item identifier and date of bill for the baseline or assembly of interest, then specify whether data is to be retrieved for all sites for which there is data or just the local site. Next, enter "3" for the type of sort and, if desired, add a document number and/or note to be included in the header for each page in the report. Enter the number of copies for the desired report, then hit "E" for execute. XRP-II will list -- by subsystem, source CI, and function -- the hosts at each site that perform a given function.

**Figure 4.3.3-25. Site - Host Maps CHUI**

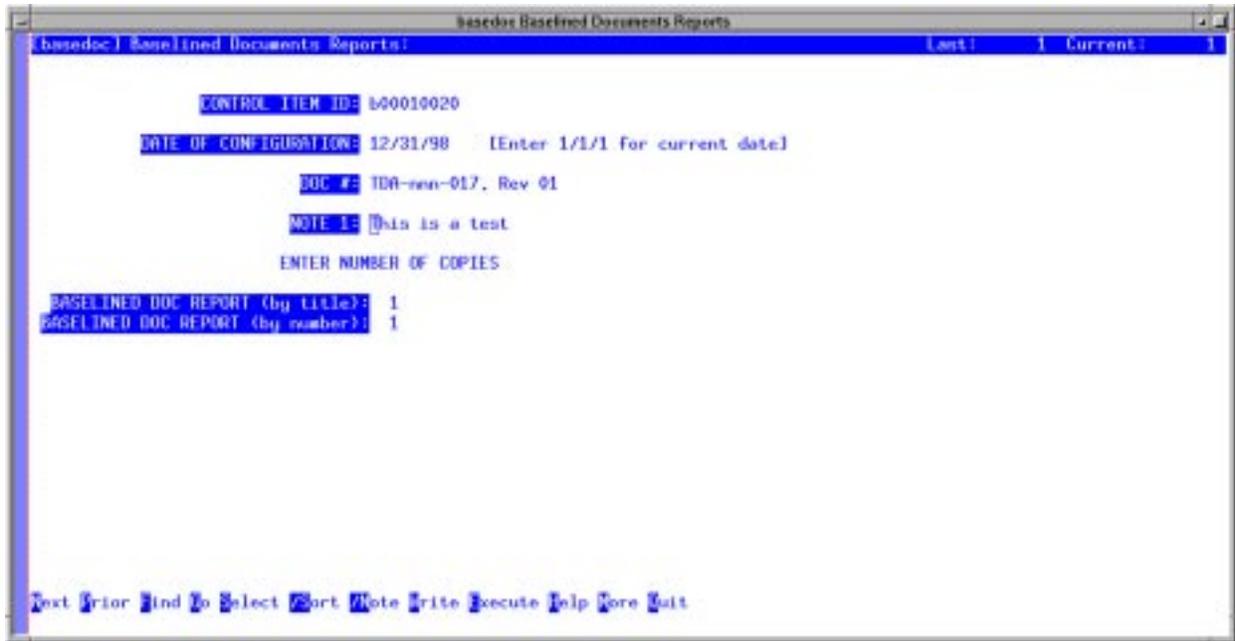

**Table 4.3.3-15. Site - Host Maps Field Descriptions-**

<b>Field Name</b>	<b>Data Type</b>	<b>Size</b>	<b>Entry</b>	<b>Description</b>
control item id	string	20	required; zoom to select from a list of control items	Unique code for a version- or configuration-controlled item
date of bill	date		required	“As of “ date used in selecting records from the configuration history of the control item
all sites	string	1	required; Y or N	Code that specifies whether to report information about all sites or just the local site
type of sort	string	1	optional	Code that specifies the field(s) to be used in sorting the data for the report
doc #	string	40	optional	Textual information to be printed as the document number in the header of the report
note	string	40	optional	Textual information to be added to the header of the report
site - host map	numeric	2	required	Number of copies wanted

#### **4.3.3.2.9.11 Baselined Documents Reports Screen**

The Baselined Documents Reports screen (Figure 4-3.3-26) is used to list the documents contained in a baseline or assembly. Two reports are available, one sorted by document numbers and one sorted by title. Table 4.3.3-16 describes the screen’s fields.

Specify the control item identifier and date of bill for the baseline or assembly of interest. Add a document number and/or note to be included on each page, as well as the number of copies of each report wanted. Enter “E” for execute, and XRP-II will compile the requested list of documents together with key details about each.

**Figure 4.3.3-26. Baselined Documents Reports CHUI**

**Table 4.3.3-16. Baselined Documents Reports Field Descriptions**

Field Name	Data Type	Size	Entry	Description
control item id	string	20	required; zoom to select from a list of control items	Unique code for a version- or configuration-controlled item
date of bill	date		required	“As of “ date used in selecting records from the configuration history of the control item
doc #	string	40	optional	Textual information to be printed as the document number in the header of the report
note	string	40	optional	Textual information to be added to the header of the report
baselined documents report	numeric	2	required	Number of copies wanted

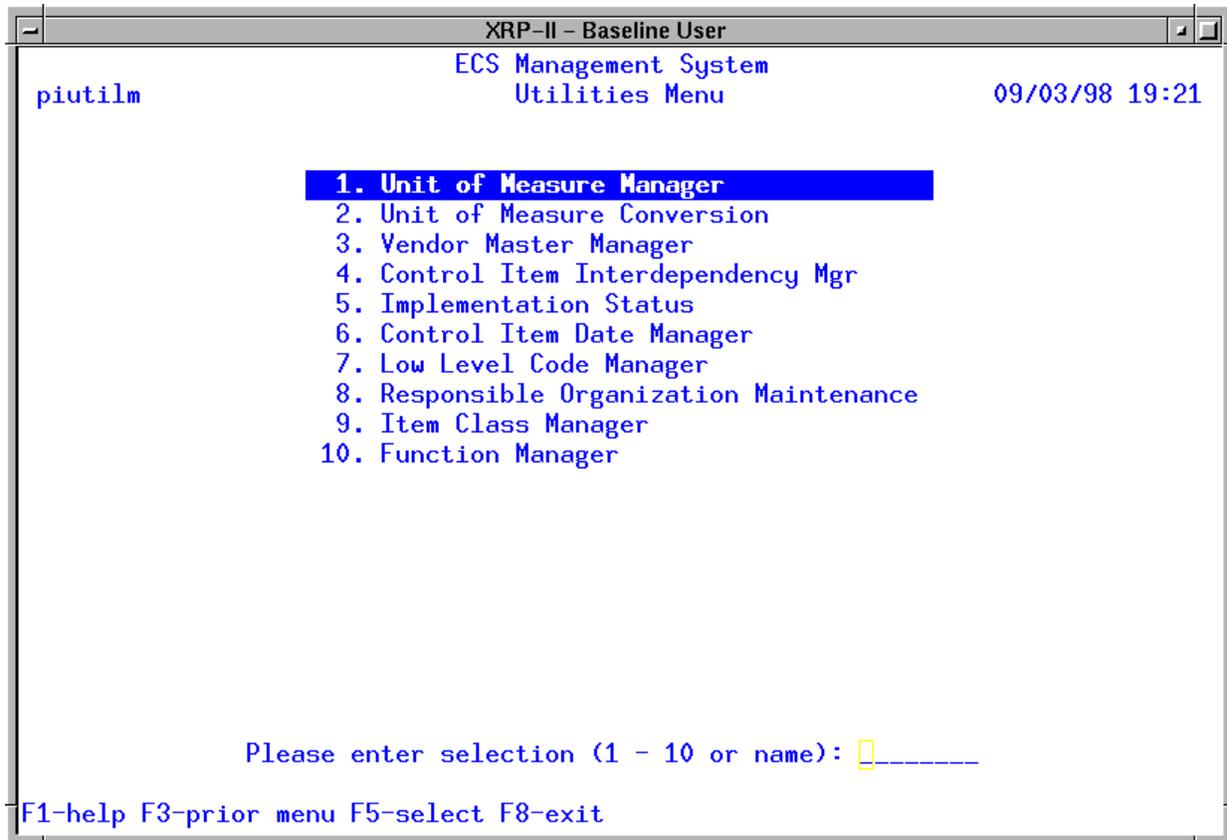

#### 4.3.3.2.10 Perform Baseline Management Master Files Maintenance

XRP-II groups together several programs that help standardize values for certain baseline management data, support product structure administration, and manage types of data for which a

separate menu is not warranted. The screens supporting these programs are accessed via the Utilities menu (Figure 4.3.3-27), except for the following which are described in the XRP-II manuals:

- Unit of Measure Maintenance - maintains codes and descriptions for Baseline Manager's units of measure. These codes are used on bill of material data entry screens, which can access them via "zoom" command to facilitate data entry and promote data consistency. The screen is described in Section 3.2 of the Product Information Manual.
- Unit of Measure Conversion - maintains factors used for converting between units of measure. This standard XRP-II capability, not used by Baseline Manager, is retained for use with inventory, logistics, and maintenance management functions scheduled for delivery in Version 2.0. It is described in Section 3.3 of the Product Information Manual.
- Control Item Date Manager - supports a utility that is functionally equivalent to the Part Master Date Maintenance utility described in section 4 of the Product Information Manual. The utility cycles through product structure and product history files, determining the earliest and latest dates on which each control item is employed as a parent or component, and updates the active and inactive dates in the control item records accordingly. This utility should be run periodically (perhaps monthly), but need only be run if any product structures have been (or may have been) deleted, or if the bill of material screen "Replace a Component in All Bills" has been used. This utility is described in Section 7.2 of the Product Information Manual.

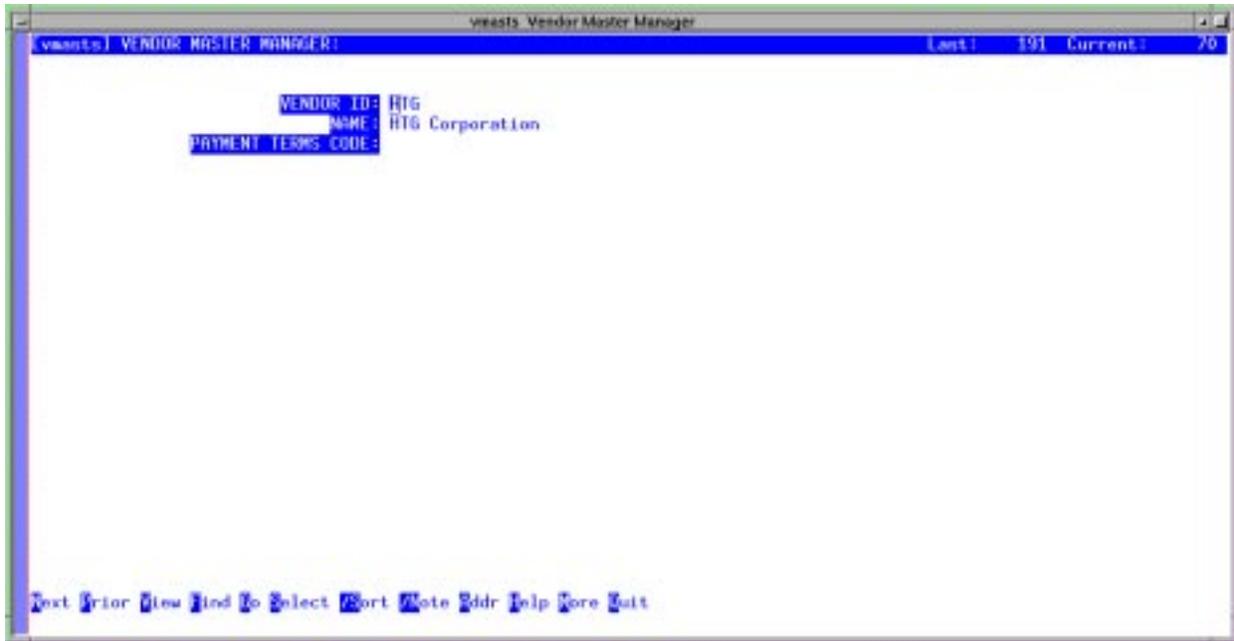

The sections that follow describe other Utility menu screens.

**Figure 4.3.3-27. Utilities Menu CHUI**

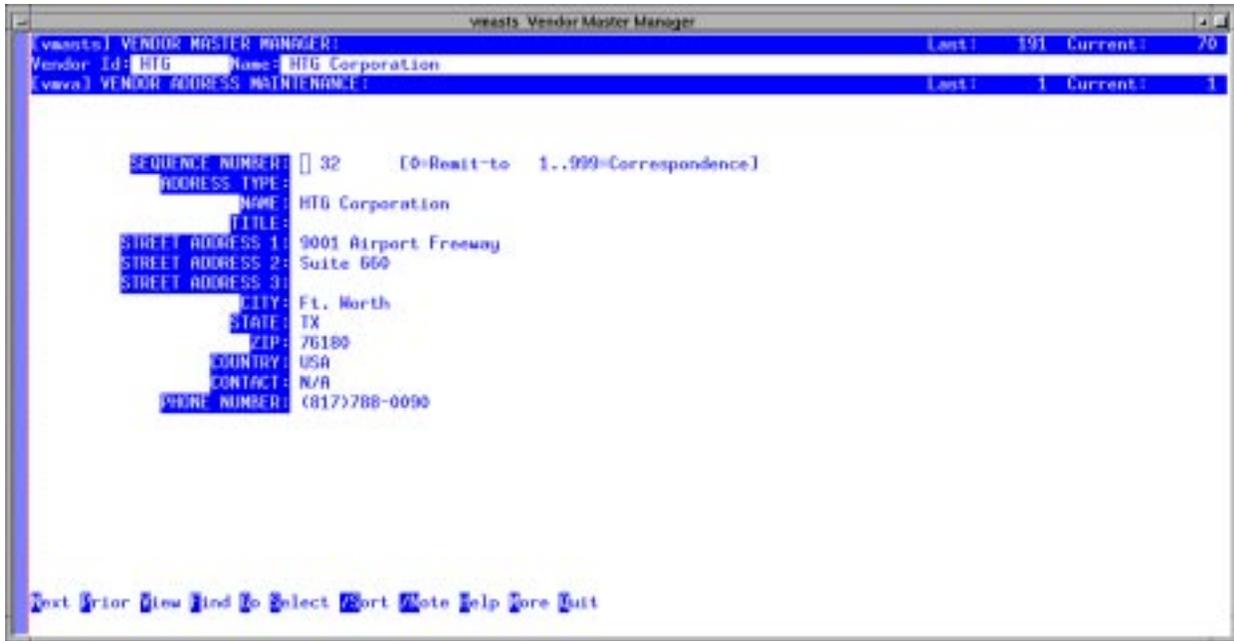

#### **4.3.3.2.10.1 Vendor Master Manager Screen**

This screen (Figure 4-3.3-28) maintains a list of companies in order to facilitate entering manufacturer and developer codes for control items and to promote data consistency across control item records. An operator updating the control item catalog can select manufacturer/developer codes from this list via the */Zoom* command on control item master screens (see Section 4.3.3.1.3).

**Figure 4.3.3-28. Vendor Master Manager CHUI**

Use this screen to update the list of manufacturers or developers, giving each a unique identification number. Then use the bottom-line command **Addr** to navigate to the Vendor Address Maintenance screen (Figure 4.3.3-29), which can record one or more addresses for the company. Fill out the address form, entering or letting XRP-II assign a new sequence number for each distinct address record being added. (XRP-II recognizes sequence number “0” as the company’s default or principal address.) When done, exit the address screen, and either edit another vendor record or exit to the Utilities menu.

**Figure 4.3.3-29. Vendor Address Maintenance CHUI**

Tables 4-3.3-17 and 4.3.3-18 describe the fields for the Vendor Master Manager and Vendor Address Maintenance screens, respectively.

**Table 4.3.3-17. Vendor Master Manager Field Descriptions**

Field Name	Data Type	Size	Entry	Description
vendor id	string	6	required	Coded name of the company/organization that produced a control item
name	string	30	optional	Name by which a specific manufacturer or developer is known
payment terms code	string	2	optional	Code identifying the default payment terms for the vendor's invoices. The code must exist in the terms/conditions table, accessed via the Sales/Purchase Terms Maintenance data entry screen

**Table 4.3.3-18. Vendor Address Maintenance Field Description**

Field Name	Data Type	Size	Entry	Description
sequence number	numeric	3	mandatory	Number that uniquely identifies each address for a company. The value "0" is interpreted as the default.
address type	string	2	optional	Code that distinguishes among purposes for which the address is used
name	string	30	optional	Company name or individual's name that appears as the first line of the address
title	string	20	optional	Title of an individual
street address 1,2,3	string	30	optional	Address for the vendor
city	string	20	optional	Name of the city in which the vendor is located
state	string	2	optional	Abbreviation for the state in which the vendor is located
zip	string	10	optional	Postal code used by the vendor
country	string	16	required	Country in which the vendor is located
contact	string	30	optional	Name of a contact at the address
phone number	string	18	optional	Telephone number of the contact

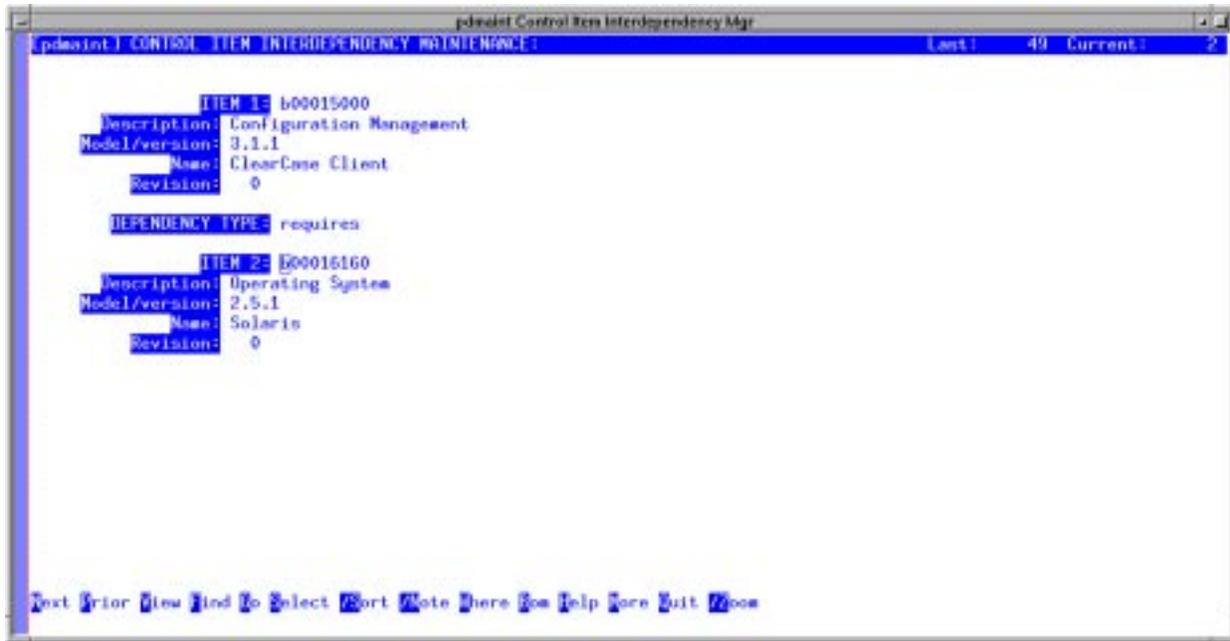

#### 4.3.3.2.10.2 Control Item Interdependency Maintenance Screen

This screen (Figure 4.3.3-30) maintains information about dependencies between any two control items. Any control item pair can have multiple dependency relationships; however, each of the control items must exist in the control item catalog. Dependency types are operator-specified and non-constrained. Baseline Manager does not maintain an on-line chronological history of dependencies or dependency changes for a control item, but records can be both downloaded and printed so they can be saved for historical purposes.

Use this screen to add, delete, modify, or browse dependency records. When a control item identifier is entered, XRP-II displays its description, version, name, and revision.

The table view is particularly well-suited for displaying lists of all dependencies associated with a given control item. Placing the cursor on either of the control items activates the bottom-line commands "Where" and "Bom". Use **Where** to view product structure records in which the control item is a component in some other item's bill of material. Use **Bom** to view product structure records in which the control item is a parent with a bill containing other control items.

This screen's fields are described in Table 4.3.3-19.

**Figure 4.3.3-30. Control Item Interdependency Maintenance CHUI**

**Table 4.3.3-19. Control Item Interdependency Maintenance Field Descriptions**

Field Name	Data Type	Size	Entry	Description
item one	string	20	required; zoom to select from control items list	Unique code for a version- or configuration-controlled item (normally, a control item id) that is the subject of the dependency relationship.
description	string	54	system supplied	Textual characterization of an entity
model/version	string	24	system supplied	Textual identifier for a level of functional capability for a control item
name	string	24	system supplied	Name by which a specific item, engineer, or vendor is known
revision	string	3	system supplied	Identifier for the currently-active revision level of the item's product structure
item two	string	20	required; zoom to select from control items list	Unique code for a version- or configuration-controlled item (normally, a control item id) that is the object of the dependency relationship
dependency type	string	20	required	Code or nomenclature describing the relationship between two control items

#### 4.3.3.2.10.3 Implementation Status Screen

This screen maintains information about the deployment and implementation of control items system-wide. One record can be created for each control item for each site. The control item must

exist in the control item catalog, and the site must exist in the site list (see Section 4.3.3.2.11.8). Baseline Manager does not maintain a chronological history of implementation status data or implementation status data changes for a control item or site.

The following bottom-line command is unique to this screen:

- **.Create** - creates an implementation status record for an operator-specified control item and site, and for each component in the control item's bill of materials. XRP-II does not create or modify a record if it finds that one already exists.

Use this screen to maintain and browse all control item implementation status records. Table view can display comprehensive lists of the sites to which a control item is (being) deployed and of the control items (being) deployed to a site. Whenever a set of implementation status records is needed for a new control item, type **“.C”** and answer XRP-II's prompts for data values to be used when creating the records.

**Figure 4.3.3-31. Implementation Status CHUI**

**Note:** The field “Implementation Status” has special significance in extracting resource profiles for resource planners. Control records are selected only if the items they describe are in the bill of materials of site operational baselines whose implementation status is “production”.

**Note:** A control item must have at least one implementation status record in order to be listed properly in reports whose data are sorted by site.

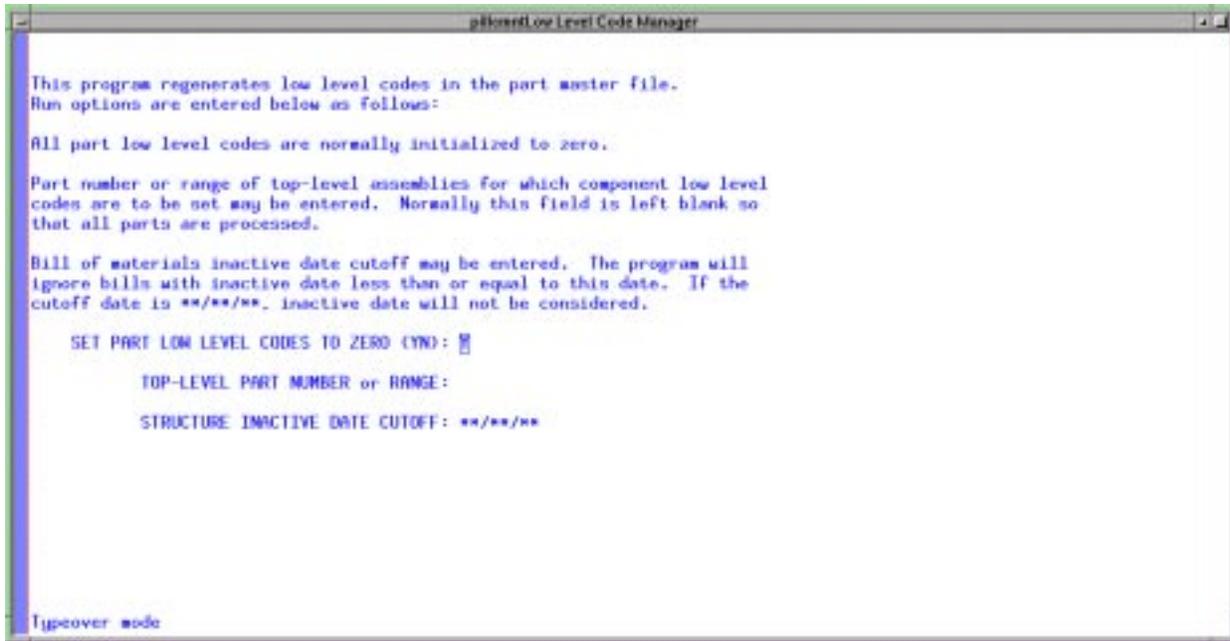

**Table 4.3.3-20. Implementation Status Field Descriptions**

Field Name	Data Type	Size	Entry	Description
control item id	string	20	required; zoom to select from control items list	Unique code for a version- or configuration-controlled item
site	string	6	required; zoom to select from a list of sites	Mnemonic or short name for an ECS site
name	string	54	system supplied	Name by which a specific control item is known
description	string	54	system supplied	Textual characterization of an entity
model/version	string	24	system supplied	Textual identifier for a level of functional capability for a control item
installation date	date	N/A	optional	Designated date a control item is to be or was installed at a site
installation date	date	N/A	optional	Designated date a control item is to be or was installed at a site
installation date	date	N/A	optional	Designated date a control item is to be or was installed at a site
implementation status	string	20	optional;	Classification of a control item according to operational life cycle state (e.g., projected, installed, production, test, maintenance, inactive)

#### 4.3.3.2.10.4 Low Level Code Screen

This utility is equivalent to the Low Level Code Maintenance utility described in Section 4 of the Product Information Manual, except options not yet described in the manual are now available for specifying a subset of records to process. It regenerates low level codes maintained in the control item master file by the system logic to improve the efficiency of certain XRP-II processing (see Section 4.2 of the Product Information Manual). Low level codes do not affect Baseline Manager functions; however, they appear in the headers of bill of material and where-used reports, where they identify the deepest level at which a subject control item is found in any recorded product structure tree.

This utility should be run periodically (perhaps monthly), but need only be run if any product structure records have been (or may have been) deleted. Its data entry screen (Figure 4.3.3-32) explains options operators are given.

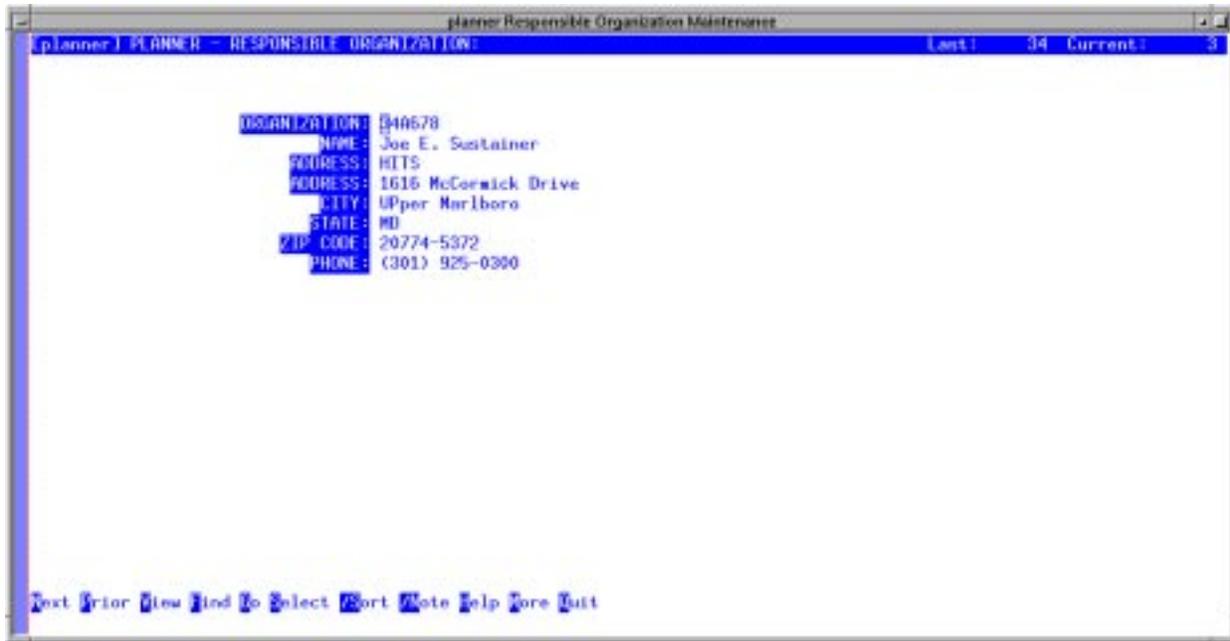

**Figure 4.3.3-32. Low Level Code CHUI**

#### **4.3.3.2.10.5 Responsible Organization Maintenance Screen**

This screen (Figure 4.3.3-33) maintains data about individuals in order to facilitate identifying points of contact for individual control items. An operator updating the control item catalog can select a code for an engineer from this list via the /Zoom command on control item master screens.

Use this screen to update the list of organizations responsible for control items. Table 4-3.3-21 describes its data entry fields.

**Figure 4.3.3-33. Responsible Organization CHUI**

**Table 4.3.3-21. Responsible Organization Field Descriptions**

Field Name	Data Type	Size	Entry	Description
organization	string	6	required	Organization or task code of an engineer assigned responsibility for a control item
name	string	30	optional	Name of the responsible engineer
address	string	30	optional	Street address where the responsible engineer is located
city	string	20	optional	Name of the city in which the responsible engineer is located
state	string	2	optional	Name of the state in which the responsible engineer is located
zip	string	10	optional	Postal code where the responsible engineer is located
phone	string	18	optional	Phone number for the responsible engineer

#### 4.3.3.2.10.6 Item Class Manager Screen

The Item Class Manager screen (Figure 4.3.3-34) maintains a list of names used to classify control items. Operators use the names for grouping and sorting records, while XRP-II uses them to

determine which records to display for the various Control Item Master and Query screens. The names can be selected from a pick list on Control Item Master screens via a /Zoom command on Item Class fields.

Use the standard bottom-line commands to add, modify, delete, or browse item class records.

**Figure 4.3.3-34. Item Class Manager CHUI**

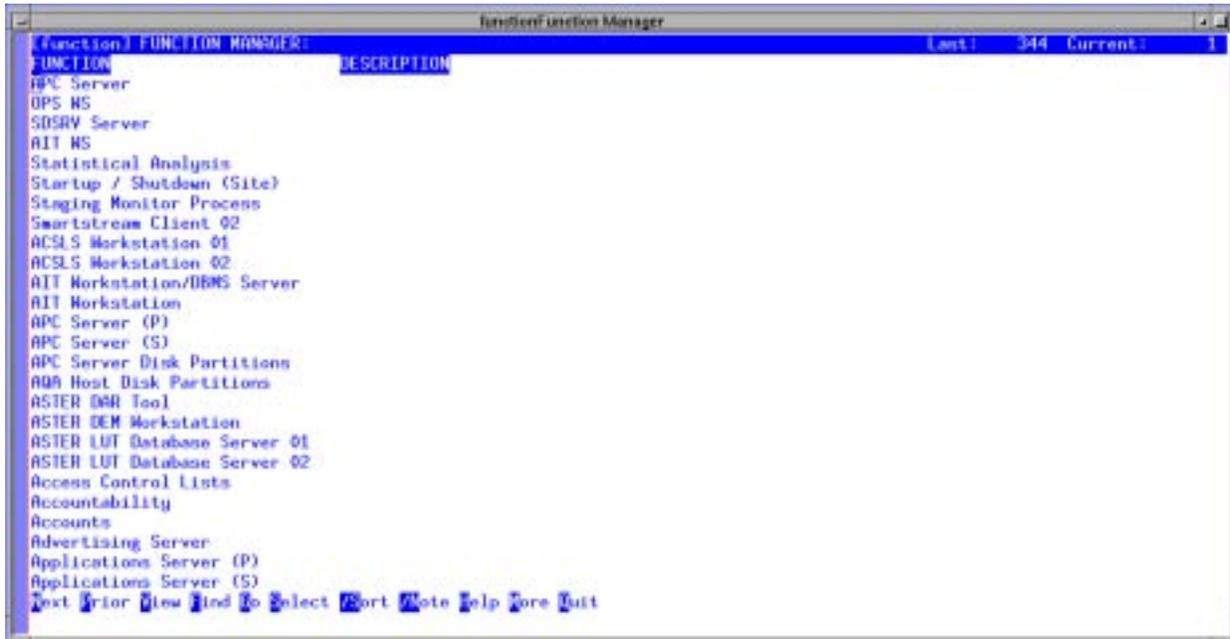

**Table 4.3.3-22. Item Class Manager Field Descriptions**

Field Name	Data Type	Size	Entry	Description
class key	string	16	required	Identifier for a type of control item (e.g., baseline, hardware, software, documents, etc.)
description	string	30	optional	Textual characterization of a control item class

#### 4.3.3.2.10.7 Function Manager Screen

Operators use the Function Manager screen (Figure 4.3.3-35) to maintain a list of functions that control items perform. Operators use the names for grouping and sorting records, especially host records. The names are available to the Function field on Control Item Master screens to facilitate data entry and promote standardization.

Use the standard bottom-line commands to add, modify, delete, or browse function records.

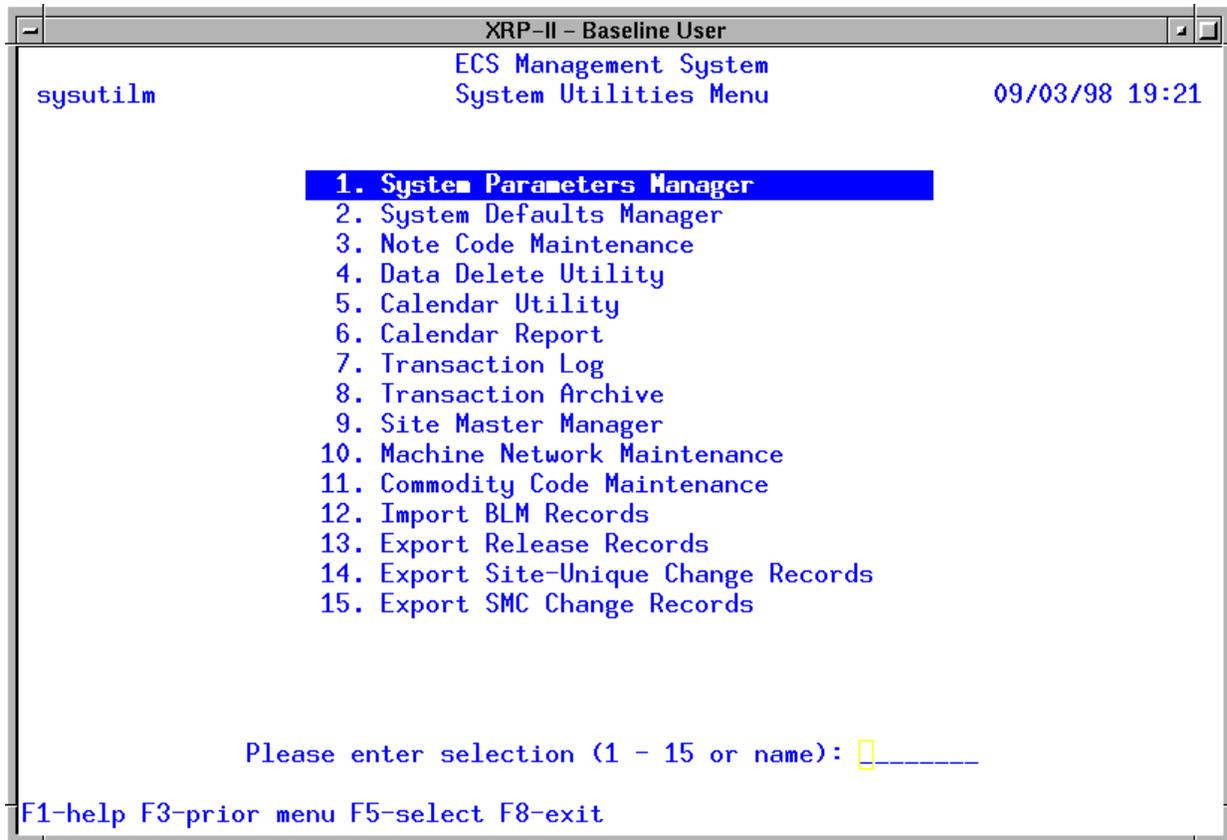

**Figure 4.3.3-35. Function Manager CHUI**

**Table 4.3.3-23. Function Manager Field Descriptions**

Field Name	Data Type	Size	Entry	Description
function	string	30	required	Name of the primary job of a control item
description	string	30	optional	Textual characterization of a control item class

#### 4.3.3.2.11 Perform XRP-II Master File Maintenance

XRP-II groups together several programs that help standardize values for all of XRP-II and support inter-site exchange of Baseline Manager data. The screens supporting these programs are accessed via the System Utilities menu (Figure 4-3.3-36). The System Defaults Manager, Note Code Maintenance, Data Delete Utility, and [Shop] Calendar Utility, and [Shop] Calendar Report screens are fully described in the System Reference Manual. The remaining utilities are discussed in the sections that follow.

**Figure 4.3.3-36. System Utilities Menu CHUI**

#### 4.3.3.2.11.1 System Parameters Manager Screen

The screen shown in Figure 4.3.3-37 maintains system-wide, XRP-II parameters and is principally used when first installing the system. Since Baseline Manager uses only a subset of the full XRP-II capabilities, this is a scaled down version of the screen described in Section 6 of the System Reference Manual. It contains only the fields needed to tailor the system to the site at which it operates.

The system parameter key is the key field of the system parameter file. The value “A” designates the active record, which is set when the database is created.

**Note:** An active record must always be present in order for XRP-II to function.

In the site identifier field, enter the code for the ECS site where the copy of XRP-II that the operator is using is installed. This data is used primarily in report headers and file names that XRP-II creates.

**Note:** The site identifier field must have an entry in order for Baseline Manager’s data export processing to work properly.

In the last control item identifier field, enter a value XRP-II is to use in determining the next available identifier when an operator requests a default for a new item being added or inserted in the control item catalog. The value must end in a numeral, which XRP-II automatically increments. This identifier should always have the site's designated prefix: the first three characters of the site identifier.

**Figure 4.3.3-37. System Parameters Manager CHUI**

**Table 4.3.3-24. System Parameters Manager Field Descriptions**

Field Name	Data Type	Size	Entry	Description
system parameter key	string	1	required	Code that designates the active record in XRP-II's system parameter table
site id	string	6	optional; zoom to select from a list of sites	Code that identifies an ECS site
last control item id	string	20	optional	Code used in determining the next sequentially-available identifier when assigning control item identifiers automatically
last ein	string	14	optional	Code used in determining the next sequentially-available identifier when assigning ein numbers automatically
use branch as order prefix	string	1	optional; Y	Code that, if "Y", causes all purchase orders, work orders, and salex orders to be prefixed with the site code of the user or, if null, the default site code
NASA contract number	string	60	optional	Code that is used by NASA to identify the ECS contract and is attached to all property records
default mfg year	numeric	4	optional	Year used as default to identify when an item was built
export functioning	string	1	system supplied (but must be set to "N" manually when a data export attempt aborts); Y,N	Code that indicates if an XRP-II data "export" function is in progress; used to prevent multiple export routines being run concurrently

#### 4.3.3.2.11.2 Transaction Log Screen

This screen allows operators to browse, and maintain if necessary, the database transaction log file. Values for all fields on this screen are system-supplied. When a database record is modified via a data entry screen, the system provides the next available transaction number and records information about what field was modified when and by whom.

The transaction log facilitates synchronizing database changes among sites. For example, the Export Site-Unique Changes utility (Section 4.3.3.2.11.9) analyzes the log's entries to identify database records that have been modified, setting each Transferred field so it bypasses the entry next time the utility is run.

The screen displays numbers to identify XRP-II database fields because field names are not stored in the database. Field names that correspond to the numbers can be found in file

\$MSPATH/mms/def/file.h, where MSPATH is an environment variable identifying XRP-II's installation directory.

Similarly, the screen uses numbers to identify locations of altered database records. The current contents of a referenced record can be displayed as follows, but only if the record at that location was neither deleted nor replaced by another since the log entry was made. At a Unix command line prompt, type:

<b>SYS920</b>	Invokes UNIFY's database test driver
<b>setloc &lt;table&gt; &lt;location&gt;</b>	Displays a record's data
<b>end</b>	Exits program SYS920

**Note:** Use Transaction Archive (Section 4.3.3.2.11.3) to remove obsolete transaction records. Transaction Archive preserves records that export utilities still need, and it saves a historical copy of the records it deletes.

**Figure 4.3.3-38. Transaction Log CHUI**

**Table 4.3.3-25. Transaction Log Field Descriptions**

Field Name	Data Type	Size	Entry	Description
transaction key	numeric	5	system supplied	Number that uniquely identifies each update transaction
field number	numeric	8	system supplied	Numerical identifier for the XRP-II field affected by the transaction.
table name	string	10	system supplied	Name of the XRP-II table affected by the update transaction
operator id	string	8	system supplied	Userid of the operator making the update transaction
date	date	N/A	system supplied	Date of the update transaction
time	time	N/A	system supplied	Time of the update transaction
transaction type	string	1	system supplied	Code for the type of transaction: A (add), M (modify), or D (delete)
transferred	string	1	system supplied	Code that indicates that the transaction has been analyzed by an export utility. "T" means the corresponding control item record has been exported, while "X" means it did not need to be exported.
record location	numeric	8	system supplied	Identifier for the transaction record's location within XRP-II
ilm	string	1	system supplied; Y, <NULL>	Code that distinguishes between ILM- and BLM-related log entries; "Y" signifies ILM

#### 4.3.3.2.11.3 Transaction Archive Screen

Control item data update transactions should periodically be deleted from the database after changed records have been exported. This makes room to log new transactions.

The Transaction Archive screen copies to a named file the records of transactions that occurred on or prior to a specified cutoff date. It then deletes the records from the database.

Specify the date of the last transaction to archive and the name of a file in which to store the data.

**Note:** XRP-II will only archive a transaction log record if its Transferred field contains the value "T" or "X". The presence of a "T" or "X" means the record has been analyzed by a program for exporting records about control item changes to other sites (see Sections 4.3.3.2.11.8 and 4.3.3.2.11.9). Deleting unanalyzed transaction log records can cause incomplete data exchanges.

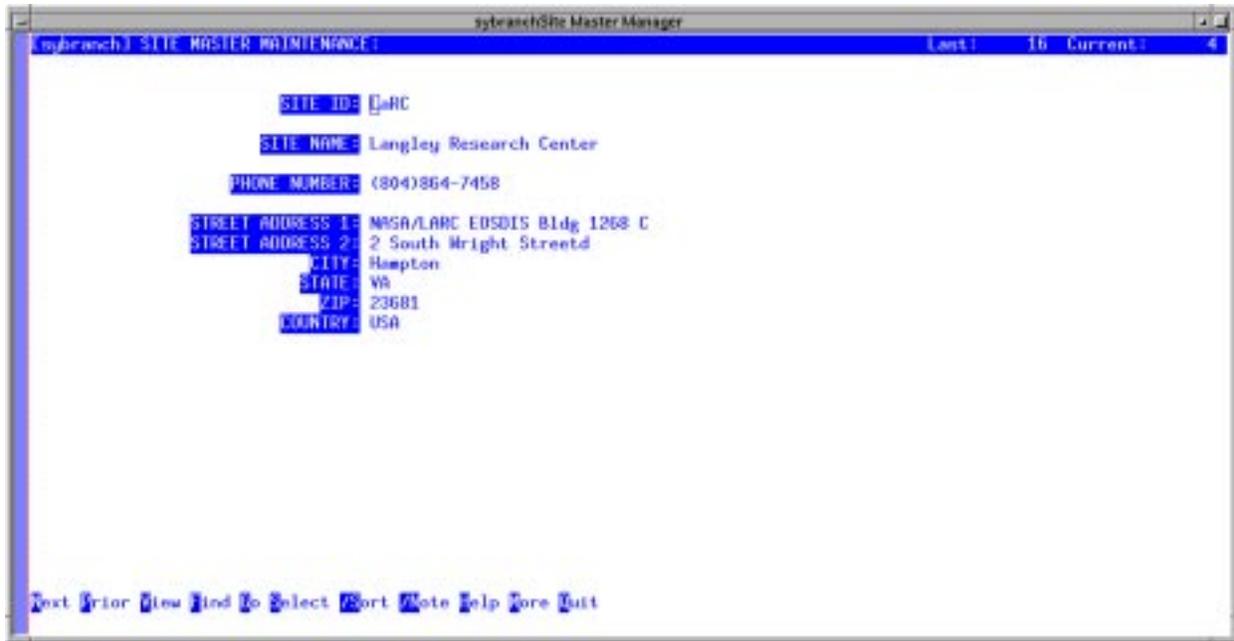

**Figure 4.3.3-39. Transaction Archive CHUI**

**Table 4.3.3-26. Transaction Archive CHUI Field Descriptions**

Field Name	Data Type	Size	Entry	Description
file name	string	8	required	Name of the file in which to store transaction records being archived
cutoff date	date	N/A	required	Date of the most recent transaction to be archived

#### 4.3.3.2.11.4 Site Master Manager Screen

The Site Master Manager screen (Figure 4.3.3-40) lets operators maintain an index of ECS-related sites. This index, which identifies details about each site, also serves as a pick list to facilitate entering control item implementation status data and report generation parameters on other screens. This screen is identical to the Branch Master Maintenance screen described in Section 6.8 of the System Reference Manual, except that the term “site” is used in lieu of “branch” and the tax code field has been deleted. Baseline Manager does not implement the organizational branch processing described in the System Reference Manual. Rather, it uses site identifiers during data export operations to determine if a control item identifier or engineering change number is site-unique.

**Figure 4.3.3-40. Site Master Manager CHUI**

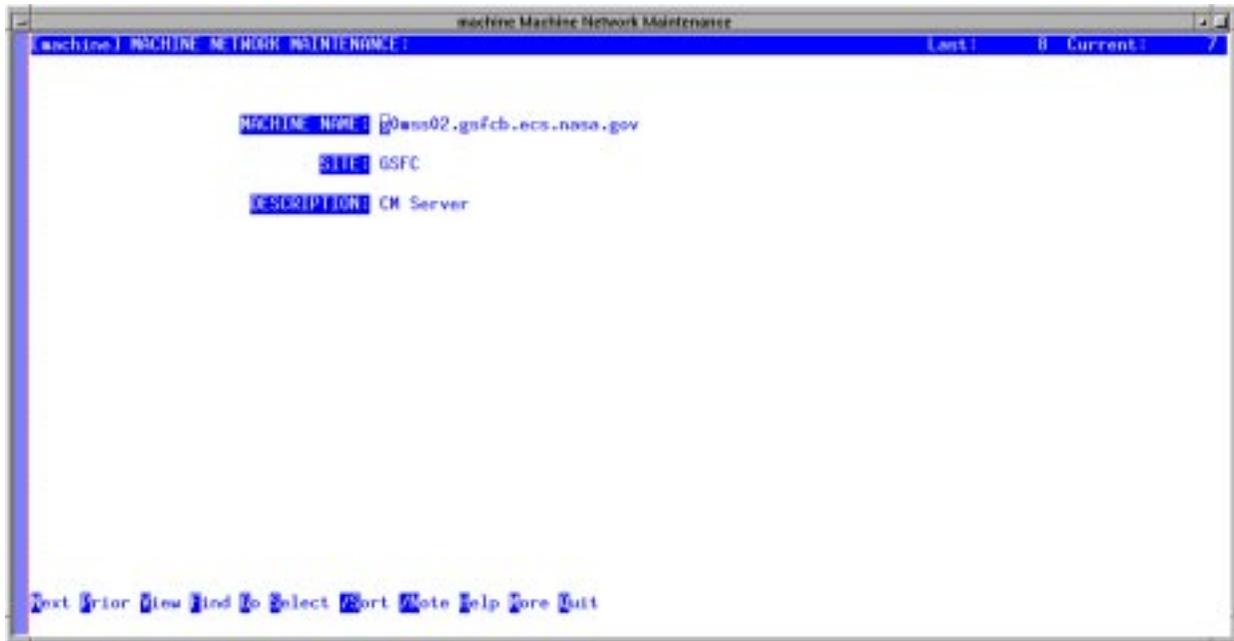

Table 4.3.3-27 describes the “site” fields that were tailored for ECS.

**Table 4.3.3-27. Site Master Manager Field Descriptions**

Field Name	Data Type	Size	Entry	Description
site id	string	6	required	Code that uniquely identifies an ECS site.
site name	string	46	optional	Full name of an ECS site.
phone number	string	8	optional	Phone number of a point of contact at the site
street address	string	30	optional	Address for the site
city	string	20	optional	Name of the city in which the site is located
state	string	2	optional	Abbreviation for the state in which the site is located
zip	string	10	optional	Postal code for the site
country	string	16	optional	Code for the country in which the site is located

#### 4.3.3.2.11.5 Machine Network Maintenance Screen

Operators use the Machine Network Maintenance screen (Figure 4.3.3-41) to keep a list of MSS CM Server hosts to which Baseline Manager records are usually shipped. The list is used by the three data entry screens that export Baseline Manager data (see Sections 4.3.3.2.11.8 - 10). The list is not required; it exists primarily to support /Zoom commands that help operators specify a target host(s) to which exported Baseline Manager records are to be sent.

**Figure 4.3.3-41. Machine Network Maintenance CHUI**

**Table 4.3.3-28. Machine Network Maintenance Field Descriptions**

Field Name	Data Type	Size	Entry	Description
machine name	string	32	required	Full, network-addressable name of a host
site	string	6	optional; zoom to select from a list of sites	Code that uniquely identifies an ECS site
description	string	30	optional	Textual characterization of a host machine

#### 4.3.3.2.11.6 Commodity Code Maintenance Screen

The Commodity Code Maintenance screen (Figure 4.3.3-42) maintains standard codes and names that are used to classify a control item according to how it was procured or obtained for a project. This data, used as a pick list by control item update screens, promotes data standardization and facilitates recording control item data.

**Figure 4.3.3-42. Commodity Code Maintenance CHUI**

Use this screen to update the list of commodity codes to use for control items. Table 4.3.3-29 describes its data entry fields.

**Table 4.3.3-29. Commodity Code Maintenance Field Descriptions**

Field Name	Data Type	Size	Entry	Description
commodity code	string	8	required	Classification for how a control item was produced or obtained (e.g., COTS, heritage, GFE, custom, mod-COTS, shareware, freeware, etc.)
description	string	20	optional	Full name for the commodity type

#### 4.3.3.2.11.7 Import BLM Records Screen

The screen shown in Figure 4.3.3-43 initiates loading of XRP-II data from tar files created by Baseline Manager's data export utilities. Entering "Y" at the prompt causes XRP-II to process all files in the directory named in the IMPORTPATH environment variable. Import tar files -- whose names indicate the date and time they were made -- are processed in chronological order as determined from their file names. Upon completion, the original files are moved to an archive directory named in the IMPORTARC environment variable.

**Figure 4.3.3-43. Import BLM Records CHUI**

#### 4.3.3.2.11.8 Export Release Records Screen

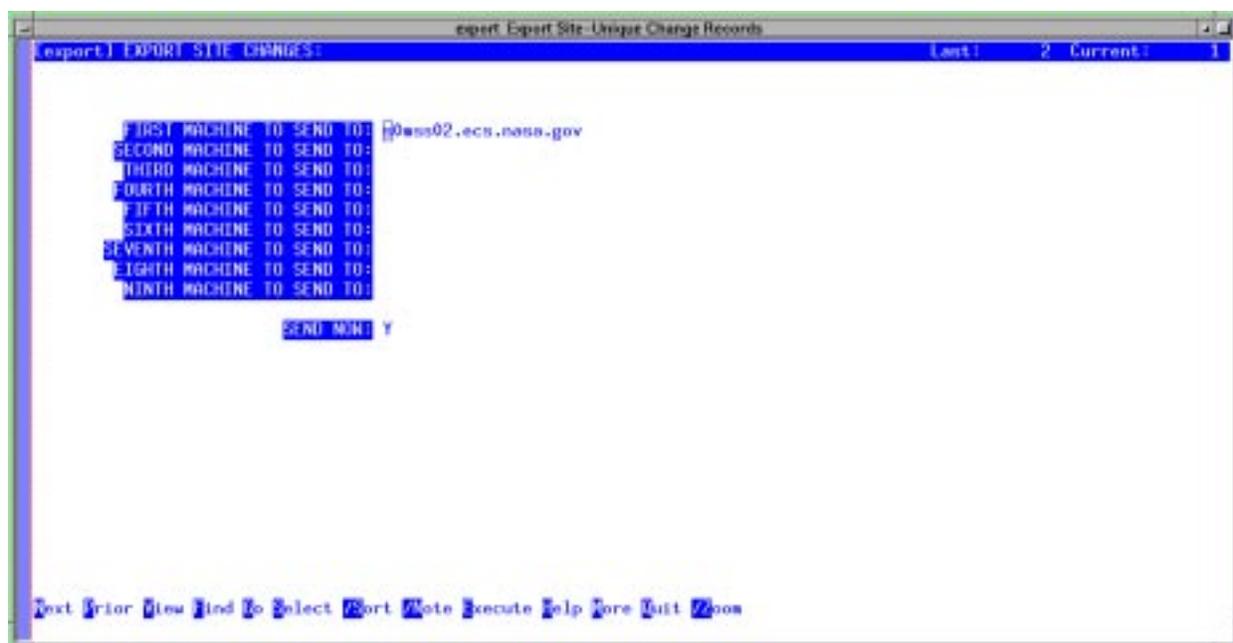

Operators use this screen to produce files for distribution that contain records associated with the release of a specified baseline, configuration item, or other control item. Via a SEND NOW feature, operators can opt to have XRP-II ftp the files to as many as six remote hosts.

The process entails extracting data about a specified item and all other items in its bill of materials as of a given date. XRP-II copies appropriate records from control item master, product structure, engineering change, interdependency, and implementation status tables and stores them in a file whose format is compatible with the Import Data utility. One tar file is created for each destination and is given a name that identifies the machine to which the file is to be sent, the origination site, the file's type, and the identifier and effective date of the control item whose records are being released. If the SEND NOW feature is used, XRP-II transfers the files via ftp then moves them

from the export directory to an archive directory<sup>1</sup>. Otherwise, the files remain in the export directory to be transferred manually.

**Note:** Export files that are transferred manually to a destination machine must also be moved manually to the archive directory.

Enter the identifier of one or more control items, and specify the name of one or more hosts to receive the data. (Include domain names, or use IP addresses. Machine names can be selected from a managed list by using the /Zoom command.) Next, enter an effective date to use for the item's bill, and indicate whether or not XRP-II is to ftp the files now. Begin data extraction by using the Execute command and, if prompted, provide a login account and a password for the ftp. As processing progresses, XRP-II will display informational messages; including some that contain the names of the tar files that are created. Messages that terminate with the symbol ">" require an operator response. Hit any key and processing will continue. XRP-II returns to the System Utilities menu when done.

**Figure 4.3.3-44. Export Release Records CHUI**

---

<sup>1</sup> The export directory and its corresponding export archive directory are configuration parameters named via program environment variables. See Section 4.3.3.2.3.

**Table 4.3.3-30. Export Release Records Field Descriptions**

Field Name	Data Type	Size	Entry	Description
control item id	string	20	required; zoom to select from a control item list	Unique code for a version- or configuration-controlled item
machine to send to	string	40	required; zoom to select from a list of machines	Full, network-addressable name of a host
date of configuration	date	N/A	required	"As of" date used in selecting records from the configuration history of a control item
send now	string	1	Y or N	Code that indicates whether or not to ship files immediately

#### 4.3.3.2.11.9 Export Site-Unique Change Records Screen

This screen is used to extract, and distribute to another site such as the SMC, copies of records about site-unique control items that have changed since the last time this function was used. XRP-II can ftp the records to up to six remote hosts specified by the operator.

XRP-II analyzes the transaction log to determine what data changed and which site-unique control items were affected.<sup>2</sup> Control item master, product structure, engineering change, interdependency, and implementation status records for these control items are copied and stored in files compatible with XRP-II's Import Data utility. These files are, in turn, converted to tar format, one per destination host the operator specifies. Each tar file is given a name that identifies the date and time the export was done, the origination site, the file's type, and the machine to which the file is to be sent. If the SEND NOW feature is used, XRP-II transfers the files via ftp then moves them from the export directory to an archive directory.<sup>3</sup> Otherwise, the files remain in the export directory to be transferred manually.

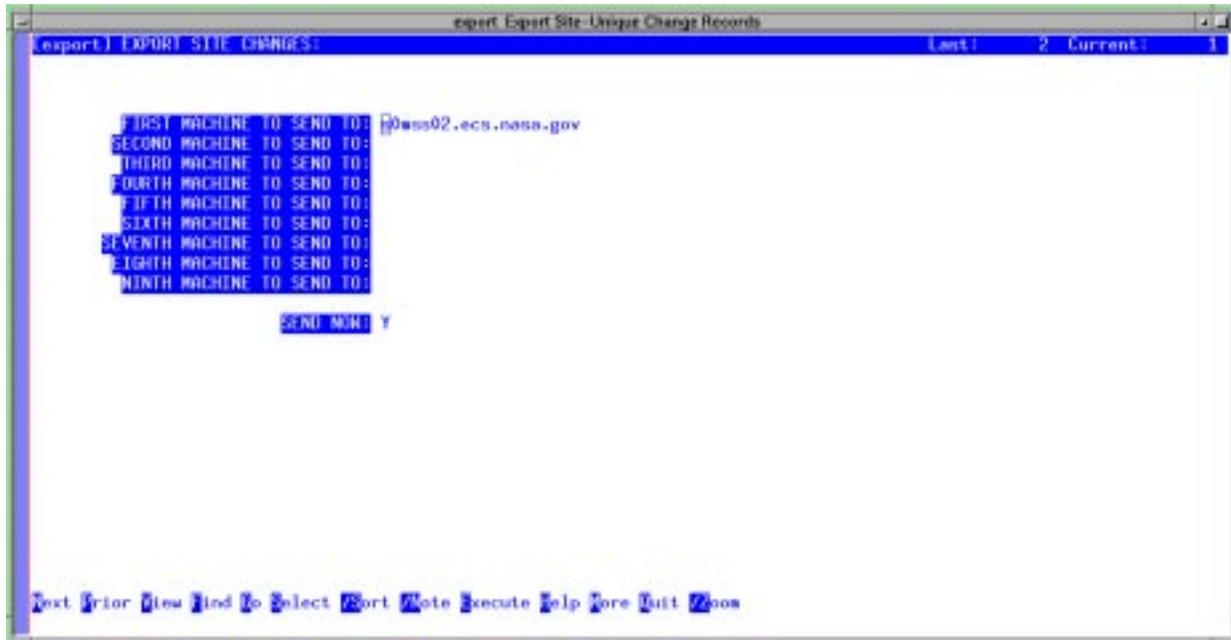

**Note:** Export files that are transferred manually to a destination machine must also be moved manually to the archive directory.

---

<sup>2</sup> Site-unique control items have identifiers containing the local site's designated prefix. Baseline Manager requires that the site prefix be the first three characters of the identifier for the site specified in the system parameters table. See Section 4.3.3.1.13.1.

<sup>3</sup> The export directory and its corresponding export archive directory are configuration parameters named via program environment variables. See Section 4.3.3.2.3.

Enter the name of one or more machines to receive the data (using their domain names or IP addresses), and choose whether or not to ftp the data files immediately after they are created. Names can be selected from a managed list by using XRP-II's /Zoom command. Use **E**xecute to begin data extraction and, if prompted, provide a login account and a password for the ftp. As processing progresses, XRP-II will display informational messages, including some that contain the names of the tar files that are created. Messages that terminate with the symbol ">" require an operator response. Hit any key and processing will continue. XRP-II returns to the System Utilities menu when done.

**Figure 4.3.3-45. Export Site-Unique Change Records CHUI**

**Table 4.3.3-31. Export Site-Unique Change Records Field Descriptions**

Field Name	Data Type	Size	Entry	Description
machine to send to	string	40	required; zoom to select from a list of machines	Full domain name or network address of the host to receive the exported data file(s)
send now	string	1	Y or N	Code that indicates whether or not to ship files immediately

#### 4.3.3.2.11.10 Export SMC Change Records Screen

This screen extracts, and distributes to remote sites, copies of records about centrally managed control items<sup>4</sup> changed since the last time this function was used. XRP-II can ftp the files to up to six remote hosts specified by the operator.

XRP-II analyzes the transaction log to determine what data changed and which centrally managed control items were affected. Control item master, product structure, engineering change, interdependency, and implementation status records for these control items are copied and stored in files compatible with XRP-II's Import Data utility. These files are, in turn, converted to tar format, one per destination host the operator specifies. Each tar file is given a name that identifies the date and time the export was done, the origination site, the file's type, and the machine to which the file is to be sent. If the SEND NOW feature is used, XRP-II attempts to transfer the files via ftp then moves them from the export directory to an archive directory.<sup>5</sup> Otherwise, the files remain in the export directory to be transferred manually.

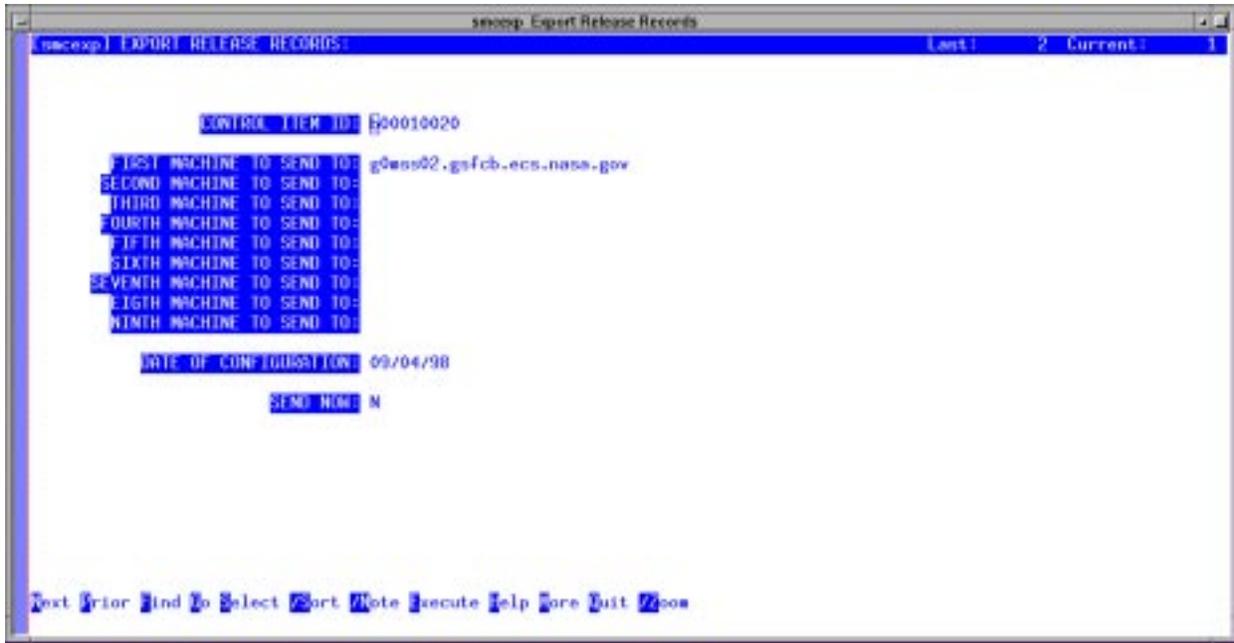

**Note:** Export files that are transferred manually to a destination machine must also be moved manually to the archive directory.

Enter the name of one or more hosts to receive the data (using either domain names or IP addresses), and choose whether or not to ftp the data files immediately after they are created. Names can be selected from a list of servers (see Section 4.3.3.2.11.5) by using the **/Zoom** command. Use **Execute** to begin data extraction and, if prompted, provide a login account and a password for the ftp. As processing progresses, XRP-II will display informational messages; including some that contain the names of the tar files that are created. Messages that terminate with the symbol ">" require an operator response. Hit any key and processing will continue. XRP-II returns to the System Utilities menu when done.

---

<sup>4</sup> Centrally managed control items have identifiers whose 3-character prefix is other than the first three characters of any site's code.

<sup>5</sup> The export directory and its corresponding export archive directory are configuration parameters named via program environment variables. See Section 4.3.3.2.3.

**Figure 4.3.3-46. Export SMC Change Records CHUI**

**Table 4.3.3-32. Export SMC Change Records Field Descriptions**

Field Name	Data Type	Size	Entry	Description
machine to send to	string	40	required; zoom to select from a list of machines	Full domain name or network address of the host to receive the exported data file(s)
send now	string	1	Y or N	Code that indicates whether or not to ship files immediately

### 4.3.3.2.12 Perform XRP-II System and Database Administration

XRP-II provides several programs for controlling user access, maintaining the database, and customizing the user interface. Many of the programs are supported by data entry screens accessed via XRP-II's System Tools menu <sup>1</sup> These are described in Sections 4.3.3.2.12.1-4.3.3.2.12.9. The rest are supported by UNIFY data entry screens or are run from the command line. These are described in Sections 4.3.3.2.12.10-4.3.3.2.12.15. Table 4.3.3-33 is an index to the functions addressed in this section.

**Table 4.3.3-33. Index of System/Database Administration Functions**

Category	Function	Program	Section
user access control	userid maintenance	User Manager	4.3.3.2.12.2
	groups definition	Groups Manager	4.3.3.2.12.3
	screen privileges maintenance	Screen Permission Control	4.3.3.2.12.4
printers management	printers definition	Printers Management	4.3.3.2.12.6
database administration	database dump	Data Dump Utility	4.3.3.2.12.7
	database load	Data Load Utility	4.3.3.2.12.8
	Access ACCELL/UNIFY	ACCELL	4.3.3.2.12.9
	b-tree maintenance	Add, Drop B-Tree Indexes	4.3.3.2.12.10
	database backups	Write Data Base Backup	4.3.3.2.12.11
	database restore	Read Data Base Backup	4.3.3.2.12.12
	UNIFY transaction log control	Transaction Logging Status	4.3.3.2.12.13
user interface customization	data entry screen maintenance	Screen Manager Screen Reset (dvset)	4.3.3.2.12.1 4.3.3.2.12.14
	menu maintenance	Menu Manager	4.3.3.2.12.5
	report maintenance	Report Reset (rpset)	4.3.3.2.12.15

#### 4.3.3.2.12.1 Screen Manager Screen

Operators use the Screen Manager screen (Figure 4.3.3-47) to define XRP-II's menus and Datalook data entry screens. Once defined, any screen or menu can be positioned in XRP-II's menu hierarchy via the Menu Manager (Section 4.3.3.2.12.5), and be made accessible for use via Screen Permission Control (Section 4.3.3.2.12.4). Appendix D of the System Reference Manual and the first six chapters of the Datalook/Datarite Reference Manual provide pertinent insights into Datalook screens and how they relate to the XRP-II menu handler.

<sup>1</sup> The System Tools menu is new with version 3.0.1 of XRP-II. It moves control of menus, screens, and user access from ASCII files to the database and brings to the menu handler functions previously available only at the command line. HTG Corporation manuals do not yet reflect the change.

Every XRP-II menu and screen has a name or code by which it is referenced. By convention, names are lower case, and the first two characters usually correspond to the XRP-II module the entity supports (e.g., “pi” for Product Information). XRP-II screens and menus are supported by executables that perform data retrieval and manipulation. By convention, executables are named in uppercase. Every data entry screen, including those used for producing reports, is supported by a specification file that defines the screen configuration.

Use the standard bottom-line commands to add, delete, modify, or browse screen and menu records. Table 4.3.3-34 describes the Screen Manager fields. The special command, **Editscreen**, is for creating or changing specifications for a screen.<sup>2</sup> **Editscreen** opens a Vi session for a specification file named “<screen code>.dv” located in the \$MSPATH/mms/local directory. When Vi is exited, **Editscreen** automatically compiles the file and resets all XRP-II screens.

**Note:** Do not alter any of the standard screen script files in directory \$MSPATH/mms/dvspec.

**Figure 4.3.3-47. Screen Manager CHUI**

<sup>2</sup> See Chapters 1-6 of the Datalook/Datarite Reference Manual for details about screen specifications.

**Table 4.3.3-34. Screen Manager Field Descriptions**

Field Name	Data Type	Size	Entry	Description
screen or menu code	string	8	required	Identifier (short name) that XRP-II programs use in referencing an XRP-II screen or menu (e.g., pici).
executable	string	16	optional	Name of the executable driving a data entry screen
header	string	36	optional	Name of the heading or title for the data entry screen or menu
type	string	1	optional; S, M, E	Code for distinguishing between records identifying screens (S), menus (M), and executables (E)

#### 4.3.3.2.12.2 User Manager Screen

Operators use the User Manager screen (Figure 4.3.3-48) to register the Unix userids of individuals authorized to run XRP-II. Individuals are assigned a group of menus and screens that may be accessed and a specific entry menu. As part of logon processing, XRP-II's menu handler obtains an individual's Unix userid from the system and verifies it against those that have been registered.<sup>3</sup>

Use this screen to add, delete, modify or browse XRP-II user records.

**Note:** Consistent with the single login philosophy of ECS, XRP-II prompts the user for neither a userid nor a password when the ECS standard Baseline Manager startup script "pcs" is used. The script passes XRP-II the operator's userid as an argument based on results of a "whoami" command and access is controlled via screen permissions rather than passwords.

---

<sup>3</sup> Data access for operators running XRP-II executables from the command line is governed by Unix file permissions rather than the menu handler.

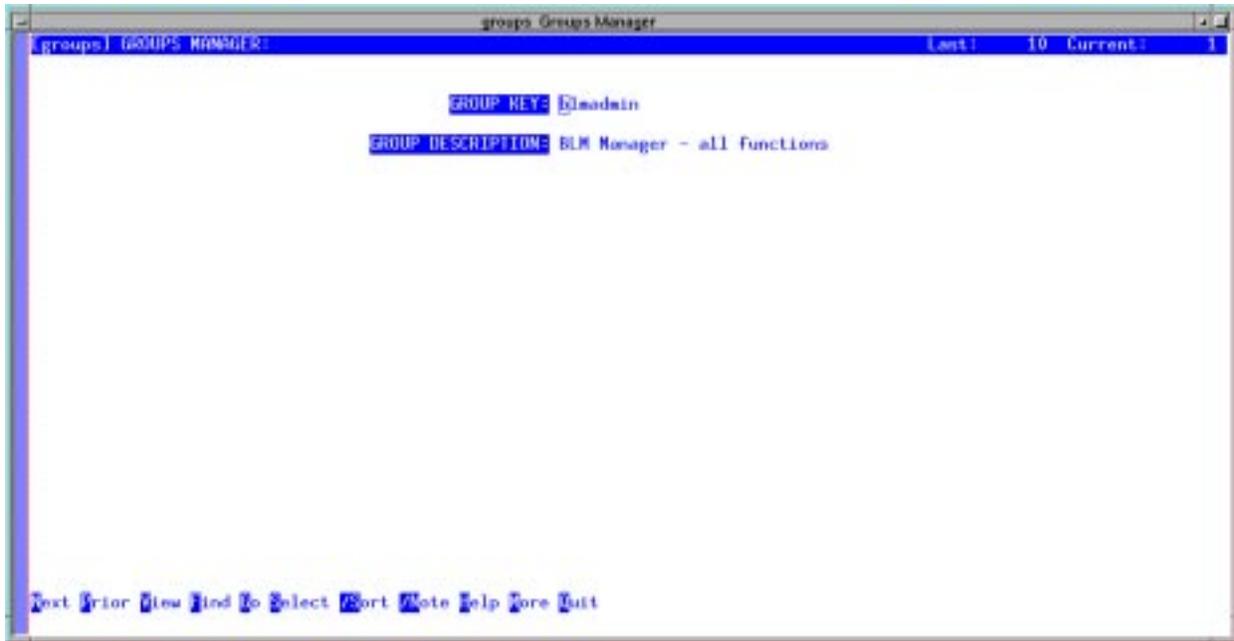

**Figure 4.3.3-48. User Manager CHUI**

**Table 4.3.3-35. User Manager Field Descriptions**

Field Name	Data Type	Size	Entry	Description
login id	string	32	required	Full, network-addressable name of a host
password	string	6	optional; zoom to select from a list of sites	Code that uniquely identifies an ECS site
first name	string	30	optional	First name of the user
last name	string	30	optional	Surname of the user
title	string	20	optional	Name of the user's position or job
group	string	8	optional; zoom to select from a list of groups	Name for a collection of XRP-II data entry screens and menus. These are the default screens and menus the user can access. Deviations can be specified via Screen Permission Control.
address	string	30	optional	Street address where the responsible engineer is located
city	string	20	optional	Name of the city in which the responsible engineer is located
phone	string	18	optional	Phone number for the responsible engineer
state	string	2	optional	Name of the state in which the responsible engineer is located
zip	string	10	optional	Postal code where the responsible engineer is located
start menu	string	8	optional; zoom to select from a list	Name or code of the menu initially presented to the user at login

#### 4.3.3.2.12.3 Groups Manager Screen

Operators use the Groups Manager screen (Figure 4.3.3-49) to maintain a list of XRP-II user group names. Groups are collections of userids having common access privileges. Access to XRP-II menus and screens can be assigned by group as well as by user. A userid can be a member of at most one XRP-II group.

**Figure 4.3.3-49. Groups Manager CHUI**

XRP-II is delivered to the site with the following nine user groups pre-defined. xrpadmin - for the XRP-II super user. Has access and full privileges to all XRP-II menus and screens

- blmadmin - for the Baseline Manager focal point. Has access with full privileges to all BLM menus and screens and to system utilities and system tools. Has access with inquiry privileges to selected ILM menus and screens
- blmupdt - for those performing Baseline Manager data entry. Has access with full privileges to all BLM menus and screens. Has access with inquiry privileges to selected ILM menus and screens.
- blmquery - for those restricted to Baseline Manager data retrieval. Has access to BLM query and report menus and screens. Has access with inquiry privileges to selected ILM menus and screens.
- ilmadmin - for the Inventory, Logistics, Maintenance Manager focal point. Has access with full privileges to all ILM menus and screens and to system utilities and system tools. Has access to BLM query and report menus and screens.
- ilmuser - for those performing inventory data entry. Has access with full privileges to all inventory menus and screens. Has access to BLM query and report menus and screens.

- ilmquery - for those restricted to ILM data retrieval only. Has access with inquiry privileges to ILM menus and screens. Has access to BLM query and report menus and screens.
- ilmmain - for the Maintenance Engineer. Has access to Maintenance menus and screens. Has access to BLM query and report menus and screens.
- ilmlog - for the Logistics Manager. Has access to the Logistics menus and screens. Has access to BLM query and report menus and screens.

Use the Groups Manager data entry screen to add, delete, modify or browse XRP-II group records. Table 4.3.3-36 describes the screen’s fields.

**Note:** User Manager assigns userids to groups (see Section 4.3.3.2.12.2), and Screen Permission Control Manager assigns privileges to groups (see Section 4.3.3.2.12.4). A group must have been defined before it can have members or be given screen privileges.

**Table 4.3.3-36. Groups Manager Field Descriptions**

Field Name	Data Type	Size	Entry	Description
group key	string	8	required	Name that classifies XRP-II users according to access required to menus and screens
group description	string	30	optional	Textual characterization of a user group

#### 4.3.3.2.12.4 Screen Permission Control Screen

Screen Permission Control (Figure 4-3.3-50) lets operators specify the XRP-II menus and data entry screens a user or user group can access and the data manipulation permissions the user or group are granted when accessing a screen. It replaces reliance on the “users” and “groups” files discussed in Sections 5 and D.5 of the System Reference Manual, however the concept of access and privileges by group and user is the same.

Use this screen to browse, add to, or edit existing screen permission control records. Each record renders a menu or data entry screen accessible to some user or group. For data entry screens, it also assigns to the user or group the privilege to query (inquire), add, modify, and/or delete records via the screen. A privilege is assigned by placing a “Y” in the appropriate privilege field. Similarly, a privilege is removed by placing an “N” in the appropriate privilege field.

Consider the following when modifying screen permissions:

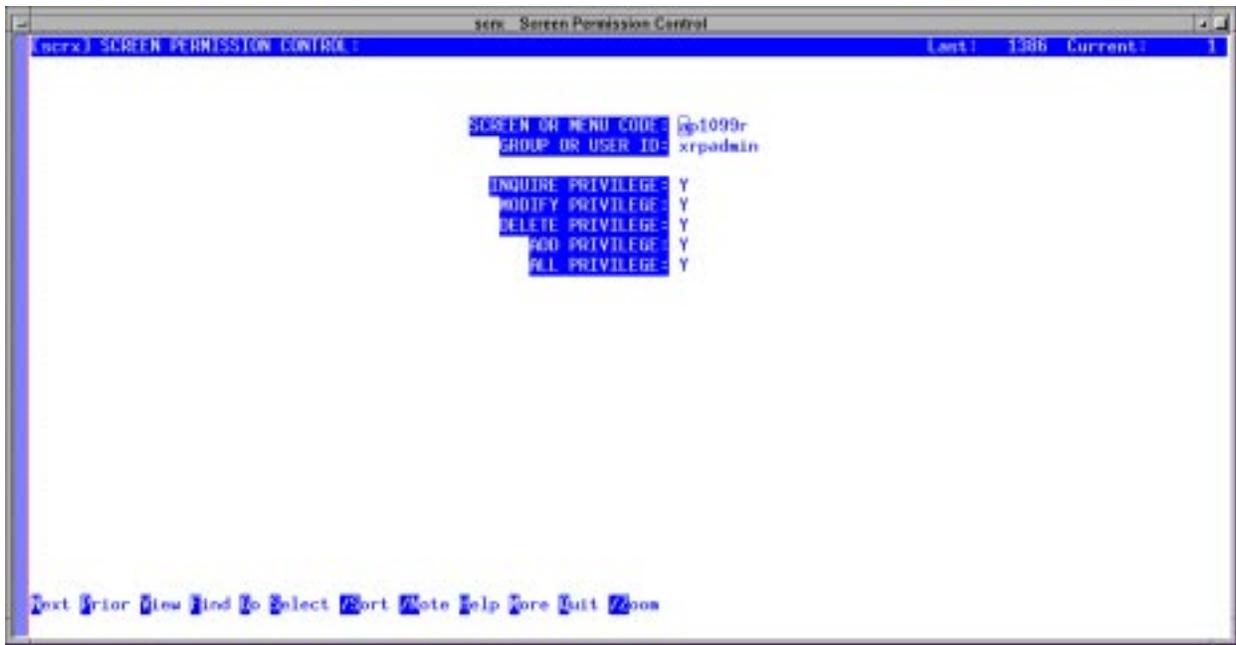

- Privileges specified for a user take precedence over privileges specified for the user’s group

- A user or group is granted access to a menu or screen only if a privilege is assigned.
- Assignment of All Privilege overrides other privileges specified in the record
- Privileges specified in the record do not override permission restrictions coded into specifications for the screen (e.g., no user can update the database via a screen marked for querying the database only, regardless the privileges the user is given for the screen.)

Baseline Manager is delivered with a default set of user groups and associated screen permissions (see Section 4.3.3.3.2). Example ways an operator might extend this set include:

- Making a screen available to a group - add a record that names the screen and group, then assign at least one privilege for the group
- Making a screen accessible to only certain users - add a record for each user. Name the screen and the user, and assign at least one privilege for the user. Then find and delete any records that make the screen accessible to groups other than any established for the system administrator.
- Increasing a screen's privileges for a member of a group - add a record that names the screen and the user, and assign the extra privilege for the user.
- Restricting a screen's privileges for a member of a group - add a record that names the screen and the user, and remove the privilege(s) for the user

Table 4.3.3-37 describes this screen's fields.

**Figure 4.3.3-50. Screen Permission Control CHUI**

**Table 4.3.3-37. Screen Permission Control Field Descriptions**

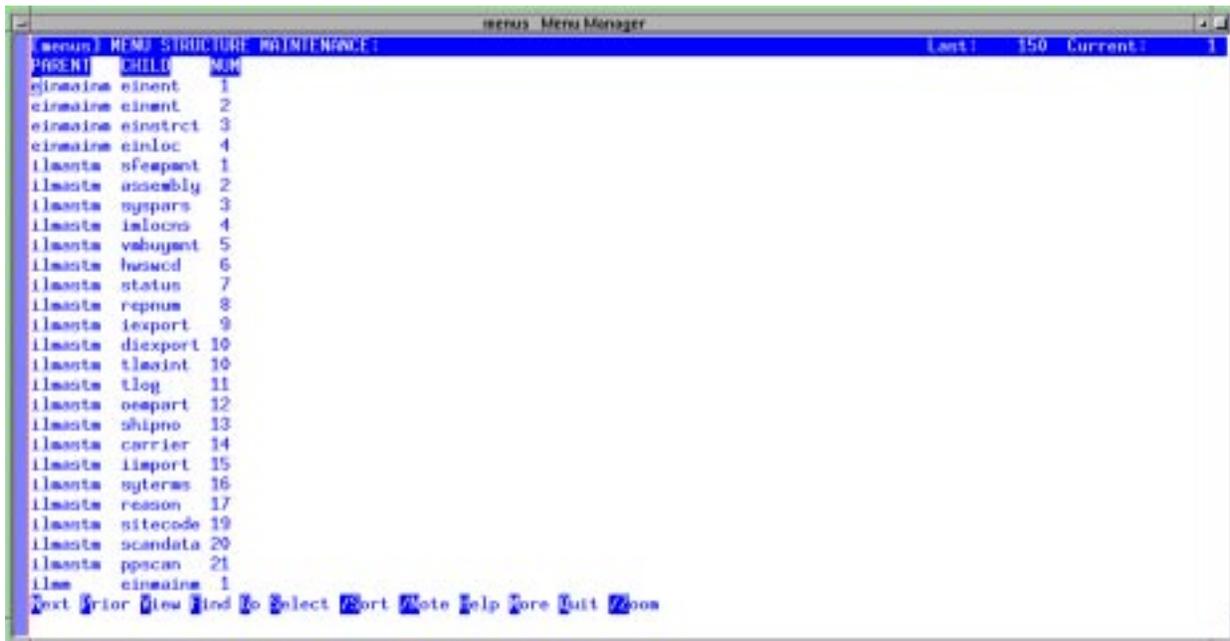

Field Name	Data Type	Size	Entry	Description
screen or menu code	string	8	required	Identifier (short name) that XRP-II programs use in referencing an XRP-II screen or menu (e.g., pici).
group or user id	string	8	required	Name that classifies XRP-II users according to access required to menus and screens, or an individual's Unix userid
inquire privilege	string	1	optional; Y,N	Code indicating if the group or user can: a) read database records via the named screen; or b) can access the named menu.
modify privilege	string	1	optional; Y,N	Code indicating if the group or user can: a) modify database records via the named screen; or b) can access the named menu.
delete privilege	string	1	optional; Y,N	Code indicating if the group or user can: a) delete database records via the named screen; or b) can access the named menu.
add privilege	string	1	optional; Y,N	Code indicating if the group or user can: a) add database records via the named screen; or b) can access the named menu.
all privilege	string	1	optional; Y,N	Code indicating if the group or user can: a) read, modify, delete, and add database records via the named screen; or, b) can access the named menu.

#### 4.3.3.2.12.5 Menu Manager Screen

Operators use the Menu Manager screen (Figure 4.3.3-51) to customize XRP-II's hierarchy of menus. The screen maintains records that prescribe which submenus and data entry screens are available for selection from each menu and the order in which choices appear. Menus and screens must be defined via Screen Manager before they can be included in the hierarchy. The headers specified in screen manager records are the text used for displaying menu choices.

Use this screen add, delete, or modify menu structure records. Table 4-3.3-38 describes record fields.

**Note:** Menu structure records govern what choices can appear on a given menu. The choice will appear for a user only if screen permission control has a record that: 1) associates the screen or menu with either that user or that user's group; and 2) at least one access privilege is assigned.

**Figure 4.3.3-51. Menu Manager CHUI**

**Table 4.3.3-38. Menu Manager Field Descriptions**

Field Name	Data Type	Size	Entry	Description
parent	string	8	required; zoom to select from a list of screens, menus and executables	Full, network-addressable name of a host
child	string	8	optional; zoom to select from a list of screens, menus and executables	Code that uniquely identifies an ECS site
menu number	numeric	2	optional	Sequence number of the child screen or menu in the selection list on the parent menu

#### 4.3.3.2.12.6 Printer Management Screen

The Printer Management screen (Figure 4.3.3-52) provides access to XRP-II's list that defines printer selections and options available for generating both custom and ad hoc reports. The list is contained in an "msprinters" configuration file, which is described in Section 8.1.4 of the System Reference Manual.

Enter “Y” to confirm that XRP-II should proceed. XRP-II will run the Vi Editor and open the “msprinters” file. Edit the file, then exit Vi. XRP-II will recompile printer configuration binaries, making the new printer definitions available to all XRP-II operators.

**Figure 4.3.3-52. Printer Management CHUI**

#### 4.3.3.2.12.7 Data Dump Utility Screen

Operators use the Data Dump Utility screen (Figure 4.3.3-53) to bulk dump one or more XRP-II database tables into specially-formatted data files. A file is created for each database table, and it contains all fields for all records in the table. Fields are separated by pipe symbols (|). The first line in each file identifies the field ordering. See the XRP Tools, Techniques, and Conventions Manual, Sections 1.5 and 1.6, for file format conventions XRP-II uses.

Enter Modify mode and, using Table 4.3.3-39 as a guide, specify which tables to dump and whether to archive the resulting data files. Return to Inquiry mode, then enter “E” to initiate the dump and “Y” at the confirmation prompt. XRP-II will create the requested data files and return to the System Tools menu.

**Note:** If a tar file is named, XRP-II archives all formatted data files it finds regardless whether the corresponding database table was part of the current dump.

**Figure 4.3.3-53. Data Dump Utility CHUI**

**Table 4.3.3-39. Data Dump Utility Field Descriptions**

Field Name	Data Type	Size	Entry	Description
dump	string	60	optional	List of tables to dump (e.g., pm, ec, etc.). A null field causes all tables to be dumped. Section 4.3.3.4.1 describes how to obtain a list of XRP-II table names
tar dump files	string	1	optional; Y,N	Code indicating whether or not to tar the data tables that were dumped
tar file name	string	40	optional	Pathname for the tar file in, or relative to, the database directory specified in environment variable \$DBPATH

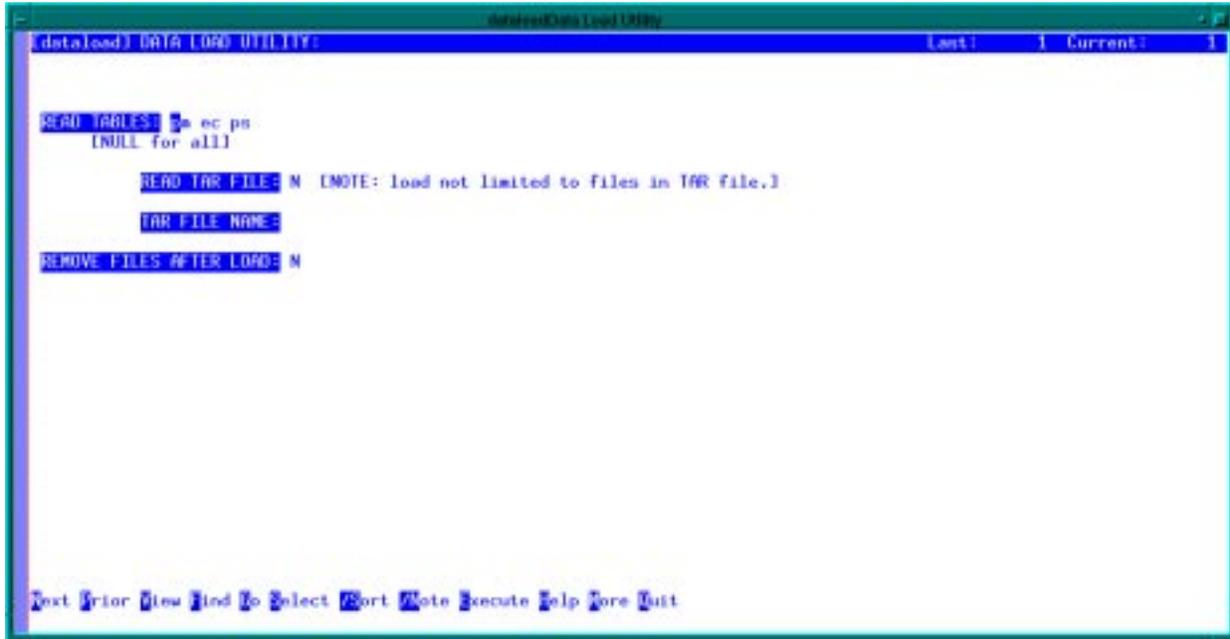

#### **4.3.3.2.12.8 Data Load Utility Screen**

Operators use the Data Load Utility screen (Figure 4.3.3-54) to bulk load specially-formatted data into one or more XRP-II database tables. The data must be in files that conform to XRP-II data conventions (see the XRP-II System Tools, Techniques, and Conventions Manual) or in an archive of such files.

Enter Modify mode and, using Table 4.3.3-40 as a guide, specify which tables to load and whether the data should be read from an archive. Return to Inquiry mode, then enter “E” to initiate the dump and “Y” at the confirmation prompt. XRP-II will create the requested data files and return to the System Tools menu.

**Note:** If no table names are specified on the data entry screen, XRP-II attempts to load data for tables, whether or not corresponding formatted data files are present.

**Note:** If a tar file is named, XRP-II expands the entire archive before loading any tables. If no table names are specified on the data entry screen, XRP-II loads from all formatted data files it finds regardless whether they had been part of the named archive.

**Figure 4.3.3-54. Data Load Utility CHUI**

**Table 4.3.3-40. Data Load Utility Field Descriptions**

Field Name	Data Type	Size	Entry	Description
read tables	string	60	optional	List of tables to load (e.g., pm, ec, etc.). A null field causes all tables to be loaded. Section 4.3.3.4.1 describes how to obtain a list of XRP-II table names
tar dump files	string	1	optional; Y,N	Code indicating whether or not the data to be loaded should be read from a tar file
tar file name	string	40	optional	Pathname of a tar file in, or relative to, the database directory specified in environment variable \$DBPATH

#### 4.3.3.2.12.9 Call Accell System Screen

This screen is used to invoke the menu system for the COTS product ACCELL and its UNIFY RDBS. To invoke ACCELL, select **Call Accell System** from XRP's System Tools menu, then

type “Y” at the resulting prompt (see figure 4.3.3-55). The menus, detailed in Chapter 3 of the UNIFY Developer’s Reference manual, provide access to several database maintenance utilities referred to in earlier sections. When done, type <F5> to exit.

**Figure 4.3.3-55. Call Accell System CHUI**

#### **4.3.3.2.12.10 B-tree Index Maintenance**

XRP-II uses B-tree indexes to speed up data retrieval. All indexes should be reset at least monthly to reduce their size and improve system performance. Use UNIFY’s Add, Drop B-Tree Indexes data entry screen to rebuild XRP-II B-trees.

To reset B-Trees via the UNIFY menu handler, type **accell** from a command line prompt or invoke **Call Accell System** from the XRP-II’s System Tools Menu. Navigate to the Add, Drop B-Tree Indexes data entry screen by selecting **ACCELL/DBMS, System Administration, Data Base Maintenance**, then **Add, Drop B-Tree Indexes** menu choices. From there, follow instructions contained in Section 8.5 of the UNIFY Developer’s Reference. See Section 8.5 of the UNIFY Developer’s Reference for a description of the data entry screen.

To access the B-trees program from the command line directly, set appropriate XRP-II environment variables (see Appendix) then change to the database directory (\$DBPATH) and type **IDXMNT**. **Note:** No one should be logged on XRP-II when B-trees are being reset.

**Note:** Do not modify standard B-tree indexes defined in file “\$MSPATH/mms/base.dd”. Custom B-tree indexes, if any, are defined in file “\$MSPATH/mms/nasa/nasa.dd”. If the custom

“.dd” file is modified, the Unify data dictionary should be reset by running ‘mnset -a base nasa’ from the database directory, \$DBPATH.

#### 4.3.3.2.12.11 Database Backup

Operators can write a checkpoint of the XRP-II database by using UNIFY’s Write Data Base Backup program, BUDB. The program saves a copy of the database, B-tree indexes, and data dictionary to a diskette drive, a cartridge, a 9-track tape drive, or a file named in the BUDEV environment variable (see Appendix A).

**Note:** Operators must use this program in order to take advantage of UNIFY’s transaction logging feature (see Section 4.3.3.2.12.13).

**Note:** Ensure no one is using the database when doing the backup.

To backup the database via the UNIFY menu handler, type **accell** from a command line prompt or invoke **Call Accell System** from the XRP-II’s System Tools Menu. Navigate to the Write Data Base Backup data entry screen by selecting **ACCELL/DBMS, System Administration, Data Base Maintenance**, then **Write Data Base Backup** menu choices. From there, follow instructions contained in Section 9.1 of the UNIFY Developer’s Reference.

To access the backup program from the command line, set appropriate XRP-II environment variables (see Appendix) then change to the database directory (\$DBPATH) and type **BUDB**.

#### 4.3.3.2.12.12 Database Restore

Operators restore a checkpointed XRP-II database by using UNIFY’s Read Data Base Backup program.. The program loads a database, B-tree indexes, and data dictionary (previously saved by UNIFY’s Write Data Base Backup program) from a diskette drive, a cartridge, or a 9-track tape drive named in the BUDEV environment variable. It also offers the operator options to replay the transaction log to rollforward the database and to re-saves the database. See Section 9.2 of the UNIFY Developer’s Reference Manual for details, including information about replaying the transaction log and handling of errors.

**Note:** If transactions are rolled forward, transaction logging is forced OFF until the next backup is performed.

**Note:** Ensure no one is using the database when doing the restore.

To access the restore program via the UNIFY menu handler, type **accell**. Navigate to the Read Data Base Backup data entry screen by selecting **ACCELL/DBMS, System Administration, Database Maintenance**, then **Read Data Base Backup** menu choices. From there, follow instructions in Section 9.2 of the UNIFY Developer’s Reference.

To access the restore program from the command line, set appropriate XRP-II environment variables (see ) then change to the database directory, \$DBPATH, and type **REDB**

#### 4.3.3.2.12.13 UNIFY Transaction Logging Control

The UNIFY relational database management system can log database transactions so they can be rolled forward in the event of hardware or software failure to recover database updates made since

the last database checkpoint. Operators use the Transaction Logging Status data entry screen to set and display logging parameters. Section 12.1 of the UNIFY Developer's Reference Manual describes transaction logging in detail.

To access the transaction logging status program via the UNIFY menu handler, type **acell**. Select the **ACCELL/DBMS, System Administration**, then **Transaction Logging Status** menu choices. From there, follow instructions in Section 12.1 of the UNIFY Developer's Reference.

To access the transaction logging status program from the command line, set appropriate XRP-II environment variables (see Appendix) then change to the database directory (\$DBPATH) and type **TXCONF**. From there, follow instructions in Section 12.1 of the UNIFY Developer's Reference.

#### **4.3.3.2.12.14 Screen Reset**

XRP-II's Datalook data entry screens need to be "reset" whenever their specification files are changed. Although this happens automatically when a change is made via Screen Manager's Editscreen command, these ASCII text files can be altered or replaced other ways as well.

Use program **dvset** when necessary to reset a screen manually. It must be run from the XRP-II install directory, which is named in the environment variable MSPATH. See Section 3.3 of the Datalook/Datarite Reference Manual for a description of the Datalook screen development process how to use **dvset**.

#### **4.3.3.2.12.15 Report Reset**

XRP-II's report scripts need to be "reset" whenever their report specification files are changed. Like Datalook data entry screen specifications, report scripts are also stored in files as ASCII text.

Use program **rpset** as necessary to reset a report manually. It must be run from the XRP-II database directory, which is named in the environment variable DBPATH. See Sections 8.2 and 8.3 of the Datalook/Datarite Reference Manual for a details about how to use **rpset**.

### **4.3.3.3 Required Operating Environment**

For all COTS packages, appropriate information on operating environments, tunable parameters, environment variables, and a list of vendor documentation can be found in a CM controlled document for each product. To find the documentation for XRP Baseline Manager, refer to the ECS Baseline Information System web page, URL <http://cmdm.east.hitc.com/>.

### **4.3.3.4 Databases**

XRP-II stores control item data in a relational database managed by "UNIFY", a COTS relational database management system marketed under the product name "Accell". The database consists of a collection of tables in a single file (.../mms/bin/file.db) in the XRP-II principal directory. The structure of the database and the file in which it is stored is wholly maintained by the vendor, HTG Corporation.

Refer to the XRP-II System Reference Manual, Appendix B, for a discussion of XRP-II data structures and to the XRP-II Tools, Techniques, and Conventions Manual, Chapter 1, for discussions of utilities available for listing data dictionary and data record contents.

#### 4.3.3.4.1 Database Schema

The standard XRP-II database schema was extended to implement the Baseline Manager and Inventory, Logistics, Maintenance Manager applications for ECS. The ECS database contains 173 tables and more than 2,200 fields. Data dictionary information is helpful and sometimes necessary for loading and dumping the database, troubleshooting, and customizing XRP-II screens and reports.

UNIFY can generate a Data Dictionary Report, but in hardcopy only (100+ pages). It contains a complete schema listing, a field list, a table list, and a list of table relationships; but it does not contain the field prompts and column headings seen on BLM and ILM screens and reports. These are known only to XRP-II. The Data Dictionary Report is described in Section 11.1 of the UNIFY Developer's Reference.

XRP-II provides two utilities, schemout and fldrep, that are run from the command line and may be more helpful because both write to standard output, making the data accessible for use with standard Unix redirection and utilities. Schemout produces a schema listing similar to the one generated by UNIFY's Data Dictionary Report. Fldrep produces a listing of database fields that includes the field prompts/column headings seen on XRP-II screens and reports together with each field's characteristics. Schemout and fldrep are discussed in Sections 1.15 and 1.13.3 of the Tools, Techniques and Conventions Reference Manual, respectively.

To obtain a UNIFY Data Dictionary Report from any XRP-II menu, type:

<b>shell</b>	Obtains a command line prompt
<b>cd \$UNIFY/..</b>	Changes working directory to the Accell principal directory
<b>accell</b>	Invokes the Accell main menu
<b>2 &lt;Enter&gt;</b>	Invokes the Accell/DBMS menu
<b>7 &lt;Enter&gt;</b>	Invokes the System Administration menu
<b>7 &lt;Enter&gt;</b>	Invokes the Data Dictionary Reports menu
<b>1 &lt;Enter&gt;</b>	Executes the Print Data Base Design program
<b>&lt;F5&gt;</b>	Exits Accell
<b>exit</b>	Returns to the XRP-II menu

To run schemout from any XRP-II menu, type:

<b>shell</b>	Obtains a command line prompt
<b>schemout</b>	Executes the schemout program
<b>or</b>	
<b>schemout   grep -v “^ . . . . . [A-z]”   grep “[A-z]”   sort</b>	Obtains a list of table names only
<b>exit</b>	Returns to the XRP-II menu

To run fldrep from any XRP-II menu, type:

<b>shell</b>	Obtains a command line prompt
<b>fldrep</b>	Executes the fldrep program
<b>exit</b>	Returns to the XRP-II menu

**Note:** Any of these programs can be run without first logging onto XRP-II. In a C-shell, start at the XRP-II database directory (typically, /usr/ecs/OPS/.COTS/xrp/mms/bin), source the XRP-II configuration file (typically /usr/ecs/OPS/COTS/xrp/scripts/xrp\_csh\_env.cfg), and omit the “shell” and “exit” commands.

#### **4.3.3.5 Special Constraints**

The ECS environment imposes the following constraints on how XRP-II is used :

- Control item identifiers - XRP-II uses centralized database technology and is separately installed at each ECS site. This necessitates a special scheme for assigning identifiers to control items so that sites may safely exchange database records. For example, the SMC must be able to distribute centrally maintained release records to multiple sites without interfering with records the sites locally maintain there. Similarly, the SMC must be able to absorb copies of site-maintained records forwarded by the sites to form the consolidated picture of system-wide baselines without contaminating centrally-maintained data. To distinguish between centrally maintained and site-maintained records, Baseline Manager expects that identifiers of site-maintained control items have a unique 3-character prefix that matches the first three characters of the site’s code (see Section 4.3.3.2.11.1). To preclude confusion, identifiers of centrally-maintained control items should begin with a numeral.
- Database schemas - The XRP-II database schema must be identical at all ECS sites so that database records can be uniformly exchanged among them.
- Data entry screens - Table view driver programs cannot handle the number and size of fields used in the form view of many Baseline Manager data entry screens. Where limitations exist, fields that appear in table view were chosen either because they help identify control items or because they are likely to be used in multi-record operations.
- Import file directories - XRP-II uses the name contained in the IMPORTPATH environment variable as a destination when ftp’ing exported data records to other sites. Consequently, the directory that is used to receive the data should have the same name at each site.

#### **4.3.3.6 Outputs**

XRP-II is a database application whose principal outputs as Baseline Manager are formatted data files. These files are used to exchange records among XRP-II systems, to describe production baseline configurations for resource planners, and to store copies of reports. Other, ancillary files are occasionally produced in the course of processing, but they are for XRP-II’s internal use and generally of no interest to operators. Table 4.3.3-41 lists and describes each of the above types of outputs.

**Table 4.3.3-41. Outputs**

Output	Description and Format
export/iimport tar files	Produced by XRP-II's "export" utilities, these are archives containing one or more .dasc files. (See Sections 4.3.3.2.3 and 4.3.3.2.5 above.)
.dasc files	Transient, ASCII files produced by XRP-II's "export" utilities and used by its import utility. Each file contains a header record followed by one or more detail records from a particular XRP-II database table. Each detail record contains values for a single database record, separated by pipe symbols. The header record contains the specification of the dump, identifying the database table and the names of the fields that correspond to values in the detail records. (See Section 1.6 of the XRP-II Tools, Techniques and Conventions Manual.)
.dspc files	Transient, ASCII files produced by XRP-II's import and export utilities. Each file identifies the name of a database file (table) and the names of fields in that file in the order required to load data in the database. Data is separated by pipe symbols. (See Section 1.6 of the XRP-II Tools, Techniques and Conventions Manual.)
resplan data file	An ASCII file consisting of one header record followed by one or more detail records. Each detail record identifies a control item that is marked as a planning resource and is part of a specified production baseline; it also identifies specific characteristics about the item. The header record contains a message that identifies the production baseline that was specified. This file is stored in directory /usr/tmp on the MSS CM Server, and a copy of it can be transmitted, via Tivoli, to the requestor. It is generated via command line interface (see Section 4.3.3.5 above.)
print files	ASCII text files that contain reports requested via XRP-II data entry and report generation screens. These files are stored in the operator's home directory.
temporary files	Various working files XRP-II creates for its own internal use. These are stored in directory /usr/tmp on the MSS CM Server but not deleted by XRP-II.

### 4.3.3.7 Event and Error Messages

XRP-II issues both status and error messages. UNIFY manuals discuss common messages an operator may encounter, but no listing of standard XRP-II messages is provided in the COTS documentation. Messages are generally self-explanatory; however, some refer operators to log files which, in many cases, are intended for XRP-II programmers and require special training to interpret.

XRP-II has several event logs. One, located at file "xrp.log" within the XRP-II principal directory<sup>4</sup>, contains a record of each user attempt to log into XRP-II via the menu handler. It identifies the user id, date, and time of an event, and indicates whether the attempt succeeded or failed. Other event logs, maintained in files in XRP's \$MSPATH/log subdirectory, capture a chronology of XRP datadump, dataload, data export, and data import processing.

XRP-II also maintains a Transaction Log to identify database records that have been added or modified, and by whom. This log, stored in the database, can be browsed via the Transaction Log screen (see Section 4.3.3.2.11.2) to determine the date, time, operator, and type of change for

<sup>4</sup> The XRP-II principal directory is named in the MSPATH environment variable (see Section 4.3.3.2.3).

each update to a database field. The transaction log does not contain messages, per se, and is not monitored or used by ECS' system management applications.

Many errors XRP-II reports result from an error returned by the Unify RDBMS. Details about fatal errors are written to the error log files at the following pathnames relative to the XRP-II principal directory:

- ./bin/errlog
- ./def/errlog
- ./dicty/errlog
- ./bin/dbrbld.err
- ./bin/uniload.err
- ./dicty/uniload.err

These files generally do not contain the actual messages displayed to the operator, and they are meaningful mainly to the system administrator or XRP-II programmer. Appendix E of the UNIFY Direct HLI Programmer's reference manual describes some of the common messages written to the logs.

**Table 4.3.3-42. Reports**

XRP-II can generate the pre-defined reports listed in Table 4.3.3-42. Each can be routed to the operator's display, a named file, or a printer.

XRP-II may make several printers available for a particular report. These printers often represent formatting choices rather than specific devices. Reports directed to a printer that does not correspond to a specific device will be printed on the operator's default printer device.

All of the pre-defined reports are generated according to specifications that are "compiled" using XRP-II's Datarite report writer. Authorized operators can develop custom specifications. See Section 8 of the Datalook/Datarite Reference Manual for details.

**Table 4.3.3-42. Reports (1 of 2)**

Report Type	Report Description	When and Why Used
Bill of Materials	A list that identifies and describes an assembly's constituent control items	As required
Indented Bill of Materials	A list that identifies and depicts the full assembly structure of a control item	As required
Summarized Bill Report	A list that identifies the control items in an assembly along with the quantity of each	As required

**Table 4.3.3-42. Reports (2 of 2)**

<b>Report Type</b>	<b>Report Description</b>	<b>When and Why Used</b>
Multilevel Where Used Display	A list that identifies and describes the assemblies in which a specified control item is used	As required
Multilevel Where Used Report	A list that identifies and describes the assemblies in which a specified control item is used together with the effectivity dates for each	As required
Configuration Items List - Level One	A list of all ECS configuration items active and deployed at the specified sites as of a specified date	As required
Configuration Items List - Level Two	A list of all ECS design components active and deployed at the specified sites as of a specified date	As required
Configured Articles List	A list of all active ECS configured articles for specified sites as of a specified date	As required
Version Description Reports	A list of all active ECS configured articles for specified sites as of a specified date	As required
Site Baseline	A list of all ECS configured articles active and deployed as part of a specified baseline	As required
Change History	A list of all versions and product structure revisions for the specified item together with details associated with the item change	As required
BOM Comparison Reports	A list that identifies the control items that two bills have in common as well as the control items in one that are not in the other.	As required
Hardware - Software Map	A list of ECS firmware and software control items by subsystem and host in a specified baseline as of a specified date.	As required
COTS Software Version Baseline	Descriptions of the software and firmware control items in a specified baseline as of a specified date	As required
Site - Host Map	A matrix presenting the names of the ECS hosts performing corresponding functions across the various sites for a specified baseline as of a specified date	As required
Baselined Documents by Numbers	A list of documents sorted by number for a specified baseline as of a specified date	As required
Baselined Documents by Titles	A list of documents sorted by title for a specified baseline as of a specified date	As required

#### **4.3.3.8.1 Sample Reports**

The figures that follow contain samples of Baseline Manager's pre-defined reports. One sample is provided for each report listed in Table 4.3.3-42.

Figure 4.3.3-72. Baselined Documents by Titles Report

#### **4.3.4 XRP-II (Inventory, Logistics and Maintenance Manager {ILM})**

ILM helps the M&O staff at the DAACs, EOC, and SMC to maintain records that describe all inventory components and their assembly structures and interdependencies. The database maintained by this tool, keeps chronological histories (a record of the transactions) of receipt, installation, and relocation of inventory items. ILM limits DAAC staff to accessing only those records which correspond to equipment at their DAAC.

ILM is a set of automated tools that will assist the Procurement, Property Management, Maintenance, and Logistics teams in managing the tangible property of NASA's EOSDIS project. ILM is a heavily customized application developed utilizing the commercially available package XRP-II (Product Information and Inventory Management Modules). XRP-II is a manufacturing management system and its customization supports the required capabilities and functions of ECS. The application contains other functions beside the ILM tools. The ECS Management System Main Menu has selections for the Baseline Management tool which is not part of ILM. This menu also has selections for functions that are reserved for system administrators.

XRP-II is a legacy based application. The application consists of a hierarchical menu screen structure and an imbedded COTS database (UNIFY). The hierarchical menu structure is built upon character oriented, mainframe computer terminal screens. The vendor has customized the original screens to be ECS specific. The menu screens must be navigated to reach the appropriate ILM function. The lowest level of the structure is a function data screen that displays data and/or accepts data input for the function selected through the menu navigation process. The database provides a transaction oriented environment for data input and modification. While an operator is logged into the XRP-II program he is engaged in a database session. Additions and modifications are not final until the operator specifies to store the screen or the session is ended by logging off.

Use of the ILM tool involves considerations of the ECS business rules and general logistics concepts as applied on the ECS project. The tool is designed to incorporate these considerations as part of the navigation process and functional capabilities of the tool. This document does not include a discussion of these considerations. For a complete understanding of the ILM functions the operators will have to familiarize themselves with these topics. Some basic logistics definitions are provided below.

Each inventory item is identified by a unique Equipment Inventory Number (EIN), and in case of hardware items a physical silver sticker with the EIN is placed on the item. The most significant relationship maintained among inventory items is product structure. Product structure is the XRP-II term for the parent-component pairings that define the ingredients – or bill of material -- for an assembly. Product structures have corresponding active and inactive dates that establish the timeframe during which the pairing is in effect, and they can reference Work Orders. XRP-II's Work Order capabilities enable product structure changes to be grouped, reported, checked, and approved before they go into effect. They also facilitate tracking control item changes by a related configuration change request and/or trouble ticket. Sections 1.6.2 and 4.1 of the *XRP-II Product Information Manual* discuss product structures in more detail.

Table 4.3.4-1 summarizes the operator functions supported. The sections that follow present how to use the customized features of ILM. Each user/operator is assigned to a work group and the ILM menu options available are controlled based on the individual's role. The following roles currently exist within ILM:

- ILMADMIN All functions within the ILM
- ILMLOG ILM Logistics User
- ILMMAINT ILM Maintenance User
- ILMQUERY ILM User with query privileges only
- ILMUPDT ILM User with update privileges only
- ILMUSER All ILM functions except ILM system administration privileges.

Additionally there is an XRP administrator (XRPADM) who will have all privileges and is responsible for the operation of the XRP application.

There are separate manuals describing the functions of the XRP and ILM administrators. These administrators may use functions in the System Utilities Menu or Systems Tools selections from the ECS Management System Main Menu.

Customization of individual operator privileges is done on an as needed basis by an ILM system Administrator. The system tools provide the functions to revise the users privileges.

**Table 4.3.4-1. Common ECS Operator Functions Performed with ILM**

Operating Function	Character-based User Interface	Description	When and Why to Use
ILM tool selection	ILM Main Menu from ECS Management System	After the user has logged into XRP-11 (see section 4.3.4.1) based on the user's role, the starting menu will be presented. In this summary, the functions available and the order of menu presentation is defined for the user with the authorization to perform all of ILM functions.	To perform any of ILM functions for property management, inventory ordering, purchase order processing, property maintenance, or system management configuration.
Property Management	EIN Menu, EIN Transactions, or ILM Report Menu from ILM Main Menu	Maintain information for property items, their structure and inter-relationship.	Entering information for new items, modifying information, defining and maintaining the structure of the properties that are composites (bill of material), installation and relocation of property.
Inventory Ordering	Inventory Ordering Menu from ILM Main Menu	Define and manage ordering information for the inventory items.	Establish order point and monitory inventory levels.
Purchase Order Processing	PO / Receiving Menu from ILM Main Menu	Purchase order preparation and monitoring receipt of inventory items.	Generate purchase order and record receipt of inventory.
Property Maintenance	Maintenance Menu from ILM Main Menu	Manage information for required repairs and preventive maintenance.	Predefine scheduled maintenance, recording and monitory
ILM Configuration	ILM Master Menu from ILM Main Menu	Manage configuration information for ILM.	ILM administrative function to define and maintain parameters required by ILM, maintain user information, export and import ILM information.

## General Information

### Using XRP

- The XRP application is case sensitive. It interprets data exactly as it is entered and takes the case of your input string into account. If something is in UPPER CASE, follow convention and put the request or data entry into UPPER CASE too.
- Pressing the <ENTER> key after each entry is required. Otherwise, the data entered may not be processed.
- The XRP application user interface is character based (not GUI). Navigation, selection, and moving is handled by keys. Each user interface screen has a set of active bottom line commands defining the keyboard letters, or function keys for activating functions or commands.
- **Your mouse doesn't work with ILM.** ILM is not GUI driven consequently there is no cutting or pasting, placing the mouse pointer on an item and double clicking, etc. ILM is a character based system that requires you to enter information, use bottom line commands, and press keys to start functions or commands.

### ILM System

- The ILM System was designed to assist in the tracking of Government Property items for each site and in a consolidated manner.
- The ILM System is a character based, menu driven system based upon the UNIFY data base.
- Each screen provides the user with simple and quick one or two keystroke commands to control entry and editing of data.
- System administrators have the ability to easily modify screens, menus, and reports to meet changing requirements and individual user needs.
- Included are functions for transferring data between sites and the SMC.
- Reports and screens at the SMC can provide consolidated views of material and requirements.

The following manuals provide additional detailed information on XRP-II:

- *XRP-II System Reference Manual* presents an overview of XRP-II and describes system-related functions associated with using it.
- *XRP-II Product Information Manual* presents a full description of XRP-II's product information module in context of XRP-II's integrated set of manufacturing-oriented applications.

- *XRP-II Datalook/Datarite Reference Manual* presents a technical reference for the on screen database editor (DATALOOK) and report generator (DATARITE) incorporated in XRP-II and used to create custom screens and reports.
- *XRP-II Tools, Techniques, and Conventions Manual* presents a description of methods and utilities an XRP-II support engineer would use to perform low-level maintenance on XRP-II's database, screens, and reports.
- *UNIFY Developer's Reference* presents a guide with examples for using UNIFY's tools to develop database applications. It also describes many UNIFY messages.
- *UNIFY Direct HLI Programmer's Manual* presents a technical reference for programmers of UNIFY RDBMS applications and contains a summary of UNIFY's error log file and common error messages.

Refer to EOSDIS and ECS configuration management plans and procedures for definitions of such terms as baseline, configuration item, control item, and configured article used in this document.

#### **4.3.4.1 Quick Start Using ILM**

ILM inherited a character-based user interface from the XRP-II application which employs screens for data entry and report generation, and menus for navigating to the screens. Data is entered via the keyboard in fields that are traversed from left to right, row by row. On data entry screens, labels for fields whose values can be modified are displayed in upper case; those that can not have the first letter capitalized. The database is updated every time a field's value changes, and a record of that change is written to a transaction log.

Most data entry screens have a form and a table view. Form views offer full screen layouts of a data record's fields, whereas table views offer rows of records in a window that is panned to see columns of fields. Some screens' table views, however, contain fewer fields than their corresponding form views caused by system limitations on a table view's panes.

Numerous functions can be performed on the data entry screens. Commands available to an operator are screen-dependent and are listed near the bottom of each screen (hence their name: bottom-line commands). The **M**ore command helps the operator cycle through them. Most bottom-line functions are described in the XRP-II System Reference Manual Section 2.6 and XRP-II Product Information Manual. Those added for ILM are described in the sections below along with the screens to which they pertain. The terminology used can be confusing. "Mode" is used in two separate ways: 1) as used in the next paragraph to describe data impact (Add, Insert, or Modify), and 2) the F4-mode of keyboard impact on the selected field in the display.

It is important to note that the UNIFY database management system XRP-II uses does not support rules requiring entries in specific fields. ILM attempts some enforcement via the data entry screens, either by establishing default values where feasible when new records are created, or by blocking an operator from advancing the cursor past a null field when in Add, Insert, or Modify modes. However, database updates can occur in ways that bypass these mechanisms, so operators must ensure required data is entered.

The documentation of ILM used as a basis and referenced in this section is for ILM 3.0.1.

#### **4.3.4.1.1 Invoking ILM From the Command Line Interface**

To invoke the ILM program the operator must be logged in to the appropriate server and be registered with XRP for the appropriate privileges.

To execute ILM from the command line prompt use:

##### **ilmusr**

Refer to the 920-TDx-013 “Custom Code Configuration Parameters” documentation series , for a listing of **ilmusr**.

After logging into the appropriate server, the authorized users can invoke ILM by entering **ilmusr** command line. This script solicits the identity of the operator’s workstation. When prompted the operator must provide either the workstation name or it’s IP address. This information is normally posted on a sticker on the workstation monitor. The script then starts XRP-II, passing it the operator’s userid which it obtains from the system. Access depends on the user’s id being included in the XRP group. Also, the user must be listed in the XRP-II “users” configuration file, shown in Figure 4.3.4-1. The ECS Management System menu, Figure 4.3.4-2, is the next screen in the menu hierarchy. However, the screen that is displayed after the XRP-II login is determined by XRP-II based on the user’s ID.

The initial screen is associated with a specific userid. ILM users will be assigned to Groups according to the role for which their userid is valid. ILM privileges are dependent on the Group assignment. ILM privileges include function selections, data modification capability, report selection. These assignments are made in the “users” configuration file described in section D.5 of the XRP-II System Reference Manual. The ILM administrator have the authorization to modify the content of this file. *The configuration of initial screen, screen modes, and function selection may result in the display of a data screen that is not exactly as shown in the presentation below.*

All ILM menus are similar in appearance and function the same way. Only the titles and selections vary. Refer to Chapter 2 of the XRP-II System Reference Manual to familiarize yourself with using the menus and screens.

```

[users] USER MANAGER:                               Last: 29 Current: 1

```

**Figure 4.3.4-1. XRP-II Users Screen**

#### 4.3.4.1.2 Invoking ILM From the ECS Desk top.

There is no icon on the ECS Desktop for ILM. Currently, ILM is activated with a command line script as described in the previous section.

#### 4.3.4.2 ECS Management System Main Menu

The XRP top-level menu is ECS Management System Main Menu. The userid/password configured initial screen will generally be different for the operator. The ECS Management System Main Menu contains selections that are not ILM functions. Only selection 2, the ILM Main Menu may be selected by non-administrator operations personnel.

```

[mainm                               ECS Management System
                                     Main Menu                               11/07/97 14:2

1. Baseline Management
2. ILM Main Menu
3. System Utilities Menu
4. System Tools

Please enter selection ( 1 -4 or name): -----

F1-help F3-prior menu F5-select F8-exit

```

**Figure 4.3.4-2. ECS Management System Main Menu**

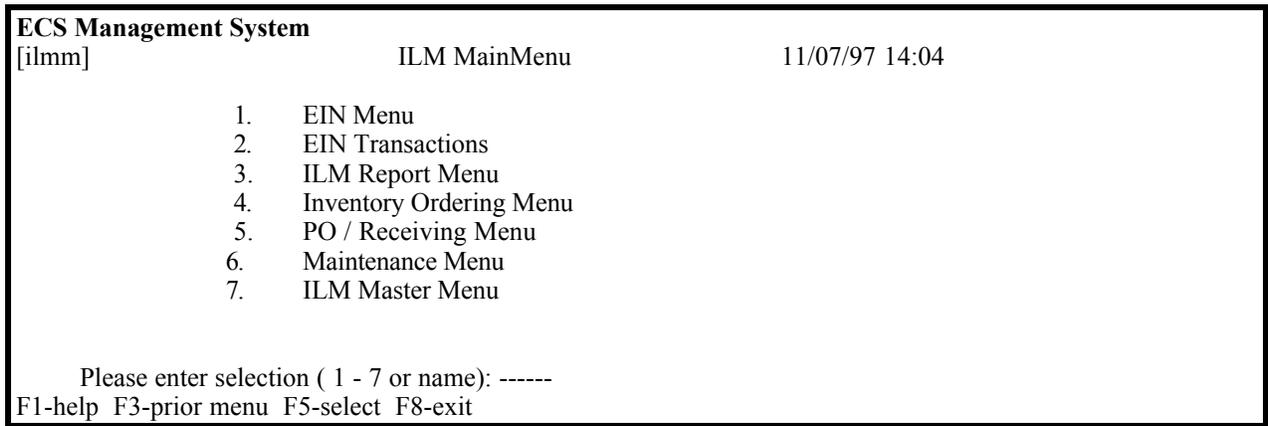

For the operator with only ILM authorization, the point of entry is ILM Main menu (Figure 4.3.4-3), and for an operator with more limited authorization, the point of entry is at a specified menu or screen. In this and following sections, the navigation through the menus of ILM is defined for the user with the highest level of ILM authorization. The menus described are presented in order of the hierarchy of the menus as opposed to navigating through the steps for specific functions or capabilities.

To make a selection in the above menu and all other ILM menus, the operator may enter the option number and by pressing the enter key, or simply moving the cursor to the option to highlight it and press the enter key or F5 (function key 5). The tools built with XRP-II provide the bottom line commands for selection of options. Each screen is identified by a name presented at the top left corner of the screen. A user who is familiar with the names of the screens may enter the name for a selection. Note, the navigation using the name does not require the user to follow the standard path; rather, the entered name will allow jumping to the desired screen at any time. This is still controlled based on user privileges. That is, an unauthorized screen can not be accessed.

The tools built with XRP-II provide the bottom line commands for selection of options. For the menu screens the commands displayed in Table 4.3.4-2 are provided. These commands are common to all the menu screens in the XRP-II application.

**Table 4.3.4-2. XRP-II menu Function Key bottom commands**

F1	Function Key 1 - <b>help</b>	Get a description for the highlighted option
F3	Function Key 3 - <b>prior menu</b>	Move back to the previous menu
F5	Function Key 5 - <b>select</b>	Select the highlighted option
F8	Function Key 8 - <b>exit</b>	Exit the tool (XRP-II to the Unix command line)

**Figure 4.3.4-3. ILM Main Menu**

The ILM Main Menu lets the operators navigate to the following submenus:

**Table 4.3.4-3. ILM Main Menu Functions**

<b>Menu item</b>	<b>Function</b>	<b>Section</b>
EIN Menu	For adding, modifying, and reviewing the inventory items.	4.3.4.2.1
EIN Transactions	For handling installation, shipment, transfer, and relocation of the inventory items.	4.3.4.2.2
ILM Report Menu	For requesting reports.	4.3.4.2.3
Inventory Ordering Menu	For defining ordering point (reorders), transfer and queries of consumable items and spare parts.	4.3.4.2.4
PO / Receiving Menu	For Purchase Order processing.	4.3.4.2.5
Maintenance Menu	For managing the maintenance and work order information.	4.3.4.2.6
ILM Master Menu	For managing the ILM parameters and reference information	4.3.4.2.7

### **ECS Management System Bottom Line Commands**

The bottom line commands for each menu screen function the same as described for the main menu. Each data screen also has bottom line commands. Generally, the commands are invoked with the single letter in bold. For commands with an “already used” first letter, a slash, “/”, is used as part of the command. A period, “.” is used for the third occurrence of a leading letter.

Note that the bottom line commands appearing on any screen are dependent on the user’s attributes. Not all the commands listed for a screen may be appropriate to specific users.

A set of “standard” bottom line commands occurs on nearly all the ILM data screens. These commands are listed below in Table 4.3.4-4 ILM Standard Bottom Line Commands. The command function is the same as the original XRP-II application. These commands are described in the XRP-II System Reference Manual.

**Table 4.3.4-4. ILM Standard Bottom Line Commands**

Function key/letter	Submenu used?	Description
/Report	Yes	Generate a report using submenu options.
Find	Yes	Locate a record with the selected value in the data base and display the record.
Go	Yes	Displays then nth record of the displayed screen-format is ng.
Help	Yes	Displays submenu to identify help target. Sometimes displays help description of selected field.
Justify		Places the current selected field at the left edge of the screen.
Left		Justify command to move the display left for View type displays.
More		Displays more bottom line commands (cycles).
Next		Moves the display "forward" records or pages depending on View type.
Prior		Moves the display "back" records or pages depending on View type.
Quit		Exits the current function. If at screen function will exit screen to previous screen.
Right		Justify command to move the display Right for View type displays
Select	Yes	Allows complex criteria to be used in record selection. See XRP-II System Reference Manual
Tag		"Tags" the selected field on the display screen for transport (mark).
Untag		Removes the "Tag" from selected field on the display screen.

Other commands may appear on specific screens and are listed in the "Unique Bottom Line Command" section for the function. These commands are listed below in Table 4.3.4-5 ILM Unique Bottom Line Commands.

While entering data into ILM you may notice that **/Z** appears at the bottom of your screen for a given field. This is your indication that a **ZOOM** list is available to assist you with your data entry selections. To operate a **ZOOM** screen do the following:

- enter **/Z** in field and a pick list will appear for you to make a selection.
- When the list appears, your cursor is already in the list.
- To select an item, move the cursor to the desired entry and press **<T>**.
- Your selection is highlighted.
- Press **<Q>** to return to the data entry screen. Notice that your selection now appears in the data entry field.

**Table 4.3.4-5. ILM Unique Bottom Line Commands**

<b>Function key/letter</b>	<b>Submenu used?</b>	<b>Description</b>
/Add		Add (store) the displayed record (data on the screen) to the data base.
/Copy	Yes	Copy the "tagged" displayed fields (data on the screen) to other fields.
/Delete	Yes	Delete the displayed record (data on the screen) from the data base.
/Insert		Insert (store) the displayed record (data on the screen) in sequence to the data base
/Modify		Modify (store) the displayed record (data on the screen) in the data base.
/Note		Add a 60 character note to the displayed record (data on the screen).
/Sort	Yes	Sort on the selected field of the displayed record (data on the screen).
/Zoom		Display a list of all the values of the selected field in the data base.
View		Toggles between "form" or record display and "table" or list display.
.Cartons		This command brings up the cartons page and allows the operator to enter the number and sizes of cartons.
/Items		This command invokes the items page of the structure manager to allow the user to add or modify children EIN items.
Addr		This command invokes the vendor address maintenance screen to allow the user to update the vendor address information.
Bom		This command allows the user to view the Bill of Material for this item, if any.
Copy-bill		This command allows the user to copy the Bill of Material for this item to create a new item's BOM.
Copy-dates		This command allows the user to copy the Active and Inactive from the Parent record to the children records.
Copypart		This command allows the user to copy the information for this part.
Copyein		This command allows the user to create a new item while copying all the fields except the EIN Number from another item.
Execute		This command invokes the appropriate process and prints a report on the results.
Foreground Background or Abandon ?		Foreground will perform the process while connected to the display: no other XRP-II functions may be used until the process completes. Background will perform the process and allow other XRP-II functions to be performed. Abandon will terminate the Purchase Order Processing.
Proceed?		Y = continue with the process, N = quit.
Where		This command allows the user to view all EIN parent items this item has been assigned to, if any.
Write		Saves the current record to a file designated by the operator.

**Table 4.3.4-6. Add mode bottom line commands**

**ADD F1-help F2-clear F3-exit F4-mode F6=default**

Screens may be entered in one of the modes: Add or Modify. In this case the bottom line will specify the mode and appropriate function keys. For Example, The bottom line command for the Add mode is shown in Table 4.3.4-6 *Add mode bottom line commands*. For this mode, the F3-exit command “exits” to the “normal” mode and the regular bottom line commands will appear.

Help refers to a text description of the subject, superimposed on the screen. Help may be invoked from the data screens with the F1 function key (in ADD mode) or the “**H**” keyin followed by an <Enter>. If a field is selected when F1 is used the text description of the field is displayed in a frame superimposed on the data screen. Otherwise, a Help bottom line is displayed as shown in Table 4.3.4-7 *Help bottom line commands*. The subject for the help description is selected by the appropriate keyin followed by <Enter>. The Help command has to be exited by using the Quit command or F3. If no help is available for the selected subject then a “No help for ...” message appears at the bottom left of the screen.

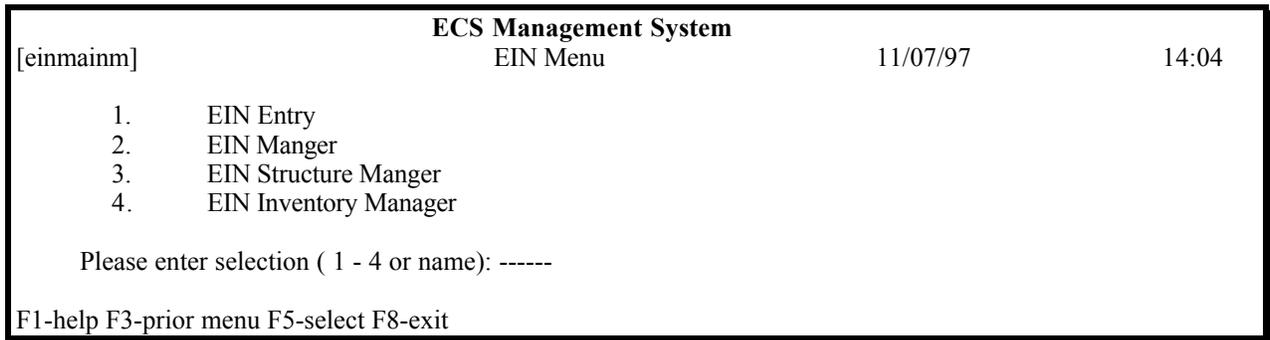

**Table 4.3.4-7. Help Bottom Line Commands**

**HELP: Field Screen Commands Quit**

In the discussion below, each ILM function is described with a presentation of the screen(s) for performing the function. Associated with each screen are tables for the Bottom Line Commands and Data Fields displayed on the screen. There is significant variation allowable on the screens for the Bottom Line Commands and Display/Input of individual data fields based on the operator’s privileges and other considerations. For this reason the indication of data field Display/Input has not been included in the tables.

**4.3.4.2.1 EIN Menu**

Options provided on this menu allow the operator to navigate to a set of screens for managing and accessing the inventory information.

**Figure 4.3.4-4. EIN Entry Menu CHUI**

#### 4.3.4.2.1.1 EIN Entry Screen

This screen is designed to enter ILM EIN controlled items into the data base. It is presented to the user upon receipt of items at the receiving dock. It is also presented in the EIN MENU to allow entry of items outside the receiving process. This screen is always presented to the user in the ADD mode. All ILM items must be entered through this screen.

```
[einent] EIN ENTRY:                               Last: _____ Current: _____

**Figure 4.3.4-5. EIN Entry CHUI**

#### Unique Bottom Line Commands:

- ADD MODE: F1,F2,F3,F4,F6
- /Add Add (store) the displayed record (data on the screen) to the data base.
- /Delete Delete the displayed record (data on the screen) from the data base.
- /Insert Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify Modify (store) the displayed record (data on the screen) in the data base.
- /Copy Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Note Add a note to the displayed record (data on the screen).
- /Sort Sort on the selected field of the displayed record (data on the screen).
- Bom This field allows the user to view the Bill of Material for this item, if any.
- Copyein This command allows the user to create a new item while copying all the fields except the EIN Number from another item.
- View Toggles between “form” or record display and “table” or list display.
- Where This command allows the user to view all EIN parent items this item has been assigned to, if any.

**Table 4.3.4-8. EIN Entry Field Descriptions (1 of 3)**

<b>Field Name</b>	<b>Data Type</b>	<b>Size</b>	<b>Description</b>
EIN	String	14	This field is for the entry of the actual silver tag numbers attached to each item. If an item must be controlled by the ILM but does not receive a silver tag, the system creates an internal tag number which is prefixed with the Site abbreviation and contains a sequentially assigned number. Pressing RETURN at the field prompt automatically performs this internal assignment. This number, whether entered or assigned, must be used for all machine configuration operations as well as reporting and maintenance functions.
SERIAL NUMBER	String	30	This field is for the entry of the serial number of the product being entered. If the item does not contain a serial number of it's own, the system will assign an internal number prefixed with the Site abbreviation and contain a sequentially assigned number. Pressing RETURN at the field prompt automatically performs this internal assignment
OEM PART NUMBER	String	34	This field is for the entry of the Manufacturer's or Vendor's part number. The user may perform a zoom to the OEM PART NUMBER screen (oempart) at this field to pick the appropriate item. NOTE: These OEM Part Numbers must be entered prior to the use in this screen. When an item is from this file is chosen, the information contained in the file is written to the EIN file.
OEM DESCRIPTION	String	30	This field reflects the description of the OEM PART NUMBER entered in the field above, but provides the ability for the user to modify it in the EIN file.
CONTROL ITEM ID	String	20	This field provides the ability for the user to point to an equivalent item contained within the BASELINE MANAGEMENT system. ILM will enter the BLM Control Item based on the OEM Part Number.
ECS NAME	String	23	This field provides the ability for the user to enter a name the item will be known by.

**Table 4.3.4-8. EIN Entry Field Descriptions (2 of 3)**

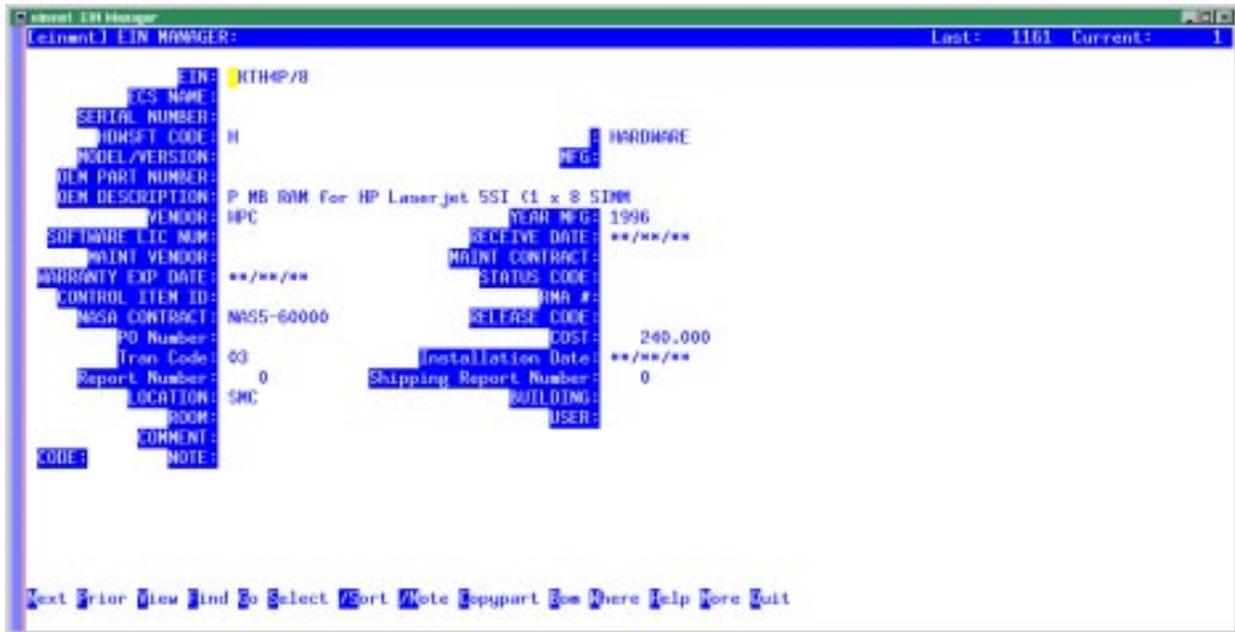

Field Name	Data Type	Size	Description
HDWSFT CODE	String	10	This field provides the ability for the user to enter a code designating the type of item. The user may zoom to the Hardware/Software data file. NOTE: This data must be previously entered in screen Hardware/Software Codes (hswcd).
MODEL/ VERSION	String	24	This field is used to enter the actual Model and or Version of the item. If the user had chosen a known OEM Part, this field will be written with the information from this file.
YEAR MFG	String	4	This field is used to enter the actual 4-digit year the item was manufactured. This field defaults to the current year.
MFG	String	6	This is the code of the manufacturer.
VENDOR	String	6	This field is used to enter the Vendor code whom the item was purchased from. The user may zoom to the Vendor data file and pick the desired code. NOTE: This data must be previously entered using screen Vendor Master Maintenance (vmasts).
SOFTWARE LIC NUM	String	10	This field is used to enter the license number for a software type license item.
MAINT VENDOR	String	6	This field is used to enter the code for the vendor who is the maintenance vendor. The user may zoom to the Vendor data file and choose the appropriate code. NOTE: This information must be previously enter using screen Vendor Master Maintenance (vmasts).
MAINT CONTRACT	String	15	This field is used to enter the Maintenance Contract number for maintenance on this particular item. The user may zoom to the Contract data file and choose the desired contract number. NOTE: This data must be previously enter with screen Maintenance Contracts (mntcont).
STATUS CODE	String	1	This field designates the status of the item and is controlled by transactions within the system.. The following codes are included : R - Received; S - Shipped; I - Installed; A - Archived;
NASA CONTRACT	String	11	This field is used to designate the Contract number used for this item. This information is automatically assigned and can not be changed.
RELEASE CODE	String	10	This field is used for entry of the actual release code for the item.
PO NUMBER	String	10	The user will enter the Purchase Order Number in this field for item selection when adding children items. The user will use the PO Number or the Vendor Code in he next field. For Receipts the field is filled in by the Receiving system and designates the Purchase Order the item was received against.
TRAN CODE	Number	3	This field designates the transaction code. The value will always be set to '03' and is not modifiable by the user

**Table 4.3.4-8. EIN Entry Field Descriptions (2 of 3)**

Field Name	Data Type	Size	Description
LOCATION	String	8	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
BUILDING	String	6	This field is used to designate the building number within the site where the item is.
ROOM	String	6	This field is used to enter the actual room number of where the item is or will be shipped to.
USER	String	8	The user code of the person who has the item. The user may choose to zoom to the User ID data base and pick the appropriate code. NOTE : This information must be previously entered with screen Employee Maintenance (sfempmnt).
NOTE	String	60	This field is used to enter a 60 character note attached to this item.
WARRANTY EXP DATE	Date	2	This field is used to enter the end date for the warranty period. This field default to 365 days from the date of entry.
UNIT COST	Number	10	This field is used to enter the price for each item.
COMMENT	String	60	This field is a user comment field.
NOTE	String	60	This field is used to enter a 60 character note attached to this item.

#### **4.3.4.2.1.2 EIN Manager**

This screen is designed to view or modify ILM EIN controlled items. This screen is always presented to the user in INQUIRY mode. Although the user may modify most fields on the screen, it is advised that the user adhere to the many functions present within ILM to cause changes and modifications to the EIN records. Only skilled and trained operators should be using this screen to modify data.

**Figure 4.3.4-6. EIN Manager CHUI**

Unique Bottom Line Commands:

- **/Add** Add (store) the displayed record (data on the screen) to the data base.
- **/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.
- **/Delete** Delete the displayed record (data on the screen) from the data base.
- **/Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base
- **/Modify** Modify (store) the displayed record (data on the screen) in the data base.
- **/Note** Add a note to the displayed record (data on the screen).
- **/Sort** Sort on the selected field of the displayed record (data on the screen).
- **Bom** This field allows the user to view the Bill of Material for this item, if any.
- **Copypart** This command copies the part displayed to create another item for the parent.
- **View** Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-9. EIN Manager Field Description (1 of 3)**

Field Name	Data Type	Size	Description
EIN	String	14	This field is for the entry of the actual silver tag numbers attached to each item. If an item must be controlled by the ILM but does not receive a silver tag, the system creates an internal tag number which is prefixed with the Site abbreviation and contains a sequentially assigned number. Pressing RETURN at the field prompt automatically performs this internal assignment. This number, whether entered or assigned, must be used for all machine configuration operations as well as reporting and maintenance functions.
ECS NAME	String	23	This field provides the ability for the user to enter a name the item will be known by.
SERIAL NUMBER	String	30	This field is for the entry of the serial number of the product being entered. If the item does not contain a serial number of it's own, the system will assign an internal number prefixed with the Site abbreviation and contain a sequentially assigned number. Pressing RETURN at the field prompt automatically performs this internal assignment
HDWSFT CODE	String	10	This field provides the ability for the user to enter a code designating the type of item. The user may zoom to the Hardware/Software data file. NOTE: This data must be previously entered in screen Hardware/Software Codes (hwsxcd).
MODEL/VERSION	String	24	This field is used to enter the actual Model and or Version of the item. If the user had chosen a known OEM Part, this field will be written with the information from this file.
MFG	String	6	This is the code of the manufacturer.
OEM PART NUMBER	String	34	This field is for the entry of the Manufacturer's or Vendor's part number. The user may perform a zoom to the OEM PART NUMBER screen (oempart) at this field to pick the appropriate item. NOTE: These OEM Part Numbers must be entered prior to the use in this screen. When an item is from this file is chosen, the information contained in the file is written to the EIN file.
OEM DESCRIPTION	String	30	This field reflects the description of the OEM PART NUMBER entered in the field above, but provides the ability for the user to modify it in the EIN file.

**Table 4.3.4-9. EIN Manager Field Description (2 of 3)**

Field Name	Data Type	Size	Description
VENDOR	String	6	This field is used to enter the Vendor code whom the item was purchased from. The user may zoom to the Vendor data file and pick the desired code. NOTE: This data must be previously entered using screen Vendor Master Maintenance (vmasts).
YEAR MFG	String	4	This field is used to enter the actual 4-digit year the item was manufactured. This field defaults to the current year.
SOFTWARE LIC NUM	String	10	This field is used to enter the license number for a software type license item.
MAINT VENDOR	String	6	This field is used to enter the code for the vendor who is the maintenance vendor. The user may zoom to the Vendor data file and choose the appropriate code. NOTE: This information must be previously enter using screen Vendor Master Maintenance (vmasts).
MAINT CONTRACT	String	15	This field is used to enter the Maintenance Contract number for maintenance on this particular item. The user may zoom to the Contract data file and choose the desired contract number. NOTE: This data must be previously enter with screen Maintenance Contracts (mntcont).
WARRANTY EXP DATE	Date	2	This field is used to enter the end date for the warranty period. This field default to 365 days from the date of entry.
BASELINE ITEM	String	20	This field provides the ability for the user to point to an equivalent item contained within the BASELINE MANAGEMENT system. The user may enter the ID if known, or perform a zoom to the Baseline data file.
STATUS CODE	String	1	This field designates the status of the item and is controlled by transactions within the system.. The following codes are included : R - Received; S - Shipped; I - Installed; A - Archived;
NASA CONTRACT	String	11	This field is used to designate the Contract number used for this item. This information is automatically assigned and can not be changed.
PO NUMBER	String	10	The user will enter the Purchase Order Number in this field for item selection when adding children items. The user will use the PO Number or the Vendor Code in he next field. For Receipts the field is filled in by the Receiving system and designates the Purchase Order the item was received against.
TRAN CODE	Number	3	This field designates the transaction code. The value will always be set to '03' and is not modifiable by the user
REPORT NUMBER	Number	4	This field is the installation report number assigned by the system when an installation had occurred.

**Table 4.3.4-9. EIN Manager Field Description (3 of 3)**

Field Name	Data Type	Size	Description
LOCATION	String	8	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
BUILDING	String	6	This field is used to designate the building number within the site where the item is.
ROOM	String	6	This field is used to enter the actual room number of where the item is or will be shipped to.
YEAR MFG	String	4	This field is used to enter the actual 4-digit year the item was manufactured. This field defaults to the current year.
RECEIVE DATE	String	8	Date item was received from vendor
MAINT CONTRACT	String	15	This field is used to enter the Maintenance Contract number for maintenance on this particular item. The user may zoom to the Contract data file and choose the desired contract number. NOTE: This data must be previously enter with screen Maintenance Contracts (mntcont).
RMA#	String	6	Reliability Maintainability Availability number.
RELEASE CODE	String	10	This field is used for entry of the actual release code for the item.
COST	Floating	9.2	This field is the purchase cost of the item.
INSTALLATION DATE	Date	2	This date reflects the actual date this item was installed.
SHIPPING REPORT NUMBER	Number	2	This field is the report number assigned to this item when the item was shipped.
MFG	String	6	This is the code of the manufacturer.
USER	String	8	The user code of the person who has the item. The user may choose to zoom to the User ID data base and pick the appropriate code. NOTE : This information must be previously entered with screen Employee Maintenance (sfempmnt).
COMMENT	String	60	This field is a user comment field.
NOTE	String	60	This field is used to enter a 60 character note attached to this item.

#### 4.3.4.2.1.3 EIN Structure Manager

This screen is designed to enter a structure for a machine, e.g. assign child items to parents. This screen is always presented to the user in INQUIRY mode. To add a new item, the user will invoke the /A, (ADD) command and proceed to add the new header record. The user has the choice of entering the PO Number or Vendor Code in the header record. The system uses this field to pick and display the items when adding children items in the items page. Leaving these two fields blank or NULL will cause the ZOOM function to display all EIN items. When complete, the user will

use the Items bottom line command to display the items page and proceed to add or modify the EIN children.

```

```

**Figure 4.3.4-7. EIN Structure Manager CHUI**

**Unique Bottom Line Commands:**

- **/Add** Add (store) the displayed record (data on the screen) to the data base.
- **/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.
- **/Delete** Delete the displayed record (data on the screen) from the data base.
- **/Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base
- **/Modify** Modify (store) the displayed record (data on the screen) in the data base.
- **/Note** Add a note to the displayed record (data on the screen).
- **/Sort** Sort on the selected field of the displayed record (data on the screen).
- **/Zoom** Display a list of all the values of the selected field in the data base.
- **Copy-dates** This command allows the user to copy the Active and Inactivedates from the Parent record to the children records.
- **Items** This command invokes the items page of the structure manager to allow the user to add or modify children EIN items.
- **View** Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-10. EIN Structure Manager Field Descriptions**

Field Name	Data Type	Size	Description
PARENT EIN	String	14	This field is the Parent EIN for the installation/structure. The user may /Z, Zoom at this field to view the entire EIN data base.
ENGINEERING CHANGE	String	8	This field is the change number assigned when the record was added to the data base. The user should press RETURN at this field to allow the system to assign the default.
OEM Part	String	34	This field is the OEM part number reflected from the EIN record of the child.
OEM Desc	String	40	This field is the OEM Description reflected from the EIN Record for the Parent EIN.
ECS Name	String	23	This field provides the ability for the user to enter a name the item will be known by.
INSTALLATION REPORT	Number	4	This field is the installation report number assigned by the system when an installation had occurred and as reflected from the EIN Record for the Parent EIN.
SHIP REPORT	Number	3	This field is the report number assigned to this item as reflected from the Parent EIN record when the item was shipped.
PO NUMBER	String	10	The user will enter the Purchase Order Number in this field for item selection when adding children items. The user will use the PO Number or the Vendor Code in the next field. For Receipts the field is filled in by the Receiving system and designates the Purchase Order the item was received against.
ed	String	6	This field is used to enter the Vendor code whom the item was purchased from. The user may zoom to the Vendor data file and pick the desired code. NOTE: This data must be previously entered using screen Vendor Master Maintenance (vmasts).
Date Entered	Date	2	This field is a system assigned date when the record was added to the data base and not modifiable by the user.
Operator ID	String	8	This field is the login ID of the user who added this item to the data base and is not modifiable by the user.
ACTIVE DATE	String	8	Date the item is received and entered into inventory
INACTIVE DATE	Date	2	This field is the date to make the structure ineffective.

#### 4.3.4.2.1.4 EIN Inventory Query

This screen is designed to view the inventory location of EIN controlled items. The user may sort and select by any field on the screen and then print a report of the data. This screen is displayed in Inquiry mode only and the user may not modify any data with this screen.

**Figure 4.3.4-8. EIN Inventory Query CHUI**

**Unique Bottom Line Commands:**

- /Note Add a note to the displayed record (data on the screen).
- /Sort Sort on the selected field of the displayed record (data on the screen).
- View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-11. EIN Inventory Query Field Descriptions**

Field Name	Data Type	Size	Description
EIN	String	14	This field is for the entry of the actual silver tag numbers attached to each item. If an item must be controlled by the ILM but does not receive a silver tag, the system creates an internal tag number which is prefixed with the Site abbreviation and contains a sequentially assigned number. Pressing RETURN at the field prompt automatically performs this internal assignment. This number, whether entered or assigned, must be used for all machine configuration operations as well as reporting and maintenance functions.
ECS Name	String	23	This field provides the ability for the user to enter a name the item will be known by.
OEM Part	String	34	This field is the OEM part number reflected from the EIN record of the child.
OEM Desc	String	40	This field is the OEM Description reflected from the EIN Record for the Parent EIN.
CONTROL ITEM ID	String	20	This field provides the ability for the user to point to an equivalent item contained within the BASELINE MANAGEMENT system. ILM will enter the BLM Control Item based on the OEM Part Number.
Cost	Floating	9.2	This field is the purchase cost of the item.
Location	String	8	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
Building	String	6	This field is used to designate the building number within the site where the item is.
Room	String	6	This field is used to enter the actual room number of where the item is or will be shipped to.
User	String	8	The user code of the person who has the item. The user may choose to zoom to the User ID data base and pick the appropriate code. NOTE : This information must be previously entered with screen Employee Maintenance (sfempmnt).
Name	String	30	This field is the user's name as reflected from the user file.
Status	String	1	Status code for TERMS CODE
Install Date	Date	2	This date reflects the actual date this item was installed.

#### 4.3.4.2.1.5 EIN Transactions

Options provided on this menu allow the operator to navigate to a set of screens to perform the transactions for installation, relocation, archiving of the inventory items and related queries for these functions.

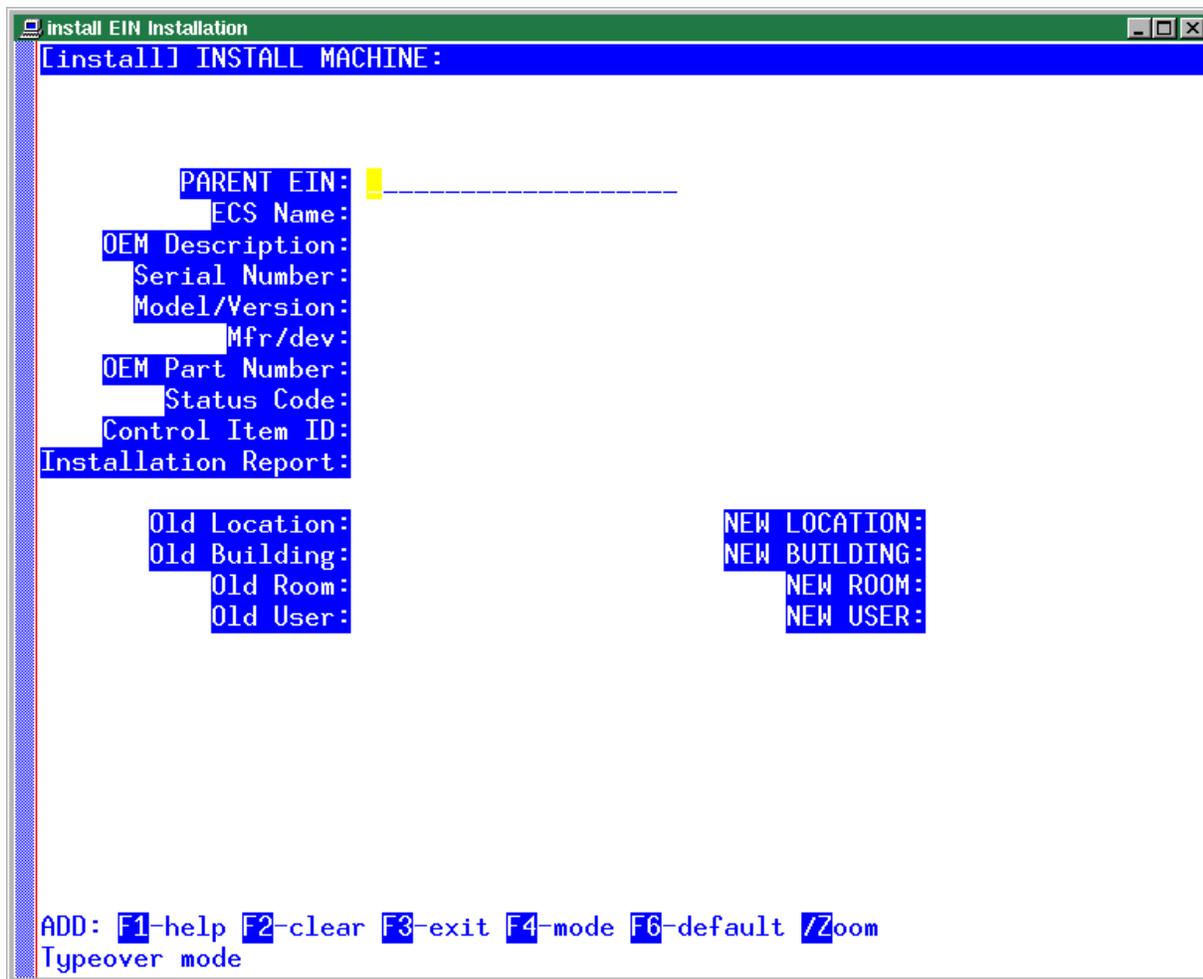

ECS Management System			
[txein]	EIN Transactions	11/07/97	14:04
1.	EIN Installation		
2.	EIN Shipment		
3.	EIN Transfer		
4.	EIN Archive		
5.	EIN Relocation		
6.	Inventory Transaction Query		
Please enter selection ( 1 - 6 or name): -----			
F1-help F3-prior menu F5-select F8-exit			

**Figure 4.3.4-9. EIN Transaction Menu**

#### **4.3.4.2.2 EIN Installation**

##### **4.3.4.2.2.1 EIN Installation Screens**

This screen is designed for the actual installation process of the Parent EIN and all or selected children. This screen is invoked after the item had been delivered to the user and signed off. This screen is always presented in ADD mode. The user enters the Parent EIN, and the new locations fields, then invokes the Items command to choose which EIN children will be installed as well.

**Figure 4.3.4-10. EIN Installation CHUI**

**Unique Bottom Line Commands:**

- **ADD MODE: F1,F2,F3,F4,F6**
- /Add (store) the displayed record (data on the screen) to the data base.
- /Copy the "tagged" displayed fields (data on the screen) to other fields.
- /Delete the displayed record (data on the screen) from the data base.
- /Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify (store) the displayed record (data on the screen) in the data base.
- /Note, Add a note to the displayed record (data on the screen).

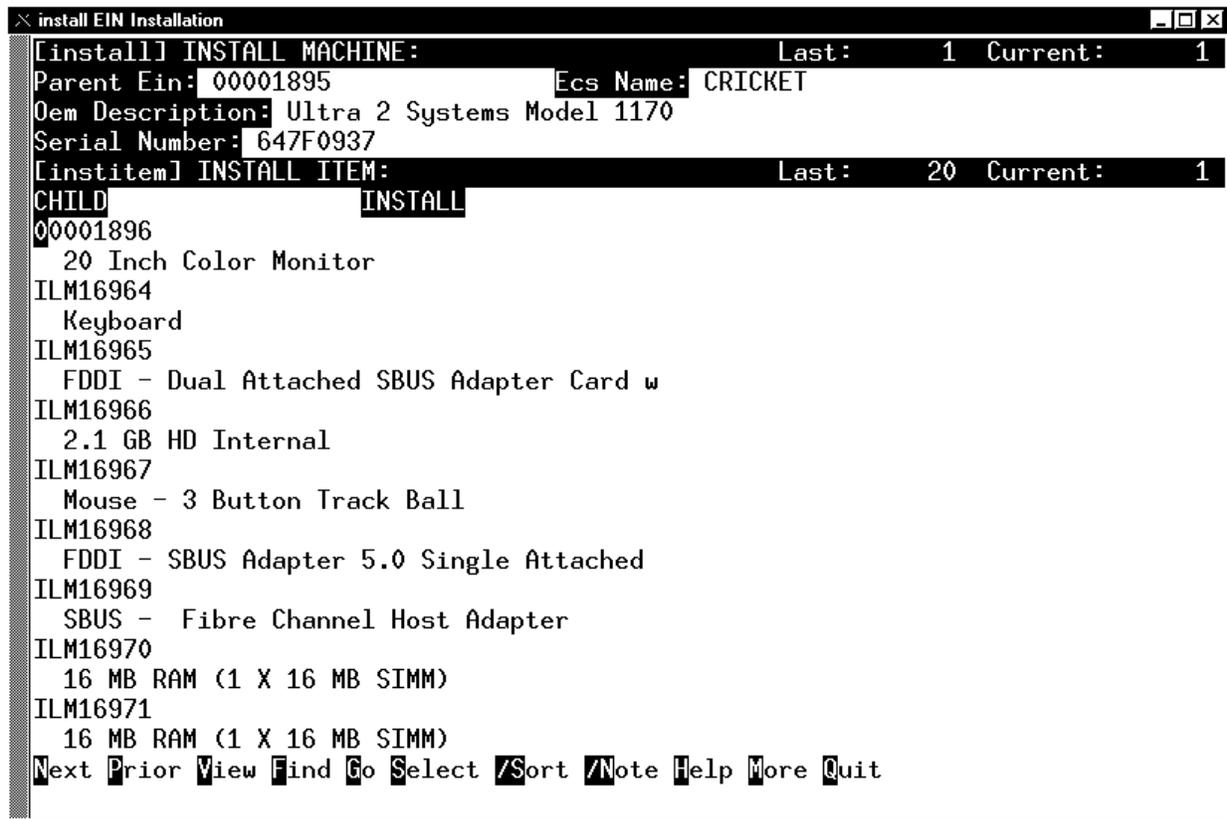

- /Sort on the selected field of the displayed record (data on the screen).
- /Zoom toDisplay a list of all the values of the selected field in the data base.
- Execute invokes the appropriate process and prints a report on the results.
- Items command invokes the items page of the structure manager to allow the user to add or modify children EIN items.
- View toggles between "form" or record display and "table" or list display.

**Table 4.3.4-12. EIN Installation Field Descriptions**

Field Name	Data Type	Size	Description
PARENT EIN	String	14	This field is the Parent EIN for the installation/structure. The user may /Z, Zoom at this field to view the entire EIN data base.
ECS Name through Old User	MULTI-FIELD		These fields are all reflected from the Parent Ein record and cannot be modified.
NEW LOCATION	String	6	This field is the new location code or site code where the parent was installed.
NEW BUILDING	String	10	This field is the new building code where the parent was installed.
NEW ROOM	String	6	This field is the new room code where the parent was installed.
NEW USER	Number	4	This field is the user code the parent was assigned to. The operator may /Z, Zoom at this field to view the User data base.

#### **4.3.4.2.2.2 Items Page of EIN Installation**

This screen is designed for the user to choose which child EIN items have been installed with the parent. If the parent has already been installed, the system display a warning message to the user but allows the user to choose to install more children if desired. The user will enter Modify mode and place a 'Y' in the INSTALL field of the screen for each child EIN that was installed.

**Figure 4.3.4-11. Items Page CHUI**

**Unique Bottom Line Commands:**

None.

**Table 4.3.4-13. Items Page Field Descriptions**

Field Name	Data Type	Size	Description
CHILD	String	14	Displayed is the CHILD EIN with the description of the item under
INSTALL	String	1	This field accepts either a 'N' or 'Y' to designate to the system which items are to be shipped with the parent..

**4.3.4.2.2.3 EIN Shipment**

EIN Shipment provides tracking of EIN shipping information.

#### 4.3.4.2.2.4 EIN Shipment Screen

This screen is designed for the user to ship a parent EIN and children to another site. This screen is always presented in the ADD mode. The user enters the required data elements, invokes the items page to choose the EIN parents to be shipped, invokes the items command of the parent page to display the EIN children and choose those to be shipped with each parent, invokes the .Cartons command to enter the number, weight and size of the cartons being shipped, then Executes the transaction and prints the shipment report.

```
[shipein] SHIP EIN: _____ Last: _____ Current: _____
ILM INTERNAL SHIPMENT SEQUENCE: _____ DESTINATION: _____ :
Report Number: _____ Alpha: _____
SHIP DATE: __/__/__ ESTIMATED SHIP DATE: __/__/__ Operator Id: _____
SHIP VIA: _____ BILL OF LADING: _____
Number Of Cartons: _____ Weight: _____
BUILDING: _____ ROOM: _____ CARRIER: _____
Status: _____ Consignee Name: _____
Address 1: _____ Address 2: _____
City: _____
State: __ Zip: _____ Phone: _____
USER: _____
Next Prior View Find Go Select /Sort /Note Items .Cartons Execute Help More Quit
```

**Figure 4.3.4-12. EIN SHIPMENT CHUI**

#### Unique Bottom Line Commands:

.Cartons This command brings up the cartons page and allows the operator to enter the number and sizes of cartons.

- /Add (store) the displayed record (data on the screen) to the data base.
- /Copy the "tagged" displayed fields (data on the screen) to other fields.
- /Delete the displayed record (data on the screen) from the data base.
- /Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify (store) the displayed record (data on the screen) in the data base.
- /Note, Add a note to the displayed record (data on the screen).
- /Sort on the selected field of the displayed record (data on the screen).
- /Zoom toDisplay a list of all the values of the selected field in the data base.
- Execute invokes the appropriate process and prints a report on the results.
- Items command invokes the items page of the structure manager to allow the user to add or modify children EIN items.

- View toggles between "form" or record display and "table" or list display.

**Table 4.3.4-14. Ship EIN Field Descriptions**

Field Name	Data Type	Size	Description
ILM INTERNAL SHIPMENT SEQUENCE	Number	6	This field is the internal shipment sequence maintained by the system. The user should always press return at this field to allow the system to assign the next internal sequence number.
DESTINATION	String	6	This field is the destination location or site code where the parent and children are being shipped to. The user may /Z, Zoom at this field to display the location data base.
Report Number and Alpha	MULTI-FIELD		These two fields display the shipping report number for the location and parent EIN and are not modifiable by the user.
SHIP DATE	Date	2	This field is the actual shipping date and defaults to the current date.
ESTIMATED SHIP DATE	Date	2	This field is the estimated ship date for the shipment.
Operator Id	String	8	This field is the login ID of the user who added this item to the data base and is not modifiable by the user.
SHIP VIA	String	20	This field is used to enter the shipment method.
BILL OF LADING	String	255	The user will enter the actual Bill of Lading in this field.
Number of Cartons and Weight	MULTI-FIELD		Number of cartons and total weight of shipment.
BUILDING	String	6	This field is used to designate the building number within the site where the item is.
ROOM	String	6	This field is used to enter the actual room number of where the item is or will be shipped to.
Status through Phone	MULTI-FIELD		These fields present the status of the parent and the coassignee name and address information from the location data base.
USER	String	8	The user code of the person who has the item. The user may choose to zoom to the User ID data base and pick the appropriate code. NOTE : This information must be previously entered with screen Employee Maintenance (sfempmnt).

#### 4.3.4.2.2.5 Items Page for EIN Shipment

This screen is designed for the user to enter EIN items to be shipped. The operator will use the Items command of this page to display the children of each parent and designate which children are to be shipped.

```

[shppar] SHIP EIN PARENTS:                               Last: _____ Current: _____
PARENT                OEM Part                            Model/Version
OEM Desc: _____
Next Prior View Find Go Select /Sort /Note Items Help More Quit

```

**Figure 4.3.4-13. Items Page for EIN Shipment**

**Unique Bottom Line Commands:**

**Items** - This command allows the user to select which EIN children are to be shipped.

**Table 4.3.4-15. Items Page for EIN Shipment Field Descriptions**

Field Name	Data Type	Size	Description
PARENT	String	20	Enter the Parent EIN number to be shipped.
OEM Part, Model, and OEM Desc	MULTI-FIELD		These fields are reflected from the EIN record of the entered parent EIN.

**4.3.4.2.2.6 Items Structure Page for EIN Shipment**

This screen is designed for the user to enter or designate which children of the parent EIN's will be shipped.

```

[shpitem] SHIP ITEM:                               Last: _____ Current: _____
CHILD                SHIP
_____ -
_____ -
_____ -
_____ -
_____ -
_____ -
_____ -
_____ -
Next Prior View Find Go Select /Sort /Note Help More Quit

```

**Figure 4.3.4-14. Items Structure Page for EIN Shipment**

### Unique Bottom Line Commands:

None.

**Table 4.3.4-16. Items Structure Page for EIN Shipment  
Field Descriptions**

Field Name	Data Type	Size	Description
CHILD	String	14	Displayed is the CHILD EIN with the description of the item under
INSTALL	String	1	This field accepts either a 'N' or 'Y' to designate to the system which items are to be shipped with the parent..

#### 4.3.4.2.2.7 Carton Size

This screen is designed for the user to enter the dimensions, weight, and quantity of the cartons for the shipment.

The screenshot shows a terminal window titled "shipein EIN Shipment". The main display area contains the following text:

```
[shipein] SHIP EIN: Last: 3 Current: 1
[Im Internal Shipment Sequence: 42 Destination: EDC
: EROS Data Center Report Number: 1
[sectn] CARTON SIZES: Last: 2 Current: 1
```

Below this, the carton size details are displayed:

```
SEQUENCE: 1
DIMENSIONS: 12x12x12
WEIGHT: 100.00
QUANTITY: 2
```

At the bottom of the screen, a menu of commands is visible:

```
Next Prior View Find Go Select /Sort /Note Help More Quit
```

**Figure 4.3.4-15. Carton Size Page for EIN Shipment**

### Unique Bottom Line Commands:

None.

**Table 4.3.4-17. Carton Size Page for EIN Shipment Field Descriptions**

Field Name	Data Type	Size	Description
SEQUENCE	Number	4	This field is the automatically assigned sequence number of the cartons data attached to the shipment header record.
DIMENSIONS	String	8	Enter the actual dimensions of the box.
WEIGHT	Floating	7.1	Enter the weight of the box.
QUANTITY	Floating	10.1	Enter the quantity of the boxes having the same dimension and weight.

### 4.3.4.2.3 EIN Transfer

EIN Transfer provides tracking of EIN shipping information.

#### 4.3.4.2.3.1 EIN Transfer Screen

This screen is designed for the user to transfer a machine from one location or building or room or user to another. This screen is always presented to the operator in the ADD mode. The operator will enter the Parent EIN number and other fields, then invoke the items page to choose which children of the parent are being transferred as well. When the selection is complete, the operator will execute the transaction and print a report.

```
[transfer] TRANSFER MACHINE:                Last: _____ Current: _____
                PARENT EIN: _____        DESTINATION LOCATION: _____
BUILDING: _____        ROOM: _____        REASON CODE: _____
CCR #: _____        TROUBLE TICKET: _____
NEW USER: _____

Next Prior Find Go Select /Sort /Note Items Execute Help More Quit
```

**Figure 4.3.4-16. EIN Transfer CHUI**

### Unique Bottom Line Commands:

ADD MODE: F1,F2,F3,F4,F6, /Zoom

**/Add** Add (store) the displayed record (data on the screen) to the data base.

**/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.

**/Delete** Delete the displayed record (data on the screen) from the data base.

**/Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base

- /Modify**    Modify (store) the displayed record (data on the screen) in the data base.
- /Note**     Add a note to the displayed record (data on the screen).
- /Sort**     Sort on the selected field of the displayed record (data on the screen).
- Execute**    This command invokes the appropriate process and prints a report on the results.
- Items**      This command invokes the items page of the structure manager to allow the user to add or modify children EIN items.

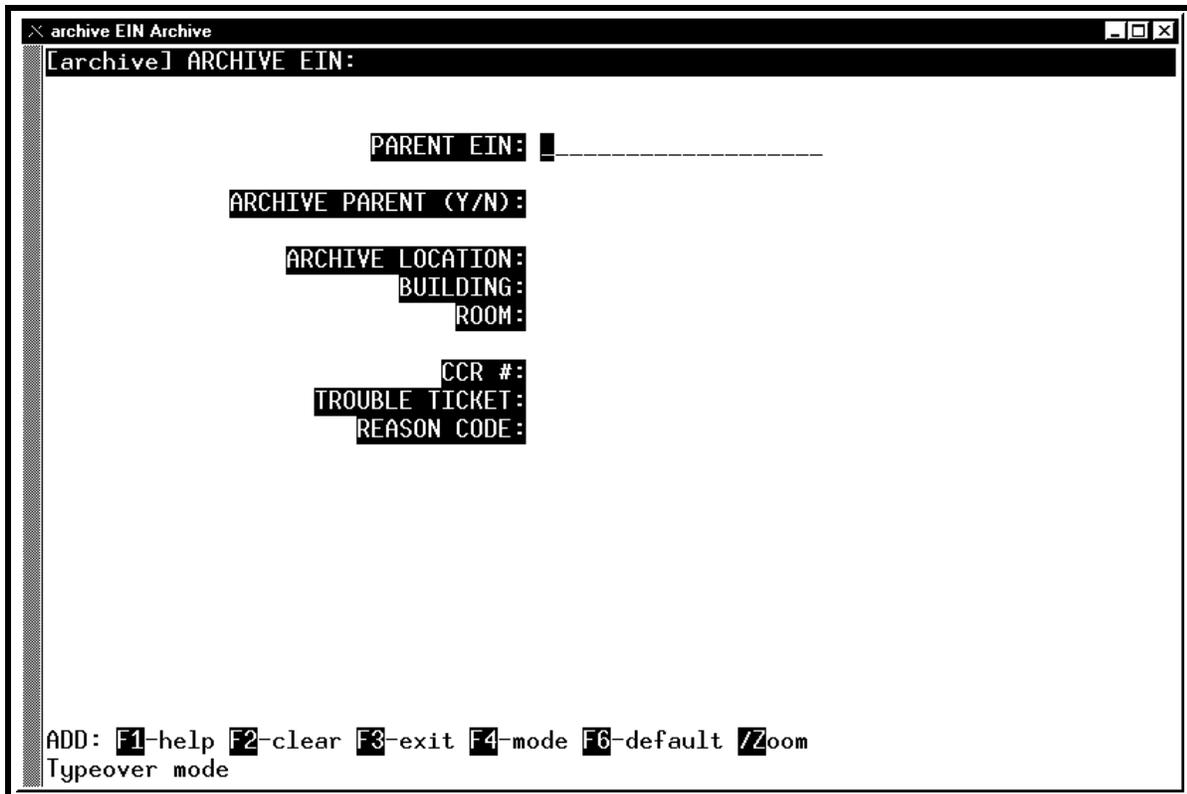

**Table 4.3.4-18. Transfer Machine Field Descriptions**

<b>Field Name</b>	<b>Data Type</b>	<b>Size</b>	<b>Description</b>
PARENT EIN	String	14	This field is the Parent EIN for the installation/structure. The user may /Z, Zoom at this field to view the entire EIN data base.
DESTINATION LOCATION	String	6	Enter the destination location (DAAC) where the item is being transferred to.
DESTINATION BUILDING	String	6	Enter the destination building number where the item is being transferred to.
DESTINATION ROOM	String	6	Enter the room number where the item is being relocated to
REASON CODE	String	4	Enter the reason code for the transfer, The operator may /Z, Zoom to the reason code data base to choose the appropriate code.
CCR #	String	30	Enter the applicable CCR number.
TROUBLE TICKET	String	15	Enter the applicable trouble ticket number here.
NEW USER	Number	4	This field is the user code the parent was assigned to. The operator may /Z, Zoom at this field to view the User data base.

**4.3.4.2.3.1.1    Item Page for EIN Transfer**

This screen is designed to designate which children of the Parent EIN are to be transferred. The operator enters a ‘Y’ in the appropriate field to signal the system to transfer the child with the parent.

**Figure 4.3.4-18. EIN Archive CHUI**

Unique Bottom Line Commands:

ADD MODE: F1,F2,F3,F4,F6, /Zoom

- /Add**        Add (store) the displayed record (data on the screen) to the data base.
- /Copy**       Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Delete**      Delete the displayed record (data on the screen) from the data base.
- /Insert**      Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify**     Modify (store) the displayed record (data on the screen) in the data base.
- /Note**        Add a note to the displayed record (data on the screen).
- /Sort**        Sort on the selected field of the displayed record (data on the screen).
- Execute**      This command invokes the appropriate process and prints a report on the results.
- Items**        This command invokes the items page of the structure manager to allow the user to add or modify children EIN items.

**Table 4.3.4-20. EIN Archive Screen Item Field Descriptions**

Field Name	Data Type	Size	Description
Parent EIN	String	14	This field is the Parent EIN for the installation/structure. The user may /Z, Zoom at this field to view the entire EIN data base.
Archive Parent	String	1	Enter Y if parent is to archived along with children
Archive Location	String	6	Physical location of archived item
Building	String	6	This field is used to designate the building number within the site where the item is.
Room	String	6	This field is used to enter the actual room number of where the item is or will be shipped to.
CCR #	String	30	Enter the applicable CCR number.
Trouble Ticket	String	15	Enter the applicable trouble ticket number here.
Reason Code	String	4	Enter the reason code for the transfer, The operator may /Z, Zoom to the reason code data base to choose the appropriate code.

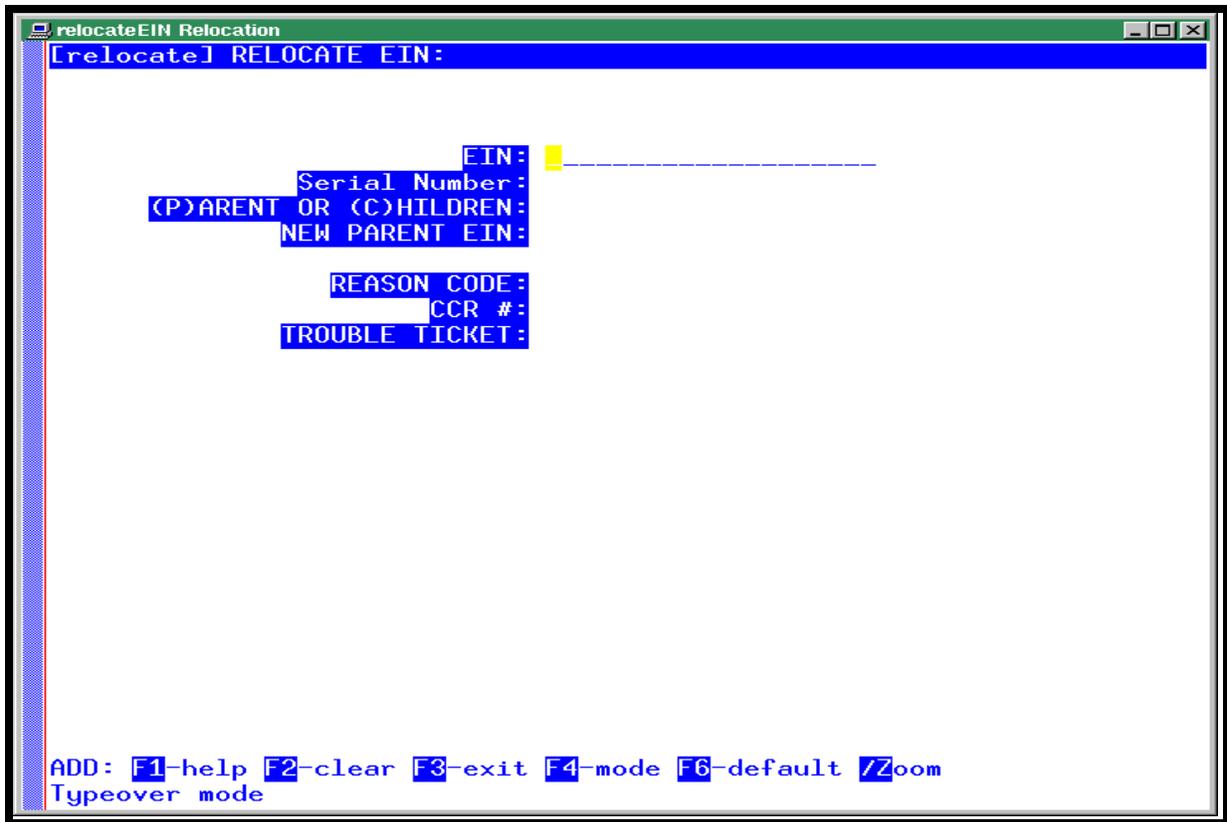

#### **4.3.4.2.3.3 EIN Relocation**

This screen is designed to relocate an EIN to another Parent item. The operator will enter the required data fields, invoke the items page to pick the children, if any, to be relocated with the parent.

There is a system-filled field for "Serial Number" so the user can be more certain of the part being moved.

There is a user-filled field "(P)ARENT OR (C)HILDREN." If the user supplies a "P" then the EIN specified on the top line will be relocated, with all of its children, to the new parent. If the user supplies a "C", then the parent specified on the top line will not be moved; instead, the user must use the "I" bottom-line command to go to the Items screen and choose which child items to move to the new parent. Note that the Items screen now also has the Serial Number for each Child Item.

Then, execute the transaction and print a report.

**Figure 4.3.4-19. EIN Relocation CHUI**

Unique Bottom Line Commands:

ADD MODE: F1,F2,F3,F4,F6, /Zoom

/Add Add (store) the displayed record (data on the screen) to the data base.

/Copy Copy the “tagged” displayed fields (data on the screen) to other fields.

/Delete Delete the displayed record (data on the screen) from the data base.

/Insert Insert (store) the displayed record (data on the screen) in sequence to the data base

/Modify Modify (store) the displayed record (data on the screen) in the data base.

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

Execute This command invokes the appropriate process and prints a report on the results.

Items This command invokes the items page of the structure manager to allow the user to add or modify children EIN items.

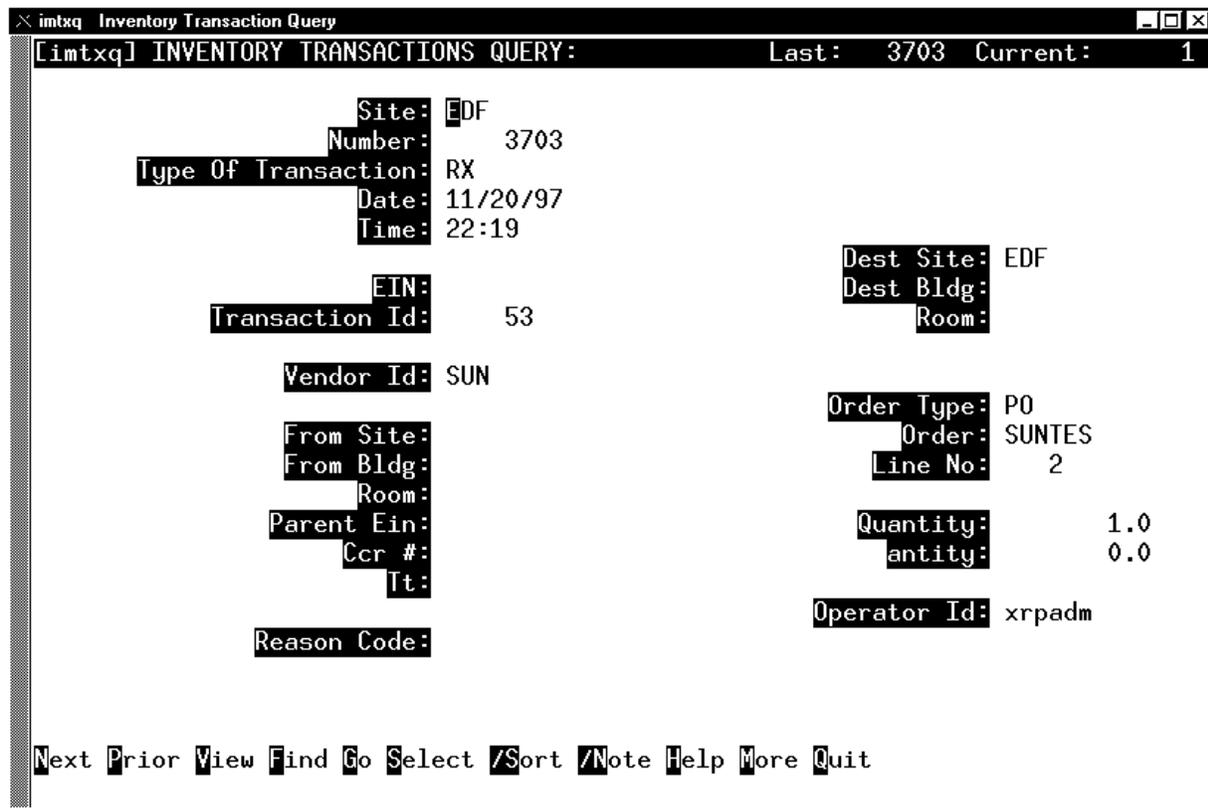

The following table provides a description of the field items for the EIN Relocation Screen.

**Table 4.3.4-21. EIN Relocation Field Descriptions**

<b>Field Name</b>	<b>Data Type</b>	<b>Size</b>	<b>Description</b>
EIN	String	14	This field is for the entry of the actual silver tag numbers attached to each item. If an item must be controlled by the ILM but does not receive a silver tag, the system creates an internal tag number which is prefixed with the Site abbreviation and contains a sequentially assigned number. Pressing RETURN at the field prompt automatically performs this internal assignment. This number, whether entered or assigned, must be used for all machine configuration operations as well as reporting and maintenance functions.
New Parent EIN	String	14	Enter new parent ein for component being relocated
Reason Code	String	4	Enter the reason code for the transfer, The operator may /Z, Zoom to the reason code data base to choose the appropriate code.
CCR #	String	30	Enter the applicable CCR number.
Trouble Ticket	String	15	Enter the applicable trouble ticket number here.

#### **4.3.4.2.3.4 Inventory Transaction Query**

This screen is designed to allow the operator to view all inventory transactions performed on items in the data base. The operator may sort and select on any field on the screen and print a report of sorted data, if desired.

**Figure 4.3.4-20. Inventory Transaction Query Screen**

Unique Bottom Line Commands:

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between “form” or record display and “table” or list display.

The following table provides a description of the field items for the Inventory Transactions Query Screen.

**Table 4.3.4-22. Inventory Transactions Query Item Field Descriptions  
(1 of 2)**

Field Name	Data Type	Size	Description
Site	String	6	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
Number	Number	8	Record number of database record being observed.
Type of Transaction	String	3	Code assigned to the type of transaction being performed
Date	String	2	Date for the query; e.g. transaction date.
Time	Time	2	Time for the query; e.g. transaction time
Dest Site	String	6	Destination site (DAAC code)
EIN	String	14	This field is for the entry of the actual silver tag numbers attached to each item. If an item must be controlled by the ILM but does not receive a silver tag, the system creates an internal tag number which is prefixed with the Site abbreviation and contains a sequentially assigned number. Pressing RETURN at the field prompt automatically performs this internal assignment. This number, whether entered or assigned, must be used for all machine configuration operations as well as reporting and maintenance functions.
Dest Bldg	String	6	Destination building number
Transaction Id	Number	6	Number assigned to a particular transaction
Room	String	6	This field is used to enter the actual room number of where the item is or will be shipped to.
Vendor Id	String	6	Vendor id code of equipment being queried
Order Type			
Order			
From Site	String	6	This field shows the original site of where the item resides
From Bldg	String	6	This field shows the original building number of where the item resides
Line No.	Number	4	Line number of the item if there is an order associated with the transaction
Room	String	6	This field is used to enter the actual room number of where the item is or will be shipped to.
Parent EIN	String	14	This field is the Parent EIN for the installation/structure. The user may /Z, Zoom at this field to view the entire EIN data base.
Quantity	Floating	10.1	Enter the quantity of the boxes having the same dimension and weight.
CCR #	String	30	Enter the applicable CCR number.
Quantity	Floating	10.1	Enter the quantity of the boxes having the same dimension and weight.

**Table 4.3.4-22. Inventory Transactions Query Item Field Descriptions  
(2 of 2)**

Field Name	Data Type	Size	Description
Tt	String	15	Enter the applicable trouble ticket number here
Operator Id	String	8	This field is the login ID of the user who added this item to the data base and is not modifiable by the user.
Reason Code	String	4	Enter the reason code for the transfer, The operator may /Z, Zoom to the reason code data base to choose the appropriate code.

#### 4.3.4.2.4 ILM Report Menu

ILM Report Menu provides access to display and report controlled items into the data base. This section of ILM is mainly used for reporting purposes.

```
ilmrepm                      ECS Management System
                              ILM Report Menu
                              11/19/97 10:24
```

##### **1. ILM Inventory Reports**

2. EIN Structure Reports
3. Install/Receipt Report
4. EIN Shipment Reports
5. Transaction History Reports
6. PO Receipt Reports
7. Installation Summary Reports

Please enter selection (1 - 7 or name):

F1-help F3-prior menu F5-select F8-exit

**Figure 4.3.4-21. Report Menu CHUI**

Figure 4.1.3-21 depicts the ILM full menu for the user with authorization to perform all the listed functions. When the user authorization is more limited, this menu offers less options. In this and the following sections, the content of the menus and the screen layouts cover the complete functionality although all of the functions will not be available to every user.

The ILM Report menu lets the users navigate to the following screens:

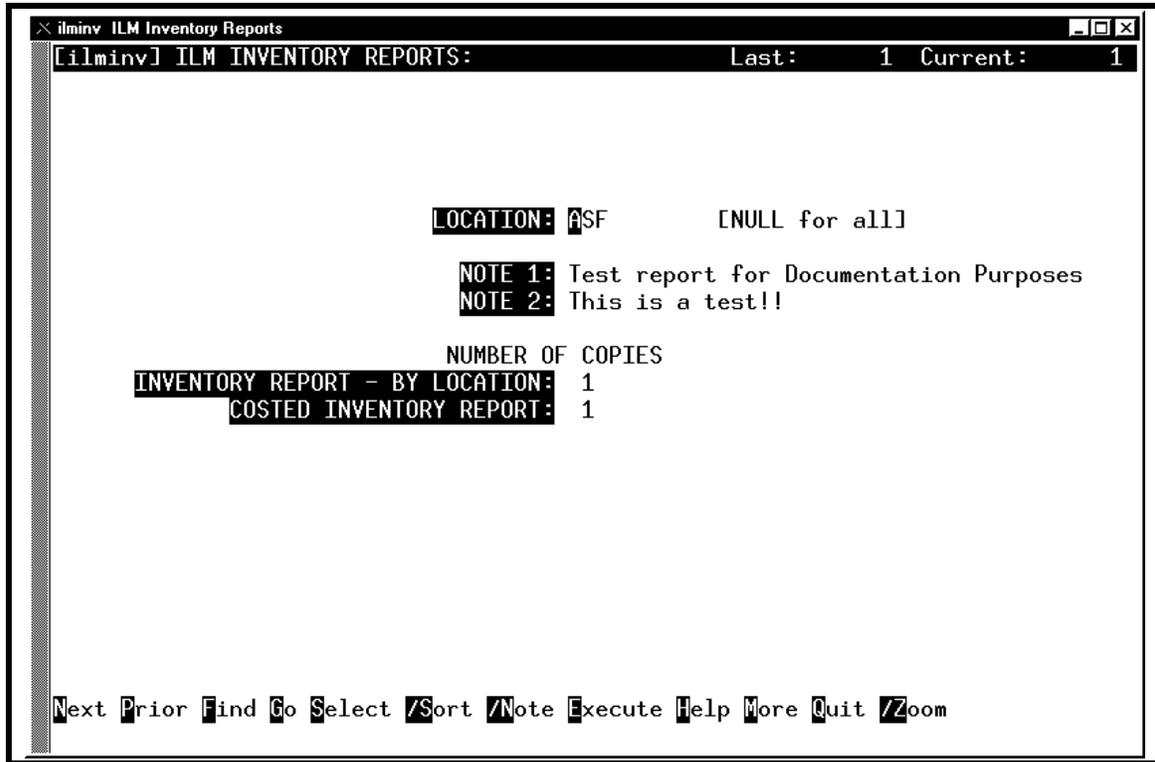

- **ILM Inventory Reports;** retrieves and prints all items contained within the designated location(s). A cost report is included displaying the actual cost of items selected.
- **EIN Structure Reports;** retrieves and prints all designated parents and components in a multi-level bill report.
- **Install/Receipt Report;** allows the user to print a report of a parent EIN configuration and send the hard copy to the receiving organization for sign off.
- **EIN Shipment Reports;** allows the user to print a report of a shipment that was performed previously within the system.
- **Transaction History Reports;** allows the user to print a history of all transactions contained within the system.
- **PO Receipt Reports;** retrieves and prints all receipts that have occurred for the designated PO, Vendor, or Date.
- **Installation Summary Reports;** retrieves and prints all receipts that have occurred for the designated PO, Vendor, or Date.

This menu allows the user to print a series of hard or soft copy reports of various information contained within the system.

The bottom line commands for each menu screen function the same as described for the main menu. Each data screen also has bottom line commands. The following is the a list of the standard commands available on many of the data screens. Any additional commands provided in on each data screen are described following the sample screen presented.

#### **4.3.4.2.4.1 ILM Inventory Reports**

This screen is designed to retrieves and prints all items contained within the designated location(s). A cost report is included displaying the actual cost of items selected.

**Figure 4.3.4-22. ILM Inventory Reports CHUI**

Unique Bottom Line Commands:

ADD MODE: F1,F2,F3,F4,F6

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

/Zoom Display a list of all the values of the selected field in the data base.

Execute This command invokes the appropriate process and prints a report on the results.

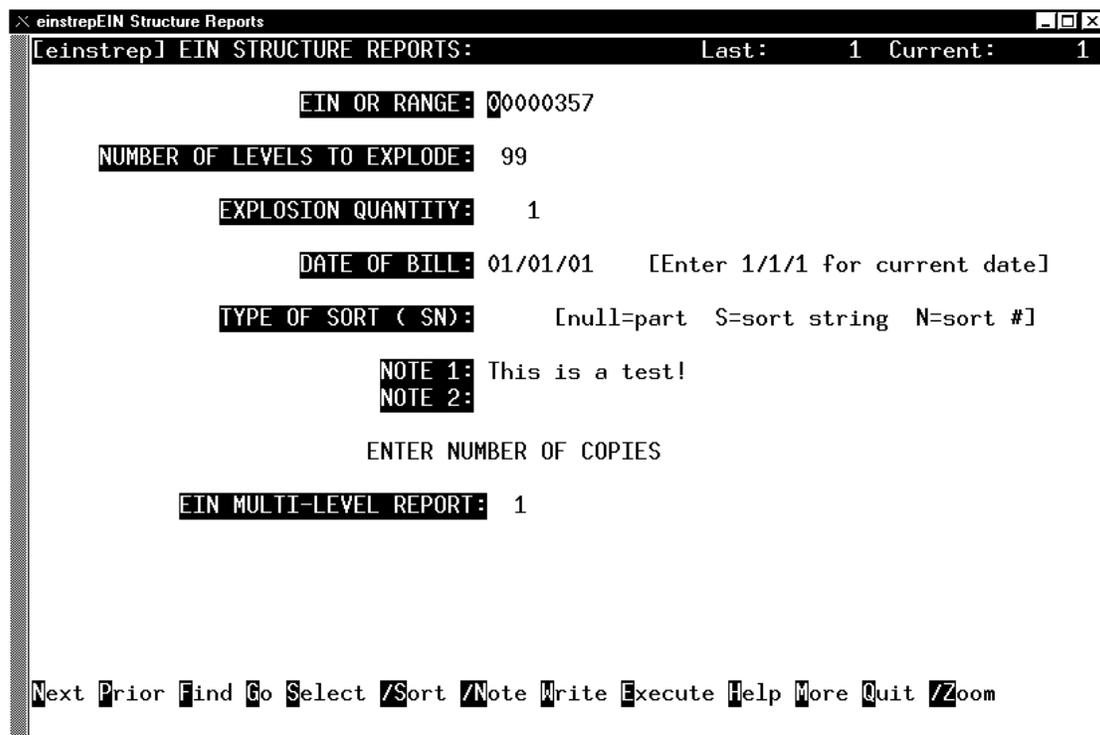

The following table provides a description of the fields contained on the previous screen for ILM Inventory Reports.

**Table 4.3.4-23. ILM Inventory Reports Field Descriptions**

Field Name	Data Type	Size	Description
Last	String	35	indicate the last requisition entered and the current requisition you are reviewing.
Current	Date	8	Current date
Location	String	8	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
Note 1	String	60	This field is used to enter a 60 character note attached to this item.
Note 2	String	60	This field is used to enter a 2nd 60 character note attached to this item.
Inventory Report - By Location	Number	2	Enter number of copies of this report to generate.
Cost Inventory Report	Number	1	Inventory Report containing cost information

#### 4.3.4.2.4.2 EIN Structure Reports

This screen is designed to retrieve and print all designated parents and components in a multi-level bill report.

**Figure 4.3.4-23. EIN Structure Reports CHUI**

### Unique Bottom Line Commands:

- /Note** Add a note to the displayed record (data on the screen).
- /Sort** Sort on the selected field of the displayed record (data on the screen).
- /Zoom** Display a list of all the values of the selected field in the data base.
- Execute** This command invokes the appropriate process and prints a report on the results.
- Write** Saves the current record to a file designated by the operator.

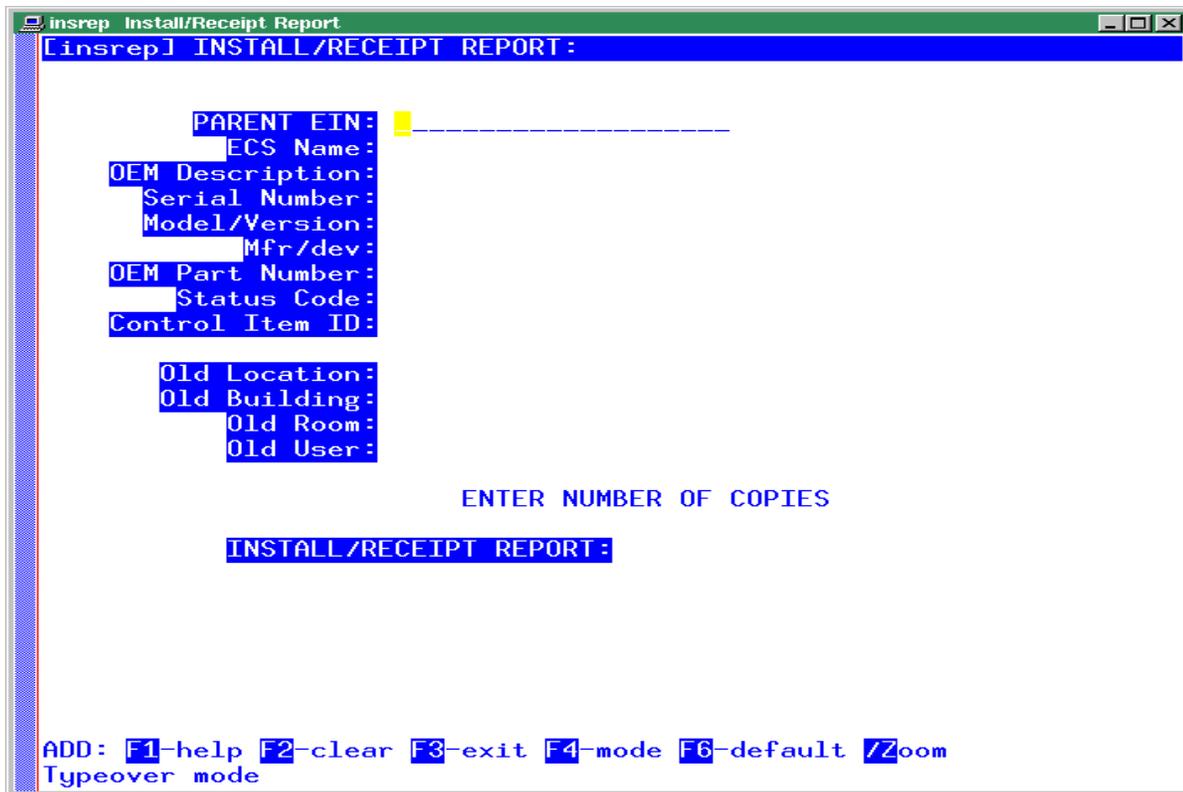

The following table provides a description of the fields contained on the previous screen for EIN Structure Reports.

**Table 4.3.4-24. EIN Structure Reports Field Descriptions**

Field Name	Data Type	Size	Description
Last	String	35	indicate the last requisition entered and the current requisition you are reviewing.
Current	Date	8	Current date
EIN or Range	String	14	Field can accept two 14 character strings. E.g. EDF0000000001-EDF9999999999 for a range
Number of levels to Explode	Number	2	Enter number of levels to display for a particular parent structure.
Explosion Quantity	Number	2	Enter number of level to be displayed for parent ein structure
Date of Bill	Date	2	Date item was billed
Type of Sort	String	1	Null = part, S=Sort string N = Sort number
Note 1	String	60	This field is used to enter a 60 character note attached to this item.
Note 2	String	60	This field is used to enter a 2nd 60 character note attached to this item.
EIN Multi-Level Report	Number	2	Enter the number of copies of this report to generate.

#### 4.3.4.2.4.3 Install/Receipt Report

This screen is designed to allow the user to print a report of a parent EIN configuration and send the hard copy to the receiving organization for sign off.

**Figure 4.3.4-24. Install/Receipt Report CHUI**

**Unique Bottom Line Commands:**

ADD MODE: F1,F2,F3,F4,F6, /Zoom

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

/Zoom Display a list of all the values of the selected field in the data base.

Execute This command invokes the appropriate process and prints a report on the results.

The following table provides a description of the fields contained on the previous screen for Install/Receipt Reports.

**Table 4.3.4-25. Install/Receipt Report Field Descriptions (1 of 2)**

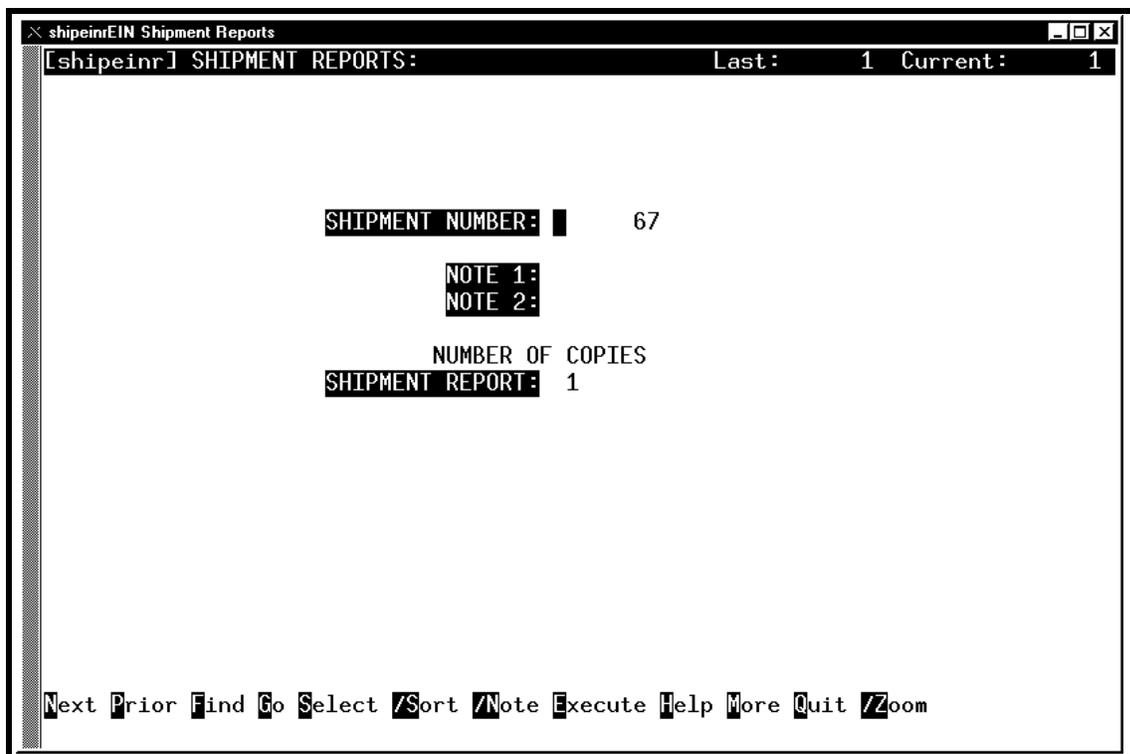

Field Name	Data Type	Size	Description
Last	String	35	indicate the last requisition entered and the current requisition you are reviewing.
Current	Date	8	Current date
Parent EIN	String	14	This field is the Parent EIN for the installation/structure. The user may /Z, Zoom at this field to view the entire EIN data base.
ECS Name	String	23	This field provides the ability for the user to enter a name the item will be known by.
OEM Description	String	30	This field reflects the description of the OEM PART NUMBER entered in the field above, but provides the ability for the user to modify it in the EIN file.
Serial Number	String	30	This field is for the entry of the serial number of the product being entered. If the item does not contain a serial number of it's own, the system will assign an internal number prefixed with the Site abbreviation and contain a sequentially assigned number. Pressing RETURN at the field prompt automatically performs this internal assignment
Model/Version	String	24	This field is used to enter the actual Model and or Version of the item. If the user had chosen a known OEM Part, this field will be written with the information from this file.
Mfr/dev	String	6	This field is used to enter the Manufacturer or Developer ID. The user may zoom to the appropriate data file and pick the desired code. NOTE: This data must be previously entered with screen Vendor Master Maintenance (vmasts).
OEM Part Number	String	34	This field is for the entry of the Manufacturer's or Vendor's part number. The user may perform a zoom to the OEM PART NUMBER screen (oempart) at this field to pick the appropriate item. NOTE: These OEM Part Numbers must be entered prior to the use in this screen. When an item is from this file is chosen, the information contained in the file is written to the EIN file.
Status Code	String	1	This field designates the status of the item and is controlled by transactions within the system.. The following codes are included : R - Received; S - Shipped; I - Installed; A - Archived;
Control Item ID	String	20	This field provides the ability for the user to point to an equivalent item contained within the BASELINE MANAGEMENT system. ILM will enter the BLM Control Item based on the OEM Part Number.
Old Location	String	6	Shows current location (DAAC) of where the item resides
New Location	String	6	This field is the new location code or site code where the parent was installed.
Old Building	String	6	Shows current building number of where the item resides

**Table 4.3.4-25. Install/Receipt Report Field Descriptions (2 of 2)**

Field Name	Data Type	Size	Description
New Building	String	10	This field is the new building code where the parent was installed.
Old Room	String	6	Shows the current room number of where the item resides
New Room	String	6	This field is the new room code where the parent was installed.
Old User	String	10	Shows the current user for the item
New User	Number	4	This field is the user code the parent was assigned to. The operator may /Z, Zoom at this field to view the User data base.
Install/Receipt Report	Number	2	Enter number of copies of this report to generate.

#### 4.3.4.2.4.4 EIN Shipment Reports

This screen is designed to allow the user to print a report of a shipment that was performed previously within the system.

**Figure 4.3.4-25. EIN Shipment Reports CHUI**

Unique Bottom Line Commands:

- /Note**        Add a note to the displayed record (data on the screen).
- /Sort**       Sort on the selected field of the displayed record (data on the screen).
- /Zoom**      Display a list of all the values of the selected field in the data base.
- Execute**     This command invokes the appropriate process and prints a report on the results.

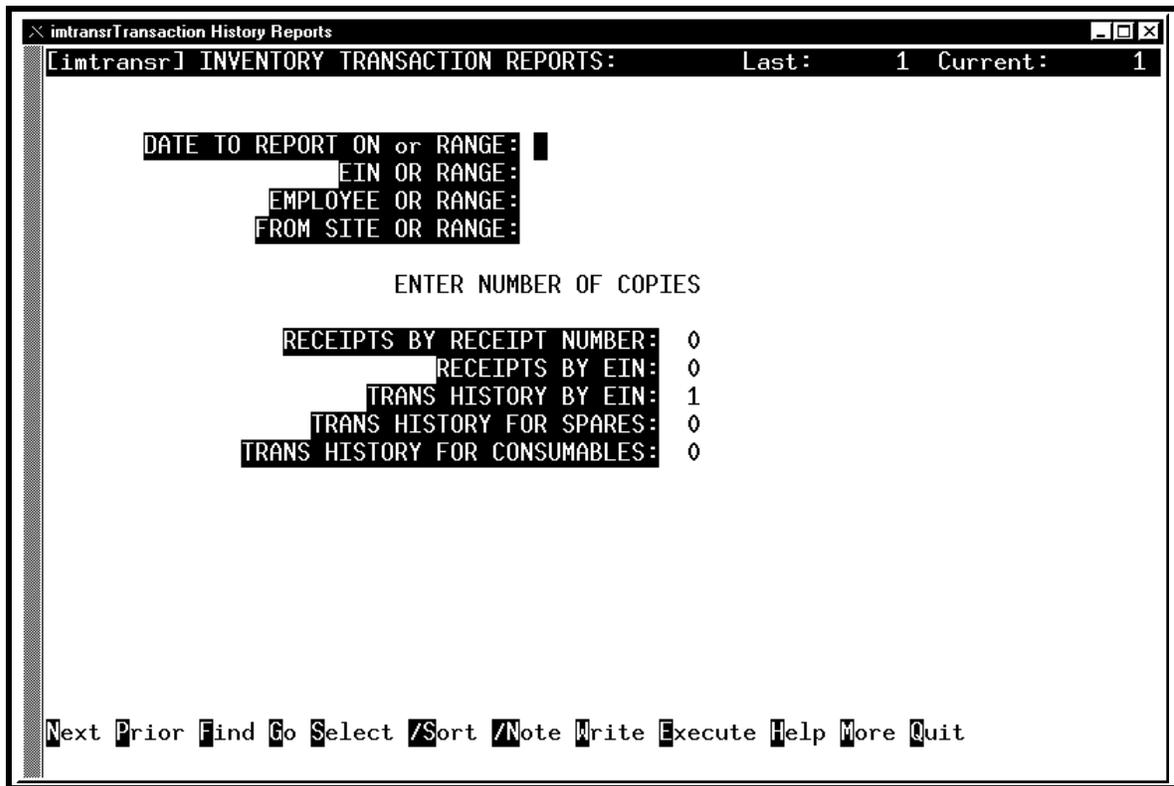

The following table provides a description of the fields contained on the previous screen for EIN Shipment Reports.

**Table 4.3.4-26. EIN Shipment Reports Field Descriptions**

<b>Field Name</b>	<b>Data Type</b>	<b>Size</b>	<b>Description</b>
Last	String	35	indicate the last requisition entered and the current requisition you are reviewing.
Current	Date	8	Current date
Shipment Number	Number	6	Sequential number assigned to a shipment
Note 1	String	60	This field is used to enter a 60 character note attached to this item.
Note 2	String	60	This field is used to enter a 2nd 60 character note attached to this item.
Shipment Report	Number	2	Enter number of copies of report to print

#### **4.3.4.2.4.5 Transaction History Reports**

This screen is designed to allow the user to print a history of all transactions contained within the system.

**Figure 4.3.4-26. Transaction History Reports CHUI**

Unique Bottom Line Commands:

- /Note**        Add a note to the displayed record (data on the screen).
- /Sort**        Sort on the selected field of the displayed record (data on the screen).
- Execute**      This command invokes the appropriate process and prints a report on the results.
- Write**        Saves the current record to a file designated by the operator.

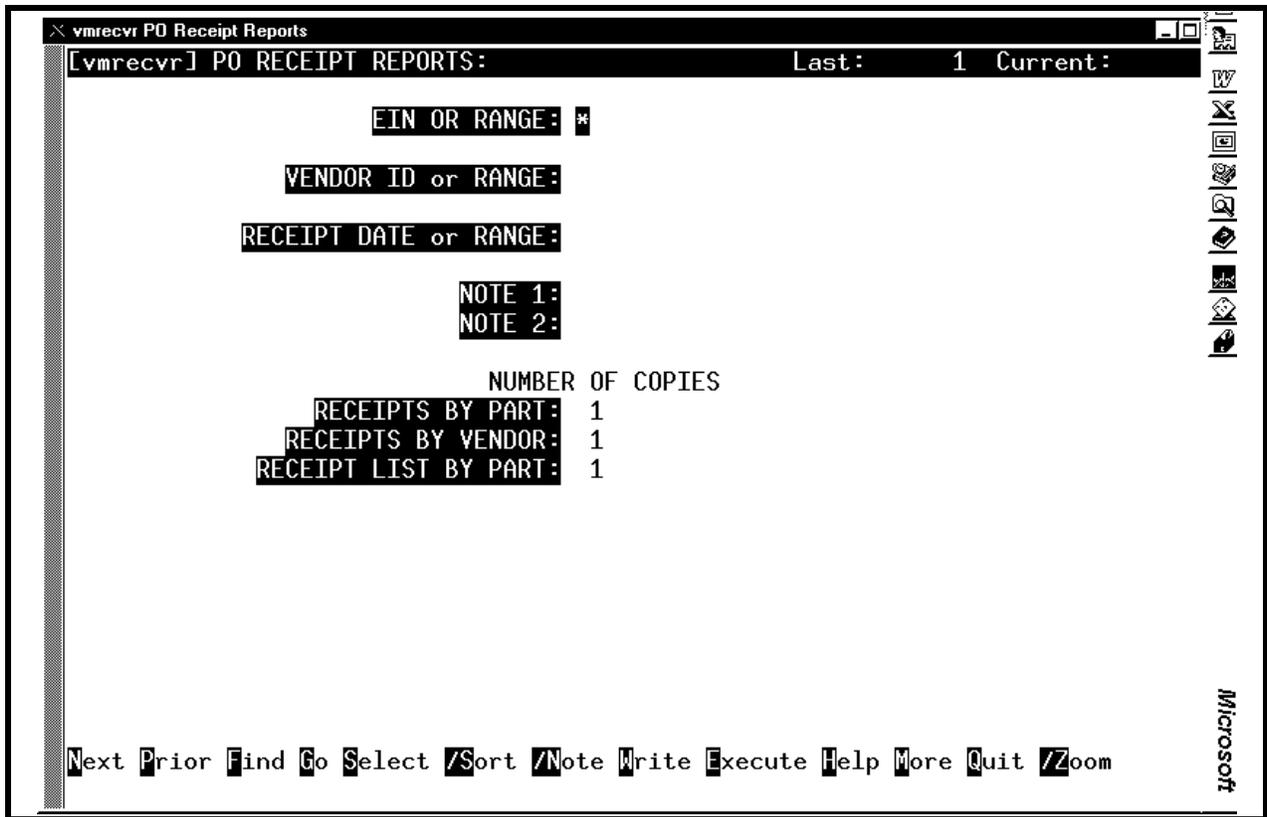

The following table provides a description of the fields contained on the previous screen for Transaction History Reports.

**Table 4.3.4-27. Transaction History Reports Field Descriptions**

<b>Field Name</b>	<b>Data Type</b>	<b>Size</b>	<b>Description</b>
Last	String	35	indicate the last requisition entered and the current requisition you are reviewing.
Current	Date	8	Current date
Date range of transaction	Date	2	Date or date range for desired transaction query
Date to report on or range	Date	2	Date or date range to report on
EIN or Range	String	14	Field can accept two 14 character strings. E.g. EDF00000000001-EDF9999999999 for a range
Employee or Range	String	8	Enter employee id code to query on
From Site or Range	String	6	Enter site (DAAC) or range to report on
Receipts by Receipt Number	Number	2	Request report of receipts in order by Receipt number
Receipts By EIN	Number	2	Request report of receipts in order by EIN
Trans History By EIN	Number	2	Enter number of copies of this report to generate.

#### **4.3.4.2.4.6 PO Receipt Reports**

This screen is designed to retrieve and prints all receipts that have occurred for the designated PO, Vendor, or Date.

**Figure 4.3.4-27. PO Receipt Reports CHUI**

Unique Bottom Line Commands:

**/Zoom**      Display a list of all the values of the selected field in the data base.

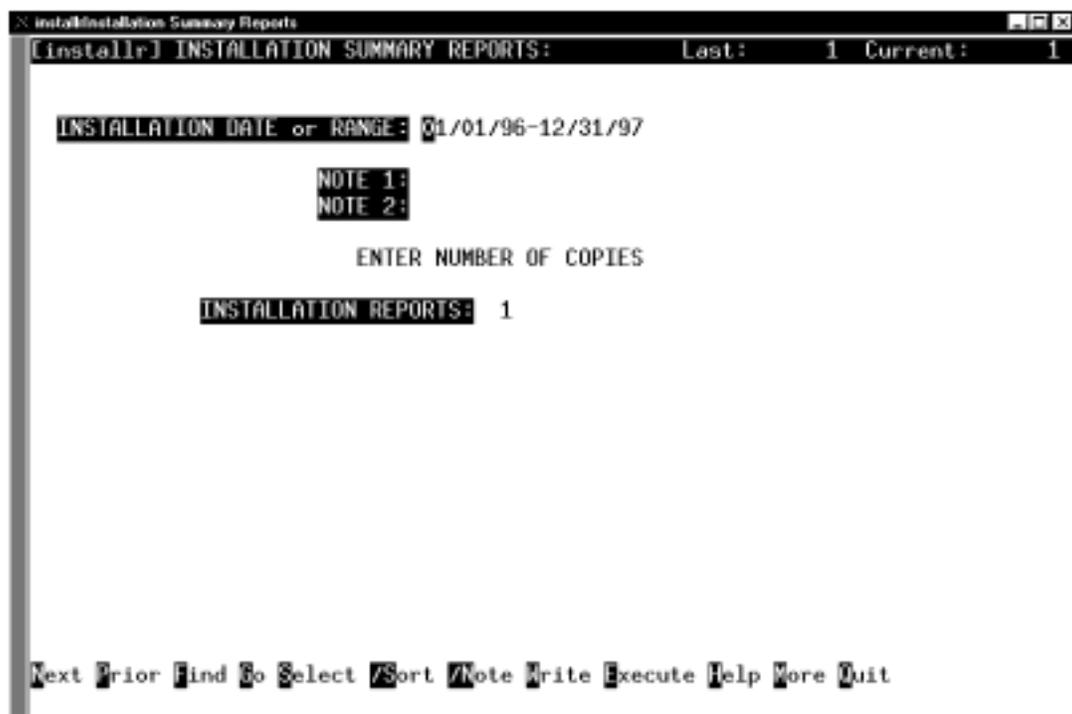

The following table provides a description of the fields contained on the previous screen for PO Receipt Reports.

**Table 4.3.4-28. PO Receipt Reports Field Descriptions**

Field Name	Data Type	Size	Description
Last	String	35	indicate the last requisition entered and the current requisition you are reviewing.
Current	Date	8	Current date
EIN or Range	String	14	Field can accept two 14 character strings. E.g. EDF00000000001-EDF9999999999 for a range
Vendor ID or Range	String	6	Vendor id code of equipment being queried
Receipt Date or Range	Date	2	Receipt date(s) to report.
Note 1	String	60	This field is used to enter a 60 character note attached to this item.
Note 2	String	60	This field is used to enter a 2nd 60 character note attached to this item.
Receipts By Part	Number	2	Enter 1 if report listing a parts by receipt is required.
Receipts By Vendor	Number	2	Enter 1 if report listing receipts by vendor is required
Receipt List by Part	Number	2	Enter 1 if report listing all receipts for a particular part number.

#### 4.3.4.2.4.7 Installation Summary Reports

This screen is designed to retrieve and print all receipts that have occurred for the designated PO, Vendor, or Date.

**Figure 4.3.4-28. Installation Summary Reports CHUI**

Unique Bottom Line Commands:

- /Note**        Add a note to the displayed record (data on the screen).
- /Sort**       Sort on the selected field of the displayed record (data on the screen).
- Execute**     This command invokes the appropriate process and prints a report on the results.
- Write**        Saves the current record to a file designated by the operator.

The following table provides a description of the fields contained on the previous screen for Installation Summary Reports.

**Table 4.3.4-29. Installation Summary Reports Field Descriptions**

<b>Field Name</b>	<b>Data Type</b>	<b>Size</b>	<b>Description</b>
Last	String	35	indicate the last requisition entered and the current requisition you are reviewing.
Current	Date	8	Current date
Installation Date or Range	MULTI-FIELD		Enter installation date or range of dates to report on as one or two D,2 fields.
Note 1	String	60	This field is used to enter a 60 character note attached to this item.
Note 2	String	60	This field is used to enter a 2nd 60 character note attached to this item.
Installation Reports	Number	4	This field is the installation report number assigned by the system when an installation had occurred and as reflected from the EIN Record for the Parent EIN.

#### 4.3.4.2.5 Inventory Ordering Menu

```
imordm                      ECS Management System
                           Inventory Ordering Menu                11/19/97 10:26

                           1. Order Point Parameters Manager
                           2. Generate Order Point Recommendations
                           3. Recommended Orders Manager
                           4. Transfer Order Point Orders
                           5. Consumable Inventory Query
                           6. Spares Inventory Query
                           7. Transfer Consumable & Spare Mat'l

                           Please enter selection (1 - 7 or name): █

F1-help F3-prior menu F5-select F8-exit
```

**Figure 4.3.4-29. Inventory Ordering Menu CHUI**

The following process allows the user to designate and control some OEM items with the Order Point methodology.

Figure 4.3.4-29 depicts the ILM full menu for the user with authorization to perform all the listed functions. When the user authorization is more limited, this menu offers less options. In this and the following sections, the content of the menus and the screen layouts cover the complete functionality although all of the functions will not be available to every user.

The ILM **Inventory Ordering** menu allows the users to navigate to the following screens:

- **Order Point Parameters Manager;** allows the user to enter new items to be Order Point controlled. The user has the option when in Add mode to zoom to the data base of OEM items and tag one.
- **Generate Order Point Recommendations;** examines all items designated as Order Point control. examines the level of inventory for each item, and generates a recommended order for each item where the inventory quantity has fallen below the control values.

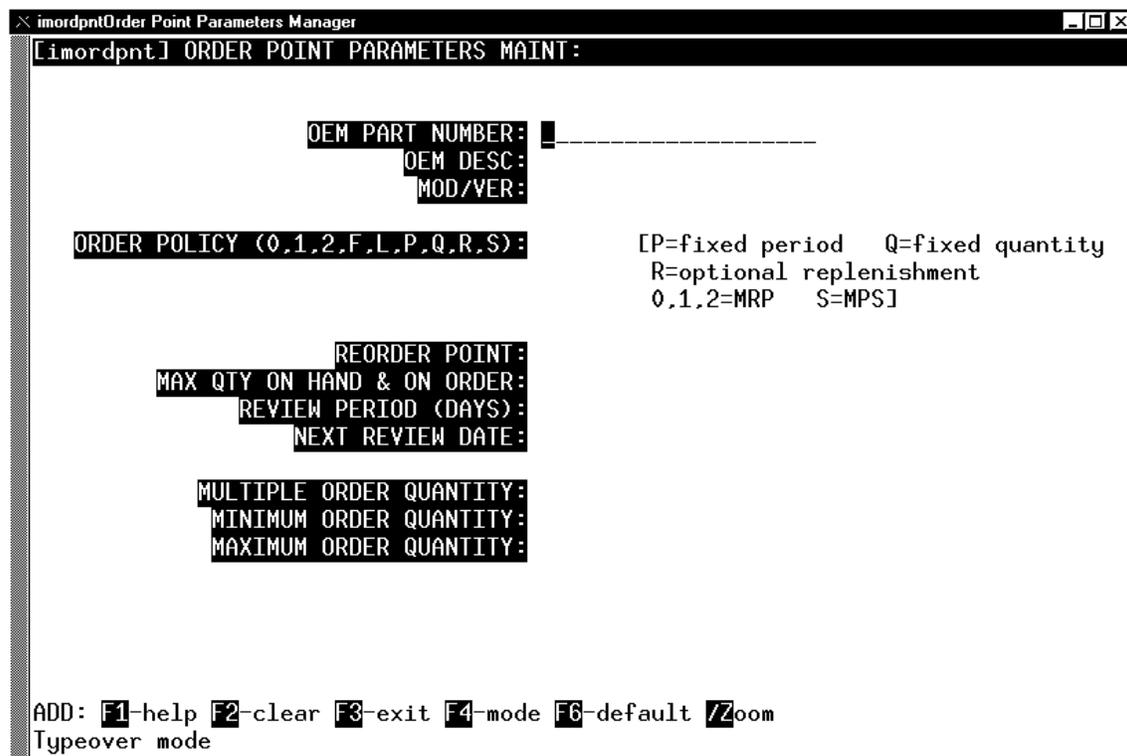

- **Recommend Orders Manager;** For each item to be transferred to the requisition or work order files, change the status to “T”..
- **Transfer Order Point Orders;** transfers all recommendations whose status has been set to “T” to the Requisition file, if the item is coded as a Buy item, or to the Work Order file, if the item is coded as a Make item.
- **Consumable Inventory Query;** This screen allows the user to view the inventory for only those items designated as consumable.
- **Spares Inventory Query;** This screen allows the user to view the inventory for only those items designated as spares.
- **Transfer Consumable & Spare Matí;** allows the user to transfer items designated as Consumable or Spares from one inventory location to another location or to become part of a machine structure.

These are the **Inventory Ordering** data entry, query, reporting screens. The following sections contain descriptions of each menus and its data screens.

The bottom line commands for each menu screen function the same as described for the main menu. Each data screen also has bottom line commands. The following is a list of the standard commands available on many of the data screens. Any additional commands provided on each data screen are described following the sample screen presented.

#### **4.3.4.2.5.1 Order Point Parameters Manager**

This screen is designed to allows the user to enter new items to be Order Point controlled. The user has the option when in Add mode to zoom to the data base of OEM items and tag one.

**Figure 4.3.4-30. Order Point Parameters Manager CHUI**

**Unique Bottom Line Commands:**

ADD MODE: F1,F2,F3,F4,F6, /Zoom

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

/Zoom Display a list of all the values of the selected field in the data base.

View Toggles between “form” or record display and “table” or list display.

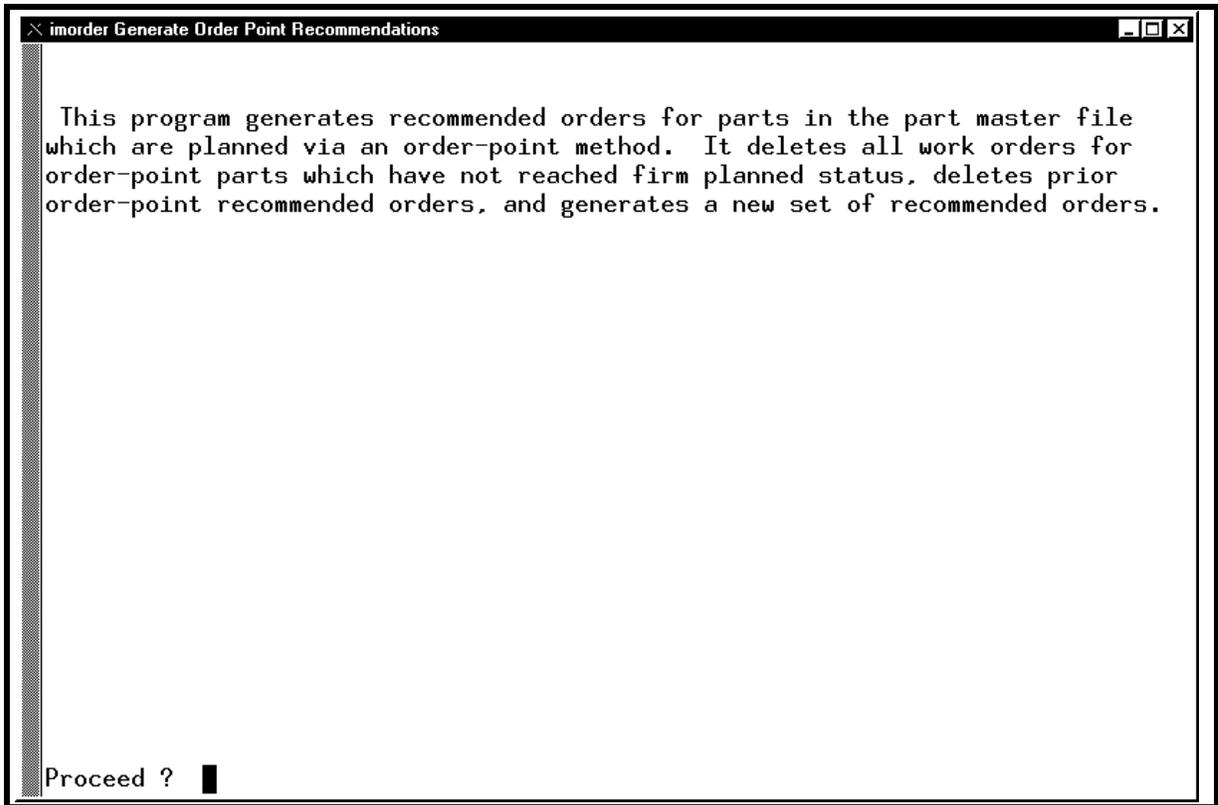

The following table provides a description of the fields contained on the previous screen for Order Point Parameters Manager.

**Table 4.3.4-30. Order Point Parameters Manager Field Descriptions**

Field Name	Data Type	Size	Description
Last	String	35	indicate the last requisition entered and the current requisition you are reviewing.
Current	Date	8	Current date
OEM Part Number	String	34	This field is for the entry of the Manufacturer's or Vendor's part number. The user may perform a zoom to the OEM PART NUMBER screen (oempart) at this field to pick the appropriate item. NOTE: These OEM Part Numbers must be entered prior to the use in this screen. When an item is from this file is chosen, the information contained in the file is written to the EIN file.
OEM Desc	String	40	This field is the OEM Description reflected from the EIN Record for the Parent EIN.
Mod/Ver	String	24	This field is used to enter the actual Model and or Version of the item. If the user had chosen a known OEM Part, this field will be written with the information from this file.
Order Policy	String	1	Enter type of ordering policy such as P = Fixed period, Q = Fixed quantity etc.
Reorder Point	Floating	10.1	Quantity at which reorder of item should occur
Max. Qty on Hand and on Order	Floating	10.1	Maximum number of items in stock plus the number on order
Review Period	Number	3	Number of days to perform inventory check
Next Review Date	Date	2	Date of next inventory quantity check
Multiple Order Quantity	Floating	9.1	Number of items to order in a multiple parts/items order
Minimum Order Quantity	Floating	9.1	Minimum number of items to order or reorder
Maximum Order Quantity	Floating	9.1	Maximum number of items to order or reorder

#### **4.3.4.2.5.2 Generate Order Point Recommendations**

This screen is designed to examine all items designated as Order Point control. It examines the level of inventory for each, and generates a recommended order for each item where the inventory quantity has fallen below the control values.

**Figure 4.3.4-31. Generate Order Point Recommendations CHUI**

Unique Bottom Line Commands:

Proceed? Y = continue with the process, N = quit. The default is "Y".

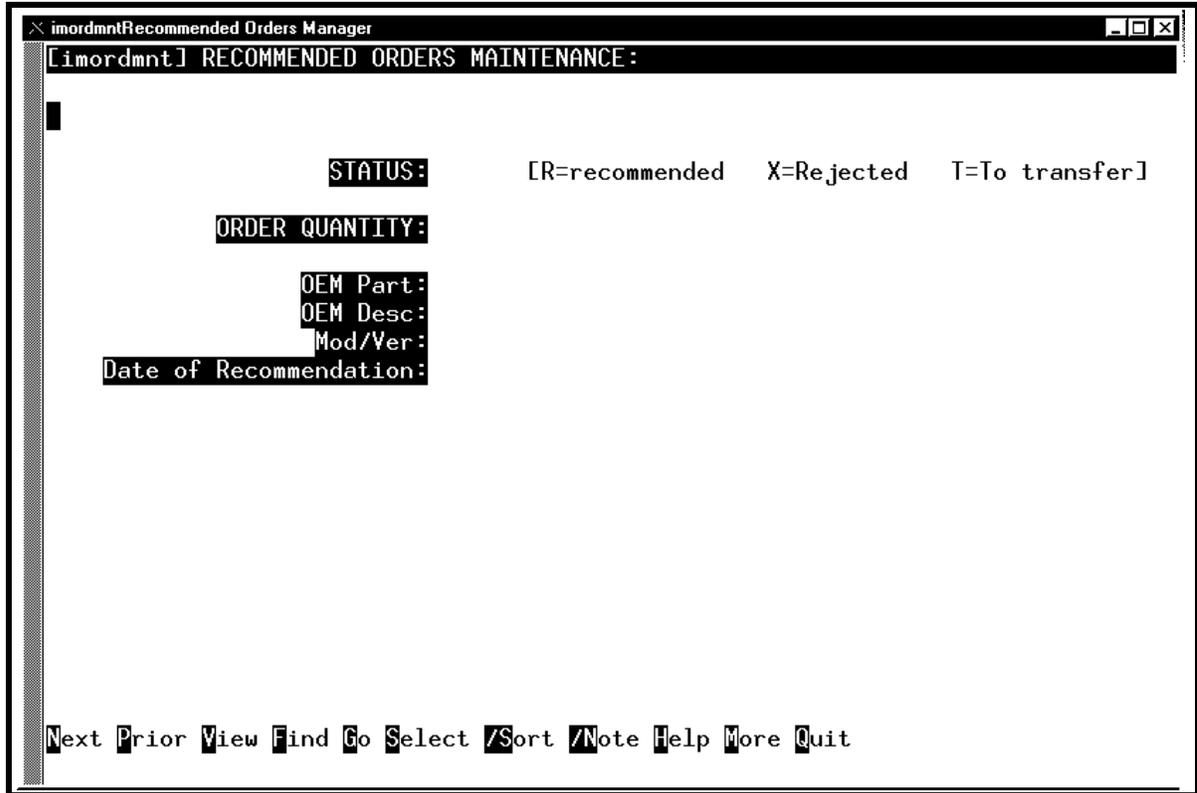

The following table describes an option for the user to either proceed or cancel a function of the tool.

**Table 4.3.4-31. Generate Order Point Recommendations Field Descriptions**

Field Name	Data Type	Size	Description
Proceed?	String	1	Y or N to continue the process

#### 4.3.4.2.5.3 Recommend Orders Manager

This screen is designed to change the status to "T" for each item to be transferred to the requisition or work order files.

**Figure 4.3.4-32. Recommend Orders Manager CHUI**

**Unique Bottom Line Commands:**

**/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.

**/Modify** Modify (store) the displayed record (data on the screen) in the data base.

**/Note** Add a note to the displayed record (data on the screen).

**/Sort** Sort on the selected field of the displayed record (data on the screen).

**View** Toggles between “form” or record display and “table” or list display.

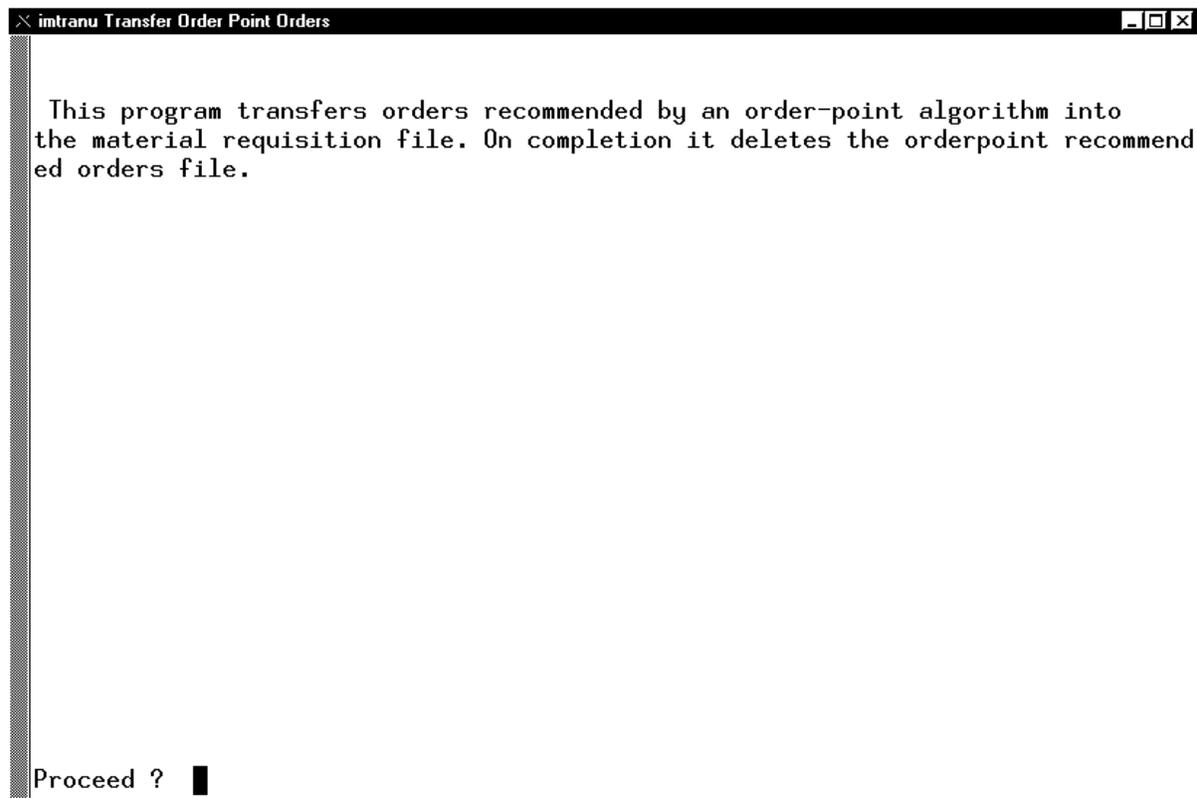

The following table provides a description of the fields contained on the previous screen for Recommend Orders Manager.

**Table 4.3.4-32. Recommend Orders Manager Field Descriptions**

Field Name	Data Type	Size	Description
Last	String	35	indicate the last requisition entered and the current requisition you are reviewing.
Current	Date	8	Current date
Status	String	1	Status code for TERMS CODE
Order Quantity	Floating	9.1	Quantity to order
OEM Part	String	34	This field is the OEM part number reflected from the EIN record of the child.
OEM Desc	String	40	This field is the OEM Description reflected from the EIN Record for the Parent EIN.
Mod/Ver	String	24	This field is used to enter the actual Model and or Version of the item. If the user had chosen a known OEM Part, this field will be written with the information from this file.
Date of Recommendation	Date	2	Date the recommendation was recorded

**4.3.4.2.5.4 Transfer Order Point Orders**

This screen is designed to transfer all recommendations whose status has been set to “T” to the Requisition file, if the item is coded as a Buy item, or to the Work Order file, if the item is coded as a Make item.

**Figure 4.3.4-33. Transfer Order Point Orders CHUI**

Unique Bottom Line Commands:

Proceed? Y = continue with the process, N = quit. The default is "Y".

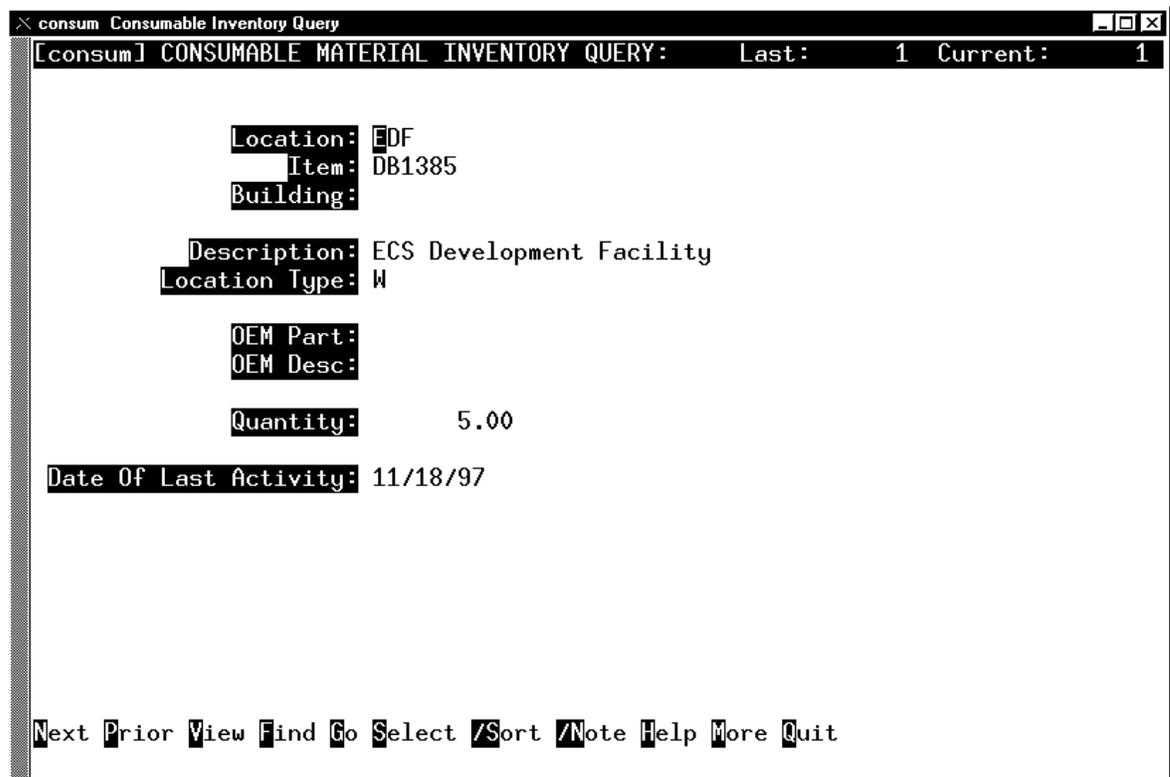

The following table provides a description of the fields contained on the previous screen for Transfer Order Point Orders.

**Table 4.3.4-33. Transfer Order Point Orders Field Descriptions**

Field Name	Data Type	Size	Description
Proceed	String	1	Enter Y or N to proceed with process.

#### 4.3.4.2.5.5 Consumable Inventory Query

This screen allows the user to view the inventory for only those items designated as consumable.

**Figure 4.3.4-34. Consumable Inventory Query CHUI**

Unique Bottom Line Commands:

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between "form" or record display and "table" or list display.

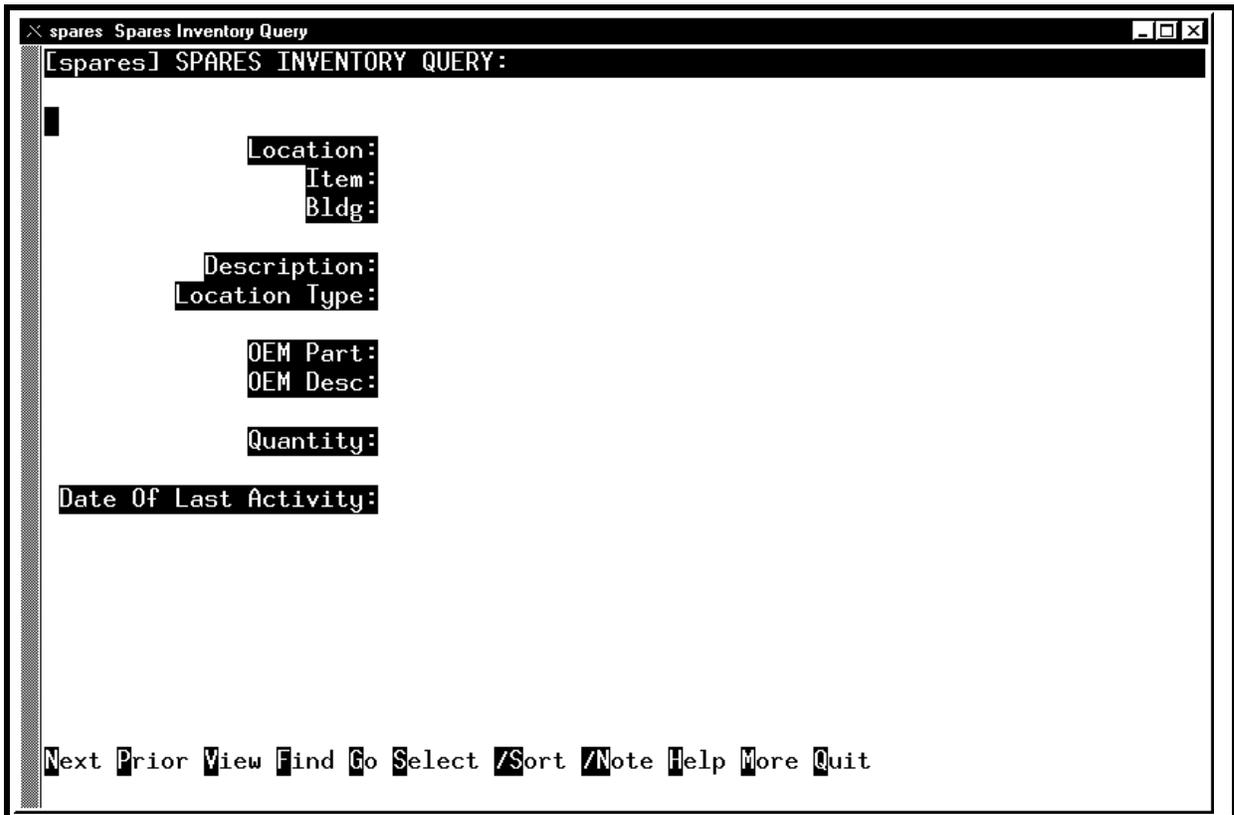

The following table provides a description of the fields contained on the previous screen for Consumable Inventory Query.

**Table 4.3.4-34. Consumable Inventory Query Field Descriptions**

Field Name	Data Type	Size	Description
Last	String	35	indicate the last requisition entered and the current requisition you are reviewing.
Current	Date	8	Current date
Location	String	8	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
OEM Part Number	String	34	This field is for the entry of the Manufacturer's or Vendor's part number. The user may perform a zoom to the OEM PART NUMBER screen (oempart) at this field to pick the appropriate item. NOTE: These OEM Part Numbers must be entered prior to the use in this screen. When an item is from this file is chosen, the information contained in the file is written to the EIN file.
Building	String	6	This field is used to designate the building number within the site where the item is.
Description	String	30	is an auto filled field based upon your selection of the OEM PART number
Location Type	String	1	Specifies the material application at the site: Null or S = stock, R = received, N = non-nettable, W = work center, A = archive.
OEM Desc	String	40	This field is the OEM Description reflected from the EIN Record for the Parent EIN.
Quantity	Floating	10.1	Enter the quantity of the boxes having the same dimension and weight.
Date of Last Activity	Date	2	Date of last activity performed on an item

#### 4.3.4.2.5.6 Spares Inventory Query

This screen allows the user to view the inventory for only those items designated as spares.

**Figure 4.3.4-35. Spares Inventory Query CHUI**

**Unique Bottom Line Commands:**

- /Note**      Add a note to the displayed record (data on the screen).
- /Sort**     Sort on the selected field of the displayed record (data on the screen).
- View**      Toggles between “form” or record display and “table” or list display.

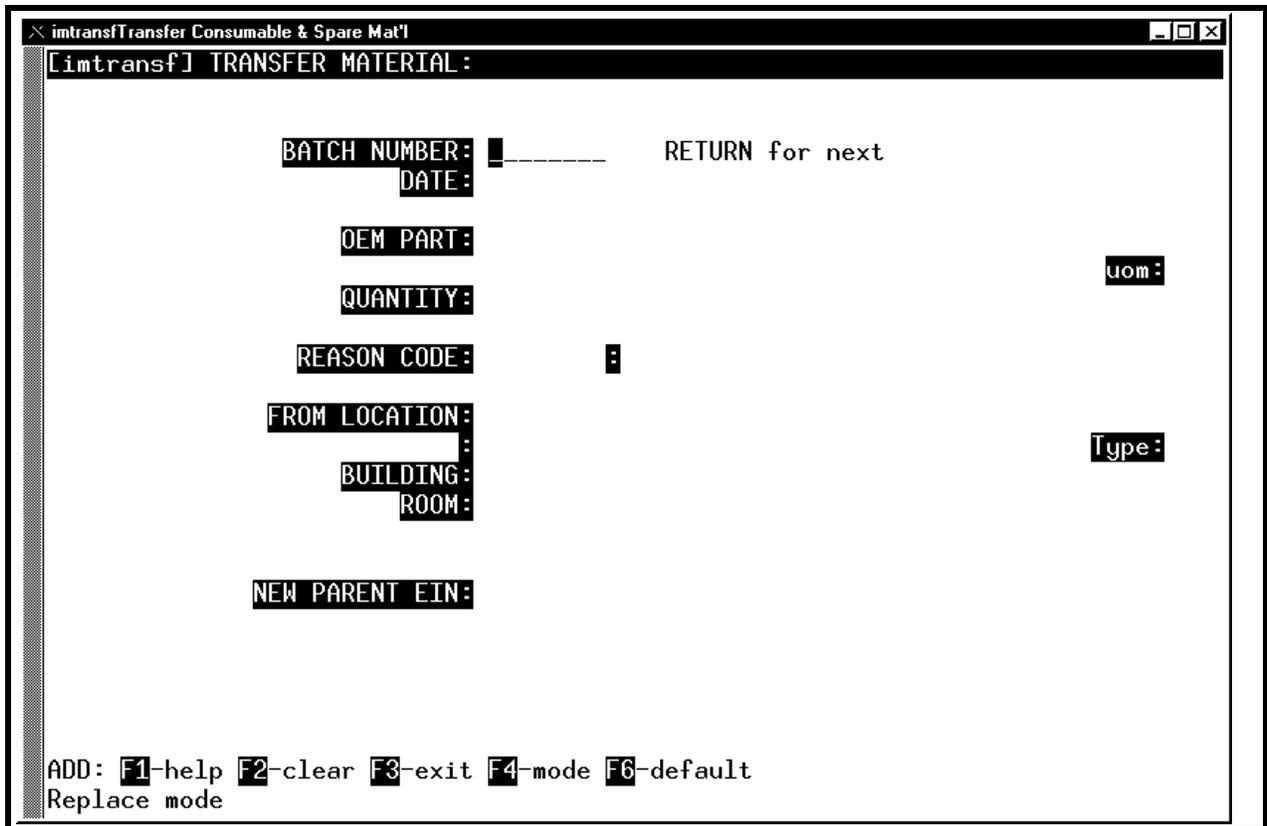

The following table provides a description of the fields contained on the previous screen for Spares Inventory Query.

**Table 4.3.4-35. Spares Inventory Query Field Description**

Field Name	Data Type	Size	Description
Last	String	35	indicate the last requisition entered and the current requisition you are reviewing.
Current	Date	8	Current date
Location	String	8	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
OEM Part Number	String	34	This field is for the entry of the Manufacturer's or Vendor's part number. The user may perform a zoom to the OEM PART NUMBER screen (oempart) at this field to pick the appropriate item. NOTE: These OEM Part Numbers must be entered prior to the use in this screen. When an item is from this file is chosen, the information contained in the file is written to the EIN file.
Bldg	String	6	This field is used to designate the building number within the site where the item is
Description	String	30	is an auto filled field based upon your selection of the OEM PART number
Location Type	String	1	Specifies the material application at the site: Null or S = stock, R = received, N = non-nettable, W = work center, A = archive.
OEM Desc	String	40	This field is the OEM Description reflected from the EIN Record for the Parent EIN.
Quantity	Floating	10.1	Enter the quantity of the boxes having the same dimension and weight.
Date of Last Activity	Date	2	Date of last activity performed on an item

#### 4.3.4.2.5.7 Transfer Consumable & Spare Mat'l

This screen is designed to allow the user to transfer items designated as Consumable or Spares from an inventory location to another location or to become part of a machine structure.

**Figure 4.3.4-36. Transfer Consumable & Spare Mat'l CHUI**

**Unique Bottom Line Commands:**

ADD MODE: F1,F2,F3,F4,F6

- /Note        Add a note to the displayed record (data on the screen).
- /Sort        Sort on the selected field of the displayed record (data on the screen).
- Check       This command will check available quantities against quantities input by user.
- Execute     This command invokes the appropriate process and prints a report on the results.
- View        Toggles between "form" or record display and "table" or list display.

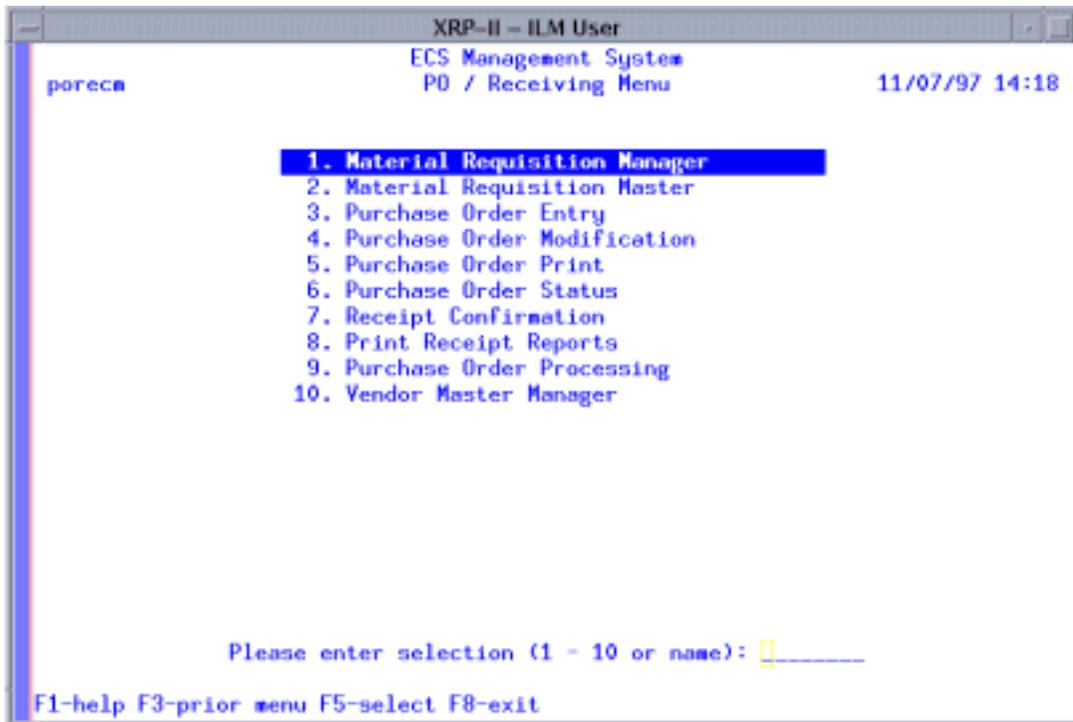

The following table provides a description of the fields contained on the previous screen for Transfer Consumable & Spare Material.

**Table 4.3.4-36. Transfer Consumable & Spare Mat'l Field Descriptions**

Field Name	Data Type	Size	Description
Last	String	35	indicate the last requisition entered and the current requisition you are reviewing.
Current	Date	8	Current date
Batch Number	Number	8	This is the system assigned batch number for the group of transactions the user enters, when transferring consumables and spares.
Date	String	2	Date for the query; e.g. transaction date.
OEM Part	String	34	This field is the OEM part number reflected from the EIN record of the child.
Quantity	Floating	10.1	Enter the quantity of the boxes having the same dimension and weight.
Reason Code	String	4	Enter the reason code for the transfer, The operator may /Z, Zoom to the reason code data base to choose the appropriate code.
From Location	String	6	This field shows the original location of where the item resides
Building	String	6	This field is used to designate the building number within the site where the item is.
Room	String	6	This field is used to enter the actual room number of where the item is or will be shipped to.
Destination Location	String	6	Enter the destination location (DAAC) where the item is being transferred to.
Building	String	6	This field is used to designate the building number within the site where the item is.
Destination Room	String	6	Enter the room number where the item is being relocated to

#### **4.3.4.2.6 PO/Receiving Menu**

This section of the ILM is mainly used for procurement and property receiving.

**Figure 4.3.4-37. PO/Receiving Menu CHUI**

The **PO/RECEIVING** menu is broken down into the following functions

**Table 4.3.4-37. PO/Receiving Menu options**

<b>Menu item</b>	<b>Function</b>	<b>Section</b>
Material Requisition Manager	Initiates the process of requisitioning consumables or spares. This requisition requires approval of the procurement manager before it turns into a purchase order.	4.3.4.2.6.1
Material Requisition Master	For buyers to examine all manual and system generated requisitions for the placement of Purchase Orders with Vendors.	4.3.4.2.6.2
Purchase Order Entry	Entry point for all Purchase Orders	4.3.4.2.6.3
Purchase Order Modification	Provides buyers with the ability modify existing PO information and the individual item records associated a PO.	4.3.4.2.6.4
Purchase Order Print	Prints the Purchase Order document for subsequent mailing to the vendor and/or copy to the receiving dock.	4.3.4.2.6.5
Purchase Order Status	Provides an inquiry into the PO file only.	4.3.4.2.6.6
Receipt Confirmation	Provides the receiving requirements for open PO's and is the entry point for assignment of EIN numbers into the system.	4.3.4.2.6.7
Print Receipt Reports	Provides ability to print past receipt reports.	4.3.4.2.6.8
Purchase Order Processing	Examines all open PO's and closes those that meet established criteria.	4.3.4.2.6.9
Vendor Master Maintenance	Permits the entry and modification of vendors and address data to the system.	4.3.4.2.6.10

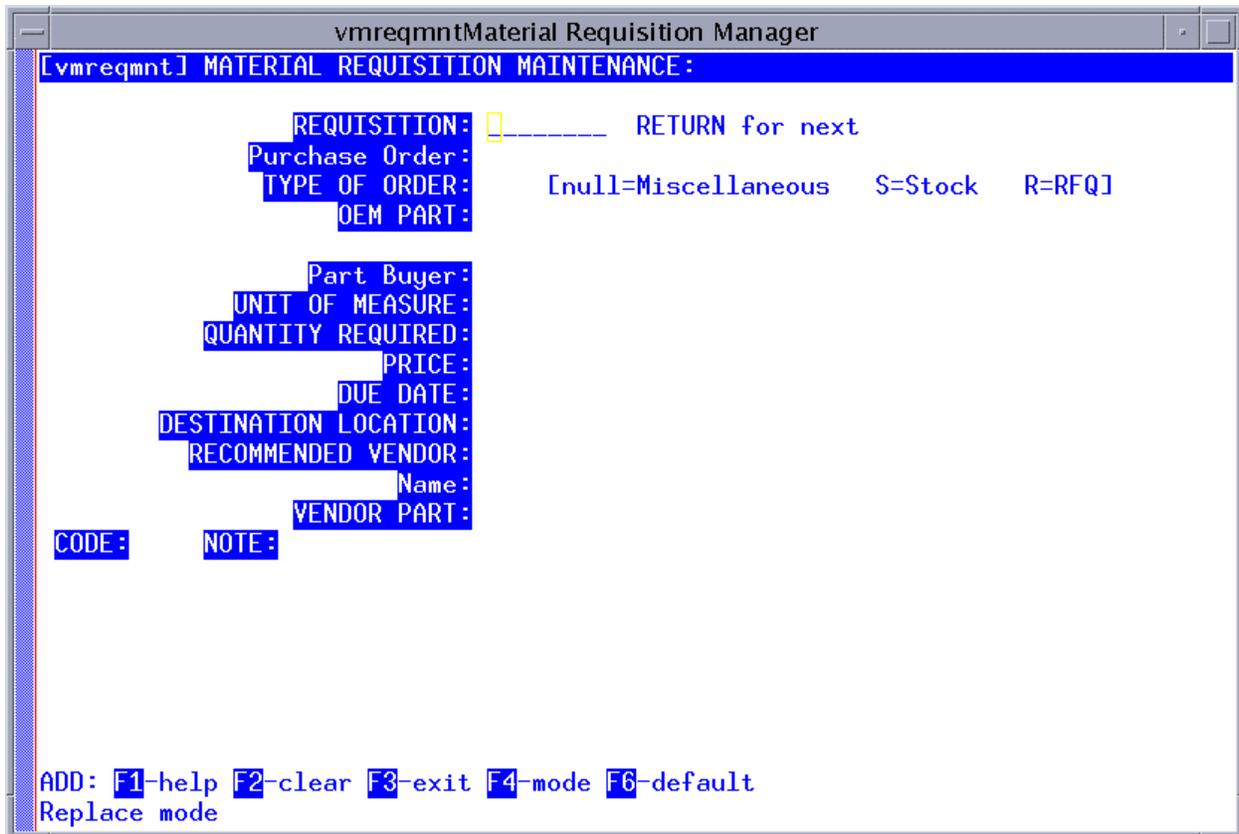

The following pages describe the screens, the data, and the process for entering, modifying, and managing purchase order and property receiving data. Each selection item on the PO/RECEIVING menu is discussed, in order, as it appears on the menu screen. This discussion include sub menus, screens, and automatic triggers, if any, associated with the individual screen or field.

#### **4.3.4.2.6.1 Material Requisition Manager**

The Material Requisition Manager initiates the process of requisitioning consumables or spares. This requisition requires approval of the procurement manager before it turns into a purchase order.

##### **4.3.4.2.6.1.1 Material Requisition Manager Screens**

This screen permits users to enter requisitions of consumables or spares manually for transmission to buyers. This requisition requires approval of the procurement manager before it turns into a purchase order. Once approved, ILM will automatically generate a PO for the user.

**Figure 4.3.4-38. Material Requisition Manager CHUI**

Unique Bottom Line Commands:

ADD MODE: F1,F2,F3,F4,F6

**/Add** Add (store) the displayed record (data on the screen) to the data base.

**/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.

**/Delete** Delete the displayed record (data on the screen) from the data base.

**/Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base

**/Modify** Modify (store) the displayed record (data on the screen) in the data base.

**/Note** Add a note to the displayed record (data on the screen).

**/Sort** Sort on the selected field of the displayed record (data on the screen).

**/Zoom** Display a list of all the values of the selected field in the data base.

**View** Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-38. Material Requisition Manager Machine Field Descriptions**

Field Name	Data Type	Size	Description
LAST & CURRENT REQUISITION	String	35	indicate the last requisition entered and the current requisition you are reviewing.
PURCHASE ORDER	String	10	This is the actual Purchase Order number. The system will generate the next available number for you when you press <RETURN>. The operator can use the Purchase Order Modification screen to change the PO number after the actual PO number is obtained from Purchasing
TYPE OF ORDER	String	1	allows you to select the appropriate code this requisition:
TYPE OF ORDER, NULL	String	1	Null = Miscellaneous
TYPE OF ORDER, STOCK	String	1	S = Stock
TYPE OF ORDER, R	String	1	R = RFQ
OEM PART	String	34	This field is the OEM part number reflected from the EIN record of the child.
PART BUYER	String	6	is filled by ILM using you user ID
UNIT OF MEASURE	String	2	is the measure of the item you are buying. Use the /Zoom screen to assist your selection
QUANTITY REQUIRED	Floating	9.1	is the total number of items you wish to order.
PRICE	Floating	11.4	is the total price of each item.
DUE DATE	Date	2	is calculated by ILM for you (Today plus 45 days.)
DESTINATION LOCATION	String	6	Enter the destination location (DAAC) where the item is being transferred to.
RECOMMENDED VENDOR	String	6	selects the vendor code and is your opportunity to select your vendor of choice for this item. Use the /Zoom screen to assist your selection. ILM fills in the name fields for you when you make this selection.
Name	String	30	This field is the user's name as reflected from the user file.
VENDOR PART	String	16	is the actual vendor part number if it differs from the OEM part number entered earlier on this screen.
CODE	String	2	The administrator can set up codes for their specific needs if desired.
NOTE	String	60	This field is used to enter a 60 character note attached to this item.

Remember to press <ENTER> after each field.

#### 4.3.4.2.6.2 Material Requisition Master

Material Requisition Master provides buyers with the capability to examine all manual and system generated requisitions for the placement of Purchase Orders with Vendors.

##### 4.3.4.2.6.2.1 Material Requisition Master Screen

**Figure 4.3.4-39. Material Requisition Master CHUI**

This screen is the master for buyers to examine all manual and system generated requisitions for the placement of Purchase Orders with Vendors.

Unique Bottom Line Commands:

- /Add Add (store) the displayed record (data on the screen) to the data base.
- /Copy Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Delete Delete the displayed record (data on the screen) from the data base.
- /Insert Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify Modify (store) the displayed record (data on the screen) in the data base.
- /Note Add a note to the displayed record (data on the screen).
- /Sort Sort on the selected field of the displayed record (data on the screen).
- View Toggles between “form” or record display and “table” or list display.

Please consult the XRP-II Purchasing Manual for details of use and the fields on this screen.

**Table 4.3.4-39. Material Requisition Master Machine Field Descriptions  
(1 of 2)**

Field Name	Data Type	Size	Description
LAST & CURRENT REQUISITION	String	35	indicate the last requisition entered and the current requisition you are reviewing.
PURCHASE ORDER	String	10	This is the actual Purchase Order number. The system will generate the next available number for you when you press <RETURN>. The operator can use the Purchase Order Modification screen to change the PO number after the actual PO number is obtained from Purchasing
TYPE OF ORDER	String	1	allows you to select the appropriate code this requisition:
TYPE OF ORDER, NULL	String	1	Null = Miscellaneous
TYPE OF ORDER, STOCK	String	1	S = Stock
TYPE OF ORDER, R	String	1	R = RFQ
PERSON REQUESTING	String	8	Name of person completing the requisition. Automatically filled in from the operator's UserID.
OEM PART	String	34	This field is the OEM part number reflected from the EIN record of the child.
PART BUYER	String	6	is filled by ILM using you user ID
UNIT OF MEASURE	String	2	is the measure of the item you are buying. Use the /Zoom screen to assist your selection
QUANTITY REQUIRED	Floating	9.1	is the total number of items you wish to order.
PRICE	Floating	11.4	is the total price of each item.
DUE DATE	Date	2	is calculated by ILM for you (Today plus 45 days.)
DESTINATION LOCATION	String	6	Enter the destination location (DAAC) where the item is being transferred to.
RECOMMENDED VENDOR	String	6	selects the vendor code and is your opportunity to select your vendor of choice for this item. Use the /Zoom screen to assist your selection. ILM fills in the name fields for you when you make this selection.

**Table 4.3.4-39. Material Requisition Master Machine Field Descriptions  
(2 of 2)**

Field Name	Data Type	Size	Description
Name	String	30	This field is the user's name as reflected from the user file.
VENDOR PART	String	16	is the actual vendor part number if it differs from the OEM part number entered earlier on this screen.
CODE	String	2	The administrator can set up codes for their specific needs if desired.
NOTE	String	60	This field is used to enter a 60 character note attached to this item.

Remember to press <ENTER> after each field.

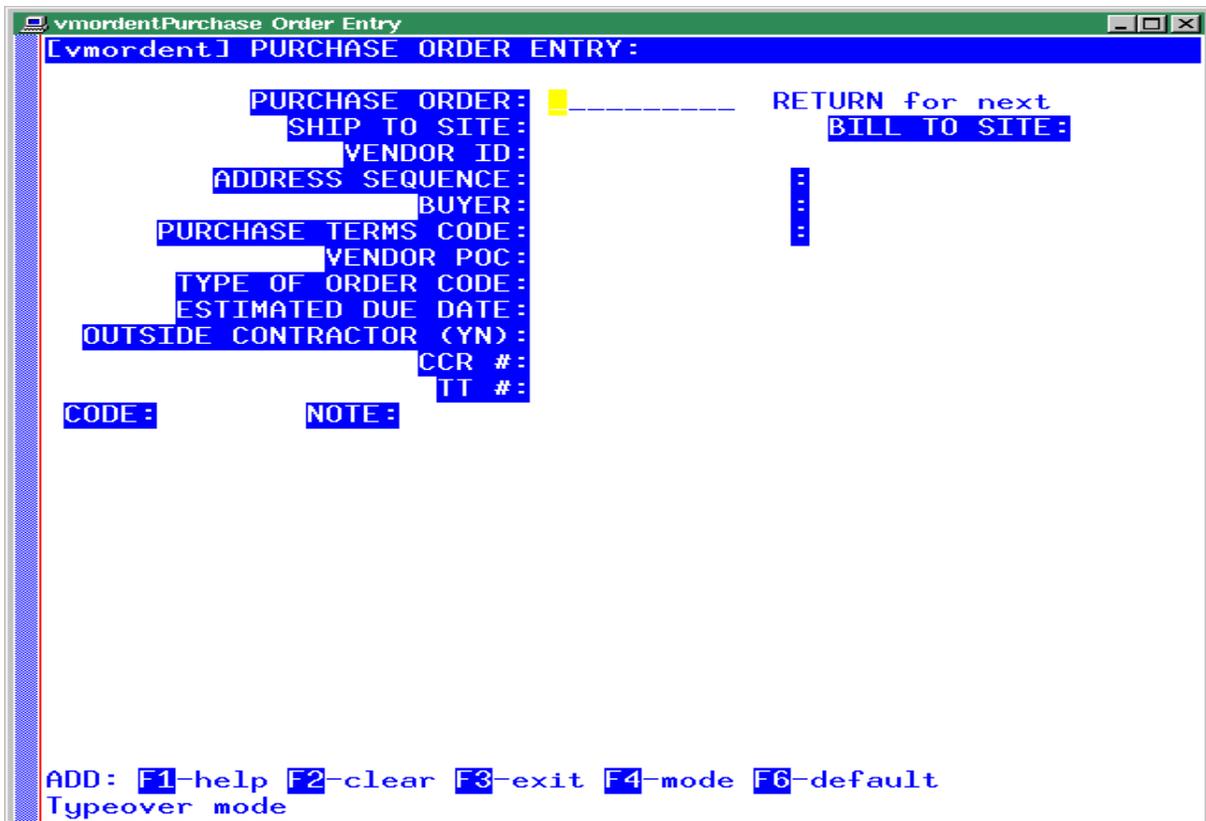

#### **4.3.4.2.6.3 Purchase Order Entry**

Purchase Order Entry is the entry point for all Purchase Orders. There are 2 screens for the Purchase Order Entry.

##### **4.3.4.2.6.3.1 Purchase Order Entry Screen**

This screen is the entry point for all Purchase Orders. The screen is presented to the operator in ADD mode. When the header record has been completed, the operator will invoke the items page to add line items for the material being purchased.

Occasionally, there may be a need to enter a new PO using the ILM. The following information is designed to make you data entry task easier. Below, is a listing of fields found on the Purchase Order Entry Form and its child screen PO Component Entry Screen.

**Figure 4.3.4-40. Purchase Order Entry CHUI**

Unique Bottom Line Commands:

ADD MODE: F1,F2,F3,F4,F6

**/Add** Add (store) the displayed record (data on the screen) to the data base.

**/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.

**/Delete** Delete the displayed record (data on the screen) from the data base.

**/Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base

**/Modify** Modify (store) the displayed record (data on the screen) in the data base.

**/Note** Add a note to the displayed record (data on the screen).

**/Sort** Sort on the selected field of the displayed record (data on the screen).

**/Items** This command invokes the items page of the structure manager to allow the user to add or modify children EIN items.

**View** Toggles between “form” or record display and “table” or list display.

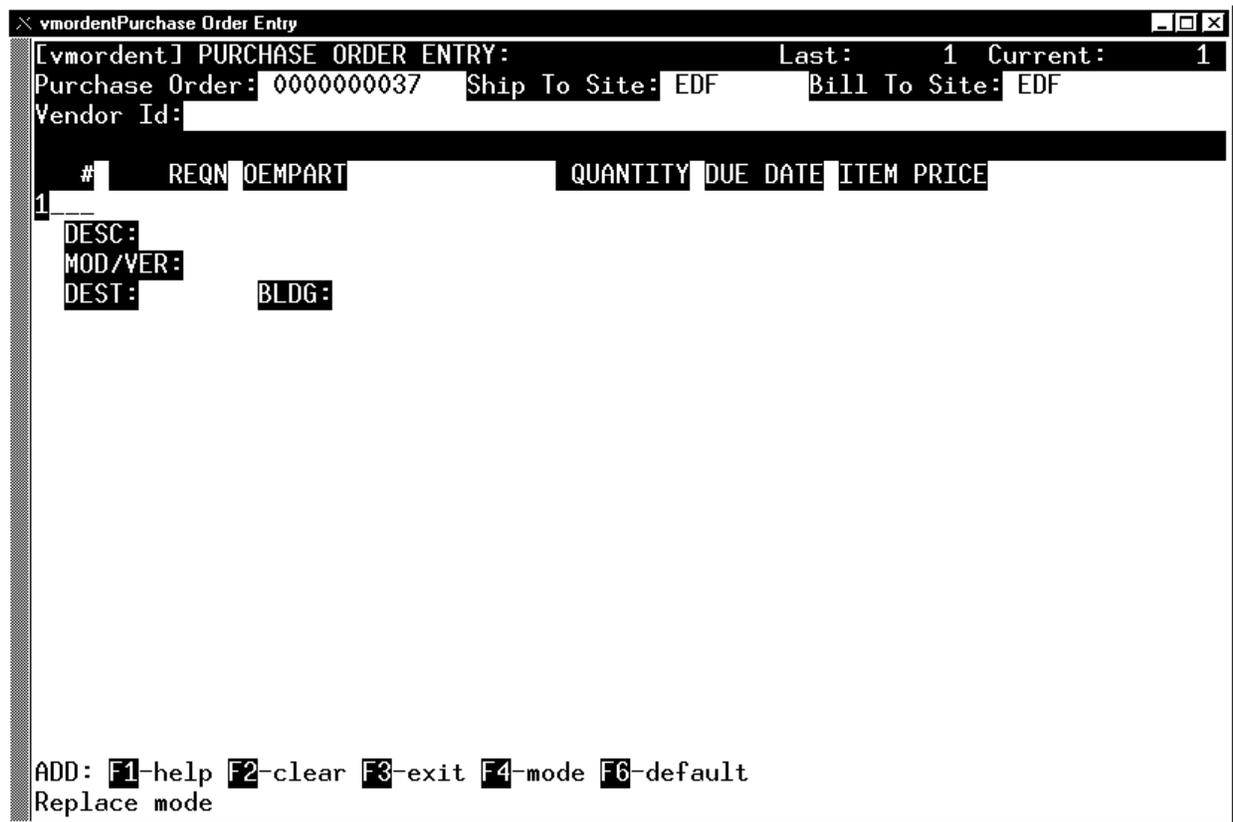

**Table 4.3.4-40. Purchase Order Entry Field Descriptions**

Field Name	Data Type	Size	Description
PURCHASE ORDER	String	10	This is the actual Purchase Order number. The system will generate the next available number for you when you press <RETURN>. The operator can use the Purchase Order Modification screen to change the PO number after the actual PO number is obtained from Purchasing
SHIP TO SITE	String	6	Enter the site code for the material to be shipped to. The default is the current site. The operator may /Zoom to the Location table for other location codes.
BILL TO SITE	String	6	Enter the site code for the vendor to send the invoice. The operator may /Zoom to the Location table for other location codes.
VENDOR ID	String	6	Vendor id code of equipment being queried
BUYER	String	6	Enter the buyer ID. The operator may /Zoom to the buyer data base to obtain the appropriate value.
PURCHASE TERMS CODE	String	2	Enter the terms code for the PO.
VENDOR POC	String	30	Enter the name of the person designated as the point of contact at the vendor facility.
TYPE OF ORDER CODE	String	1	This field should always be left at the default of 'S'.
ESTIMATED DUE DATE	Date	2	Enter the estimated due date for the material being ordered.
OUTSIDE CONTRACTOR	String	1	This field should always be left at the default of 'Y'.
CCR #	String	30	Enter the applicable CCR number.
TT #	String	15	Enter the appropriate Trouble Ticket number if this PO is open because of a trouble ticket.
NOTE	String	60	This field is used to enter a 60 character note attached to this item.

Remember to press <ENTER> after each field.

#### **4.3.4.2.6.3.2 Item Page for Purchase Order Entry**

Selecting **Item** from the bottom line commands will display the following screen with purchase order item information.

**Figure 4.3.4-41. Item Page for Purchase Order Entry CHUI**

Unique Bottom Line Commands:

None.

**Table 4.3.4-41. Item Page for Purchase Order Entry Field Descriptions**

Field Name	Data Type	Size	Description
LAST & CURRENT	String	35	indicate the last requisition entered and the current requisition you are reviewing.
PURCHASE ORDER	String	10	This is the actual Purchase Order number. The system will generate the next available number for you when you press <RETURN>. The operator can use the Purchase Order Modification screen to change the PO number after the actual PO number is obtained from Purchasing
SHIP TO SITE	String	6	Enter the site code for the material to be shipped to. The default is the current site. The operator may /Zoom to the Location table for other location codes.
BILL TO SITE	String	6	Enter the site code for the vendor to send the invoice. The operator may /Zoom to the Location table for other location codes.
VENDOR ID	String	6	Vendor id code of equipment being queried
# (PO)	Number	4	Count of entries on the Item Page
REQN (PO)	Number	8	is the requisition number assigned to this Purchase Order. It automatically generated when the user presses the <ENTER> key.
OEMPART (PO)	String	34	is the manufacturer's part number of the item(s) you are ordering. The field, DESC, is automatically filled with the selected part's description when you make this selection. Use the /Zoom screen to assist your selection
QUANTITY (PO)	Floating	10.1	Number of items on order.
DUE DATE	Date	2	is calculated by ILM for you (Today plus 45 days.)
ITEM PRICE	Floating	11.4	This field is the purchase cost of the item. Same as COST.
DESC (PO)	String	30	is an auto filled field based upon your selection of the OEM PART number
MOD/VER (PO)	String	24	This field is used to enter the actual Model and or Version of the item. If the user had chosen a known OEM Part, this field will be written with the information from this file.
DEST (PO)	String	6	This field is the destination location or site code where the parent and children are being shipped to. The user may /Z, Zoom at this field to display the location data base.
BDLG (PO)	String	6	This field is used to designate the building number within the site where the item is.

Remember to press <ENTER> after each field.

#### **4.3.4.2.6.3.3 Entering a Purchase Order**

1. Press enter for the PO Number. This number must begin with the first three characters of the site name, e.g. EDF. If this is not so, see the ILM Administrator.
2. Enter the key data elements by selecting the appropriate item from either the pop-up screen or by /Zooming to an additional screen of information.

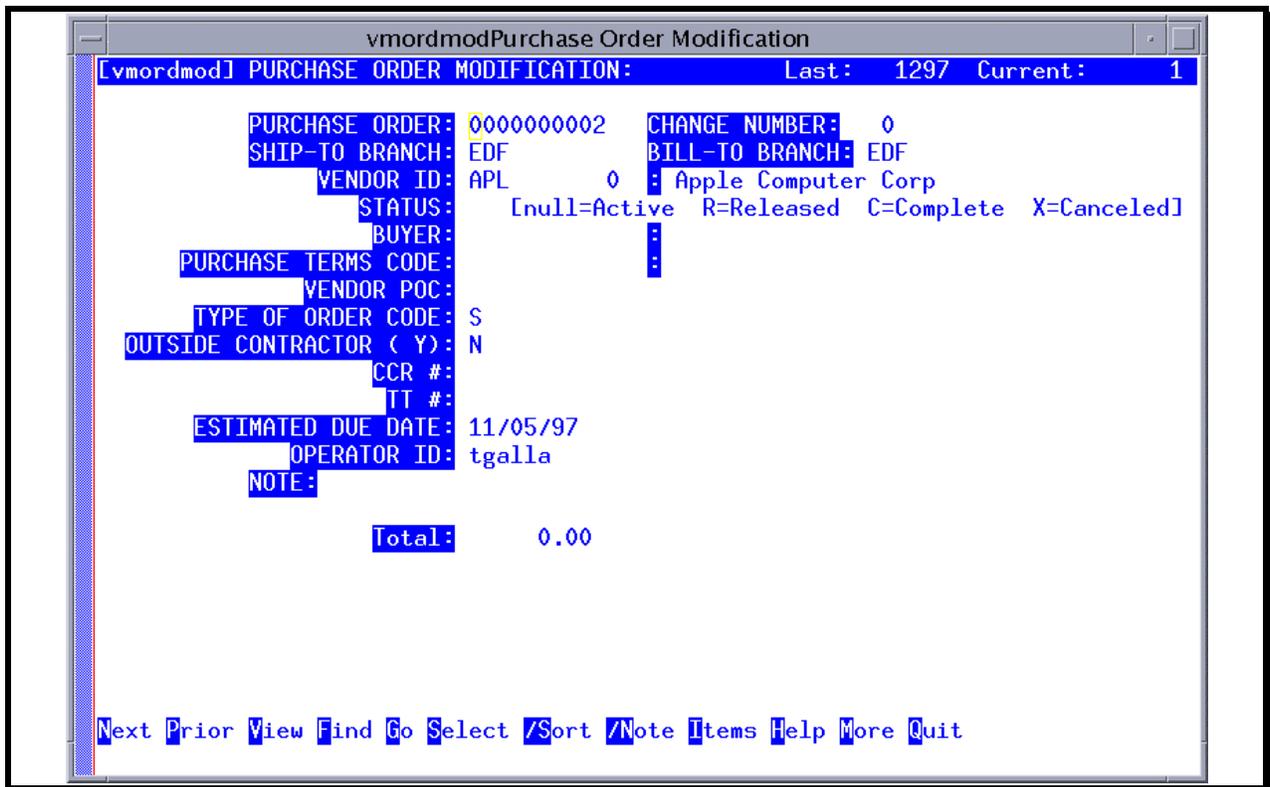

3. Press **F3** to exit Add mode.
4. Press **< I >** to navigate o the Items page.
5. Press enter to obtain the next sequential line number.
6. **/Zoom** to the Requisition or OEM Part as appropriate, enter the quantity, due date, price, destination location, and building.
7. Continue as required for more line items.
8. When complete, press **F3** until the menu reappears.

#### 4.3.4.2.6.4 Purchase Order Modification

Purchase Order Modification provides buyers with the ability modify existing PO information and the individual item records associated a PO.

##### 4.3.4.2.6.4.1 Purchase Order Modification Screens

This screen provides buyers with the ability modify existing PO information and the individual item records associated a PO.

**Figure 4.3.4-42. Purchase Order Modification CHUI**

Unique Bottom Line Commands:

**/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.

**/Modify** Modify (store) the displayed record (data on the screen) in the data base.

**/Note** Add a note to the displayed record (data on the screen).

**/Sort** Sort on the selected field of the displayed record (data on the screen).

**/Items** This command invokes the items page of the structure manager to allow the user to add or modify children EIN items.

**View** Toggles between “form” or record display and “table” or list display.

This screen is similar to the PO entry screen.

**Table 4.3.4-42. Purchase Order Modification Field Descriptions (1 of 2)**

Field Name	Data Type	Size	Description
PURCHASE ORDER	String	10	This is the actual Purchase Order number. The system will generate the next available number for you when you press <RETURN>. The operator can use the Purchase Order Modification screen to change the PO number after the actual PO number is obtained from Purchasing
CHANGE NUMBER	Number	3	Enter the numeric value of the change number for PO's that have experienced modifications from the original entry date.
SHIP TO BRANCH	String	6	Enter the site code for the material to be shipped to. The default is the current site. The operator may /Zoom to the Location table for other location codes.
BILL TO BRANCH	String	6	Enter the site code for the vendor to send the invoice. The operator may /Zoom to the Location table for other location codes.
VENDOR ID	String	6	Vendor id code of equipment being queried
STATUS	String	1	Status code for TERMS CODE
BUYER	String	6	Enter the buyer ID. The operator may /Zoom to the buyer data base to obtain the appropriate value.
PURCHASE TERMS CODE	String	2	Enter the terms code for the PO.
VENDOR POC	String	30	Enter the name of the person designated as the point of contact at the vendor facility.
TYPE OF ORDER CODE	String	1	This field should always be left at the default of 'S'.
ESTIMATED DUE DATE	Date	2	Enter the estimated due date for the material being ordered.
OPERATOR ID	String	8	This field is the login ID of the user who added this item to the data base and is not modifiable by the user.
OUTSIDE CONTRACTOR	String	1	This field should always be set to 'Y'. The default value is 'N'.

**Table 4.3.4-42. Purchase Order Modification Field Descriptions (2 of 2)**

Field Name	Data Type	Size	Description
CCR #	String	30	Enter the applicable CCR number.
TT #	String	15	Enter the appropriate Trouble Ticket number if this PO is open because of a trouble ticket.
NOTE	String	60	This field is used to enter a 60 character note attached to this item.
TOTAL	Number	10	This is the system calculated value of the order.

Remember to press <ENTER> after each field.

#### **4.3.4.2.6.4.2 Modifying a Purchase Order**

Perform a “Find” or a “Select” to locate the desired PO. For more information on using the FIND or SELECT bottom line commands, review Appendix A, Bottom Line Commands. You may also press <V>, VIEW and select for the list on the screen. Simply move the cursor to the desired PO and press <V> again. ILM will return you to the modification screen

To actually alter data elements enter </M>. This places you into modify mode. Alter any data elements on the PO header screen as required. Remember, press enter after each field alteration or ILM will not accept the change.

When modifications are complete, press <F3> to exit modify mode

To alter individual line item parts of the PO press <I> to to move to the ITEMS screen. Review the line items and move the cursor to the line item you want to modify. Again, press </M> to enter modification mode and alter data as required.

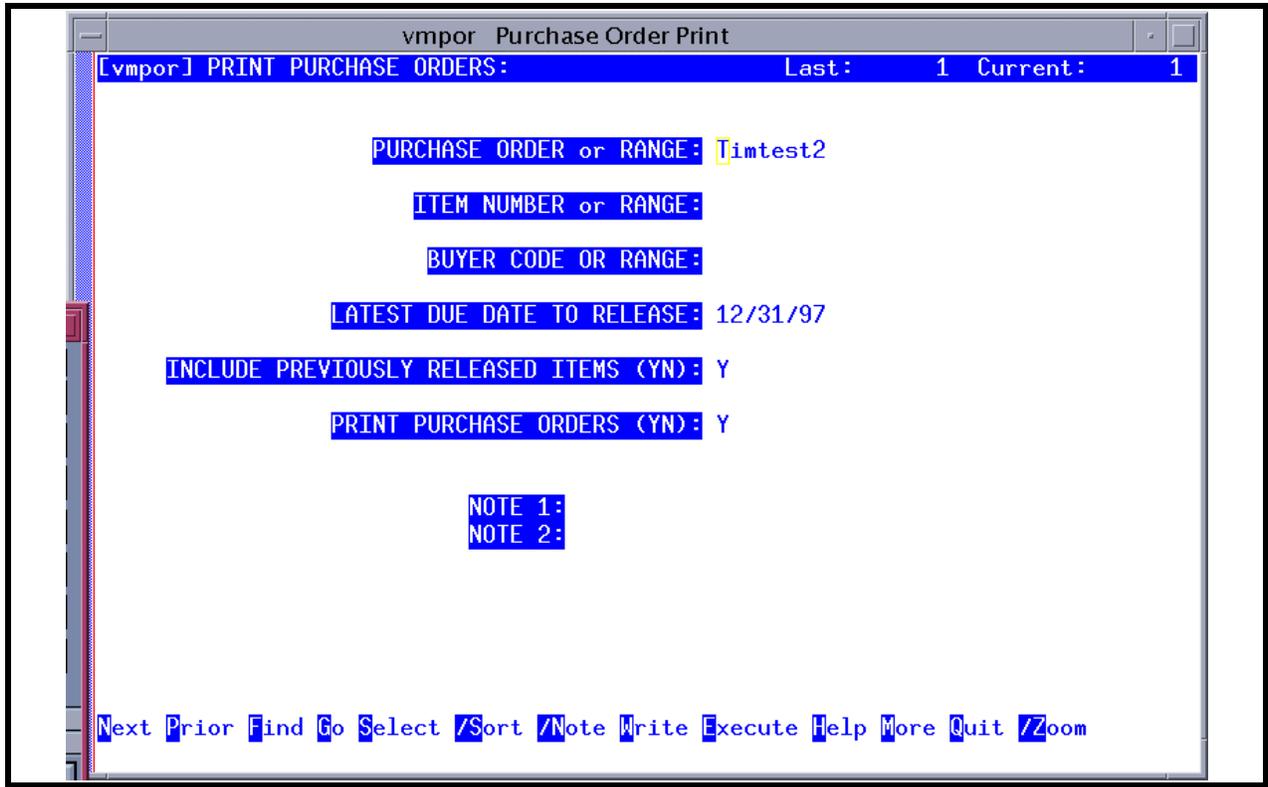

When modifications are complete, press <F3> to exit modify mode

#### **4.3.4.2.6.5 Purchase Order Print**

Purchase Order Print prints the Purchase Order document for subsequent mailing to the vendor and/or copy to the receiving dock.

##### **4.3.4.2.6.5.1 Purchase Order Print Screens**

This screen prints the Purchase Order document for subsequent mailing to the vendor and/or copy to the receiving dock. You may consult HTG’s XRP-II Purchasing Management Reference Manual, section 2.6.16, pages 14, for use of the /R, Report Command. This command provides you a methodology of obtaining quick reports from ILM.

**Figure 4.3.4-43. Purchase Order Print CHUI**

Unique Bottom Line Commands:

- /Add** Add (store) the displayed record (data on the screen) to the data base.
- /Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Delete** Delete the displayed record (data on the screen) from the data base.
- /Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify** Modify (store) the displayed record (data on the screen) in the data base.
- /Note** Add a note to the displayed record (data on the screen).
- /Sort** Sort on the selected field of the displayed record (data on the screen).
- /Zoom** Display a list of all the values of the selected field in the data base.
- Execute** This command invokes the appropriate process and prints a report on the results.
- Write** Saves the current record to a file designated by the operator.

Please consult the HTG’s XRP-II Purchasing Management Reference Manual, Section 5.3, page 35 & 36, for details of use and the fields on this screen.

**Table 4.3.4-43. Purchase Order Print Field Descriptions**

Field Name	Data Type	Size	Description
PURCHASE ORDER or RANGE	String	10	This is the actual Purchase Order number. The system will generate the next available number for you when you press <RETURN>. The operator can use the Purchase Order Modification screen to change the PO number after the actual PO number is obtained from Purchasing
ITEM NUMBER or RANGE	String	8	Item number(s) to report.
BUYER CODE or RANGE	String	2	Enter the buyer ID. The operator may /Zoom to the buyer data base to obtain the appropriate value.
LATEST DUE DATE to RELEASE	String	8	is calculated by ILM for you (Today plus 45 days.)
INCLUDE PREVIOUSLY RELEASED ITEMS (YN)	String	1	Include (Y) items covered in the selected POs that have a RELEASE CODE showing the item is released. Else (N) display only unreleased items.
PRINT PURCHASE ORDERS (YN)	String	1	Print (Y) the displayed information. Else (N) do not print.
NOTE 1 and NOTE 2	String	60	Enter any notes to appear on the header of the report.

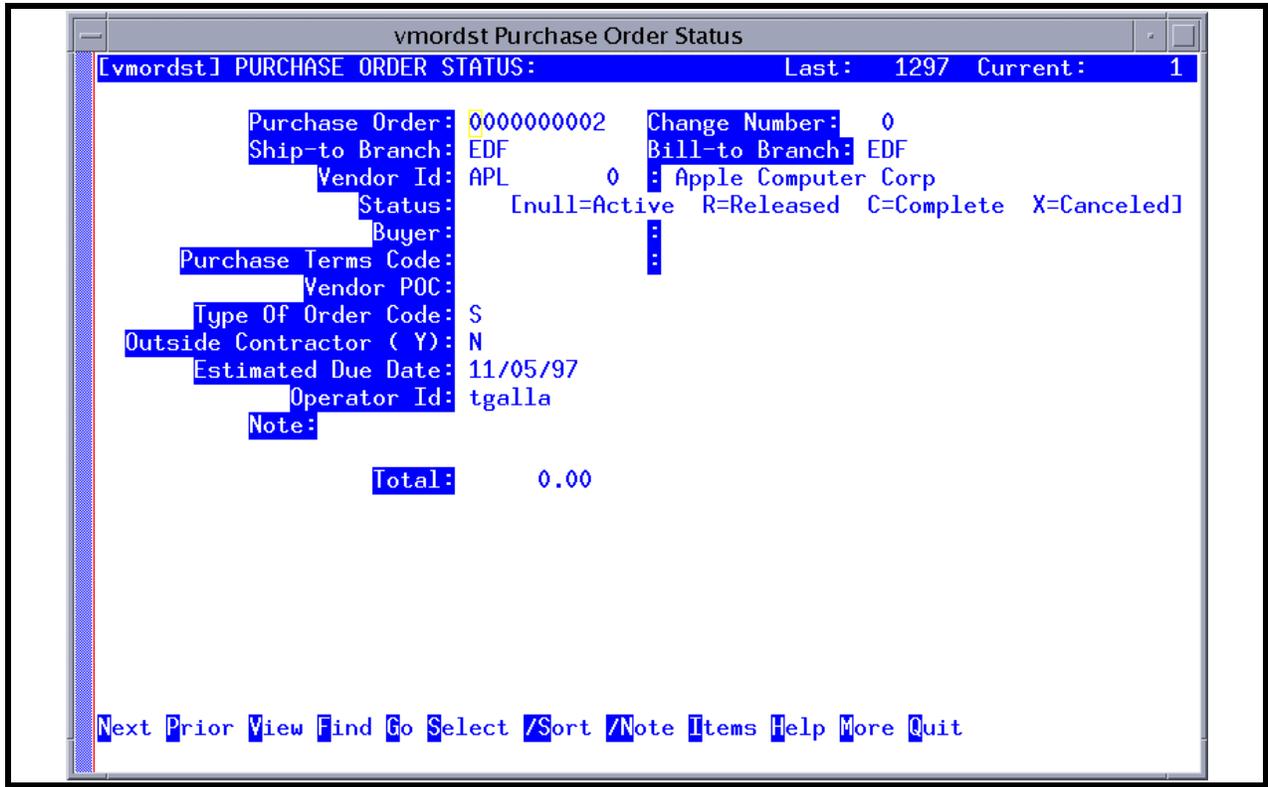

Remember to press <ENTER> after each field.

#### **4.3.4.2.6.6 Purchase Order Status**

Purchase Order Status provides an inquiry into the PO file only.

##### **4.3.4.2.6.6.1 Purchase Order Status Screens**

This screen provides an inquiry into the PO file only.

**Figure 4.3.4-44. Purchase Order Status CHUI**

Unique Bottom Line Commands:

**/Note** Add a note to the displayed record (data on the screen).

**/Sort** Sort on the selected field of the displayed record (data on the screen).

**/Items** This command invokes the items page of the structure manager to allow the user to add or modify children EIN items.

**View** Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-44. Purchase Order Status Field Descriptions**

Field Name	Data Type	Size	Description
PURCHASE ORDER	String	10	This is the actual Purchase Order number. The system will generate the next available number for you when you press <RETURN>. The operator can use the Purchase Order Modification screen to change the PO number after the actual PO number is obtained from Purchasing
CHANGE NUMBER	Number	3	Enter the numeric value of the change number for PO's that have experienced modifications from the original entry date.
SHIP TO BRANCH	String	6	Enter the site code for the material to be shipped to The default is the current site. The operator may /Zoom to the Location table for other location codes.
BILL TO BRANCH	String	6	Enter the site code for the vendor to send the invoice. The operator may /Zoom to the Location table for other location codes.
VENDOR ID	String	6	Vendor id code of equipment being queried
STATUS	String	1	Status code for TERMS CODE
BUYER	String	6	Enter the buyer ID. The operator may /Zoom to the buyer data base to obtain the appropriate value.
PURCHASE TERMS CODE	String	2	Enter the terms code for the PO.
VENDOR POC	String	30	Enter the name of the person designated as the point of contact at the vendor facility.
TYPE OF ORDER CODE	String	1	This field should always be left at the default of 'S'.
OUTSIDE CONTRACTOR	String	1	This field should always be left at the default of 'Y'.set to 'Y'. The default value is 'N'.
ESTIMATED DUE DATE	Date	2	Enter the estimated due date for the material being ordered.
OPERATOR ID	String	8	This field is the login ID of the user who added this item to the data base and is not modifiable by the user.
NOTE	String	60	This field is used to enter a 60 character note attached to this item.
TOTAL	Number	10	This is the system calculated value of the order.

Remember to press <ENTER> after each field.

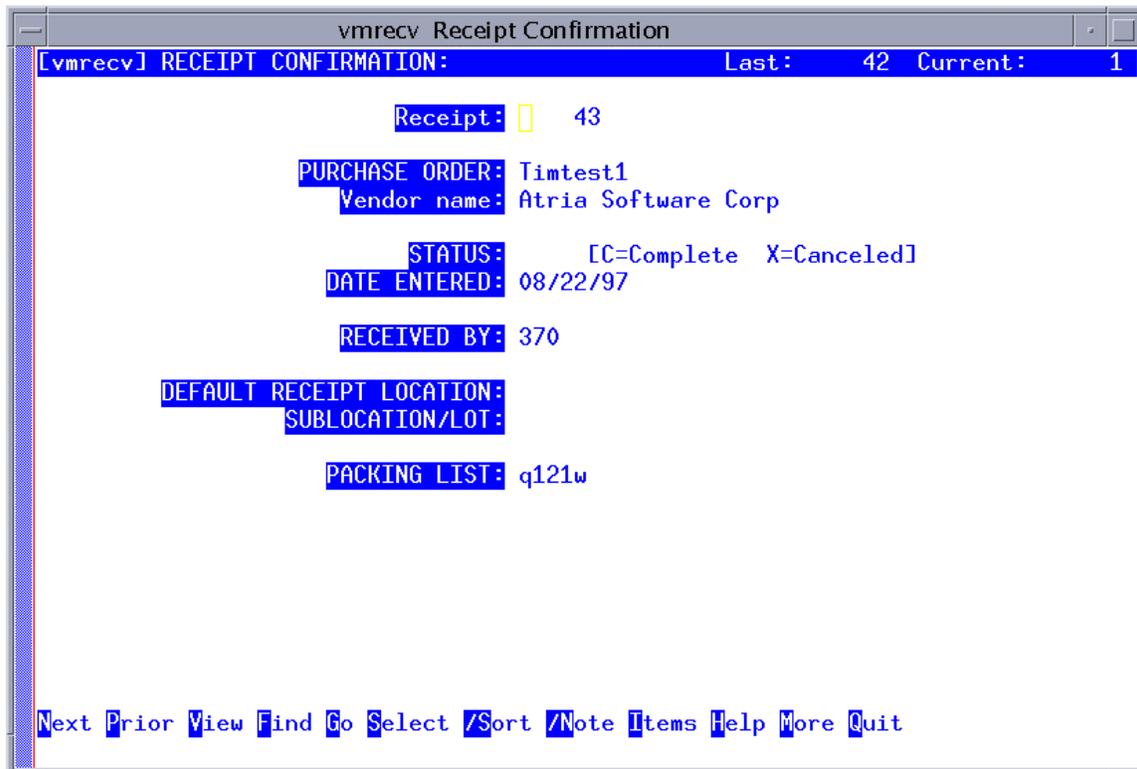

#### **4.3.4.2.6.7 Receipt Confirmation**

Receipt Confirmation provides the receiving requirements for open PO's and is the entry point for assignment of EIN numbers into the system.

##### **4.3.4.2.6.7.1 Receipt Confirmation Screens**

This screen provides the receiving requirements for open PO's and is the entry point for assignment of EIN numbers into the system. The operator should always permit the system to

assign the next sequential system assigned receiving sequence number, enter the required fields, and then invoke the Items screens to display all open line items on the entered PO. The operator will enter the actual quantities of each line item in this screen and then exit. Upon exit, the system will query the master record for each item and, if the item has been previously designated as a consumable or spare item, the transaction is performed. If not, the operator is asked if the item is consumable or spare. If the operator replies 'N' for no, the system then displays the EIN entry screen for assignment of EIN numbers

**Figure 4.3.4-45. Receipt Confirmation CHUI**

Unique Bottom Line Commands:

**/Add** Add (store) the displayed record (data on the screen) to the data base.

**/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.

**/Delete** Delete the displayed record (data on the screen) from the data base.

**/Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base

**/Modify** Modify (store) the displayed record (data on the screen) in the data base.

**/Note** Add a note to the displayed record (data on the screen).

**/Sort** Sort on the selected field of the displayed record (data on the screen).

**View** Toggles between “form” or record display and “table” or list display.

**/Items** This command invokes the items page of the structure manager to allow the user to add or modify children EIN items.

Please consult the XRP-II Purchasing Manual for details of use and the fields on this screen.

**Table 4.3.4-45. Receipt Confirmation Field Descriptions**

Field Name	Data Type	Size	Description
RECEIPT	Number	6	Number assigned to order during receipt process
PURCHASE ORDER (requisition)	String	10	is the PO # associated with this requisition
Vendor name	String	35	Vendor name on the PO
STATUS	String	1	Status code for TERMS CODE
Date Entered	Date	2	This field is a system assigned date when the record was added to the data base and not modifiable by the user.
RECEIVED BY	String	4	User Id code of the operator entering this receipt.
DEFAULT RECEIPT LOCATION	String	6	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
SUBLOCATION/ LOT	String	10	Additional identification of the receipt location.
PACKING LIST	String	20	Tracking Identifier/ ID of the packing list included in the received shipment.

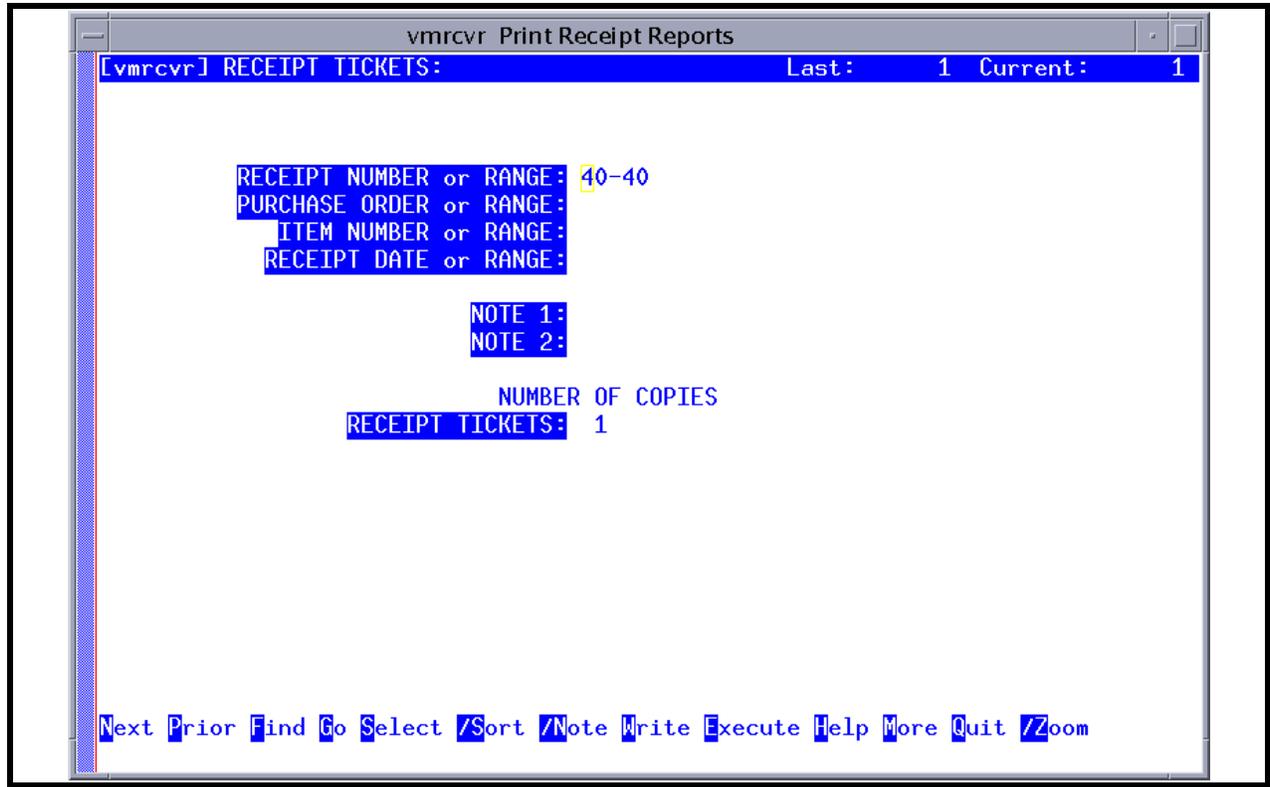

Remember to press <ENTER> after each field.

#### **4.3.4.2.6.8 Print Receipt Reports**

Print Receipt Reports provides ability to print past receipt reports.

##### **4.3.4.2.6.8.1 Print Receipt Reports Screens**

This screen provides ability to print past receipt reports.

**Figure 4.3.4-46. Print Receipt Reports CHUI**

Unique Bottom Line Commands:

- /Add** Add (store) the displayed record (data on the screen) to the data base.
- /Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Delete** Delete the displayed record (data on the screen) from the data base.
- /Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify** Modify (store) the displayed record (data on the screen) in the data base.
- /Note** Add a note to the displayed record (data on the screen).
- /Sort** Sort on the selected field of the displayed record (data on the screen).
- /Zoom** Display a list of all the values of the selected field in the data base.
- Execute** This command invokes the appropriate process and prints a report on the results.
- Write** Saves the current record to a file designated by the operator.

**Table 4.3.4-46. Print Receipt Reports Field Descriptions**

Field Name	Data Type	Size	Description
RECEIPT NUMBER or RANGE	String	6	Receipt tracking number(s) to report.
PURCHASE ORDER or RANGE	String	10	This is the actual Purchase Order number. The system will generate the next available number for you when you press <RETURN>. The operator can use the Purchase Order Modification screen to change the PO number after the actual PO number is obtained from Purchasing
ITEM NUMBER or RANGE	String	8	Item number(s) to report.
RECEIPT DATE or RANGE	Date	2	Receipt date(s) to report.
NOTE 1 and NOTE 2	String	60	Enter any notes to appear on the header of the report.
NUMBER OF COPIES	String	1	Enter any number of copies of the report to print.

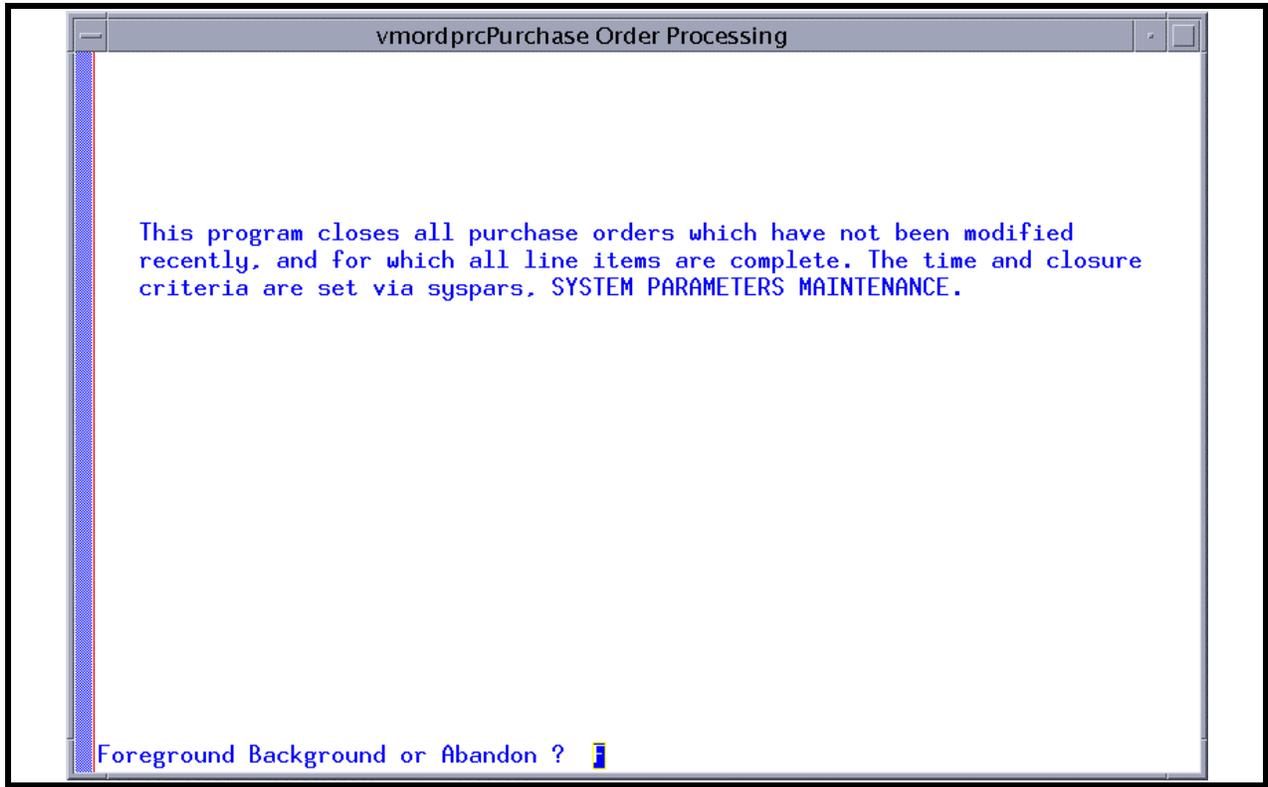

Remember to press <ENTER> after each field.

#### **4.3.4.2.6.9 Purchase Order Processing**

Purchase Order Processing examines all open PO's and closes those that meet established criteria.

##### **4.3.4.2.6.9.1 Purchase Order Processing Screens**

This function examines all open PO's and closes those that meet established criteria.

**Figure 4.3.4-47. Purchase Order Processing CHUI**

Unique Bottom Line Commands:

Foreground Background or Abandon? Foreground performs the process while connected to the display: no other XRP-II functions may be used until the process completes. Background performs the process and allow other XRP-II functions to be performed. Abandon terminates the Purchase Order Processing.

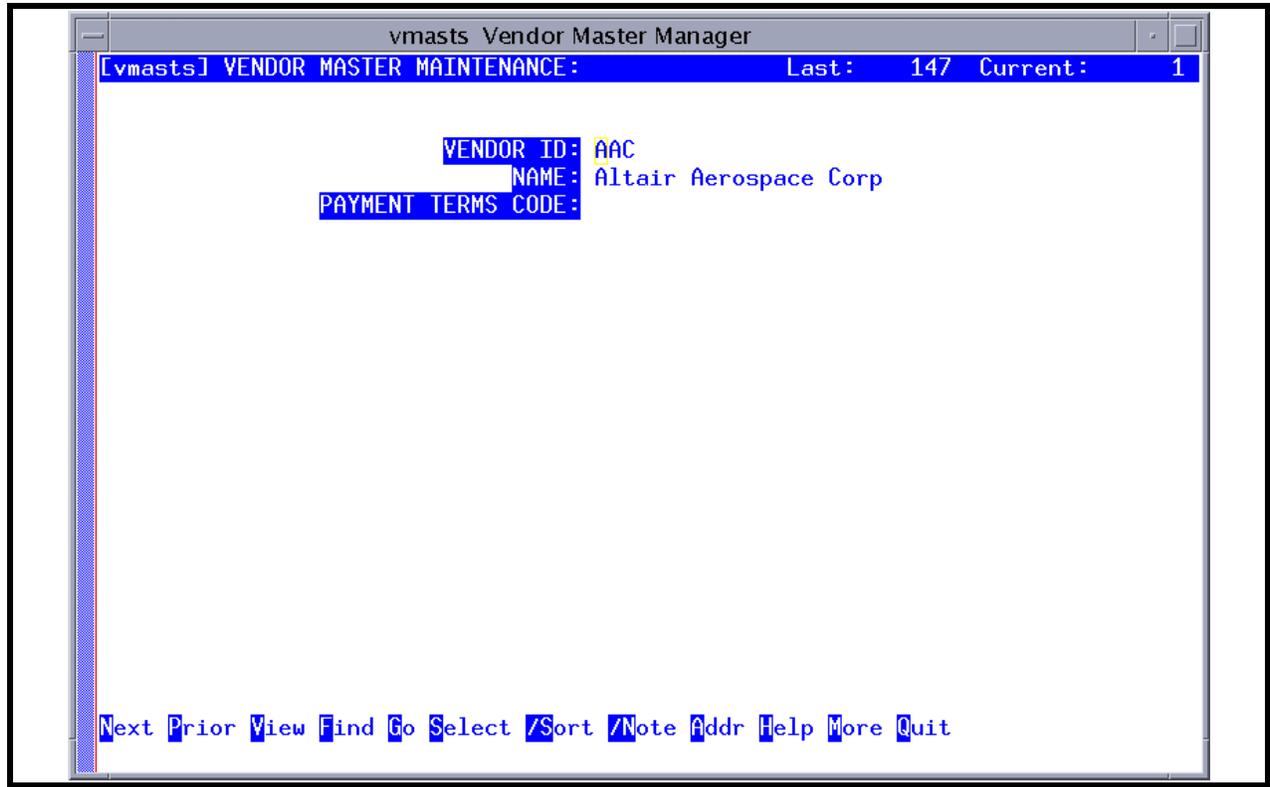

Remember to press <ENTER> after each field.

#### **4.3.4.2.6.10 Vendor Master Maintenance**

Vendor Master Maintenance permits the entry and modification of vendors and address data to the system.

##### **4.3.4.2.6.10.1 Vendor Master Maintenance Screens**

This screen permits the entry and modification of vendors and address data to the system. The user will enter or modify the fields as required on this screen then invoke the address page to perform any modifications required for the address data for each vendor.

**Figure 4.3.4-48. Vendor Master Maintenance CHUI**

Unique Bottom Line Commands:

**/Add** Add (store) the displayed record (data on the screen) to the data base.

**/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.

**/Delete** Delete the displayed record (data on the screen) from the data base.

**/Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base

**/Modify** Modify (store) the displayed record (data on the screen) in the data base.

**/Note** Add a note to the displayed record (data on the screen).

**/Sort** Sort on the selected field of the displayed record (data on the screen).

**Addr** This command invokes the vendor address maintenance screen to allow the user to update the vendor address information.

**View** Toggles between “form” or record display and “table” or list display.

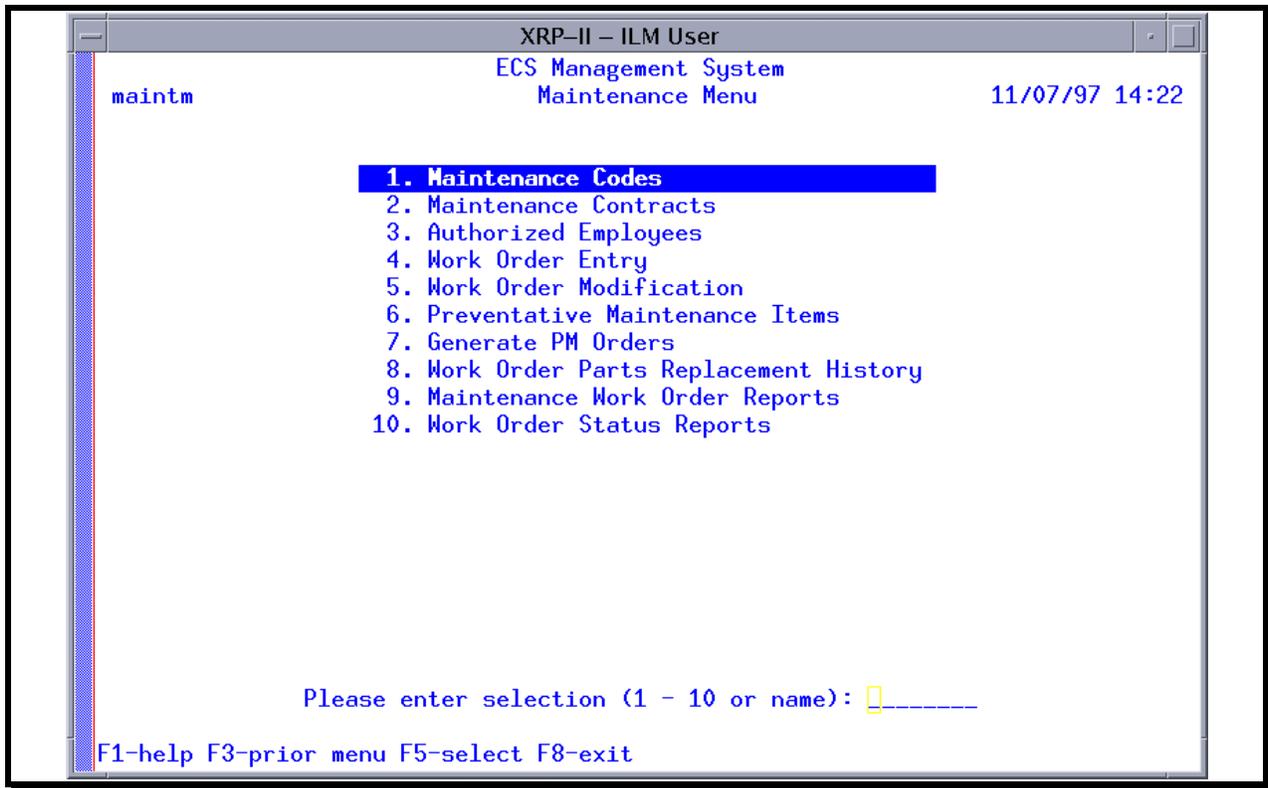

**Table 4.3.4-47. Vendor Master Maintenance Field Descriptions**

Field Name	Data Type	Size	Description
VENDOR ID	String	6	Vendor id code of equipment being queried
NAME	String	30	This field is the user's name as reflected from the user file.
PAYMENT TERMS CODE	String	2	Enter code for payment. The operator may /Zoom to the payment terms data base to choose the appropriate terms code.

Remember to press <ENTER> after each field.

#### 4.3.4.2.7 Maintenance Menu

The ILM Maintenance Menu is used to maintain the ILM database of maintenance oriented data, generate and track Work Orders for maintenance actions, and schedule preventative maintenance for appropriate items.

**Figure 4.3.4-49. Maintenance Menu CHUI**

The Maintenance menu is broken down into the following functions:

**Table 4.3.4-48. Maintenance Menu options**

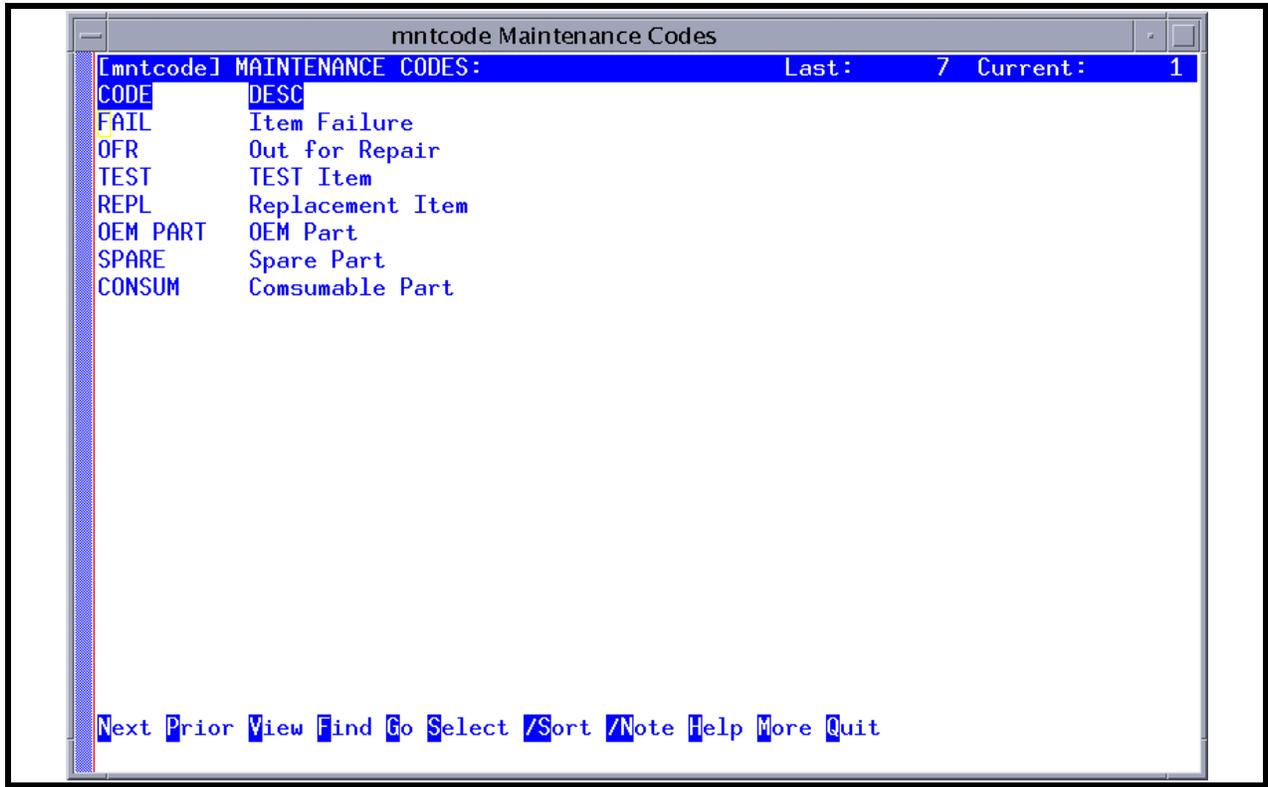

<b>Menu item</b>	<b>Function</b>	<b>Section</b>
Maintenance Codes	Provides the ability to establish failure codes and descriptions for use with repairs and replacements.	4.3.4.2.7.1
Maintenance Contracts	Provides the ability enter and maintain contracts numbers for repair contracts with vendors and suppliers.	4.3.4.2.7.2
Authorized Employees	Provides the ability enter and maintain employee codes for employees who have been permitted access to the vendor for repair notification.	4.3.4.2.7.3
Work Order Entry	Provides the ability enter Work Orders for repairs	4.3.4.2.7.4
Work Order Modification	Provides the ability to modify Work Orders for repairs	4.3.4.2.7.5
Preventative Maintenance Items	Provides the ability to designate which items in the EIN file should experience preventative maintenance.	4.3.4.2.7.6
Generate PM Orders	Provides the ability to generate Work Orders for item needing a PM.	4.3.4.2.7.7
Work Order Parts Replacement History	Generates a series of reports detailing parts replacement.	4.3.4.2.7.8
Maintenance Work Order Reports	Provides Work Order Reports for work done on selected machines.	4.3.4.2.7.9
Work Order Status Reports	Provides status reports on selected Work Orders.	4.3.4.2.7.10

**4.3.4.2.7.1 Maintenance Codes**

Maintenance Codes provides the ability to establish failure codes and descriptions for use with repairs and replacements.

**4.3.4.2.7.1.1 Maintenance Codes Screens**

This screen provides the ability to establish failure codes and descriptions for use with repairs and replacements.

**Figure 4.3.4-50. Maintenance Codes CHUI**

Unique Bottom Line Commands:

- /Add Add (store) the displayed record (data on the screen) to the data base.
- /Copy Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Delete Delete the displayed record (data on the screen) from the data base.
- /Insert Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify Modify (store) the displayed record (data on the screen) in the data base.
- /Note Add a note to the displayed record (data on the screen).
- /Sort Sort on the selected field of the displayed record (data on the screen).
- View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-49. Maintenance Codes Field Descriptions**

Field Name	Data Type	Size	Description
CODE (maintenance)	String	2	The user will enter any desired code (to be described in DESC) in this field.
DESC (maintenance)	String	30	Enter the description of the (maintenance) code.

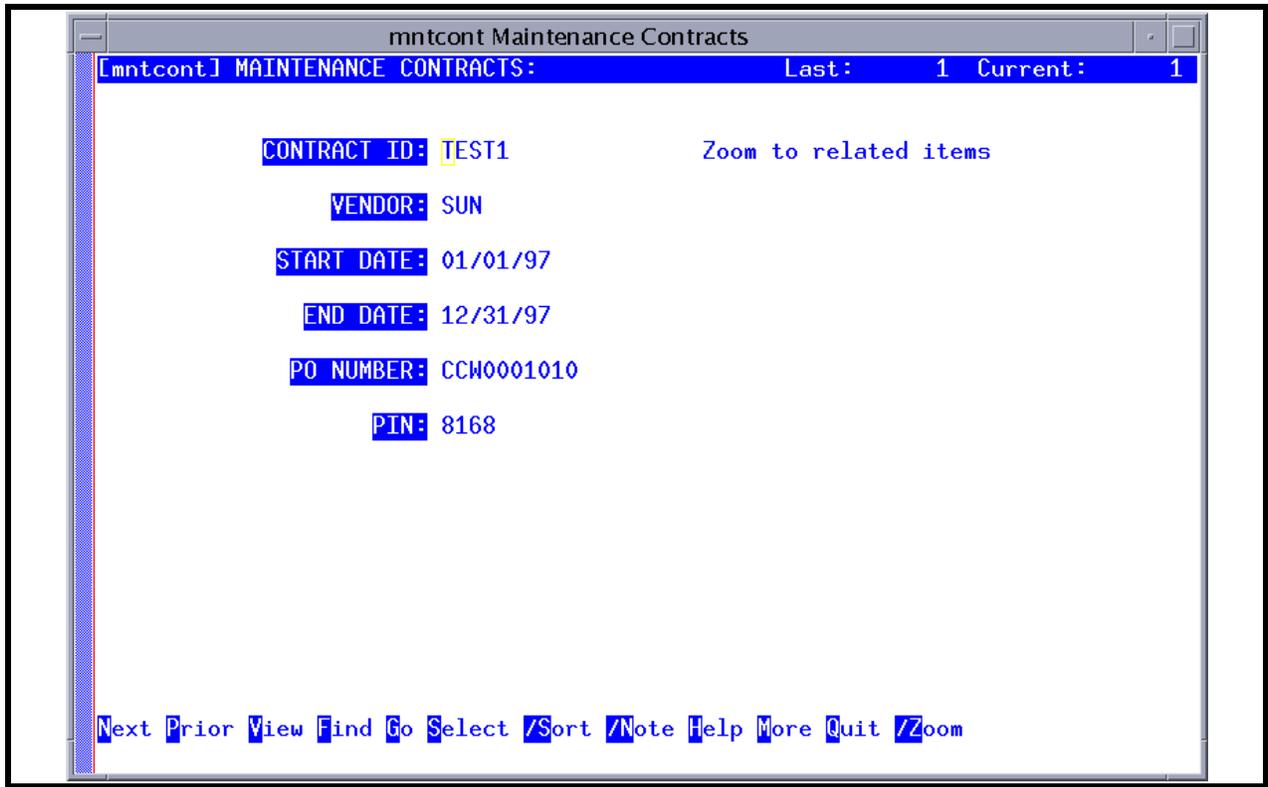

Remember to press <ENTER> after each field.

#### 4.3.4.2.7.2 Maintenance Contracts

Maintenance Contracts provides the ability enter and maintain contracts numbers for repair contracts with vendors and suppliers.

##### 4.3.4.2.7.2.1 Maintenance Contracts Screens

This screen provides the ability enter and maintain contracts numbers for repair contracts with vendors and suppliers. The contract number is the key field and this should be the actual number assigned by Purchasing or the Vendor. The operator may /Z, zoom from the contract number to view all EIN items designated as belonging to this contract.

**Figure 4.3.4-51. Maintenance Contracts CHUI**

Unique Bottom Line Commands:

**/Add** Add (store) the displayed record (data on the screen) to the data base.

**/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.

**/Delete** Delete the displayed record (data on the screen) from the data base.

**/Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base

**/Modify** Modify (store) the displayed record (data on the screen) in the data base.

**/Note** Add a note to the displayed record (data on the screen).

**/Sort** Sort on the selected field of the displayed record (data on the screen).

**/Zoom** Display a list of all the values of the selected field in the data base.

**View** Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-50. Maintenance Contracts Field Descriptions**

Field Name	Data Type	Size	Description
CONTRACT ID	String	15	The user will enter the actual ID as assigned by Purchasing or provided by the vendor.
VENDOR	String	6	This field is used to enter the Vendor code whom the item was purchased from. The user may zoom to the Vendor data file and pick the desired code. NOTE: This data must be previously entered using screen Vendor Master Maintenance (vmasts).
START DATE	Date	2	Enter the date the contract is to become effective.
END DATE	Date	2	Enter the date the contract will expire.
PO NUMBER	String	10	The user will enter the Purchase Order Number in this field for item selection when adding children items. The user will use the PO Number or the Vendor Code in the next field. For Receipts the field is filled in by the Receiving system and designates the Purchase Order the item was received against.
PIN	String	20	Enter the PIN number applicable for authorization for vendor contact.

Remember to press <ENTER> after each field.

#### **4.3.4.2.7.3 Authorized Employees**

Authorized Employees provides the ability enter and maintain employee codes for employees who have been permitted access to the vendor for repair notification.

##### **4.3.4.2.7.3.1 Authorized Employees Screens**

This screen provides the ability enter and maintain employee codes for employees who have been permitted access to the vendor for repair notification.

EMPL	CONTRACT NO	VENDOR	Last Name

**Figure 4.3.4-52. Authorized Employees CHUI**

Unique Bottom Line Commands:

- /Add** Add (store) the displayed record (data on the screen) to the data base.
- /Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Delete** Delete the displayed record (data on the screen) from the data base.
- /Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify** Modify (store) the displayed record (data on the screen) in the data base.
- /Note** Add a note to the displayed record (data on the screen).
- /Sort** Sort on the selected field of the displayed record (data on the screen).
- /Zoom** Display a list of all the values of the selected field in the data base.
- View** Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-51. Authorized Employees Field Descriptions**

Field Name	Data Type	Size	Description
EMPL	String	10	Enter the employee code.
CONTRACT NO	String	10	Enter the maintenance contract number.
VENDOR	String	6	This field is used to enter the Vendor code whom the item was purchased from. The user may zoom to the Vendor data file and pick the desired code. NOTE: This data must be previously entered using screen Vendor Master Maintenance (vmasts).
Last Name	String	30	This field reflects the employee last name from the employee master file.

Remember to press <ENTER> after each field.

#### 4.3.4.2.7.4 Work Order Entry

Work Order Entry provides the ability enter Work Orders for repairs.

##### 4.3.4.2.7.4.1 Work Order Entry Screens

This screen provides the ability enter Work Orders for repairs. The operator will complete the required fields and upon exit of the screen, the system copies in all of the EIN children to the line item file. This screen is always presented in ADD mode.

```

**Figure 4.3.4-53. Work Order Entry CHUI**

Unique Bottom Line Commands:

ADD MODE: F1,F2,F3,F4,F6

/Add Add (store) the displayed record (data on the screen) to the data base.

/Copy Copy the “tagged” displayed fields (data on the screen) to other fields.

/Delete Delete the displayed record (data on the screen) from the data base.

/Insert Insert (store) the displayed record (data on the screen) in sequence to the data base

/Modify Modify (store) the displayed record (data on the screen) in the data base.

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between “form” or record display and “table” or list display.

/Items This command invokes the items page of the structure manager to allow the user to add or modify children EIN items.

**Table 4.3.4-52. Work Order Entry Field Descriptions (1 of 2)**

Field Name	Data Type	Size	Description
WORK ORDER	String	10	This is the actual Work Order number. The operator should always press RETURN to obtain the next number sequentially assigned by the system.
PARENT EIN	String	14	This field is the Parent EIN for the installation/structure. The user may /Z, Zoom at this field to view the entire EIN data base.
Serial Number through Room	MULTI-FIELD		These fields are all reflected from the EIN file for the Parent as entered.
TROUBLE TICKET #	String	15	Enter the applicable trouble ticket number here
NOTIFICATION DATE	Date	2	Notification Date
NOTIFICATION TIME	Time	2	Notification Time
PRIORITY	String	1	This is a user controlled field and any value may be entered.
SUBMITTER	String	10	Enter the employee code for the person who submitted the problem and caused the work order to be opened. The operator may /Z, zoom to the employee file.
FAILURE DATE	Date	2	Enter actual failure date.
FAILURE TIME	String	2	Enter actual failure time.

**Table 4.3.4-52. Work Order Entry Field Descriptions (2 of 2)**

Field Name	Data Type	Size	Description
MFR/DEV	String	6	This field is used to enter the Manufacturer or Developer ID. The user may zoom to the appropriate data file and pick the desired code. NOTE: This data must be previously entered with screen Vendor Master Maintenance (vmasts).
VENDOR	String	6	This field is used to enter the Vendor code whom the item was purchased from. The user may zoom to the Vendor data file and pick the desired code. NOTE: This data must be previously entered using screen Vendor Master Maintenance (vmasts).
MAINT VENDOR	String	6	This field is used to enter the code for the vendor who is the maintenance vendor. The user may zoom to the Vendor data file and choose the appropriate code. NOTE: This information must be previously entered using screen Vendor Master Maintenance (vmasts).
VENDOR CALL DATE	Date	2	Date the vendor was called and informed of the problem.
VENDOR CALL TIME	Time	2	Time the vendor was called and informed of the problem.
VENDOR CONTACT NAME	String	30	Vendor point of contact
VENDOR REFERENCE	String	20	User has option to enter any information in reference to the vendor
CODE	String	2	The administrator can set up codes for their specific needs if desired.
NOTE	String	60	This field is used to enter a 60 character note attached to this item.
TEXT	String	8	Press /Z at this prompt to obtain a free form text window. The operator should enter the failure / repair details in this window. When complete, press F3 to exit the text window.

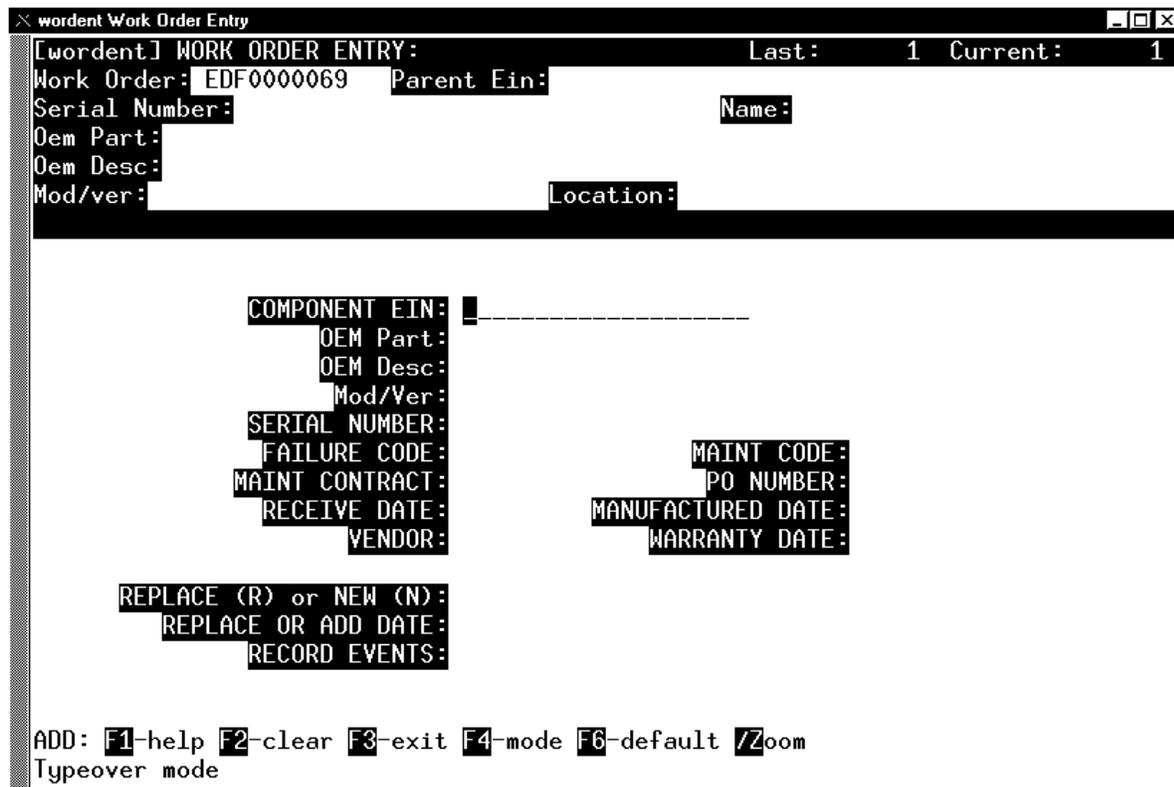

Remember to press <ENTER> after each field.

#### **4.3.4.2.7.4.2 Item Page for Work Order Entry**

The Work Order Entry **Item** option provides a list of the components if the Parent EIN specified in the Work Order.

##### **4.3.4.2.7.4.2.1 Item Page for Work Order Entry Screens**

The Work Order Entry **Item** option will display the following screen.

**Figure 4.3.4-54. Item Page for Work Order Entry CHUI**

Unique Bottom Line Commands:

ADD MODE: F1,F2,F3,F4,F6

**/Add** Add (store) the displayed record (data on the screen) to the data base.

**/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.

**/Delete** Delete the displayed record (data on the screen) from the data base.

**/Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base

**/Modify** Modify (store) the displayed record (data on the screen) in the data base.

**/Note** Add a note to the displayed record (data on the screen).

**/Sort** Sort on the selected field of the displayed record (data on the screen).

**View** Toggles between “form” or record display and “table” or list display.

**/Items** This command invokes the items page of the structure manager to allow the user to add or modify children EIN items.

**Table 4.3.4-53. Item Page for Work Order Entry Field Descriptions  
(1 of 2)**

<b>Field Name</b>	<b>Data Type</b>	<b>Size</b>	<b>Description</b>
WORK ORDER	String	10	This is the actual Work Order number. The operator should always press RETURN to obtain the next number sequentially assigned by the system.
PARENT EIN	String	14	This field is the Parent EIN for the installation/structure. The user may /Z, Zoom at this field to view the entire EIN data base.
Serial Number through Location	MULTI-FIELD		These fields are all reflected from the EIN file for the Parent as entered.
COMPONENT EIN	String	35	This field is the component EIN number of the Parent EIN.
OEM PART	String	34	This field is the OEM part number reflected from the EIN record of the child.
OEM DESC (WO)	String	40	This field reflects the description of the OEM PART NUMBER entered in the field above, but provides the ability for the user to modify it in the EIN file.
MOD/VER	String	24	This field is used to enter the actual Model and or Version of the item. If the user had chosen a known OEM Part, this field will be written with the information from this file.
SERIAL NUMBER	String	30	This field is for the entry of the serial number of the product being entered. If the item does not contain a serial number of it's own, the system will assign an internal number prefixed with the Site abbreviation and contain a sequentially assigned number. Pressing RETURN at the field prompt automatically performs this internal assignment
FAILURE CODE	String	2	Code identifying the failure
MAINT CODE	String	3	The user will enter any desired code in this field.
MAINT CONTRACT	String	15	This field is used to enter the Maintenance Contract number for maintenance on this particular item. The user may zoom to the Contract data file and choose the desired contract number. NOTE: This data must be previously enter with screen Maintenance Contracts (mntcont).
PO NUMBER	String	10	The user will enter the Purchase Order Number in this field for item selection when adding children items. The user will use the PO Number or the Vendor Code in the next field. For Receipts the field is filled in by the Receiving system and designates the Purchase Order the item was received against.
RECEIVED DATE	Date	2	The date the item was received.
MANUFACTURED DATE	Date	2	Date Manufactured

**Table 4.3.4-53. Item Page for Work Order Entry Field Descriptions  
(2 of 2)**

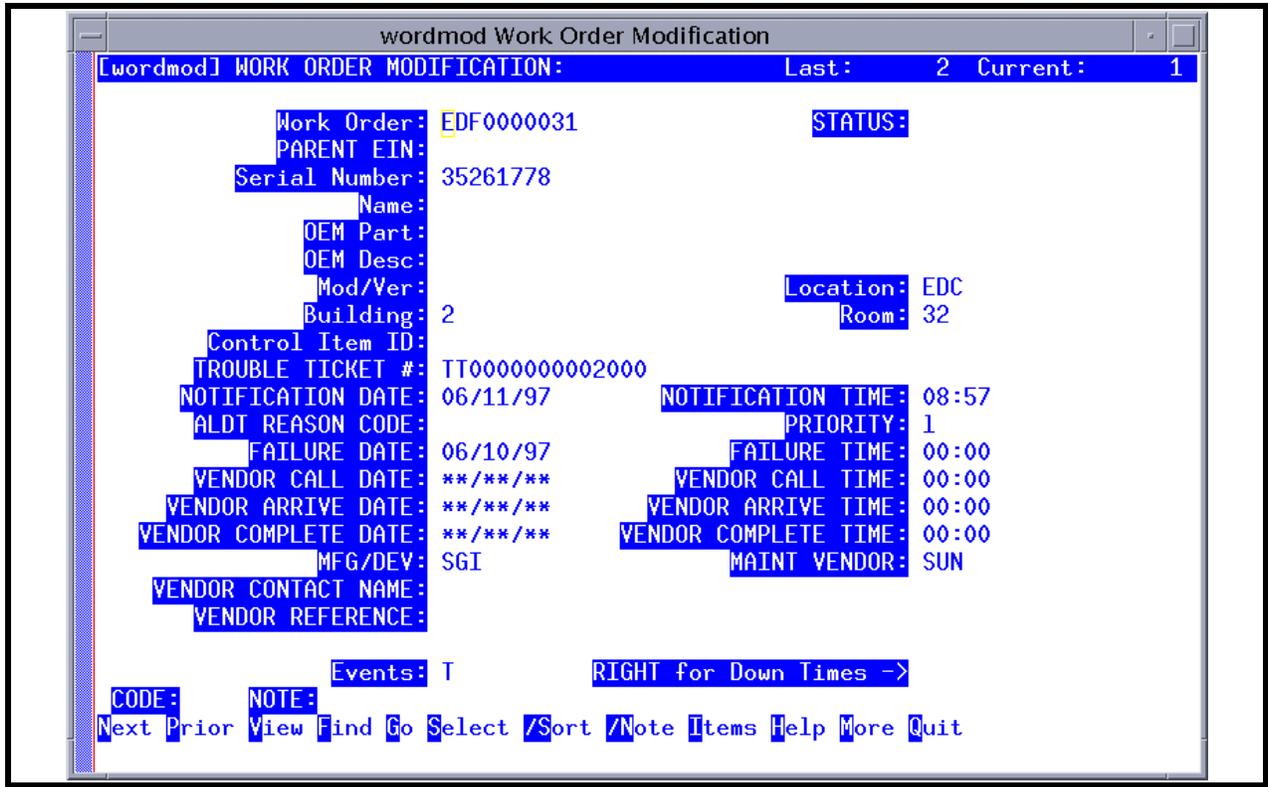

<b>Field Name</b>	<b>Data Type</b>	<b>Size</b>	<b>Description</b>
VENDOR	String	6	This field is used to enter the Vendor code whom the item was purchased from. The user may zoom to the Vendor data file and pick the desired code. NOTE: This data must be previously entered using screen Vendor Master Maintenance (vmasts).
WARRANTY DATE (WO)	Date	2	<i>This field is the end date for the warranty period.</i>
REPLACE (R) or NEW (N)	String	1	Enter an 'R' in this field for the Child EIN that had been replaced in the machine. When entering a new item, be sure to place an 'N' in this field to designate the record as being new.
REPLACE OR ADD DATE	String	8	<i>Date add or replace occurred.</i>
RECORD EVENTS	String	1	<i>Flag to indicate the events are to be recorded.</i>

#### **4.3.4.2.7.5 Work Order Modification**

Work Order Modification provides the ability to modify Work Orders for repairs.

##### **4.3.4.2.7.5.1 Work Order Modification Screens**

This screen provides the ability to modify Work Orders for repairs. This screen should be used when the repair has been completed and all appropriate information about the repair is known. The operator will enter or modify information in the fields as appropriate then invoke the items page to view the EIN children for the parent. In this screen, the operator will designate which item had been replaced by placing an 'R' in the appropriate field and entering the new item by using the ADD capability of the screen. When complete and upon exit of the items screen, the system performs the necessary transactions. The operator also has the ability with this screen to enter delay times and chargeable times. Press the 'R' key to move to the next screen to the right to maintain delay times and then again to maintain chargeable times.

**Figure 4.3.4-55. Work Order Modification Screen**

Unique Bottom Line Commands:

**/Add** Add (store) the displayed record (data on the screen) to the data base.

**/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.

**/Delete** Delete the displayed record (data on the screen) from the data base.

**/Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base

**/Modify** Modify (store) the displayed record (data on the screen) in the data base.

**/Note** Add a note to the displayed record (data on the screen).

**/Sort** Sort on the selected field of the displayed record (data on the screen).

**/Zoom** Display a list of all the values of the selected field in the data base.

**Copy-bill** This command allows the user to copy the Bill of Material for this item to create a new item’s BOM.

**Items** This command invokes the items page of the structure manager to allow the user to add or modify children EIN items.

**View** Toggles between “form” or record display and “table” or list display.

**RIGHT for Down Times** -><-<- to LEFT to return to main page

**Table 4.3.4-54. Work Order Modification Field Descriptions (1 of 2)**

Field Name	Data Type	Size	Description
WORK ORDER	String	10	This is the actual Work Order number. The operator should always press RETURN to obtain the next number sequentially assigned by the system.
STATUS	String	1	Status code for TERMS CODE
PARENT EIN	String	14	This field is the Parent EIN for the installation/structure. The user may /Z, Zoom at this field to view the entire EIN data base.
Serial Number through Control Item ID	MULTI-FIELD		These fields are all reflected from the EIN file for the Parent as entered.
TROUBLE TICKET #	String	15	Enter the applicable trouble ticket number here
NOTIFICATION DATE and TIME	MULTI-FIELD		These fields are initialized with the current date and time and can be modified.
ALDT REASON CODE	String	10	Enter the reason code for the ALDT.
PRIORITY	String	1	This is a user controlled field and any value may be entered.
FAILURE DATE and TIME	MULTI-FIELD		Enter actual failure date and time.
ALDT	Floating	9.1	This field is used to enter the known (actual) ALDT time in hours.
VENDOR CALL DATE and TIME	MULTI-FIELD		Enter the date and time the vendor actually arrived to perform the repairs.
VENDOR ARRIVE DATE and TIME	MULTI-FIELD		Enter the date and time the vendor actually arrived to perform the repairs.
VENDOR COMPLETE DATE and TIME	MULTI-FIELD		Enter the actual date and time the vendor completed the repairs.
MFR/DEV	String	6	This field is used to enter the Manufacturer or Developer ID. The user may zoom to the appropriate data file and pick the desired code. NOTE: This data must be previously entered with screen Vendor Master Maintenance (vmasts).
MAINT VENDOR	String	6	This field is used to enter the code for the vendor who is the maintenance vendor. The user may zoom to the Vendor data file and choose the appropriate code. NOTE: This information must be previously entered using screen Vendor Master Maintenance (vmasts).
VENDOR CONTACT NAME	String	30	Vendor point of contact

**Table 4.3.4-54. Work Order Modification Field Descriptions (2 of 2)**

Field Name	Data Type	Size	Description
VENDOR REFERENCE	String	20	User has option to enter any information in reference to the vendor
Events	String	30	Name of the event
CODE	String	2	The administrator can set up codes for their specific needs if desired.
NOTE	String	60	This field is used to enter a 60 character note attached to this item.

Remember to press <ENTER> after each field.

#### 4.3.4.2.7.5.2 Delay Times Page for Work Order Modification

Delay Times Page provides the ability to maintain delay date and times to be used for downtime calculations.

##### 4.3.4.2.7.5.2.1 Delay Times Page for Work Order Modification Screens

This screen provides the ability to maintain delay date and times to be used for downtime calculations.

```

[wordmod] WORK ORDER MODIFICATION:                               Last:_____ Current:_____

```

**Figure 4.3.4-58. Items Page for Work Order Modification - CHUI**

Unique Bottom Line Commands:

None.

**Table 4.3.4-57. Items Page for Work Order Modification Field Descriptions**

Field Name	Data Type	Size	Description
COMPONENT EIN	String	35	This field is the component EIN number of the Parent EIN.
EOM Part through WARRANTY DATE	MULTI-FIELD		These fields are all copied from the child EIN record and may be modified in this screen as required.
REPLACE (R) or NEW (N)	String	1	Enter an 'R' in this field for the Child EIN that had been replaced in the machine. When entering a new item, be sure to place an 'N' in this field to designate the record as being new.
TEXT	String	8	Press /Z at this prompt to obtain a free form text window. The operator should enter the failure / repair details in this window. When complete, press F3 to exit the text window.

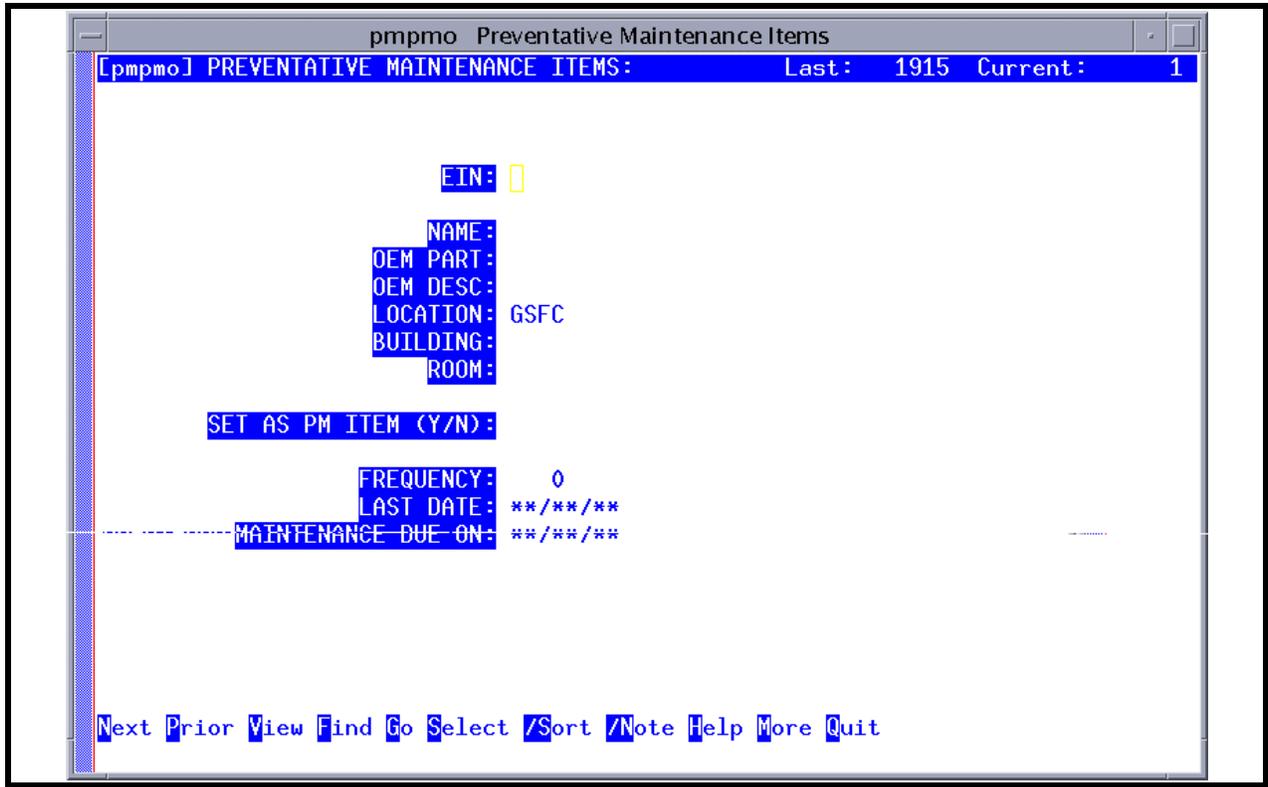

Remember to press <ENTER> after each field.

#### **4.3.4.2.7.6 Preventative Maintenance Items**

Preventative Maintenance Items provides the ability to designate which items in the EIN file should experience preventative maintenance.

##### **4.3.4.2.7.6.1 Preventative Maintenance Items Screens**

This screen provides the ability to designate which items in the EIN file should experience preventative maintenance. The operator may perform the DATALOOK select and sort functions to obtain a list of the items to be modified. The operator will then enter a 'Y' in the set field, the frequency of maintenance, the last date maintenance was performed and the due date for the next maintenance operation.

**Figure 4.3.4-59. Preventative Maintenance Items CHUI**

Unique Bottom Line Commands:

ADD MODE: F1,F2,F3,F4,F6

/Add Add (store) the displayed record (data on the screen) to the data base.

/Copy Copy the “tagged” displayed fields (data on the screen) to other fields.

/Delete Delete the displayed record (data on the screen) from the data base.

/Insert Insert (store) the displayed record (data on the screen) in sequence to the data base

/Modify Modify (store) the displayed record (data on the screen) in the data base.

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-58. Preventative Maintenance Items Field Descriptions**

Field Name	Data Type	Size	Description
EIN through ROOM	MULTI-FIELD		These fields are not modifiable by the operator and represent the actual data from the EIN file.
SET AS PM ITEM (Y/N)	String	1	Enter a 'Y' in this field if the item should experience a preventative maintenance operation.
FREQUENCY	Number	3	Enter number of days between PM's.
LAST DATE	Date	2	Enter the last date a PM as performed for this item.
MAINTENANCE DUE ON	String	8	Enter the date the next maintenance is due.

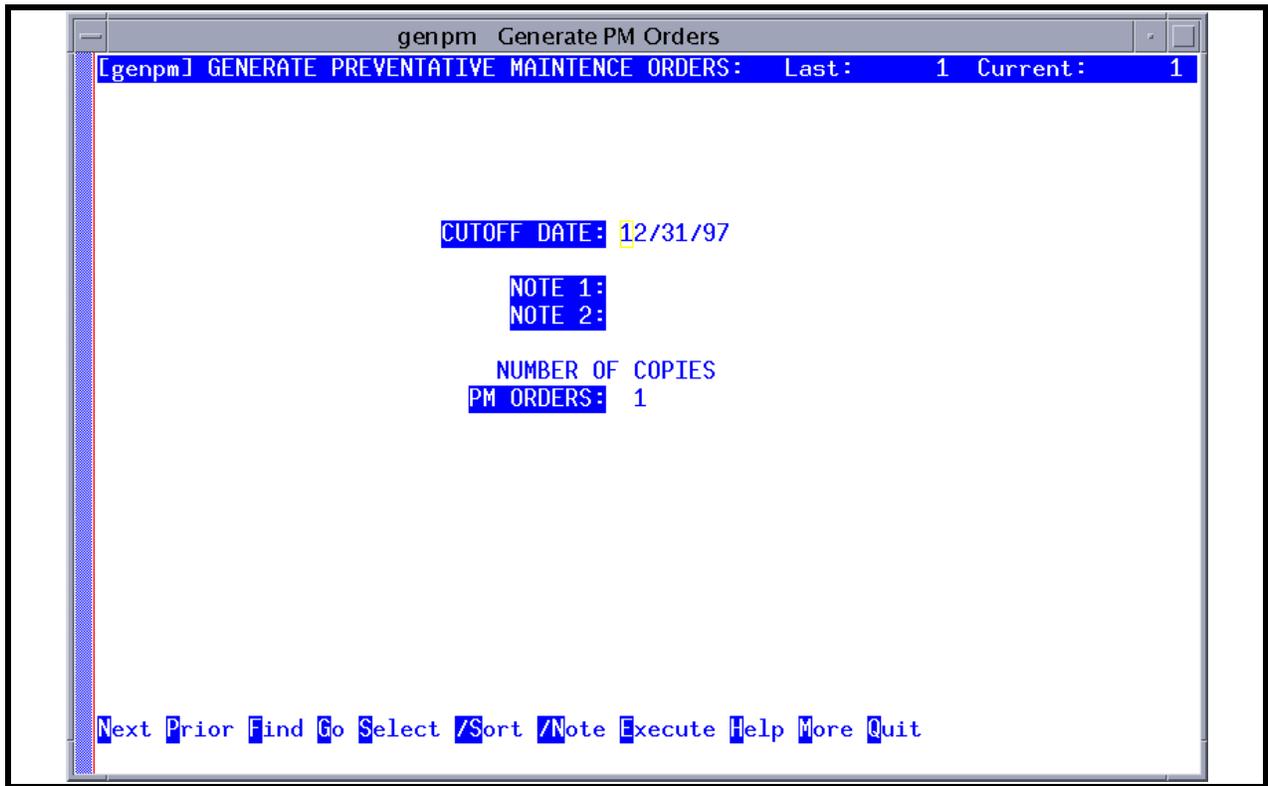

Remember to press <ENTER> after each field.

#### 4.3.4.2.7.7 Generate Maintenance Orders

Generate Maintenance Orders provides the ability to generate Work Orders for item needing a PM.

##### 4.3.4.2.7.7.1 Generate Maintenance Orders Screens

This screen provides the ability to generate Work Orders for item needing a PM. When executed, order are created for all items needing a PM prior to the cutoff date entered and prints a summary report of orders created.

**Figure 4.3.4-60. Generate Maintenance Orders CHUI**

Unique Bottom Line Commands:

**/Add** Add (store) the displayed record (data on the screen) to the data base.

**/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.

**/Delete** Delete the displayed record (data on the screen) from the data base.

**/Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base

**/Modify** Modify (store) the displayed record (data on the screen) in the data base.

**/Note** Add a note to the displayed record (data on the screen).

**/Sort** Sort on the selected field of the displayed record (data on the screen).

**Execute** This command invokes the appropriate process and prints a report on the results.

**Table 4.3.4-59. Generate Maintenance Orders Field Descriptions**

Field Name	Data Type	Size	Description
CUTOFF DATE	String	8	Enter the last date for the system to examine PM items and generate orders.
NOTE 1 and NOTE 2	String	60	Enter any notes to appear on the header of the report.
NUMBER OF COPIES (PM Orders)	String	1	Enter any number of copies of the report to print

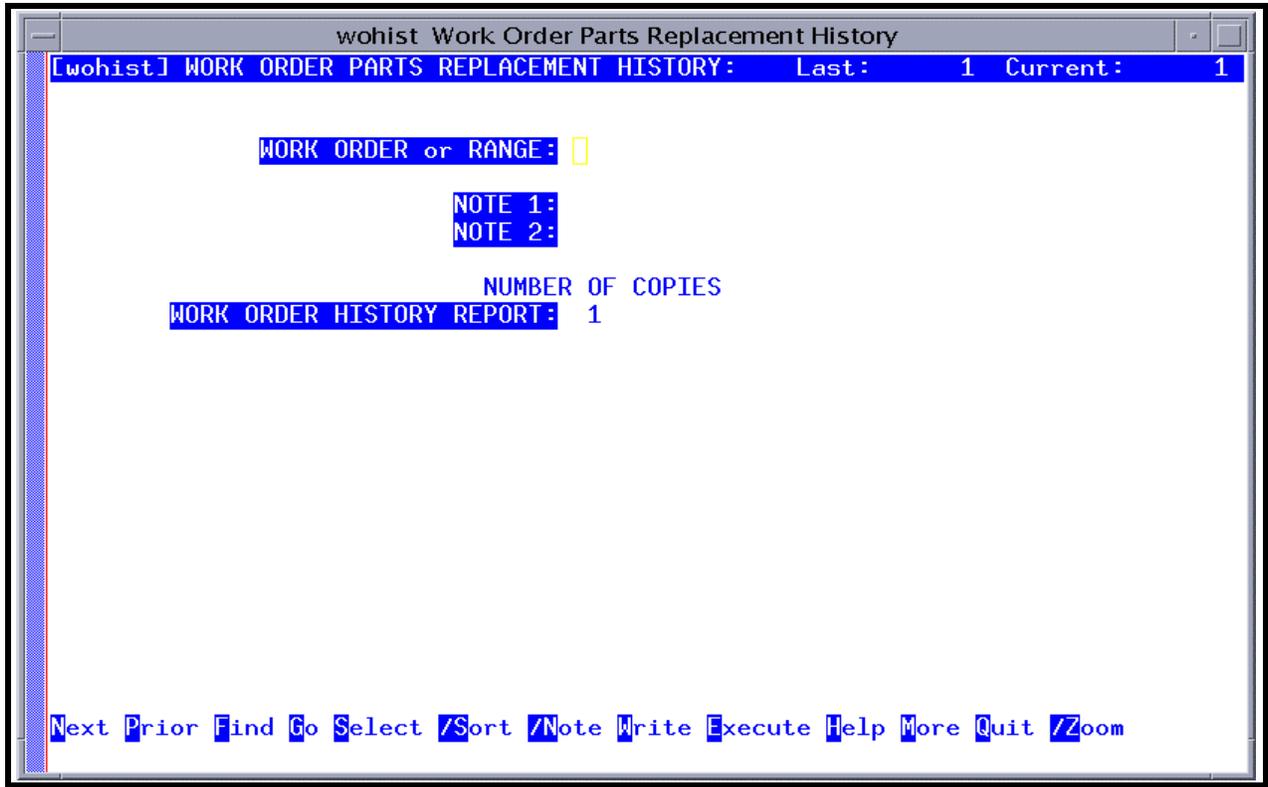

Remember to press <ENTER> after each field.

#### **4.3.4.2.7.8 Work Order Parts Replacement History**

Work Order Parts Replacement History generates a series of reports detailing parts replacement.

##### **4.3.4.2.7.8.1 Work Order Parts Replacement History Screens**

This screen generates a series of reports detailing parts replacement. The operator will enter the Work Order number or range of numbers and then execute the process to print the history reports.

**Figure 4.3.4-61. Work Order Parts Replacement History CHUI**

Unique Bottom Line Commands:

- /Add** Add (store) the displayed record (data on the screen) to the data base.
- /Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Delete** Delete the displayed record (data on the screen) from the data base.
- /Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify** Modify (store) the displayed record (data on the screen) in the data base.
- /Note** Add a note to the displayed record (data on the screen).
- /Sort** Sort on the selected field of the displayed record (data on the screen).
- /Zoom** Display a list of all the values of the selected field in the data base.
- Execute** This command invokes the appropriate process and prints a report on the results.
- Write** Saves the current record to a file designated by the operator.

**Table 4.3.4-60. Work Order Parts Replacement History Field Descriptions**

Field Name	Data Type	Size	Description
WORK ORDER or RANGE	String	25	Enter the Work Order number or range of numbers to examine.
NOTE 1 and NOTE 2	String	60	Enter any notes to appear on the header of the report.
NUMBER OF COPIES (Work Order History Report)	String	1	Enter any number of copies of the report to print

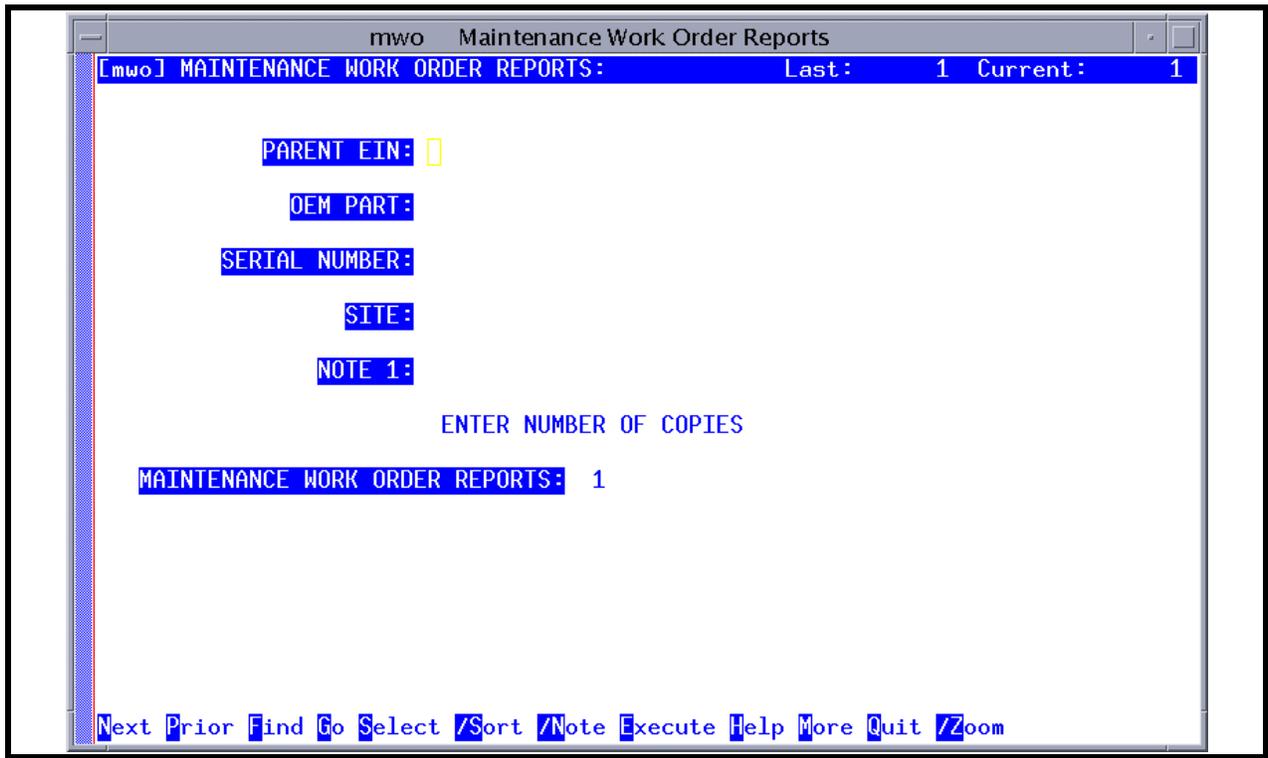

Remember to press <ENTER> after each field.

#### 4.3.4.2.7.9 Maintenance Work Order Reports

Maintenance Work Order Reports provides Work Order Reports for work done on selected machines.

##### 4.3.4.2.7.9.1 Maintenance Work Order Reports Screens

This screen provides Work Order Reports for work done on selected machines.

**Figure 4.3.4-62. Maintenance Work Order Reports CHUI**

Unique Bottom Line Commands:

**/Add** Add (store) the displayed record (data on the screen) to the data base.

**/Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.

**/Delete** Delete the displayed record (data on the screen) from the data base.

**/Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base

**/Modify** Modify (store) the displayed record (data on the screen) in the data base.

**/Note** Add a note to the displayed record (data on the screen).

**/Sort** Sort on the selected field of the displayed record (data on the screen).

**/Zoom** Display a list of all the values of the selected field in the data base.

**Execute** This command invokes the appropriate process and prints a report on the results.

**Table 4.3.4-61. Maintenance Work Order Reports Field Descriptions**

Field Name	Data Type	Size	Description
PARENT EIN	String	14	This field is the Parent EIN for the installation/structure. The user may /Z, Zoom at this field to view the entire EIN data base.
OEM PART	String	34	This field is the OEM part number reflected from the EIN record of the child.
SERIAL NUMBER	String	30	This field is for the entry of the serial number of the product being entered. If the item does not contain a serial number of it's own, the system will assign an internal number prefixed with the Site abbreviation and contain a sequentially assigned number. Pressing RETURN at the field prompt automatically performs this internal assignment
SITE (LOCATION)	String	6	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
NOTE 1	String	60	This field is used to enter a 60 character note attached to this item.
ENTER NUMBER OF COPIES (Maintenance Work Order Reports)	Number	1	Enter any number of copies of the report to print.

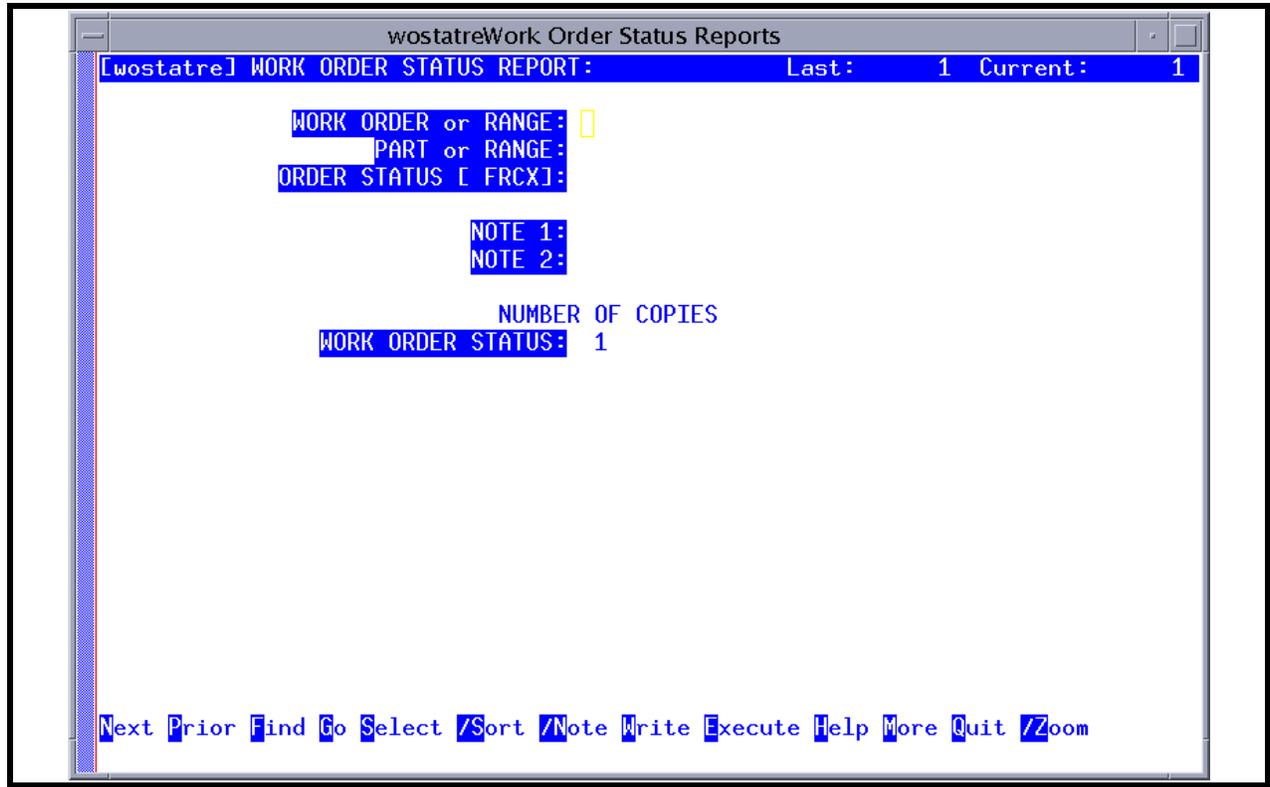

Remember to press <ENTER> after each field.

#### **4.3.4.2.7.10 Work Order Status Reports**

Work Order Status Reports provides status reports on selected Work Orders.

##### **4.3.4.2.7.10.1 Work Order Status Reports Screens**

This screen provides status reports on selected Work Orders.

**Figure 4.3.4-63. Work Order Status Reports CHUI**

Unique Bottom Line Commands:

- /Add** Add (store) the displayed record (data on the screen) to the data base.
- /Copy** Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Delete** Delete the displayed record (data on the screen) from the data base.
- /Insert** Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify** Modify (store) the displayed record (data on the screen) in the data base.
- /Note** Add a note to the displayed record (data on the screen).
- /Sort** Sort on the selected field of the displayed record (data on the screen).
- /Zoom** Display a list of all the values of the selected field in the data base.
- Execute** This command invokes the appropriate process and prints a report on the results.
- Write** Saves the current record to a file designated by the operator.

**Table 4.3.4-62. Work Order Status Reports Field Descriptions**

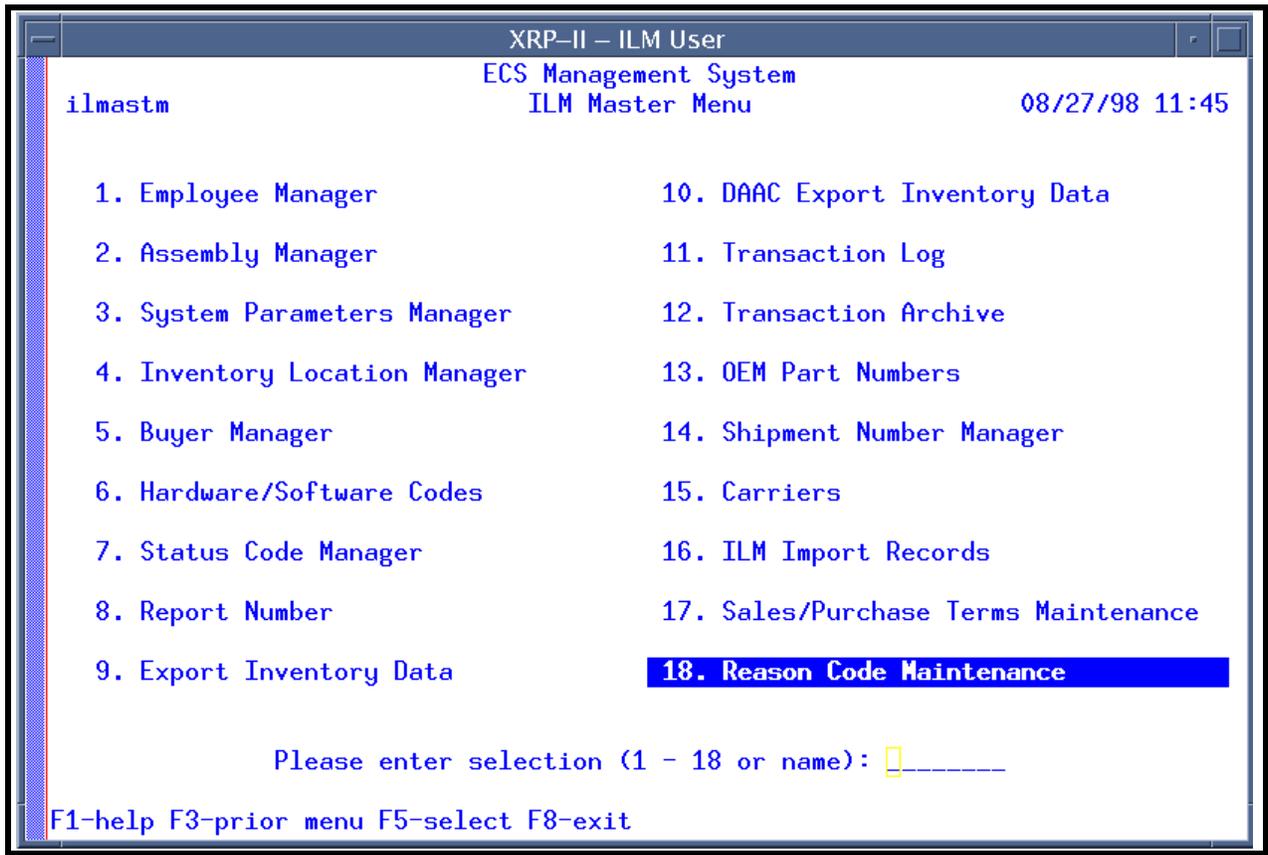

Field Name	Data Type	Size	Description
WORK ORDER or RANGE	String	25	Enter the Work Order number or range of numbers to examine.
PART (OEM PART NUMBER) or RANGE	String	34	Enter Manufacture or Vendor part number or range to query
ORDER STATUS [ FRCX ] (STATUS)	String	2	Enter the appropriate status. When the order is first entered, the status is NULL. When the order has been printed, the status moves to 'R' for released. When all line items have been received complete, the status moves to 'C' for complete. The status of 'X' is used to manually cancel an order.
NOTE 1	String	60	This field is used to enter a 60 character note attached to this item.
NOTE 2	String	60	This field is used to enter a 2nd 60 character note attached to this item.
ENTER NUMBER OF COPIES (Work Order Status)	Number	1	Enter any number of copies of the report to print.

Remember to press <ENTER> after each field.

#### 4.3.4.2.9 ILM Master Menu

The ILM Master Menu provides ILM system administration capabilities. Generally these functions are reserved for the ILM system Administrators.

#### 4.3.4.2.9.1 ILM Master Menu Screens

**Figure 4.3.4-64. ILM Master Menu CHUI**

The ILM Master menu is broken down into the following functions:

**Table 4.3.4-63. ILM Master Menu options**

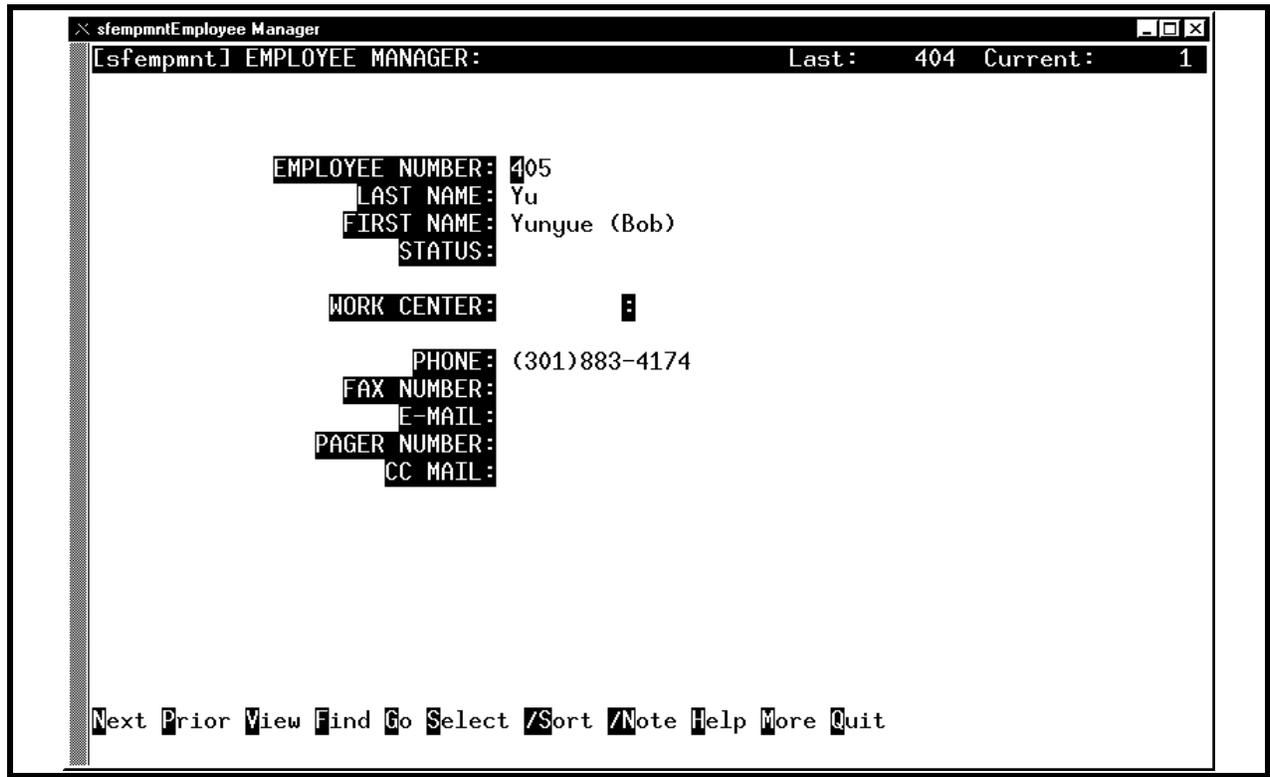

<b>Menu item</b>	<b>Function</b>	<b>Section</b>
Employee Manager	Provides for the maintenance of employee information.	4.3.4.2.9.1
Assembly Manager	Creates the parent/child relationship between components in an assembly.	4.3.4.2.9.2
System Parameters Manager		4.3.4.2.9.3
Inventory Location Manager	Provides for the maintenance of location information used in the inventory and logistics processes.	4.3.4.2.9.4
Buyer Manager	Provides for the maintenance of Buyer information used in the inventory and logistics processes.	4.3.4.2.9.5
Hardware/Software Codes	Provides for the maintenance of the codes used to identify maintenance cost source information in the inventory and logistics processes.	4.3.4.2.9.6
Status Code Manager	Provides for the maintenance of the status codes used to track property and events in the inventory and logistics processes.	4.3.4.2.9.7
Report Number	Provides for the maintenance of the Report Number conversion used to assign numbers to reports.	4.3.4.2.9.8
Export Inventory Data	Provides the assignment of destinations for the transfer of a site's inventory data to another location.	4.3.4.2.9.9
DAACEXport Inventory Data	Provides the assignment of destinations for the transfer of a site's inventory data to the SMC.	4.3.4.2.9.10
Transaction Log	Provides a review of the transactions applied to the .ILM database.	4.3.4.2.9.11
Transaction Archive	Provides the assignment of a destination for archived Transaction Logs with the archiving action	4.3.4.2.9.12
OEM Part Numbers	Provides for the maintenance of OEM Part Numbers information used in the inventory and logistics processes	4.3.4.2.9.13
Shipment Number Manager	Provides for the maintenance of the Shipment Number conversion used to assign numbers to shipments.	4.3.4.2.9.14
Carriers	Provides for the maintenance of Carrier information used in the inventory and logistics processes.	4.3.4.2.9.15
ILM Import Records	Provides for the movement of a file from the drop directory to the application directory, unTar it, and load the data base for all ILM related files.	4.3.4.2.9.16
Sales / Purchase Terms: Maintenance	Provides for the maintenance of the Sales / Purchase Terms information used in the inventory and logistics processes	4.3.4.2.9.17
Reason Maintenance	Provides for the maintenance of the reason codes used to justify changes in the configuration.	4.3.4.2.9.18

#### **4.3.4.2.9.1 Employee Manager**

Employee Manager provides for the maintenance of employee information.

#### 4.3.4.2.9.1.1 Employee Manager Screens

This screen provides for the maintenance of employee information.

**Figure 4.3.4-65. Employee Manager CHUI**

Unique Bottom Line Commands:

- /Add Add (store) the displayed record (data on the screen) to the data base.
- /Copy Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Delete Delete the displayed record (data on the screen) from the data base.
- /Insert Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify Modify (store) the displayed record (data on the screen) in the data base.
- /Note Add a note to the displayed record (data on the screen).
- /Sort Sort on the selected field of the displayed record (data on the screen).
- View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-64. Employee Manager Field Descriptions**

<b>Field Name</b>	<b>Data Type</b>	<b>Size</b>	<b>Description</b>
EMPLOYEE NUMBER (EMPL)	String	10	Enter the employee code.
LAST NAME (EMPLOYEE)	String	30	Last name of the employee described by the displayed code.
FIRST NAME (EMPLOYEE)	String	30	First name of the employee described by the displayed code.
STATUS (EMPLOYEE)	String	1	Status of the employee described by the displayed code.
WORK CENTER (EMPLOYEE)	String	6	Work Center (normally assigned) of the employee described by the displayed code.
PHONE (EMPLOYEE)	String	18	Telephone number of the employee described by the displayed code.
FAX NUMBER (EMPLOYEE)	String	13	FAX number of the employee described by the displayed code.
E-MAIL (EMPLOYEE)	String	30	Enter employee's e-mail address.
PAGER NUMBER (EMPLOYEE)	String	13	Pager Number of the employee described by the displayed code.
CC MAIL (EMPLOYEE)	String	30	CC-mail address of the employee described by the displayed code.

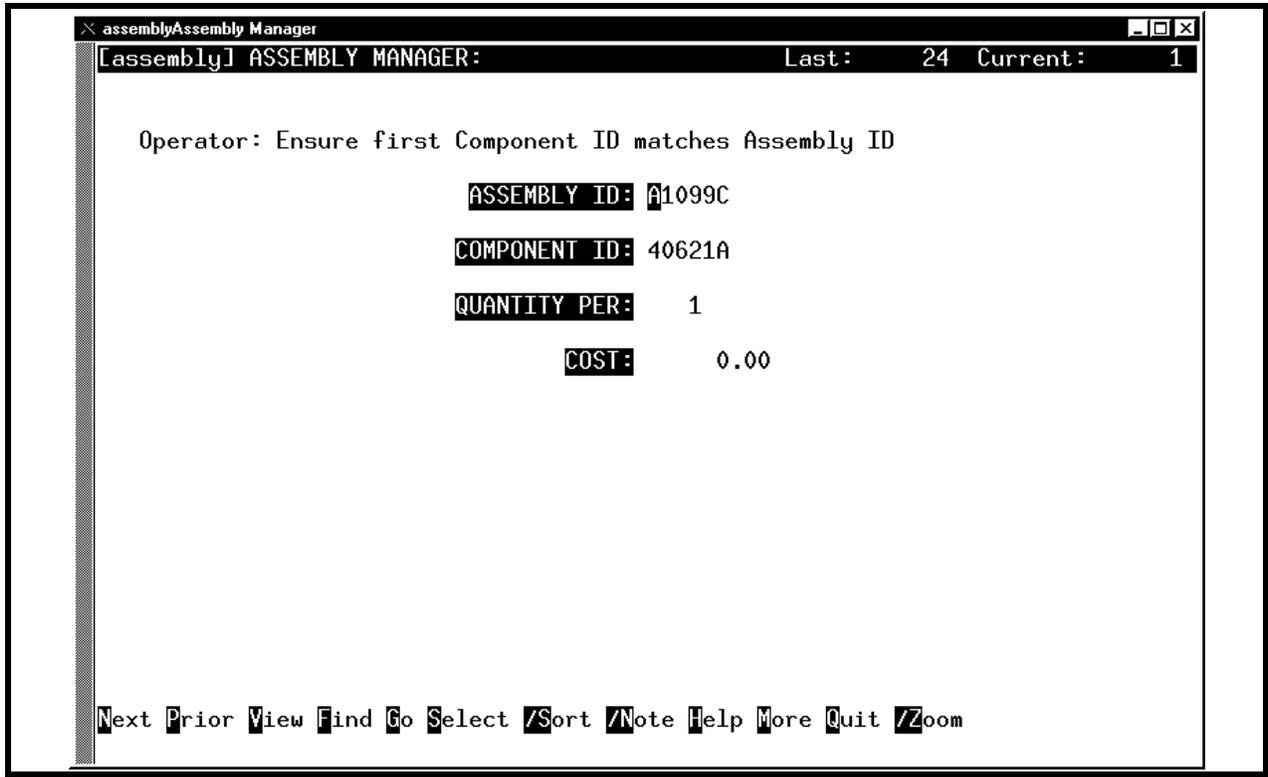

Remember to press <ENTER> after each field.

#### **4.3.4.2.9.2 Assembly Manager**

Assembly Manager creates the parent/child relationship between components in an assembly.

##### **4.3.4.2.9.2.1 Assembly Manager Screens**

This screen creates the parent/child relationship between components in an assembly.

**Figure 4.3.4-66. Assembly Manager CHUI**

Unique Bottom Line Commands:

- /Add Add (store) the displayed record (data on the screen) to the data base.
- /Copy Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Delete Delete the displayed record (data on the screen) from the data base.
- /Insert Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify Modify (store) the displayed record (data on the screen) in the data base.
- /Note Add a note to the displayed record (data on the screen).
- /Sort Sort on the selected field of the displayed record (data on the screen).
- /Zoom Display a list of all the values of the selected field in the data base.
- View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-65. Assembly Manager Field Descriptions**

Field Name	Data Type	Size	Description
ASSEMBLY ID	String	35	Identifier for the assembly displayed. All components of the assembly can be referenced through this parent id or code.
COMPONENT ID (Assembly)	String	35	Identifier for the specific component of the displayed assembly. The first component of an assembly must have the same id/code as the assembly id.
QUANTITY PER (Assembly)	Floating	10.3	The total number of the displayed components in the assembly.
COST	Floating	9.2	This field is the purchase cost of the item.

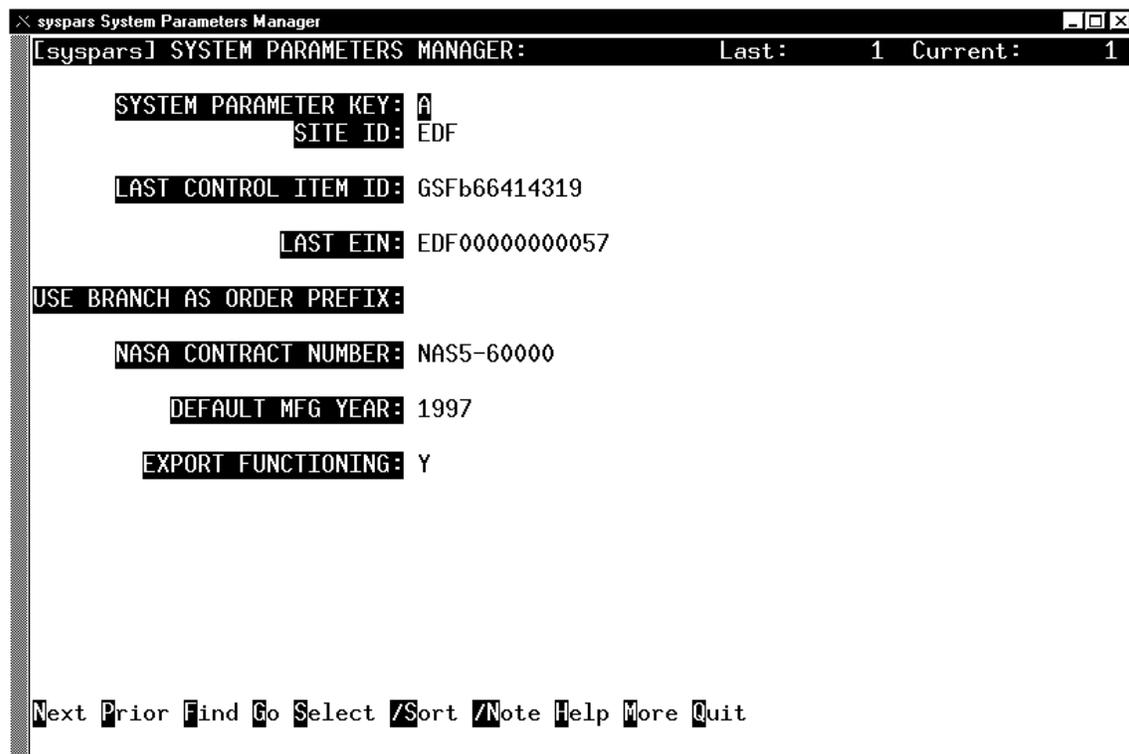

Remember to press <ENTER> after each field.

### 4.3.4.2.9.3 System Parameters Manager

System Parameters Manager provides maintenance for some of the basic/default values used in ILM processes.

#### 4.3.4.2.9.3.1 System Parameters Manager Screens

This screen provides maintenance for some of the basic/default values used in ILM processes. This screen allows each site to customize these parameters.

**Figure 4.3.4-67. System Parameters Manager CHUI**

Unique Bottom Line Commands:

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

**Table 4.3.4-66. System Parameters Manager Field Descriptions**

Field Name	Data Type	Size	Description
SYSTEM PARAMETER KEY	String	1	The Key filed of the System Parameter file. The active record has the value A.
SITE ID (LOCATION)	String	6	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
LAST CONTROL ITEM ID	String	20	Control Item ID to display as the last ID assigned. A new generation of Control Item IDs will be generated starting with this one.
LAST EIN	String	20	EIN to display as the last EIN assigned. A new generation of EINs will be generated starting with this one.
USE BRANCH AS ORDER PREFIX	String	1	<i>This option will generate Purchase and Work Orders with the Work Center code for the employee creating the Order as a prefix.</i>
NASA CONTRACT NUMBER	String	11	Default NASA Contract Number
DEFAULT MFG YEAR	String	4	DEFAULT MFG YEAR
EXPORT FUNCTIONING	String	1	<i>Allows use of the Export Inventory Data function.</i>

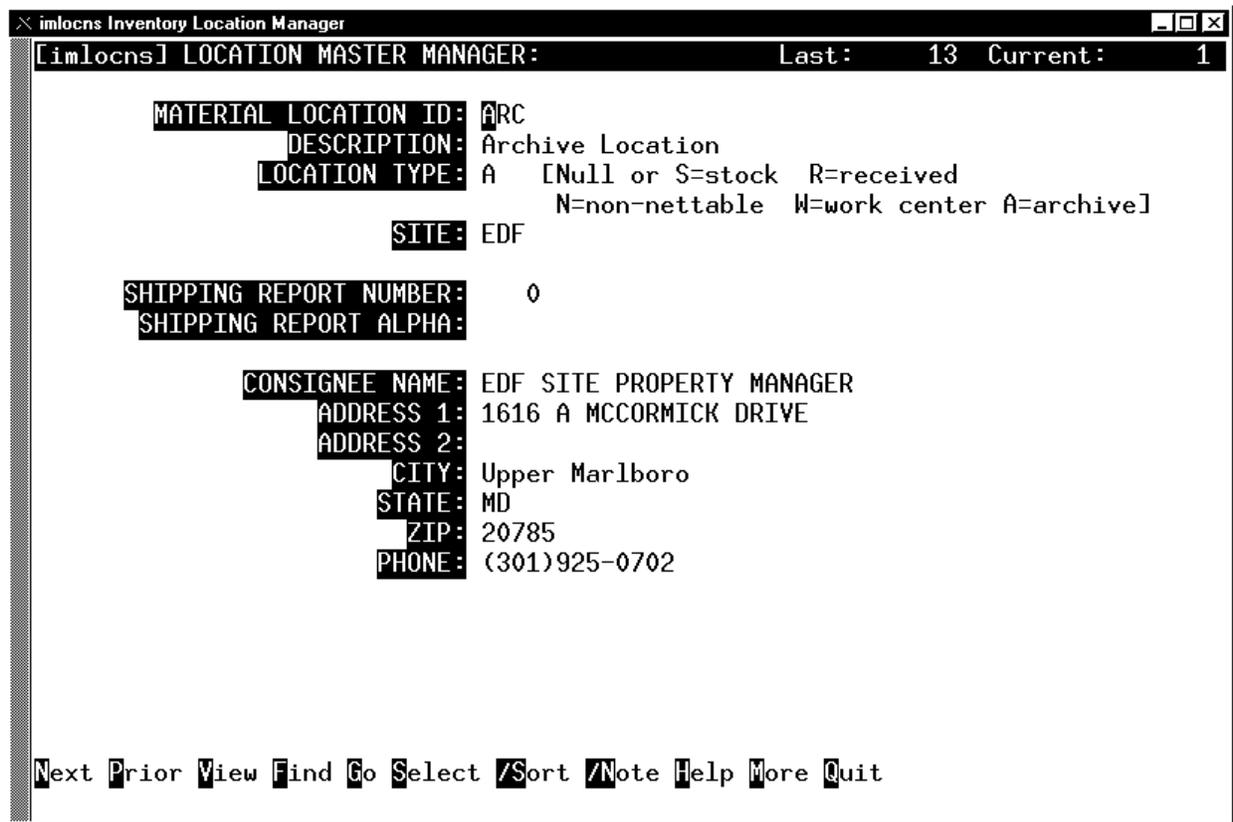

Remember to press <ENTER> after each field.

#### **4.3.4.2.9.4 Inventory Location Manager**

Inventory Location Manager provides for the maintenance of location information used in the inventory and logistics processes.

##### **4.3.4.2.9.4.1 Inventory Location Manager Screens**

This screen provides for the maintenance of location information used in the inventory and logistics processes.

**Figure 4.3.4-68. Inventory Location Manager CHUI**

Unique Bottom Line Commands:

- /Add Add (store) the displayed record (data on the screen) to the data base.
- /Copy Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Delete Delete the displayed record (data on the screen) from the data base.
- /Insert Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify Modify (store) the displayed record (data on the screen) in the data base.
- /Note Add a note to the displayed record (data on the screen).
- /Sort Sort on the selected field of the displayed record (data on the screen).
- View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-67. Inventory Location Manager Field Descriptions**

<b>Field Name</b>	<b>Data Type</b>	<b>Size</b>	<b>Description</b>
MATERIAL LOCATION ID	String	6	ID for the location where material can be found.
DESCRIPTION (Material Location)	String	30	Text description of the utility of the site.
LOCATION TYPE (Material Location)	String	1	Specifies the material application at the site: Null or S = stock, R = received, N = non-nettable, W = work center, A = archive.
SITE (LOCATION)	String	6	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
SHIPPING REPORT NUMBER	Number	2	This field is the report number assigned to this item when the item was shipped.
SHIPPING REPORT ALPHA	String	2	Shipping report code associating an alpha code to a numeric site code. See Shipment Numbers by Site screen (shipno).
CONSIGNEE NAME	String	30	Name of individual/office responsible for material at the site.
ADDRESS 1 (Consignee)	String	30	First part of address
ADDRESS 2 (Consignee)	String	30	Second part of address.
CITY	String	20	City part of address
STATE	String	2	State 2 character abbreviation of address.
ZIP	String	10	Zip code of address.
PHONE	String	18	Telephone number of address

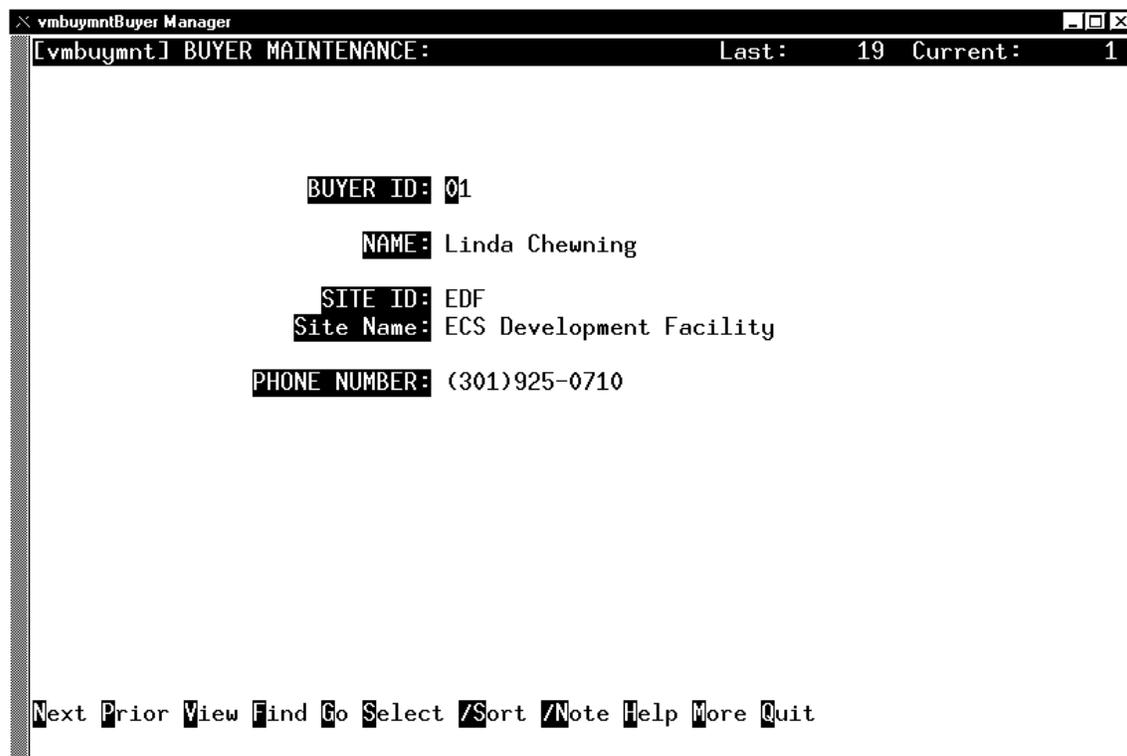

Remember to press <ENTER> after each field.

#### **4.3.4.2.9.5.1 Buyer Manager**

Buyer Manager provides for the maintenance of Buyer information used in the inventory and logistics processes.

#### **4.3.4.2.9.5.1 Buyer Manager Screens**

This screen provides for the maintenance of Buyer information used in the inventory and logistics processes.

**Figure 4.3.4-69. Buyer Manager CHUI**

Unique Bottom Line Commands:

/Add Add (store) the displayed record (data on the screen) to the data base.

/Copy Copy the “tagged” displayed fields (data on the screen) to other fields.

/Delete Delete the displayed record (data on the screen) from the data base.

/Insert Insert (store) the displayed record (data on the screen) in sequence to the data base

/Modify Modify (store) the displayed record (data on the screen) in the data base.

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-68. Buyer Manager Field Descriptions**

Field Name	Data Type	Size	Description
BUYER ID	String	6	Enter the buyer ID. The operator may /Zoom to the buyer data base to obtain the appropriate value.
Name (Buyer ID)	String	30	This field is the user's name as shown in the Buyer file.
SITE ID (LOCATION)	String	6	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
Site Name	String	46	Name of the Site whose code is displayed.
PHONE (Buyer)	String	18	Telephone number of the Buyer described by the displayed code.

Remember to press <ENTER> after each field.

#### **4.3.4.2.9.6 Hardware/Software Codes**

Hardware/Software Codes provides for the maintenance of the codes used to identify maintenance cost source information in the inventory and logistics processes.

##### **4.3.4.2.9.6.1 Hardware/Software Codes Screens**

This screen provides for the maintenance of the codes used to identify maintenance cost source information in the inventory and logistics processes.

**Figure 4.3.4-70. Hardware/Software Codes CHUI**

Unique Bottom Line Commands:

/Add Add (store) the displayed record (data on the screen) to the data base.

/Copy Copy the itaggedî displayed fields (data on the screen) to other fields.

/Delete Delete the displayed record (data on the screen) from the data base.

/Insert Insert (store) the displayed record (data on the screen) in sequence to the data base

/Modify Modify (store) the displayed record (data on the screen) in the data base.

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between îformî or record display and îtableî or list display.

**Table 4.3.4-69. Hardware/Software Codes Field Descriptions**

Field Name	Data Type	Size	Description
CODE (Hardware/Software)	String	10	The user will enter any desired (Hardware/Software) code in this field.
DESCRIPTION (Hardware/Software)	String	30	Enter the description of the (Hardware/Software) code.

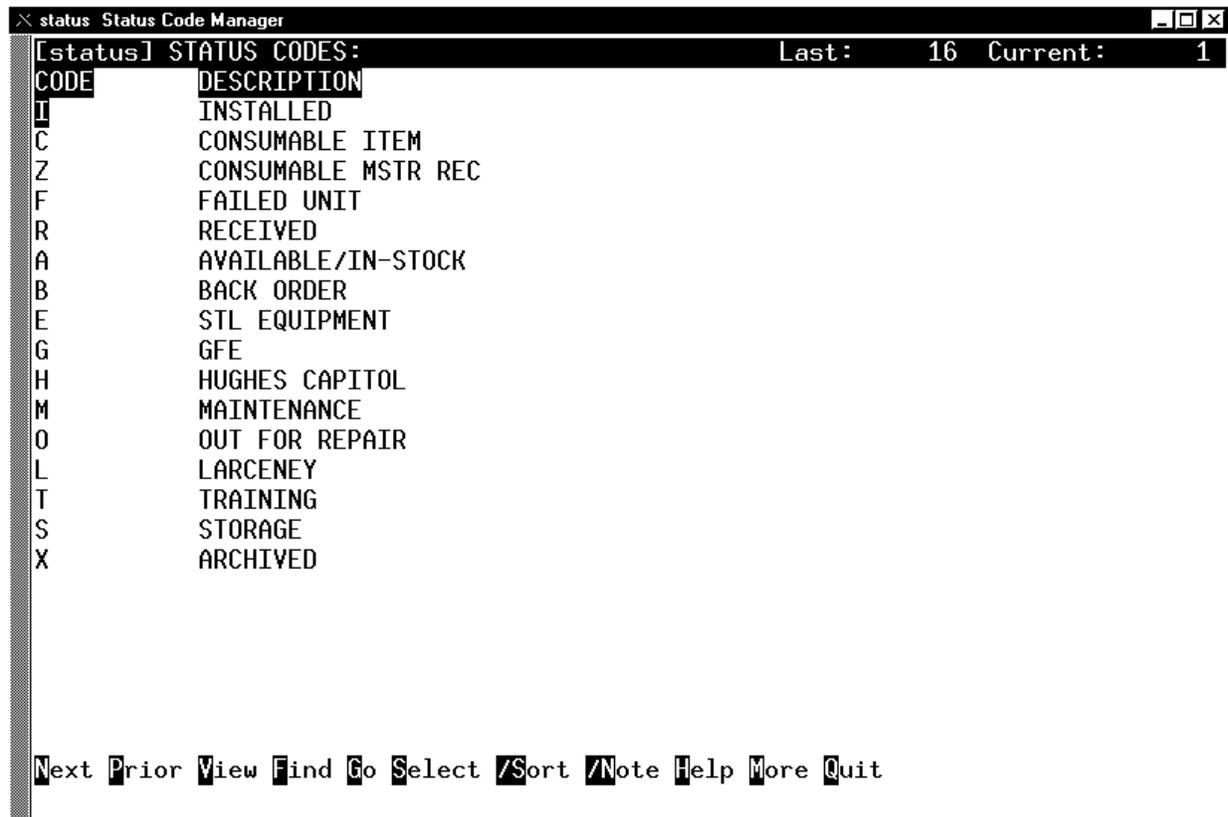

Remember to press <ENTER> after each field.

#### 4.3.4.2.9.7 Status Code Manager

Status Code Manager provides for the maintenance of the status codes used to track property and events in the inventory and logistics processes.

##### 4.3.4.2.9.7.1 Status Code Manager Screen

This screen provides for the maintenance of the status codes used to track property and events in the inventory and logistics processes.

**Figure 4.3.4-71. Status Code Manager CHUI**

Unique Bottom Line Commands:

/Add Add (store) the displayed record (data on the screen) to the data base.

/Copy Copy the itaggedî displayed fields (data on the screen) to other fields.

/Delete Delete the displayed record (data on the screen) from the data base.

/Insert Insert (store) the displayed record (data on the screen) in sequence to the data base

/Modify Modify (store) the displayed record (data on the screen) in the data base.

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between îformî or record display and îtableî or list display.

**Table 4.3.4-70. Status Code Manager Field Descriptions**

Field Name	Data Type	Size	Description
CODE (Status codes)	String	4	The user will enter any desired (Status codes) code in this field.
DESCRIPTION (Status codes)	String	30	Enter the description of the (Status codes) code.

Remember to press <ENTER> after each field.

#### **4.3.4.2.9.8 Report Number**

Report Number provides for the maintenance of the Report Number conversion used to assign numbers to reports.

##### **4.3.4.2.9.8.1 Report Number Screens**

This screen provides for the maintenance of the Report Number conversion used to assign numbers to reports.

**Figure 4.3.4-72. Report Number CHUI**

Unique Bottom Line Commands:

- /Add Add (store) the displayed record (data on the screen) to the data base.
- /Copy Copy the “tagged” displayed fields (data on the screen) to other fields.
- /Delete Delete the displayed record (data on the screen) from the data base.
- /Insert Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify Modify (store) the displayed record (data on the screen) in the data base.
- /Note Add a note to the displayed record (data on the screen).
- /Sort Sort on the selected field of the displayed record (data on the screen).
- View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-71. Report Number Field Descriptions**

Field Name	Data Type	Size	Description
OLD (Report numbers)	String	5	The user will enter OLD Report numbers.
NEW (Report numbers)	String	5	Enter the corresponding NEW Report numbers.

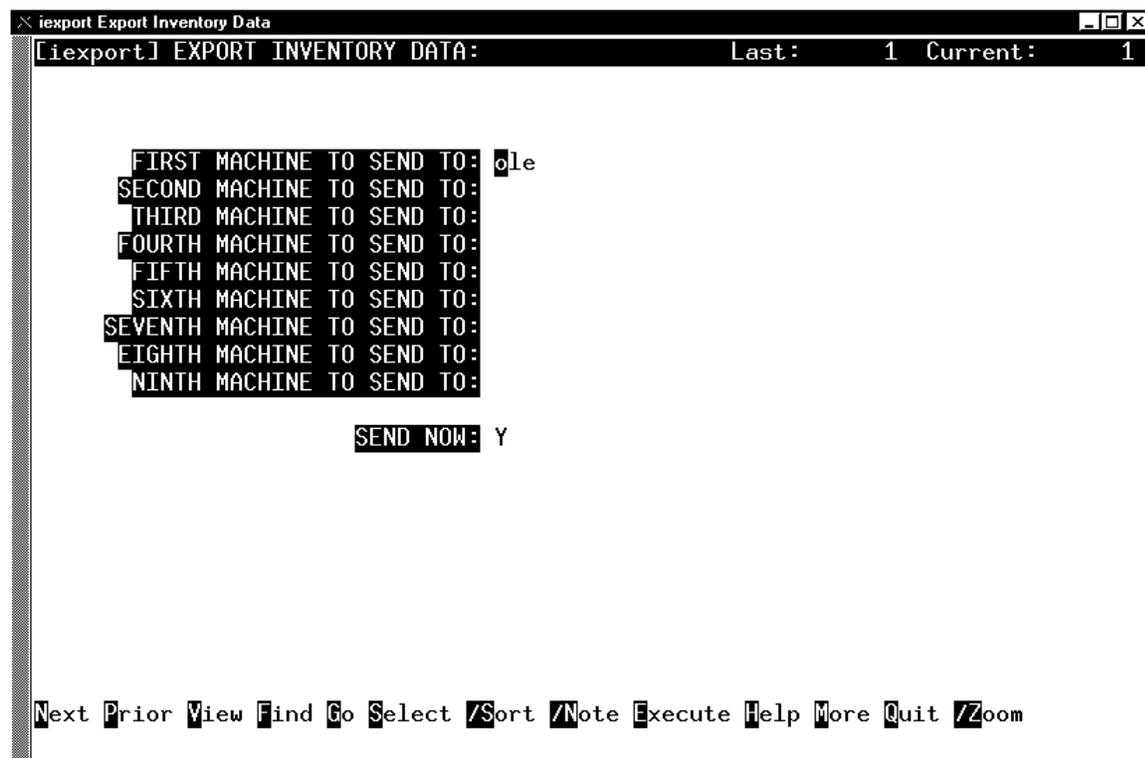

Remember to press <ENTER> after each field.

#### 4.3.4.2.9.9 Export Inventory Data

Export Inventory Data provides the assignment of destinations for the transfer of a site's inventory data to another location.

##### 4.3.4.2.9.9.1 Export Inventory Data Screens

This screen provides the assignment of destinations for the transfer of a site's inventory data to another location.

**Figure 4.3.4-73. Export Inventory Data CHUI**

Unique Bottom Line Commands:

/Add Add (store) the displayed record (data on the screen) to the data base.

/Copy Copy the “tagged” displayed fields (data on the screen) to other fields.

/Delete Delete the displayed record (data on the screen) from the data base.

/Insert Insert (store) the displayed record (data on the screen) in sequence to the data base

/Modify Modify (store) the displayed record (data on the screen) in the data base.

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

/Zoom Display a list of all the values of the selected field in the data base.

View Toggles between “form” or record display and “table” or list display.

Execute This command invokes the appropriate process and prints a report on the results.

**Table 4.3.4-72. Export Inventory Data Field Descriptions**

Field Name	Data Type	Size	Description
Nth MACHINE TO SEND TO	String	6	Enter Site Code of machine to receive Inventory Data.
SEND NOW	String	1	Flag to indicate subject is to be sent in response..

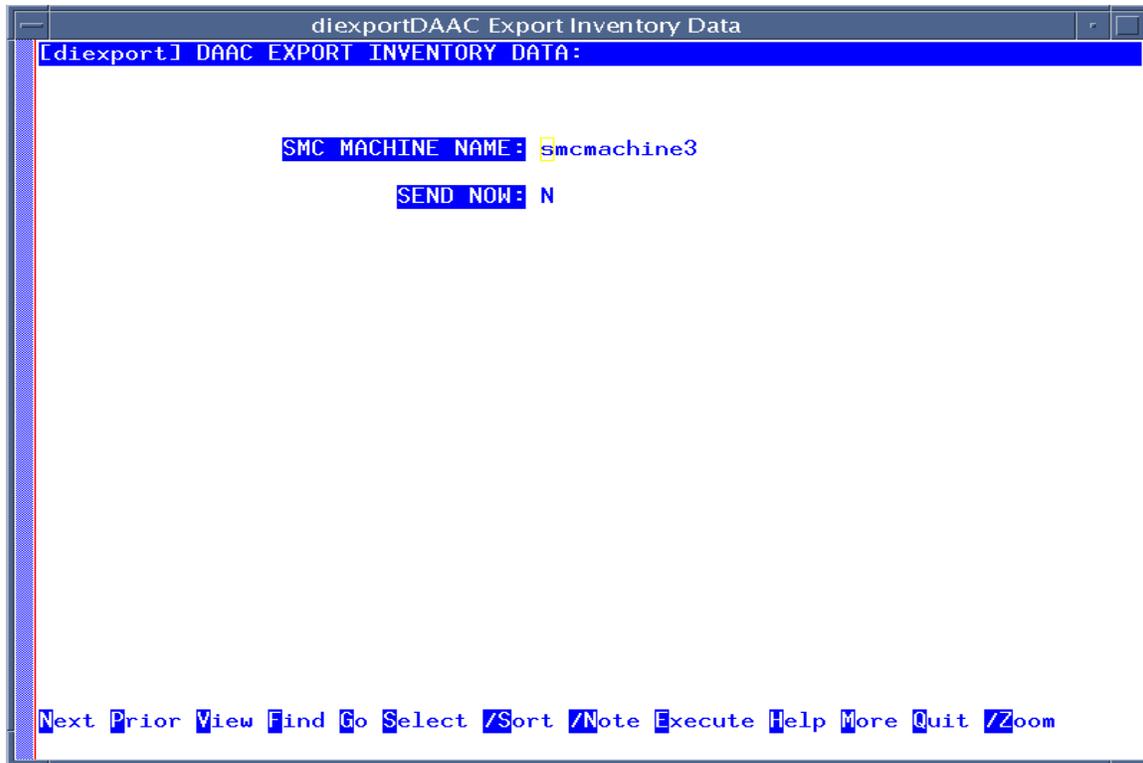

Remember to press <ENTER> after each field.

#### **4.3.4.2.9.10 DAAC Export Inventory Data**

DAAC Export Inventory Data provides for the transfer of Inventory Data from the DAAC to a specific machine at the SMC.

##### **4.3.4.2.9.10.1 DAAC Export Inventory Data Log Screens**

This screen provides the operator with the means to specify the destination machine for the DAAC's Inventory Data at the SMC and whether to send the data immediately.

**Figure 4.3.4-74. DAAC Export Inventory CHUI**

Unique Bottom Line Commands:

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-73. DAAC Export Inventory Data Field Descriptions**

Field Name	Data Type	Size	Description
SMC MACHINE NAME	String	6	Enter Site Code of machine to receive Inventory Data.
SEND NOW	String	1	Flag to indicate subject is to be sent in response..

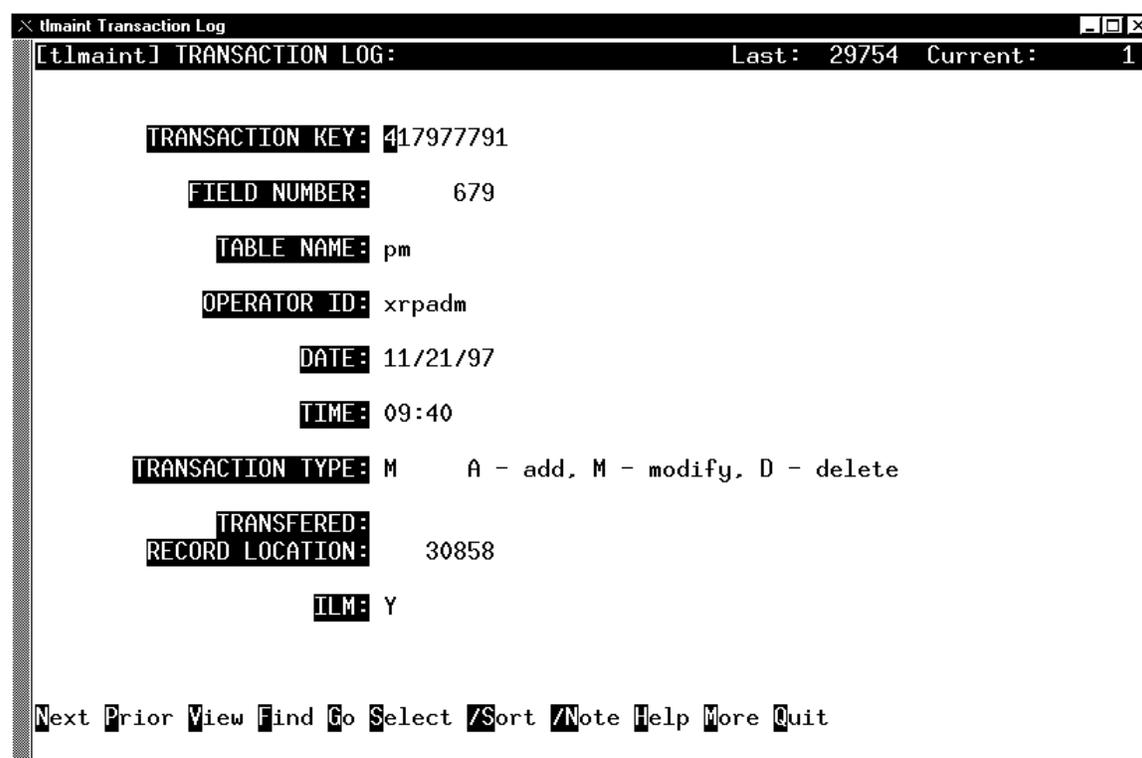

Remember to press <ENTER> after each field.

#### 4.3.4.2.9.11 Transaction Log

Transaction Log provides a review of the transactions applied to the .ILM database.

#### 4.3.4.2.9.11.1 Transaction Log Screens

This screen provides a review of the transactions applied to the .ILM database. This function may be used by ILMADM and XRPADM users only.

**Figure 4.3.4-75. Transaction Log CHUI**

Unique Bottom Line Commands:

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between "form" or record display and "table" or list display.

**Table 4.3.4-74. Transaction Log Field Descriptions**

Field Name	Data Type	Size	Description
TRANSACTION KEY	Number	8	The transaction log key field. This key is assigned by the program.
FIELD NUMBER	Number	8	The field number of the transaction field to query.
TABLE NAME	String	20	The table name of the database table containing the field to query.
OPERATOR ID	String	8	This field is the login ID of the user who added this item to the data base and is not modifiable by the user.
DATE	Date	2	Date for the query; e.g. transaction date.
Time	Time	2	Time for the query; e.g. transaction time
TRANSACTION TYPE	Number	2	Code for the TYPE of transaction to query: A = Add, M = Modify, D = Delete.
TRANSFERRED RECORD LOCATION	String	20	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
ILM	String	1	Flag Y/N indicating ILM vs Baseline Manager.

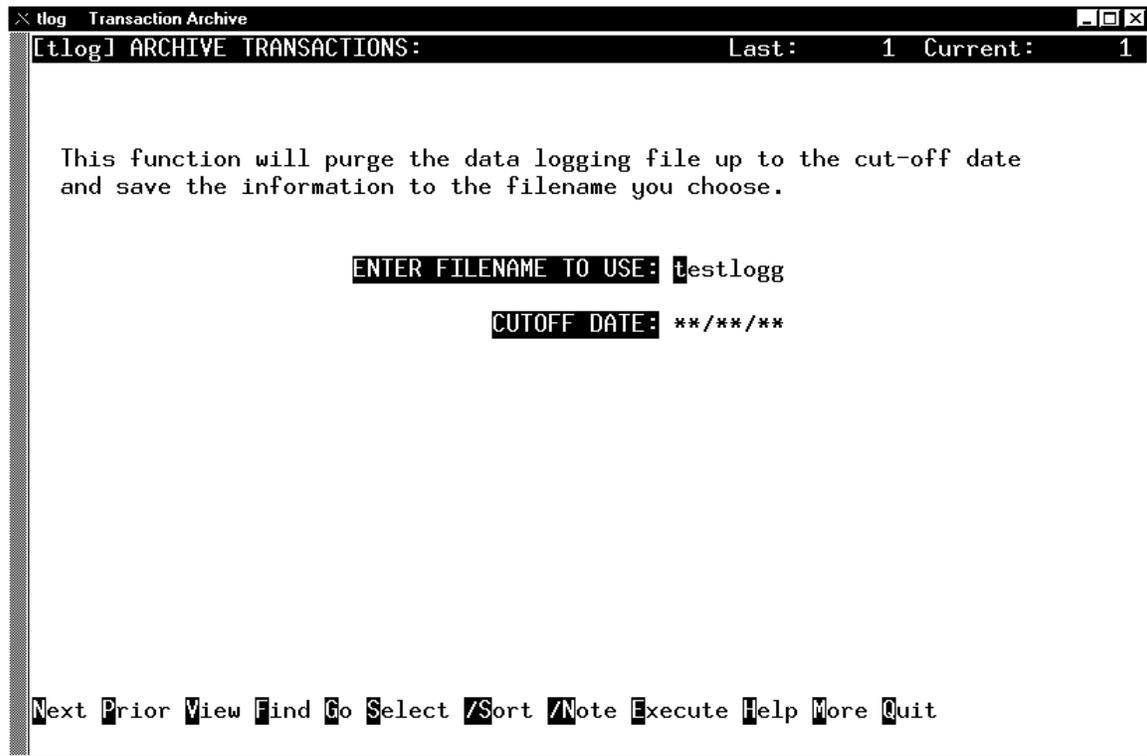

Remember to press <ENTER> after each field.

#### **4.3.4.2.9.12 Transaction Archive**

Transaction Archive provides the assignment of a destination for archived Transaction Logs with the archiving action

##### **4.3.4.2.9.12.1 Transaction Archive**

This screen provides the assignment of a destination for archived Transaction Logs with the archiving action. This function must be performed regularly to prevent the Transaction Log file from wrapping.

**Figure 4.3.4-76. Transaction Archive CHUI**

Unique Bottom Line Commands:

/Add Add (store) the displayed record (data on the screen) to the data base.

/Copy Copy the “tagged” displayed fields (data on the screen) to other fields.

/Delete Delete the displayed record (data on the screen) from the data base.

/Insert Insert (store) the displayed record (data on the screen) in sequence to the data base

/Modify Modify (store) the displayed record (data on the screen) in the data base.

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between “form” or record display and “table” or list display.

Execute This command invokes the appropriate process and prints a report on the results.

**Table 4.3.4-75. Transaction Archive Field Descriptions**

Field Name	Data Type	Size	Description
ENTER FILENAME TO USE	String	20	Enter filename to archive the transaction log to.
CUTOFF DATE (Transaction archive)	String	8	Enter last date for transaction records to be archived.

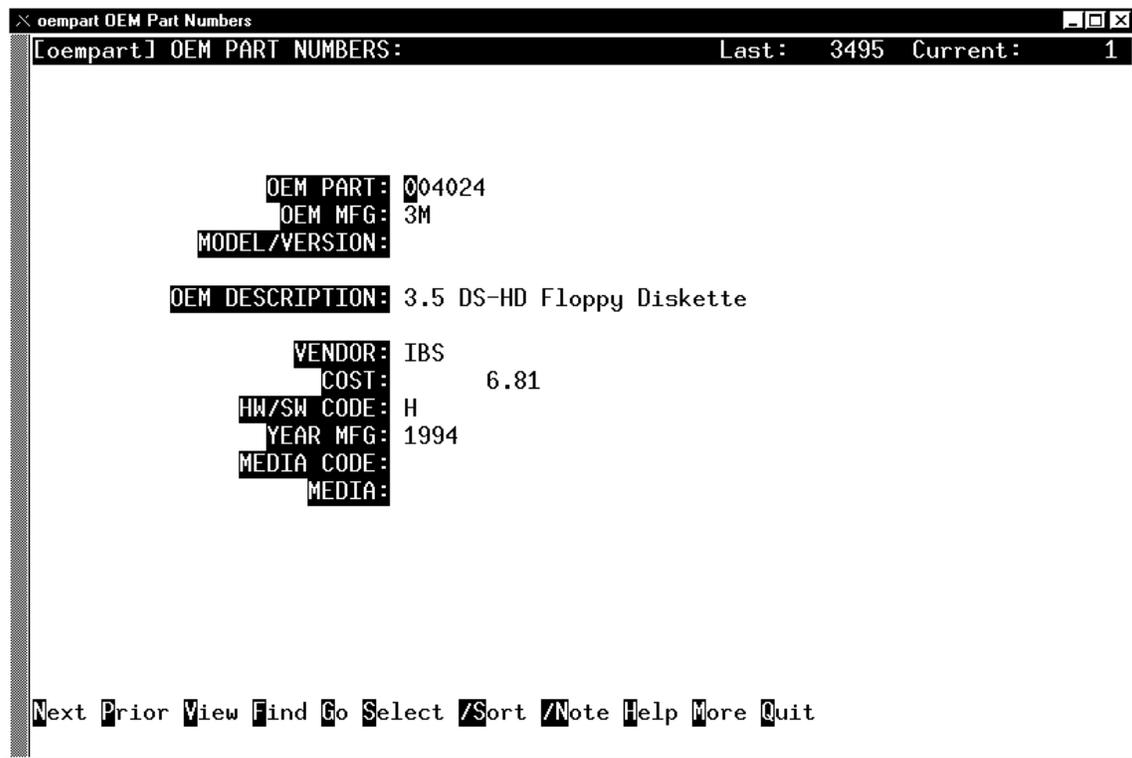

Remember to press <ENTER> after each field.

#### 4.3.4.2.9.13 OEM Part Numbers

OEM Part Numbers provides for the maintenance of OEM Part Numbers information used in the inventory and logistics processes

##### 4.3.4.2.9.13.1 OEM Part Numbers

This screen provides for the maintenance of OEM Part Numbers information used in the inventory and logistics processes.

**Figure 4.3.4-77. OEM Part Numbers Screen**

Unique Bottom Line Commands:

/Add Add (store) the displayed record (data on the screen) to the data base.

/Copy Copy the “tagged” displayed fields (data on the screen) to other fields.

/Delete Delete the displayed record (data on the screen) from the data base.

/Insert Insert (store) the displayed record (data on the screen) in sequence to the data base

/Modify Modify (store) the displayed record (data on the screen) in the data base.

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-76. OEM Part Numbers Field Descriptions**

Field Name	Data Type	Size	Description
OEM PART (Part numbers)	String	34	This is the manufacturer’s part number of the item being cataloged
OEM MFG (Part numbers)	String	40	This is the name of the manufacturer.
MODEL/VERSION (Part numbers)	String	24	This field is used to enter the actual Model and or Version of the item.
OEM DESCRIPTION (Part numbers)	String	30	This field reflects the description of the OEM PART NUMBER entered in the field above.
VENDOR (Part numbers)	String	6	Enter the vendor ID. The operator may /Zoom to the vendor data base to choose the appropriate vendor code.
COST	Floating	9.2	This field is the purchase cost of the item.
HD/SW CODE	String	10	This field provides the ability for the user to enter a code designating the type of item. The user may zoom to the Hardware/Software data file. NOTE: This data must be previously entered in screen Hardware/Software Codes (hswgcd).
YEAR MFG	String	4	This field is used to enter the actual 4-digit year the item was manufactured. This field defaults to the current year.
MEDIA CODE	String	1	Code for Media identification
MEDIA	String	2	Media material

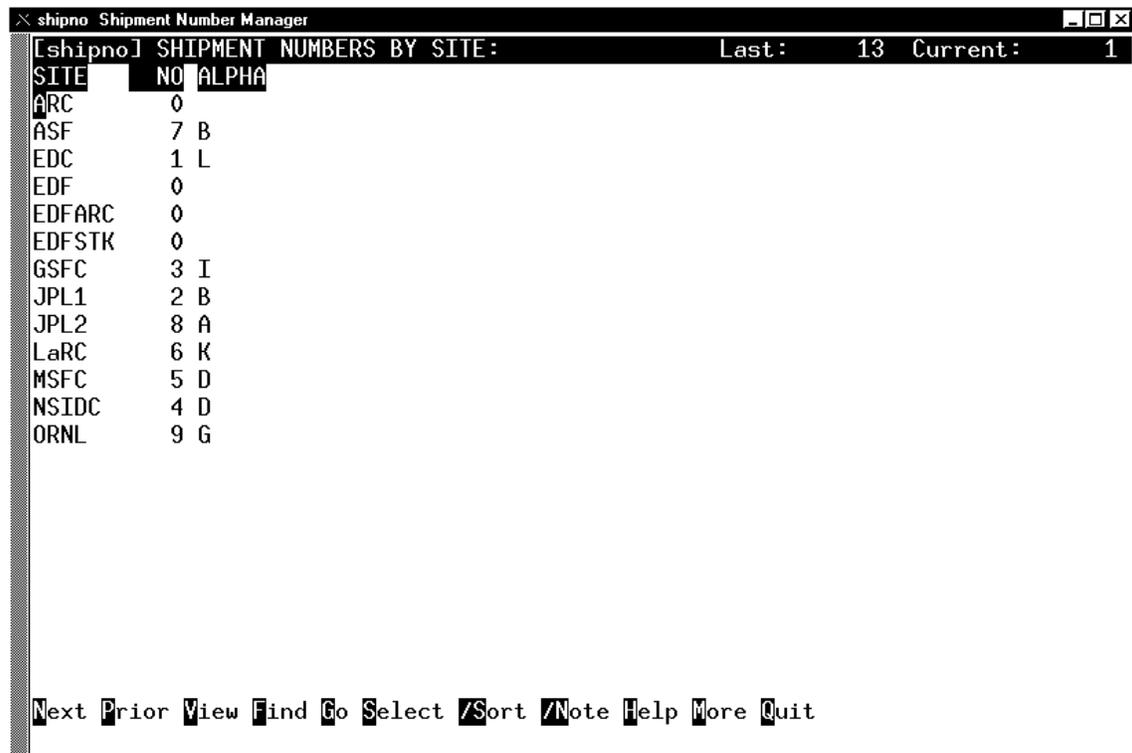

Remember to press <ENTER> after each field.

#### 4.3.4.2.9.14 Shipment Number Manager

Shipment Number Manager provides for the maintenance of the Shipment Number conversion used to assign numbers to shipments.

##### 4.3.4.2.9.14.1 Shipment Number Manager Screens

This screen provides for the maintenance of the Shipment Number conversion used to assign numbers to shipments.

**Figure 4.3.4-78. Shipment Number Manager CHUI**

Unique Bottom Line Commands:

`/Add` Add (store) the displayed record (data on the screen) to the data base.

`/Copy` Copy the “tagged” displayed fields (data on the screen) to other fields.

`/Delete` Delete the displayed record (data on the screen) from the data base.

`/Insert` Insert (store) the displayed record (data on the screen) in sequence to the data base

`/Modify` Modify (store) the displayed record (data on the screen) in the data base.

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-77. Shipment Number Manager Field Descriptions**

Field Name	Data Type	Size	Description
SITE (LOCATION)	String	6	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
NO (Shipment Numbers)	Number	4	Site number used in shipment tracking.
ALPHA (Shipment Numbers)	String	2	Alpha code corresponding to site number used in shipment tracking.

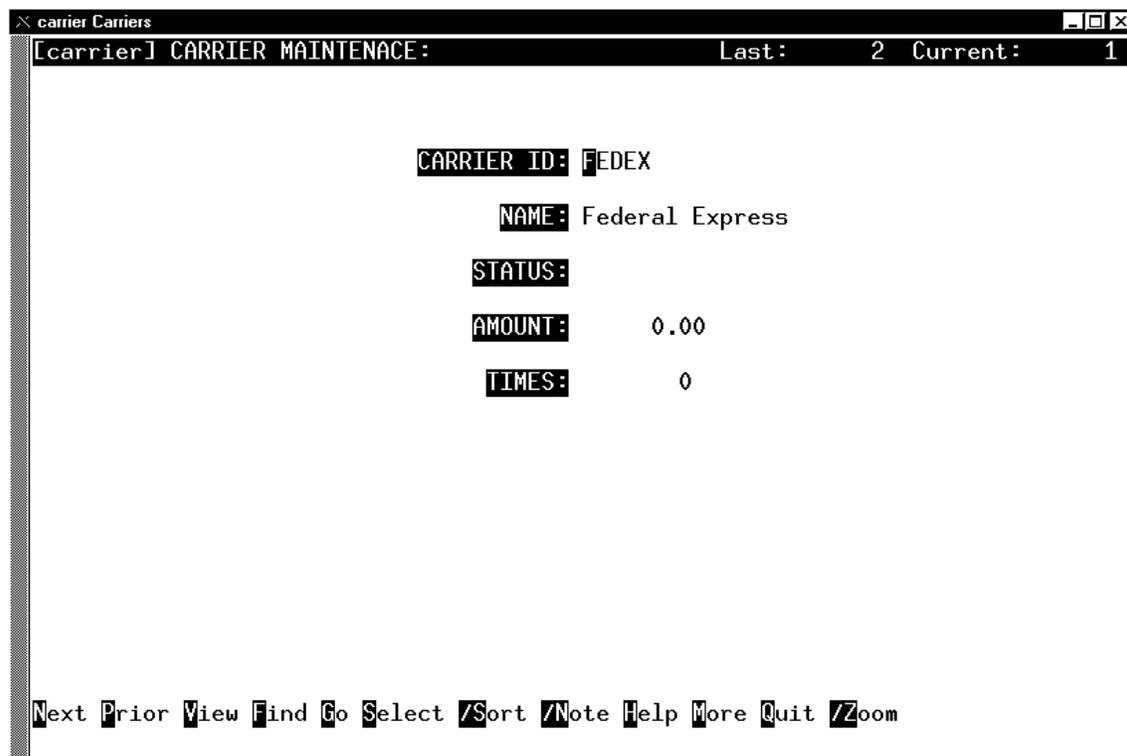

Remember to press <ENTER> after each field.

#### **4.3.4.2.9.15 Carriers**

Carriers provides for the maintenance of Carrier information used in the inventory and logistics processes.

##### **4.3.4.2.9.15.1 Carriers Screens**

This screen provides for the maintenance of Carrier information used in the inventory and logistics processes.

**Figure 4.3.4-79. Carriers CHUI**

Unique Bottom Line Commands:

/Add Add (store) the displayed record (data on the screen) to the data base.

/Copy Copy the “tagged” displayed fields (data on the screen) to other fields.

/Delete Delete the displayed record (data on the screen) from the data base.

/Insert Insert (store) the displayed record (data on the screen) in sequence to the data base

/Modify Modify (store) the displayed record (data on the screen) in the data base.

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

/Zoom Display a list of all the values of the selected field in the data base.

View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-78. Carriers Field Descriptions**

Field Name	Data Type	Size	Description
CARRIER ID	String	6	Enter the code to be used for the carrier
NAME (Carrier)	String	30	Enter the name of the carrier corresponding to the displayed code.
STATUS (Carrier)	String	10	Status of the carrier.
AMOUNT (Carrier)	A	7	Amount of carrier services used.
TIMES (Carrier)	String	8	Number of times carrier has been used.

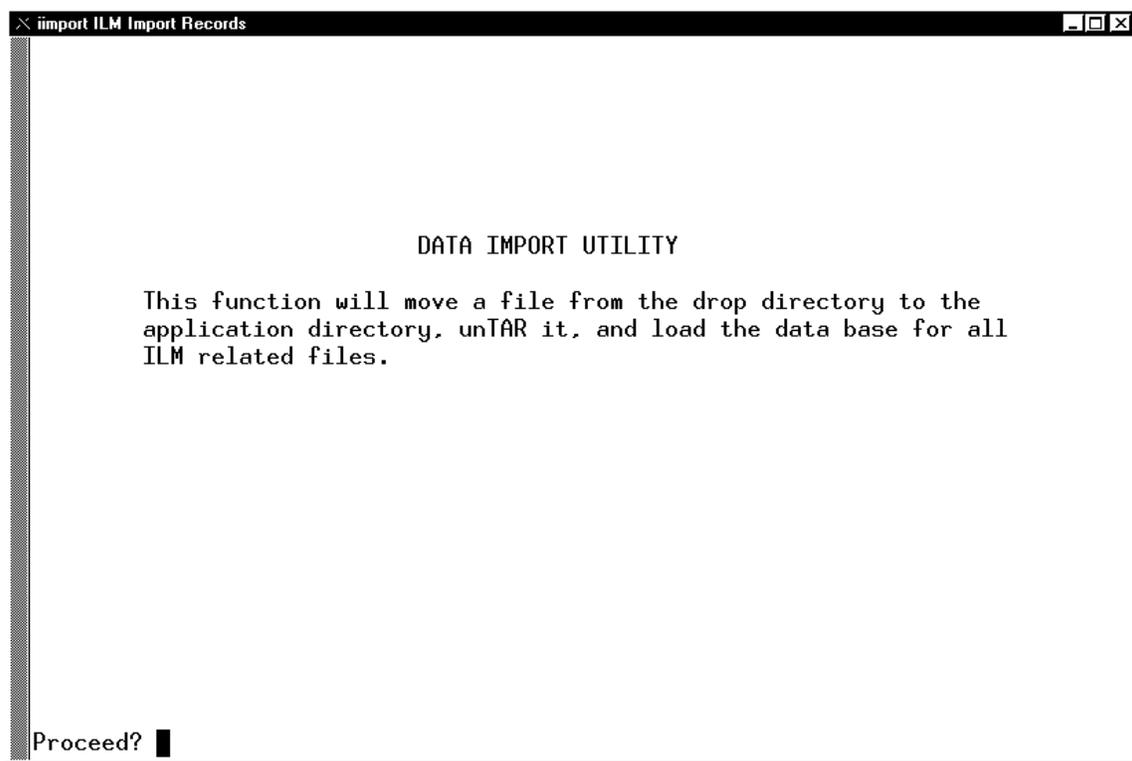

Remember to press <ENTER> after each field.

#### **4.3.4.2.9.15 ILM Import Records**

ILM Import Records provides for the movement of a file from the drop directory to the application directory, unTar it, and load the data base for all ILM related files.

##### **4.3.4.2.9.15.1 ILM Import Records Screens**

This screen provides for the movement of a file from the drop directory to the application directory, unTar it, and load the data base for all ILM related files.

**Figure 4.3.4-80. ILM Import Records CHUI**

Unique Bottom Line Commands:

Proceed? Y = continue with the process, N = quit. The default is N.

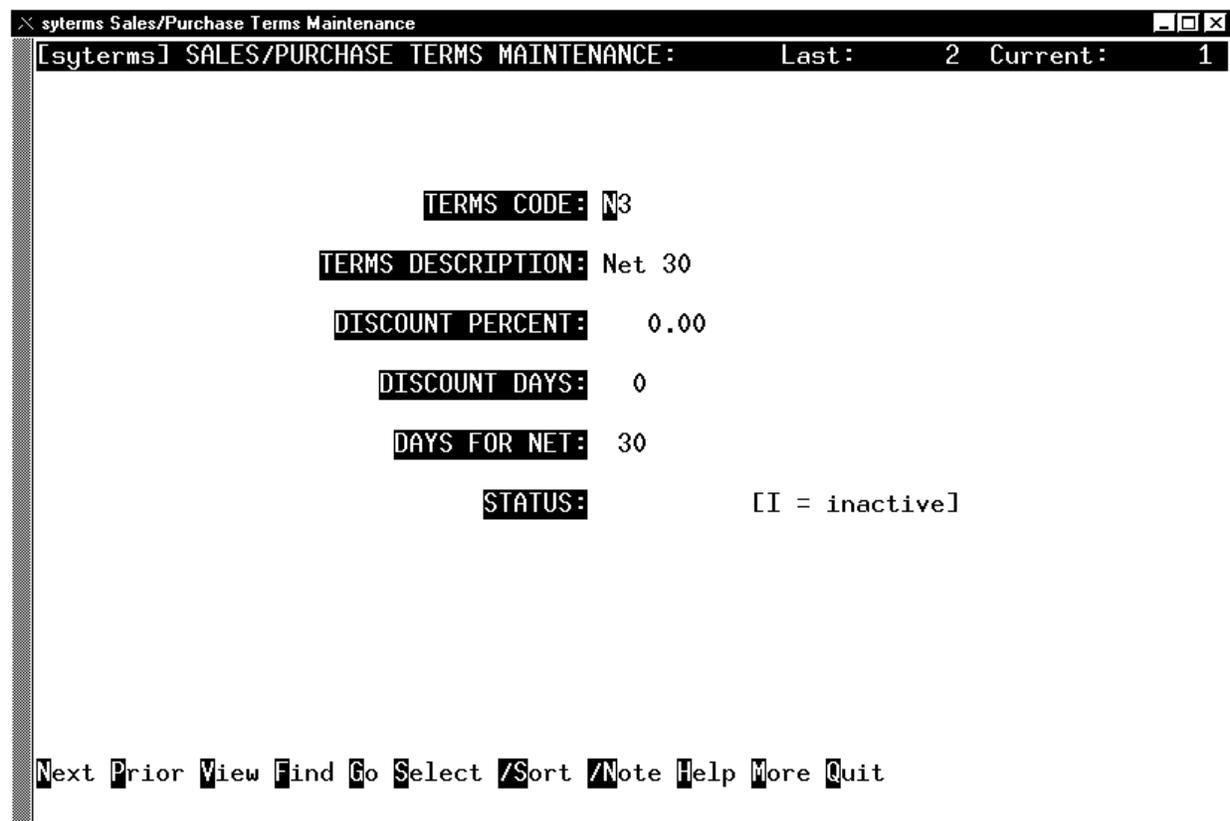

Remember to press <ENTER> after each field.

#### 4.3.4.2.9.17 Sales / Purchase Terms: Maintenance

Sales / Purchase Terms: Maintenance provides for the maintenance of the Sales / Purchase Terms information used in the inventory and logistics processes.

##### 4.3.4.2.9.17.1 Sales / Purchase Terms: Maintenance Screens

This screen provides for the maintenance of the Sales / Purchase Terms information used in the inventory and logistics processes.

**Figure 4.3.4-81. Sales/Purchase Terms: Maintenance CHUI**

Unique Bottom Line Commands:

/Add Add (store) the displayed record (data on the screen) to the data base.

/Copy Copy the “tagged” displayed fields (data on the screen) to other fields.

- /Delete Delete the displayed record (data on the screen) from the data base.
- /Insert Insert (store) the displayed record (data on the screen) in sequence to the data base
- /Modify Modify (store) the displayed record (data on the screen) in the data base.
- /Note Add a note to the displayed record (data on the screen).
- /Sort Sort on the selected field of the displayed record (data on the screen).
- View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-79. Sales/Purchase Terms: Maintenance Field Descriptions**

Field Name	Data Type	Size	Description
TERMS CODE	String	2	Enter the code to be used for this TERMS set.
TERMS DESCRIPTION	String	20	Description for this TERMS CODE.
DISCOUNT PERCENT	String	3	Discount percent if available.
DISCOUNT DAYS	String	3	Days to pay invoice to get discount.
DAYS FOR NET	Number	3	Days to pay before getting penalized for late payment.
STATUS	String	1	Status code for TERMS CODE

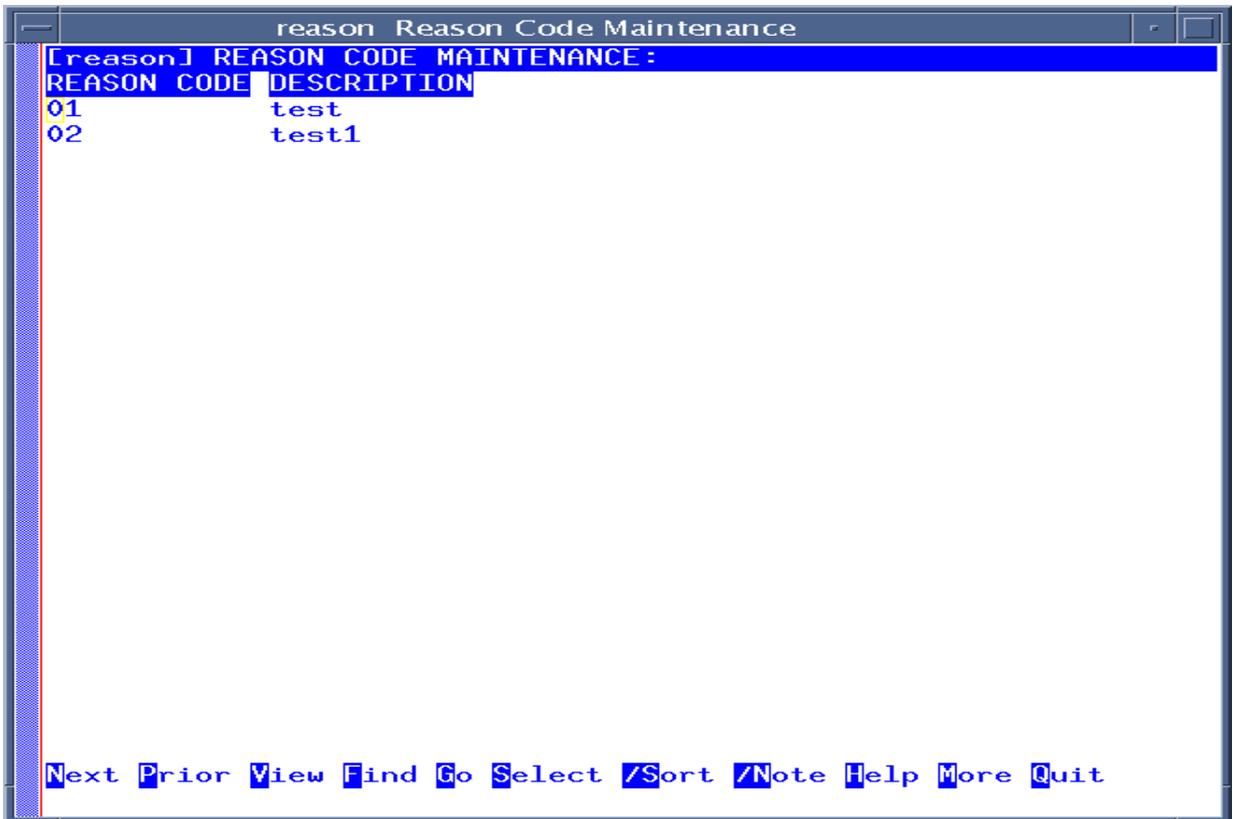

Remember to press <ENTER> after each field.

#### **4.3.4.2.9.18 Reason Code Maintenance**

Sales / Purchase Terms: Maintenance provides for the maintenance of the Sales / Purchase Terms information used in the inventory and logistics processes.

##### **4.3.4.2.9.18.1 Reason Code Maintenance Screens**

This screen provides for the maintenance of the Sales / Purchase Terms information used in the inventory and logistics processes.

**Figure 4.3.4-82. Reason Code Maintenance CHUI**

Unique Bottom Line Commands:

/Note Add a note to the displayed record (data on the screen).

/Sort Sort on the selected field of the displayed record (data on the screen).

View Toggles between “form” or record display and “table” or list display.

**Table 4.3.4-80. Reason Code Maintenance Field Descriptions**

Field Name	Data Type	Size	Description
REASON CODE	String	2	Enter the code to be used for this REASON
DESCRIPTION	String	20	Description for this REASON CODE.

Remember to press <ENTER> after each field.

#### 4.3.4.3 Required Operating Environment

For all COTS packages, appropriate information on operating environments, tunable parameters, environment variables, and a list of vendor documentation can be found in a CM controlled

document for each product. To find the documentation for ILM, refer to the ECS Baseline Information System web page, URL <http://cmdm.east.hitc.com/>.

For information on the operating environment, tunable parameters and environment variables of ILM refer to the 920-TDx-013 “Custom Code Configuration Parameters” documentation series . The “x” refers to the installed location, e.g. 920-TDG-013 is for GSFC DAAC.

#### **4.3.4.3.1 Interfaces and Data Types**

Not applicable.

#### **4.3.4.4 Databases**

The XRP-II application uses the COTS product UNIFY for data base functions. Refer to the UNIFY documentation.

The table below lists the fields encountered on the ILM screens. The names were taken from the screens and the descriptions from online help for the field or interpretation of the screen function. The data attributes of the fields are extracted from the XRP-II data base.

Many CHUIs have several fields grouped together that are filled in by the program as a result of a different field. For instance, an EIN may determine all the LOCATION parameters (Location, Building, Room). These cases are indicated as MULTI-FIELD in the Data-Type column below.

**Table 4.3.4-83. ILM Field Descriptions (1 of 19)**

Field Name	Data Type	Size	Description
# (PO)	Number	4	Count of entries on the Item Page
ACTIVE DATE	String	8	Date the item is received and entered into inventory
ADDRESS 1 (CONSIGNEE)	String	30	First part of address
ADDRESS 2 (Consignee)	String	30	Second part of address.
ALDT	Floating	9.1	This field is used to enter the known (actual) ALDT time in hours.
ALDT REASON CODE	String	10	Enter the reason code for the ALDT.
ALPHA (Shipment Numbers)	String	2	Alpha code corresponding to site number used in shipment tracking.
AMOUNT (Carrier)	A	7	Amount of carrier services used.
ARCHIVE LOCATION	String	6	Physical location of archived item
ARCHIVE PARENT	String	1	Enter Y if parent is to archived along with children
ASSEMBLY ID	String	35	Identifier for the assembly displayed. All components of the assembly can be referenced through this parent id or code.
BASELINECONTR OL ITEM ID	String	20	This field provides the ability for the user to point to an equivalent item contained within the BASELINE MANAGEMENT system. ILM will enter the BLM Control Item based on the OEM Part Number.
BATCH NUMBER	Number	8	This is the system assigned batch number for the group of transactions the user enters, when transferring consumables and spares.
BDLG (PO)	String	6	This field is used to designate the building number within the site where the item is.
BILL OF LADING	String	255	The user will enter the actual Bill of Lading in this field.
BILL TO BRANCH	String	6	Enter the site code for the vendor to send the invoice. The operator may /Zoom to the Location table for other location codes.
BILL TO SITE	String	6	Enter the site code for the vendor to send the invoice. The operator may /Zoom to the Location table for other location codes.
BLDG	String	6	This field is used to designate the building number within the site where the item is

**Table 4.3.4-79. ILM Field Descriptions (2 of 19)**

Field Name	Data Type	Size	Description
BUILDING	String	6	This field is used to designate the building number within the site where the item is.
BUYER	String	6	Enter the buyer ID. The operator may /Zoom to the buyer data base to obtain the appropriate value.
BUYER CODE or RANGE	String	2	Enter the buyer ID. The operator may /Zoom to the buyer data base to obtain the appropriate value.
BUYER ID	String	6	Enter the buyer ID. The operator may /Zoom to the buyer data base to obtain the appropriate value.
CARRIER ID	String	6	Enter the code to be used for the carrier
CC MAIL (Employee)	String	30	CC-mail address of the employee described by the displayed code.
CCR #	String	30	Enter the applicable CCR number.
CHANGE NUMBER	Number	3	Enter the numeric value of the change number for PO's that have experienced modifications from the original entry date.
CHILD	String	14	Displayed is the CHILD EIN with the description of the item under
CITY	String	20	City part of address
CODE	String	2	The administrator can set up codes for their specific needs if desired.
CODE (Hardware/Software)	String	10	The user will enter any desired (Hardware/Software) code in this field.
CODE (Maintenance)	String	2	The user will enter any desired code in this field.
CODE (Requisition)	String	2	is a special user code that you can associate with this requisition.
CODE (Status codes)	String	4	The user will enter any desired (Status codes)code in this field.
COMMENT	String	60	This field is a user comment field.
COMPONENT EIN	String	35	This field is the component EIN number of the Parent EIN.
COMPONENT ID	String	35	Identifier for the specific component displayed
COMPONENT ID (Assembly)	String	35	Identifier for the specific component of the displayed assembly. The first component of an assembly must have the same id/code as the assembly id.
CONSIGNEE NAME	String	30	Name of individual/office responsible for material at the site.
CONTRACT ID	String	15	The user will enter the actual ID as assigned by Purchasing or provided by the vendor.
CONTRACT NO	String	10	Enter the maintenance contract number.
CONTROL ITEM ID	String	20	This field provides the ability for the user to point to an equivalent item contained within the BASELINE MANAGEMENT system. ILM will enter the BLM Control Item based on the OEM Part Number.
COST	Floating	9.2	This field is the purchase cost of the item.

**Table 4.3.4-79. ILM Field Descriptions (3 of 19)**

Field Name	Data Type	Size	Description
COST INVENTORY REPORT	Number	1	Inventory Report containing cost information
CURRENT	Date	8	Current date
CUTOFF DATE	String	8	Enter the last date for the system to examine PM items and generate orders.
CUTOFF DATE (Transaction archive)	String	8	Enter last date for transaction records to be archived.
DATE	Date	2	Date for the query; e.g. transaction date.
Date Entered	Date	2	This field is a system assigned date when the record was added to the data base and not modifiable by the user.
DATE OF BILL	Date	2	Date item was billed
DATE OF LAST ACTIVITY	Date	2	Date of last activity performed on an item
DATE OF RECOMMENDATION	Date	2	Date the recommendation was recorded
DATE RANGE OF TRANSACTION	Date	2	Date or date range for desired transaction query
DATE TO REPORT ON OR RANGE	Date	2	Date or date range to report on
DAYS FOR NET	Number	3	Days to pay before getting penalized for late payment.
DEFAULT MFG YEAR	String	4	DEFAULT MFG YEAR
DEFAULT RECEIPT LOCATION	String	6	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
DESC (Maintenance)	String	30	Enter the description of the (maintenance) code.
DESC (PO)	String	30	is an auto filled field based upon your selection of the OEM PART number
DESCRIPTION	String	30	is an auto filled field based upon your selection of the OEM PART number
DESCRIPTION (Hardware/Software)	String	30	Enter the description of the ((Hardware/Software) code.
DESCRIPTION (Material Location)	String	30	Text description of the utility of the site.
DESCRIPTION (Reason codes)	String	30	Enter the description of the (Reason codes) code.
DESCRIPTION (Status codes)	String	30	Enter the description of the (Status codes) code.

**Table 4.3.4-79. ILM Field Descriptions (4 of 19)**

Field Name	Data Type	Size	Description
DEST (PO)	String	6	This field is the destination location or site code where the parent and children are being shipped to. The user may /Z, Zoom at this field to display the location data base.
DEST BLDG	String	6	Destination building number
DEST SITE	String	6	Destination site (DAAC code)
DESTINATION	String	6	This field is the destination location or site code where the parent and children are being shipped to. The user may /Z, Zoom at this field to display the location data base.
DESTINATION BUILDING	String	6	Enter the destination building number where the item is being transferred to.
DESTINATION LOCATION	String	6	Enter the destination location (DAAC) where the item is being transferred to.
DESTINATION LOCATION,BUILDING,ROOM	MULTI-FIELD		Enter the destination location, building and room codes where the parent is to be transferred to. The operator may /Z, Zoom to the location data base to choose an appropriate location.
DESTINATION ROOM	String	6	Enter the room number where the item is being relocated to
DIMENSIONS	String	8	Enter the actual dimensions of the box.
DISCOUNT DAYS	String	3	Days to pay invoice to get discount.
DISCOUNT PERCENT	String	3	Discount percent if available.
DUE DATE	Date	2	is calculated by ILM for you (Today plus 45 days.)
E MAIL (Employee)	String	30	E-mail address of the employee described by the displayed code.
ECS NAME	String	23	This field provides the ability for the user to enter a name the item will be known by.
ECS Name	String	23	This field is the ECS Name assigned to the Parent EIN Record.
ECS Name through Old User	MULTI-FIELD		These fields are all reflected from the Parent Ein record and cannot be modified.
EIN	String	14	This field is for the entry of the actual silver tag numbers attached to each item. If an item must be controlled by the ILM but does not receive a silver tag, the system creates an internal tag number which is prefixed with the Site abbreviation and contains a sequentially assigned number. Pressing RETURN at the field prompt automatically performs this internal assignment. This number, whether entered or assigned, must be used for all machine configuration operations as well as reporting and maintenance functions.
EIN MULTI-LEVEL REPORT	Number	2	Enter the number of copies of this report to generate.
EIN OR RANGE	String	14	Field can accept two 14 character strings. E.g. EDF0000000001-EDF9999999999 for a range
EIN through ROOM	MULTI-FIELD		These fields are not modifiable by the operator and represent the actual data from the EIN file.

**Table 4.3.4-79. ILM Field Descriptions (5 of 19)**

Field Name	Data Type	Size	Description
E-MAIL (EMPLOYEE)	String	30	Enter employee's e-mail address.
EMPL	String	10	Enter the employee code.
EMPLOYEE NUMBER (EMPL)	String	10	Enter the employee code.
EMPLOYEE NUMBER (Employee)	String	10	Employee identification number Employee code generated by the program.
EMPLOYEE OR RANGE	String	8	Enter employee id code to query on
END DATE	Date	2	Enter the date the contract will expire.
ENGINEERING CHANGE	String	8	This field is the change number assigned when the record was added to the data base. The user should press RETURN at this field to allow the system to assign the default.
ENTER FILENAME TO USE	String	20	Enter filename to archive the transaction log to.
ENTER NAME TO USE	String	20	Enter filename to archive the transaction log to.
ENTER NUMBER OF COPIES	Number	1	Enter any number of copies of the report to print.
ENTER NUMBER OF COPIES (MAINTENANCE WORK ORDER REPORTS)	Number	1	Enter any number of copies of the report to print.
ENTER NUMBER OF COPIES (WORK ORDER STATUS)	Number	1	Enter any number of copies of the report to print.
EOM Part through WARRANTY DATE	MULTI-FIELD		These fields are all copied from the child EIN record and may be modified in this screen as required.
ESTIMATED DUE DATE	Date	2	Enter the estimated due date for the material being ordered.
ESTIMATED SHIP DATE	Date	2	This field is the estimated ship date for the shipment.
Events	String	30	Name of the event
EXPLOSION QUANTITY	Number	2	Enter number of level to be displayed for parent ein structure
EXPORT FUNCTIONING	String	1	Allows use of the Export Inventory Data function.
FAILURE CODE	String	2	Code identifying the failure
FAILURE DATE	Date	2	Enter actual failure date.

**Table 4.3.4-79. ILM Field Descriptions (6 of 19)**

Field Name	Data Type	Size	Description
FAILURE DATE and TIME	MULTI-FIELD		Enter actual failure date and time.
FAILURE TIME	String	2	Enter actual failure time.
FAX NUMBER (Employee)	String	13	FAX number of the employee described by the displayed code.
FIELD NUMBER	Number	8	The field number of the transaction field to query.
FIRST NAME (Employee)	String	30	First name of the employee described by the displayed code.
FREQUENCY	Number	3	Enter number of days between PM's.
FROM BLDG	String	6	This field shows the original building number of where the item resides
FROM LOCATION	String	6	This field shows the original location of where the item resides
FROM SITE	String	6	This field shows the original site of where the item resides
FROM SITE OR RANGE	String	6	Enter site (DAAC) or range to report on
HD/SW CODE	String	10	This field provides the ability for the user to enter a code designating the type of item. The user may zoom to the Hardware/Software data file. NOTE: This data must be previously entered in screen Hardware/Software Codes (hswswcd).
HDWSFT CODE	String	10	This field provides the ability for the user to enter a code designating the type of item. The user may zoom to the Hardware/Software data file. NOTE: This data must be previously entered in screen Hardware/Software Codes (hswswcd).
ILM	String	1	Flag Y/N indicating ILM vs Baseline Manager.
ILM INTERNAL SHIPMENT SEQUENCE	Number	6	This field is the internal shipment sequence maintained by the system. The user should always press return at this field to allow the system to assign the next internal sequence number.
INACTIVE DATE	Date	2	This field is the date to make the structure ineffective.
INCLUDE PREVIOUSLY RELEASED ITEMS (YN)	String	1	Include (Y) items covered in the selected POs that have a RELEASE CODE showing the item is released. Else (N) display only unreleased items.
INSTALL	String	1	This field accepts either a 'N' or 'Y' to designate to the system which items are to be shipped with the parent..
INSTALL DATE	Date	2	This date reflects the actual date this item was installed.
INSTALL/RECEIPT REPORT	Number	2	Enter number of copies of this report to generate.
INSTALLATION DATE	Date	2	This date reflects the actual date this item was installed.
INSTALLATION DATE OR RANGE	Date	2	Enter installation date or range of dates to report on

**Table 4.3.4-79. ILM Field Descriptions (7 of 19)**

Field Name	Data Type	Size	Description
INSTALLATION REPORT	Number	4	This field is the installation report number assigned by the system when an installation had occurred and as reflected from the EIN Record for the Parent EIN.
INSTALLATION REPORTS	Number	4	This field is the installation report number assigned by the system when an installation had occurred and as reflected from the EIN Record for the Parent EIN.
INVENTORY REPORT - BY LOCATION	Number	2	Enter number of copies of this report to generate.
ITEM NUMBER or RANGE	String	8	Item number(s) to report.
ITEM PRICE	Floating	11.4	This field is the purchase cost of the item. Same as COST.
LAST	String	35	indicate the last requisition entered and the current requisition you are reviewing.
LAST & CURRENT	String	35	indicate the last requisition entered and the current requisition you are reviewing.
LAST CONTROL ITEM ID	String	20	Control Item ID to display as the last ID assigned. A new generation of Control Item IDs will be generated starting with this one.
LAST DATE	Date	2	Enter the last date a PM as performed for this item.
LAST EIN	String	20	EIN to display as the last EIN assigned. A new generation of EINs will be generated starting with this one.
Last Name	String	30	This field reflects the employee last name from the employee master file.
LAST NAME (Employee)	String	30	Last name of the employee described by the displayed code.
LATEST DUE DATE to RELEASE	String	8	is calculated by ILM for you (Today plus 45 days.)
LINE NO.	Number	4	Line number of the item if there is an order associated with the transaction
LOCATION	String	8	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
LOCATION TYPE	String	1	Specifies the material application at the site: Null or S = stock, R = received, N = non-nettable, W = work center, A = archive.
LOCATION TYPE (Material Location)	String	1	Specifies the material application at the site: Null or S = stock, R = received, N = non-nettable, W = work center, A = archive.
MACHINE NAME`	String	6	Name of a machine used to set a source or destination for data transfer.
MAINT CODE	String	3	The user will enter any desired code in this field.

**Table 4.3.4-79. ILM Field Descriptions (8 of 19)**

Field Name	Data Type	Size	Description
MAINT CONTRACT	String	15	This field is used to enter the Maintenance Contract number for maintenance on this particular item. The user may zoom to the Contract data file and choose the desired contract number. NOTE: This data must be previously enter with screen Maintenance Contracts (mntcont).
MAINT VENDOR	String	6	This field is used to enter the code for the vendor who is the maintenance vendor. The user may zoom to the Vendor data file and choose the appropriate code. NOTE: This information must be previously entered using screen Vendor Master Maintenance (vmasts).
MAINTENANCE DUE ON	String	8	Enter the date the next maintenance is due.
MANUFACTURED DATE	Date	2	Date Manufactured
MATERIAL LOCATION ID	String	6	ID for the location where material can be found.
MAX. QTY ON HAND AND ON ORDER	Floating	10.1	Maximum number of items in stock plus the number on order
MAXIMUM ORDER QUANTITY	Floating	9.1	Maximum number of items to order or reorder
MEDIA	String	2	Media material
MEDIA CODE	String	1	Code for Media identification
MFG	String	6	This is the code of the manufacturer.
MFR/DEV	String	6	This field is used to enter the Manufacturer or Developer ID. The user may zoom to the appropriate data file and pick the desired code. NOTE: This data must be previously entered with screen Vendor Master Maintenance (vmasts).
MINIMUM ORDER QUANTITY	Floating	9.1	Minimum number of items to order or reorder
MOD/VER	String	24	This field is used to enter the actual Model and or Version of the item. If the user had chosen a known OEM Part, this field will be written with the information from this file.
MOD/VER (PO)	String	24	This field is used to enter the actual Model and or Version of the item. If the user had chosen a known OEM Part, this field will be written with the information from this file.
MODEL/VERSION	String	24	This field is used to enter the actual Model and or Version of the item. If the user had chosen a known OEM Part, this field will be written with the information from this file.
MODEL/VERSION (Part numbers)	String	24	This field is used to enter the actual Model and or Version of the item.
MULTIPLE ORDER QUANTITY	Floating	9.1	Number of items to order in a multiple parts/items order
Name	String	30	This field is the user's name as reflected from the user file.

**Table 4.3.4-79. ILM Field Descriptions (9 of 19)**

Field Name	Data Type	Size	Description
NAME	String	30	Vendor name for the displayed vendor ID.
Name (Buyer ID)	String	30	This field is the user's name as shown in the Buyer file.
NAME (Carrier)	String	30	Enter the name of the carrier corresponding to the displayed code.
NASA CONTRACT	String	11	This field is used to designate the Contract number used for this item. This information is automatically assigned and can not be changed.
NASA CONTRACT NUMBER	String	11	Default NASA Contract Number
NEW (REPORT NUMBERS)	String	5	Enter the corresponding NEW Report numbers.
NEW (Report numbers)	String	5	Enter the corresponding NEW Report numbers.
NEW BUILDING	String	10	This field is the new building code where the parent was installed.
NEW LOCATION	String	6	This field is the new location code or site code where the parent was installed.
NEW PARENT EIN	String	14	Enter new parent ein for component being relocated
NEW ROOM	String	6	This field is the new room code where the parent was installed.
NEW USER	Number	4	This field is the user code the parent was assigned to. The operator may /Z, Zoom at this field to view the User data base.
NEXT REVIEW DATE	Date	2	Date of next inventory quantity check
NO (Shipment Numbers)	Number	4	Site number used in shipment tracking.
NOTE	String	60	This field is used to enter a 60 character note attached to this item.
NOTE (PO)	String	60	Enter a 60 character note to describing why this PO is used
NOTE (Requisition)	String	60	is a field for you to enter a 60 character note about this requisition. For example why you are buying this material or who told you to order these items, etc.
NOTE 1	String	60	This field is used to enter a 60 character note attached to this item.
NOTE 1 and NOTE 2	String	60	Enter any notes to appear on the header of the report.
NOTE 2	String	60	This field is used to enter a 2nd 60 character note attached to this item.
NOTIFICATION DATE	Date	2	Notification Date
NOTIFICATION DATE and TIME	MULTI-FIELD		These fields are initialized with the current date and time and can be modified.
NOTIFICATION TIME	Time	2	Notification Time

**Table 4.3.4-79. ILM Field Descriptions (10 of 19)**

Field Name	Data Type	Size	Description
Nth MACHINE TO SEND TO	String	6	Enter Site Code of machine to receive Inventory Data.
NUMBER	Number	8	Record number of database record being observed.
Number of Cartons and Weight	MULTI-FIELD		Number of cartons and total weight of shipment.
NUMBER OF COPIES	String	1	Enter any number of copies of the report to print.
NUMBER OF COPIES (PM ORDERS)	String	1	Enter any number of copies of the report to print
NUMBER OF COPIES (WORK ORDER HISTORY REPORT)	String	1	Enter any number of copies of the report to print
NUMBER OF LEVELS TO EXPLODE	Number	2	Enter number of levels to display for a particular parent structure.
OEM Desc	String	40	This field is the OEM Description reflected from the EIN Record for the Parent EIN.
OEM DESC (WO)	String	40	This field reflects the description of the OEM PART NUMBER entered in the field above, but provides the ability for the user to modify it in the EIN file.
OEM DESCRIPTION	String	30	This field reflects the description of the OEM PART NUMBER entered in the field above, but provides the ability for the user to modify it in the EIN file.
OEM DESCRIPTION (Part numbers)	String	30	This field reflects the description of the OEM PART NUMBER entered in the field above.
OEM MFG (Part numbers)	String	40	This is the name of the manufacturer.
OEM Part	String	34	This field is the OEM part number reflected from the EIN record of the child.
OEM PART	String	34	is the manufacturer's part number of the item(s) you are ordering. The next field, DESCRIPTION, is automatically filled with the selected part's description when you make this selection. Use the /Zoom screen to assist your selection
OEM PART (Part numbers)	String	34	This is the manufacturer's part number of the item being cataloged
OEM PART NUMBER	String	34	This field is for the entry of the Manufacturer's or Vendor's part number. The user may perform a zoom to the OEM PART NUMBER screen (oempart) at this field to pick the appropriate item. NOTE: These OEM Part Numbers must be entered prior to the use in this screen. When an item is from this file is chosen, the information contained in the file is written to the EIN file.

**Table 4.3.4-79. ILM Field Descriptions (11 of 19)**

Field Name	Data Type	Size	Description
OEM Part, Model, and OEM Desc	MULTI-FIELD		These fields are reflected from the EIN record of the entered parent EIN.
OEMPART (PO)	String	34	is the manufacturer's part number of the item(s) you are ordering. The field, DESC, is automatically filled with the selected part's description when you make this selection. Use the /Zoom screen to assist your selection
OLD (Report numbers)	String	5	The user will enter OLD Report numbers.
OLD BUILDING	String	6	Shows current building number of where the item resides
OLD LOCATION	String	6	Shows current location (DAAC) of where the item resides
OLD ROOM	String	6	Shows the current room number of where the item resides
OLD USER	String	10	Shows the current user for the item
Operator ID	String	8	This field is the login ID of the user who added this item to the data base and is not modifiable by the user.
OPERATOR ID	String	8	UserID of the operator performing this value is supplied by the program.
ORDER	String	6	Descriptor for the order
ORDER POLICY	String	1	Enter type of ordering policy such as P=Fixed period, Q=Fixed quantity etc.
ORDER QUANTITY	Floating	9.1	Quantity to order
ORDER STATUS [ FRCX ] (Status)	String	2	Enter the appropriate status. When the order is first entered, the status is NULL. When the order has been printed, the status moves to 'R' for released. When all line items have been received complete, the status moves to 'C' for complete. The status of 'X' is used to manually cancel an order.
ORDER TYPE	String	2	Code for order : e.g PO, WO
OUTSIDE CONTRACTOR	String	1	This field should always be left at the default of 'Y'.
PACKING LIST	String	20	Tracking Identifier/ ID of the packing list included in the received shipment.
PAGER NUMBER (Employee)	String	13	Pager Number of the employee described by the displayed code.
PAGER NUMBER(EMPLOYEE)	String	18	Enter Employee's pager number
PARENT	String	20	Enter the Parent EIN number to be shipped.
PARENT EIN	String	14	This field is the Parent EIN for the installation/structure. The user may /Z, Zoom at this field to view the entire EIN data base.

**Table 4.3.4-79. ILM Field Descriptions (12 of 19)**

Field Name	Data Type	Size	Description
PART (OEM Part Number)	String	20	This field is for the entry of the Manufacturer's or Vendor's part number. The user may perform a zoom to the OEM PART NUMBER screen (oempart) at this field to pick the appropriate item. NOTE: These OEM Part Numbers must be entered prior to the use in this screen. When an item is from this file is chosen, the information contained in the file is written to the EIN file.
PART (OEM PART NUMBER) OR RANGE	String	34	Enter Manufacture or Vendor part number or range to query
PART BUYER	String	6	is filled by ILM using you user ID
PAYMENT TERMS CODE	String	2	Enter code for payment. The operator may /Zoom to the payment terms data base to choose the appropriate terms code.
PERSON REQUESTING	String	8	Name of person completing the requisition. Automatically filled in from the operator's UserID.
PHONE	String	18	Telephone number of address
PHONE (Buyer)	String	18	Telephone number of the Buyer described by the displayed code.
PHONE (Employee)	String	18	Telephone number of the employee described by the displayed code.
PIN	String	20	Enter the PIN number applicable for authorization for vendor contact.
PO NUMBER	String	10	The user will enter the Purchase Order Number in this field for item selection when adding children items. The user will use the PO Number or the Vendor Code in he next field. For Receipts the field is filled in by the Receiving system and designates the Purchase Order the item was received against.
PRICE	Floating	11.4	is the total price of each item.
PRINT PURCHASE ORDERS (YN)	String	1	Print (Y) the displayed information. Else (N) do not print.
PRIORITY	String	1	This is a user controlled field and any value may be entered.
PROCEED	String	1	Enter Y or N to proceed with process.
PROCEED?	String	1	Y or N to continue the process
PURCHASE ORDER	String	10	This is the actual Purchase Order number. The system will generate the next available number for you when you press <RETURN>. The operator can use the Purchase Order Modification screen to change the PO number after the actual PO number is obtained from Purchasing
PURCHASE ORDER (Requisition)	String	10	is the PO # associated with this requisition

**Table 4.3.4-79. ILM Field Descriptions (13 of 19)**

Field Name	Data Type	Size	Description
PURCHASE ORDER or RANGE	String	10	This is the actual Purchase Order number. The system will generate the next available number for you when you press <RETURN>. The operator can use the Purchase Order Modification screen to change the PO number after the actual PO number is obtained from Purchasing
PURCHASE ORDER or RANGE	String	10	PURCHASE ORDER number(s) to report.
PURCHASE TERMS CODE	String	2	Enter the terms code for the PO.
QUANTITY	Floating	10.1	Enter the quantity of the boxes having the same dimension and weight.
QUANTITY (PO)	Floating	10.1	Number of items on order.
QUANTITY PER (Assembly)	Floating	10.3	The total number of the displayed components in the assembly.
QUANTITY REQUIRED	Floating	9.1	is the total number of items you wish to order.
REASON	String	4	Enter the appropriate reason code for the delay entered.
REASON CODE	String	4	Enter the reason code for the transfer, The operator may /Z, Zoom to the reason code data base to choose the appropriate code.
RECEIPT	Number	6	Number assigned to order during receipt process
RECEIPT DATE or RANGE	Date	2	Receipt date(s) to report.
RECEIPT LIST BY PART	Number	2	Enter 1 if report listing all receipts for a particular part number.
RECEIPT NUMBER or RANGE	String	6	Receipt tracking number(s) to report.
RECEIPTS BY EIN	Number	2	Request report of receipts in order by EIN
RECEIPTS BY PART	Number	2	Enter 1 if report listing a parts by receipt is required.
RECEIPTS BY RECEIPT NUMBER	Number	2	Request report of receipts in order by Receipt number
RECEIPTS BY VENDOR	Number	2	Enter 1 if report listing receipts by vendor is required
RECEIVE DATE	String	8	Date item was received from vendor
RECEIVED BY	String	4	User Id code of the operator entering this receipt.
RECEIVED DATE	Date	2	The date the item was received.
RECOMMENDED VENDOR	String	6	selects the vendor code and is your opportunity to select your vendor of choice for this item. Use the /Zoom screen to assist your selection. ILM fills in the name fields for you when you make this selection.
RECORD EVENTS	String	1	Flag to indicate the events are to be recorded.
RELEASE CODE	String	10	This field is used for entry of the actual release code for the item.

**Table 4.3.4-79. ILM Field Descriptions (14 of 19)**

Field Name	Data Type	Size	Description
REORDER POINT	Floating	10.1	Quantity at which reorder of item should occur
REPLACE (R) or NEW (N)	String	1	Enter an 'R' in this field for the Child EIN that had been replaced in the machine. When entering a new item, be sure to place an 'N' in this field to designate the record as being new.
REPLACE OR ADD DATE	String	8	Date add or replace occurred.
REPORT NUMBER	Number	4	This field is the installation report number assigned by the system when an installation had occurred.
Report Number and Alpha	MULTI-FIELD		These two fields display the shipping report number for the location and parent EIN and are not modifiable by the user.
REQN (PO)	Number	8	is the requisition number assigned to this Purchase Order. It automatically generated when the user presses the <ENTER> key.
REQUISITION	Number	8	is the requisition number assigned to this Material Requisition. It automatically generated when the user presses the <ENTER> key.
REVIEW PERIOD	Number	3	Number of days to perform inventory check
RMA#	String	6	Reliability Maintainability Availability number.
ROOM	String	6	This field is used to enter the actual room number of where the item is or will be shipped to.
SEND NOW	String	1	Flag to indicate subject is to be sent in response.
SEQUENCE	Number	4	This field is the automatically assigned sequence number of the cartons data attached to the shipment header record.
SERIAL NUMBER	String	30	This field is for the entry of the serial number of the product being entered. If the item does not contain a serial number of it's own, the system will assign an internal number prefixed with the Site abbreviation and contain a sequentially assigned number. Pressing RETURN at the field prompt automatically performs this internal assignment
Serial Number through Control Item ID	MULTI-FIELD		These fields are all reflected from the EIN file for the Parent as entered.
SERIAL NUMBER THROUGH LOCATION	MULTI-FIELD		
Serial Number through Room	MULTI-FIELD		These fields are all reflected from the EIN file for the Parent as entered.
SET AS PM ITEM (Y/N)	String	1	Enter a 'Y' in this field if the item should experience a preventative maintenance operation.
SHIP DATE	Date	2	This field is the actual shipping date and defaults to the current date.
SHIP REPORT	Number	3	This field is the report number assigned to this item as reflected from the Parent EIN record when the item was shipped.

**Table 4.3.4-79. ILM Field Descriptions (15 of 19)**

Field Name	Data Type	Size	Description
SHIP TO BRANCH	String	6	Enter the site code for the material to be shipped to. The default is the current site. The operator may /Zoom to the Location table for other location codes.
SHIP TO SITE	String	6	Enter the site code for the material to be shipped to. The default is the current site. The operator may /Zoom to the Location table for other location codes.
SHIP VIA	String	20	This field is used to enter the shipment method.
SHIPMENT NUMBER	Number	6	Sequential number assigned to a shipment
SHIPMENT REPORT	Number	2	Enter number of copies of report to print
SHIPPING REPORT ALPHA	String	2	Shipping report code associating an alpha code to a numeric site code. See Shipment Numbers by Site screen (shipno).
SHIPPING REPORT NUMBER	Number	2	This field is the report number assigned to this item when the item was shipped.
SITE	String	6	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
SITE (Location)	String	6	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
SITE ID (Location)	String	6	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
Site Name	String	46	Name of the Site whose code is displayed.
SMC MACHINE NAME	String	6	Enter the SMC machine name to receive Inventory Data.
SOFTWARE LIC NUM	String	10	This field is used to enter the license number for a software type license item.
START DATE	Date	2	Enter the date the contract is to become effective.
START DATE and END DATE	MULTI-FIELD		These fields are used to enter the beginning and ending dates for known delay times in the repair of a system.
START TIME and END TIME	MULTI-FIELD		These fields are used to enter the beginning and ending times associated with the dates above for known delay times in the repair of a system.
STATE	String	2	State 2 character abbreviation of address.
STATUS	String	1	Status code for TERMS CODE
Status	String	10	This field is the current status of the item.

**Table 4.3.4-79. ILM Field Descriptions (16 of 19)**

Field Name	Data Type	Size	Description
STATUS	String	10	Enter the appropriate status. When the order is first entered, the status is NULL. When the order has been printed, the status moves to 'R' for released. When all line items have been received complete, the status moves to 'C' for complete. The status of 'X' is used to manually cancel an order.
STATUS (Carrier)	String	10	Status of the carrier.
STATUS (Employee)	String	1	Status of the employee described by the displayed code.
STATUS CODE	String	1	This field designates the status of the item and is controlled by transactions within the system.. The following codes are included : R - Received; S - Shipped; I - Installed; A - Archived;
Status through Phone	MULTI-FIELD		These fields present the status of the parent and the coassignee name and address information from the location data base.
SUBLOCATION/LOCATION	String	10	Additional identification of the receipt location.
SUBMITTER	String	10	Enter the employee code for the person who submitted the problem and caused the work order to be opened. The operator may /Z, zoom to the employee file.
SWITCH OVER TIME	String	5	Enter the total hours required for switch over.
SYSTEM PARAMETER KEY	String	1	The Key filed of the System Parameter file. The active record has the value A.
TABLE NAME	String	20	The table name of the database table containing the field to query.
TERMS CODE	String	2	Enter the code to be used for this TERMS set.
TERMS DESCRIPTION	String	20	Description for this TERMS CODE.
TEXT	String	8	Press /Z at this prompt to obtain a free form text window. The operator should enter the failure / repair details in this window. When complete, press F3 to exit the text window.
Time	Time	2	Time for the query; e.g. transaction time
TIME TO REPAIR	Time	2	This field is used to enter the known time the repair required in hours.
TIMES (Carrier)	String	8	Number of times carrier has been used.
TOTAL	Number	10	This is the system calculated value of the order.
TOTAL CHARGEABLE DOWNTIME	String	5	Enter the total hours to be charged for downtime.
TRAN CODE	Number	3	This field designates the transaction code. The value will always be set to '03' and is not modifiable by the user
TRANS HISTORY BY EIN	Number	2	Enter number of copies of this report to generate.

**Table 4.3.4-79. ILM Field Descriptions (17 of 19)**

Field Name	Data Type	Size	Description
TRANSACTION ID	Number	6	Number assigned to a particular transaction
TRANSACTION KEY	Number	8	The transaction log key field. This key is assigned by the program.
TRANSACTION TYPE	Number	2	Code for the TYPE of transaction to query: A = Add, M = Modify, D = Delete.
TRANSFER	String	1	Enter a 'Y' if the child is to be transferred.
TRANSFERRED RECORD LOCATION	String	20	This field is used to designate the actual location or site of where the item is. The user may zoom to the Location screen to pick an appropriate code. NOTE : This data must be previously entered with screen Material Location Maintenance (imlocns).
TROUBLE TICKET	String	15	Enter the applicable trouble ticket number here.
TROUBLE TICKET #	String	15	Enter the applicable trouble ticket number here
TT	String	15	Enter the applicable trouble ticket number here
TT #	String	15	Enter the appropriate Trouble Ticket number if this PO is open because of a trouble ticket.
TYPE OF ORDER	String	1	allows you to select the appropriate code this requisition:
TYPE OF ORDER CODE	String	1	This field should always be left at the default of 'S'.
TYPE OF ORDER(Requisition )	String	1	allows you to select the appropriate code this requisition:
TYPE OF ORDER, NULL	String	1	Null = Miscellaneous
TYPE OF ORDER, R	String	1	R = RFQ
TYPE OF ORDER, STOCK	String	1	S = Stock
TYPE OF SORT	String	1	Null = part, S = Sort string N = Sort number
TYPE OF TRANSACTION	String	3	Code assigned to the type of transaction being performed
UNIT COST	Number	10	This field is used to enter the price for each item.
UNIT OF MEASURE	String	2	is the measure of the item you are buying. Use the /Zoom screen to assist your selection
USE BRANCH AS ORDER PREFIX	String	1	This option will generate Purchase and Work Orders with the Work Center code for the employee creating the Order as a prefix.
USER	String	8	The user code of the person who has the item. The user may choose to zoom to the User ID data base and pick the appropriate code. NOTE : This information must be previously entered with screen Employee Maintenance (sfempmnt).

**Table 4.3.4-79. ILM Field Descriptions (18 of 19)**

Field Name	Data Type	Size	Description
VENDOR	String	6	This field is used to enter the Vendor code whom the item was purchased from. The user may zoom to the Vendor data file and pick the desired code. NOTE: This data must be previously entered using screen Vendor Master Maintenance (vmasts).
VENDOR (Part numbers)	String	6	Enter the vendor ID. The operator may /Zoom to the vendor data base to choose the appropriate vendor code.
VENDOR ARRIVAL DATE and TIME	MULTI-FIELD		Enter the date and time the vendor actually arrived to perform the repairs.
VENDOR ARRIVE DATE AND TIME	MULTI-FIELD		Enter the date and time the vendor actually arrived to perform the repairs.
VENDOR CALL DATE	Date	2	Date the vendor was called and informed of the problem.
VENDOR CALL DATE AND TIME	MULTI-FIELD		Enter the date and time the vendor actually arrived to perform the repairs.
VENDOR CALL TIME	Time	2	Time the vendor was called and informed of the problem.
VENDOR COMPLETE DATE and TIME	MULTI-FIELD		Enter the actual date and time the vendor completed the repairs.
VENDOR CONTACT NAME	String	30	Vendor point of contact
VENDOR ID	String	6	Vendor id code of equipment being queried
VENDOR ID OR RANGE	String	6	Vendor id code of equipment being queried
Vendor name	String	35	Vendor name on the PO
VENDOR PART	String	16	is the actual vendor part number if it differs from the OEM part number entered earlier on this screen.
VENDOR POC	String	30	Enter the name of the person designated as the point of contact at the vendor facility.
VENDOR REFERENCE	String	20	User has option to enter any information in reference to the vendor
WARRANTY DATE (WO)	Date	2	This field is the end date for the warranty period.
WARRANTY EXP DATE	Date	2	This field is used to enter the end date for the warranty period. This field default to 365 days from the date of entry.
WEIGHT	Floating	7.1	Enter the weight of the box.
WORK CENTER (Employee)	String	6	Work Center (normally assigned) of the employee described by the displayed code.
WORK ORDER	String	10	This is the actual Work Order number. The operator should always press RETURN to obtain the next number sequentially assigned by the system.
WORK ORDER or RANGE	String	25	Enter the Work Order number or range of numbers to examine.

**Table 4.3.4-79. ILM Field Descriptions (19 of 19)**

Field Name	Data Type	Size	Description
YEAR MFG	String	4	This field is used to enter the actual 4-digit year the item was manufactured. This field defaults to the current year.
ZIP	String	10	Zip code of address.

#### **4.3.4.5 Special Constraints**

NONE.

#### **4.3.4.6 Outputs**

Outputs from the XRP-II application for ILM are generated in several ways.

**Table 4.3.4-84. Outputs**

Output	Description and Format
CHUI displays	Menus and functions described in section 4.3.4.2
ILM Reports	Reports generated from Report selections on the ILM menu CHUIs
ILM ad hoc reports	Reports generated using the /Report option on ILM CHUIs
Prints of CHUI displays	Screen prints of the displayed information.
File output	Files generated with the Write option on ILM CHUIs
Data base updates	ILM Add, Insert, Copy, Delete, and Modify actions

#### **4.3.4.7 Event and Error Messages**

Error messages from ILM that originate from data storage access conflicts are documented in Appendix E of UNIFY Direct HLI Programmer's Manual.

#### **4.3.4.8 Reports**

The reports used by ILM are provided in Table 4.3.4-81. This is not a complete list, but provides a representative sample of reports used by this tool.

**Table 4.3.4-85. Reports**

<b>Report Type</b>	<b>Report Description</b>	<b>When and Why Used</b>
Installation	This report provides a record of the installation of equipment (including model, version, serial numbers, and warranty period).	Whenever equipment is installed at a site to keep track of equipment available and warranties and licenses.
Installation Summary	This report provides a summary of an installation or replacement or addition of equipment to a site.	Whenever equipment is installed, added or replaced at a site to keep track of equipment available and warranties and licenses.
Inventory - By Location	This report provides an inventory by Site. Filters can be used to limit "Site" to specific rooms.	This report would be used to assist in performing an Inventory Audit.
Equipment Installation/ Receipt	This report provides a record of receipt of equipment at a site and the location, date, and time of the installation of the equipment.	Whenever equipment is received at a site for installation for equipment tracking purposes.
Maintenance Work Order	This report provides a record of any maintenance done to any equipment at a site.	To record and track all maintenance on equipment at a site.
Receipts	This report provides three distinct ways to list receipts. Receipts are listed by part, vendor, or list by part.	To track parts, when received, and vendor part is received from.
Purchase Order	This report provides a record of a purchase order(s).	Whenever a purchase is made for equipment for a site.
Relocation	This report provides a record of any equipment relocations within or outside of a site.	Whenever equipment is relocated from one place to another within the ECS.
Shipping	This report summarizes the shipment of equipment from one site to another.	Whenever the SMC sends equipment to one of the DAACs.
EIN Structure	This report provides a listing of equipment with parent and child (parts) of equipment to assemble.	Whenever equipment with parts are provided to a site to determine and track parts of equipment and for maintenance.
Transaction History	This report provides a history of all equipment transactions including archives, relocations, shipping, receiving, spares, and consumables.	Whenever an item is received, moved, put in storage, or used beyond repair.
Work Order Status	This report provides a list of work orders and the status of each work order.	To track all work orders for progress of work being performed at a site.
Equipment Transfer and Receipt	This report provides a list of equipment that has been targeted for transfer and a status of the receipt of the equipment at the transfer site.	Whenever equipment is moved from one place to another in the ECS for tracking and inventory purposes.
