Preface

This document is a contract deliverable with an approval code 2. As such, it does not require formal Government approval, however, the Government reserves the right to request changes within 45 days of the initial submittal. Once approved, contractor changes to this document are handled in accordance with Class I and Class II change control requirements described in the EOS Configuration Management Plan, and changes to this document shall be made by document change notice (DCN) or by complete revision.

Any questions should be addressed to:

Data Management Office
The ECS Project Office

Abstract

The ECS System Acceptance Test Report document contains information on the results of the specific tests executed to verify that Release 5A satisfies the functional components, error conditions and performance constraints delivered with the drop.

Keywords: Acceptance test, ECS Release 5A, NCR, functional components, error conditions, performance constraints, reports

1. Introduction

1.1 Identification

This Acceptance Test Report, Contract Data Requirement List (CDRL) item 071, whose requirements are specified in Data Item Description (DID) 412/VE2, is a required deliverable under the Earth Observing System Data and Information System (EOSDIS) Core System (ECS) Contract NAS5-60000.

The ECS System Acceptance Test Report document contains the results of the tests executed to verify that Release 5A satisfies the functional components, error conditions, and performance constraints delivered with this drop.

1.2 Scope

Release 5A includes the functional capabilities, features and services to support pre-launch and launch support activities. Release 5A contains the software to support all external operational interfaces and the associated EOS Mission Integration Testing and Ground System Integration Testing that is performed for Terra (AM-1) and Landsat-7.

Release 5A was acceptance tested at the Verification and Acceptance Test Center (VATC) prior to launch of the Terra (AM-1) instruments. This schedule is intended to support the EOS Ground System (EGS) Integration and Mission Integration activities defined in the Earth Science Data & Information System Master Schedule.

This document contains the results of the System Verification and Acceptance Test (SVAT) organization's acceptance tests for Release 5A as of the conduct of the Consent to Ship Review (CSR) held on July 21, 1999. Results include the number of functional components tested, not tested, verified, and not verified for each test case executed. The status of error condition and performance constraints testing is also reported. The number of Nonconformance Reports (NCRs) opened and closed during testing is also included in this document.

1.3 Purpose

The purpose of the Release 5A ECS System Acceptance Test Report is to detail the results of the tests used to formally verify that the Release 5A meets all specified functional components, error conditions and performance constraints.

1.4 Status and Schedule

The submittal of DID 412/VE2 meets the milestone specified in the Contract Data Requirements List (CDRL) for ECS Overall System Acceptance Test Procedures of NASA contract NAS5-60000. The submittal schedule is one month after Release Readiness Review (RRR). For Release 5A, the schedule is relative to the CSR as no RRR is conducted for this release.

1.5 Organization

This document is organized in 3 sections. The content of each section is described below.

- Section 1: Introduction - Provides information regarding the identification, scope, purpose, status and schedule, and organization of this document.
- Section 2: Related Documentation - Provides a listing of parent documents, applicable documents, and documents that are used as source information.
- Section 3: Formal Acceptance Test Results - Provides the results of acceptance testing that took place in the VATC and at the Distributed Active Archive Centers (DAACs) if applicable.

2. Related Documentation

222-WP-004	Release B Replan for the ECS Project
410-TP-004	Release B Replan Functionality by Phase for the ECS Project
	Release 5A Build Plan
	Release L7-NCR P1 Build Plan

3. Formal Acceptance Test Results

This section contains results for the ECS Release 5A formal acceptance tests, held from March, 1999 to July, 1999 at the VATC. The test schedules are contained in Appendix A of this document.

3.1 ECS Test Program Context

The test program for Release 5A was conducted in two phases. Phase 1 consisted of demonstrating Release 5A Y2K compliance and Phase 2 consisted of verification of test criteria determined to be essential for Terra (AM-1) and Landsat 7 operational support. All tests conducted during the first phase for Y2K compliance are posted on the internet at http://dmserver.gsfc.nasa.gov/relb_it/y2k.html. The formal acceptance testing in phase 2 included the execution of tests designed to verify functional components, error conditions and performance constraints specified in the Feature Acceptance Tickets (FATs). All tests conducted during the Release 5A Acceptance Test period to verify these acceptance criteria are posted on the internet at http://dmserver.gsfc.nasa.gov/relb_it/5a.html, 5A Test Procedures.

Results reported in this document represent status as of the CSR conducted on July 21, 1999 and are a direct result of test procedures conducted, which coincide with the test case list provided in Table 3-1.

3.2 ECS Testing during the Formal Test Phase

The Release 5A Formal Acceptance Test was conducted at the VATC during the period indicated in the Test Schedule presented in Appendix A. For each test conducted, a test log was completed, detailing the successes/failures of each test, deviations made to procedures, NCRs written or verified as fixed, and a complete description of the as-run tests. Following the conduct of each test, the Test Team determined the status of assigned functional component or error condition criteria (i.e. verified passed, verified with workarounds, not verified (failed), or not tested) and indicated status for each shown on the test report. The sections and appendices of this document provide the general and detailed results of this formal test period.

Table 3-1. Release 5A Acceptance Tests

3.3 Release 5A Formal Test Results

The approach taken for Acceptance testing ECS Release 5A software focused on verification of functional components and error conditions. Each test was not given an overall pass or fail status, but rather the number of functional components and error conditions tested and verified was reported.

The detailed results of each test case are maintained in a test folder. The test folders contain the test procedures with any redlines noted during the test, test artifacts collected during the test execution, test witness sign off sheets, NCR's written against the test, Feature Acceptance Tickets, and any other general comments on the test. Reasons for not fulfilling certain test objectives are recorded on the test execution forms and related NCRs are tracked in the ECS Verification Database (VDB). Test folders are maintained under configuration control by the ECS Configuration Management organization. The VDB is maintained on the Web (<http://ecsv.gsfc.nasa.gov/>) where it may be accessed to obtain current information regarding test status.

All of the Release 5A acceptance test results are condensed in tabular form in the VDB, which was maintained through the testing phase. It details the test results status for each of the functional component, error condition and performance constraints criteria. A Y2K and Release 5A test report generated from the final Verification Database (as downloaded on 8/16/99) is presented in Appendix B. In the following sections, references will be made to functional, error and performance criteria and their criteria keys. The mapping of these keys to criteria and their description may also be found in the VDB.

Recommendations and subsequent planned actions resulting from the test verification process were addressed in the Presentation Package of the Consent to Ship Review (CSR) held July 21, 1999 (DID 714).

3.4 Functional Component Status

A total of 97 Functional Components were tested during the Release 5A Acceptance Testing period. Of those, 67 were verified (V), 14 were not verified (NV), and 16 were not tested (NT).

Table 3-2 depicts the results of each of the Functional Components associated with their respective Feature Acceptance Ticket (FAT) documents and the verification status of each functional component. The FATs, in turn, are grouped by areas of interest so that system capabilities in those areas may be assessed. Table 3-2 also contains, in order, the V, NT, and NV status of the functional component criteria identified by their criteria keys.

3.5 Error Condition Status

Acceptance testing for Release 5A also included verification of Error Conditions. Error Conditions were verified using a combination of variations of AT and SV tests. A total of 111 Error Conditions were tested during Release 5A Acceptance Testing. Of those 86 were verified (V), 21 were not verified (NV), and 4 were not tested (NT).

Table 3-3 depicts the results of each of the Error Conditions associated with their respective Feature Acceptance Ticket (FAT) documents and the verification status of each error condition. The FATs, in turn, are grouped by areas of interest so that system capabilities in those areas may be assessed. Table 3-3 also contains, in order, the V, NT, and NV verification status of the error condition criteria identified by their criteria keys.

3.6 Performance Constraints Status

In addition, Release 5A criteria included verification of Performance Constraints. Performance Constraints testing was not included in the Acceptance Testing conducted in the VATC, but will be tested in the End to End Post Verification Test conducted at NSIDC.

Table 3-4 depicts the Performance constraints associated with their respective Feature Acceptance Ticket (FAT) documents and test cases that will be tested in the ETE test to be conducted at NSIDC.

3.7 Y2K Test Status

A battery of Y2K tests were conducted on the Release 5A system. The tests executed verified a variety of rollover occurrences including the first day of the next century, a leap year test, uncommon leap year and the 366th day of uncommon leap year. The tests verified the ability of the system to process data whose temporal coverage intersects these dates, and the ability of the system to process requests across these dates.

Table 3-5 depicts the results of the Y2K testing. Two tests, TS0493 – Pre2000 Y2K Data Processing (DPREP), and possibly TS0815.3, - DSS System Time Change Test, are scheduled to be rerun in the August time frame.

Table 3-2. Release 5A Functional Component Criteria Verification Status Summary

FAT	Crit. 1	Crit. 2	Crit. 3	Crit. 4	Crit. 5	Crit. 6	Crit. 7	Crit. 8	Crit. 9	Crit. 10	Total	V	NT	NV	FAT ID

3.8 NCR Status

Discrepancies observed during Acceptance Testing are filed as NCRs and entered into the Nonconformance Reporting and Corrective Action (NRCA) system for disposition by the NCR Review Board. All ECS NCRs are entered into the Distributed Defect Tracking System (DDTS) tool for prioritization, assignment, and status tracking by the ECS NCR Review Board.

During the period of Release 5A Acceptance Testing, a total of 120 new NCRs were generated. Table 3-6 lists the number of NCRs generated by severity. During the execution of acceptance tests, 201 previously existing NCRs were verified and closed. Table 3-7 lists the number of NCR's verified and closed in each severity category.
