

17. Archive Procedures

Archive processing procedures support and maintain the process by which the Data Server Subsystem (DSS) manages persistent storage of earth science and related data, and through which the DSS provides search and retrieval access to the data. Through archive processing, data products that have been ingested into the system or produced by data processing on previously stored data are archived to tape for permanent storage and distributed to users via hard media (tape or disk) or electronic means. The DAAC Archive Manager's job entails working with the Science Data Specialist, the Science Coordinator, and the Resource Manager, as well as providing direction for the Data Ingest Technician. The physical archive is one or more StorageTek (STK) Powderhorn Model 9310 Automated Cartridge System tape storage towers, providing a mass storage system of jukeboxes for removable media (tape cartridges). The File Storage Management System (FSMS) software, hosted on a Silicon Graphics Inc. (SGI) Origin 2000, is the Archival Management and Storage System (AMASS), a product of Advanced Digital Information Corporation (ADIC). AMASS is a UNIX file system that manages files, volumes (media), drives and jukeboxes. The *AMASS System Administrator's User Guide* can be viewed using Adobe Acrobat and is available electronically on **drg** servers (e.g., g0drg01, e0drg11, l0drg01, n0drg01) in directory **/usr/amass/books**.

Archive processing activities include operating functions associated with the AMASS software, managing and operating the physical archive, and using ECS custom software for monitoring archive functions and maintaining the stored data. The Archive Manager may also work with the Automated Cartridge Storage Library System (ACSL) software and the AMASS Graphical User Interface (GUI). Finally, the Archive Manager conducts archive troubleshooting and problem resolution procedures.

Subsequent sections related to Archive Processing address procedures for the following functions:

- Section 17.1 Starting and Stopping AMASS.
- Section 17.2 Loading, removing, and managing archive media.
- Section 17.3 Monitoring and managing the archive with ECS custom GUIs.
- Section 17.4 Deleting granules from the archive.
- Section 17.5 Backing up and restoring AMASS.
- Section 17.6 Backing up and restoring archived data.
- Section 17.7 Archive troubleshooting.
- Section 17.8 ACSLS procedures.
- Section 17.9 Using the AMASS GUI.

- Section 17.10 Data Pool Maintenance Tasks.

For each set of functions, an **Activity Checklist** table provides an overview of the tasks to be completed. The outline of the Activity Checklist is as follows:

Column one - **Order** shows the order in which tasks could be accomplished.

Column two - **Role** lists the Role/Manager/Operator responsible for performing the task.

Column three - **Task** provides a brief explanation of the task.

Column four - **Section** provides the Procedure (P) section number or Instruction (I) section number where details for performing the task can be found.

Column five - **Complete?** is used as a checklist to keep track of which task steps have been completed.

17.1 Starting and Stopping AMASS

To start AMASS, the Archive Manager or System Administrator first ensures that the physical storage system is powered up and then enters commands at the FSMS server host (e.g., e0drg11, g0drg01, l0drg01, n0drg01) to start AMASS. Stopping AMASS is accomplished by killing the required daemons. Rebooting AMASS involves killing the daemons and then restarting the application.

Table 17.1-1 provides an Activity Checklist for Starting and Stopping AMASS.

Table 17.1-1. Starting and Stopping AMASS - Activity Checklist

Order	Role	Task	Section	Complete?
1	System Administrator or Archive Manager	Starting the AMASS Application	(P) 17.1.1	
2	System Administrator or Archive Manager	Shutting Down AMASS Tape Archive System	(P) 17.1.2	
3	System Administrator or Archive Manager	Rebooting AMASS	(P) 17.1.3	

17.1.1 Starting the AMASS Application

Starting the AMASS FSMS requires actions to ensure that the STK Powderhorn storage system is powered up as well as actions at the SGI FSMS host. Powering up the STK requires actions at its control panels, including the Library Management Unit (LMU) and Library Control Unit (LCU) [the Library Storage Module (LSM) is powered through the LCU]. *Note:* Preconditions

include that 1) the FDDI network is up and running and 2) power to all units is functional and available.

Table 17.1-2 presents the steps required to start the AMASS application. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Make sure power switches for the StorageTek LCU and LMU are **ON**.
 - *NOTE:* The LCU should be the last unit powered up, but otherwise there are no dependencies within the group.
- 2 If it is not already running, boot the FSMS SGI host (workstation **x0drg##**) normally.
 - *NOTE:* The **x** in the workstation name will be a letter designating your site: **g** = GSFC, **m** = SMC, **l** = LaRC, **e** = EDC, **n** = NSIDC, **o** = ORNL, **a** = ASF, **j** = JPL; the **##** will be an identifying two-digit number (e.g., **n0drg01** indicates an FSMS SGI host at NSIDC).
 - There are no dependencies on other hosts, COTS or custom software.
 - AMASS normally starts automatically on bootup. If it does, go to **Step 5**. If it does not, or if you are restarting AMASS after a shutdown, go to **Step 3**.
- 3 At the FSMS SGI host, log in as **root**.
- 4 Type **/usr/amass/tools/amass_start** and then press the **Return/Enter** key.
 - The AMASS application starts.
- 5 To verify that AMASS has started correctly, type **/usr/amass/bin/amassstat -c** and then press the **Return/Enter** key.
 - The message **FILESYSTEM IS ACTIVE** is displayed.

Table 17.1-2. Starting AMASS

Step	What to Do	Action to Take
1	Power switches ON .	Observe/set switches
2	Boot FSMS SGI host	Normal workstation boot
3	Log in as root	press Return/Enter
4	amass_start	press Return/Enter
5	amassstat -c	press Return/Enter

17.1.2 Shutting Down AMASS Tape Archive System

Table 17.1-3 presents the steps required to shut down AMASS. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in as **root** (system administrator) at the FSMS SGI host (workstation **x0drg##**).
 - NOTE: The **x** in the workstation name will be a letter designating your site: **g** = GSFC, **m** = SMC, **l** = LaRC, **e** = EDC, **n** = NSIDC, **o** = ORNL, **a** = ASF, **j** = JPL; the **##** will be an identifying two-digit number (e.g., **n0drg01** indicates an FSMS SGI host at NSIDC).
- 2 Type **/usr/amass/tools/killdaemons** and then press the **Return/Enter** key.
 - A message is displayed indicating that all daemons have been terminated.

Table 17.1-3. Shutting Down AMASS

Step	What to Do	Action to Take
1	Log in as root	Press Return/Enter
2	killdaemons	Press Return/Enter

17.1.3 Rebooting AMASS

The AMASS file system may need to be rebooted during certain anomalous conditions (e.g., system "hang," interruption of communication between AMASS and ACSLS, a required daemon is down). AMASS needs to have the following daemons running at all times: amassmain, daemons/lm_ip -a fslock, klogd, amass_iocomp, qset, libsched, libio_tape,. To verify they are running, simply search for the AMASS processes (refer to Procedure 17.7.1.1 **Checking Daemons and Using healthcheck**). To check the health of AMASS while it is still running, execute the **healthcheck** command (refer to Procedure 17.7.1.1).

In order to reboot AMASS you must have root privileges. The following procedure demonstrates the steps to reboot AMASS. Table 17.1-4 presents the steps required to follow the reboot process. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in as **root** (system administrator) at the FSMS SGI host (workstation **x0drg##**).
 - NOTE: The **x** in the workstation name will be a letter designating your site: **g** = GSFC, **m** = SMC, **l** = LaRC, **e** = EDC, **n** = NSIDC, **o** = ORNL, **a** = ASF, **j** = JPL; the **##** will be an identifying two-digit number (e.g., **n0drg01** indicates an FSMS SGI server at NSIDC).

- 2 To kill the daemons, type **killdaemons** and then press the **Return/Enter** key.
 - A message is displayed indicating that all daemons have been terminated.
- 3 If you want to test AMASS before restarting, go to step 4; otherwise, type **amass_start** and then press the **Return/Enter** key.
 - The AMASS application starts.
- 4 To test the AMASS filesystem prior to starting AMASS type: **install_tests**, and press the **Return/Enter** key.
 - Tests the operation jukebox operation and cache partitions, then restarts AMASS.

Table 17.1-4. Rebooting AMASS

Step	What to Do	Action to Take
1	Log in as root	press Return/Enter
2	killdaemons	press Return/Enter
3	amass_start	press Return/Enter
4	install_tests	press Return/Enter

17.2 Loading, Removing, and Managing Archive Media

For the STK storage facility, each Powderhorn is equipped with a 21-tape Cartridge Access Port (CAP). In automatic mode, tapes may be placed in the CAP for automatic loading. Tapes are also ejected through the CAP when identified for ejection using a command at the host for the STK Automated Cartridge System Library Software (ACSL). It is also possible to bypass the CAP and manually load media directly into the library bins, typically only done at the initial load of the system or if it is otherwise necessary to load large numbers of volumes. Newly loaded volumes may need to be placed online and formatted. It is also necessary to ensure the ready availability of drive cleaning cartridges in the specially designated volume group for that purpose.

Table 17.2-1 provides an Activity Checklist for Loading, Removing, and Managing Archive Media.

Table 17.2-1. Loading, Removing, and Managing Archive Media - Activity Checklist

Order	Role	Task	Section	Complete?
1	Archive Manager	Automatically Loading Archive Media	(P) 17.2.1	
2	Archive Manager	Manually Loading Archive Media	(P) 17.2.2	
3	Archive Manager	Formatting a Volume	(P) 17.2.3	
4	Archive Manager	Removing Archive Media	(P) 17.2.4	

17.2.1 Automatically Loading Archive Media

Automatic loading of media is appropriate when there are relatively small numbers of media to be loaded. Up to 21 volumes at a time may be loaded through the Cartridge Access Port (CAP). With automated loading, AMASS assigns each cartridge a unique volume number, enters the volumes in its database, and marks the volumes Online in the database.

Table 17.1-2 presents the steps required for automated media loading. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in as **amass** or **root** at the FSMS SGI host (workstation **x0drg##**).
 - NOTE: The **x** in the workstation name will be a letter designating your site: **g** = GSFC, **m** = SMC, **l** = LaRC, **e** = EDC, **n** = NSIDC, **o** = ORNL, **a** = ASF, **j** = JPL; the **##** will be an identifying two-digit number (e.g., **n0drg01** indicates an FSMS SGI server at NSIDC).
- 2 At the FSMS host, type **/usr/amass/bin/bulkinlet SP** and then press the **Return/Enter** key.
 - The Cartridge Access Port (CAP) door unlocks (audible unlatching sound).
 - *Note:* If you have removed an existing volume and are re-inserting it, do not use the **SP** option, which puts the volume in the general space pool. Instead type **/usr/amass/bin/bulkinlet <volgrp>**, where **<volgrp>** is the volume group from which the volume was removed. This will put the volume back where it was before removal.
- 3 Write down or note the bar code number(s) on the label(s) of the cartridge(s), open the recessed latch on the CAP door and insert the tape(s), solid black side up, with the bar code label facing you, and close the door.
 - The robot scans all the volumes.
 - Data for the newly inserted media are displayed, including bar codes, associated volume numbers, and, in the **flag** column, the letters **IUO**, indicating that the volumes are inactive (**I**), unformatted (**U**), and offline (**O**).
- 4 For any newly inserted media, it is necessary to issue a formatting command. For the new 9940 tapes, type **/usr/amass/bin/volformat -b 256k ###**, where **###** is the volume number, and then press the **Return/Enter** key. You can enter more than one, separating each number from the preceding one with a space.
 - A message requests confirmation that you wish to continue.
- 5 Type **y** and then press the **Return/Enter** key.
 - A message is displayed requesting further confirmation, stating that **The following volumes will be formatted:** and listing volume numbers, followed by **(Y-N)**.

- 6 Type **y** and then press the **Return/Enter** key.
 - After a few minutes, a message **Completed formatting all volumes** is displayed.
- 7 To verify that the volume(s) are inserted, type **/usr/amass/bin/vollist** and then press the **Return/Enter** key.
 - Data for the media are displayed; the **flag** column shows that the newly formatted volumes are inactive (**I**).
- 8 To activate the media for use, type **/usr/amass/bin/volstat** and then press the **Return/Enter** key.
 - Data for the media are displayed; the **flag** column shows that the volumes are now active (**A**).

Table 17.2- 2. Automatically Loading Archive Media

Step	What to Do	Action to Take
1	Log in as amass or root	enter text; press Return/Enter
2	bulkinlet SP (unless re-inserting removed volume)	press Return/Enter
3	Place cartridge(s) in CAP	close door
4	volformat -b 256k < volumenumber >	press Return/Enter
5	y (to continue)	press Return/Enter
6	y (to confirm/continue)	press Return/Enter
7	vollist	press Return/Enter
8	volstat	press Return/Enter

17.2.2 Manually Loading Archive Media

Media may be introduced into volume groups in the storage facility without AMASS initial monitoring and assignment. This may be done using the CAP, as illustrated in the following procedure, or it may be done during an initial loading of the system. For such an initial loading, large numbers of cartridges may be placed directly in storage slots without using the CAP (i.e., with the Powderhorn library door open before the system is powered up). Manual loading uses an AMASS command different from that used for automatic loading; the command used here enables AMASS to determine what media have been placed in the library and convey the information to its database.

Table 17.2-3 presents the steps required for manual media loading. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 To manually insert a tape into the Powderhorn, login to the control software (ACSL) using the **acssa** account at an ACSLS workstation (e.g., e0drs03, g0drs03, l0drs02, n0drs03).
- 2 Type **enter 0,0,0** and then press the **Return/Enter** key.
 - The Cartridge Access Port (CAP) door unlocks (audible unlatching sound).
- 3 Write down or note the bar code number(s) on the label(s) of the cartridge(s), open the recessed latch on the Cartridge Access Port (CAP) door and insert the tape(s), solid black side up, with the bar code label facing you, and close the door.
 - The robot scans all the volumes.
- 4 At the AMASS host, type **/usr/amass/bin/bulkload -s SP** and then press the **Return/Enter** key.
 - The AMASS database is populated with data for the volumes in the library, including bar codes, associated volume numbers, and status -- inactive (**I**), unformatted (**U**), and offline (**O**). The data may be reviewed using the **vollist** command.
 - *Note:* If you are loading a very large number of volumes, such as at initial load, and choose to bypass the CAP and place the volumes directly in the library slots, data about the volumes will not be immediately available to ACSLS for communication to AMASS. You will first have to use the ACSLS **audit** command to initiate an audit of the library, a process that may take several hours.

Caution

Inactivate AMASS before using the following command.

- 5 To view a list of media in the library, type **/usr/amass/utills/medialist -3**, and then press the **Return/Enter** key.
 - The **-3** option indicates the STK Powderhorn.
 - The utility reads the library element status stored in the library, and information about the library contents, including the status (**FULL** or **EMPTY**) of the elements.

Table 17.2-3. Manually Loading Archive Media

Step	What to Do	Action to Take
1	Log in as acssa	enter text; press Return/Enter
2	enter 0,0,0	press Return/Enter
3	Place cartridge(s) in CAP	close door
4	bulkload -s SP	press Return/Enter
5	medialist -3	press Return/Enter

17.2.3 Formatting a Volume

To format a volume, it must be online. A volume is placed online using the **volloc** command. For a tape cartridge, you must first set the tape length using the **tapelength** command. Formatting a volume destroys any files on that volume. Before formatting a volume, check to make sure it does not have any files that should be saved. Table 17.2-4 presents the steps required to follow the formatting process. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 To put the volume online, at the FSMS host, type **/usr/amass/bin/volloc -n ###**, and then press the **Return/Enter** key.
 - **###** is the number of the volume.
- 2 To verify there are no files on volume, type **/usr/amass/bin/volfilelist <Vol. No.>** , and then press the **Return/Enter** key.
 - No files are displayed.
 - If a list of files is returned, indicating that the volume is not empty, before proceeding verify that you have the correct volume and that it is to be formatted.
- 3 To format the volume, type **/usr/amass/bin/volformat -b 256k ###**, and then press the **Return/Enter** key.
 - **###** is the number of the volume.
- 4 To verify status of the volume, type **/usr/amass/bin/volprint -a #####**, and then press the **Return/Enter** key.
 - **###** is the number of the volume.

Table 17.2-4. Formatting a Tape Volume

Step	What to Do	Action to Take
1	volloc -n volnumber	press Return/Enter
2	volfilelist volnumber	press Return/Enter
3	volformat -b 256k volnumber	press Return/Enter
4	volprint -a volnumber	press Return/Enter

17.2.4 Removing Media

Table 17.2-5 presents the steps required to remove media from the STK Powderhorn. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in as **amass** or **root** at the FSMS SGI host (workstation **x0drg##**).
 - NOTE: The **x** in the workstation name will be a letter designating your site: **g** = GSFC, **m** = SMC, **l** = LaRC, **e** = EDC, **n** = NSIDC, **o** = ORNL, **a** = ASF, **j** = JPL; the **##** will be an identifying two-digit number (e.g., **n0drg01** indicates an FSMS SGI server at NSIDC).
- 2 Determine which volumes you want to remove by utilizing the volume number. If necessary to review volume numbers and other information, at the FSMS host, type **/usr/amass/bin/vollist** and then press the **Return/Enter** key.
 - A list of volumes is displayed.
- 3 If there are only a few volumes to remove, for each volume to be removed type **/usr/amass/bin/voloutlet ###**, where **###** is the volume number, and then press the **Return/Enter** key.
 - AMASS marks the volume off-line and the volume is transferred to the CAP.
- 4 Open the recessed latch on the Cartridge Access Port (CAP) door and remove the tape(s).

Table 17.2-5. Removing Media from the Storage Library

Step	What to Do	Action to Take
1	Log in as amass or root	enter text; press Return/Enter
2	vollist	press Return/Enter
3	voloutlet volumenumber	press Return/Enter
4	Remove tape(s) from CAP	open CAP latch

17.3 Monitoring and Managing the Archive with ECS Custom GUIs

Custom Graphical User Interfaces (GUIs) in the ECS software can provide helpful information concerning the relationship between physical storage archives (Library Storage Modules, or LSMs) and the Archive Server software applications at the site. For example, a data repository identified as DRP1 is served by the software application EcDsStArchiveServerDRP1.

Subdivisions within LSMs (e.g., for storage of different data types) are reflected in the Storage Management database, where each Volume Group (a logical group of volumes in the archive) has its own path. Each path maps to an AMASS volume group, and thus to a physical volume group in the archive.

Information concerning archive servers and the logical volume groups served may be obtained from the Storage Management Control GUI. The Storage Configuration tab on the Storage Management GUI permits display of server information and access to related status information.

Table 17.3-1 provides an Activity Checklist for Monitoring and Managing the Archive with ECS Custom GUIs.

Table 17.3-1. Monitoring and Managing the Archive - Activity Checklist

Order	Role	Task	Section	Complete?
1	Archive Manager	Launching DSS GUIs	(P) 17.3.1	
2	Archive Manager	Using Storage Management GUIs to Display Archive Path Information	(P) 17.3.2	
3	Archive Manager	Monitoring Archive Requests using the Storage Management GUI	(P) 17.3.3	
4	Archive Manager	Monitoring Distribution Requests using the Data Distribution GUI	(P) 17.3.4	
5	Archive Manager	Setting Checksum Calculation	(P) 17.3.5	

17.3.1 Launching DSS GUIs

The following software applications are associated with DSS:

- Science Data Server (SDSRV).
- Storage Management (STMGT) Servers.
 - Request Manager Server.
 - Staging Disk Server.
 - Cache Manager Server.
 - Archive Server.
 - Request Manager Server.
 - FTP Server.
 - D3/9940 Tape Server.
 - 8mm Tape Stacker Server.
- Data Distribution (DDIST) Server.
- DDIST Graphical User Interface (GUI).
- STMGT GUIs.
- Science Data Server GUIs.

Access to Storage Management, Data Distribution (DDIST), and other GUIs is gained through the use of UNIX commands. The procedure for launching the GUIs begins with the assumption that the applicable servers are running and that the operator (Archive Manager or System Administrator) has logged in.

Table 17.3-2 presents the steps required to launch DSS GUIs using UNIX commands. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Access the command shell.
 - The command shell prompt is displayed.
- NOTE:** Commands in Steps 2 through 9 are typed at a UNIX system prompt.
- 2 Type **setenv DISPLAY *clientname*:0.0** and then press the **Return/Enter** key.
 - Use either the terminal/workstation IP address or the machine-name for the *clientname*.
 - 3 Start the log-in to the DDIST client server by typing **/tools/bin/ssh *hostname*** (e.g., **e0dis02**, **g0dis02**, **l0dis02**, or **n0dis02**) and then press the **Return/Enter** key.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type yes (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 4.
 - If you have not previously set up a secure shell passphrase; go to Step 5.
 - 4 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your **Passphrase** and then press the **Return/Enter** key. Go to Step 6.
 - 5 At the **<user@remotehost>'s password:** prompt, type your **Password** and then press the **Return/Enter** key.
 - 6 To change directory to the directory containing the startup scripts for DSS, type **cd /usr/ecs/<MODE>/CUSTOM/utilities** and then press the **Return/Enter** key.
 - The **<MODE>** will most likely be one of the following operating modes:
OPS (for normal operation).
TS1 or TS2 (for testing).
 - Note that the separate subdirectories under **/usr/ecs** apply to different operating modes.
 - 7 To launch the Storage Management Control GUI, type the following command: **EcDsStmgtGuiStart <MODE>**, where **<MODE>** is the one selected in Step 6, and then press the **Return/Enter** key.
 - The Storage Management Control GUI, used for review of storage events and status of devices, is displayed.
 - 8 To launch the Data Distribution GUI, use a similar procedure and type the following command: **EcDsDdistGuiStart <MODE>**, where **<MODE>** is the one selected in Step 6, and then press the **Return/Enter** key.
 - The Data Distribution GUI is displayed.

- 9 To launch the **DSS Science Data Server** GUI, log in to the host for Science Data Server (e.g., **e0acs05**, **g0acs03**, **l0acs03**, or **n0acs04**). Use a similar procedure and type the following command: **EcDsSdSrvGuiStart <MODE>** and then press the **Return/Enter** key.
 - The Science Data Server Operator GUI is displayed.

Table 17.3-2. Launching DSS GUIs

Step	What to Do	Action to Take
1	Access command shell	
2	setenv DISPLAY clientname:0.0	Enter text, press Return/Enter
3	/tools/bin/ssh hostname	Enter text, press Return/Enter
4	Passphrase (or, if none, go to step 5)	Enter text, press Return/Enter
5	Password	Enter text, press Return/Enter
6	cd /usr/ecs/<MODE>/CUSTOM/utiilites	press Return/Enter
7	EcDsStmgtGuiStart <MODE> (for STMGT GUI)	press Return/Enter
8	EcDsDdistGuiStart <MODE> (for DDIST GUI)	press Return/Enter
9	EcDsSdSrvGuiStart <MODE> (for SDSRV GUI)	press Return/Enter

17.3.2 Using Storage Management GUIs to Display Archive Path Information

If requested to provide archive path information for a particular Earth Science Data Type (ESDT) stored in the archive, the Storage Management GUI can be used to obtain the needed information. Table 17.3-3 presents the steps required to use the Storage Management GUIs to Display Archive Path information. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DSS Storage Management GUI using UNIX commands (see Procedure 17.3.1 **Launching DSS GUIs**).
 - The DSS Storage Management GUI is displayed.
- 2 Click on the **Storage Config.** tab to ensure that the Storage Configuration display is available.
 - The **Storage Config.** tab is displayed.
- 3 In the field listing **Server Type**, click on the **ARCHIVE** line to highlight it.
 - The selected line is highlighted and the **Server Name** and **Status** of archive servers are displayed in the field listing **Server Name**.
- 4 Click on the **Vol Grp Config.** tab.
 - The **Volume Group Information** is displayed showing volume groups and their current paths.

- 5 If it is desirable to display the path history for a data type, on the **Vol Grp Config.** tab, click on the **Data Type Name** entry for the specific data type for which path history information is desired.
 - The selected line is highlighted.
- 6 Click on the **Display History** button.
 - A **Volume Group History** window is displayed showing the path history for the highlighted data type.

Table 17.3-3. Using Storage Management GUIs to Display Archive Path Information and History

Step	What to Do	Action to Take
1	Launch the DSS Storage Management GUI	Use procedure in Section 17.3.1
2	Select Storage Config. tab	single-click
3	Highlight Archive in Server Type field	single-click
4	Select Vol Grp Config. tab	single-click
5	Highlight a selected data type line	single-click
6	Activate Display History button	single-click

17.3.3 Monitoring Archive Requests using the Storage Management GUI

A primary GUI tool for monitoring of archive processing is the **Request Status** window, accessible from the **Storage Management Control** GUI. Using the **Request Status** tab the Archive Manager or Distribution Technician can detect stalled requests or servers that appear to be idle.

The **Request Status** window displays the following information:

- **Operation** is the type of operation represented by the request.
- **Request ID** is a unique identifier for the request.
- **Progress** is the stage of processing on which the request is currently working (may include a numeric progress indication).
- **Status** provides information about processes attempted and the outcome (e.g., DsEStDRExecuteFailed, DsEStARPathSearchExhausted, OK, . . . WriteFailed, . . .).
- **Priority** is **Xpress**, **Very High**, **High**, **Normal**, or **Low**.
- **When Submitted** is the time and date when the request was received by the Storage Management server that is responsible for the request.
- **Last Updated** is the time and date when the status was last updated for the request.

The operator can reduce the displayed list of requests by clicking on the **Filtering** pull-down menu just above the **Request Status Information** list on the window. This permits filtering on four areas or filter types selectable from the pull-down menu:

- **Server** controls what activity is displayed by limiting the list to the requests being/having been serviced by a specific server. Selecting **All** displays all requests throughout Storage Management. Other selections include the individual archive servers, cache manager servers, ftp servers, request manager server, and staging disk servers.
- **Operation** allows the operator to focus on a specific type of operation. The list of operations is dynamically generated to reflect those operations for which requests are currently in queue (e.g., **All**, **CMLink**, **ArStore**, **ArRetrieve**, **FtpPull**, **FtpPush**).
- **Processing State** allows the operator to differentiate among requests that are being actively processed; have been completed, either successfully or to a retryable error state; or have been suspended and are awaiting the outcome of another event. The following selections are available: **All**, **Processing**, **Suspended**, **Completed**.
- **Submitter** allows the Distribution Technician to see the status of requests submitted by a specific client process. The list of possible clients is dynamically generated to reflect the list of clients with outstanding requests (e.g., **All**, **DSDD**, **HDFC**, **SDSV**, **this**, **[various servers]**).

Table 17.3-4 presents the steps required to monitor archive requests using the Storage Management Control GUI. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DSS Storage Management GUI using UNIX commands (see Procedure 17.3.1 **Launching DSS GUIs**).
 - The DSS Storage Management GUI is displayed.
- 2 Click on the **Request Status** tab.
 - The **Request Status** tab is displayed.
- 3 Observe information displayed on the **Request Status** tab of the **Storage Management Control** GUI.
 - The **Request Status Information** table displays the following information:
 - Operation.
 - Request ID.
 - Progress.
 - Status.
 - Priority.

When Submitted.

Last Updated.

- By default all storage management server requests for the last 24 hours are shown in the **Request Status Information** table of the **Request Status** tab.
 - Clicking on any of the column headers of the **Request Status Information** table causes the listed requests to be sorted in order by the column selected.
 - For example, clicking on the **Last Updated** column header causes requests to be listed in order from the least recently updated to the most recently updated.
 - The **Operator Messages** field at the bottom of the GUI displays messages concerning events occurring in storage management operations.
 - Note that storage management servers control virtually all data inserted into or retrieved from the archive; the resulting large amount of activity on the **Request Status** tab may make it useful to restrict the number of requests displayed by applying a filter (see next step).
- 4** To filter the list of requests, use the **Filtering** pull-down menu above the top left corner of the **Request Status Information** table, selecting as desired to display requests associated with a particular **Server**, **Operation**, **Processing State**, or **Submitter**.
- The list of requests displayed in the **Request Status Information** table is restricted by the filtering choice.
- 5** Observe the Storage Management requests displayed in the **Request Status Information** table.
- The **Progress** and **Status** column entries in the table may provide indication for particular requests of potential problems or conditions requiring attention.
- 6** Repeat Steps 4 and 5 as necessary to monitor Storage Management requests.
- 7** To **exit**, follow menu path **File→Exit**.

Table 17.3-4. Monitoring Archive Requests using the Storage Management GUI

Step	What to Do	Action to Take
1	Launch the DSS Storage Management GUI	Use procedure in Section 17.3.1
2	Select Request Status tab	single-click
3	Observe listed request information	read text
4	Select Filtering option	click-hold and drag cursor or execute three clicks
5	Observe selected (filtered) requests	read text
6	Repeat steps 4 and 5 as necessary	
7	Exit (if necessary/desirable)	Menu selection File→Exit

17.3.4 Monitoring Distribution Requests using the Data Distribution GUI

Distribution requests result from orders for ECS data, placed by users or subscriptions, and by requests for data by internal ECS processes (e.g., those related to data processing). As ECS responds to these requests, the Archive Manager or other operators can monitor the progress of the distribution requests. Table 17.3-5 presents the steps required to monitor distribution requests using the Data Distribution GUI. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the **DDIST GUI** using UNIX commands (see Procedure 17.3.1 **Launching DSS GUIs**).
 - The **Data Distribution GUI** tool is displayed.
- 2 Click on the **Distrib'n Requests** tab.
 - The Distribution Requests window is opened.
 - A list of requests is displayed.
- 3 Follow menu path **View→Filter**.
 - The **Distribution Filter Requests** window opens.
 - Three filter types are displayed in a radio box at the top of the **Distribution Filter Requests** window: **Request ID**, **Requester**, and **All Requests**.
- 4 In the radio box at the top, click on one of the radio buttons to select filtering by **Request ID**, **Requester**, or **All Requests** as desired.
 - The selection is indicated by the radio button depressed appearance.
 - If the selection is **Request ID** or **Requester**, the cursor moves to the text entry field to the right of the selected button.
- 5 If the selection is **Request ID** or **Requester**, enter the request ID or requester's name, respectively, in the appropriate text entry field.
- 6 In the **Media Type:** area of the **Distribution Filter Requests** window, click on the **All** button or click on one of the entries in the **Media Type:** field to select for filtering on **FtpPull** or **FtpPush** (because of the incorporation of the Product Distribution System to handle media distributions, any media distribution requests are reflected as FtpPush distributions to the Product Distribution System).
 - Selected entries in the **Media Type:** window show as highlighted.
- 7 In the **State:** area, click on the **All** button to select all states, or click on one or more radio buttons to select one or more states for the filtering.
 - Any selected **State:** toggle buttons show as depressed.

- 8 Click on the **OK** push button, located at the bottom of the window.
 - The other push buttons located at the bottom of the window are Apply, Cancel, and Help.
 - The Filter Requests window is closed.
 - The Distribution Requests screen shows any requests that meet the filter criteria in the **Data Distribution Requests** field.
- 9 If necessary, use the scroll bar at the bottom of the **Data Distribution Requests** field to scroll horizontally to view the state of the selected request(s).

Table 17.3-5. Monitoring Distribution Requests using the Data Distribution GUI

Step	What to Do	Action to Take
1	Launch the DSS Data Distribution GUI	Use procedure in Section 17.3.1
2	Select Distrb'n Requests tab	single-click
3	Open the Distribution Filter Requests window	Menu selection View→Filter
4	Select Filtering type	single-click
5	Enter any required information for Filtering type	enter text
6	Select Media Type : filtering option(s)	click to highlight
7	Select State : filtering option(s)	click to select
8	Click OK to apply filters and close Distribution Filtering Requests window	single-click
9	Observe filtered Distribution Request(s) list, scrolling as necessary	read text; click-hold and drag as necessary

17.3.5 Setting Checksum Calculation

The system design for ECS incorporates calculation of a checksum when a granule is inserted into the archive. If such a checksum is calculated, it can then be used as an indicator to determine if there is data corruption within the archive. Comparison of the original checksum with one calculated, for example, when the granule is retrieved (e.g., for processing or distribution) can detect whether the inserted file and the retrieved file are the same. If the checksums do not match, then the operator can investigate (refer to Procedure 17.7.4 **Diagnosing/Investigating Read Errors**). The checksums are set in the configuration for the archive server, with variables that set calculation on granule insert and calculation on retrieval. The Storage Management GUI provides an easy way to set these configuration parameters. The settings are available from the **Storage Config.** tab, by highlighting the Archive Server and clicking on the **Modify Server** button. This opens the **Archive Server Configuration** window. The window includes option buttons to **Enable Checksumming On Store:** and **Enable Checksumming On Retrieve:**

Calculation of checksums can be time consuming. System throughput may be significantly improved if checksum calculation on granule insert is turned off, and therefore the default reflects checksum calculation turned off. Unfortunately, turning checksums off compromises the

ability to detect data corruption in the archive. This problem may be alleviated somewhat by calculating a checksum when a granule is first retrieved from the archive and storing that checksum to be compared with one calculated upon a later retrieval. However, this approach will not guard against the possibility of data corruption on initial insertion (e.g., through I/O errors). If it becomes necessary to enable calculation (e.g., for troubleshooting), use the Storage Management GUI. Table 17.3-6 presents the general steps required for setting checksum calculation. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the Storage Management GUI using UNIX commands (refer to Procedure 17.3.1 **Launching DSS GUIs**).
 - The DSS Storage Management GUI is displayed.
- 2 Click on the **Storage Config.** tab to ensure that the Storage Configuration display is available.
 - The **Storage Config.** tab is displayed.
- 3 In the field listing **Server Type**, click on the **ARCHIVE** line to highlight it.
 - The selected line is highlighted and the **Server Name** and **Status** of archive servers are displayed in the field listing **Server Name**.
- 4 In the field listing **Server Name**, click on the archive server (e.g., **EcDsStArchiveServerDRP1**) for which the checksum variables are to be set.
 - The selected line is highlighted.
- 5 Click on the **Modify Server** button.
 - The **Archive Server Configuration** window is displayed showing configuration data for the selected archive server.
- 6 Click on the option button in the **Enable Checksumming On Store:** block.
 - A pop-up display offers the choice of **Yes** or **No**.
- 7 Click on the desired choice to enable (**Yes**) or disable (**No**) checksumming when a granule is stored.
 - The pop-up display is closed and the selected choice appears as the label on the option button.
- 8 Click on the option button in the **Enable Checksumming On Retrieve:** block.
 - A pop-up display offers the choice of **Yes** or **No**.

- 9 Click on the desired choice to enable (**Yes**) or disable (**No**) checksumming when a granule is retrieved.
 - The pop-up display is closed and the selected choice appears as the label on the option button.
- 10 Click on the **OK** button.
 - The **Archive Server Configuration** window is closed and the changes take effect.

Table 17.3-6. Setting Checksum Calculation

Step	What to Do	Action to Take
1	Launch the DSS Storage Management GUI	Use procedure in Section 17.3.1
2	Select Storage Config. tab	single-click
3	Select ARCHIVE server type	single-click to highlight
4	Select archive server for which to set checksumming	single-click to highlight
5	Select Modify Server button	single-click
6	Display options for Enable Checksumming on Store:	single-click
7	Select Yes to enable or No to disable	single-click
8	Display options for Enable Checksumming on Retrieve:	single-click
9	Select Yes to enable or No to disable	single-click
10	Select OK button	single-click

17.4 Deleting Granules

The **Granule Deletion** capability allows operators to delete products on demand. There are several circumstances that may require deletion on demand, such as:

- New PGE versions have been created and are used to reprocess large amounts of past data, creating new ESDT versions. As reprocessing progresses, Operations deletes the granules for the old ESDT versions from the archive and inventory.
- It is determined that certain lower-level (e.g., Level 2) products are of little or no interest to the science or public user community. In concert with the science teams, DAAC operations personnel decide to remove these products from the inventory. Since the products are still referenced by higher-level products as inputs, the DAAC decides to keep the inventory records for production history purposes.
- One or more granules were found defective and were reprocessed on an individual basis. When the reprocessing is complete, the operator wishes to delete the old, defective granule(s) from the inventory.
- A DAAC has extended ECS with subsetting services. The subsetting products are produced outside ECS, but are then inserted into the ECS archive to take advantage of

the ECS distribution capability. The DAAC writes a script to delete the subsetted products on a regular basis.

The Science Data Server provides an application programming interface (API) for deleting granules from the archive, or from both the archive and inventory since earlier releases, but the Granule Deletion capability adds a front-end command-line utility that provides several ways for selecting granules for deletion. Confirmation is generally required so that granules are not inadvertently deleted. However, the confirmation may be suppressed so that operators can run regularly scheduled deletion scripts using background execution. This suppression possibility presents an opportunity for inadvertent loss of data and so must be used with care and only after thorough testing of any deletion script.

The Science Data Server captures deletions and related errors in the application log. Operators may also specify a separate and independent delete log for immediate analysis of the success or failure of a delete operation.

Deletion Sequence. The deletion of granules from the archive involves three elements, and therefore actually occurs in stages. Two of the elements are parts of the Science Data Server (SDSRV), and the third is a part of the Storage Management (STMGT) software and Graphical User Interface (GUI).

- *Logical Deletion:* For the first stage, a command-line delete utility specifies selection criteria for deletion of granules and "logically" deletes from the inventory those granules that meet the criteria. These granules are flagged as 'deleted' and can no longer be accessed, but their inventory entries are not yet removed. The logical 'deletion' may specify, via command line input, removal of granule files from the archive (*Delete From Archive*, or DFA) only, leaving the inventory record, or it may specify *Physical Deletion*, which entails removal of the inventory record as well as removal of the files from the archive. The deletion flag consists of records in the SDSRV database. Specifically, in the DsMdGranules table, the value of the DeleteFromArchive entry is changed from N to Y, and the granule is entered in the DsMdDeletedGranules table with a time stamp recording the logical deletion time.
- *Physical Deletion:* The second stage is actual deletion from the inventory of those granules marked for physical deletion (not DFA only), which occurs when the operations staff runs the physical deletion cleanup utility script. For Physical Deletion, the script removes all inventory rows for granules that were flagged as 'deleted,' including rows referencing related information (e.g., QA data). The script writes to the STMGT database (and therefore must be run under a log in by *sdsrv_role* with authorization to write to that database), creating entries in the DsSdPendingDelete table for granules to be deleted. This includes entries for granules that are to be physically deleted, as well as those designated DFA only. The operations staff controls the lag time between logical deletion and physical deletion. That lag time is entered into the physical deletion script, which deletes only inventory entries for granules that have been logically deleted prior to that time period.

- *Deletion from Archive (DFA)*: STMGT provides a GUI screen that allows the operator to initiate the removal from the archive of the files listed its deletion table (populated by SDSRV). STMGT creates requests to the archive servers to delete files. The STMGT GUI can be used to look at the state of the deletion requests. Files that are successfully deleted have their associated rows removed from the STMGT database table.

Periodically, as sufficient data removal from the archive makes it appropriate, operations may elect to reclaim the tape space and recycle archive tapes. The AMASS software commands (*volcomp*, *volclean*, *volformat*, *volstat*) are used for that purpose.

Table 17.4-1 provides an Activity Checklist for Deleting Granules from the Archive.

Table 17.4-1. Deleting Granules from the Archive - Activity Checklist

Order	Role	Task	Section	Complete?
1	Archive Manager/Database Administrator	Resetting the Lock on the DsMdDeletedGranules table	(P) 17.4.1	
2	Archive Manager	Selecting Granules for Deletion	(P) 17.4.2	
3	Archive Manager/Data Base Administrator	Deleting Granules from the Inventory and Archive (Physical Deletion)	(P) 17.4.3	
4	Archive Manager	Deleting Granules from the Archive	(P) 17.4.4	

17.4.1 Resetting the Lock on the DsMdDeletedGranules Table

The DsMdDeletedGranules table may become locked during execution of the Deletion Cleanup task if there is a need to restart the Science Data Server or if there is a problem with Sybase. The lock can prevent granules being marked for deletion upon subsequent runs of the Granule Deletion utility, and it is therefore necessary to reset the lock. This is accomplished using a Perl script, **EcDsResetLock.pl**. Table 17.4-2 presents the steps required to run the EcDsResetLock.pl script. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the SDSRV host (e.g., e0acs05, g0acs03, l0acs03, n0acs04) with an ID authorized with permissions to execute the EcDsResetLock.pl script.
- 2 To change directory to the directory containing the script, type **cd /usr/ecs/<MODE>/CUSTOM/utilities** and then press the **Return/Enter** key.
 - The **<MODE>** will most likely be one of the following operating modes:
 - OPS (for normal operation).
 - TS1 or TS2 (for testing).

- The working directory is changed to `/usr/ecs/<MODE>/CUSTOM/utilities`.
- 3 To execute the script, type `EcDsResetLock.pl` and then press the **Return/Enter** key.
 - The script prompts **Enter Mode of Operation :**
 - 4 To identify the mode in which the script is to be run, type **OPS**, **TS1**, **TS2**, or other `<MODE>`, and then press the **Return/Enter** key.
 - The script prompts **Enter Log File name:**
 - 5 Type **ResetLock.log** or another name of your choosing for the log, and then press the **Return/Enter** key.
 - The script prompts **Enter Sybase User Name:**
 - 6 Type `sdsrv_role` and then press the **Return/Enter** key.
 - The script prompts **Enter Sybase password:**
 - 7 Type the Sybase `<password>` (may require input from Database Administrator) and then press the **Return/Enter** key.
 - The script prompts **Enter Sybase SQL Server Name:**
 - 8 Type `x0acs0n_srvr` and then press the **Return/Enter** key.
 - The `x` will be `g` for GSFC, `e` for EDC, `l` for LaRC, or `n` for NSIDC. The `n` will be a number identifying the Sybase SQL Server (may require input from the Database Administrator).
 - The script prompts **Enter SDSRV's database name:**
 - 9 Type `EcDsScienceDataServer1_<MODE>`, and then press the **Return/Enter** key.
 - The script attempts to access the locked table, generating a number of errors, before resetting the lock so that marking for deletion can proceed.

Table 17.4-2. Resetting the Lock on the DsMdDeletedGranules Table

Step	What to Do	Action to Take
1	Log in to SDSRV host	enter text
2	<code>cd /usr/ecs/<MODE>/CUSTOM/utilities</code>	enter text; press Return/Enter
3	<code>EcDsResetLock.pl</code>	enter text; press Return/Enter
4	<code><MODE></code>	enter text; press Return/Enter
5	<code>ResetLock.log</code>	enter text; press Return/Enter
6	<code>sdsrv_role</code>	enter text; press Return/Enter
7	<code><password></code>	enter text; press Return/Enter
8	<code>x0acs0n_srvr</code>	enter text; press Return/Enter
9	<code>EcDsScienceDataServer1_<MODE></code>	enter text; press Return/Enter

17.4.2 Selecting Granules for Deletion

Selecting granules for deletion consists of running the Granule Deletion Command line tool to accomplish *logical deletion*, or marking (by entries in the SDSRV inventory database) of granules for deletion. It specifies either DFA only, leaving the inventory record, or Physical Deletion, which will result in removal of the inventory record as well as removal of the files from the archive.

17.4.2.1 Selection by ESDT ShortName, Version, and Granule Time Coverage

Table 17.4-3 presents the steps required to select granules for deletion using the ESDT ShortName, version, and granule time coverage. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the SDSRV host (e.g., e0acs05, g0acs03, l0acs03, n0acs04) with an ID authorized with permissions to execute the Granule Deletion utility.
 - 2 To change directory to the directory containing the script, type **cd /usr/ecs/<MODE>/CUSTOM/utilities** and then press the **Return/Enter** key.
 - The <MODE> will most likely be one of the following operating modes:
 - OPS (for normal operation).
 - TS1 or TS2 (for testing).
 - The working directory is changed to **/usr/ecs/<MODE>/CUSTOM/utilities**.
 - 3 Type the command to run the Granule Deletion utility specifying ESDT ShortName, ESDT version, and granule time coverage (granule beginning date and time, and granule ending date and time), and specifying DFA or physical deletion, and then press the **Return/Enter** key.
 - For deletion from archive only, the command is:
EcDsGranuleDeleteClientStart <MODE> -name <ShortName> -version <version no.> -BeginDate <granbegdate/time> -EndDate <granenddate/time> -log /usr/ecs/<MODE>/CUSTOM/logs/GranDel<n>.log -DFA.
 - For physical deletion, the command is:
EcDsGranuleDeleteClientStart <MODE> -name <ShortName> -version <version no.> -BeginDate <granbegdate/time> -EndDate <granenddate/time> -log /usr/ecs/<MODE>/CUSTOM/logs/GranDel<n>.log -physical.
 - The utility executes and displays the number of granules for deletion, and prompts the user **Do you want to continue [y/n]?**
- Note:* It is possible to suppress the continuation prompt by including the argument **-noprompt** with the command.

4 Type **y** and then press the **Return/Enter** key.

- The process continues to completion.
- **Note:** The deletion actions are displayed in the Deletion log and in the Science Data Serve ALOG, including information on the user ID of the requester, the ShortName, VersionID, and granule coverage time of the request. It is also possible to view the SDSRV database to verify the granule tagging for deletion; the granule should appear in the database with values depending on whether the deletion request specified **-DFA** or **-physical** (see matrix below).

	DsMdGranules Table		DsMdDeletedGranules Table	
Request Type	DeleteEffective Date	DeleteFromArchive	Transaction Time	DFA Flag
-DFA	NULL	Y	Current Time	1
-physical	Current Time	N	Current Time	0

Table 17.4-3. Selection by ESDT ShortName, Version, and Granule Time Coverage

Step	What to Do	Action to Take
1	Log in to SDSRV host	enter text
2	cd /usr/ecs/<MODE>/CUSTOM/utilities	enter text; press Return/Enter
3	Run Granule Delete utility	Execute Step 3 of Procedure 17.4.2.1
4	y (at continuation prompt y/n?)	enter text; press Return/Enter

17.4.2.2 Selection by ESDT ShortName, Version, and Granule Insert Time Range

Table 17.4-4 presents the steps required to select granules for deletion using the ESDT ShortName, version, and granule insert time range. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the SDSRV host (e.g., e0acs05, g0acs03, l0acs03, n0acs04) with an ID authorized with permissions to execute the Granule Deletion utility.
- 2 To change directory to the directory containing the script, type **cd /usr/ecs/<MODE>/CUSTOM/utilities** and then press the **Return/Enter** key.
 - The **<MODE>** will most likely be one of the following operating modes:
 - OPS (for normal operation).
 - TS1 or TS2 (for testing).
 - The working directory is changed to **/usr/ecs/<MODE>/CUSTOM/utilities**.
- 3 Type the command to run the Granule Deletion utility specifying ESDT ShortName, ESDT version, and granule insert time range (insert beginning date and time, and insert

ending date and time), and specifying DFA or physical deletion, and then press the **Return/Enter** key.

- For deletion from archive only, the command is:

```
EcDsGranuleDeleteClientStart <MODE> -name <ShortName> -version <version no.> -insertbegin <insbegdate/time> -insertend <insenddate/time> -log /usr/ecs/<MODE>/CUSTOM/logs/GranDel<n>.log -DFA.
```

- For physical deletion, the command is:

```
EcDsGranuleDeleteClientStart <MODE> -name <ShortName> -version <version no.> -insertbegin <insbegdate/time> -insertend <insenddate/time> -log /usr/ecs/<MODE>/CUSTOM/logs/GranDel<n>.log -physical.
```

- The utility executes and displays the number of granules for deletion, and prompts the user **Do you want to continue [y/n]?**.
- 4 Type **y** and then press the **Return/Enter** key.
- The process continues to completion.

- **Note:** The deletion actions are displayed in the Deletion log and in the Science Data Serve ALOG, including information on the user ID of the requester, the ShortName, VersionID, and granule insert time of the request. It is also possible to view the SDSRV database to verify the granule tagging for deletion; the granule should appear in the database with values depending on whether the deletion request specified **-DFA** or **-physical** (see matrix below).

Request Type	DsMdGranules Table		DsMdDeletedGranules Table	
	DeleteEffective Date	DeleteFromArchive	Transaction Time	DFA Flag
-DFA	NULL	Y	Current Time	1
-physical	Current Time	N	Current Time	0

Table 17.4-4. Selection by ESDT ShortName, Version, and Insert Time Range

Step	What to Do	Action to Take
1	Log in to SDSRV host	enter text
2	cd /usr/ecs/<MODE>/CUSTOM/utilities	enter text; press Return/Enter
3	Run Granule Delete utility	Execute Step 3 of Procedure 17.4.2.2
4	y (at continuation prompt y/n?)	enter text; press Return/Enter

17.4.2.3 Selection Using a Separate Input File

The tool permits referencing a list of granules in a file created for the purpose of providing that list as input to the tool. The desired deletion is achieved by creating a file containing identifying information for the granule(s) to be deleted. The file can list multiple granules. Several options are available for identifying granules, and for controlling how the utility executes:

- the input file can specify SDSRV Granule IDs (geoIDs).
- the input file can specify logical, or "local," Granule IDs.
- the command to execute the Granule Deletion utility can include the **-display** argument, which results in a listing of the geoID and logical ID of each granule selected for deletion.
- by default, the number of granules selected for deletion is displayed and the operator is prompted to confirm the deletion, but the command to execute the Granule Deletion utility can include a **-noprompt** argument, which suppresses the confirmation prompt.
- the operator can choose whether selected granules are to be deleted from the archive and the inventory or from the archive only.
- by default, any BROWSE, QA, and PH granules associated with physically deleted granules are deleted if no longer referenced otherwise, but the command to execute the Granule Deletion utility can include a **-noassoc** argument, which suppress deletion of these associated granules.

Table 17.4-5 presents the steps required to select granules for deletion using a separate input file. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the SDSRV host (e.g., e0acs05, g0acs03, l0acs03, n0acs04) with an ID authorized with permissions to execute the Granule Deletion utility.
- 2 To change directory to the directory containing the script, type **cd /usr/ecs/<MODE>/CUSTOM/utilities** and then press the **Return/Enter** key.
 - The **<MODE>** will most likely be one of the following operating modes:
 - OPS (for normal operation).
 - TS1 or TS2 (for testing).
 - The working directory is changed to **/usr/ecs/<MODE>/CUSTOM/utilities**.

3 Type the command to run the Granule Deletion utility specifying an input file type and file name, a granule deletion log file path, type of deletion (DFA or physical), omission of prompt (if prompt is not desired), argument to suppress deletion of associated BROWSE, QA, and PH granules (if deletion of those associated granules is not desired), and then press the **Return/Enter** key.

- The form of the command is:

```
EcDsGranuleDeleteClientStart <MODE> [-geoidfile <geoidfilename>]
[-localgranulefile <localfilename>] -log /usr/ecs/<MODE>/CUSTOM/logs/
GranDel<n>.log -DFA [-noprompt] [-noassoc]
```

OR

```
EcDsGranuleDeleteClientStart <MODE> [-geoidfile <geoidfilename>]
[-localgranulefile <localfilename>] -log /usr/ecs/<MODE>/CUSTOM/logs/
GranDel<n>.log -physical [-noprompt] [-noassoc].
```

- The utility executes and displays the number of granules for deletion, and, unless the command included the **-noprompt** option, prompts the user **Do you want to continue [y/n]?**. If the **-noprompt** option was used, the process continues to completion (see *Note* under step 4).

4 If prompted at the end of Step 3, type **y** and then press the **Return/Enter** key.

- The process continues to completion.
- *Note:* The deletion actions are displayed in the Deletion log and in the Science Data Serve ALOG, including information on the user ID of the requester, the ShortName, VersionID, and granule insert time of the request. It is also possible to view the SDSRV database to verify the granule tagging for deletion; the granules should appear in the database with values depending on whether the deletion request specified **-DFA** or **-physical** (see matrix below). By default, if there are any BROWSE, QA, and PH granules associated with the science data granules to be deleted and these associated granules are not referenced by other granules, the associated granules will also be tagged for deletion. However, the command may include the **-noassoc** argument to suppress deletion of these associated granules.

Request Type	DsMdGranules Table		DsMdDeletedGranules Table	
	DeleteEffective Date	DeleteFromArchive	Transaction Time	DFA Flag
-DFA	NULL	Y	Current Time	1
-physical	Current Time	N	Current Time	0

Table 17.4-5. Selection Using a Separate Input File

Step	What to Do	Action to Take
1	Log in to SDSRV host	enter text
2	cd /usr/ecs/<MODE>/CUSTOM/utilities	enter text; press Return/Enter
3	Run Granule Delete utility	Execute Step 3 of Procedure 17.4.2.3
4	If prompted, y (at continuation prompt y/n?)	enter text; press Return/Enter

17.4.3 Deleting Granules from the Inventory and Archive (Physical Deletion)

Once granules are marked for deletion, the operator runs the Deletion Cleanup Utility, a Perl script, **EcDsDeletionCleanup.pl**. This script identifies those granules that were marked for deletion to the STMGT database for removal from the archive. In addition, if the granules were marked for physical deletion in the SDSRV database, they are deleted from the SDSRV database. A lag time, specified as a number of days, is used so that the operator can request that not all the granules marked for deletion are immediately deleted -- i.e., the Deletion Cleanup Utility deletes granules marked for deletion a specified number of days prior to the current date. A lag time of 0 may be used to implement immediate deletion. The script also asks for entry of a batch size, by which the operator specifies the increments for transfer of files from the SDSRV database to the STMGT database. For large numbers of deletions, a large batch size may be specified (up to a maximum of 10,000).

Table 17.4-6 presents the steps required to delete granules from the inventory and archive. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the SDSRV host (e.g., e0acs05, g0acs03, l0acs03, n0acs04) with an ID authorized with permissions to execute the Deletion Cleanup utility.
- 2 To change directory to the directory containing the script, type **cd /usr/ecs/<MODE>/CUSTOM/utilities** and then press the **Return/Enter** key.
 - The **<MODE>** will most likely be one of the following operating modes:
OPS (for normal operation).
TS1 or TS2 (for testing).
 - The working directory is changed to **/usr/ecs/<MODE>/CUSTOM/utilities**.
- 3 To run the Deletion Cleanup Utility, type **EcDsDeletionCleanup.pl** and then press the **Return/Enter** key.
 - The script prompts **Enter lag time in days:**.

- 4 Type *<n>*, where *n* is the lag time in days specifying a number of days prior to the current date during which granules marked for deletion are not yet to be deleted, and then press the **Return/Enter** key.
 - *Note*: Use a lag time of 0 to indicate immediate deletion of all marked granules.
 - The script prompts **Enter mode of operation:**.
- 5 Type *<MODE>*, where *<MODE>* is the mode in which you are making the deletion (typically **OPS**, **TS1**, or **TS2**) and then press the **Return/Enter** key.
 - The script prompts **Enter log file name:**.
- 6 Type **DelCleanup1.log** and then press the **Return/Enter** key.
 - The script prompts **Enter Sybase User:**.
- 7 Type **sdsrv_role**, and then press the **Return/Enter** key.
 - The script prompts **Enter Sybase User Password:**.
- 8 Type *<password>*, where *<password>* is the Sybase password (*Note*: This step may require input by the Database Administrator).
 - The script prompts **Enter sql server:**.
- 9 Type *<x>0acg<nn>_srvr* (**e0acg11_srvr** at EDC, **g0acg01_srvr** at GSFC, **l0acg02_srvr** at LaRC, or **n0acg01_srvr** at NSIDC) and then press the **Return/Enter** key.
 - The script prompts **Enter DBName:**.
- 10 Type **EcDsScienceDataServer1_<MODE>**, where *<MODE>* is the mode in which you are making the deletion (typically **OPS**, **TS1**, or **TS2**) and then press the **Return/Enter** key.
 - The script prompts **Enter STMGT DBName:**.
- 11 Type **stmgtdb1_<MODE>**, where *<MODE>* is the mode in which you are making the deletion (typically **OPS**, **TS1**, or **TS2**) and then press the **Return/Enter** key.
 - *Note*: If you do not know the STMGT DBName, contact the Database Administrator.
 - The script prompts **Enter Batch size:**.
- 12 Type *<n>* where *n* is the batch size specifying the increments for transfer of files from the SDSRV database to the STMGT database (maximum 10,000), and then press the **Return/Enter** key.
 - The script prompts **Do you wish to continue deleting these granules?:**.

- 13 Type **y** and then press the **Return/Enter** key.
- The Deletion Cleanup Utility script displays the number of granules to be deleted from the archive (DFA) and physically deleted, with a confirmation prompt. If the lag time was specified as 0, all granules in the DeletedGranules table are displayed.
- 14 Type **y** (response to the confirmation prompt) and then press the **Return/Enter** key.
- Execution of the Deletion Cleanup Utility script completes.
 - *Note:* In the SDSRV database, the SDSRV Staging table (DsMdStagingTable) can be observed for transfer of data to the STMGT database (in increments of the specified batch size); when the transfer is complete, the table is empty. In the STMGT database, the STMGT Pending Delete table (DsStPendingDelete) can be observed for receipt of the data; all granules specified in the delete request are received. The Deletion Cleanup log displays messages about the actions, indicating that information is placed in the STMGT database in increments of the specified batch size.

Table 17.4-6. Deleting Granules from the Inventory and Archive

Step	What to Do	Action to Take
1	Log in to SDSRV host	enter text
2	cd /usr/ecs/<MODE>/CUSTOM/utilities	enter text; press Return/Enter
3	EcDsDeletionCleanup.pl	enter text; press Return/Enter
4	<n> (lag time, in days)	enter text; press Return/Enter
5	<MODE>	enter text; press Return/Enter
6	DelCleanup.log	enter text; press Return/Enter
7	sdsrv_role	enter text; press Return/Enter
8	<password>	enter text; press Return/Enter
9	x0acg0nn_srvr	enter text; press Return/Enter
10	EcDsScienceDataServer1_<MODE>	enter text; press Return/Enter
11	stmgtdb1_<MODE>	enter text; press Return/Enter
12	<n> (increments for transfer of files, maximum 10,000)	enter text; press Return/Enter
13	y (to continue)	enter text; press Return/Enter
14	y (to confirm/continue)	enter text; press Return/Enter

17.4.4 Deleting Granules from the Archive

Once the STMGT database receives the data on the granules to be deleted (reflected in the STMGT Pending Delete table, DsStPendingDelete), the operator uses the Storage Management GUI to initiate the removal from the archive of the listed files. This completes the physical deletion for those granules selected for removal from the archive and inventory, and accomplishes the removal from the archive of those granules selected for Deletion from the Archive (DFA) only. Table 17.4-7 presents the steps required to delete granules from the archive. If you are already familiar with the procedure, you may prefer to use this quick-step

table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DSS Storage Management GUI using UNIX commands (see Procedure 17.3.1 **Launching DSS GUIs**).
 - The DSS Storage Management GUI is displayed.
- 2 On the STMGT GUI, to view the ESDTs with granules targeted for deletion, follow menu path **Delete→Batch Delete**.
 - The **Batch Delete** window is displayed, listing the granules tagged for deletion as ESDT/Version pairs with numbers of files in the **Granule Deletion Information** field.
- 3 To select data for deletion from the archive, click on an ESDT/Version pair.
 - The selected ESDT/Version pair is highlighted.
- 4 Click the **Delete** button.
 - A confirmation Delete Warning prompt asks **Are you sure you want to delete the selected files?**
- 5 To confirm the deletion, click the **OK** button.
 - The delete request continues to completion and the ESDT/Version pair is removed from the list of granules tagged for deletion in the **Granule Deletion Information** field of the **Batch Delete** window.
 - *Note:* The delete actions can be tracked via messages in the Archive Server log files (EcDsStArchiveServer.ALOG, EcDsStArchiveServerDebug.log)

Table 17.4-7. Deleting Granules from the Archive

Step	What to Do	Action to Take
1	Launch the DSS Storage Management GUI	Use procedure in Section 17.3.1
2	Open the Batch Delete window	Menu selection Delete→Batch Delete
3	Select an ESDT/Version pair	single-click
4	Activate Delete button	single-click
5	Click OK (to confirm deletion)	single-click

17.4.5 Undelete Capability

In the event that it is desirable to restore granules that have been marked for deletion (although not yet actually removed physically from the archive), the Granule Deletion Tool provides an undelete capability. This is implemented by command line options for use with the command **EcDsGranuleDeleteClientStart** and its selected options as follows:

- **-undelphysical** to undelete granules marked logically deleted by the **-physical** option;

- **-undelDFA** to undelete granules marked logically deleted by the **-DFA** option;
- **-displayUndelPhysical** to display granules that will be undeleted with the **-undelphysical** option and other selected options (*Note:* the number of granules returned with this option is limited by `MaxGeoidFileLines` and `MaxCollectorSize` parameters in the `EcDsGranuleDelete.CFG` file and/or the `DBMAXRESULTS` parameter for the Science Data Server);
- **-displayUndelDFA** to display granules that will be undeleted with the **-undelDFA** option and other selected options (*Note:* the number of granules returned with this option is limited by `MaxGeoidFileLines` and `MaxCollectorSize` parameters in the `EcDsGranuleDelete.CFG` file and/or the `DBMAXRESULTS` parameter for the Science Data Server).

These options are used in conjunction with other command line options of the Granule Delete tool. For example, it is possible to undelete or display granules using the command line options for selection by ESDT short name, version, and granule time coverage, or to undelete or display granules using the command line option to specify a separate input file.

17.5 Backing Up and Restoring AMASS

A key responsibility of the Archive Manager is to guard against loss of the AMASS database and functioning. This is achieved through creation of backups that can be used to restore functioning in the event of database corruption or other failure. The archive storage format used by AMASS is a proprietary format designed to optimize storage and retrieval speed. The command **vgexport -q** can be used to create a text file, storable on magnetic media, which can be used with the AMASS format archive tapes and the command **vgimport** to recover from the loss. This command exports the AMASS database for a specified volume group to standard out (**stdout**), a file containing the directory structure and media attributes (e.g., media type, ownership, timestamp) for the volume group. The file is located in `/usr/amass/filesysdb` and is exported as standard ASCII text.

Table 17.5-1 provides an Activity Checklist for activities related to backing up and restoring AMASS.

Table 17.5-1. Activity Checklist for Backing Up and Restoring AMASS

Order	Role	Task	Section	Complete?
1	Archive Manager/ System Administrator	Creating a Backup for AMASS	(P) 17.5.1	
2	Archive Manager/ System Administrator	Replacing the AMASS Database Backup Volume (Volume 1)	(P) 17.5.2	
3	Archive Manager/ System Administrator	Restoring the AMASS Database	(P) 17.5.3	

17.5.1 Creating a Backup for AMASS

Table 17.5-2 presents the steps required to create a backup for AMASS. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01) as **amass** or **root**.
- 2 Type **/usr/amass/bin/vgexport -q** and then press the **Return/Enter** key.
 - A file named **stdout** is created in **/usr/amass/filesysdb**.
 - *Note:* The **stdout** file is useful only with the archive volumes represented in the AMASS database.

Table 17.5-2. Creating a Backup for AMASS

Step	What to Do	Action to Take
1	Log in as amass or root	enter text; press Return/Enter
2	vgexport -q	enter text; press Return/Enter

17.5.2 Replacing the AMASS Database Backup Volume (Volume 1)

The AMASS database backup is stored in the archive on Volume 1. "Volume 1," hard coded to be the backup volume, actually designates one of the last volumes in the StorageTek Library Storage Module, to prevent its inadvertent use as a data volume. Whenever **amassbackup** is run, AMASS issues an e-mail message with information on volume capacity and usage. It is also possible to issue the command **vollist 1** to display how much space is left on the volume, or **volprint 1** for still more detail. If the volume becomes full *during* a backup attempt, the backup will fail and it is necessary to initialize a new backup volume and perform a full backup as described in the following procedure. Table 17.5-3 presents the steps required to replace the AMASS database backup volume. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01) as **amass** or **root**.
- 2 Type **/usr/amass/bin/voloutlet 1** and then press the **Return/Enter** key.
 - The LSM robot places the Backup Volume in the CAP.
- 3 Open the recessed latch on the CAP door; remove the Backup Volume tape and store it in a safe place.
- 4 Physically designate the new Backup Volume tape so that it can be easily discriminated from other volumes (e.g., write "Backup Volume" on the tape, color code the tape, or make and display a note of its home storage slot or preprinted barcode).

5 Note the pre-printed number on the volume label (e.g., 112102), insert the new Backup Volume in the CAP, and close the door.

- The robot scans the volume.

6 At the AMASS host, type `/usr/amass/bin/bulkinlet -u` and then press the **Return/Enter** key.

- AMASS assigns the Backup Volume a unique volume number.
- AMASS marks the volume **ONLINE** in the AMASS database.
- AMASS assigns the Backup Volume to the last barcode position in the library.
- AMASS gives the volume a **BACKUP VOLUME** label.

7 Type `/usr/amass/bin/vollist 1`, and then press the **Return/Enter** key.

- AMASS displays the following:

VOL NUM	VOL GRP	JUKE NUM	POS	VOL LABEL	FLAGS	USED (MB)	AVAIL (MB)	DEAD (%)	ERRS
1	0	1		BACKUP-VOLUME	I	0	20000	0	0

8 To change the Volume Label field from **BACKUP-VOLUME** to the preprinted media number (e.g., 112102), type `/usr/amass/bin/vollabel 1 112102` and then press the **Return/Enter** key.

9 Type `/usr/amass/bin/vollist 1`, and then press the **Return/Enter** key.

- AMASS displays the following:

VOL NUM	VOL GRP	JUKE NUM	POS	VOL LABEL	FLAGS	USED (MB)	AVAIL (MB)	DEAD (%)	ERRS
1	0	1		112102	I	0	20000	0	0

10 Type `/usr/amass/bin/volformat -u` and then press the **Return/Enter** key.

- A message requests confirmation that you wish to continue.

11 Type `y` and then press the **Return/Enter** key.

- A message is displayed requesting further confirmation, stating that **The following volumes will be formatted: 1 (Y-N)**.

12 Type `y` and then press the **Return/Enter** key.

- After a few minutes, a message **Completed formatting all volumes** is displayed.

13 To verify that the volume is inserted, type `/usr/amass/bin/vollist 1` and then press the **Return/Enter** key.

- Data for the media are displayed; the **flag** column shows that the newly formatted volume is inactive (**I**).

- 14 Type `/usr/amass/bin/amassbackup -fv` and then press the **Return/Enter** key.
- AMASS performs a full backup with the verbose option of the AMASS database and transaction logs.

Table 17.5-3. Replacing the AMASS Database Backup Volume

Step	What to Do	Action to Take
1	Log in as amass or root	enter text; press Return/Enter
2	voloutlet 1	enter text; press Return/Enter
3	Remove Backup Volume	open CAP door
4	Physically designate Backup Volume	mark volume
5	Note pre-printed number on volume label	read label
6	bulkinlet -u	enter text; press Return/Enter
7	vollist 1	enter text; press Return/Enter
8	vollabel 1 nnnnnn (number from step 5)	enter text; press Return/Enter
9	vollist 1	enter text; press Return/Enter
10	volformat -u	enter text; press Return/Enter
11	y (to continue)	enter text; press Return/Enter
12	y (to confirm volume to be formatted)	enter text; press Return/Enter
13	vollist 1	enter text; press Return/Enter
14	amassbackup -fv	enter text; press Return/Enter

17.5.3 Restoring the AMASS Database

The AMASS database is restored manually by the System Administrator or the Archive Manager using the AMASS command **amassrestore**. This command restores the last full backup, the last partial backup, and all journal transactions that have occurred since the last backup. It creates a sub-directory under `filesysdb` called **journal**. All restored files are copied to the **journal** directory. The following restore procedure uses a backup volume or tape device. Table 17.5-4 presents the steps required to restore the AMASS database. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01) as **amass** or **root**.

Caution

Do not use the **amassrestore** command when AMASS is running. To shutdown AMASS, refer to the Special Shutdown Procedures in the AMASS technical documentation *Installing AMASS*.

- 2 To inactivate the AMASS file system, type **/usr/amass/bin/amassstat -i**.
 - The AMASS file system is inactivated.
- 3 Make sure the backup drive is available.
 - If there is another volume in the drive, return it to its home slot by entering **/usr/amass/daemons/amassrecovery -s** (the option **-s** prevents system startup and performs file recovery).
- 4 Type **/usr/amass/bin/amassrestore -v -L <barcodelabel>** and then press the **Return/Enter** key.
 - If you do not know the barcode label number for the backup volume, it can be obtained by entering **/usr/amass/bin/vollist 1**.
 - The AMASS database is restored from the backup volume.

Table 17.5-4. Restoring the AMASS Database

Step	What to Do	Action to Take
1	Log in as amass or root	enter text; press Return/Enter
2	amassstat -i	enter text; press Return/Enter
3	Ensure backup drive is available (if necessary, /usr/amass/daemons/amassrecovery -s)	enter text; press Return/Enter
4	amassrestore -v -L <barcodelabel>	enter text; press Return/Enter

17.6 Backing Up and Restoring Archived Data

The ECS archive design incorporates programmed backups of archived data. System requirements specify that a percentage of archived data be duplicated for local and offsite storage to provide for data safety. However, the large volume of ECS archived data merits finding alternatives to complete backup of all volumes in the libraries. Selection of data for backup is based on assessment of the feasibility of recovery in the event of data loss.

It is imperative to back up data that would be irretrievable if lost. Such data are saved to the archive, saved to local backup, and saved to offsite backup. Many data elements that will be archived, however, could be retrieved in the event of loss. For example, in the event of loss of a higher level product that is an output of processing a lower level product, it would be possible to

restore the higher level product by reprocessing the lower level product. As another example, ECS will often archive a lower level product from a data provider, but that product may also be retained in the archives of the data provider, as is the case with EDOS, where there are maintained archives of Level 0 products that are also provided to ECS. If the product were lost from the ECS archive, it would be possible to ingest it again from the data provider, using appropriate Ingest procedures. Also, ECS archives can provide replacement for lost Level 0 data at EDOS.

Thus, when unique data are inserted into the archive (e.g., through Ingest, from Processing), up to three copies of the data may be created, reflecting different types of data use:

- the active archive copy, available for distribution or other use (volume group is specified in the *Archive ID*).
- a copy to be retained for local backup (volume group is specified in the *Backup ID*).
- a copy to be sent to offsite backup storage (volume group is specified in the *Offsite ID*).

The Archive Manager has the responsibility for ensuring and managing necessary backups of archived data and, in the event of loss, executing or supporting efforts to recover lost data. Table 17.6-1 provides an Activity Checklist for backing up and restoring archived data.

Table 17.6-1. Activity Checklist for Backup and Restoration of Archived Data

Order	Role	Task	Section	Complete?
1	Archive Manager/ Science Data Specialist	Creating Offsite Backups	(P) 17.6.1.1	
2	Archive Manager/ System Administrator	Creating Replacement Backups Manually from Existing Archives	(P) 17.6.1.2	
3	Archive Manager	Manual Data Recovery from Local Backup Tapes	(P) 17.6.2.1	
4	Archive Manager	Manual Data Recovery from Offsite Backup Tapes	(P) 17.6.2.2	
5	Archive Manager	Manual Data Recovery from Damaged Cartridge	(P) 17.6.2.3	
6	Archive Manager	Data Recovery for Known Files	(P) 17.6.2.4	
7	Archive Manager	SDSRV Retrieval of File Location Metadata	(P) 17.6.2.5.1	
8	Archive Manager	SDSRV Retrieval of Granule Production History Metadata	(P) 17.6.2.5.2	

17.6.1 Backups for Archive Data

The paths for creation of the data copies are specified for each ESDT when it is loaded. The Archive ID (for the archive copy) and the Backup ID (for the local backup copy) should reflect

different archives if possible (i.e., different Library Storage Modules), to spread the risk of loss. The Offsite ID will not be a remote site path, but rather a local path for making copies to be sent for offsite storage. The requirements to implement creation of offsite backups include:

- creating a subdirectory and volume group for offsite backups.
- using the **Vol Grp Config.** tab of the Storage Management GUIs to add the volume group to the appropriate archive server and set the offsite ID to be the three-character specification for the local site (e.g., EDC, GSF, LAR, NSC).
- adding volumes to the volume group as needed.

17.6.1.1 Creating Offsite Backups

Each site is responsible for arranging its own secure offsite storage. The offsite backup cartridges are removed from the archive storage facility using procedures already described (see Procedure 17.2.4). For local and/or offsite storage of specific archive data, the Archive Manager generates or directs the generation of a list of selected data. At the time the files are archived, they are written to specific and separate volume groups that correspond to the three data usage types identified previously (i.e., active archive, local backup, offsite backup). Only files belonging to the data usage type are written to the tapes in a specific volume group. The Archive Manager or Science Data Specialist sets up these volume groups when an Earth Science Data Type (ESDT) is installed. Table 17.6-2 presents the steps required to create offsite backups. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DSS Storage Management GUI using UNIX commands (see Procedure 17.3.1 **Launching DSS GUIs**).
 - The DSS Storage Management GUI is displayed.
- 2 Click on the **Vol Grp Config.** tab to display the Volume Group information.
 - The **Vol Grp Config.** tab information is displayed.
- 3 Click on the **Add . . .** button below the Volume Group Information field.
 - The **Add Volume Group** window is displayed.
- 4 In the **Add Volume Group** window, click in the **Data Type.Version:** field.
 - The cursor moves to the **Data Type.Version:** field.
- 5 Type the ESDT *ShortName* and *Version* (e.g., MOD01.001) of the data type for which the volume group is to be created.
 - The typed entry appears in the **Data Type.Version:** field.

- 6 In the **Add Volume Group** window, click on the pull-down arrow at the end of the **HWCI:** field.
 - A pull-down menu displays designators of the hardware configuration items available for storing data.
- 7 Click on the designator for the hardware configuration item where the archive copies of data for the ESDT are to be stored.
 - The selected designator is displayed in the **HWCI:** field.
- 8 In the **Add Volume Group** window, click in the **Volume Group Path:** field.
 - The cursor moves to the **Volume Group Path:** field.
- 9 Type the full path identification for the storage of active archive data for the ESDT (typically, the path will be of the form **dss_stkn/<MODE>/xxxxx**, where *n* is a number designating a StorageTek Library Storage Module, *MODE* is **OPS**, **TS1**, or **TS2**, and *xxxxx* is a short identifier for what is being stored; e.g., **dss_stk1/OPS/mod10**).
 - The typed entry appears in the **Volume Group Path:** field.
- 10 In the **Volume Group Type:** radio box, click on the **PRIMARY** button.
 - The button depressed appearance indicates selection of **PRIMARY**, signifying that the volume group being created is for primary storage for active archive use.
- 11 Click on the **Save and Add Next VG** button at the bottom of the **Add Volume Group** window.
 - The volume group is created for display in the **Volume Group Information** field on the **Vol Grp Config.** tab of the Storage Management GUI.
- 12 In the **Add Volume Group** window, click in the **Volume Group Path:** field.
 - The cursor moves to the **Volume Group Path:** field.
- 13 Change the data entered at Step 9 to identify the full path for the storage of local backup data for the ESDT.
 - *Note:* This step is only for those ESDTs that require local backup.
 - The typed entry appears in the **Volume Group Path:** field.
- 14 In the **Volume Group Type:** radio box, click on the **BACKUP** button.
 - The button depressed appearance indicates selection of **BACKUP**, signifying that the volume group being created is for storage for local backup use.
- 15 Click on the **Save and Add Next VG** button at the bottom of the **Add Volume Group** window.
 - The volume group is created for display in the **Volume Group Information** field on the **Vol Grp Config.** tab of the Storage Management GUI.

- 16 In the **Add Volume Group** window, click in the **Volume Group Path:** field.
 - The cursor moves to the **Volume Group Path:** field.
- 17 Change the data entered at Step 13 to identify the full path for the creation and initial storage of offsite backup data for the ESDT.
 - *Note:* This step is only for those ESDTs that require offsite backup.
 - The typed entry appears in the **Volume Group Path:** field.
- 18 In the **Volume Group Type:** radio box, click on the **OFFSITE** button.
 - The button depressed appearance indicates selection of **OFFSITE**, signifying that the volume group being created is for creation and initial storage for offsite backup use.
- 19 Click on the **Save and Exit** button at the bottom of the **Add Volume Group** window.
 - The volume group is created for display in the **Volume Group Information** field on the **Vol Grp Config.** tab of the Storage Management GUI.
 - Data stored in the volume group for **OFFSITE** backup can be safeguarded by removing tapes that have data stored on them (see procedure 17.2.4) and transporting the tapes to a secure offsite storage location.

Table 17.6-2. Creating Offsite Backups

Step	What to Do	Action to Take
1	Launch the DSS Storage Management GUI	Use procedure in Section 17.3.1
2	Select Vol Grp Config. tab	single-click
3	Click Add . . . button	single-click
4	Data Type.Version field	single-click
5	Enter ESDT ShortName and Version	enter text
6	Display HWCI: pull-down menu	single-click
7	Select HWCI:	single-click
8	Volume Group Path: field	single-click
9	Identify active archive path	enter text
10	Select PRIMARY volume group type	single-click
11	Activate Save and Add Next VG button	single-click
12	Volume Group Path: field	single-click
13	Identify local backup path	enter text
14	Select BACKUP volume group type	single-click
15	Activate Save and Add Next VG button	single-click
16	Volume Group Path: field	single-click
17	Identify offsite backup path	enter text
18	Select OFFSITE volume group type	single-click
19	Activate Save and Exit button	single-click

17.6.1.2 Creating Replacement Backups Manually from Existing Archives

If loss of data necessitates obtaining and inserting backup data from local or offsite storage, it is necessary to create replacement data to be returned to backup storage. Table 17.6-3 presents the steps required to create replacement backups manually from existing archives. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01) as **amass** or **root**.
- 2 Type **/usr/amass/bin/volcopy -c <source> <destination>** (where **<destination>** is the volume number of the destination volume and **<source>** is the volume number of the source volume), and then press the **Return/Enter** key.
 - The **-c** option specifies copy of the source to the destination.
 - A bit for bit copy of the source (the cartridge to be copied) is made at the destination (an available, unused cartridge). Because the copy procedure depends on the amount of data on the source cartridge, the process can take as long as an hour to complete.
 - *Note:* After starting a **volcopy** procedure, do not attempt to kill the process with the **kill -9** command.
- 3 A hardcopy/softcopy list of the files backed up should be created and kept for future file restoration operations.
- 4 Remove the backup volume(s) and send to offsite storage area, as appropriate.

Table 17.6-3. Creating Replacement Backups Manually from Existing Archives

Step	What to Do	Action to Take
1	Log in as amass or root	enter text; press Return/Enter
2	volcopy -c <source> <destination>	enter text; press Return/Enter
3	Add to list of backed up files for future reference	print list
4	Send backup to secure offsite storage	

17.6.2 Restoring Archive Data

Although the Archive hardware is highly reliable, errors due to tape or drive failure must be expected to occur, though at an extremely low rate, as a function of the archived data volume. Where errors have occurred and data has been lost from the archive and can not be restored from backup there may exist the potential to recover and re-archive equivalent data by one of the following means:

- copying from backup onto the original or a new primary.
- replacing damaged or corrupted volumes with vendor restored or backup volumes.
- re-generation by reprocessing.
- obtaining replacement data from the original external provider.

If a backup volume is available and contains the data that were lost or corrupted on the primary copy, the data can be copied using standard UNIX commands. If the backup volume must be obtained from offsite storage, it must then be inserted into the archive and brought on line. The procedures for loading archive media were addressed under a preceding topic. The requirements then entail:

- using the **Storage Config.** tab of the Storage Management GUIs to view the volume groups of the appropriate archive server and to find the files in the primary and backup volume groups.
- using the UNIX copy command (**cp** or **dd**) to copy the lost or corrupted file from the backup version to the primary version.
- as appropriate (i.e., if the recovery is one of a set of files to be restored, for example, because they were lost from a damaged tape), removing the names of the files recovered from the list of files to be recovered by other means.

If an entire volume is to be copied, perform the procedure to create replacement backups (see Procedure 17.6.1.2); if recovery is from offsite, send the backup back to secure offsite storage.

17.6.2.1 Manual Data Recovery from Local Backup Tapes

The procedure for manual data recovery from local backup tapes assumes that the tape is on-line and in the Powderhorn Library Storage Module. Volume groups and tapes are transparent to the automated file and storage management system. As long as the AMASS database is aware of the files, the operator moves data using standard UNIX commands.

Table 17.6-4 presents the steps required for manual data recovery from local backup tapes. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DSS Storage Management GUI using UNIX commands (see Procedure 17.3.1).
 - The DSS Storage Management GUI is displayed.
- 2 Click on the **Vol Grp Config.** tab to display volume group information.
 - The **Vol Grp Config.** tab is displayed.
- 3 Click in the **Find Next** field under the **Volume Group Information** field.
 - The cursor moves to the **Find Next** field.

- 4 Type the first three letters of the ESDT short name for the data type with missing or corrupted/damaged files on its primary storage tape.
 - The typed entry is displayed in the field.
- 5 Click on the **Find Next** button.
 - In the **Volume Group Information** field, the volume group information for the first volume group containing the three letters specified in Step 4 is highlighted.
- 6 As necessary, scroll further through the list of entries in the **Volume Group Information** field to locate the **Current Volume Group Path** for the primary and backup storage for the data type with missing or corrupted/damaged files on its primary storage tape; note or record the paths.
- 7 In a UNIX window, at the command line prompt, type **cp <backuppath/filename> <primarypath/filename>** and press the **Return/Enter** key.
 - The backup file is copied to the primary tape.
- 8 Repeat Step 7 as needed until all missing or corrupted/damaged files are restored from the backup tape to the primary tape.
- 9 Remove the file(s) restored in Steps 7 and 8 from any list of files to be recovered.

Table 17.6-4. Manual Data Recovery from Local Backup Tapes

Step	What to Do	Action to Take
1	Launch the DSS Storage Management GUI	Use procedure in Section 17.3.1
2	Select Vol Grp Config. tab	single-click
3	Find Next field	single-click
4	Specify search token	enter text
5	Activate Find Next button to start search	single-click
6	Locate and record primary and backup paths	click and drag to scroll; read text
7	cp <backuppath/filename> <primarypath/filename>	enter text; press Return/Enter
8	Repeat Step 7 as needed	
9	Remove restored files from list of files to be recovered	

17.6.2.2 Manual Data Recovery from Offsite Backup Tapes

Each site has its own arrangements for managing data requiring secure offsite backup storage. In the event of loss of data on primary and local backup tapes, recovery may be possible using offsite backup tapes. Table 17.6-5 presents the steps required for manual data recovery from local backup tapes. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DSS Storage Management GUI using UNIX commands (see Procedure 17.3.1).
 - The DSS Storage Management GUI is displayed.
- 2 Click on the **Vol Grp Config.** tab to display volume group information.
 - The **Vol Grp Config.** tab is displayed.
- 3 Click in the **Find Next** field under the **Volume Group Information** field.
 - The cursor moves to the **Find Next** field.
- 4 Type the first three letters of the ESDT short name for the data type with missing or corrupted/damaged files on its primary and local backup storage tapes.
 - The typed entry is displayed in the field.
- 5 Click on the **Find Next** button.
 - In the **Volume Group Information** field, the volume group information for the first volume group containing the three letters specified in Step 4 is highlighted.
- 6 As necessary, scroll further through the list of entries in the **Volume Group Information** field to locate the **Current Volume Group Path** for the primary and offsite storage for the data type with missing or corrupted/damaged files on its primary and local backup storage tapes; note or record the paths.
- 7 Log in at the FSMS SGI host (workstation **x0drg##**).
 - NOTE: The **x** in the workstation name will be a letter designating your site: **g** = GSFC, **m** = SMC, **l** = LaRC, **e** = EDC, **n** = NSIDC, **o** = ORNL, **a** = ASF, **j** = JPL; the **##** will be an identifying two-digit number (e.g., **n0drg01** indicates an FSMS SGI server at NSIDC).
- 8 To identify the offsite volume ID where a known file to be recovered is stored, on the FSMS host, at the command line prompt in a UNIX window, type **/usr/amass/utills/fileprint <filepathname/filename>**, where **filepathname/filename** is the path and name of the file, and press the **Return/Enter** key.
 - AMASS returns database information for each location where the file is stored. For example, if the input filepathname and filename for a lost or damaged file is **/dss_stk1/aster/:Science:AST_L1BT:2137:1.EOSHDF**, the output returned by AMASS should look similar to the following:

```

FILE :Science:AST_L1BT:2137:1.EOSHDF :
  rid      = 5993
  prid     = 4749
  size     = 5410105 (0x528d39)
  start blk = 37750397
  vol      = 18
  ltvol    = 18
  mode     = 81a4

```

```

links      =    1
ncrc       =   4195
flags      =    0

```

This indicates that the file should be on volume 18. Similar output should be returned for each volume involved in storage of the file.

- 9 To determine if the offsite volume is in the archive, on the FSMS host, at the command line prompt in a UNIX window, type `/usr/amass/bin/vollist <volumenumber>`, where *volumenumber* is the volume ID returned in Step 8, and press the **Return/Enter** key.

- AMASS returns information about the requested volume. This step can be repeated for each volume ID returned in Step 8. If the return is similar to the following:

VOL	VOL	JUKE	POS	VOL	FLAGS	USED	AVAIL	DEAD	ERRS
NUM	GRP	NUM		LABEL		(MB)	(MB)	(%)	
18	700	1	NET	SD2102	IO	35589	0	35	0

the **IO** in the **FLAGS** column indicates that the volume is inactive and offline -- i.e., the volume is not in the Library Storage Module. The offsite backup volume will have this status if it is not in the archive and needs to be retrieved from offsite storage.

- 10 Retrieve the volume from offsite storage and insert it in the Library Storage Module (see Procedure 17.2.1), using the command `/usr/amass/bin/bulkinlet <volgrp>`, where *volgrp* is the identifier in the **VOL GRP** column of the return in Step 9.

- The CAP door unlocks (audible unlatching sound).

- 11 Open the recessed latch on the CAP door and insert the tape(s), solid black side up, with the bar code label facing you, and close the door

- The robot scans the volume(s) and makes the insertion into the volume group specified in Step 10.

- 12 To recover a file from the newly inserted offsite backup volume, in a UNIX window, at the command line prompt, type `cp <offsitepath/filename> <primarypath/filename>` and press the **Return/Enter** key.

- The backup file is copied to the primary tape.

- 13 Repeat Step 12 as needed until all missing or corrupted/damaged files are restored from the offsite tape to the primary tape.

- 14 Remove the file(s) restored in Steps 12 and 13 from any list of files to be recovered.

Table 17.6-5. Manual Data Recovery from Offsite Backup Tapes

Step	What to Do	Action to Take
1	Launch the DSS Storage Management GUI	Use procedure in Section 17.3.1
2	Select Vol Grp Config. tab	single-click
3	Find Next field	single-click
4	Specify search token	enter text
5	Activate Find Next button to start search	single-click
6	Locate and record primary and offsite backup paths	click and drag to scroll; read text
7	Log in at FSMS host	enter text; press Return/Enter
8	/usr/amass/utills/fileprint <filepathname/filename>	enter text; press Return/Enter ; read text
9	/vollist <volumenumber>	enter text; press Return/Enter ; read text
10	bulkinlet <volgrp> volume retrieved from offsite	enter text; press Return/Enter
11	Insert the tape in the CAP	close door
12	cp <offsitepath/filename> <primarypath/filename>	enter text; press Return/Enter
13	Repeat Step 12 as needed	
14	Remove restored files from list of files to be recovered	

17.6.2.3 Manual Data Recovery from Damaged Cartridge

In the course of operations it is possible for a tape to become physically damaged or accidentally overwritten. Some indications of a damaged tape may be AMASS read/write errors, or AMASS may determine that the volume is unreadable and mark it inactive. In that event that a tape volume is damaged, a manual recovery of data from the cartridge must be attempted.

Because of the technical complexity of data recovery from a damaged cartridge, it will be performed by STK personnel. However, the Archive Manager can support and prepare for the process by listing all the files on the tape and their associated start block numbers and providing the list to the recovery personnel. The list is generated by using a *Perl* utility script. The utility will generate three ASCII files that must be provided to the STK recovery personnel along with the damaged tape. The files are: **filelist_<volnumber>**, **start_block_listing_volnumber>**, and **README_<volnumber>**, where *volnumber* is the volume number of the requested tape volume.

The script utility, **EcDsStFilesPerTapeUtility**, is located in the directory **/usr/ecs/<MODE>/CUSTOM/utilities**. The script produces directory information followed by three files.

The directory information output should be similar to the following example:

```

/data1/data/:BR:Browse.001:1170:1.BINARY
/data1/data/:BR:Browse.000:1170:1.BINARY
/data1/data/:SC:MOD00:65001:1.CCSDS
/data1/data/:SC:MOD00:65002:1.CCSDS
/data1/data/:SC:MOD00:20001:1.CCSDS
/data1/data/:PH:PH.001:2000000076:1.BINARY
/data1/data/:PH:PH.000:2000000076:1.BINARY
/data1/data/:QA:QA.001:1003:1.ASCII
/data1/data/:QA:QA.001:1004:1.ASCII
/data1/data/:QA:QA.001:1005:1.ASCII
/data1/data/:OR:OR.001:2100:1.ASCII
/data1/data/:OR:OR.001:2101:1.ASCII
/data1/data/:OR:OR.001:2102:1.ASCII
/data1/data/:OR:OR.001:2103:1.ASCII
/data1/data/:AN:AN.001:3100:1.ASCII
/data1/data/:AN:AN.001:3101:1.ASCII
/data1/data/:AN:AN.001:3102:1.ASCII
/data1/data/:AN:AN.001:3103:1.ASCII

```

The information in the file **filelist_<volnumber>** is in ASCII format with one file name per line, as in the following example:

```

/dss_stk2/joel/TestStdSeq6_0_10.wrt
/dss_stk2/joel/TestStdSeq6_0_10.wrt
/dss_stk2/joel/TestStdSeq6_0_10.wrt
/dss_stk2/joel/TestStdSeq6_0_10.wrt
/dss_stk2/joel/TestStdSeq6_0_10.wrt

```

Table 17.6-6 presents the steps required for manual data recovery from a damaged cartridge. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in as **amass** or **root** at the FSMS SGI host (workstation **x0drg##**, **xacg##**, or **xwkg##**).
 - NOTE: The **x** in the workstation name will be a letter designating your site: **g** = GSFC, **m** = SMC, **l** = LaRC, **e** = EDC, **n** = NSIDC, **o** = ORNL, **a** = ASF, **j** = JPL; the **##** will be an identifying two-digit number (e.g., **n0drg01** indicates an FSMS SGI server at NSIDC).
- 2 To verify that AMASS is running, type **/usr/amass/bin/amassstat -c** and press the **Return/Enter** key.
 - The message **FILESYSTEM IS ACTIVE** should be displayed. If it is not, restart AMASS using procedure 17.1.1.

3 To identify the volume ID where a known file to be recovered is stored, on the FSMS host, at the command line prompt in a UNIX window, type `/usr/amass/utlis/fileprint <filepathname/filename>`, where *filepathname/filename* is the path and name of the file, and press the **Return/Enter** key.

- AMASS returns database information for each location where the file is stored. For example, if the input filepathname and filename for a lost or damaged file is `/dss_stk1/aster/:Science:AST_L1BT:2137:1.EOSHDF`, the output returned by AMASS should look similar to the following:

```
FILE :Science:AST_L1BT:2137:1.EOSHDF :
    rid      =    5993
    prid     =    4749
    size     =    5410105 (0x528d39)
    start blk =    37750397
    vol      =     18
    ltvol    =     18
    mode     =    81a4
    links    =     1
    nrcrc    =    4195
    flags    =     0
```

This indicates that the file should be on volume 18. Similar output should be returned for each volume involved in storage of the file.

4 Remove the volume from the archive (see Procedure 17.2.4).

5 Inspect the physical cartridge and tape for damage. Any creasing, scratches, snapping, or stretching of the tape may warrant keeping the volume offline and sending it to STK for replacement.

6 If the cartridge is damaged and to be returned to STK for recovery of data, run the script **EcDsStFilesPerTapeUtility** script; to start the utility script, type the command: `/usr/ecs/<MODE>/CUSTOM/utilities/EcDsStFilesPerTapeUtility` and press the **Return/Enter** key.

- The script runs and prompts for input of the volume number, as follows:

```
You have invoked an ECS utility script.
```

```
This script supports file recovery from an AMASS tape volume
by generating two listings of the files located on that volume.
The listings are ASCII files and can be viewed.
```

```
AMASS must be running in order to generate one of the listings.
If a .fileprint. use error messages result, make sure AMASS is
running, and you have AMASS privileges, before invoking this
utility again.
```

```
Please enter the AMASS volume number,
for which you wish to generate listings
```

```
-->
```

- 7 Type the volume ID determined in Step 3 and press the **Return/Enter** key.
 - The script runs and a message is displayed to indicate generation of the information and completion of the run. The two ASCII files are **filelist_<volnumber>** and **start_block_listing_<volnumber>**. There is also a **README_<volnumber>** file.
- 8 Send the volume to STK along with the files generated by the perl utility.
 - STK copies all uncorrupted data to a new tape and inserts filler data blocks to replace the lost data.
 - The filler data is inserted using the original block sequence so that the remaining data can be accessed by AMASS.
 - After copying of the data to a new cartridge, it is returned to the DAAC with the original volume label and a report indicating which data blocks were replaced with filler data.
- 9 After receiving the recovered tape back from STK, insert the tape into the library (see Procedure 17.2.1), using the command **/usr/amass/bin/bulkinlet <volgrp>**, where **volgrp** is the volume group number. (*Note*: If you do not know the volume group number, you can determine it by using the **vollist** command with the volume ID obtained in the return from Step 3).
 - AMASS reads the volume label and places the volume in its home slot.
- 10 To put the volume **online**, type **volloc -n <volumenumber>**, where **volumenumber** is the volume ID obtained in the return from Step 3, and press the **Return/Enter** key.
 - The volume is marked **O** (online) in the database.
- 11 To activate the volume, type the command **/usr/amass/bin/volstat -a <volumenumber>**, where **volumenumber** is the volume ID obtained in the return from Step 3, and press the **Return/Enter** key.
 - The volume is marked **A** (active) in the database.
- 12 Using the report provided by STK, determine which files have had data blocks replaced with filler and delete those files from AMASS using standard UNIX commands. All such files must be recorded on a list of non-recovered files. To delete a file, type the command **rm filepathname/filename** where **filepathname/filename** is the path and name of the file, and press the **Return/Enter** key.
 - The file is removed.

13 To assess dead space on the tape, type `/usr/amass/bin/vollist <volumenumber>`, where *volumenumber* is the volume ID, and press the **Return/Enter** key.

- AMASS returns information about the requested volume similar to the following example:

VOL NUM	VOL GRP	JUKE NUM	POS	VOL LABEL	FLAGS	USED (MB)	AVAIL (MB)	DEAD (%)	ERRS
18	700	1	NET	SD2102	A	35589	0	85	0

- If the amount of dead space created on the tape exceeds the allowed threshold, the files can be copied to another volume within the volume group and the tape can be reformatted (see "Recycle a Volume" in the *AMASS System Administrator's Guide*).

14 Retrieve the file location metadata to recover the ArchiveID and any checksum for each file (see Procedure 17.6.2.5.1).

- The system design incorporates calculation of a checksum when a granule is inserted into the archive. However, calculation of checksums can be time consuming, and therefore to improve system performance checksums are only calculated for a small percentage of granules on a random basis.

15 For files with a non-zero checksum returned by SDSRV (Step 14), to validate the checksum of the recovered file type `cksum <filepathname/filename>`, where *filepathname/filename* is the path and name of the recovered file.

- The system returns one line with three parameters per input file, similar to the following example:

```
cksum :Science:MOD29:2498:1.EOSHDF
1295913534 10892630 :Science:MOD29:2498:1.EOSHDF
```

The first parameter is the checksum (the second is the number of octets, and the third is the filename). If this returned checksum does not match the SDSRV-generated checksum (from Step 14), repeat Step 12 to delete the file.

16 For files with a checksum of zero returned by SDSRV (Step 14), it may be possible to have a Science Data Specialist use a viewing tool (e.g., EOSView) to exercise some validation on the files. It may also be possible to use information supplied by STK identifying corrupt blocks on the tape, in conjunction with the data in the `start_block_listing_volnumber` file, to determine specific files that are corrupt and recover the remaining files. The conservative approach is to assume that all zero-checksum files are corrupt and repeat Step 12 to delete them.

17 Add non-recovered files to the list of files to be recovered by other means (see Procedure 17.6.2.4).

Table 17.6-6. Manual Data Recovery from Damaged Cartridge

Step	What to Do	Action to Take
1	Log in at FSMS host as amass or root	enter text; press Return/Enter
2	amassstat -c	enter text; press Return/Enter
3	/usr/amass/utlis/fileprint <filepathname/filename>	enter text; press Return/Enter
4	Remove the volume from the archive	use Procedure 17.2.4
5	Inspect the cartridge and tape for damage	observe
6	EcDsStFilesPerTapeUtility	enter text; press Return/Enter
7	Volume ID (from Step 3)	enter text; press Return/Enter
8	Send volume and file information to STK	
9	bulkinlet <volgrp> volume returned from STK	enter text; press Return/Enter
10	volloc -n <volumenumber>	enter text; press Return/Enter
11	volstat -a <volumenumber>	enter text; press Return/Enter
12	rm filepathname/filename	enter text; press Return/Enter
13	vollist <volumenumber>	enter text; press Return/Enter
14	Retrieve file location metadata	use Procedure 17.6.2.5.1
15	cksum <filepathname/filename> (files with non-zero checksum from SDSRV); delete files with non-match)	enter text; press Return/Enter
16	Other validation for files with zero checksum (e.g., EOSVIEW, recover non-corrupt files), or delete	
17	Add non-recovered files to list of files to be recovered by other means	see Procedure 17.6.2.4

17.6.2.4 Data Recovery for Known Files Not Backed Up in ECS

For any set of known files to be recovered (e.g., a list of files that were on a damaged tape and could not be recovered by Procedure 17.6.2.3, and were not available in local or offsite backups), data recovery can be attempted through procedures such as re-ingest, obtaining the data from another DAAC that was the original source, or regeneration. Each of these potential recovery approaches is addressed in a separate procedure.

The results of file or granule recovery are slightly different depending on whether the lost files are recovered from backup, or the corresponding lost granule had to be re-archived after re-ingest or re-generation by PDPS. Files which are recovered within the Archive/STMGT procedures are re-archived under the same name, so that the affected granule(s) are restored as they were before the failure.

Where file recovery within STMGT control is not possible, granule recovery through re-ingest or re-generation results in the insertion of a new granule. This new granule has a new Universal Reference (UR) and a new 'Production Date and Time'. Particularly where granule re-generation is required, exact re-production of the original granule (data byte-for-byte) is not guaranteed.

17.6.2.4.1 Re-Ingest of Lost Data

Table 17.6-7 presents the steps required for re-ingest of lost data. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Identify the source for each of the lost granules that were ingested.
- 2 If you have not already done so, retrieve the file location metadata for each file (see **Procedure 17.6.2.5.1**).
- 3 With reference to the applicable Interface Control Document (ICD) and using the granule metadata retrieved in Step 2, initiate the required data re-supply requests as defined in the ICD for those data suppliers able to re-supply data.
 - To re-order Level 0 production data sets (PDSs) from EDOS, the DAACS use the ESDIS-sponsored EOS Data Reorder Web Tool. Steps 4 - 26 address use of the tool to submit a re-order request.
 - EDOS furnishes L0 replacement data to the GSFC Earth Sciences (GES) DAAC on DTF-2 tapes. A tape may contain multiple granules and files, a subset of which are needed to replace the lost granule(s). Steps 27 - 54 address recovery of the lost data.
 - EDOS furnishes L0 replacement data to other DAACs that do not have DTF-2 tape drives. In this case, EDOS transfers the necessary PDS(s) to ECS in the automated Ingest process for polling with delivery record, monitored by the Ingest Technician using **Procedure 16.2.5 Monitor/Control Ingest Requests** (see Chapter 16). The re-order is accomplished as specified in steps 4 - 26; the only other necessary steps in this procedure are 45, 48, and 49.
 - Note: Some data suppliers (e.g., Landsat-7) do not support re-supply of data.

Note: Steps 4 – 8 are to access and launch browser software.

- 4 At the UNIX command shell prompt, type **setenv DISPLAY *clientname*:0.0** and then press the **Return/Enter** key.
 - For *clientname*, use either the local terminal/workstation IP address or its machine name.
- 5 Start the log-in to a Netscape host by typing **/tools/bin/ssh *hostname*** (e.g., g0ins02, e0ins02, l0ins02, n0ins02) at the UNIX command shell prompt, and press the **Return/Enter** key.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type **yes** (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 6.
 - If you have not previously set up a secure shell passphrase; go to Step 7.

- 6 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your *Passphrase* and then press the **Return/Enter** key. Go to Step 8.
- 7 At the *<user@remotehost>'s password:* prompt, type your *Password* and then press the **Return/Enter** key.
 - You are logged in and a UNIX command shell prompt is displayed.
- 8 Type **netscape &** and then press the **Return/Enter** key.
 - The Netscape web browser is displayed.
- 9 Click in the **Netsite:** or **Location:** field.
 - The field is highlighted.
- 10 Type the Universal Resource Locator (URL) for the End-to-End Data Tracking System (<http://edts1.gsfc.nasa.gov:8080/index.html>) and then press the **Return/Enter** key.
 - The **End-to-End Data Tracking System** index page is displayed, offering access to various reports and related links.
- 11 Under **Related Links**, click on the appropriate Data Reorder link.
 - There are links for various satellite platforms (e.g., Terra, Aqua).
 - The appropriate **Data Reorder Request** page for the selected Data Reorder link is displayed.
- 12 On the Data Reorder Request page, click on the **Add New Request** link.
 - The **Add New Request** page is displayed.
- 13 On the **Add New Request** page, click in the **Requestor's Name** field.
 - The cursor is displayed in the field.
- 14 Type the name of the person making the request.
 - The typed entry is displayed in the field.
- 15 Single-click on the pull-down arrow at the end of the **Requestor's Organization** field and then single-click on the name of the requesting organization to select it, or, if the requesting organization is not displayed in the pull-down menu, select **Other**.
 - The choices are **LaRD DAAC, LaTIS, GSFC DAAC, EDC, EDOS, FOT, ESDIS, ASTER GDS, and Other**.
 - The selected choice is displayed in the field.
- 16 In the **Requested Data (UTC)** block of the page, single-click on the pull-down arrow at the end of the **Year** field and then single-click on the year for the missing data to select it.
 - The selected choice is displayed in the field.

- 17** In the **Requested Data (UTC)** block of the page, single-click on the pull-down arrow at the end of the **DOY** (Day of Year) field and then single-click on the day of the year for the missing data, first scrolling with the scroll bar if necessary to display the desired day.
- The selected choice is displayed in the field.
- 18** In the **Requested Data (UTC)** block of the page, single-click on the pull-down arrow at the end of the **Start time** field and then single-click on the hour representing the start of a two-hour time window for the missing data.
- The choices are in even two-hour time intervals beginning with **0000** and proceeding to **2200**.
 - The selected choice is displayed in the field.
- 19** In the **Requested Data (UTC)** block of the page, single-click on the pull-down arrow at the end of the **Stop time** field and then single-click on the hour representing the end of a two-hour time window for the missing data.
- The choices are in even two-hour time intervals beginning with **0200** and proceeding to **2400**.
 - The selected choice is displayed in the field.
- 20** In the **Request Reason** block of the page, click on the appropriate radio button to indicate the reason for the request, specifying that the dataset is **Missing** or **Partial**.
- The selected button is filled to indicate its selection.
- 21** For any data priority other than **3**, click on the pull-down arrow at the end of the **Priority** field and then click on the appropriate priority for the request.
- The choices are **1** (critical data needed within 24-48 hours), **2** (important data observation or activity, such as a target of opportunity), and **3** (all other data needs). The default is **3**, and this step may be skipped if that is the priority for the request.
 - The selected choice is displayed in the field.
- 22** Click in the applicable check boxes in the **Data type(s)** block of the page to specify the desired **FDS** or Flight Dynamics System information (Carry-out and APID1 or satellite housekeeping data, Attitude, and Replacement Ephemeris), **Low Rate** information, and instrument (e.g., **MODIS**, **ASTER**, **CERES**, **MOPITT**, and **MISR**) application process identifiers (APIDs).
- The selected check boxes each display a checkmark to indicate selection.
- 23** If it is desirable to enter any comments concerning the request, click in the **Comments** field; otherwise, go to Step 25
- The cursor is displayed in the field.

- 24 Type any comments to be submitted with the request.
- The typed entry is displayed in the field.
- 25 In the **Actionee Org** block of the page, click on the appropriate radio button to identify the actionee for the request, specifying **EDOS** or **FOT**.
- The selected button is filled to indicate the selection (in this case, **EDOS**).
- 26 Click on the **Submit** button at the bottom of the form.
- Following confirmation, the request submittal is acknowledged with a request ID.
- 27 If the replacement data are on a DTF-2 tape from EDOS, load the tape into a DTF-2 drive, using procedure **16.3.3.4 Load a DTF-2 Drive** (see Chapter 16).
- The tape is loaded.
- 28 Access a terminal window logged in to the appropriate host (e.g., Distribution Server).
- Examples of Distribution Server host names include **e0dis02**, **g0dis02**, **l0dis02**, and **n0dis02**.
- 29 Type **cd *path*** and then press the **Return/Enter** key.
- ***path*** represents the directory path to the location where the data from the EDOS archive tape should be copied.
 - Using an empty directory would help identify the data from the tape.
- 30 Type **tar xvf *device*** and then press the **Return/Enter** key.
- ***device*** is the DTF-2 drive device name (e.g., **/dev/rmt/2n**) as it is known to the shell.
 - For example:

```
tar xvf /dev/rmt/2n
```
 - As files are read from the tape the file names, file sizes (in bytes), and number of blocks are listed on the screen.
 - For example:

```
x DZ9ZA49.MDR, 17393 bytes, 34 tape blocks
```
- 31 Type **pg *PPMUDR_name*** and then press the **Return/Enter** key.
- ***PPMUDR_name*** represents the file name of the PDS Physical Media Unit Delivery Record (PPMUDR).
 - The PPMUDR file name has a **.MDR** extension.
 - The PPMUDR is the first item on the EDOS archive tape.
 - For example:

```
pg DZ9ZA49.MDR
```

- Although this procedure has been written for the **pg** command, any UNIX editor or visualizing command (e.g., **vi**, **view**, **more**) can be used to review the log file.

32 Observe the contents of the PPMUDR to identify the PDS(s) to be archived.

- Packet date/time ranges in the PPMUDR can be used to determine which PDS(s) is (are) to be archived.
 - In the PPMUDR the PDSs on the tape are listed in file groups, which represent data sets [i.e., science data file(s) and corresponding metadata file].
 - Each file group (data set) includes the date/time range of the data specified as **FIRST_PACKET_TIME** and **LAST_PACKET_TIME**.
- For example (extract from a PPMUDR):

OBJECT = FILE_GROUP

DATA_SET_ID = P0420064AAAAAAAAAAAAAAAA03101231459600

DATA_TYPE = MOD000

FIRST_PACKET_TIME = 2003-04-10T00:00:00.000000Z

LAST_PACKET_TIME = 2003-04-10T01:59:59.999999Z

PACKET_COUNT = NOT USED

OCTET_COUNT = NOT USED

TEST_FLAG = F

APID_COUNT = 1

OBJECT = APID_SPEC

APID_IN_PDS = 64

END_OBJECT = APID_SPEC

FILE_COUNT = 2

OBJECT = FILE_SPEC

DIRECTORY_ID = NOT USED

FILE_ID = P0420064AAAAAAAAAAAAAAAA03101231459600.PDS

FILE_TYPE = METADATA

FILE_SIZE = 384

END_OBJECT = FILE_SPEC

OBJECT = FILE_SPEC

DIRECTORY_ID = NOT USED

FILE_ID = P0420064AAAAAAAAAAAAAAAAA03101231459601.PDS

FILE_TYPE = DATA

FILE_SIZE = 108000

END_OBJECT = FILE_SPEC

END_OBJECT = FILE_GROUP

- In the preceding example one data set is defined (as a “FILE_GROUP”).
 - The data type for the set is MOD000.
 - The data were collected on April 10, 2003 between midnight GMT (00:00:00.000000Z) (FIRST_PACKET_TIME) and just before 2:00 A.M. GMT (01:59:59.999999Z) (LAST_PACKET_TIME).
 - There are two files in the data set (FILE_COUNT = 2).
 - One file (P0420064AAAAAAAAAAAAAAAAA03101231459600.PDS) is a metadata file (in EDOS terminology, a “construction record”).
 - The other file (P0420064AAAAAAAAAAAAAAAAA03101231459601.PDS) is a data file.
 - Based on information embedded in the file names, the data set was created on April 11, 2003 at 11:14:59 P.M. (as described under the next bullet).
- The EDOS archive tape may contain both nominal and reprocessed PDSs but creation times in file names differentiate between the versions.
 - Ingest the latest (most recent) version if there is more than one version.
 - PDS file names consist of 40 bytes (characters) and Bytes 23 through 33 specify the creation time of the file.
 - For example, **03101231459** is the creation time in the following file name:
P0420064AAAAAAAAAAAAAAAAA03101231459601.PDS
 - **03** indicates the year (2003).
 - **101** specifies the Julian day (April 11, the 101st day of the year).
 - **231459** is the time of file creation (11:14:59 P.M.).
- It is the Archive Manager’s responsibility to resolve any questions concerning which PDSs should be archived (see step 2).

33 Type **cp *filename1 filename2 [... filenameN] path*** and then press the **Return/Enter** key.

- ***filename1 filename2 [... filenameN]*** represent the file names of the PDS files to be ingested.
 - Copy both the data and metadata files (as identified in the PPMUDR) for each data set.
- ***path*** is the directory path to the Ingest polledEDOS directory; i.e., the directory in which the ECS software for EDOS ingest routinely looks for EDOS delivery records and data.
 - The EDOS polling directory is specified as a parameter in the Registry database or in the configuration file for EDOS polling (e.g., EcInPolling.EDOS.CFG).

• For example:

```
cp P0420064AAAAAAAAAAAAAAAA03101231459600.PDS  
P0420064AAAAAAAAAAAAAAAA03101231459601.PDS  
/usr/ecs/OPS/CUSTOM/icl/x0icg01/data/pollEDOS
```

- **NOTE:** If a DAAC-unique script is available for creating delivery records and signal files and placing the files in the polling directory, use the script and skip Steps 34 through 44 (go to Step 45 after running the script). Otherwise, manually generate delivery records and signal files as described in Steps 34 through 44.

34 Type **cd *path*** and then press the **Return/Enter** key.

- ***path*** is the directory path to the Ingest polledEDOS directory.
- For example:

```
cd /usr/ecs/OPS/CUSTOM/icl/x0icg01/data/pollEDOS
```

NOTE: Steps 35 through 39 describe how to use an old delivery record (PDR) as a template for generating a new PDR.

35 Type **cp *old_PDR_filename new_PDR_filename*** and then press the **Return/Enter** key.

- ***old_PDR_filename*** represents the file name of an old PDR that is being used as a template for creating a PDR for PDS files to be ingested.
- ***new_PDR_filename*** represents the file name of the new PDR that is being created for PDS files to be ingested.
 - Use the EDOS file-naming convention for PDRs (refer to the EDOS ICD, 423-ICD-EDOS/EGS):
 - PDR file names consist of 38 bytes (characters).
 - Byte 1 identifies the file as either a PDS Delivery Record (“X”) or EDS Delivery Record (“Y”).

- Bytes 2 through 8 identify the spacecraft ID (SCID) (three bytes) and first Applications Process Identifier (APID) (four bytes) in the data set (right-justified and, if necessary, zero-filled on the left).
- Bytes 9 through 15 identify the SCID and second APID in the data set (right-justified and, if necessary, zero-filled on the left), if applicable. If no second APID is present in the data set, this item has a value of “AAAAAAA”.
- Bytes 16 through 22 identify the SCID and third APID in the data set (right-justified and, if necessary, zero-filled on the left), if applicable. If no second APID is present in the data set, this item has a value of “AAAAAAA”.
- Bytes 23 through 33 identify the GMT/ZULU time when the data set was created.
- Byte 34 is a numeric identification in the range of “0” to “9” to aid in distinguishing the order of data set creation during the day and to provide uniqueness to the file name.
- Bytes 35 through 38 are the file name extension (i.e., “.PDR” or “.EDR”)
- For example:

X0420064AAAAAAAAAAAAAAAA031012314596.PDR

X identifies the file as a PDS Delivery Record.

0420064 identifies the SCID (**042** = Terra) and first APID (**0064** = MOD000 data type) in the data set.

AAAAAAA indicates that there is no second APID in the data set.

AAAAAAA indicates that there is no third APID in the data set.

03101231459 is the GMT/ZULU time when the data set was created [**03** indicates the year (2003); **101** specifies the Julian day (April 11, the 101st day of the year); **231459** is the time of data set creation (11:14:59 P.M.)].

6 is a numeric identifier (sixth data set of the day).

.PDR is the file-name extension for a PDS Delivery Record.

36 Type **vi new_PDR_filename** and then press the **Return/Enter** key.

- The PDR template file is opened (displayed by the vi text editor).
- Although this procedure has been written for the vi editor, any UNIX editor can be used to create the PDR.

- 37** Using vi editor commands modify the PDR file to specify ingest of one of the data sets to be ingested.
- Create a separate PDR for each data set [science data file(s) and corresponding metadata file – refer to the PPU DR “file group” example in Step 32].
 - The following vi editor commands are useful:
 - **h** (move cursor left).
 - **j** (move cursor down).
 - **k** (move cursor up).
 - **l** (move cursor right).
 - **a** (append text).
 - **i** (insert text).
 - **r** (replace single character).
 - **x** (delete a character).
 - **dw** (delete a word).
 - **dd** (delete a line).
 - **ndd** (delete *n* lines).
 - **u** (undo previous change).
 - **Esc** (switch to command mode).
- 38** Press the **Esc** key.
- 39** Type **ZZ**.
- New PDR file is saved.
 - UNIX prompt is displayed.
- 40** Type **vi XFR_filename** and then press the **Return/Enter** key.
- A new file with the specified **XFR_filename** is opened.
 - Use the EDOS file-naming convention for signal files (refer to the EDOS ICD, 423-ICD-EDOS/EGS):
 - Signal file name is the corresponding PDR file name plus the signal file name extension (i.e., “.XFR”).
 - For example:
X0420064AAAAAAAAAAAAAAAA031012314596.PDR.XFR
 - The signal file indicates that the relevant data files and PDR have been put in the polling directory and are ready to be ingested.

- Although this procedure has been written for the **vi** editor, any UNIX editor can be used to create the signal file.
- 41 Using **vi** editor commands create a file that contains the name of the relevant PDR.
 - A signal file contains the name of the relevant PDR only.
 - For example:
`X0420064AAAAAAAAAAAAAAAA031012314596.PDR.`
 - 42 Press the **Esc** key.
 - 43 Type **ZZ**.
 - New signal file is saved.
 - UNIX prompt is displayed.
 - At the next polling occasion, the EDOS polling client should detect the signal file and initiate ingest of the data specified in the corresponding PDR.
 - 44 Repeat Steps 34 through 43 as required to create delivery records and signal files for all remaining data sets (from the EDOS archive tape) to be ingested.
 - 45 To monitor Ingest request processing (polling with delivery record), perform **Procedure 16.2.5 Monitor/Control Ingest Requests** (see Chapter 16).
 - 46 Remove the EDOS-provided tape from the DTF-2 drive, using **Procedure 16.3.3.5 Unload a DTF-2 Drive** (see Chapter 16).
 - 47 Verify that the data have been inserted into the archive as described in **Procedure 16.2.10 Verify the Archiving of Ingested Data** (see Chapter 16).
 - 48 When insertion into the archive has been verified, the Archive Manager specifies "set delete" for the replaced data/metadata by using procedures for granule deletion to mark the data/metadata for deletion from the archive (see **Section 17.4.2 Selecting Granules for Deletion** and **Procedure 17.4.2.3 Selection Using a Separate Input File**).
 - 49 When insertion into the archive has been verified, ensure that the EDOS archive tape is returned to the EDOS Level 0 Processing Facility (LZPF).
- Note:** Clean up (as described in Steps 50 through 54) the directory into which data were originally copied from the EDOS archive tape. If preferred, skip Steps 50 through 54 and use the script described in **Procedure 16.2.11 Clean the Polling Directories** (see Chapter 16).
- 50 Type **cd path** and then press the **Return/Enter** key.
 - *path* represents the directory path to the location where the data from the EDOS archive tape were first copied.

- 51 Type **ls** and then press the **Return/Enter** key.
- A listing of the files in the current directory is displayed.
- 52 Type **rm filename1 filename2 [... filenameN]** and then press the **Return/Enter** key.
- **filename1 filename2 [... filenameN]** represent the names of the files to be removed from the directory.
 - A wildcard may be used if some of the files have common characteristics.
 - For example:
rm *.PDS
 - A prompt is displayed requesting whether or not a particular file should be removed.
 - For example:
rm: remove DZ9ZA49.MDR (yes/no)?
- 53 Type **y** and then press the **Return/Enter** key.
- The specified file is deleted and (if applicable) a prompt is displayed requesting whether or not another particular file should be removed.
- 54 Repeat Step 53 as necessary.

Table 17.6-7. Re-Ingest of Lost Data (1 of 3)

Step	What to Do	Action to Take
1	Identify the source for each lost granule	
2	Retrieve file location metadata	use Procedure 17.6.2.5.1
3	Initiate data re-supply with data provider	read ICD
4	setenv DISPLAY clientname:0.0	enter text; press Return/Enter
5	/tools/bin/ssh hostname	enter text; press Return/Enter
6	Passphrase (or Step 7)	enter text; press Return/Enter
7	Password	enter text; press Return/Enter
8	netscape &	enter text; press Return/Enter
9	Move cursor to Netsite: or Location: field	single-click
10	http://<URL>	enter text; press Return/Enter
11	Select data reorder link from Related Links	single-click
12	On Data Reorder Request page, select Add New Request	single-click
13	Move cursor to Requestor's Name field	single-click
14	Type name of person making request	enter text
15	Pull down list and select Requestor's Organization	clicks
16	In Requested Data (UTC) block, pull down list and select Year	clicks

Table 17.6-7. Re-Ingest of Lost Data (2 of 3)

Step	What to Do	Action to Take
17	In Requested Data (UTC) block, pull down list and select DOY	clicks
18	In Requested Data (UTC) block, pull down list and select Start Time	clicks
19	In Requested Data (UTC) block, pull down list and select Stop Time	clicks
20	Select Request Reason	single-click
21	Pull down list and select Priority	clicks
22	In Data type(s) block, check-select appropriate APIDs	click(s)
23	Optional: Move cursor to Comments field	single-click
24	Optional: Enter comments	enter text
25	In Actionee Org block, select actionee	single-click
26	Activate Submit button	single-click
27	For tape from EDOS, load tape into DTF-2 drive	procedure 16.3.3.4
28	Access terminal window logged in to appropriate host	
29	cd path (to location for copy of data)	enter text; press Return/Enter
30	tar xvf device (the DTF-2 drive device name)	enter text; press Return/Enter
31	pg PPMUDR_name (file name of PPMUDR)	enter text; press Return/Enter
32	Identify the PDS(s) to be archived	read PPMUDR contents
33	cp filename1 filename2 [... filenameN] path (copy files to Ingest polIEDOS directory)	enter text; press Return/Enter
34	cd path (path to Ingest polIEDOS directory)	enter text; press Return/Enter
35	cp old_PDR_filename new_PDR_filename	enter text; press Return/Enter
36	vi new_PDR_filename	enter text; press Return/Enter
37	Use vi editor commands to modify PDR file to specify ingest of a data set to be ingested	
38	Place vi editor in command mode	press Esc key
39	Type ZZ	enter text
40	vi XFR_filename	enter text; press Return/Enter
41	Use vi editor commands to create a signal file (file containing the name of the created PDR file)	
42	Place vi editor in command mode	press Esc key
43	Type ZZ	enter text
44	Repeat steps 34 through 43 as needed to create any additional delivery records and signal files for other data sets from the EDOS tape to be ingested	
45	Monitor Ingest request processing	use Procedure 16.2.5
46	Remove EDOS tape from DTF-2 drive	use Procedure 16.3.3.5
47	Verify that the data are inserted in the archive	use Procedure 16.2.10
48	Mark the replaced data/metadata for deletion	use Procedure 17.4.2.3
49	Return the EDOS tape to the LZPF	

Table 17.6-7. Re-Ingest of Lost Data (3 of 3)

Step	What to Do	Action to Take
50	cd path (location where the data from the EDOS tape were first copied)	enter text; press Return/Enter
51	ls	enter text; press Return/Enter
52	rm filename1 filename2 [... filenameN]	enter text; press Return/Enter
53	y	enter text; press Return/Enter
54	Repeat Step 53 as necessary	

17.6.2.4.2 Recovery of Lost Data by Reprocessing

Table 17.6-8 presents the steps required for recovery of lost data by reprocessing. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 If you have not already done so, retrieve the granule Production History (PH) metadata for each file for the lost granules (see Procedure 17.6.2.5.2).
- 2 Pass the output of Step 1 to the procedure "Re-Generate Granules Affected by Loss of Files from the Archive" (see Chapter 13).

Table 17.6-8. Recovery of Lost Data by Reprocessing

Step	What to Do	Action to Take
1	Retrieve granule Production History metadata	use Procedure 17.6.2.5.2
2	Execute procedure to re-generate granules affected by loss of files from the archive	see Chapter 13

17.6.2.4.3 Recovering Granules from Another Producing Site

A special case for data recovery involves granules archived at a DAAC other than the producing DAAC or site and (generally) not archived at the producing DAAC or site. Ultimately, the recovery involves a re-ingest (see Chapter 16), but because the granules are not archived at the producing DAAC or site, they must first be generated through reprocessing. Table 17.6-9 presents the steps required for recovering granules from another producing site. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 If you have not already done so, retrieve the file location metadata for each file for the lost granules (see Procedure 17.6.2.5.1).
- 2 Identify which of the lost granules were ingested from DAACs or other sites where the granules were produced but not archived.
 - These lost granules are known to the local SDSRV, but do not have an associated Production History (PH) granule (the PH granule is at the producing site).
- 3 Forward the granule metadata lists to the source DAAC or other site, where the metadata are used as input to the procedure "Re-Generate Granules Affected by Loss of Files from the Archive" (see Chapter 13).
- 4 Once the granule is re-generated, it may be inserted at the DAAC where it was lost, either through an order or through cross-DAAC ingest (see Chapter 16).

Table 17.6-9. Recovering Granules from Another Producing Site

Step	What to Do	Action to Take
1	Retrieve file location metadata	use Procedure 17.6.2.5.1
2	Identify lost granule(s) produced at another site	
3	Forward granule metadata to producing site	
4	Execute ingest procedure	see Chapter 16

17.6.2.4.4 Restoration of L0 Data to the EDOS Archive from the ECS

If EDOS discovers missing or corrupt L0 data files in its archive, the lost data may be recovered by obtaining L0 files from ECS. In the event of such loss, the EDOS Level 0 Processing Facility notifies the DAAC that archives the appropriate L0 data, either by telephone or, preferably, by e-mail. In the notification, EDOS identifies each requested Production Data Set by Application Process Identification (APID) and Start and Stop time. The notification also provides a host and directory path and any related information necessary for the DAAC operator to write the data, as well as the priority of the request (high, medium, or low). The following procedure, referencing standard data ordering procedures (see Chapter 19), may be used to achieve the transfer.

- 1 Review the request notification from EDOS to obtain appropriate criteria to search the archive for the requested data and to specify the host and directory to which the data are to be pushed.
- 2 Use procedure **19.3.1 Search and Order Data using the EDG Search and Order Tool** (see Chapter 19) to conduct a search for the data requested by EDOS, constraining the search with the criteria provided by EDOS in the request notification, and to order the data to be distributed by FTP Push to the provided host and directory path.
 - The order is confirmed.
 - *Note:* If the request is for one or two files, it may be preferable to use a tool and method other than the EDG to achieve the distribution (e.g., the test tool **EcTsDsClientDriver**).

17.6.2.5 SDSRV Procedures in Support of Data Recovery

There are two procedures described here that may be used to extract information from the SDSRV database to support the recovery of lost archive data. The first returns file metadata including file checksums for use with file recovery from backup tapes. The second generates granule metadata for use by the Planning subsystem (PLS) in re-creating granules from which files have been irrecoverably lost. The output “lists” from these procedures should be exchanged as electronic files (e.g., as email attachments) to facilitate subsequent use (e.g., to permit copying into input screens of GUIs for other procedures).

17.6.2.5.1 SDSRV Retrieval of File Location Metadata

The input to this procedure is a list of the unique file names of files in the archive affected by a tape failure (e.g., Procedure 17.6.2.3 shows how the script **EcDsStFilesPerTapeUtility** may be used to generate file names for the list). The list may be called the *Affected File List* (AFL). The file names in the AFL will match the **internalFileName** column of the **DsMdFileStorage** table within the SDSRV metadata database.

The output of this procedure is a list of file metadata (archiveIDs and checksums) for each file named in the input. It may be called the *Affected File Metadata* (AFM) list. It is used to determine the backup locations, if any, of lost files and to verify the checksum of files restored through support of the tape drive vendor (StorageTek).

This procedure has the following dependencies:

- The operator is working on a machine from which SQL connections can be made to the SDSRV SQL server (e.g., e0acg11, g0acg01, l0acg02, n0acg01) and that server recognizes the Sybase account **sdsrv_role**.
- The UNIX account in use has execute permission on the required scripts, the ‘path’ shell variable set to include a directory where the command ‘isql’ is located and the SYBASE (Sybase ‘home’) environment variable set appropriately (e.g. setenv SYBASE /tools/sybOCv11.1.0).
- The operator knows the password for the SDSRV Sybase user **sdsrv_role**

Table 17.6-10 presents the steps required for SDSRV retrieval of file location metadata. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in at the SDSRV host (e.g., e0acs05, g0acs03, l0acs03, n0acs04).
- 2 Receive the Affected File List (AFL) (e.g., file list from output of script **EcDsStFilesPerTapeUtility**) as an electronic file; save a local copy of the file with an identifiable name (e.g., aflfile.txt).
- 3 To change directory to the location of the database scripts, type **cd /usr/ecs/<MODE>/CUSTOM/dbms/DSS** and press the **Return/Enter** key.

- The **<MODE>** will most likely be one of the following operating modes:

OPS (for normal operation).

TS1 or TS2 (for testing).

- The working directory is changed to **/usr/ecs/<MODE>/CUSTOM/dbms/DSS**.

- 4 To execute the script for retrieval of file location metadata, type **DsDbSrFileLocMetadata aflfile.txt aflmetadata.txt**, where **aflfile.txt** is the name of the input file with the list of affected files and **aflmetadata.txt** is the desired name of the output file, and then press the **Return/Enter** key.

- The script requires that certain environmental variables be set prior to execution. If you have not set them, the script returns an error message listing the variables that must be set and giving examples. To make the script execute properly, you may need to set environmental variables using the following commands and appropriate variable entries:

```
setenv DSQUERY x0acg0n_srvr (e.g., e0acg11, g0acg01, l0acg02, n0acg01)
```

```
setenv DBNAME EcDsScienceDataServer1_<MODE>
```

```
setenv DBUSERNAME sdsrv_role
```

```
setenv DBPASSWORD <password>
```

```
setenv SYBASE /tools/sybOCv11.1.1
```

- If the variables are set appropriately, the script uses the data in the input file to generate the named output file; during the execution it provides feedback similar to the following:

```
Using Login    : sdsrv_role
Using Server   : t1acg04_srvr
using Database: EcDsScienceDataServer1_TS2
```

```
Recovering the Effected Lost Files....
```

```
**** No errors found in DBoutfile_FileLocMetadata ***
```

5 To check that the output file is not empty (i.e., of zero length), type the command **ls -l aflmetadata.txt**, where *aflmetadata.txt* is the name of the output file, and press the **Return/Enter** key.

- UNIX displays the file information in the following form:

```
-rw-r--r--  1 cmshared      293 Sep 25 15:25 aflmetadata.txt
```

- If the file is of zero length, either the input file was of zero length or an unexplained error occurred. Check the input file.

6 To visually inspect the file to verify the success of the command, type the command **view aflmetadata.txt**, where *aflmetadata.txt* is the name of the output file, and press the **Return/Enter** key.

- The contents of the output file are in two sections: 1) the affected file metadata found within SDSRV inventory database; and 2) files not found within SDSRV database (this section is usually empty). UNIX displays the contents of the file in the following form (for this sample data, the input file contained only one filename):

```
InternalFileName_found_in_SDSRV_Inventory_Metadata_Database  
Tue Sep 25 15:25:49 EDT 2001
```

```
      :SC:MOD000.001:19862:1.CCSDS  
      "Aug 21 2001  3:34:17:000PM"  0  1670000364  SCMOD000.00119862
```

```
InternalFileName_not_found_in_SDSRV_Inventory_Metadata_Database  
Tue Sep 25 15:25:50 EDT 2001
```

- To exit the view process, type **:q!** and press the **Return/Enter** key. (*Note:* This step specifies use of the **view** command to view the file, but the content can be viewed using other commands as well [e.g., **vi**, **pg**, **more**]).
- It is advisable, especially if there are large numbers of affected files, to check for errors in the output of the script, searching for occurrences of the strings 'msg' and 'error.' To execute a check for 'msg,' type the command **grep -i msg aflmetadata.txt | wc -l**, where *aflmetadata.txt* is the name of the output file, and press the **Return/Enter** key. To execute a check for 'error,' type the command **grep -i error aflmetadata.txt | wc -l** and press the **Return/Enter** key.
 - If no errors occurred, UNIX returns an output of '0' (zero).
 - Any other output means that there were errors in the process. If errors are found, they must be diagnosed based on the error message(s) and the procedure must be repeated after correction of the input file.

7 When the output file passes the tests of Step 7, it can be passed to the calling procedure.

Table 17.6-10. SDSRV Retrieval of File Location Metadata

Step	What to Do	Action to Take
1	Log in at SDSRV host	enter text; press Return/Enter
2	Save a local copy of the Affected File List	name file, e.g., aflfile.txt
3	cd /usr/ecs/<MODE>/CUSTOM/dbms/DSS	enter text; press Return/Enter
4	DsDbSrFileLocMetadata aflfile.txt aflmetadata.txt	enter text; press Return/Enter
5	ls -l aflmetadata.txt	enter text; press Return/Enter ; read text
6	view aflmetadata.txt	enter text; press Return/Enter ; read text
7	grep -i msg aflmetadata.txt wc -l grep -i error aflmetadata.txt wc -l	enter text; press Return/Enter ; read text
8	Pass output file to calling procedure	

17.6.2.5.2 SDSRV Retrieval of Granule Production History Metadata

The input to this procedure is a list of files remaining to be recovered after as many files as possible are recovered from backup (see Procedures 17.6.2.1 and 17.6.2.2) and/or from a damaged cartridge (see Procedure 17.6.2.3). The list may be referred to as the *Affected File List* (AFL). The output of this procedure serves as input to the PDPS/PLS procedure for granule regeneration, “Re-Generate Granules Affected by Loss of Files from the Archive,” in Chapter 13.

The goal of this procedure is to list PLS-required granule metadata for use by the local PDPS in re-generating lost granules. The procedure extracts valid Production History URs for the ‘lost’ granules from the local SDSRV database. It assumes that the Delivered Algorithm Package information has been inserted into the SDSRV for all associate datatypes in the process of Science Software Integration and Test (SSI&T), which is addressed in Chapter 26. There may be a period in the lifetime of a granule when this information is not populated, during which granule attributes PGEName and PGEVersion are not available to this procedure.

Output from this procedure is a file containing:

- “Granules for PDPS Re-generation” -- those found within SDSRV. These are passed to the PLS operators for re-generation using the procedure “Re-Generate Granules Affected by Loss of Files from the Archive” (see Chapter 13).
- “Residual Granules to Recover” -- those not found within SDSRV inventory. This list may include granules that have been removed by the process for physical deletion from the archive and SDSRV inventory (see Procedure 17.4.3).

Table 17.6-11 presents the steps required for SDSRV retrieval of granule production history metadata. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in at the SDSRV host (e.g., e0acs05, g0acs03, l0acs03, n0acs04).
- 2 Receive the Affected File List (AFL) (e.g., file list from output of script **EcDsStFilesPerTapeUtility**) as an electronic file; save a local copy of the file with an identifiable name (e.g., aflfile.txt).
- 3 To change directory to the location of the database scripts, type **cd /usr/ecs/<MODE>/CUSTOM/dbms/DSS** and press the **Return/Enter** key.

- The **<MODE>** will most likely be one of the following operating modes:

OPS (for normal operation).

TS1 or TS2 (for testing).

- The working directory is changed to **/usr/ecs/<MODE>/CUSTOM/dbms/DSS**.

- 4 To execute the script for retrieval of file location metadata, type **DsDbSrGranPHMetadata aflfile.txt agrmetadata.txt**, where **aflfile.txt** is the name of the input file with the list of affected files and **agrmetadata.txt** is the desired name of the output file, and then press the **Return/Enter** key.

- The script requires that certain environmental variables be set prior to execution. If you have not set them, the script returns an error message listing the variables that must be set and giving examples. To make the script execute properly, you may need to set environmental variables using the following commands and appropriate variable entries:

```
setenv DSQUERY x0acgnn_srvr (e.g., e0acg11, g0acg01, l0acg02, n0acg01)
```

```
setenv DBNAME EcDsScienceDataServer1_<MODE>
```

```
setenv DBUSERNAME sdsrv_role
```

```
setenv DBPASSWORD <password>
```

```
setenv SYBASE /tools/sybOCv11.1.1
```

- If the variables are set appropriately, the script uses the data in the input file to generate the named output file; during the execution it provides feedback similar to the following:

```
Using Login      : sdsrv_role
Using Server     : t1acg04_srvr
using Database: EcDsScienceDataServer1_TS2
```

```
Recovering the Lost Files....
```

```
**** No errors found in DBoutfile_GranPHMetadata ***
```

5 To check that the output file is not empty (i.e., of zero length), type the command **ls -l agrmetadata.txt**, where *agrmetadata.txt* is the name of the output file, and press the **Return/Enter** key.

- UNIX displays the file information in the following form:

```
-rw-r--r--  1 cmshared      293 Sep 25 15:25 agrmetadata.txt
```

- If the file is of zero length, either the input file was of zero length or an unexplained error occurred. Check the input file.

6 To visually inspect the file to verify the success of the command, type the command **view agrmetadata.txt**, where *agrmetadata.txt* is the name of the output file, and press the **Return/Enter** key.

- The contents of the output file are in two sections: 1) the granule metadata found within SDSRV inventory database; and 2) granule metadata not found within SDSRV database (residual granules to recover). For each of the files listed in the input file for which related granule metadata are found in the SDSRV, the script output should include the GeoID (partial UR), the UR of any available associated Production History granule, the ESDT shortname and versionID, the granule beginning date and time and ending date and time. UNIX displays the contents of the file in the following form:

```
Granule_metadata_found_within_SDSRV_Inventory_database Wed Sep 26
11:11:51 EDT 2001
```

```
:BR:Browse.001:1170:1.BINARY

- To exit the view process, type **:q!** and press the **Return/Enter** key. (*Note:* This step specifies use of the **view** command to view the file, but the content can be viewed using other commands as well [e.g., **vi**, **pg**, **more**]).
- 7 It is advisable, especially if there are large numbers of affected files, to check for errors in the output of the script, searching for occurrences of the strings 'msg' and 'error.' To execute a check for 'msg,' type the command **grep -i msg agrmetadata.txt | wc -l**, where **agrmetadata.txt** is the name of the output file, and press the **Return/Enter** key. To execute a check for 'error,' type the command **grep -i error aflmetadata.txt | wc -l** and press the **Return/Enter** key.
- If no errors occurred, UNIX returns an output of '0' (zero).
 - Any other output means that there were errors in the process. If errors are found, they must be diagnosed based on the error message(s) and the procedure must be repeated after correction of the input file.
- 8 When the output file passes the tests of Step 7, it can be passed to the calling procedure (e.g., Chapter 13 Procedure to Re-Generate Granules Affected by Loss of Files from the Archive).
- *Note:* Granules for recovered files will, by definition, have a different granuleURs (dbIDs) than the files that were lost.

Table 17.6-11. SDSRV Retrieval of Granule Production History Metadata

Step	What to Do	Action to Take
1	Log in at SDSRV host	enter text; press Return/Enter
2	Save a local copy of the Affected File List	name file, e.g., afffile.txt
3	cd /usr/ecs/<MODE>/CUSTOM/dbms/DSS	enter text; press Return/Enter
4	DsDbSrGranPHMetadata afffile.txt agrmetadata.txt	enter text; press Return/Enter
5	ls -l agrmetadata.txt	enter text; press Return/Enter ; read text
6	view agrmetadata.txt	enter text; press Return/Enter ; read text
7	grep -i msg agrmetadata.txt wc -l grep -i error agrmetadata.txt wc -l	enter text; press Return/Enter ; read text
8	Pass output file to calling procedure	

17.7 Archive Troubleshooting

There are several troubleshooting tools provided with AMASS that can assist you in monitoring archive activity and in responding to fault notifications. The *AMASS System Administrator's Guide* (available electronically on **drg** servers [e.g., g0drg01, e0drg11, l0drg01, n0drg01] in directory **/usr/amass/books**) includes instructions on using these tools. Some of the most useful ones are addressed in this section. Table 17.7-1 provides an Activity Checklist for archive troubleshooting.

Table 17.7-1. Activity Checklist for Archive Troubleshooting (1 of 2)

Order	Role	Task	Section	Complete?
1	Archive Manager	Checking daemons and using <i>healthcheck</i>	(P) 17.7.1.1	
2	Archive Manager	Using <i>sysperf</i> to Display the Status of AMASS I/O Activity	(P) 17.7.1.2	
3	Archive Manager	Using <i>vollist</i> to Display Volume Data	(P) 17.7.1.3	
4	Archive Manager	Using the <i>amass_log</i> Script to Display AMASS Errors	(P) 17.7.1.4	
5	Archive Manager	Using <i>quedisplay</i> to View What is in the AMASS Queue	(P) 17.7.1.5	
6	Archive Manager	Using <i>mediamove</i> to Establish Synchrony Between <i>quedisplay</i> and <i>medialist</i>	(P) 17.7.1.6	
7	Archive Manager	Checking Log Files	(P) 17.7.2.1	
8	Archive Manager	A Special Case: Checking the Request Manager Server Debug Log	(P) 17.7.2.2

Table 17.7-1. Activity Checklist for Archive Troubleshooting (2 of 2)

Order	Role	Task	Section	Complete?
12	Archive Manager	Diagnosing/Investigating Write Errors	(P) 17.7.3	
13	Archive Manager	Diagnosing/Investigating Read Errors	(P) 17.7.4	

17.7.1 Using AMASS Commands, Utilities, and Scripts for Monitoring and Fault Response

The AMASS file system needs to have the following daemons running at all times:

- **amassmain.**
- **daemons/lm_ip -a fslock.**
- **qset.**
- **klogd.**
- **amass_iocomp.**
- **libsched** (one instance for each virtual library).
- **libio_tape** (at least one instance for each drive in each jukebox).

The UNIX process search provides an easy check for these daemons. If they are up, the AMASS **healthcheck** command provides a useful check on the health of AMASS while it is running.

A command provided to display the status of the AMASS I/O activity is **sysperf**. This command returns several items:

- the number of reads and writes that are outstanding.
- the number of volumes (for reads) or volume groups (for writes) that are going to be used by those reads and writes.
- the current volumes in the drives.
- the I/O rate in Kb per second since the last update. This value first appears as a zero. Then AMASS continues to update the information at intervals based on a value for *updateinterval* entered by the operator.

Sysperf can often show the first sign of trouble. For example, if there are reads and writes in process but throughput is always 0, a problem is indicated. The most common problems are volumes and drives that go off line and/or inactive.

Volumes are monitored using the **vollist** command. It returns information on the status of a specified volume or list of volumes in the archive. If the output of **vollist** indicates that the volume is inactivated (i.e., **I** appears in the **FLAGS** column), the **amass_log** script can help to determine the nature of the problem. The **amass_log** script displays AMASS messages from the system log file. This script can provide helpful information under several circumstances, such as when a command gives unexpected results or when AMASS appears not to be functioning properly in other ways.

Unless use of the **amass_log** script shows that there are many errors on a volume that has been inactivated, you can reactivate the volume using the command:

```
/usr/amass/bin/volstat -a <volumenumber>
```

where **<volumenumber>** is the volume ID for the volume to be activated.

Just as **vollist** provides information on the status of volumes, the command **drivelist** displays the status of drives available to AMASS. Active drives are noted by an **A**, and inactive drives are noted by an **I**. The command is **/usr/amass/bin/drivelist**. If AMASS inactivates a drive, use the **amass_log** script as described previously. Unless there is a hardware problem and several attempts have been made to ready the drive, it is usually appropriate to reactivate the drive using the **drivestat** command. For example, to reactivate drive 1 in jukebox 1, type the command **/usr/amass/bin/drivestat -a 1 1**.

A useful library utility included with AMASS is **quedisplay**. This utility permits the operator to see what is in the queue, and to diagnose problems such as the following:

- During an attempt to write to a file, the drive light does not illuminate.
- The system is slowing down.
- An AMASS command does not complete.

The output of the **quedisplay** utility shows the queue, which consists of read and write requests, AMASS administration commands, and a list of libraries, drives, and what volumes they manage. An example of output from this utility might take the following form:

```
READQ rid=52696, fptr=0xf0227c5c, vol=3, fnode_flags=0x110
WRITEQ rid=79, fptr=0xc00eff54, vol=5, fnode_flags=0x8048844
ADMINQ:cmd=1, flags=0x6,vol=32, juke=1, pid=1047, ftype=0, err=0
JUKEBOX 1 DRIVE 1, vid=32, vflag=0x100, status=0
JUKEBOX 1 DRIVE 2, no volume in drive
```

If there are **READQ** or **WRITEQ** entries, the name(s) of the file(s) being processed can be determined by using the **filepath** command and the first number in the entry. For example, enter **/usr/amass/utills/filepath 52696** for the first file number in the sample output.

Occasionally, a robot may lose synchrony with AMASS concerning the location of media. The best way to verify this is to compare **quedisplay** and **medialist**. The **medialist** utility is a standalone program that communicates with the robot controller in the Library Storage Module to determine the robot's view of media and their slot locations. If the two programs disagree, you can bring the two programs into synchrony using **mediamove**. The following paragraphs provide step-by-step procedures for use of some of these commands and utilities.

17.7.1.1 Checking Daemons and Using *healthcheck*

If there is an indication or question of a potential problem with AMASS, an appropriate initial step is to check the status of the required daemons. If the check indicates that the daemons are up, then it is a reasonable next step to run the *healthcheck* command. Table 17.7-2 presents the steps required for checking daemons and using *healthcheck* to verify the status of AMASS. If you

are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

1 Log in as **amass** at the FSMS host.

2 Type **ps -ef | grep amass** and press the **Return/Enter** key.

- UNIX returns running AMASS processes in a format similar to the following:

```

amass 7214464 7208385 0 Sep 19 ? 0:00 libio_tape 2 1
amass 7208385 1 0 Sep 19 ? 10:33 /usr/amass/daemons/amassmain 0
amass 7214747 7208385 0 Sep 19 ? 0:10 amass_iocomp
amass 7282853 7215637 0 Sep 20 ? 1:47 libio_tape 1 1
amass 7282868 7215637 0 Sep 20 ? 0:00 libio_tape 1 1
amass 6949087 7215637 0 Sep 20 ? 1:47 libio_tape 1 1
amass 7214915 7208385 0 Sep 19 ? 0:00 klogd
amass 7214972 7208385 0 Sep 19 ? 50:54 libio_tape 1 2
amass 5539722 7217884 0 Sep 20 ? 0:23 libio_tape 1 3
amass 7301726 7215964 0 Sep 20 ? 1:05 libio_tape 3 1
amass 7215313 1 0 Sep 19 ? 9:34 /usr/amass/daemons/lm_ip -a
fslock1 -u 128 -f 256 -q 128
amass 7357656 7216363 0 Sep 20 ? 0:00 libio_tape 3 3
amass 7215637 7208385 0 Sep 19 ? 84:10 libio_tape 1 1
amass 7215638 7208385 0 Sep 19 ? 2:43 libsched 3
amass 7277545 7214972 0 Sep 20 ? 0:41 libio_tape 1 2
amass 7215870 7208385 0 Sep 19 ? 2:52 libsched 1
amass 7215964 7208385 0 Sep 19 ? 109:25 libio_tape 3 1
amass 7216363 7208385 0 Sep 19 ? 84:16 libio_tape 3 3
amass 6950984 7217884 0 Sep 20 ? 0:23 libio_tape 1 3
amass 8175053 7212410 0 Sep 26 ? 0:00 libio_tape 1 4
amass 7340525 7217134 0 Sep 20 ? 1:19 libio_tape 3 2
amass 7278745 7217884 0 Sep 20 ? 0:23 libio_tape 1 3
amass 7216941 7208385 0 Sep 19 ? 0:32 qset
amass 7340710 7217134 0 Sep 20 ? 1:19 libio_tape 3 2
amass 7217134 7208385 0 Sep 19 ? 138:26 libio_tape 3 2
amass 7359550 7216363 0 Sep 20 ? 0:52 libio_tape 3 3
amass 7217388 7208385 0 Sep 19 ? 0:00 libio_tape 2 2
amass 7285477 7215637 0 Sep 20 ? 1:47 libio_tape 1 1
amass 7285537 7215637 0 Sep 20 ? 1:47 libio_tape 1 1
amass 7217884 7208385 0 Sep 19 ? 17:37 libio_tape 1 3
amass 7279821 7214972 0 Sep 20 ? 0:41 libio_tape 1 2
amass 6878049 7208385 0 Sep 19 ? 2:36 libsched 2
amass 7279907 7214972 0 Sep 20 ? 0:41 libio_tape 1 2
amass 7335573 7217134 0 Sep 20 ? 1:19 libio_tape 3 2
.
.

```

- If the running processes do not include **amassmain**, **daemons/lm_ip -a fslock**, **qset**, **klogd**, **amass_iocomp**, **libsched**, and **libio_tape**, it may be necessary to restart AMASS (refer to Procedure 17.1.3 **Rebooting AMASS**).

3 To check the AMASS database integrity, check the availability of write resources FNODEs and cache blocks, and to verify cache partitions, type **/usr/amass/bin/healthcheck -viwc** and press the **Return/Enter** key.

- AMASS returns information on its health in format similar to the following:

```

--- STARTING DATABASE INTEGRITY CHECK ---

    -api has been opened properly and AMASS is running.
    -verifying pathnames.
    -got locks on database
    -unlocking database tables and exiting

--- CHECK COMPLETED!! ---

--- CHECKING AVAILABILITY OF WRITE RESOURCES FNODEs AND CACHE
BLOCKS ---

    -api has been opened properly and AMASS is running.
    -Initializing the passed arguments.
    -Returning the passed arguments.
    -Restoring signals.
    -exiting.

--- CHECK COMPLETED!! ---

--- RUNNING CACHE TEST ---

    -api has been opened properly and AMASS is running.
    -Validating the raw cache.
    -Restoring signals.
    -exiting.

--- TEST COMPLETED!! ---

```

- If an error message is returned, it may be necessary to restart AMASS (refer to Procedure 17.1.3 **Rebooting AMASS**).

4 To check library components, type **/usr/amass/bin/healthcheck -vl 1 0 volumenumber** and press the **Return/Enter** key.

- The argument **-l** (lower-case l) specifies the library components check, and requires specification of a jukebox (**1** in this case), a drive number (entering **0** as in this case checks all active drives), and a volume number (**volumenumber** is the volume ID of an available volume in the specified jukebox; it may be helpful to use the **vollist**

command [refer to Procedure 17.7.1.3 **Using *vollist* to Display Volume Data**] to identify a suitable volume, such as a volume in the Space Pool, to use for this test).

- AMASS returns information on the health of library components in the following format:

```

--- CHECKING LIBRARY COMPONENTS ---

    -api has been opened properly and AMASS is running.
    -mapping shared memory.
    -verifying the juke number.
    -validating volume number.
    -validating drive number and checking for active drive/s/.
    -saving the volume's status before inactivating it.
    -proceeding with physical test.
    -restoring signals and exiting.

--- CHECK COMPLETED!! ---

```

- If an error message is returned, it may be necessary to restart AMASS (refer to Procedure 17.1.3 **Rebooting AMASS**) and/or to check for possible hardware problems with drives or other components.

Table 17.7-2. Checking Daemons and Using healthcheck

Step	What to Do	Action to Take
1	Log in at FSMS host	enter text; press Return/Enter
2	ps -ef grep amass	enter text; press Return/Enter
3	/usr/amass/bin/healthcheck -viwc	enter text; press Return/Enter
4	/usr/amass/bin/healthcheck -vl 1 0 volumenumber	enter text; press Return/Enter

17.7.1.2 Using *sysperf* to Display the Status of AMASS I/O Activity

Table 17.7-3 presents the steps required for using *sysperf* to display the status of AMASS I/O activity. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01).
- 2 Type **/usr/amass/bin/sysperf -k 5** and press the **Return/Enter** key.
 - The screen updates every 5 seconds and display information on the amass kernel (**-k**) in a form similar to the following example (**Note**: A different number of seconds may be entered to specify a different refresh rate.):

```

SYSTEM STATISTICS - Thu Sep 27 08:17:33
UPDATE INTERVAL  - 10 SEC
AVERAGE THROUGHPUT - 0 KBYTES/SEC

```

```

READ REQUESTS          # OF VOLUMES
      0                  0

WRITE REQUESTS         # OF VOL GROUPS
      0                  0

CACHE BLOCKS   2957 Total   2957 Free   0 Dirty
FNODES         800 Total   796 Free   4 Used

JUKE  DRIVE  VOLFLAGS  VOLUME  VOLGRP  KBYTES/SEC

```

- 3 To break out of the command, use **ctrl-c** (while holding down the **Control Key**, press **c**).
 - The screen stops updating and displays a UNIX prompt.

Table 17.7-3. Using sysperf to Display the Status of AMASS I/O Activity

Step	What to Do	Action to Take
1	Log in at FSMS host	enter text; press Return/Enter
2	sysperf -k 5	enter text; press Return/Enter
3	ctrl-c	hold Control key and press c

17.7.1.3 Using *vollist* to Display Volume Data

Table 17.7-4 presents the steps required for using *vollist* to display volume data. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01).
- 2 Type **/usr/amass/bin/vollist *volumenumber*** (where *volumenumber* is the ID for one of the volumes) and press the **Return/Enter** key.

- AMASS displays volume data in the following form:

```

VOL  VOL  JUKE  POS  VOL      FLAGS  USED  AVAIL  DEAD  ERRS
NUM  GRP  NUM      LABEL      (MB)  (MB)  (%)
100  500  3      NET  SD0060  O      99213  3167  0      0

```

- **Note:** In this example for volume 100, the **O** in the **FLAGS** column indicates that the volume is offline. Other often-used flags are: **A** for Active, **I** for Inactive, **R** for Read-only, **U** for Unformatted.
- If *volumenumber* is omitted from the command, AMASS displays volume data for all volumes.
- If the argument **-g** is used with the command and a volume group identifier is specified (i.e., **vollist -g *volumegroupnumber***), AMASS displays volume data for each volume in the specified volume group.

- 3 To put an offline volume back on line, type `/usr/amass/bin/volloc -n volumenumber` and press the **Return/Enter** key.
 - The specified volume is put online, and in output from execution of an appropriate **vollist** command, AMASS displays **A** in the **FLAGS** column.

Table 17.7-4. Using vollist to Display Volume Data

Step	What to Do	Action to Take
1	Log in at FSMS host	enter text; press Return/Enter
2	vollist [-g] [volumenumber]	enter text; press Return/Enter
3	volloc -n volumenumber (to put offline volume online)	enter text; press Return/Enter

17.7.1.4 Using the *amass_log* Script to Display AMASS Errors

Table 17.7-5 presents the steps required for using the *amass_log* script to display AMASS errors. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01).
- 2 To change to the AMASS tools directory, type `cd /usr/amass/tools`, and then press the **Return/Enter** key.
 - The working directory is changed to `/usr/amass/tools`.
- 3 Type `./amass_log logfilepath`, where *logfilepath* is the full pathname of the system log file to scan for AMASS messages, and then press the **Return/Enter** key.
 - On a Sun, the *logfilepath* is likely to be `/var/adm/messages`; on an SGI, the *logfilepath* is likely to be `/var/adm/SYSLOG`. Any AMASS error messages in the scanned log file are displayed.
- 4 Perform the action recommended for the error message in the log.
 - The *AMASS System Administrator's Guide* (available electronically on **drg** servers [e.g., g0drg01, e0drg11, l0drg01, n0drg01] in directory `/usr/amass/books`) provides detailed information concerning error messages. An error message informs of critical problems that prevent AMASS from functioning. An error message is usually followed by a correction message, which provides instructions for correcting the situation. Sometimes, there is a previous warning message that may provide an accompanying correction message. Other messages may be identified by number only; the *System Administrator's Guide* provides a reference list, with accompanying corrective actions.

Table 17.7-5. Using the `amass_log` Script to Display AMASS Errors

Step	What to Do	Action to Take
1	Log in at FSMS host	enter text; press Return/Enter
2	<code>cd /usr/amass/tools</code>	enter text; press Return/Enter
3	<code>.Jamass_log logfilepath</code>	enter text; press Return/Enter
4	Perform recommended action (see <i>System Administrator's Guide</i>)	read text

17.7.1.5 Using `quedisplay` to View What is in the AMASS Queue

Table 17.7-6 presents the steps required for using `quedisplay` to view what is in the AMASS queue. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01).
- 2 To change to the utilities directory, type `cd /usr/amass/utlils`, and then press the **Return/Enter** key.
 - The working directory is changed to `/usr/amass/utlils`.
- 3 Type `quedisplay`, and then press the **Return/Enter** key.
 - The AMASS queue is displayed in the following form:

```
READQ rid=52696, fptr=0xf0227c5c, vol=3, fnode_flags=0x110
WRITEQ rid=79, fptr=0xc00eff54, vol=5, fnode_flags=0x8048844
ADMINQ:cmd=1, flags=0x6,vol=32, juke=1, pid=1047, ftype=0, err=0
JUKEBOX 1 DRIVE 1, vid=32, vflag=0x100, status=0
JUKEBOX 1 DRIVE 2, no volume in drive
```

Note: In the output, "rid" = Record ID, "pid" = Process ID

Table 17.7-6. Using `quedisplay` to View What is in the AMASS Queue

Step	What to Do	Action to Take
1	Log in at FSMS host	enter text; press Return/Enter
2	<code>cd /usr/amass/utlils</code>	enter text; press Return/Enter
3	<code>quedisplay</code>	enter text; press Return/Enter

17.7.1.6 Using `mediamove` to Establish Synchrony Between `quedisplay` and `medialist`

Table 17.7-7 presents the steps required for using `mediamove` to establish synchrony between `quedisplay` and `medialist`. If you are already familiar with the procedure, you may prefer to use

this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in as **amass** at the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01).
- 2 Type **/usr/amass/utills/quedisplay** and then press the **Return/Enter** key.
 - AMASS displays the following information (for example of incorrect status).

```
. . . .
JUKEBOX 1 DRIVE 1, no volume in drive
JUKEBOX 1 DRIVE 2, vid=50, vflags=0x4, status=0
```

- 3 Type **/usr/amass/utills/medialist** and then press the **Return/Enter** key.
 - AMASS displays the following information (for example of actual status).

```
. . . .
SLOT VSD0098 FULL
DRIVE 1 FULL FROM VSD0096
DRIVE 2 FULL FROM VSD0097
```

- Note that the **medialist** result shows that drive 1 actually is occupied, although **quedisplay** registers that drive 1 is empty.
- 4 Type **/usr/amass/utills/mediamove 1 VSD0096 1** and then press the **Return/Enter** key.
 - AMASS moves the volume from the *source* (drive **1** in this example) to the *destination* (slot **VSD0096** in this example) in the specified *jukeboxnumber* (jukebox **1** in this example), thereby bringing the actual status of drive 1 (as known by *medialist*) to the status reflected by *quedisplay*.

Table 17.7-7. Using mediamoveto Establish Synchrony Between quedisplay and medialist

Step	What to Do	Action to Take
1	Log in as amass at FSMS host	enter text; press Return/Enter
2	quedisplay	enter text; press Return/Enter
3	medialist	enter text; press Return/Enter
4	mediamove source destination [jukeboxnumber]	enter text; press Return/Enter

17.7.2 Recovering from Failure to Store or Retrieve Data

Successful data storage and retrieval functions are the heart of ECS. Successful ingest of data or processing of data to produce new science data granules require that Storage Management (STMGT) is inserting the product into the archive and that Science Data Server (SDSRV) is inserting the associated metadata into the inventory. Staging disks and cache managers for the Archive server and the FTP server are also involved in this process. To check the functioning of these elements, it is necessary that the ESDTs for the data to be inserted are installed and available, and that subscriptions have been registered.

Troubleshooting failures to store or retrieve data (as well as other failures) often requires review of server or application log files. This section contains a general procedure for reviewing log files to check for proper start-up and communications. It also has a procedure for a special case of reviewing log files for the Storage Management Request Manager server, and a procedure for reviewing the current tac log file of interactions between AMASS and ACSLS. Separate procedures then address recovery from failure to insert (store) data and recovery from failure to acquire (retrieve) data.

17.7.2.1 Checking Server Log Files

Table 17.7-8 presents the general steps required for checking server log files. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the host for the server and log(s) to be examined.
- 2 Type `cd /usr/ecs/<MODE>/CUSTOM/logs` and then press the **Return/Enter** key.
 - The working directory is changed to `/usr/ecs/<MODE>/CUSTOM/logs`.
- 3 To view a server log, type `pg filename` and then press the **Return/Enter** key.
 - *filename* refers to the log file to be reviewed (e.g., `EcDsScienceDataServer.ALOG`, `EcDsScienceDataServerDebug.log`).
 - The first page of the log file is displayed; additional sequential pages can be displayed by pressing the **Return/Enter** key at the `:` prompt.
 - Although this procedure has been written for the `pg` command, any UNIX editor or visualizing command (e.g., `vi`, `view`, `more`, `tail`) can be used to review the log file.
 - Typically, the `<server>Debug.log` captures more detailed information than the `<server>.ALOG`. However, for some servers (e.g., `SDSRV`), there may be significant detail in the `<server>.ALOG`. It is also important to note that the `DebugLevel` parameter setting in the **Configuration Registry** determines the level of detail captured in the `<server>Debug.log` (`0` is off, a setting of `1` captures status and errors, a setting of `2` captures major events, and a setting of `3` is a full trace recording of all activity). If the `DebugLevel` has been set to one of the lower levels during operations, the System Administrator may set it to `3` during troubleshooting. Similarly, the `AppLogLevel` parameter setting determines the level of detail captured in the `<server>.ALOG` (`0` provides a full trace recording of all events, `1` provides messages related to all major events, `2` yields just records of errors, and `3` turns recording off). (Note: As of Release 6A, there are new debug levels available for some logs; Storage Management (STMGT) offers "enhanced" debugging based on bitmasks. Level 7 provides a four-bit level for detailed database debugging. Level 15 provides an eight-bit level that repeatedly dumps the in-memory request queue in the STMGT Request Manager.

4 Review the log file(s) to determine if there are any indications of connection problems or errors at start up.

- The log file for the called server may contain an error message indicating a problem at start-up. The debug log should indicate a typical start sequence, including (sample log entries in the following material were taken from a debug log showing start-up for **EcDsStFtpServer**):

Get parameters from registry (log entries similar to the following).

```

- This procedure is applicable for reviewing logs for different types of errors and events on ECS servers.

- 5 Exit the log file (e.g., from **pg**, type **q** and then press the **Return/Enter** key).

Table 17.7-8. Checking Server Log Files

Step	What to Do	Action to Take
1	Log in at host for server and log(s) to be examined	enter text; press Return/Enter
2	cd /usr/ecs/<MODE>/CUSTOM/logs	enter text; press Return/Enter
3	pg (or other viewing command) filename	enter text; press Return/Enter
4	Review the entries in the file	read text
5	Exit the log file (e.g., q for exit from pg)	enter text; press Return/Enter

17.7.2.2 A Special Case: Checking the Request Manager Server Debug Log

The Request Manager server in the Storage Management computer software configuration item of the Data Server Subsystem processes requests from external clients (processes outside of Storage Management). Requests between Storage Management servers are passed directly from one server to another.

- Requests that require one of the Storage Management servers to perform processing are checkpointed (except requests that can be serviced solely through SQL).
 - Checkpointing involves recording the request's state (e.g., "checkpointed," "failed," "completed") in the database to assist in error recovery.
- Requests that can be serviced solely through SQL are considered "trivial" requests.
 - Trivial requests are not checkpointed.
 - Examples include attaching to a staging disk, getting capacity, and getting block size.
 - Trivial requests submitted from outside Storage Management are serviced by the Request Manager server.
 - Trivial requests originating within Storage Management are passed directly from the client to the database server.

The Request Manager server (like other Storage Management servers) can manage several concurrent activities. This is accomplished through the use of threads. There are several different kinds of threads:

- Manager thread.
 - One per Storage Management server.
 - Responsible for dequeuing requests and assigning them to service threads.
 - Checks for cancelled requests.

- Service thread.
 - Multiple threads per Storage Management server.
 - Responsible for the actual servicing of requests.
 - Logs all progress including all changes of request state.
 - Notifies submitter when request has been completed.
- Receptionist thread.
 - One per Storage Management server.
 - Registers the server as "up" in the database.
 - Sits on a socket, waiting for connections from other Storage Management servers.
 - Unregisters the server at shutdown.
- Inbound RPC thread.
 - Spawned by a request from a Storage Management client.
 - Hands off the request to the manager thread and waits for completion of the request.
- Housekeeper thread.
 - Watches for completed requests which haven't previously been seen and processed.

Information concerning Request Manager server processing of requests (identified by thread) is recorded in the Request Manager server debug log (assuming some level of debug log recording is specified in the Registry database).

Trivial requests typically involve the following types of activities:

- Inbound RPC thread appears with a request.
- Manager thread dequeues the request and assigns it to a service thread.
- Service thread recognizes the thread as "trivial."
 - A "No checkpointing required -- going straight to responded" message is recorded in the Request Manager server debug log.
- Service thread executes the database transaction for results.
 - When the request is completed, a "Done servicing" message is recorded in the Request Manager server debug log.
 - If the request fails, an "Unable to service" message is recorded in the Request Manager server debug log.

- Service thread hands the results to the inbound RPC thread.
 - A "Notifying the client" message is recorded in the Request Manager server debug log.
- Inbound RPC thread silently returns to the client with the results.

Non-trivial requests are forwarded to the appropriate Storage Management server (e.g., EcDsStFtpServer, EcDsStStagingDiskServer, EcDsStArchiveServer) for processing.

- Some of the same types of entries are made in the Request Manager server debug log for non-trivial requests as for trivial requests.
 - For example:
 - "Waking up service thread" (Request Manager is preparing to process the request).
 - "Done servicing" (request processing has been completed).
 - "Unable to service" (the request has failed).
- Although some trivial requests include "token" statements, tokens are characteristic of non-trivial requests.
 - A token includes request information that varies with the type of operation to be performed.
 - For example, a token for an ftp request might include the following types of data:
 - Stored procedure (e.g., DsStFRInsert) [other types of stored procedures include DsStSDRInsert and DsStGRMapLogicalArchiveId].
 - RPC ID (e.g., RPCId=1821_535_1109-1124464729_171062001_x0ins01.xdc.ecs.nasa.gov:SBSVSDSV1DSDD1DSDD4:).
 - Username.
 - Encrypted password.
 - Host.
 - Source path.
 - Destination path.
 - External request ID.
 - Server name (e.g., EcDsStFtpServerNONE) [other types of operations might involve the EcDsStStagingDiskServerDRP1 for example].
 - Type of operation (e.g., FtpPush) [other types of operations include ArRetrieve, SDAllocateDisk, SDLinkFile].

- Submitter (e.g., DSDD) [other types of operations might involve SDSV].
- Priority.
- The server to which the request was sent is identified by name (ServerName).
- Transaction ID is embedded in the RPC ID (the portion before the first colon in the RPC ID).

A "transaction" may involve multiple operations on a host or several hosts. Consequently, multiple threads may be used on each relevant host.

Table 17.7-9 presents the general steps required for checking the Storage Management Request Manager server debug log file. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the Distribution Server host (e.g., e0dis02, g0dis02, l0dis02, n0dis02).
- 2 To change to the logs directory, type **cd /usr/ecs/<MODE>/CUSTOM/logs** then press the **Return/Enter** key.
 - The working directory is changed to **/usr/ecs/<MODE>/CUSTOM/logs**.
- 3 Type **pg filename** then press the **Return/Enter** key.
 - **filename** refers to the appropriate Request Manager debug log.
 - For example: **pg EcDsStRequestManagerServerDebug.log**
 - The content of the first page of the specified file is displayed.
 - Although this procedure has been written for the **pg** command, any UNIX editor or visualizing command (e.g., **vi**, **view**, **more**) can be used to review the log file.
- 4 At the **:** prompt type **/date time** then press the **Return/Enter** key.
 - **date time** refers to the approximate date and time of the problem.
 - For example:
/06/18/01 12:17:31
 - The file is searched for the specified text.
 - If the specified text is in the log file, the following type of response is displayed.

```
...skipping forward
06/18/01 12:17:31: Thread ID : 105 : DsShTSSStorage: creating the
MutexVec for this thread
[...]
```
 - If the specified text is not in the log file, the following type of response is displayed.

Pattern not found:

- If the specified text is not in the log file, verify the following aspects of Steps 3 and 4:
 - Date and time were entered correctly (Step 4).
 - Proper file was opened (Step 3).

5 At the `:` prompt type **/Unable to service** then press the **Return/Enter** key.

- **pg** searches the file for the specified text.
 - If the specified text is in the log file, the following type of response is displayed.

```
...skipping forward
2:IngestRQ409GR1 Unable to service | Thread 52
[...]
```

- If the specified text is not in the log file, the following type of response is displayed.

Pattern not found:

- If the specified text is in the file, go to Step 7.
- If the specified text is not in the file, go to Step 6.

6 Examine the contents of the log file to determine which thread is associated with the problem being investigated.

- The following **pg** commands (at the `:` prompt) are useful:
 - **n** then **Return/Enter** (go to Page *n*).
 - **Return/Enter** or **+1** then **Return/Enter** (go down to the next page).
 - **-1** then **Return/Enter** (go back to the preceding page).
 - **+n** then **Return/Enter** (go down *n* number of pages).
 - **-n** then **Return/Enter** (go back *n* number of pages).
 - **+nl** then **Return/Enter** (go down *n* number of lines).
 - **-nl** then **Return/Enter** (go back *n* number of lines).
 - **q** then **Return/Enter** (exit from **pg**).

7 At the `:` prompt type the appropriate text (depending on the direction of the desired search) then press the **Return/Enter** key:

To search back toward the beginning of the file, type `^Waking up service thread n^` and then press **Return/Enter**.

To search toward the end of the file, type `/Waking up service thread n` and then press **Return/Enter**.

- For example:

`^Waking up service thread 52^`

- The file is searched back toward the beginning of the file for the specified text.

- If the specified text is in the log file, the following type of response is displayed.

```
...skipping backward
06/18/01 12:17:31: Thread ID : 102 : Waking up service thread 52
| Thread 102
[...]
```

- If the specified text is not in the log file, the following type of response is displayed.

```
Pattern not found:
```

- The entries `"Waking up service thread n"` and `"Unable to service | Thread n"` bracket the thread servicing in which an error occurred.

NOTE: Thread IDs are reused frequently. There are likely to be many processes with the same thread ID in any particular log file. It is important to follow the correct instance of the thread.

NOTE: It is likely that the Request Manager would try again to process a failed request. Subsequent request processing may use the same thread ID or a different thread ID. However, it would involve the same transaction ID.

- A `"No checkpointing required -- going straight to responded"` entry associated with the thread ID indicates that the request is "trivial."

8 At the `:` prompt type `/SEARCHING` then press **Return/Enter**.

- The file is searched for the specified text.
 - If the specified text is in the log file, the following type of response is displayed.

```
...skipping forward
06/18/01 12:17:31: Thread ID : 52 : SEARCHING FOR: 30148 (Found)
| Thread 52
06/18/01 12:17:31: Thread ID : 52 : SEARCHING FOR: 30148 (Found)
| Thread 52
```

```

06/18/01 12:17:31: Thread ID : 52 :

Thread 52
[...]

```

- In the preceding example the expression **SEARCHING** is associated with Thread ID 52.
 - The context of the **SEARCHING** statement indicates the type and source of the problem; in this case there appears to be a problem executing a stored procedure.
- If the specified text is not in the log file, the following type of response is displayed.

Pattern not found:

- 9** If the expression **SEARCHING** is not associated with the specified thread in the lines displayed, repeat Step 8.
- 10** If necessary, at the : prompt type **-2l** [lower-case letter l] then press the **Return/Enter** key.
- **pg** simulates scrolling the screen backward two lines (or any other number of lines that is typed at the prompt).
 - The file is redisplayed to include the two lines that preceded the page previously displayed.
 - For example:

```

...skipping backward

```

```

06/18/01 12:17:31: Thread ID : 52 : DBIF:Execute: Ultimate SQL:
exec DsStSDAttachDisk
"/usr/ecs/TS2/CUSTOM/pdps/x0spg01/data/DpPrRm/x0spg01_disk",
"SDSV", 0 | Thread 52
06/18/01 12:17:31: Thread ID : 52 : SEARCHING FOR: 30148 (Found)
| Thread 52
06/18/01 12:17:31: Thread ID : 52 : SEARCHING FOR: 30148 (Found)
| Thread 52
06/18/01 12:17:31: Thread ID : 52 :
DsStStoredProcedures::Execute - ERROR: Could not execute stored
procedure | Thread 52
06/18/01 12:17:31: Thread ID : 52 : Error encountered in stored
procedure | Thread 52
[...]
```

- The additional lines preceding "SEARCHING FOR" in the example indicate that the stored procedure in which the error was encountered is DsStSDAttachDisk.

- 11 At the : prompt type **q** then press the **Return/Enter** key.
 - **pg** exits from the Request Manager server debug log file.
- 12 If the request is a trivial request, go to Step 22.
- 13 If the request is a non-trivial request, open a separate UNIX window.
 - The results of related operations on the server involved in performing copy or ftp functions for the transaction are going to be checked in a separate UNIX window.
- 14 In the new UNIX window log in to the appropriate server host (e.g., e0drg11, g0drg01, l0drg01, n0drg01) for the server involved in performing copy or ftp functions for the transaction.
- 15 At the shell prompt type **grep 'TransactionId' filename | grep 'LogProgress'** then press the **Return/Enter** key.
 - For example:

```
grep 'af610628-' EcDsStArchiveServerDebug.log | grep 'LogProgress'
```
 - **filename** refers to the name of the log file for the process involved in performing copy or ftp functions for the transaction.
 - **TransactionId** refers to the Transaction ID associated with the applicable request.
 - In this example af610628-1dd1-11b2-a047-af3a589fd88e is the relevant Transaction ID.
 - However, usually it is not necessary to use the entire Transaction ID in the command; a representative sample (e.g., af610628- from the example) should be sufficient.

- References to other Transaction IDs and entries that do not contain the string "LogProgress" are filtered out so references to the specified Transaction ID that contain the string "LogProgress" are the only log entries displayed.
 - The string "LogProgress" is a filter for references to stored procedure DsStGRLogProgress.
- Progress is logged for copy and ftp input/output at each block.
- The following type of response is displayed:

```
06/26/01 12:46:00: Thread ID : 65674 : myTransactionList[1]:
exec DsStGRLogProgress "af610628-1dd1-11b2-a047-

```

- If no progress is indicated, go to Step 22.

16 Click in the UNIX window for the Distribution Server host.

17 Type **grep 'TransactionId' filename | grep 'Done servicing'** then press **Return/Enter**.

- *filename* refers to the appropriate Request Manager debug log.
- For example:

```
grep 'af610628-' EcDsStRequestManagerServerDebug.log | grep 'Done
servicing'
```

- If the operation has been completed, the following type of response is displayed:

```

1:55732 Done servicing | Thread 52

```

- The statement "Done servicing" shows that the operation has been completed; however, it provides no indication as to whether the operation succeeded or failed.
- If "Done servicing" is followed by "Unable to service," (as described in Step 19) the operation failed.
- If the operation has not been completed, no file entries are displayed (the UNIX prompt is displayed).
 - It may just be slow to complete.
- If the operation has been completed, go to Step 19.
- If the operation has not been completed, go to Step 20.

18 Type `grep 'TransactionId' filename | grep 'Unable to service'` then press the **Return/Enter** key.

- *filename* refers to the appropriate Request Manager debug log.
- For example:
`grep '2a7d4168-' EcDsStRequestManagerServerDebug.log | grep 'Unable to service'`
- If the request has failed, the following type of response is displayed:

```
06/26/01 12:56:22: Thread ID : 52 : 2a7d4168-1dd2-11b2-8c52-99d0f708dce5:PDPSSDSV1:MoPGE02#sy14182000TS2MOD02OBC Unable to service | Thread 52
06/26/01 12:56:22: Thread ID : 52 : 2a7d4168-1dd2-11b2-8c52-99d0f708dce5:PDPSSDSV4:MoPGE02#sy14182000TS2MOD02OBC Unable to service | Thread 52
```

– If the operation has failed, return to Step 7.

- If the operation has not failed, no file entries are displayed (the UNIX prompt is displayed).

19 If the operation has not failed, at the shell prompt type `tail -f filename | grep 'TransactionId'` and then press the **Return/Enter** key.

- *filename* refers to the appropriate Request Manager debug log.
- *TransactionId* refers to the Transaction ID associated with the applicable request.

- For example:

```
tail -f EcDsStRequestManagerServerDebug.log | grep 'af610628-'
```

- If new entries are being posted to the log, the operation has not finished yet.
 - If the same entries continue to be repeated over and over, it may be necessary to restart the server.
- If it is necessary to exit from a tailed log, type **ctrl-c** (while holding down the **Control Key**, press **c**).

20 If the operation has not finished yet, monitor the tailed log for awhile.

- If the operation does not seem to finish (i.e., if entries continue to be made to the tailed log) after a reasonable period of time (e.g., 30 minutes), it may be necessary to restart the Request Manager server.
- If it is necessary to exit from a tailed log, type **ctrl-c** (while holding down the **Control Key**, press **c**).

- 21 If problems were detected in the Request Manager server debug log and/or the log file for the process involved in performing copy or ftp functions for the transaction, it may be necessary to restart the server(s) performing those functions.
- If server restart does not resolve the problem, it is appropriate to notify the Help Desk and prepare a Trouble Ticket.
- 22 If no problems were detected in the Request Manager server debug log or the log file for the process involved in performing copy or ftp functions for the transaction, check the Science Data Server log files; use Procedure 17.7.2.1 for **Checking Server Log Files**.

Table 17.7-9. A Special Case: Checking the Request Manager Server Debug Log

Step	What to Do	Action to Take
1	Log in at host for Distribution Server	enter text; press Return/Enter
2	cd /usr/ecs/<MODE>/CUSTOM/logs	enter text; press Return/Enter
3	pg (or other viewing command) EcDsStRequestManagerServerDebug.Log (or filename of other Request Manager debug log)	enter text; press Return/Enter
4	/date time (of problem)	enter text; press Return/Enter
5	/Unable to service	enter text; press Return/Enter
6	Identify thread ID associated with problem	read text
7	^Waking up service thread n^ or /Waking up service thread n	enter text; press Return/Enter
8	/SEARCHING	enter text; press Return/Enter
9	As necessary, repeat Step 8	
10	As necessary, -2I	enter text; press Return/Enter
11	q (to exit pg)	enter text; press Return/Enter
12	If request is trivial, go to Step 22	
13	If request is non-trivial, open a separate UNIX window	enter text; press Return/Enter
14	(In new window), log in at host for server for transaction	enter text; press Return/Enter
15	grep 'TransactionId' filename grep 'LogProgress'	enter text; press Return/Enter
16	Go to window for Distribution Server host	single-click
17	(In logs directory) grep 'TransactionId' filename grep 'Done servicing'	enter text; press Return/Enter
18	grep 'TransactionId' filename grep 'Unable to service'	enter text; press Return/Enter
19	If operation has not failed, tail -f filename grep 'TransactionId'	enter text; press Return/Enter
20	If operation not finished, monitor tailed log	read text
21	If problem(s) detected, restart associated server	
22	If no problem detected, check Science Data Server logs	Use Procedure 17.7.2.1

17.7.2.3 Checking the tac Log

Each day a current **tac_00** log on the FSMS host records interactions between AMASS and ACSLS. This log can provide helpful information in troubleshooting problems manifested in those interactions. Table 17.7-10 presents the steps required for recovering from a failure to store data. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in as **amass** at the FSMS host.
- 2 Type **cd /usr/amass/logs/tac** and then press the **Return/Enter** key.
 - The working directory is changed to **/usr/amass/logs/tac**.
- 3 Use the current tac log to investigate possible problems in communication between AMASS and ACSLS. To view the current tac log, type **pg tac_00** and then press the **Return/Enter** key.
 - The first page of the log file is displayed; additional sequential pages can be displayed by pressing the **Return/Enter** key at the **:** prompt.
 - Although this procedure has been written for the **pg** command, any UNIX editor or visualizing command (e.g., **vi**, **view**, **more**, **tail**) can be used to review the log file.
 - The log contains entries related to activities and communications associated with actions by AMASS to direct ACSLS robotic activities; the entries should appear in format similar to the following sample:

```
Sep 24 09:49:42 p0drg01 amass LIBSCHED3[7215638]:
E7003(16)<00000>:xdiStk2749: STK Response received; Status: 0

Sep 24 09:49:42 p0drg01 amass LIBSCHED3[7215638]:

Sep 24 10:19:32 p0drg01 amass LIBSCHED1[7215870]:
E7003(16)<00000>:xdiStk533: Sending a mount command

Sep 24 10:34:56 p0drg01 amass LIBSCHED1[7215870]:
E1043(7)<00000>:libsched3165: Idle Eject timer expired on volume
188 in drive 2.

Sep 24 10:35:07 p0drg01 amass LIBSCHED1[7215870]:
E7003(16)<00000>:xdiArch39: Archive index : 0

Sep 24 10:35:07 p0drg01 amass LIBSCHED1[7215870]:
E7003(16)<00000>:xdiStk686: Media Id = P20676, Drive index = 1

Sep 24 10:35:07 p0drg01 amass LIBSCHED1[7215870]:
E7003(16)<00000>:xdiStk719: Sending a dismount command

Sep 24 10:35:07 p0drg01 amass LIBSCHED1[7215870]:
E7003(16)<00000>:xdiStk2742: Waiting for ACSLS response

Sep 24 10:35:07 p0drg01 amass LIBSCHED1[7215870]:
E7003(16)<00000>:xdiStk2749: STK Response received; Status: 0

Sep 24 10:35:07 p0drg01 amass LIBSCHED1[7215870]:
E7003(16)<00000>:xdiStk2758: Error unexpected sequence number: 101
-expected sequence number: 109

```

- Examine the sections of the log with entries near the time of any problem being investigated, looking for messages that indicate whether there was successful communication between AMASS and ACSLS regarding mounting of a tape and transfer of information. It may be useful to search the log for occurrences of the word **fail** (while viewing the log with **pg**, **view**, **vi**, or other viewing/editing tool, type **/fail** and press the **Return/Enter** key).
- If the log indicates problems in communication between AMASS and ACSLS, it may be useful to use the **quedisplay** command to obtain the AMASS view of the queue and the **medialist** command to obtain the robot view. If these commands show discrepancies indicating a lack of synchrony between AMASS and ACSLS, it may be possible to re-establish that synchrony using the **mediamove** command (refer to Procedure 17.7.1.6 **Using *mediamove* to Establish Synchrony Between *quedisplay* and *medialist***).

Note: The message "Error unexpected sequence number: 101 -expected sequence number: 109" is an artifact likely to be removed in releases of AMASS subsequent to Version 5.0.0 Revision 17 and does not reflect a real error.

Table 17.7-10. Checking the tac Log

Step	What to Do	Action to Take
1	Log in at FSMS host	enter text; press Return/Enter
2	cd /usr/amass/logs/tac	enter text; press Return/Enter
3	pg tac_00 (or vi , view , tail , or other viewing tool)	enter text; press Return/Enter

17.7.2.4 Handling a Data Insertion Failure

Successful data insertion requires interactions among numerous servers, and the interactions are reflected in entries in the debug logs for those servers. Detection and initial isolation of a problem that prevents successful insertion may require tracing events across multiple log files on different hosts. Table 17.7-11 presents the steps required for recovering from a failure to store data. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the host for SDSRV (e.g., e0acs05, g0acs03, l0acs03, n0acs04), review the debug log **EcDsScienceDataServerDebug.log** (use Procedure 17.7.2.1 **Checking Server Log Files**).
 - Examine the section of the log with entries near the time of the problem, looking for error messages that indicate communication failure.
 - If the log file entries indicate a communication problem, note the server(s) with which there is impairment or disruption of communication.
- 2 At the host for Archive Server (e.g., e0drg11, g0drg01, l0drg01, n0drg01), review the debug log **EcDsStArchiveServerDebug.log** (use Procedure 17.7.2.1 **Checking Server Log Files**).
 - Examine the section of the log with entries near the time of the problem, looking for error messages that indicate communication failure.
 - If the log file entries indicate a communication problem, note the server(s) with which there is impairment or disruption of communication.

- 3 If Step 1 and/or Step 2 resulted in detection of a problem in the interaction of SDSRV and/or Archive Server with other servers, at the host(s) for those servers, review the server debug log(s). These logs may include:

EcDsStStagingDiskServerDebug.log (on Archive Server host).

EcDsStCacheManagerServerDebug.log (on Archive Server host).

EcDsStRequestManagerServerDebug.log (e.g., on e0dis02, g0dis02, l0dis02, n0dis02; use Procedure 17.7.2.2).

EcIoAdServerDebug.log (e.g., on e0ins02, g0ins02, l0ins02, n0ins02).

EcSbSubServerDebug.log (e.g., on e0ins01, g0ins01, l0ins01, n0ins01).

- If there is evidence of requests not succeeding or other communication failure, it may be necessary to have System Administrators or Engineering Support personnel resolve the problem (e.g., restart affected servers, execute **EcCsIdPingServers**, ensure that the **Name Server** is up in the mode being used and that its debug log reflects appropriate look-up activity by the application servers, mount points are intact, and database access is not impaired).

Note: The next three steps address running the Check Archive script, **EcDsCheckArchive**. To run this script, it is necessary to enter eight database-specific parameters when prompted during the running of the script: STMGT SQL server name, STMGT database name, STMGT SQL server userID, STMGT SQL server database password, SDSRV SQL server name, SDSRV database name, SDSRV SQL server userID, and SDSRV database password. To facilitate the smooth execution of the script, the parameters may be set as environmental variables instead. The parameters are not readily available to most operators; therefore, you will need to obtain them from the Database Administrator or have the Database Administrator run the script for you, using steps 4 through 6.

- 4 On the host for the Archive Server, type **cd /usr/ecs/<MODE>/CUSTOM /utilities** and then press the **Return/Enter** key.

- The prompt reflects the directory change to **/usr/ecs/<MODE>/CUSTOM/utilities**.

- 5 Type **EcDsCheckArchive <MODE>**.

- The Check Archive script runs; the initially displayed information should be similar to the following:

```
=====
This script is designed to validate the Inventory
against the Archive.

The user must select the menu option associated with the
Volume Group to be validated

Please press [RETURN] to continue
=====
```

- 6 Follow the on-screen prompts for the script, entering the necessary parameters.
 - The script provides indication of any discrepancies between the presence of granules in the Archive and entries in the inventory (metadata). Note that the appearance of a discrepancy is not necessarily indication of a failure (e.g., if a granule has been deleted but the inventory database has not been cleaned up, there may be inventory entries for which there are no granules in the archive), but a problem may be indicated if a discrepancy is apparent for a granule that you just inserted. Note also that this script would not reveal a problem if you attempted to insert a granule which failed to get inserted and also had its metadata fail to be inserted into the inventory (i.e., no granule and no inventory entry = no discrepancy). Therefore, if the script reveals no discrepancies, it may still be useful to conduct a direct examination to determine if the granule has been inserted.
- 7 On the host for the Archive Server, type the directory change command `cd /dss_stk1/<MODE>/<data_type_directory>` and then press the **Return/Enter** key.
 - The working directory is changed to `/dss_stk1/<MODE>/<data_type_directory>`.
- 8 Type `ls -al | grep "<date>"` where "`<date>`" is a three-letter abbreviation for the month followed by a number indicating the day (e.g., "**Apr 21**") for the granule being inserted, and then press the **Return/Enter** key.
 - If the inserted file is displayed, with date and time of entry, go to Step 9.
 - If the inserted file is not displayed, have the Ingest/Distribution Technician insert the file again. If this succeeds (i.e., the file is now listed), go to Step 9; otherwise, conduct the procedure for **Diagnosing/Investigating Write Errors Procedure 17.7.3**).
- 9 Determine if the inserted file is reflected in the Inventory Database (Database Administrator function) by logging into Sybase on the host for SDSRV and then selecting the data type for the granule being inserted.
 - If the inserted file is reflected in the Inventory Database, go to Step 10.
 - If the inserted file is not reflected in the Inventory Database, ensure that database access is not impaired (Database Administrator function).
- 10 Determine if the directory from/to which the copy is being made is visible on the machine being used; have the System Administrators or Engineering Support personnel check the mount points on the Archive host and the SDSRV host.
 - If the mount points are OK, go to Step 11.
 - If necessary, have the System Administrators or Engineering Support personnel re-establish the mount point(s).

11 If you inserted the file with the DSS Driver, go to Step 13. If you used Ingest to insert the file, on the Ingest host (e.g., e0icg11, g0icg01, l0acg02, n0acg01) examine the **drp**- or **icl**-mounted staging directory to determine if a staging disk was created. To do this, first type **cd /usr/ecs/<MODE>/CUSTOM/drp/<host>/data/staging/cache** (or type **cd /usr/ecs/<MODE>/CUSTOM/icl/<host>/data/StagingArea/cache**), then press the **Return/Enter** key.

- The prompt reflects a change to the specified directory. [**Note:** Be sure that you are checking the correct mount/host. Most ingests use Ingest subsystem staging areas (i.e., **icl**), but others may not. Media ingest (e.g., from tape) typically involves staging in a **dip** area. For a polling ingest for data from EDOS, the polling directory may serve as the staging area. Some data are staged directly to working storage in the Data Server subsystem. If in doubt, consult Ingest/Archive personnel.]

12 Type **ls -al | more** and then press the **Return/Enter** key.

- Any staging areas are listed in output similar to the following sample:

```
-rw-rw-r--      1 cmshared cmshared   10375 Jan 30 14:46
:SC:L70RF2.002:16015:6.HDF-EOS
-rw-rw-r--      1 cmshared cmshared  535563 Jan 30 14:46

:SC:MOD000.001:11856:3.CCSDS.
```

- If a staging area for the inserted file appears at the end of the list, go to Step 13.
- If no staging area appears for the inserted file, it is possible that the ingest failed and that the staging area was immediately removed as part of clean-up. Check the Ingest logs (e.g., **EcInReqMgrDebug.log**, **EcInAutoDebug.log**, **EcInGranDebug.log**, or **EcInGranDebug.log**, depending on the type of Ingest) (refer to procedures for troubleshooting Ingest problems, Chapter 16) to determine if a staging disk was created. If no staging disk was created, it may be necessary to resolve a communications failure as described in Step 7.

- 13 Ensure that the Archive volume groups are set up correctly (refer to Procedure 17.3.2 **Using Storage Management GUIs to Display Archive Path Information**).
- 14 Ensure that the volume groups are on line (refer to Procedure 17.7.1.3 **Using *vollist* to Display Volume Data**).
 - If the volume groups are set up correctly and their volumes are on line, and insertion still fails, it is appropriate to contact the Help Desk and prepare a trouble ticket (see Chapter 8).

Table 17.7-11. Handling a Data Insertion Failure

Step	What to Do	Action to Take
1	Review Science Data Server Debug Log	use Procedure 17.7.2.1
2	Review Archive Server Debug Log	use Procedure 17.7.2.1
3	Review debug logs for any implicated servers: a. EcDsStStagingDiskServerDebug.log b. EcDsStCacheManagerServerDebug.log c. EcDsStRequestManagerServerDebug.log d. EcIoAdServerDebug.log e. EcSbSubServerDebug.log	a. use Procedure 17.7.2.1 b. use Procedure 17.7.2.1 c. use Procedure 17.7.2.2 d. use Procedure 17.7.2.1 e. use Procedure 17.7.2.1
4	(On Archive Server host) cd /usr/ecs/<MODE>/CUSTOM/utilities	enter text; press Return/Enter
5	EcDsCheckArchive <MODE>	enter text; press Return/Enter
6	Respond to prompts to complete Check Archive Script	read text; enter text; press Return/Enter
7	(On Archive Server host) cd /dss_stk1/<MODE>/<data_type_directory>	enter text; press Return/Enter
8	ls -al grep "<date>"	enter text; press Return/Enter
9	Check for file in SDSRV Inventory database	(Database Administrator task)
10	Check mount points on Archive host and SDSRV host	(System Administrator task)
11	(For Ingested file, on Ingest host) cd /usr/ecs/<MODE>/CUSTOM/drp/<host>/data/staging/cache OR cd /usr/ecs/<MODE>/CUSTOM/icl/<host>/data/StagingArea/cache)	enter text; press Return/Enter
12	ls -al more	enter text; press Return/Enter
13	Check Archive path information to ensure volume groups are set up correctly	use Procedure 17.3.2
14	Use vollist to ensure that volume groups are online	use Procedure 17.7.1.3

17.7.2.5 Handling a Data Acquire Failure

As a first check, it is appropriate to determine if the acquire request appears in the list of System Requests on the Science Data Server GUI. If the acquire request does not appear on the Science Data Server GUI, you will need to determine where the breakdown occurred. Diagnosing an acquire failure requires detailed examination of the following system log files and directories associated with the process:

- Science Data Server log file (EcDsScienceDataServerDebug.log).
- Archive Server log file (EcDsStArchiveServerDebug.log).
- STMGT Request Manager Server log file (EcDsStRequestManagerDebug.log)
- Staging Area.
 - Presence of the relevant file.
 - Staging Disk log files (EcDsStStagingDiskServerDebug.log or EcDsStCacheManagerServerDebug.log).
 - Space available in the staging area.

In addition, note that a number of servers, clients, or other software running on various hosts, as reflected in Table 17.7-2, may be involved at various times in processing an acquire request. More information useful in troubleshooting may appear in related logs on these hosts.

**Table 17.7-12. Hosts, Servers, Clients and Other Software Relevant to Acquires
(1 of 2)**

HOST	SERVER/CLIENT/OTHER SOFTWARE
Distribution Server (e.g., e0dis02, g0dis02, l0dis02, n0dis02)	Distribution Server (EcDsDistributionServer) Request Manager Server (EcDsStRequestManagerServer)
Working Storage (e.g., e0wkg01)	Archive Server (EcDsStArchiveServer) Cache Manager Server (EcDsStCacheManagerServer) Staging Disk Server (EcDsStStagingDiskServer)
SDSRV Server (e.g., e0acs05, g0acs03, l0acs03, n0acs04)	Science Data Server (EcDsScienceDataServer) HDF EOS Server (EcDsHdfEosServer)
Access/Process Coordinators (APC) Server (e.g., e0acg11, g0acg01, l0acg02, n0acg01)	Archive Server (EcDsStArchiveServer) FTP Server (EcDsStFtpServer) Cache Manager Server (EcDsStCacheManagerServer) Staging Disk Server (EcDsStStagingDiskServer) Pull Monitor Server (EcDsStPullMonitorServer)
FSMS Server (e.g., e0drg11, g0drg01, l0drg01, n0drg01)	Archive Server (EcDsStArchiveServer) Cache Manager Server (EcDsStCacheManagerServer) Staging Disk Server (EcDsStStagingDiskServer)

**Table 17.7-12. Hosts, Servers, Clients and Other Software Relevant to Acquires
(2 of 2)**

HOST	SERVER/CLIENT/OTHER SOFTWARE
Interface Server 02 (e.g., e0ins01, g0ins01, l0ins01, n0ins01)	Subscription Server (EcSbSubServer) Event Server (EcSbEventServer)

Table 17.7-3 presents the steps required for recovering from a failure to retrieve data. The procedure is used to:

- make the initial check on the Science Data Server GUI.
- follow up with checks of the Science Data Server log file, Archive Server log file, and Request Manager log file.
- determine if a failure occurred during copying of the files to a staging area (and if so, whether there is sufficient staging space available).

If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the Science Data Server GUI (see Procedure 17.3.1 **Launching DSS GUIs**).
- 2 Click on the **System Requests** tab.
 - The **System Requests** window is displayed.
- 3 Examine the requests displayed in the **System Management Requests** field to determine if SDSRV received the acquire request.
 - If the number of request is large, the **Find** button and field below the **System Management Requests** field may be used to enter and search for information in the request, such as the Requester, or the **Filter . . .** button can be used to launch a **System Management Filter Requests** window to limit the number of entries that appear in the **System Management Requests** field.
- 4 On the SDSRV Server host (e.g., e0acs05, g0acs03, l0acs03, n0acs04), review the server logs **EcDsScienceDataServer.ALOG** and **EcDsScienceDataServerDebug.log** (refer to Procedure 17.7.2.1 **Checking Server Log Files**).
 - Examine the section of the log with entries near the time of the problem, looking for messages that indicate whether the relevant file was successfully acquired.
 - The **EcDsScienceDataServer.ALOG** file should contain entries identifying the file to be acquired by the ShortName of the corresponding ES DT; entries should be similar to the following:

```

PID : 29168:MsgLink :0 meaningfulname
:DsSrSessionExecuteRequestStart0
Msg: Request ID b5156038-03d3-11d3-8d16-c676e82eaa77:????:
executing:
DsSrRequest (1): DsShSciRequestImp: [ svr: ScienceDS, pri: NORMAL
domain: ]: (DsShSciCommandImp: service: INSERT num parameters: 3
category: Parameters are:
-UnnamedPL[SHORTNAME(AST_L1BT) VERSIONID(001)
--MAINGROUP[SHORTNAME(AST_L1BT) VERSIONID(001)
---
METADATAFILEGROUP[METADATAFILE(/home/cmops/data/SCAST_L1BT.0011279.met)]
---DATAFILEGROUP[DATAFILE(/home/cmops/data/tahoe-north-middle.MTA)]
---DATAFILEGROUP[DATAFILE(/home/cmops/data/tahoe-north-
middle.hdf)]]]
WC)

```

- The **EcDsScienceDataServerDebug.log** file should contain entries regarding the acquire activity. The following types of messages should be included in the log file:

```

05/06/99 12:52:01:
About to execute Statement: exec ProcInsertReqDomain 2205,
"UR:10:DsShESDT
UR:UR:15:DsShSciServerUR:13:[VTC:DSSDSRV]:20:SC:AST_L1BT.001:2201"
05/06/99 12:52:01:
About to execute Statement: ProcInsertAcquireCmd 2206, 2205, 3,
null, null, "tester", "FtpPush", "MAIL", "FILEFORMAT", null,
"jrattiga", "abc123", "t1dps04", "/home/jrattiga
/push", null, null

```

- If the ShortName does not appear in the file, with a timestamp corresponding to the time of the attempted acquire, SDSRV may not be running, or may not be communicating with other servers. Have the System Administrator or Operations Controller check to be sure the server is up and, if appropriate, resolve the problem (e.g., restart affected servers, execute **EcCsIdPingServers**, ensure that the **Name Server** is up in the mode being used and that its debug log reflects appropriate look-up activity by the application servers, mount points are intact, and database access is not impaired).
- If the log file does contain entries for the relevant ShortName, and indicates that two files (the file and its associated metadata file) are being distributed, SDSRV has completed its role in the acquire. Go to the next step.
- If the ALOG contains the ShortName, and also contains an error showing that the data file time stamp does not match the time stamp required by the acquire, the data file needs to be removed from the Science Data Server and reinserted.
 - This is usually done using a script called DsDbCleanGranules.

- 5 To inspect the Archive Server log and Request Manager Server log for error messages associated with the acquire, on the Archive host (e.g., **e0drg01**, **g0drg01**, **l0drg01**, **n0drg01**), review the respective server logs (**EcDsStArchiveServerDebug.log**, **EcDsStRequestManagerServerDebug.log**); refer to Procedure 17.7.2.1 **Checking Server Log Files** and Procedure 17.7.2.2 **A Special Case: Checking the Request Manager Server Debug Log**.
 - Examine the sections of the logs with entries near the time of the problem, looking for messages that indicate whether the Request Manager handled the request and whether the Archive Server log shows that the relevant file was successfully acquired.
 - If the logs indicate that the relevant file was successfully acquired, go to the next step.
 - If the file was not successfully acquired, it may be necessary to reboot AMASS (see Procedure 17.1.3 **Rebooting AMASS**) and investigate the possibility of read errors (see Procedure 17.7.4 **Diagnosing/Investigating Read Errors**).
- 6 To determine whether the file being acquired (or a link to it) and its associated metadata file arrived in the Data Distribution staging area, on the Distribution Server (e.g., **e0dis02**, **g0dis02**, **l0dis02**, **n0dis02**) type **cd /usr/ecs/<MODE>/CUSTOM/drp/<archivehost>/data/staging/cache** and then press the **Return/Enter** key.
 - The working directory is changed to the specified directory.
- 7 Type **ls -lrt** and then press the **Return/Enter** key.
 - The contents of the directory are displayed.
- 8 Review the listing to determine whether the relevant file and its metadata file arrived in the staging area.
 - The display should contain entries similar to the following:

```
lrwxrwxr-x 1 cmshared cmshared 75 Apr 26 12:52
L7CPF19980518_19980518.01 ->
/usr/ecs/TS1/CUSTOM/drp/raven/data/staging/cache/:SC:L7CPF.001:1427:
1.ASCII
-rw-rw-rw- 1 cmshared cmshared 14802 Apr 26 12:52
SCL7CPF.0011427.met
-rw-rw-r-- 1 cmshared cmshared 111 Apr 26 13:01
staging.disk.filename.list
-rw-rw-r-- 1 cmshared cmshared 2044 Apr 26 13:01
PACKING.LST.115124935248431
```
 - If the relevant files were not successfully staged, the staging log files may reveal the cause; go to Step 9.
 - If the relevant files were successfully staged, an acquire failure could be a result of problems with related servers or software (see Table 1). Have the System Administrator or Operations Controller ensure that the necessary hosts and servers are up.

- 9 To inspect the Staging Disk log for error messages associated with the acquire, on the APC Server host (e.g., **e0acg11**, **g0acg01**, **l0acg02**, **n0acg01**), review the server logs (e.g., **EcDsStStagingDiskServerDebug.log**; **EcDsStCacheManagerServerDebug.log**); refer to Procedure 17.7.2.1 **Checking Server Log Files**.
- Examine the section of each log with entries near the time of the problem, looking for messages that indicate whether the relevant files were successfully staged.
 - If the relevant files were not successfully staged, the cause may be a lack of space in the staging area; go to Step 10.
 - If the relevant files were successfully staged, an acquire failure could be a result of problems with related servers or software (see Table 1). Have the System Administrator or Operations Controller ensure that the necessary hosts and servers are up.
- 10 To check the space available in the staging area, on the Distribution Server (e.g., **e0dis02**, **g0dis02**, **l0dis02**, **n0dis02**) type **cd /usr/ecs/<mode>/CUSTOM/drp/<archivehost>/data** and then press the **Return/Enter** key.
- The working directory is changed to the specified directory.
- 11 Type **df -k .** (be sure to include the ".") and then press the **Return/Enter** key.
- The filesystem, staging disk space capacity in kbytes, amount used, amount available, and percent of capacity are displayed, as in the following example:

```
Filesystem          kbytes    used    avail capacity Mounted on
t1drg01:/usr/ecs/TS1/CUSTOM/drp/t1drg01/data
                    225209856 173253056 51956800    77%
/data1/ecs/TS1/CUSTOM/drp/t1drg01/data
```

- If there is not adequate space for staging the relevant files, it will be necessary to free up additional space (e.g., by purging expired files from cache).

Table 17.7-13. Handling a Data Acquire Failure

Step	What to Do	Action to Take
1	Launch the Science Data Server GUI	use Procedure 17.3.1
2	Select the System Requests tab	single-click
3	Review list of System Management Requests to determine if SDSRV receive the acquire request	read text
4	Review SDSRV logs for evidence of acquire or errors: a. EcDsScienceDataServer.ALOG b. EcDsScienceDataServerDebug.log	a. use Procedure 17.7.2.1 b. use Procedure 17.7.2.1
5	Review server logs for acquire error messages: a. EcDsStArchiveServerDebug.log b. EcDsStRequestManagerServerDebug.log	a. use Procedure 17.7.2.1 b. use Procedure 17.7.2.2
6	(On the Distribution Server host) cd /usr/ecs/<MODE>/CUSTOM/drpl<archivehost>/data/staging/cache	enter text; press Return/Enter
7	ls -lrt	enter text; press Return/Enter
8	Review listing for relevant file and metadata	read text
9	(On APC Server host) Review staging disk logs for acquire error messages: a. EcDsStStagingDiskServerDebug.log b. EcDsStCacheManagerServerDebug.log	a. use Procedure 17.7.2.1 b. use Procedure 17.7.2.1
10	(On the Distribution Server host) cd /usr/ecs/<mode>/CUSTOM/drpl<archivehost>/data	enter text; press Return/Enter
11	dr -k .	enter text; press Return/Enter

17.7.3 Diagnosing/Investigating Write Errors

Although write errors to the archive should be infrequent, there are some circumstances under which they may occur. Associated error messages should appear in a relevant log file (e.g., on a Sun, in `/var/adm/messages`; on an SGI, in `/var/adm/SYSLOG`). Causes of write errors may include the following:

- *AMASS off line* -- software captures and logs the error because the directory that is being written to does not exist. However, the nature of the write error is not detected.
- *Directory does not exist* -- if there is an attempt to write to a directory that does not exist, even if AMASS is on line, the result is a write error.
- *All drives off line* -- write requests are accepted until cache space fills up, which stops further data transfer.
- *Volume off line or no media associated with the directory* - causes a write error that is detectable by the software. An I/O error is recorded in the relevant log file.

- *AMASS: media write failure* -- causes the drive to go off-line and the media volume to go off-line as well. The error is written to the relevant log file. No error is detected by the application software. The operator can execute the command **/usr/amass/bin/drivelist** to see which drive has been put off-line.

Table 17.7-14 presents the general steps required for diagnosing/investigating write errors. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01) as **amass**.
- 2 To verify that AMASS is running and active, type **/usr/amass/bin/amassstat -c** and then press the **Return/Enter** key.
 - The message **FILESYSTEM IS ACTIVE** is displayed.
 - If the message **FILESYSTEM IS INACTIVE** is displayed, AMASS is inactive (off line); to put AMASS back on line, type **/usr/amass/bin/amassstat -a** and press the **Return/Enter** key, entering **y** in answer to the displayed confirmation question **Do you want to change the status? [y - n]**. If this does not activate AMASS, it may be necessary to reboot it (refer to Procedure 17.1.3 **Rebooting AMASS**).
- 3 Display AMASS I/O activity (refer to Procedure 17.7.1.2 **Using *sysperf* to Display the Status of AMASS I/O Activity**).
 - If the returned output indicates no free cache blocks, this may indicate that all drives are off line and that as a result all available cache space is filled, stopping write actions. In that case, it may be necessary to use **ctrl-c** to cancel pending I/O requests.
 - If there are no free cache blocks, go to Step 4; otherwise, go to Step 5.
- 4 Type **/usr/amass/bin/drivelist** and press the **Return/Enter** key.
 - AMASS returns the status of drives in format similar to the following:

```

DRIVE JUKE  STATUS  ERRORS
  1     1     A       0
  2     1     A       0
  3     1     I       0
  4     1     A       0
  1     2     I       0
  2     2     A       0
  1     3     A       0
  2     3     A       0
  3     3     A       0

```

/usr/amass/bin/drivelist: 9 drives configured in this system

- 5 Use the **amass_log** script to display and examine AMASS errors (refer to Procedure 17.7.1.4 **Using the *amass_log* Script to Display AMASS Errors**).
 - If the returned error message(s) identify critical problems that prevent AMASS from functioning correctly, follow the corrective guidance specified in the *System Administrator's Guide* for the specific error(s).
 - If there are no hardware problems and there have not been repeated attempts to activate the drive(s) that are off line, reactivate the drive(s) (see Step 6).
- 6 For each off-line drive, type **/usr/amass/bin/drivestat -a drivenumber [jukeboxnumber]** and press the **Return/Enter** key.
 - AMASS places on line the drive specified by **drivenumber** in the jukebox specified by **jukeboxnumber**.
- 7 Check the **tac** log for evidence of problems in communication between AMASS and ACSLS (refer to procedure 17.7.2.3 **Checking the *tac* Log**).
 - If there is evidence of communication problems, investigate and correct any lack of synchrony between AMASS and ACSLS (refer to Procedure 17.7.1.6 **Using *mediamove* to Establish Synchrony Between *quedisplay* and *medialist***).

Table 17.7-14. Diagnosing/Investigating Write Errors

Step	What to Do	Action to Take
1	Log in to the FSMS host as amass	enter text; press Return/Enter
2	/usr/amass/bin/amassstat -c	enter text; press Return/Enter
3	Display status of AMASS I/O activity	use Procedure 17.7.1.2
4	(If no free cache blocks) /usr/amass/bin/drivelist	enter text; press Return/Enter
5	Run amass_log script	use Procedure 17.7.1.4
6	/usr/amass/bin/drivestat -a drivenumber [jukeboxnumber]	enter text; press Return/Enter
7	Check tac log	use Procedure 17.7.2.3

17.7.4 Diagnosing/Investigating Read Errors

When a read error is encountered by AMASS, both the drive and the volume (tape) are taken off line. The application is notified of the read failure. The Archive Server logs an error message when the read failure is returned. The log message includes the name of the file, the secondary path for the file, the checksum for the file, and a reason for the failure. If the reason for failure is a checksum mismatch on retrieval, then the file must be restored. If the reason for failure indicates the media was off line, then further investigation is warranted to determine why the tape was off line. Off-line status can be the result of a write error, a read error on the file, or a read error on another file that caused AMASS to take the tape off line, thus making other reads

fail. For a tape that is off line, or for a tape and drive that are off line together, one possibility is that the tape is damaged. Damage may be confirmed by visual inspection or, more likely, the need to have vendor maintenance remove the media from the drive. Any requests for files on that tape fail or are served from backup. It is important that the list of files that is created for restoring a tape from backup be kept and searched when new files are reported missing. This should reduce the number of times that certain recovery procedures have to be performed (see Procedure 17.6.2.3 **Manual Data Recovery from Damaged Cartridge**).

Table 17.7-15 presents the steps required for diagnosing/investigating read errors observed during operations (e.g., appearing in the Archive Server debug log, or appearing as an I/O error message at the command line during an attempt to copy a file from an archive volume). If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in to the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01) as **amass**.
- 2 Examine the Archive Server debug log **EcDsStArchiveServerDebug.log** (refer to Procedure 17.7.2.1 **Checking Server Log Files**) for error messages associated with the read failure.
 - Examine the sections of the log with entries near the time of the failure, looking for messages that indicate read failure. It may be useful to search the log for occurrences of the word **fail** (while viewing the log with **pg**, **view**, **vi**, or other viewing/editing tool, type **/fail** and press the **Return/Enter** key).
 - From the failure information in the log, note the name of the file, the secondary path for the file, the checksum for the file, and the reason for the failure.
 - If the reason for the failure is specified as a checksum mismatch on retrieval, go to Step 3. If the reason indicates media being off line, go to Step 4.
- 3 Restore the corrupted file (refer to Procedures 17.6.2.1 **Manual Data Recovery from Local Backup Tapes**, 17.6.2.2 **Manual Data Recovery from Offsite Backup Tapes**, and 17.6.2.3 **Manual Data Recovery from Damaged Cartridge** as appropriate).
- 4 Type **dirfilelist path**, where *path* is the full path name of the directory location of the file on which the read error occurred (e.g., **/dss_stk1/OPS/modl0**), and then press the **Return/Enter** key.
 - AMASS returns a listing of the files in the directory, listing for each one the volume on which it is stored and its logical block address. Note the volume number for the file on which the read error occurred.
- 5 Use the **vollist** command to display data for the volume identified in Step 4 (refer to Procedure 17.7.1.3 **Using vollist to Display Volume Data**).
 - AMASS displays data for the specified volume; if the volume is off line (has **O** displayed in the **FLAGS** column of the output), place it on line using the command **volstat -a** and pressing the **Return/Enter** key.

- 6 Use the **amass_log** script to display and examine AMASS errors (refer to Procedure 17.7.1.4 **Using the *amass_log* Script to Display AMASS Errors**).
 - If the returned error message(s) identify critical problems that prevent AMASS from functioning correctly, follow the corrective guidance specified in the *System Administrator's Guide* for the specific error(s).
 - If there are no hardware problems and there have not been repeated attempts to activate the drive(s) that are off line, reactivate the drive(s) (see Step 7).
- 7 For each off-line drive, type **/usr/amass/bin/drivestat -a drivenumber [jukeboxnumber]** and press the **Return/Enter** key.
 - AMASS places on line the drive specified by **drivenumber** in the jukebox specified by **jukeboxnumber**.
- 8 Check the **tac** log for evidence of problems in communication between AMASS and ACSLS (refer to procedure 17.7.2.3 **Checking the *tac* Log**).
 - If there is evidence of communication problems, investigate and correct any lack of synchrony between AMASS and ACSLS (refer to Procedure 17.7.1.6 **Using *mediamove* to Establish Synchrony Between *quedisplay* and *medialist***).

Table 17.7-15. Diagnosing/Investigating Read Errors

Step	What to Do	Action to Take
1	Log in to the FSMS host as amass	enter text; press Return/Enter
2	Examine the Archive Server debug log	use Procedure 17.7.2.1
3	Restore any corrupted file	as appropriate, use Procedure 17.6.2.1, 17.6.2.2, or 17.6.2.3
4	dirfilelist path	enter text; press Return/Enter
5	vollist nnn	use Procedure 17.7.1.3
6	Run amass_log script	use Procedure 17.7.1.4
7	/usr/amass/bin/drivestat -a drivenumber [jukeboxnumber]	enter text; press Return/Enter
8	Check tac log	use Procedure 17.7.2.3

17.8 ACSLS Procedures

For the StorageTek Powderhorn, direct control of the tape storage and handling operations is managed by the *Automated Cartridge System Library Software (ACSL)*. Full guidance for using ACSLS is provided in the *Automated Cartridge System Library Software System Administrator's Guide*. Table 17.8-1 lists the commands covered in that *Guide*.

Table 17.8-1. ACSLS Command Reference

Command	Function
audit	Creates or updates the database inventory of the volumes in a library component.
cancel	Cancels a current or pending request.
clear lock	Removes all active and pending locks on transports or volumes
define pool	Creates or modifies scratch pools.
delete pool	Deletes empty scratch pools.
dismount	Dismounts a volume.
eject	Ejects one or more volumes from the Automated Cartridge System (ACS).
enter	Sets a Cartridge Access Port (CAP) to enter mode.
idle	Stops ACSLS from processing new requests.
lock	Locks (dedicates) a volume or transport to a user.
logoff	Exits the command processor.
mount	Mounts a data or scratch volume.
query	Displays the status of a library component.
set	Sets various attributes of different library components.
show	Displays your lock ID or user ID.
start	Starts ACSLS request processing.
unlock	Removes active locks on volumes or transports.
vary	Changes the state of an ACS, LSM, CAP, transport, or port.
venter	Enters one or more volumes with missing or unreadable labels into the ACS.

ACSLS commands use the following general syntax:

command type_identifier state [options]

where **type_identifier** is the ACS component and its identifier (these are listed in the *System Administrator's Guide*), **state** is a device state for the **vary** command only, and **options** are command options (these are specified for each command in the *System Administrator's Guide*). The two most useful commands in ACSLS are **query** and **vary**. Other frequently used commands are **enter** and **eject**, for inserting and removing cartridges, respectively. ACSLS does not have an online help facility, but if you enter a command (e.g., **vary**), it will prompt you for the parameters.

There are also several utilities provided with ACSLS. These are listed with their functions in Table 17.8-2.

Table 17.8-2. ACSLS Utilities

Utility	Function
bdb.acsss	Backs up the ACSLS database.
kill.acsss	Terminates ACSLS.
rc.acsss	Starts and recovers ACSLS.
rdb.acsss	Restores the ACSLS database.
Volrpt	Creates a volume report.
db_command	Starts or stops the Oracle database.

To control and interact with ACSLS, you use the following user IDs:

- **acssa** lets you enter ACSLS commands from a command processor window.
- **acsss** lets you run ACSLS utilities from the UNIX command line prompt.

It is typical to log in as both user IDs to permit entering both ACSLS utilities and commands. You can, however, open a command processor window from the **acsss** user ID if you prefer to work from a single user ID. The *System Administrator's Guide* provides full details. Table 17.8-3 provides an Activity Checklist for major ACSLS procedures addressed in this section.

Table 17.8-3. Activity Checklist for ACSLS Procedures

Order	Role	Task	Section	Complete?
1	Archive Manager	Entering the Archive after AMASS is Started	(P) 17.8.1	
2	Archive Manager	Backing up the ACSLS Database	(P) 17.8.2	
3	Archive Manager	Restoring the ACSLS Database	(P) 17.8.3	
4	Archive Manager	Checking Cleaning Cartridges	(P) 17.8.4	

17.8.1 Entering the Archive After AMASS is Started

There are circumstances in which it may be necessary to enter the archive after AMASS is started. For example, there may be a requirement for maintenance that necessitates access to the robot or other area inside the Powderhorn. Another example is that it may sometime be desirable to bypass the Cartridge Access Port (CAP) when inserting tape cartridges, if there is a need to perform bulk loading of a large number of tapes, although usually this would be limited to initial loading of the volumes. Table 17.8-4 presents the steps required for entering the archive after AMASS has started. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the host for ACSLS (e.g., **e0drs03**, **g0drs03**, **l0drs02**, **n0drs03**), log in using the **acssa** user ID and password.
 - The **acssa** command-process window is displayed with the **ACSSA>** prompt.
- 2 Type **vary lsm 0,0 offline** and then press the **Return/Enter** key.
 - The access port is unlocked (audible unlatching sound).
- 3 Use the key to unlatch and open the access door.
 - A red **DO NOT ENTER** warning is visible inside the enclosure.

If it is necessary to enter the STK Powderhorn after AMASS is started, it is necessary to perform the following step to avoid hazard and ensure safety of personnel and equipment.

- 4 Remove the key from the door to ensure that no one inadvertently locks the enclosure with someone inside.
 - The red **DO NOT ENTER** warning is extinguished and a green **ENTER** message is displayed inside the enclosure.
- 5 Upon leaving the enclosed area, insert the key in the access door and latch the door.
 - The LED display indicates that the door is locked.
- 6 At the ACSLS host, type **vary lsm 0,0 online** and then press the **Return/Enter** key. After a few seconds, the archive robots execute an initialization sequence and the LSM is back online.

Table 17.8-4. Entering the Archive after AMASS is Started

Step	What to Do	Action to Take
1	Log in to the ACSLS host as acssa	enter text; press Return/Enter
2	vary lsm 0,0 offline	enter text; press Return/Enter
3	Unlock and open access door	operate lock to unlatch with key
4	Remove key from unlatched door	remove key
5	Insert key and latch door	operate lock to latch with key
6	vary lsm 0,0 online	enter text; press Return/Enter

17.8.2 Backing Up the ACSLS Database

ACSLs provides the **bdb.acsss** utility to back up the database. It is advisable to run this utility when there has been a change in the archive volume structure (e.g., upon addition or removal of volumes). In the event of database loss, it is possible to re-create the database even if there is no backup available, by using the **audit** command to inventory the archive. However, for a large storage facility, creating the database this way may take several hours. If there is a backup available, the database can be restored easily and quickly (refer to Procedure 17.8.3). Table 17.8-5 presents the steps required for backing up the ACSLS database. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the host for ACSLS (e.g., **e0drs03**, **g0drs03**, **l0drs02**, **n0drs03**), log in using the **acsss** user ID and password.
 - The **acsss** command-process window is displayed with the **ACSSS>** prompt.
- 2 Ensure that there is a tape in the backup drive (device **dev/rmt/0**), a streaming tape drive attached to each ACSLS workstation.
- 3 Type **bdb.acsss**, and then press the **Return/Enter** key.
 - If you enter **bdb.acsss** with no options, the backup utility defaults to the default tape device attached and configured to the ACSLS server.
 - The system displays the following message.

```
Check tape device (/dev/rmt/0) to make sure you have a tape in the
tape drive.

[ Hit RETURN to continue or Ctrl-C to exit ]
```
- 4 Press the **Return/Enter** key.
 - The **bdb.acsss** utility backs up the ACSLS database and miscellaneous library resource files.

Table 17.8-5. Backing Up the ACSLS Database

Step	What to Do	Action to Take
1	Log in to the ACSLS host as acsss	enter text; press Return/Enter
2	Ensure there is a tape in the backup drive	Mount tape
3	bdb.acsss	enter text; press Return/Enter
4	Return/Enter	press Return/Enter

17.8.3 Restoring the ACSLS Database

ACSLs provides the **rdb.acsss** utility to restore the database in case of severe disk or data problems. If you have made regular backups, it should be possible to restore the database with

little or no loss of data. Restoring the database is likely to be necessary if there has been a system crash, or if the database can not be started or has a physical or logical error. Table 17.8-6 presents the steps required for restoring the ACSLS database. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the host for ACSLS (e.g., **e0drs03**, **g0drs03**, **l0drs02**, **n0drs03**), log in using the **acsss** user ID and password.
 - The **acsss** command-process window is displayed with the **ACSSS>** prompt.
- 2 Load the restore tape into the backup drive.
- 3 Type **rdb.acsss**, and then press the **Return/Enter** key.
 - If you enter **bdb.acsss** with no options, the backup utility defaults to the default tape device attached and configured to the ACSLS server.
 - The system displays the following message.

```
Check tape device (/dev/rmt/0) to make sure you have a tape in the
tape drive.

[ Hit RETURN to continue or Ctrl-C to exit ]
```
- 4 Press the **Return/Enter** key.
 - The **rdb.acsss** utility restores the ACSLS database and miscellaneous library resource files.

Table 17.8-6. Restoring the ACSLS Database

Step	What to Do	Action to Take
1	Log in to the ACSLS host as acsss	enter text; press Return/Enter
2	Load the restore tape into the backup drive	Mount tape
3	rdb.acsss	enter text; press Return/Enter
4	Return/Enter	press Return/Enter

17.8.4 Checking Cleaning Cartridges

The Automated Cartridge System Library Software (ACSL) schedules and implements routine cleaning of the system tape drives after a set usage time tracked by the software, using cleaning volumes from a cleaning volume group designated for that purpose. The ACSLS software also tracks the number of times a cleaning tape is used, and will not use a cleaning tape that has been used the maximum set number of times (usually set at 100 for the 9940 drives). It is the responsibility of the Archive Manager to monitor cleaning tape usage periodically, to ensure that usable cleaning tapes remain available to the system.

Table 17.8-7 presents the steps required to check cleaning cartridges for usage status. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the host for ACSLS (e.g., **e0drs03**, **g0drs03**, **l0drs02**, **n0drs03**), log in using the **acssa** user ID and password.
 - The **acssa** command-process window is displayed with the **ACSSA>** prompt.
- 2 Type **query clean all**, and press the **Return/Enter** key.
 - *Note:* The command may be abbreviated to **qu cl a**.
 - ACSLS displays information on the status of the cleaning volumes in format similar to the following:

```

2001-10-04 08:50:54           Cleaning Cartridge Status
Identifier Home Location    Max Usage  Current Usage  Status  Type
9840C1      0, 0, 3, 2, 2  100        38             home   STK1U
9840C2      0, 0,13, 1, 3  100         0             home   STK1U
9940C1      0, 0, 1, 4,19  100         7             home   STK2W
          
```
 - *Note:* If it is desirable or necessary to change the maximum number of uses permitted for a cleaning volume, the change can be accomplished with the command **set clean <max_usage> <vol_id>** where *max_usage* (e.g. 100) is the maximum number of uses for that volume and *vol_id* is the volume id of that cleaning cartridge.

Table 17.8-7. Checking Cleaning Cartridges

Step	What to Do	Action to Take
1	Log in as acssa	enter text; press Return/Enter
2	query clean all (or qu cl a)	press Return/Enter

17.9 Using the AMASS Graphical User Interface (GUI)

AMASS offers a Graphical User Interface (GUI) called the AMASS Administration Window (AAWin) through which operators can administer volumes and volume groups that are managed by AMASS. AAWin provides a point-and-click interface for identifying volumes their groups, and their configurable parameters. The AAWin main window is composed of a menu bar, a large middle section called the *workroom*, a utility bar at the right with icons for a trash can, a volume group, and a volume, and a status bar at the bottom with indicator “lights” that represent the current status of AMASS. Selecting the volume icon on the utility bar populates the workroom with icons for volumes. Moving the cursor over one of the icons results in the appearance of volume-related information in a pop-up display.

For large storage facilities, command-line interactions are likely to be faster and more responsive than interactions with the AMASS GUI. Therefore it is unlikely that extensive use of the GUI

will be applied for most archive operations. However, it may be useful to have the GUI open for monitoring and easy access to volume information (refer to Procedure 17.9.1 **Launching the AMASS GUI and Viewing Volume Group and Volume Information**). Table 17.9-1 provides an activity checklist for some procedures that may be accomplished using the AMASS GUI.

Table 17.9-1. Activity Checklist for Using the AMASS GUI

Order	Role	Task	Section	Complete?
1	Archive Manager	Launching the AMASS GUI and Viewing Volume Group and Volume Information	(P) 17.9.1	
2	Archive Manager	Using the AMASS GUI to Modify a Volume Group	(P) 17.9.2	
3	Archive Manager	Using the AMASS GUI to Modify a Volume	(P) 17.9.3	

17.9.1 Launching the AMASS GUI and Viewing Volume Group and Volume Information

Table 17.9-2 presents the steps required to launch the AMASS GUI and view information about volume groups and volumes in the archive. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in as **amass** at the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01).
- 2 Type **/usr/amass/bin/aawin** and then press the **Return/Enter** key.
 - The AMASS GUI main window is displayed.
- 3 Click on the **View by Volume Groups** button (middle button at the right of the *workroom*).
 - The *workroom* is populated by icons for volume groups.
 - The **Block List** window is displayed; it is a vertically scrolled list of blocks of items (in this case, volume groups). The *workroom* can display up to 256 icons; the **Block List** window provides access to additional items in blocks of 256.
- 4 Move the cursor over one of the icons for a volume group.
 - A pop-up display shows data for the volume group (**Volume Group, Volumes in Group, Free Space, Dead Space, Error Count**).
- 5 Click on the **View by Volumes** button (at the bottom right side of the *workroom*).
 - The *workroom* is populated by icons for volumes.
 - The **Block List** window is also displayed; it is a vertically scrolled list of blocks of items (in this case, volumes).
- 6 Move the cursor over one of the icons for a volume.
 - A pop-up display shows data for the volume group (**Volume, Library, Slot, Volume Group, Volume Status, Volume Label**).

Table 17.9-2. Launching the AMASS GUI and Viewing Volume Group and Volume Information

Step	What to Do	Action to Take
1	Log in as amass at FSMS host	enter text; press Return/Enter
2	aawin	enter text; press Return/Enter
3	Select View by Volume Groups button	single-click
4	Move cursor over icon for a volume group	hold left mouse button and drag
5	Select View by Volumes button	single-click
6	Move cursor over icon for a volume	hold left mouse button and drag

17.9.2 Using the AMASS GUI to Modify a Volume Group

The **Modify a VG** window is opened by selecting **Modify a Volume Group** from the **Tasks** menu. The window is used to modify the characteristics of a volume group. The top portion of the window (not modifiable) lists root directories already configured for a volume group. The middle portion of the window permits adding directories to the list of root directories for the specified volume group. The third major portion of the window, near the bottom, contains indicators of the status of the volume group and buttons for selecting a volume group, as well as buttons across the very bottom of the window for accepting or canceling the modifications. (*Note:* The **Modify a VG** window also is opened if you have the *workroom* populated with volume group icons and you click on one of them. However, in this case you may only modify the volume group on which you clicked; the bottom of the window will not display buttons for selecting a volume group.)

As an example of using the GUI to modify a volume group, it is possible to assign a new root directory in the AMASS file system to a volume group. This requires first creating the directory and then using the GUI to assign it to a volume group. Table 17.9-3 presents the steps required for using the AMASS GUI to modify a volume group, in this example to assign a new root directory in the AMASS file system to a volume group. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the AMASS GUI (refer to Procedure 17.9.1 **Launching the AMASS GUI and Viewing Volume Group and Volume Information**).
- 2 Open a second terminal window (other than the one used to launch the AMASS GUI).
- 3 In the second terminal window, log in as **amass** at the FSMS host (e0drg11, g0drg01, l0drg01, or n0drg01).
- 4 To change to the **dss_amass** directory, type **cd /dss_amass**, and then press the **Return/Enter** key.
- 5 To create an empty directory with path **/dss_amass/newdir/**, where *newdir* is the name of the new directory to be created and assigned to the volume group, type **mkdir newdir**, and then press the **Return/Enter** key.

- 6 On the AMASS GUI main window, click on the **View by Volume Groups** button (middle button at the right of the *workroom*).
 - The *workroom* is populated by icons for volume groups.
 - The **Block List** window is also displayed; it is a vertically scrolled list of blocks of items (in this case, volume groups).
- 7 Follow menu path **Tasks→Modify a Volume Group**.
 - The **Modify a VG** window is displayed, showing data for Volume Group 0001.
- 8 In the area for choosing a volume group, near the bottom of the window, use the buttons to set the number displayed in the **Volume Group** field to the desired volume group.
 - A click on the right-pointing arrow button or the left-pointing arrow button respectively increases or decreases the number by one. Buttons below the arrow buttons may be used to increase or decrease the number in multiples of 100 or 1000, as indicated on the buttons.
- 9 When the **Volume Group** field displays the number of the desired volume group, click on the **Fetch** button.
 - The list of root directories already configured for the selected volume group is displayed in the **Existing Root Directories** field.
 - The status indicators show the status of the selected volume group.
- 10 Click on the **File/Directory Selection** button (leftmost button after the label **Root Directories to Add**, with folder icon).
 - A **File Selection** filter window is displayed.
- 11 In the **File Selection** filter window, click on the **Filter** button.
 - The **Filter** field displays `/usr/amass/*`, and directories and files are displayed in the **Directories** and **Files** windows, respectively.
- 12 Use the **Filter** button and selection of directories in the **Directories** window to display `/dss_amass/newdir/` in the **Selection** field.
 - The **Selection** field displays `/dss_amass/newdir/`.
- 13 In the **File Selection** filter window, click the **OK** button.
 - The **Root Directories to Add** field of the **Modify a VG** window displays `/dss_amass/newdir/`.
- 14 To examine the capability to edit the list of Directories to Add, click on the entry `/dss_amass/newdir/` to highlight it in the **Root Directories to Add**, then click on the **Remove a File/Directory from List** button (middle button after the label **Root Directories to Add**, with folder icon crossed out with a red line).
 - The entry `/dss_amass/newdir/` is removed from the **Root Directories to Add** field.

- 15 Repeat steps 11 - 13 to restore the entry `/dss_amass/newdir/` to the **Root Directories to Add** field.
 - The **Root Directories to Add** field of the **Modify a VG** window displays `/dss_amass/newdir/`.
- 16 In the **Modify a VG** window, click on the **Accept** button at the bottom of the window.
 - The entry `/dss_amass/newdir/` is removed from the **Root Directories to Add** field and appears in the **Existing Root Directories** field.
 - The **Modify a VG** window is closed.

Table 17.9-3. Using the AMASS GUI to Modify a Volume Group

Step	What to Do	Action to Take
1	Launch the AMASS GUI	use Procedure 17.9.1
2	Open a second terminal window	UNIX command
3	Log in as amass at FSMS host	enter text; press Return/Enter
4	cd /dss_amass	enter text; press Return/Enter
5	mkdir newdir	enter text; press Return/Enter
6	Select View by Volume Groups button	single-click
7	Follow menu path Tasks → Modify a Volume Group	menu selection
8	Set Volume Group	click on right or left arrow
9	Select Fetch button	single-click
10	Select File/Directory Selection button	single-click
11	Select Filter button	single-click
12	Display <code>/dss_amass/newdir/</code> in Selection field	use Filter button and selection
13	In File Selection filter window, select OK button	single-click
14	Remove <code>/dss_amass/newdir/</code> from list	highlight and click
15	Restore <code>/dss_amass/newdir/</code> to list	highlight and click
16	Select Accept button	single-click

17.9.3 Modify a Volume

The **Modify a Volume** window is opened by selecting **Modify a Volume** from the **Tasks** menu. The window is used to modify the characteristics of a volume. The right side of the window shows the current set of statistics and configuration information (not modifiable) for the volume listed in the **Volume** field on the left side of the window (the **Volume** field looks like a button, but if you click on it, a “spinbox” is displayed, with arrow buttons permitting increases or decreases to the volume number, and buttons at the bottom to **Accept** or **Cancel** the change; accepting the change closes the spinbox, displays the new number in the **Volume** field, and displays data for that volume). The left side of the **Modify a Volume** window provides access to modifiable characteristics of the volume. Changes made to the buttons and fields in the window do not take effect until the **Accept** button at the bottom of the window is clicked. (**Note:** The **Modify a Volume** window also is opened if you have the *workroom* populated with volume

icons and you click on one of them. However, in this case you may only modify the volume on which you clicked; the **Volume** field does not look like a button and may not be changed.)

There are six fields that can be edited for a given volume:

1. The first is a button for setting the **Volume Group**. Clicking the button opens a spinbox for selecting the volume group to which the volume is to be assigned.
2. Below the Volume Group button is an **Online/Offline** indicator light with label. Clicking on the indicator toggles its state and updates the text field (label) next to it.
3. Below the Online/Offline indicator is an **Active/Inactive** indicator light with label. Clicking on the indicator toggles its state and updates the text field (label) next to it.
4. Next is a **Format Request** option button permitting selection of a formatting option for the volume.
5. Next is the **Block Size** field, applicable only to tape libraries when a format is requested to be done on the volume. This field requires a numeric value, which should be a multiple of 16384.
6. The last modifiable field is a text field for specifying the volume label.

Table 17.9-4 presents the steps required for using the AMASS GUI to modify a volume. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the AMASS GUI (refer to Procedure 17.9.1 **Launching the AMASS GUI and Viewing Volume Group and Volume Information**).
- 2 On the AMASS GUI main window, click on the **View by Volume Groups** button (middle button at the right of the *workroom*).
 - The *workroom* is populated by icons for volume groups.
 - The **Block List** window is also displayed; it is a vertically scrolled list of blocks of items (in this case, volume groups).
- 3 Click on the icon for a desired volume group.
 - The *workroom* is populated with icons for the volumes in the selected volume group, and the **Modify a VG** window is displayed, showing data for the selected volume group.
- 4 Click on the icon for the volume to be modified.
 - The **Modify a VG** window is closed and the **Modify a Volume** window is displayed, showing data for the selected volume.

- 5 If it is desired to change the volume group to which the volume is assigned, note the **Volume Group** number indicated on the **Volume Group** button, and then click on the button.
 - A spinbox is displayed showing the **Volume Group** number, with right-pointing and left-pointing arrow buttons respectively to increase or decrease the number.
- 6 Use the arrow buttons to change the **Volume Group** number, and then click on the **Accept** button in the spinbox.
 - The spinbox is closed and the new number appears in the **Modify a Volume** window as the **Volume Group** number.
- 7 To change the status of a volume indicated to be **Online**, click on the **Active/Inactive** indicator.
 - The color and label of the **Active/Inactive** indicator toggle.
- 8 To change the status of a volume indicated to be **Inactive**, click on the **Online/Offline** indicator.
 - The color and label of the **Online/Offline** indicator toggle.
- 9 Click on the **Format Request** option button.
 - A pop-up option menu is displayed for selection of **Yes** or **No**, and when one of those options is clicked, the indicated choice is displayed on the option button.
- 10 Use the mouse to move the cursor to the **Block Size** field.
 - A blinking cursor appears in the **Block Size** field.
- 11 Use the keyboard to enter or change the value in the **Block Size** field.
 - The entered data appear in the **Block Size** field.
- 12 Use the mouse to move the cursor to the **Volume Label** field.
 - A blinking cursor appears in the **Volume Label** field.
- 13 Use the keyboard to enter or change the value in the **Volume Label** field.
 - The entered data appear in the **Volume Label** field.
- 14 If you wish to cancel any request for changes to the volume, click on the **Cancel** button at the bottom of the window. If you wish to accept the changes, click on the **Accept** button at the bottom of the window.
 - When you click the **Accept** button, *AAWin* attempts to make the requested changes. For most changes, specifically changes to **Online/Offline** and **Active/Inactive** status, the requested **Volume Group** for the volume, and the **Volume Label**, the changes are made immediately. But if a format has been requested, then the **Online/Offline** and **Active/Inactive** status changes are not applied immediately. Instead, the requests for these status changes and the format changes are passed to the **AAWin Scheduler**

daemon for processing. Changes made by the **Scheduler** occur when the job is processed, which depends on how many other jobs are currently scheduled.

Table 17.9-4. Using the AMASS GUI to Modify a Volume

Step	What to Do	Action to Take
1	Launch the AMASS GUI	use Procedure 17.9.1
2	Select View by Volume Groups button	single-click
3	Select desired volume group	single-click
4	Select volume to be modified	single-click
5	To change volume group assignment, select Volume Group button	single-click
6	Set Volume Group number	click arrows on "spinbox"
7	Toggle Active/Inactive status of online volume	single-click
8	Toggle Online/Offline status of inactive volume	single-click
9	Select Format Request button	single-click
10	Move cursor to Block Size field	single-click
11	Enter Block Size	type text
12	Move cursor to Volume Label field	single-click
13	Enter Volume Label	type text
14	Select Cancel button or Accept button	single-click

17.10 Data Pool Maintenance Tasks

Archive and/or engineering support personnel are directly involved in Data Pool monitoring and maintenance, and support User Services and/or Science Data Specialists in managing the content and retention of data in the Data Pool. A major tool used for these functions is the Data Pool Maintenance (DPM) GUI. There are also scripts and utilities for specific maintenance and monitoring functions, and the Spatial Subscription Server (NSBRV) GUI can be used for some maintenance and monitoring functions. Table 17.10-1 provides an activity checklist for Data Pool procedures that are accomplished using the DPM GUI and Data Pool utility scripts. See Chapter 19 for procedures using the NSBRV GUI (Launching the NSBRV GUI; Use the NSBRV GUI to List and View Subscriptions in the NSBRV Database; Use the NSBRV GUI to Extend the Period of Retention in a Data Pool Insert Subscription; Use the NSBRV GUI to View the Acquire and Notification Actions Being Processed; Use the NSBRV GUI to View Statistics on NSBRV Processing of Events and Actions).

Table 17.10-1. Activity Checklist for Data Pool Maintenance Tasks (1 of 2)

Order	Role	Task	Section	Complete?
1	Archive Manager/ Support Engineer	Launch the Data Pool Maintenance (DPM) GUI	(P) 17.10.1	
2	Archive Manager/ Support Engineer	Using the DPM GUI to Monitor Data Pool Active Insert Processes	(P) 17.10.2	
3	Archive Manager/ Support Engineer	Suspend and Resume Data Pool Insert Actions	(P) 17.10.3	
4	Archive Manager/ Support Engineer	Check the Data Pool Insert Queue and Cancel a Data Pool Insert Action	(P) 17.10.4	
5	Archive Manager/ Support Engineer	Toggle the State of the NoFreeSpaceFlag	(P) 17.10.5	
6	Archive Manager/ Support Engineer	Configure the Number of Allowed Active Insert Processes	(P) 17.10.6	
7	Archive Manager/ Support Engineer	Configure the Default Retention Period and the Default Retention Priority	(P) 17.10.7	
8	Archive Manager/ Support Engineer	Use the DPM GUI to View Collection Groups and Collections	(P) 17.10.8	
9	Archive Manager/ Support Engineer	Use the DPM GUI to Modify Collection Groups	(P) 17.10.9	
10	Archive Manager/ Support Engineer	Use the DPM GUI to Add a Collection Group	(P) 17.10.10	
11	Archive Manager/ Support Engineer	Use the DPM GUI to Add ECS Collections to a Collection Group	(P) 17.10.11	
12	Archive Manager/ Support Engineer	Use the DPM GUI to Add NONECS Collections to a Collection Group	(P) 17.10.12	
13	Archive Manager/ Support Engineer	Use the DPM GUI to Modify Collections in a Collection Group	(P) 17.10.13	
14	Archive Manager/ Support Engineer	Use the DPM GUI to Check the Status of Batch Inserts	(P) 17.10.14	
15	Archive Manager/ Support Engineer	Use the DPM GUI to View a List of Themes	(P) 17.10.15	
16	Archive Manager/ Support Engineer	Use the DPM GUI to Modify a Theme	(P) 17.10.16	
17	Archive Manager/ Support Engineer	Use the DPM GUI to Add a Theme	(P) 17.10.17	
18	Archive Manager/ Support Engineer	Use the DPM GUI to Delete a Theme	(P) 17.10.18	
19	Archive Manager/ Support Engineer	Use the Update Granule Utility to Extend the Retention for Selected Science Granules	(P) 17.10.19	
20	Archive Manager/ Support Engineer	Invoke the Data Pool Cleanup Utility Manually	(P) 17.10.20	
21	Archive Manager/ Support Engineer	Establish Data Pool Cleanup to Run with <i>cron</i>	(P) 17.10.21	

Table 17.10-1. Activity Cecklist for Data Pool Maintenance Tasks (2 of 2)

Order	Role	Task	Section	Complete?
22	Archive Manager/ Support Engineer	Specify Data Pool Access Statistics Rollup Start Time and DPASU Execution with <i>cron</i>	(P) 17.10.22	
23	Archive Manager/ Support Engineer	Specify Data Pool Access Statistics Utility Execution from the Command Line	(P) 17.10.23	
24	Archive Manager/ Support Engineer	Archive Access Statistics using the Data Pool Archive Access Statistics Data Utility	(P) 17.10.24	
25	Archive Manager/ Support Engineer	Delete Access Statistics using the Data Pool Delete Access Statistics Data Utility	(P) 17.10.25	
26	Archive Manager/ Support Engineer	Restore Access Statistics using the Data Pool Restore Access Statistics Data Utility	(P) 17.10.26	
27	Archive Manager/ Support Engineer	Use the Batch Insert Utility for Batch Insert of Data into the Data Pool	(P) 17.10.27	

17.10.1 Launch the Data Pool Maintenance (DPM) GUI

The procedure for launching the GUI is provided separately here and referenced in other procedures. Table 17.10-2 presents the steps required to launch the DPM GUI. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the UNIX command shell prompt, type **setenv DISPLAY *clientname*:0.0** and then press the **Return/Enter** key.
 - For *clientname*, use either the local terminal/workstation IP address or its machine name.
- 2 Start the log-in to a Netscape host by typing **/tools/bin/ssh *hostname*** (e.g., g0ins02, e0ins02, l0ins02, n0ins02) at the UNIX command shell prompt, and press the **Return/Enter** key.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type **yes** (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 3.
 - If you have not previously set up a secure shell passphrase; go to Step 4.
- 3 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your **Passphrase** and then press the **Return/Enter** key. Go to Step 5.

- 4 At the `<user@remotehost>`'s **password:** prompt, type your *Password* and then press the **Return/Enter** key.
 - You are logged in and a UNIX command shell prompt is displayed.
- 5 Type **netscape** and then press the **Return/Enter** key.
 - The Netscape web browser is displayed.
- 6 Click in the **Netsite:** field.
 - The field is highlighted.
- 7 Type the Universal Resource Locator (URL) for the DPM GUI and then press the **Return/Enter** key.
 - The DPM **Home Page** is displayed, offering access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**) as well as a tab for **Help** in navigating the GUI.

Table 17.10-2. Launch the DPM GUI

Step	What to Do	Action to Take
1	setenv DISPLAY clientname:0.0	enter text; press Return/Enter
2	/tools/bin/ssh hostname	enter text; press Return/Enter
3	Passphrase (or Step 4)	enter text; press Return/Enter
4	Password	enter text; press Return/Enter
5	netscape	enter text; press Return/Enter
6	Move cursor to Netsite: field	single-click
7	http://<URL>	enter text; press Return/Enter

17.10.2 Using the DPM GUI to Monitor Data Pool Active Insert Processes

It may be useful to keep an instance of the DPM GUI displayed to monitor Data Pool Active Insert Processes. Table 17.10-3 presents the steps required to use the DPM GUI to monitor Data Pool active insert processes. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, providing a table of active insert processes showing columns of detailed information for each process, including:
 - the UNIX process identifier (**Unix ProcessId**).
 - the ECS identifier (**ECS_ID**), or Granule ID for the granule being processed.

- the **Collection** to which the granule belongs.
 - the **Version** for the collection to which the granule belongs.
 - the time at which the insert processing started (**StartTime**).
 - the time at which the status listed in the next column was achieved (**StatusTime**).
 - the current state of the insert process (**Status**).
 - the **AMASS Cache** availability (**Y** or **N**) of the granule being processed (*Note*: The system is designed for rapid insertion of data into the Data Pool by quickly processing data that are available in cache, such as data that are staged for archiving. If the insert processing is delayed and the data are removed from cache, the Data Pool insert is likely to fail.)
 - the number of attempts (**Retries**) by the process to recover from retrievable errors (e.g., Data Pool disk temporarily unavailable, Data Pool directory does not exist, Data Pool database temporarily unavailable).
- 2** If it is desired to obtain an immediate screen refresh, click on the **Refresh** button near the upper right corner of the display to refresh the screen.
- The displayed insert action data are updated. (*Note*: The screen refreshes automatically at intervals determined by the number of seconds specified in the **Screen Refresh Rate** field).
- 3** If it is desired to change the automatic screen refresh rate, click at the end of the **Screen Refresh Rate** field.
- The cursor is displayed at the end of the **Screen Refresh Rate** field.
- 4** To set a new value for **Screen Refresh Rate**, use the **Backspace** key to remove the current value, type the new value (in seconds), and then click on the **Apply** button to the right of the **Screen Refresh Rate** field.
- The typed value appears in the **Screen Refresh Rate** field and the automatic refresh frequency is based on the new value.

Table 17.10-3. Using the DPM GUI to Monitor Data Pool Active Insert Processes

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	If desired, activate the Refresh button	single-click
3	If desired, move cursor to Screen Refresh Rate field	single-click
4	Enter new value and activate the Apply button	enter text; single-click

17.10.3 Suspend and Resume Data Pool Insert Actions

At times, it may be necessary to suspend Data Pool insert actions (e.g., for cleanup or other maintenance activities). Table 17.10-4 presents the steps required to suspend and resume Data Pool insert actions. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, providing status and capabilities for changing the **Screen Refresh Rate**, **NoFreeSpaceFlag**, and **Suspension** state, as well as a table of active insert processes.
- 2 To suspend Data Pool insert actions, click the **SUSPEND** selection/indicator button.
 - The selected button is filled to indicate its selection.
- 3 Click on the **Apply** button to the right of the **SUSPEND** and **RESUME** selection/indicator buttons.
 - The screen is refreshed and the **Suspension** status line shows "Data Pool Insert actions were suspended on <date time>" to indicate the change.
- 4 To resume Data Pool insert actions, click the **RESUME** selection/indicator button.
 - The selected button is filled to indicate its selection.
- 5 Click on the **Apply** button to the right of the **SUSPEND** and **RESUME** selection/indicator buttons.
 - The screen is refreshed and the **Suspension** status line shows "Data Pool Insert actions were resumed on <date time>" to indicate the change.

Table 17.10-4. Suspend and Resume Data Pool Insert Actions

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select SUSPEND	single-click
3	Activate the Apply button	single-click
4	Select RESUME	single-click
5	Activate the Apply button	single-click

17.10.4 Check the Data Pool Insert Queue and Cancel a Data Pool Insert Action

The **List Insert Queue** tab of the DPM GUI provides a list of Data Pool inserts left to process. It also provides for each listed insert a check box permitting the insert to be marked for cancellation, and an **Apply Change** button to implement the cancellation. Table 17.10-5

presents the steps required to check the Data Pool insert queue and cancel a Data Pool insert action. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).
- 2 Click on the **List Insert Queue** tab.
 - The **List Insert Queue** page is displayed, providing a table of inserts left to process showing columns of detailed information for each process, including:
 - the insert queue identifier (**InsertQueueID**).
 - the subscription identifier (**SubID**) of the subscription selected by the software for processing (*Note*: There may be multiple subscriptions specifying insertion of specific data into the Data Pool, but only one insert is needed and therefore only one of the subscriptions serves as the basis for the insert action. The **SubID** is of no particular significance to an operator and may safely be ignored.)
 - the database identifier (**dbID**), or Granule ID for the granule to be processed.
 - the **Collection** to which the granule belongs.
 - the **Version** for the collection to which the granule belongs.
 - an indication of whether the insert is to include science granules and metadata or just the metadata (**Science Granules and/or Metadata**).
 - the time at which the insert was placed in the insert queue (**Enqueue Time**).
 - the number of attempts (**Retries**) by the process to recover from retrievable errors (e.g., Data Pool disk temporarily unavailable, Data Pool directory does not exist, Data Pool database temporarily unavailable).
 - There is a **Continue** link at the bottom of the page; if there are more inserts than can be displayed in the space of one page, this link permits display of the continuation of the list.
- 3 If it is desired to cancel one or more inserts, click on the check box at the end of the row of information for the insert(s) to be canceled.
 - The check box for each selected insert is filled to indicate selection.

- 4 To implement the cancellation of any selected insert(s), click on the **Apply Change** button.
 - A confirmation message asks "Are you ready to cancel the insert for . . ." and there are links displayed for **Yes, cancel insert** and **No, return to previous page**.
- 5 To confirm cancellation, click on the **Yes, cancel insert** link.
 - The **List Insert Queue** page is displayed with the canceled insert(s) removed and the count of inserts left to process reduced by the number of inserts canceled.

Table 17.10-5. Check the Data Pool Insert Queue and Cancel a Data Pool Insert Action

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select List Insert Queue tab	single-click
3	Mark selection box for any insert(s) to be canceled	single-click(s)
4	Activate the Apply Change button	single-click
5	Activate the Yes, cancel insert link	single-click

17.10.5 Toggle the State of the NoFreeSpaceFlag

The **NoFreeSpaceFlag** must be **OFF** in order to make inserts into the Data Pool. When an insert requires more space than is available on the Data Pool disks, the insert fails and the **NoFreeSpaceFlag** is set to **ON**. To enable further inserts, it is necessary to free up additional space (e.g., run the Data Pool Cleanup utility; see Procedure 17.10.14 **Invoke the Data Pool Cleanup Utility Manually**) and then toggle the **NoFreeSpaceFlag** back to **OFF**. Table 17.10-6 presents the steps required to toggle the state of the **NoFreeSpaceFlag**. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, providing status and capabilities for changing the **Screen Refresh Rate**, **NoFreeSpaceFlag**, and **Suspension** state, as well as a table of active insert processes.
- 2 To toggle the state of the **NoFreeSpaceFlag** from **ON** to **OFF** (i.e., if the **ON** selection/indicator is filled), click the **OFF** selection/indicator button.
 - The **OFF** selection/indicator button is filled to indicate its selection.

- 3 Click on the **Apply** button to the right of the **ON** and **OFF** selection/indicator buttons.
 - The screen is refreshed and the **NoFreeSpaceFlag** status line shows "NoFreeSpaceFlag was turned off <date/time>" to indicate the change.

Table 17.10-6. Toggle the State of the NoFreeSpaceFlag

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select OFF	single-click
3	Activate the Apply button	single-click

17.10.6 Configure the Number of Allowed Active Insert Processes

The **Manage Configuration Parameters** tab on the DPM GUI permits setting or changing configuration parameters for a number of configuration defaults for the GUI. As noted in prior sections, some parameters can also be changed on the **Home Page** tab. Although most of the parameters managed on the **Manage Configuration Parameters** tab are not likely to be changed frequently, the operator may want to change some of them for tuning the Data Pool. Three of them are addressed in this section. The change process is essentially the same for any of the parameters listed on the tab.

Table 17.10-7 presents the steps required to configure the number of allowed active insert processes. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).
- 2 Click on the **Manage Configuration Parameters** tab.
 - The **Manage Configuration Parameters** page is displayed, providing a table of parameters showing three columns: **Parameter Name**, **Parameter Value** (including an entry field with current value, followed by a brief description of the parameter), and **Click on Box to Modify Parm** (containing a check box to mark the parameter for change).
 - There is an **Apply Change** button at the bottom of the page to implement any selected change(s).

- 3 In the row for the **NumOfAllowedInsertProcesses** parameter, click at the end of the entry field in the **Parameter Value** column.
 - The cursor is displayed at the end of the entry field.
- 4 Use the **Backspace** key to remove the current value, and then type the desired value.
 - The typed entry is displayed in the field.
- 5 In the row for the **NumOfAllowedInsertProcesses** parameter, click in the check box in the **Click on Box to Modify Parm** column.
 - The box is filled to indicate selection.
- 6 Click the **Apply Change** button.
 - The screen is refreshed, the check box is unfilled, and the displayed **Parameter Value** reflects the change.

Table 17.10-7. Configure the Number of Allowed Active Insert Processes

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Manage Configuration Parameters tab	single-click
3	In the row for NumOfAllowedInsertProcesses , move cursor to end of Parameter Value entry field	single-click
4	Backspace to remove current value and type the new value	press Backspace key; enter text
5	In the row for NumOfAllowedInsertProcesses , mark check box in Click on Box to Modify Parm column	single-click
6	Activate the Apply Change button	single-click

17.10.7 Configure the Default Retention Period and the Default Retention Priority

Table 17.10-8 presents the steps required to configure the default retention period and the default retention priority. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).

- 2 Click on the **Manage Configuration Parameters** tab.
 - The **Manage Configuration Parameters** page is displayed, providing a table of parameters showing three columns: **Parameter Name**, **Parameter Value** (including an entry field with current value, followed by a brief description of the parameter), and **Click on Box to Modify Parm** (containing a check box to mark the parameter for change).
 - There is an **Apply Change** button at the bottom of the page to implement any selected change(s).
- 3 In the row for the **DefaultRetentionPeriod** parameter, click at the end of the entry field in the **Parameter Value** column.
 - The cursor is displayed at the end of the entry field.
- 4 Use the **Backspace** key to remove the current value, and then type the desired value.
 - The typed entry is displayed in the field.
- 5 In the row for the **DefaultRetentionPeriod** parameter, click in the check box in the **Click on Box to Modify Parm** column.
 - The box is filled to indicate selection.
- 6 In the row for the **DefaultRetentionPriority** parameter, click at the end of the entry field in the **Parameter Value** column.
 - The cursor is displayed at the end of the entry field.
- 7 Use the **Backspace** key to remove the current value, and then type the desired value.
 - The typed entry is displayed in the field.
- 8 In the row for the **DefaultRetentionPriority** parameter, click in the check box in the **Click on Box to Modify Parm** column.
 - The box is filled to indicate selection.
- 9 Click the **Apply Change** button.
 - The screen is refreshed, the check boxes are unfilled, and the displayed **Parameter Value** reflects the changes.

Table 17.10-8. Configure the Default Retention Period and the Default Retention Priority

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Manage Configuration Parameters tab	single-click
3	In the row for DefaultRetentionPeriod , move cursor to end of Parameter Value entry field	single-click
4	Backspace to remove current value and type the new value	press Backspace key; enter text
5	In the row for DefaultRetentionPeriod , mark check box in Click on Box to Modify Parm column	single-click
6	In the row for DefaultRetentionPriority , move cursor to end of Parameter Value entry field	single-click
7	Backspace to remove current value and type the new value	press Backspace key; enter text
8	In the row for DefaultRetentionPriority , mark check box in Click on Box to Modify Parm column	single-click
9	Activate the Apply Change button	single-click

17.10.8 Use the DPM GUI to View Collection Groups and Collections

The **Manage Collection Groups** tab of the DPM GUI allows an operator to view and modify collection groups or to add a collection group in the Data Pool database. It also provides access to screens for viewing and modifying collections within a collection group, or for adding a collection to a collection group. Table 17.10-9 presents the steps required to use the DPM GUI to view collection groups and collections. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).

- 2 Click on the **Manage Collection Groups** tab.
 - The **Manage Collection Groups** page is displayed. Depending on whether the collection group is an ECS or a NONECS collection group, the page specifies that the **Data Source** is “ECS” or “NONECS,” respectively. The page identifies the selected group at the top and lists for that group the collections that are valid for insertion in the Data Pool, as well as whether the insertion is for science and metadata or metadata only. On this page, the collection ID entries in the **Collection** column are links.
 - At the bottom of the page there are links permitting access to functions for **Add Collection Group** and **Modify Collection Group Description**.
- 3 To obtain more information about the collections in one of the groups, click on its link in the **Group ID** column.
 - The **List of Collections** page is displayed, identifying the selected group at the top and listing for that group the collections that are valid for insertion in the Data Pool, as well as whether the insertion is for science and metadata or metadata only. On this page, the collection ID entries in the **Collection** column are links.
- 4 To obtain a description of one of the collections, click on its link in the **Collection** column.
 - A **Description for Collection** page is displayed identifying the selected collection and providing the description. There is a link at the bottom to enable the operator to **Return to previous page**.
- 5 If it is desirable to view a description for another collection in the same group, click on the **Return to previous page** link; otherwise, go to Step 7.
 - The **List of Collections** page is displayed again.
- 6 Repeat Steps 4 and 5 as desired.
- 7 If it is desired to obtain more information about collections in a different collection group, repeat Steps 2 through 6.

Table 17.10-9. Use the DPM GUI to View Collection Groups and Collections

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Manage Collection Groups tab	single-click
3	In the Group ID column, activate the link for a collection for which more information is to be displayed	single-click
4	In the Collection column, activate the link for a collection for which a description is to be displayed	single-click
5	To view a description for another collection in the same group, activate the Return to previous page link; otherwise, go to Step 7	single-click
6	Repeat Steps 4 and 5 as desired	
7	To obtain more information about collections in a different group, repeat Steps 2 through 6	

17.10.9 Use the DPM GUI to Modify Collection Groups

Rarely, it may be desirable to modify the description of one or more of the collection groups listed on the **Manage Collection Groups** page. Table 17.10-10 presents the steps required to use the DPM GUI to modify collection groups. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).
- 2 Click on the **Manage Collection Groups** tab.
 - The **Manage Collection Groups** page is displayed, providing a table listing collection groups with columns providing for each group a **Group ID** and a brief **Description** of the group. The entries in the **Group ID** column are links.
 - At the bottom of the page there are links permitting access to functions for **Add Collection Group** and **Modify Collection Group Description**.
- 3 Click on the **Modify Collection Group Description** link at the bottom of the page.
 - The screen displays a page listing the collection groups with their descriptions in text-entry fields, each accompanied by a check box in a **Click on Box to Modify Desc** column.
- 4 Click at the end of the text-entry field for the collection group to be modified.
 - The cursor is displayed at the end of the **Description** text-entry field.

- 5 Use the **Backspace** key to delete the existing description and type the desired description (*Note:* You may also use the mouse to drag the cursor over all or part of the text to be replaced, highlighting the selected text, and type new text to replace the highlighted text.)
 - The typed text appears in the field.
- 6 Click on the check box in the **Click on Box to Modify Desc** column to the right of the newly modified description.
 - The box is filled to indicate its selection.
- 7 Repeat Steps 4 through 6 for any additional descriptions to be modified.
- 8 Click on the **Apply Change** button at the bottom of the **Click on Box to Modify Desc** column.
 - The screen is refreshed and the **Manage Collection Groups** page reflects the changed description(s).

Table 17.10-10. Use the DPM GUI to Modify Collection Groups

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Manage Collection Groups tab	single-click
3	Activate the Modify Collection Group Description link	single-click
4	Move cursor to end of the text-entry field for the collection group to be modified	single-click
5	Backspace to remove current value and type the new description	press Backspace key; enter text
6	Mark the check box in the Click on Box to Modify Desc column to the right of the newly modified description	single-click
7	Repeat Steps 4 through 6 for any additional descriptions to be modified	
8	Activate the Apply Change button (at the bottom of the Click on Box to Modify Desc column)	single-click

17.10.10 Use the DPM GUI to Add a Collection Group

From time to time, it may be necessary to add a collection group (e.g., if a DAAC begins archiving data from a new instrument). Typically, however, new collection groups are added only during releases of new software versions and this procedure is seldom used.

Caution:

The Add Collection Group function is to be exercised judiciously because the DPM GUI does not provide any means of deleting collection groups.

Table 17.10-11 presents the steps required to use the DPM GUI to add a collection group. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).
- 2 Click on the **Manage Collection Groups** tab.
 - The **Manage Collection Groups** page is displayed, providing a table listing collection groups with columns providing for each group a **Group ID** and a brief **Description** of the group. The entries in the **Group ID** column are links.
 - At the bottom of the page there are links permitting access to functions for **Add Collection Group** and **Modify Collection Group Description**.
- 3 Click on the **Add Collection Group** link at the bottom of the page.
 - The screen displays a page with columns of text-entry fields; a **Group ID** column and a **Description** column permit identification and description of new collection groups.
- 4 Click on the option button in the **Data Source** column and then click on **ECS** or **NONECS** to specify whether the collection to be added is an ECS Collection or a NONECS Collection, respectively.
 - The selected option is displayed on the option button.
- 5 Click in a **Group ID** text-entry field.
 - The cursor is displayed in the **Group ID** text-entry field.
- 6 Type the identifier for a new collection group.
 - The typed entry is displayed in the field.
- 7 Click in the **Description** text-entry field for the newly entered **Group ID**.
 - The cursor is displayed at the end of the **Description** text-entry field.
- 8 Type the description for the new collection group.
 - The typed entry is displayed in the field.

- 9 Repeat Steps 4 through 8 for any additional collection groups to be added.
- 10 Click on the **Apply Change** button at the bottom of the entry-field area.
 - The screen is refreshed and the **Manage Collection Groups** page reflects the new collection group(s).

Table 17.10-11. Use the DPM GUI to Add a Collection Group

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Manage Collection Groups tab	single-click
3	Activate the Add Collection Group link	single-click
4	Use the option button in the Data Source column to select ECS or NONECS	click ; then click-select
5	Move cursor to a Group ID text-entry field	single-click
6	Type the identifier for a new collection group	enter text
7	Move cursor to the Description text-entry field for the newly entered Group ID	single-click
8	Type the description for the new collection group	enter text
9	Repeat Steps 4 through 8 for any additional collection groups to be added	
10	Activate the Apply Change button at the bottom of the entry-field area	single-click

17.10.11 Use the DPM GUI to Add ECS Collections to a Collection Group

Although an initial Data Pool structure is provided, not all collections are necessarily specified as eligible for Data Pool insertion. Based on experience, or on changes in demand, a DAAC may wish to add one or more collections to a data group. Table 17.10-12 presents the steps required to use the DPM GUI to add ECS collections to a collection group. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).
- 2 Click on the **Manage Collection Groups** tab.
 - The **Manage Collection Groups** page is displayed, providing a table listing collection groups with columns providing for each group a **Group ID** and a brief **Description** of the group. The entries in the **Group ID** column are links.

- 3 Click on the **Group ID** link for the ECS collection group to which the collection is to be added.
 - The **List of Collections** page is displayed, identifying the selected group at the top and listing for that group the collections and versions that are valid for insertion in the Data Pool, as well as whether the insertion is for science and metadata or metadata only. The page also lists whether the collections are enabled for HEG processing, and the Spatial Search Type for each collection.
- 4 Click on the **Add Collection** link at the bottom.
 - The **Add Collections** page is displayed, indicating the selected collection group at the top and listing from the Science Data Server database collections not currently approved as eligible for Data Pool insertion. The page also provides a column with option buttons permitting the operator to select **Science and Metadata** or **Metadata Only** and a column enabling selection of **Valid for data pool** or **Invalid for data pool**. The defaults are **Science and Metadata** and **Invalid for data pool**, respectively. There is also a **Click on Box to Add Collection** column with check boxes to mark the collection(s) for addition, and an **Apply Change** button to implement the addition(s).
- 5 If the collection to be added is to permit insertion of **Science and Metadata**, go to Step 6; otherwise, click on its option button in the **Science Granules and/or Metadata** column and click to select **Metadata Only**.
 - The selected choice is displayed on the option button.
- 6 Click on the collection's option button in the **Data Pool Insertion** column and click to select **Valid for data pool**.
 - The selected choice is displayed on the option button.
- 7 Click on the collection's check box in the **Click on Box to Add Collection** column.
 - The box is filled to indicate its selection.
- 8 Repeat Steps 5 through 7 for any additional collections to be added to the collection group identified at the top of the page.
- 9 Click on the **Apply Change** button at the bottom of the **Click on Box to Add Collection** column.
 - The **List of Collections** page reflects the addition(s).
- 10 Repeat Steps 2 through 9 for any additional collection(s) to be added to another collection group.

Table 17.10-12. Use the DPM GUI to Add ECS Collections to a Collection Group

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Manage Collection Groups tab	single-click
3	Activate the Group ID link for the ECS collection group to which the collection is to be added	single-click
4	Activate the Add Collection link	single-click
5	To restrict insertion of metadata only, use the option button in the Science Granules and/or Metadata column to select Metadata Only ; otherwise, go to Step 6	click option
6	Use option button in the Data Pool Insertion column to select Valid for data pool	click option
7	Mark the check box for the collection in the Click on Box to Add Collection column	single-click
8	Repeat Steps 5 through 7 for any additional collections to be added to the collection group identified at the top of the page	
9	Activate the Apply Change button at the bottom of the Click on Box to Add Collection column	single-click
10	Repeat Steps 2 through 9 for any additional collection(s) to be added to another collection group	

17.10.12 Use the DPM GUI to Add NONECS Collections to a Collection Group

Table 17.10-13 presents the steps required to use the DPM GUI to add non-ECS collections to a collection group. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).
- 2 Click on the **Manage Collection Groups** tab.
 - The **Manage Collection Groups** page is displayed, providing a table listing collection groups with columns providing for each group a **Group ID** and a brief **Description** of the group. The entries in the **Group ID** column are links.
- 3 Click on the **Group ID** link for the NONECS collection group to which the collection is to be added.
 - The **List of Collections** page is displayed, identifying the selected group at the top and listing for that group the collections and versions that are valid for insertion in the Data Pool, as well as whether the insertion is for science and metadata or metadata only. The page also lists whether the collections are enabled for HEG processing, and the Spatial Search Type for each collection.

- 4 Click on the **Add Collection** link at the bottom.
- The **Add Collections** page is displayed, indicating the selected collection group at the top and permitting entry or specification of information to define the collection to be added. The page provides a column with an entry field for **Collection**, a column with an entry field for **Version**, and a column with an entry field for **Description**. It provides a column with an option button permitting the operator to select **Science and Metadata** or **Metadata Only** and a column enabling selection of **Valid for data pool** or **Invalid for data pool**. The defaults are **Science and Metadata** and **Valid for data pool**, respectively. There is also a column with an option button permitting selection of a **Spatial Search Type**; the default is **Not supported**. An **Apply Change** button is provided at the bottom to implement the addition.
- 5 Click in the entry field for **Collection**.
 - The cursor is displayed in the field.
- 6 Type the name for the collection.
 - The typed entry is displayed in the field.
- 7 Click in the entry field for **Version**.
 - The cursor is displayed in the field.
- 8 Type the version.
 - The typed entry is displayed in the field.
- 9 If the collection to be added is to permit insertion of **Science and Metadata**, go to Step 10; otherwise, click on its option button in the **Science Granules and/or Metadata** column and click to select **Metadata Only**.
 - The selected choice is displayed on the option button.
- 10 Click on the option button in the **Data Pool Insertion** column and click to select **Valid for data pool**.
 - The selected choice is displayed on the option button.
- 11 Click on the option button in the **Spatial Search Type** column and click to select the spatial search type (choices are **Not supported**, **Gpolygon**, **Rectangle**, and **Orbit**).
 - The selected choice is displayed on the option button.
- 12 Click on the **Apply Change** button.
 - The **List of Collections** page reflects the addition(s).

Table 17.10-13. Use the DPM GUI to Add NONECS Collections to a Collection Group

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Manage Collection Groups tab	single-click
3	Activate the Group ID link for the NONECS collection group to which the collection is to be added	single-click
4	Activate the Add Collection link	single-click
5	Move the cursor to the entry field for Collection .	single-click
6	Type the name for the collection.	enter text
7	Move the cursor to the entry field for Version .	single-click
8	Type the version.	enter text
9	To restrict insertion of metadata only, use the option button in the Science Granules and/or Metadata column to select Metadata Only ; otherwise, go to Step 10.	click option
10	Use option button in the Data Pool Insertion column to select Valid for data pool	click option
11	Use the option button in the Spatial Search Type column to select the Spatial Search Type .	click option
12	Activate the Apply Change button at the bottom of the Click on Box to Add Collection column	single-click

17.10.13 Use the DPM GUI to Modify Collections in a Collection Group

As part of managing the Data Pool storage and retention of data, making adjustments based on experience and/or changes in demand, it may be desirable to modify a collection. The modification may mean specifying that metadata only may continue to be inserted and science granules may no longer be inserted, or declaring the collection no longer valid for data pool insertion at all. Table 17.10-14 presents the steps required to use the DPM GUI to modify collections in a collection group. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).
- 2 Click on the **Manage Collection Groups** tab.
 - The **Manage Collection Groups** page is displayed, providing a table listing collection groups with columns providing for each group a **Group ID** and a brief **Description** of the group. The entries in the **Group ID** column are links.

- 3 Click on the **Group ID** link for the collection group containing the collection to be modified.
 - The **List of Collections** page is displayed, identifying the selected group at the top and listing for that group the collections that are valid for insertion in the Data Pool, as well as whether the insertion is for science and metadata or metadata only. The page also lists whether the collections are enabled for HEG processing, and the Spatial Search Type for each collection.
- 4 Click on the **Modify Collection** link at the bottom.
 - The **Modify Collections** page is displayed, indicating the selected collection group at the top, its data source (ECS or NONECS) and listing collections currently approved as eligible for Data Pool insertion. The page also provides a column with option buttons permitting the operator to select **Science and Metadata** or **Metadata Only** and a column enabling selection of **Valid for data pool** or **Invalid for data pool**. If the data source is NONECS, there is also a column with option buttons permitting selection of **Spatial Search Type**.
- 5 If the modification to a collection is to change the selected option displayed on the option button for insertion of **Science and Metadata** (in the **Science Granules and/or Metadata** column), click on that option button for the collection and click to select the desired option from the displayed choices.
 - The selected choice is displayed on the option button.
- 6 If the modification is to change a collection's eligibility for insertion in the Data Pool, click on that collection's option button in the **Data Pool Insertion** column and click to select the desired option from the displayed choices.
 - The selected choice is displayed on the option button.
- 7 If the modification is for a NONECS Collection and is to change a collection's Spatial Search Type, click on that collection's option button in the **Spatial Search Type** column and click to select the desired option from the displayed choices.
 - The selected choice is displayed on the option button.
- 8 Click on the collection's check box in the **Click on Box to Modify Collection** column.
 - The box is filled to indicate its selection.
- 9 Repeat Steps 5, 6, and 8 for any additional ECS collections to be modified or Steps 5 through 8 for any additional NONECS collections to be modified.
- 10 Click on the **Apply Change** button at the bottom of the **Click on Box to Modify Collection** column.
 - The **List of Collections** page reflects the change(s).

- 11 Repeat Steps 2 through 10 for any modifications to one or more collections in another collection group.

Table 17.10-14. Use the DPM GUI to Modify Collections in a Collection Group

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Manage Collection Groups tab	single-click
3	Activate the Group ID link for the collection group containing the collection to be modified	single-click
4	Activate the Modify Collection link	single-click
5	To change the selected option displayed on the option button for insertion of Science and Metadata (in the Science Granules and/or Metadata column), use the option button in that column to select the desired option	click option
6	To change a collection's eligibility for insertion in the Data Pool, use option button in the Data Pool Insertion column to select the desired option	click option
7	If the modification is for a NONECS collection and is to change the Spatial Search Type, use the collection's option button in the Spatial Search Type column to select the desired option.	click option
8	Mark the check box for the collection in the Click on Box to Modify Collection column	single-click
9	Repeat Steps 5, 6, and 8 for any additional ECS collections to be modified or Steps 5 through 8 for any additional NONECS collection to be modified	
10	Activate the Apply Change button at the bottom of the Click on Box to Modify Collection column	single-click
11	Repeat Steps 2 through 9 for any modifications to one or more collections in another collection group	

17.10.14 Use the DPM GUI to Check the Status of Batch Inserts

The DPM GUI provides a page to display a summary of the status of batch Data Pool inserts made using the Synergy III batch insert utility. Table 17.10-15 presents the steps required to use the DPM GUI to check the status of Batch Inserts. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
- The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).

- 2 To view the status of batch insert processes, click on the **Batch Summary** tab.
- The GUI displays the **Batch Summary** page, providing for each batch label the numbers of inserts for that label that are **New**, **Completed**, **Failed**, in **Retry**, and **Canceled**.
- The page also shows the screen refresh rate in minutes; the rate may be changed by clicking in the **Screen Refresh Rate** field, replacing the displayed value with the desired value, and clicking on the **Apply Refresh Rate** button.

Table 17.10-15. Use the DPM GUI to Check the Status of Batch Inserts

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Batch Summary tab	single-click

17.10.15 Use the DPM GUI to View a List of Themes

The Data Pool Web Access Tool provides the capability for end users to search the Data Pool for data associated with themes. Accordingly, as data are inserted into the Data Pool, or even after data are resident in the Data Pool, it is possible to associate the granules with themes. The DPM GUI has a **Manage Themes** tab that permits viewing, modifying, and deleting themes.

Table 17.10-16 presents the steps required to use the DPM GUI to view a list of themes. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).
- 2 Click on the **Manage Themes** tab.
 - The **Manage Themes** page is displayed, providing a table listing themes with columns providing for each theme a **Theme Name** and **Description**, an indication of whether the theme is **Insert Enabled**, an indication of whether the theme is **Web Enabled**, and a check box that can be used with an **Apply Change** button at the bottom to delete the theme. There are option buttons, a text entry field, and an **Apply Filter** button at the top for specifying filters to limit the number of themes displayed, permitting selection on the basis of whether the theme is **Web Visible** or **Insert Enabled**, or by the **Beginning Letters** in the theme name.

- 3 If it is desirable to filter the list, click either or both option buttons to select the desired **Web Visible** and/or **Insert Enabled** option and/or click in the **Beginning Letters** field and type the first few letters of the name(s) of known and sought themes.
 - The option button(s) display the selected choice(s) and/or the **Beginning Letters** field displays the typed entry.
- 4 Click on the **Apply Filters** button.
 - The listed themes reflect the choices displayed for the filters.

Table 17.10-16. Use the DPM GUI to View a List of Themes

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Manage Themes tab	single-click
3	To filter the list use option button(s) for Web Visible and/or Insert Enabled options, type first few letters of the name(s) of known and sought themes.	click select and/or enter text
4	Activate the Apply Filters button	single-click

17.10.16 Use the DPM GUI to Modify a Theme

Table 17.10-17 presents the steps required to use the DPM GUI to modify a theme. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).
- 2 Click on the **Manage Themes** tab.
 - The **Manage Themes** page is displayed, providing a table listing themes with columns providing for each theme a **Theme Name** and **Description**, an indication of whether the theme is **Insert Enabled**, an indication of whether the theme is **Web Enabled**, and a check box that can be used with an **Apply Change** button at the bottom to delete the theme. There are option buttons, a text entry field, and an **Apply Filter** button at the top for specifying filters to limit the number of themes displayed, permitting selection on the basis of whether the theme is **Web Visible** or **Insert Enabled**, or by the **Beginning Letters** in the theme name.

- 3 Click on the **Modify Theme** link at the bottom of the list of themes (scrolling down if necessary).
- The **Modify Theme** page is displayed.
- 4 If it is desirable to filter the displayed list of themes and characteristics, click either or both option buttons to select the desired **Web Visible** and/or **Insert Enabled** option and/or click in the **Beginning Letters** field and type the first few letters of the name(s) of known and sought themes.
- The option button(s) display the selected choice(s) and/or the **Beginning Letters** field displays the typed entry.
- 5 Click on the **Apply Filters** button.
- The listed themes reflect the choices displayed for the filters.
- 6 If it is desirable to modify the description of a theme, click in the field in the **Description** column in the row for the theme.
- The cursor is displayed in the field.
- 7 Modify the text as desired, either by typing over text highlighted by dragging the cursor or by backspacing to delete undesired text and typing the desired replacement.
- The desired description is displayed in the field.
- 8 If it is desired to change whether the theme is **Web Visible** and/or **Insert Enabled**, click on the toggle button box in the appropriate column(s) in the row for the theme
- Any filled button boxes that are clicked toggle to unfilled, and any unfilled button boxes that are clicked toggle to filled.
- 9 Click on the toggle button box in the **Click on Box to Modify** column in the row for the theme being changed.
- The clicked toggle button box is filled.
- 10 Repeat steps 4 –9 for any additional themes to be modified.
- 11 Click on the **Apply Change** button at the bottom of the page.
- Any changes are applied in the database and the box(es) in the **Click on Box to Modify** column that were filled are unfilled.

Table 17.10-17. Use the DPM GUI to Modify a Theme

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Manage Themes tab	single-click
3	Activate the Modify Theme link	single-click
4	To filter the list of displayed themes and characteristics, use option button(s) for Web Visible and/or Insert Enabled options, type first few letters of the name(s) of known and sought themes	click select and/or enter text
5	Activate the Apply Filters button	single-click
6	To modify the description, move the cursor to the field in the Description column	single-click
7	Modify text as desired	click-drag to highlight or backspace ; enter text
8	To modify Web Visible and/or Insert Enabled option, use toggle button box(es)	click(s)
9	Fill toggle button box in the Click on Box to Modify column in the row for the theme being changed	single-click
10	Repeat Steps 4 – 9 for any additional themes to be modified.	
11	Activate the Apply Change button	single-click

17.10.17 Use the DPM GUI to Add a Theme

Table 17.10-18 presents the steps required to use the DPM GUI to add a theme. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).
- 2 Click on the **Manage Themes** tab.
 - The **Manage Themes** page is displayed, providing a table listing themes with columns providing for each theme a **Theme Name** and **Description**, an indication of whether the theme is **Insert Enabled**, an indication of whether the theme is **Web Enabled**, and a check box that can be used with an **Apply Change** button at the bottom to delete the theme. There are option buttons, a text entry field, and an **Apply Filter** button at the top for specifying filters to limit the number of themes displayed, permitting selection on the basis of whether the theme is **Web Visible** or **Insert Enabled**, or by the **Beginning Letters** in the theme name.

- 3 Click on the **Add New Theme** link at the bottom of the list of themes (scrolling down if necessary).
 - The **Add New Theme** page is displayed.
- 4 Click in the **Theme** field in the **Theme Name** column.
 - The cursor is displayed in the field.
- 5 Type a name for the theme to be added.
 - The typed entry is displayed in the field.
- 6 Click in the **Description** field in the **Description** column.
 - The cursor is displayed in the field.
- 7 Type a description for the theme to be added.
 - The typed entry is displayed in the field.
- 8 If it is desirable to make the theme web visible at the current time, click in the toggle button box in the **Web Visible** column.
 - The clicked box is filled.
- 9 If it is desirable to enable Data Pool inserts for the theme at the current time, click in the toggle button box in the **Insert Enabled** column.
 - The clicked box is filled.
- 10 Click on the **Apply Change** button at the bottom of the page.
 - The theme is added to the database and the entry fields are cleared.
- 11 Click on the **Return to theme list** link.
 - The added theme is displayed in the list of themes.

Table 17.10-18. Use the DPM GUI to Add a Theme

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Manage Themes tab	single-click
3	Activate the Add New Theme link	single-click
4	Move the cursor to the Theme field in the Theme Name column	single-click
5	Type a name for the theme	enter text
6	Move the cursor to the Description field in the Description column	single-click
7	Type a description for the theme	enter text
8	To make the theme web visible, fill the toggle button box in the Web Visible column	single-click
9	To enable Data Pool inserts, fill the toggle button box in the Insert Enabled column	single-click
10	Activate the Apply Change button	single-click
11	Activate the Return to theme list link	single-click

17.10.18 Use the DPM GUI to Delete a Theme

Table 17.10-19 presents the steps required to use the DPM GUI to delete a theme. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DPM GUI (refer to Procedure 17.10.1 **Launch the DPM GUI**).
 - The **Home Page** is the default display, offering tabs for access to Data Pool maintenance functions (**Batch Summary**, **List Insert Queue**, **Manage Configuration Parameters**, **Manage Collection Groups**, and **Manage Themes**).
- 2 Click on the **Manage Themes** tab.
 - The **Manage Themes** page is displayed, providing a table listing themes with columns providing for each theme a **Theme Name** and **Description**, an indication of whether the theme is **Insert Enabled**, an indication of whether the theme is **Web Enabled**, and a check box that can be used with an **Apply Change** button at the bottom to delete the theme. There are option buttons, a text entry field, and an **Apply Filter** button at the top for specifying filters to limit the number of themes displayed, permitting selection on the basis of whether the theme is **Web Visible** or **Insert Enabled**, or by the **Beginning Letters** in the theme name.

- 3 If it is desirable to filter the list, click either or both option buttons to select the desired **Web Visible** and/or **Insert Enabled** option and/or click in the **Beginning Letters** field and type the first few letters of the name(s) of known and sought themes.
 - The option button(s) display the selected choice(s) and/or the **Beginning Letters** field displays the typed entry.
- 4 Click on the **Apply Filters** button.
 - The listed themes reflect the choices displayed for the filters.
- 5 In the row for the theme to be deleted, click in the toggle button box in the **Click on Box to Delete** column.
 - The clicked box is filled.
- 6 Repeat step 5 for any additional themes to be deleted at this time.
- 7 Click on the **Apply Change** button at the bottom of the page.
 - A dialog box asks **Are you sure you want to delete this theme?**.
- 8 Click on the **OK** button in the dialog box.
 - The list of themes reflects the deletion(s).

Table 17.10-19. Use the DPM GUI to Delete a Theme

Step	What to Do	Action to Take
1	Launch the DPM GUI	use Procedure 17.10.1
2	Select Manage Themes tab	single-click
3	To filter the list of displayed themes and characteristics, use option button(s) for Web Visible and/or Insert Enabled options, type first few letters of the name(s) of known and sought themes	click select and/or enter text
4	Activate the Apply Filters button	single-click
5	Fill the toggle button box in the Click on Box to Delete column	single-click
6	Repeat Step 5 for any additional themes to be deleted	
7	Activate the Apply Change button	single-click
8	Activate the OK button in the confirmation dialog	single-click

17.10.19 Use the Update Granule Utility to Extend the Retention for Selected Science Granules

A change in user interest in data from a particular location may make it desirable to retain certain data already in the Data Pool for a longer period of time than originally specified. Data Pool maintenance personnel can run the Update Granule Utility to update the expiration date for

selected science granules. This utility also permits modifying a granule's retention priority, which can affect how soon the Data Pool Cleanup Utility removes the granule from the Data Pool.

When updating the granules associated with a theme, the utility updates the expiration date of a granule associated with that theme if and only if the new expiration date specified is later than the current expiration date of the granule. It updates the retention priority of a granule associated with that theme if and only if the new expiration priority specified is higher than the current retention priority of the granule.

The Update Granule Utility permits updating granule information using a command-line interface. The following options may be used:

-noprompt: suppressing prompts and detailed information display.

-theme: specifies a valid theme name (i.e., a character string that matches an existing theme name in the Data Pool inventory).

A single granule may be updated using manual input. Multiple granule updates can be handled using an input file containing a list of granules to be updated, or by specifying a theme. The input file must be structured as a list of granules to be processed, one per line. Each line contains a granule ID (reflecting the Sybase entry in the Data Pool database), an expiration date, and (optionally) a new retention priority, the value of which may be null (i.e., left blank). The fields are separated by a single space. There should be no blank lines before the first or after the last granule in the list. The file contents should be similar to the following example.

```
GRANULE_ID_4832 EXP_DATE=2002/2/28 RETENTION=255
GRANULE_ID_4876 EXP_DATE=2002/2/28 RETENTION=200
GRANULE_ID_4883 EXP_DATE=2002/2/28 RETENTION=
GRANULE_ID_4937 EXP_DATE=2002/2/28
GRANULE_ID_4966 EXP_DATE=2002/2/28 RETENTION=255
```

The Update Granule Utility connects to the Data Pool database and calls Sybase stored procedures to perform the requested updates. Therefore, the utility runs only if the Data Pool database server is running and if the database is available. It also assumes the stored procedures are present. The Granule Update Utility may be run as a background process, with suppression of all warning/error messages and confirmation prompts if desired. When the utility is run, it writes information, any warnings, any errors, and messages to a log file about granules as they are updated.

Table 17.10-20 presents the steps required to use the Update Granule Utility to extend the retention for selected science granules. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in at the machine on which the Update Granule Utility is installed (e.g., e0dps01, g0dps01, l0dps01, n0dps01).
- 2 To change to the directory for starting the Update Granule Utility, type **cd /usr/ecs/<MODE>/CUSTOM/utilities** and then press the **Return/Enter** key.
 - The working directory is changed to **/usr/ecs/<MODE>/CUSTOM/utilities**.
- 3 At the UNIX prompt, enter the command to start the Update Granule Utility, in the form **EcDIUpdateGranule.pl <command line parameters>**. (*Note:* The first command-line parameter specified must be **<MODE>**, a valid, existing Data Pool mode [e.g., OPS, TS1, TS2]).
 - The following six permutations are valid command-line entries for initiating the Update Granule utility:
 - **EcDIUpdateGranule.pl <MODE> -file <filename>** (to update granules listed in an input file named **<filename>** while displaying all summary information to the operator, and asking confirmation of the update).
 - **EcDIUpdateGranule.pl <MODE> -grnid <granuleID> -exp <expiration date> [-ret <retention priority>]** (to update a granule identified by its **<granuleID>** with a new expiration date and, optionally, a new retention priority while displaying all summary information to the operator, and asking confirmation of the update).
 - **EcDIUpdateGranule.pl <MODE> -noprompt -file <filename>** (to update granules listed in an input file named **<filename>** with no confirmation or information displayed to the operator).
 - **EcDIUpdateGranule.pl <MODE> -noprompt -grnid <granuleID> -exp <expiration date> [-ret <retention priority>]** (to update a granule identified by its **<granuleID>** with a new expiration date and, optionally, a new retention priority with no confirmation or information displayed to the operator).
 - **EcDIUpdateGranule.pl <MODE> -theme <themename> -exp <expiration date> [-ret <retention priority>]** (to update a granule identified by its **<themename>** with a new expiration date and, optionally, a new retention priority while displaying all summary information to the operator, and asking confirmation of the update).
 - **EcDIUpdateGranule.pl <MODE> -noprompt -theme <themename> -exp <expiration date> [-ret <retention priority>]** (to update a granule identified by its **<themename>** with a new expiration date and, optionally, a new retention priority with no confirmation or information displayed to the operator).
 - The utility executes and displays a confirmation prompt similar to the following:

```

You are about to start updating granules.
-----
Total number of granules: 11
Total size of granules: 8.61339673772454 MB
Do you wish to continue processing the update? [y/n]y

```

4 Type **y** and then press the **Return/Enter** key.

- The utility completes execution and displays output similar to the following:

```
Update completed.  
Please check the database to ensure proper completion.
```

```
Update took 2 seconds to complete
```

```
Gracefully exiting...
```

- To check the database, have the Database Administrator use *isql* commands on the Data Pool database host to query the DIGranuleExpirationPriority table. It may also be useful to examine the Update Granule Utility log file to determine whether there were any problems with the execution. To examine that log file, go to Steps 5 and 6.

5 To change to the directory containing the Update Granule Utility log file and other log files, type **cd /usr/ecs/<MODE>/CUSTOM/logs**, and then press the **Return/Enter** key.

- The working directory is changed to **/usr/ecs/<MODE>/CUSTOM/logs**.

6 To examine the Update Granule Utility log file, type **pg EcDIUpdateGranule.log** and then press the **Return/Enter** key.

- The first page of the log file is displayed; additional sequential pages can be displayed by pressing the **Return/Enter** key at the **:** prompt. It is also possible to search forward by typing **<search item>**. For example, to search the log file for reference to one of the granules updated, type **<granuleID>** and then press the **Return/Enter** key.
- Although this procedure is written for the **pg** command, any UNIX editor or visualizing command (e.g., **vi**, **view**, **more**, **tail**) can be used to review the log.
- The log entries have a time and date stamp; about the time that the update was executed, the log should show entries similar to the following:

```
2001/11/29 15:52:50.814:Update started...
```

```
2001/11/29 15:52:50.964:Granule 4871 updated  
2001/11/29 15:52:51.083:Granule 4954 updated  
2001/11/29 15:52:51.212:Granule 4955 updated  
2001/11/29 15:52:51.346:Granule 4956 updated  
2001/11/29 15:52:51.409:Granule 4957 updated  
2001/11/29 15:52:51.688:Granule 4959 updated  
2001/11/29 15:52:51.778:Granule 4961 updated  
2001/11/29 15:52:51.998:Granule 4963 updated  
2001/11/29 15:52:52.107:Granule 4963 updated  
2001/11/29 15:52:52.394:Granule 4964 updated  
2001/11/29 15:52:52.569:Granule 4966 updated  
2001/11/29 15:52:52.590:Update ended.
```

```
2001/11/29 15:52:52.608:This update took approximately 2 seconds
```

- If the log indicates errors or warnings, it may be necessary to correct the condition identified in the entry (e.g., edit the data in the granule list in the input file) and run the utility again. Specific error entries depend on the error that occurred; examples of error entries in the log may be similar to the following:

```
4959      AST_04          1 0.03962299 Jul 30 2001 12:00AM Feb  2 1998
11:59PM      255          2
```

Warning: The new expiration date for the above granule is less than or equal to today's date.

```
DATABASE ERROR:Server message number=120001 severity=16 state=1

EcDIUpdateGranule_1.pl aborted due to insufficient processing data:
All the granule triplets had errors.
```

Table 17.10-20. Use the Update Granule Utility to Extend the Retention for Selected Science Granules

Step	What to Do	Action to Take
1	Log in at host for Update Granule Utility	enter text; press Return/Enter
2	cd /usr/ecs/<MODE>/CUSTOM/utilities	enter text; press Return/Enter
3	EcDIUpdateGranule.pl <command line parameters>	enter text; press Return/Enter
4	Enter y	enter text; press Return/Enter
5	cd /usr/ecs/<MODE>/CUSTOM/logs	enter text; press Return/Enter
6	pg EcDIUpdateGranule.log (or other editor or visualizing command)	enter text; press Return/Enter

17.10.20 Invoke the Data Pool Cleanup Utility Manually

The Data Pool Cleanup Utility permits ECS Operations Staff to remove expired granules from the Data Pool disks and corresponding inventory. It must be executed on the machine where the granules are located. Qualification for cleanup is based on two criteria: expiration date/time and retention priority.

To determine whether a granule qualifies for deletion, the utility first compares the granule's expiration date (insert date plus retention period in days specified in the insert subscription) with a cut-off date/time. If a granule's expiration date is prior to the cut-off, the granule qualifies as expired.

- The default cut-off date/time is set to midnight of the previous day.

- The operator is permitted to specify an ‘offset’ in hours to add or subtract hours from the previous midnight to determine a cut-off date/time for deletion.

Next, the utility compares the granule's retention priority with any priority limit the operator has specified to identify those granules that should be retained in the Data Pool even though their expiration date has passed.

- Retention priority is an integer from 1 to 255.
- Retention priority for granules already in the Data Pool may be modified using the granule expiration update script.

The Data Pool Cleanup Utility removes those granules with expiration date prior to the cut-off date/time and with retention priority is less than or equal to the specified limit. If a priority limit is not specified in command-line input parameters at the time it is invoked, the Cleanup Utility reads the parameter ‘DEFAULT_LIMIT’ from its configuration file to get a priority limit. If the operator does not wish to use retention priority as a criterion for deletion, the default limit should be set to 255. If the operator specifies a theme name, the utility applies the removal criteria only to those granules associated with the theme.

The Cleanup Utility can alternatively take as input a file listing granuleId’s for granules to be deleted. The file can contain single or multiple granuleId’s per line separated by whitespace.

The Cleanup Utility cleans up non-ECS data just as it does ECS data. It can remove granule cross references associated with a given theme, and also remove the granules associated with the theme. The option **-themexref** specifies a theme for which all cross references are to be removed from the Data Pool. The option **-theme** specifies a theme for which associated granules are to be removed. If a granule is referenced to more than one theme, the **-theme** option removes only the cross reference to the specified theme, without removing the granule.

The Cleanup Utility provides a validation capability to identify and clean up discrepancies between the Data Pool inventory and disk content. It may also be used just to log such discrepancies. This capability uses the options **-orphan** (to find/remove data in the Data Pool that is not represented by entries in the Data Pool inventory) and **-phantom** (to find/remove entries in the Data Pool inventory that have one or more science or metadata files, or associated browse files, missing from the Data Pool. To specify just logging of the discrepancies, the operator uses the option **-nofix**.

As part of its processing, the Cleanup Utility performs the following actions:

- removes from the Data Pool and inventory all data pool granules, browse files, and browse links that meet the specified cleanup criteria (provided that no other granules are cross-referenced to them – i.e., linked by a theme).
- exports a list of deleted granules for accessibility by the EOS Clearing House (ECHO); to do this, the utility invokes an external utility, EcOsBulkURL, which generates an XML file containing a list of deleted granules that qualify for ECHO export and stores it in the directory /datapool/<MODE>/user/URLExport.

- removes all HEG conversion files associated with the HEG order IDs that have the status of “DONE” or “FAILED” and a timestamp older than the cleanup age specified by the **HEGCleanupAge** parameter in the DIConfig table of the Data Pool database. (HEG orders and conversion files are generated when end users request HEG-converted data using the Data Pool Web Access tool.)
- (if specified) checks the Data Pool inventory and disk content for the existence of orphans and/or phantoms, removing or just logging them depending on the command-line options specified.
- determines how much free space has been cleared from the Data Pool disks and, if that space is greater than or equal to the amount of disk space specified in the **MIN_FREE_SPACE** parameter, updates the ‘NoFreeSpaceFlag’ in the Data Pool database, setting it to permit insertion of additional data.

If the Cleanup Utility is interrupted during execution, upon restart it continues from the point of interruption. Further, in the interest of low database contention, the Cleanup Utility allows only one instance of itself to execute. The Cleanup Utility also provides an option to suppress operator prompts/messages, although there are not many. Upon completion of removing the granule files from the Data Pool disks, the Cleanup Utility determines if there is sufficient free space to update the ‘NoFreeSpace’ flag in the Data Pool database, if necessary.

The utility may be executed using a **-noprompt** argument to suppress all confirmations and warnings normally displayed to standard output. Table 17.10-21 presents the steps required to invoke the Data Pool Cleanup Utility manually. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in at the machine where the Data Pool Cleanup Utility is installed (e.g., e0dps01, g0dps01, l0dps01, n0dps01).
 - *Note:* The operator who is executing the script must have the privilege to remove science, metadata, and browse files from the Data Pool disks.
- 2 To change to the directory for starting the Data Pool Cleanup Utility, type **cd /usr/ecs/<MODE>/CUSTOM/utilities** and then press the **Return/Enter** key.
 - The working directory is changed to **/usr/ecs/<MODE>/CUSTOM/utilities**.
- 3 At the UNIX prompt, enter the command to start the Cleanup Utility, in the form **EcDICleanupDataPool.pl <MODE> [-option1 <value1> . . . -optionN <valueN>]**, specifying up to three options.
 - The following are examples of valid command-line entries for initiating the Data Pool Cleanup utility:
 - **EcDICleanupDataPool.pl <MODE>** (to delete all granules with retention priority less than or equal to the configured default limit that have expiration dates before midnight of the previous day).

- **EcDlCleanupDataPool.pl <MODE> -noprompt** (to delete granules with retention priority less than or equal to the configured default limit that have expiration dates before midnight of the previous day while suppressing all operator prompts and confirmations).
- **EcDlCleanupDataPool.pl <MODE> -limit <priority limit>** (to delete all granules with retention priority less than or equal to the specified <priority limit> that have expiration dates before midnight of the previous day).
- **EcDlCleanupDataPool.pl <MODE> -limit <priority limit> -noprompt** (to delete all granules with retention priority less than or equal to the specified <priority limit> that have expiration dates before midnight of the previous day while suppressing all operator prompts and confirmations).
- **EcDlCleanupDataPool.pl <MODE> -offset <±hours>** (to delete granules with retention priority less than or equal to the default limit that have expiration dates before midnight of the previous day plus or minus the specified number of <hours> -- e.g., **EcDlCleanupDataPool.pl OPS -offset -5** deletes granules with expiration date before 7:00 p.m. yesterday).
- **EcDlCleanupDataPool.pl <MODE> -offset <±hours> -noprompt** (to delete granules with retention priority less than or equal to the default limit that have expiration dates before midnight of the previous day plus or minus the specified number of <hours> while suppressing all operator prompts and confirmations).
- **EcDlCleanupDataPool.pl <MODE> -offset <±hours> -limit <priority limit>** (to delete granules with retention priority less than or equal to the specified <priority limit> that have expiration dates before midnight of the previous day plus or minus the specified number of <hours>).
- **EcDlCleanupDataPool.pl <MODE> -offset <±hours> -limit <priority limit> -noprompt** (to delete granules with retention priority less than or equal to the specified <priority limit> that have expiration dates before midnight of the previous day plus or minus the specified number of <hours> while suppressing all operator prompts and confirmations).
- **EcDlCleanupDataPool.pl <MODE> -file <filename>** (to delete granules listed by granuleID in the input file named <filename>, and any associated browse granules). *Note:* The **-file** option may not be used with the **-offset** option or **-limit** option.
- **EcDlCleanupDataPool.pl <MODE> -file <filename> -noprompt** (to delete granules listed by granuleID in the input file named <filename>, and any associated browse granules while suppressing all operator prompts and confirmations).
- **EcDlCleanupDataPool.pl <MODE> -theme “<ThemeName>”** (to delete granules associated with the specified theme and with retention priority less than or equal to the configured default limit and expiration date/time on or

before midnight of the previous day). *Note:* The quotes around the theme name are required.

- **EcDICleanupDataPool.pl <MODE> -themexref “<ThemeName>”** (to remove all granule cross references to a the specified theme from the Data Pool inventory, without deleting the granules or the physical granule files.) *Note:* The quotes around the theme name are required.
 - **EcDICleanupDataPool.pl <MODE> -orphan -phantom** (to validate the Data Pool by checking for orphans and phantoms and removing any discrepancies found from the Data Pool inventory and disks).
 - **EcDICleanupDataPool.pl <MODE> -orphan -phantom -nofix** (to validate the Data Pool by checking for orphans and phantoms and log any discrepancies found without removing the discrepant data or inventory entries).
 - **EcDICleanupDataPool.pl <MODE> -orphan -phantom -collgroup “<NAME1>,<NAME2>,<NAME3>,... <NAMEn>”** (to initiate a Data Pool validation but limit the validation to specified collection group(s), where the collection groups are separated by commas in a string set off by quotation marks).
 - **EcDICleanupDataPool.pl <MODE> -cleanvalidate -orphan -phantom** (to initiate a Data Pool cleanup followed by validation, first cleaning up all granules in the specified mode with retention priorities less than or equal to the configured default limit and expiration date/time on or before midnight of the previous day, and then checking for and removing orphans and phantoms).
- The Cleanup Utility runs and the Cleanup Utility log file **EcDICleanup.log** records errors, warnings, and information about utility events.

Table 17.10-21. Invoke the Data Pool Cleanup Utility Manually

Step	What to Do	Action to Take
1	Log in at host for Data Pool Cleanup Utility	enter text; press Return/Enter
2	cd /usr/ecs/<MODE>/CUSTOM/utilities	enter text; press Return/Enter
3	EcDICleanupDataPool.pl <MODE> [-option1 <value1> . . . -optionN <valueN>] (Options: -noprompt, -limit, -offset, -file, -theme, -themexref, -orphan, -phantom, -collgroup, -nofix, -cleanvalidate)	enter text; press Return/Enter

17.10.21 Establish Data Pool Cleanup to Run (at 1:00 am) with *cron*

The Data Pool Cleanup Utility may be run with *cron* to execute it on a daily basis at a consistent time of day. The procedure specified here provides an example of adding a line to a *crontab* file

to execute the OPS mode Data Pool Cleanup at 1:00 a.m. every day. Table 17.10-22 presents the steps required to establish Data Pool Cleanup to run with *cron*. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in at an ECS platform using an account with privileges to remove science, metadata, and browse files from Data Pool disks.
- 2 To ensure that the **crontab** command launches the **vi** editor, type **setenv EDITOR vi** and then press the **Return/Enter** key.
 - It may be desirable to include this command in the operator's **.cshrc** file to set the **crontab** editor to **vi** as part of the environmental settings normally used routinely.
- 3 Type **crontab -e** and then press the **Return/Enter** key.
 - The contents of the file are displayed, and the cursor is displayed on the first character at the upper left corner of the file. **Note:** If the operator has no **crontab** file on the current platform, this command opens a new one for editing.
- 4 If necessary, use the down arrow key on the keyboard to move the cursor down to a blank line.
 - The cursor is displayed at the beginning of the selected line.
- 5 Type **i** to put the **vi** editor into the insert mode.
 - The **vi** editor is in the insert mode, but no feedback is provided.
- 6 Type **0 1 * * * /usr/ecs/OPS/CUSTOM/utilities/EcDIDataPoolCleanup.pl OPS**.
 - The typed entry appears to the left of the cursor.
- 7 Press the **Esc** key.
 - The cursor moves one character to the left and the **vi** editor is in the command mode.
- 8 Type **:wq** and then press the **Return/Enter** key.
 - UNIX displays a message identifying the number of lines and characters in the **crontab** file (stored in the directory **/var/spool/cron/crontabs**) and then displays the UNIX prompt.

Table 17.10-22. Establish Data Pool Cleanup to Run (at 1:00 am) with cron

Step	What to Do	Action to Take
1	Log in at an ECS host using an account with privileges to remove science, metadata, and browse files from Data Pool disks	enter text; press Return/Enter
2	setenv EDITOR vi	enter text; press Return/Enter
3	crontab -e	enter text; press Return/Enter
4	If necessary, use down arrow key to move cursor to a blank line	press arrow key on keyboard
5	To put vi editor in insert mode, type i	enter text command
6	0 1 * * * /usr/ecs/OPS/CUSTOM/utilities/EcDIData PoolCleanup.pl OPS	enter text
7	To put vi editor in command mode, press Esc key	press Esc key on keyboard
8	Exit vi editor with :wq	enter text; press Return/Enter

17.10.22 Specify Data Pool Access Statistics Rollup Start Time (at 1:00 am) and DPASU Execution (at 2:00 am), OPS Mode, with cron

The Data Pool Access Statistics Utility (DPASU) parses logs of the Data Pool Web Access service and the FTP access service and stores the results in tables in the Data Pool database. The DPASU is a command-line utility that permits an option of entering input parameters. It is intended to be run with *cron* to cover an arbitrary 24-hour period starting at a time specified as a configuration parameter in a configuration file. However, an operator may run the utility from the command line specifying a start date as an input parameter to cover a period other than the normal 24-hour period addressed by *cron* or to cover that normal period if *cron* failed to process the logs for that period.

There are two versions of the DPASU, one for each type of log processed. The script named **EcDIRollupWebLogs.pl** processes the Web Access log; its configuration file is **EcDIRollupWebLogs.CFG**. The script named **EcDIRollupFtpLogs.pl** processes the SYSLOG with FTP access entries; its configuration file is **EcDIRollupFtpLogs.CFG**. These scripts capture data on downloads from the Data Pool, including date and time of access, path and file name of the file, and size of the file. The captured data are written to a temporary "flat file" -- a tab-delimited text file -- stored in the directory `<ECS_HOME>/<MODE>/CUSTOM/data/DPL/`. The flat file is then exported to Sybase and stored in a table. The DPASU calls Sybase stored procedures to generate a separate rollup table, removes the flat file, and enters a record in a separate table identifying which periods have been rolled up in order to prevent inadvertent reprocessing of that period.

To prevent potential table locking, *cron* runs of the DPASU scripts should be separated so that they are not both running concurrently (e.g., separate their start times by at least 20 minutes). Use the following procedure to specify a 1:00 a.m. start time for the rollup and add a line to the *crontab* files to run the DPASU for the OPS mode beginning at 2:00 a.m. every day with a 20-minute separation between the scripts.

Table 17.10-23 presents the steps required to specify Data Pool access statistics rollup start time and DPASU execution with *cron*. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in at the host for the DPASU scripts and their configuration files (e.g., e0dps01, g0dps01, l0dps01, n0dps01).
- 2 To change to the directory containing the configuration files, type the command **cd /usr/ecs/OPS/CUSTOM/cfg** and then press the **Return/Enter** key.
 - The working directory is changed to **/usr/ecs/OPS/CUSTOM/cfg**.
- 3 To look at the Rollup Start Time specified in the configuration file for EcDIRollupWebLogs.pl, type **vi EcDIRollupWebLogs.CFG** and then press the **Return/Enter** key.
 - The contents of the file are displayed, and the last line of the file indicates the start time in format similar to the following:

```
ROLLUP_START_TIME=3:00
```

and the cursor is displayed on the first character at the upper left corner of the file.
 - If the start time is correct, exit **vi** by typing **:q!** and pressing the **Return/Enter** key; then go to Step 10. Otherwise, to change the time, execute Steps 4 - 9.
- 4 Use the arrow keys on the keyboard to move the cursor down to the line specifying the **ROLLUP_START_TIME** and to move it to the right until it is located over the first character in the time value.
 - The cursor is moved to the start time location; the line should look similar to the following:

```
ROLLUP_START_TIME=3:00
```
- 5 Type **x** to delete the number under the cursor.
 - The number is deleted; the line should look similar to the following.

```
ROLLUP_START_TIME= :00
```
 - **Note:** If more characters in the time value are to be changed, you can type **x** repeatedly to delete additional characters. For this exercise, you need only delete one character.
- 6 Type **i** to put the **vi** editor into the insert mode.
 - The **vi** editor is in the insert mode, but no feedback is provided.
- 7 Type **1**.
 - The typed entry appears to the left of the cursor.

- 8 Press the **Esc** key.
 - The cursor moves one character to the left and the **vi** editor is in the command mode.
- 9 Type **ZZ** (be sure to use upper case).
 - The file is saved and the UNIX prompt is displayed.
- 10 To ensure that the **crontab** command launches the **vi** editor, type **setenv EDITOR vi** and then press the **Return/Enter** key.
 - It may be desirable to include this command in the operator's **.cshrc** file to set the **crontab** editor to **vi** as part of the environmental settings normally used routinely.
- 11 Type **crontab -e** and then press the **Return/Enter** key.
 - The contents of the file are displayed, and the cursor is displayed on the first character at the upper left corner of the file. *Note:* If the operator has no **crontab** file on the current platform, this command opens a new one for editing.
- 12 If necessary, use the down arrow key on the keyboard to move the cursor down to a blank line.
 - The cursor is displayed at the beginning of the selected line.
- 13 Type **i** to put the **vi** editor into the insert mode.
 - The **vi** editor is in the insert mode, but no feedback is provided.
- 14 Type **0 2 * * * /usr/ecs/OPS/CUSTOM/utilities/EcDIRollupWebLogs.pl OPS -noprompt**.
 - The typed entry appears to the left of the cursor.
- 15 Press the **Esc** key.
 - The cursor moves one character to the left and the **vi** editor is in the command mode.
- 16 Type **:wq** and then press the **Return/Enter** key.
 - UNIX displays a message identifying the number of lines and characters in the **crontab** file (stored in the directory **/var/spool/cron/crontabs**) and then displays the UNIX prompt.

- 17 To look at the Rollup Start Time specified in the configuration file for `EcDIRollupFtpLogs.pl`, type **vi EcDIRollupFtpLogs.CFG** and then press the **Return/Enter** key.
- The contents of the file are displayed, and the last line of the file indicates the start time in format similar to the following:

```
ROLLUP_START_TIME=3:00
```

and the cursor is displayed on the first character at the upper left corner of the file.
 - If the start time is correct, exit **vi** by typing **:q!** and pressing the **Return/Enter** key; then go to Step 21. Otherwise, to change the time, execute Step 20.
- 18 Repeat Steps 4-9 to change the time in **EcDIRollupFtpLogs.CFG**.
- 19 To ensure that the **crontab** command launches the **vi** editor, type **setenv EDITOR vi** and then press the **Return/Enter** key.
- It may be desirable to include this command in the operator's **.cshrc** file to set the **crontab** editor to **vi** as part of the environmental settings normally used routinely.
- 20 Type **crontab -e** and then press the **Return/Enter** key.
- The contents of the file are displayed, and the cursor is displayed on the first character at the upper left corner of the file. *Note:* If the operator has no **crontab** file on the current platform, this command opens a new one for editing.
- 21 If necessary, use the down arrow key on the keyboard to move the cursor down to a blank line.
- The cursor is displayed at the beginning of the selected line.
- 22 Type **i** to put the **vi** editor into the insert mode.
- The **vi** editor is in the insert mode, but no feedback is provided.
- 23 Type **20 2 * * * /usr/ecs/OPS/CUSTOM/utilities/EcDIRollupFtpLogs.pl OPS -noprompt**.
- The typed entry appears to the left of the cursor.
- 24 Press the **Esc** key.
- The cursor moves one character to the left and the **vi** editor is in the command mode.
- 25 Type **:wq** and then press the **Return/Enter** key.
- UNIX displays a message identifying the number of lines and characters in the **crontab** file (stored in the directory **/var/spool/cron/crontabs**) and then displays the UNIX prompt.

Table 17.10-23. Specify Data Pool Access Statistics Rollup Start Time (at 1:00 am) and DPASU Execution (at 2:00 am), OPS Mode, with cron

Step	What to Do	Action to Take
1	Log in at the host for the DPASU scripts and their configuration files	enter text; press Return/Enter
2	cd /usr/ecs/OPS/CUSTOM/cfg	enter text; press Return/Enter
3	vi EcDIRollupWebLogs.CFG	enter text; press Return/Enter
4	Move cursor down to line for ROLLUP_START_TIME and right until it is over first character in time value	press keyboard arrow keys
5	To delete the number under the cursor, type x	enter text command
6	To put vi editor in insert mode, type i	enter text command
7	1 (for ROLLUP_START_TIME of 1:00 am)	enter text
8	To put vi editor in command mode, press Esc key	press Esc key on keyboard
9	ZZ	enter text command
10	setenv EDITOR vi	enter text; press Return/Enter
11	crontab -e	enter text; press Return/Enter
12	If necessary, use down arrow key to move cursor to a blank line	press arrow key on keyboard
13	To put vi editor in insert mode, type i	enter text command
14	0 2 * * * /usr/ecs/OPS/CUSTOM/utilities/EcDIRollupWebLogs.pl OPS -noprompt	enter text
15	To put vi editor in command mode, press Esc key	press Esc key on keyboard
16	Exit vi editor with :wq	enter text; press Return/Enter
17	vi EcDIRollupFtpLogs.CFG	enter text; press Return/Enter
18	Repeat steps 4 through 9 to change the time in EcDIRollupFtpLogs.CFG	
19	setenv EDITOR vi	enter text; press Return/Enter
20	crontab -e	enter text; press Return/Enter
21	If necessary, use down arrow key to move cursor to a blank line	press arrow key on keyboard
22	To put vi editor in insert mode, type i	enter text command
23	0 2 * * * /usr/ecs/OPS/CUSTOM/utilities/EcDIRollupFtpLogs.pl OPS -noprompt	enter text
24	To put vi editor in command mode, press Esc key	press Esc key on keyboard
25	Exit vi editor with :wq	enter text; press Return/Enter

17.10.23 Specify Data Pool Access Statistics Utility Execution from the Command Line

Although the Data Pool Access Statistics Utility scripts are intended to be run with **cron**, if it is necessary to run them from the command line, it is possible to do so. For example, if **cron** fails to complete successfully for any reason, no entry is made into the record table to indicate that a

period was processed. In that event, the statistics can be captured for the missing interval by running the utility manually.

There are seven command-line parameters for use with the utility scripts:

- The **<MODE>** parameter indicates the mode (must specify a valid directory path) in which the script is to run; it is mandatory, unlabeled, and must be the first parameter following the command.
- The **-noprompt** parameter optionally specifies suppression of output to the screen.
- The **-nodelete** parameter optionally prevents the flat file from being deleted upon completion of the run.
- The **-flatfile <path/file>** parameter optionally provides an alternative path/file name for the flat file produced by the parser (useful only with the **-nodelete** option).
- The **-ftp <path/file>** parameter optionally indicates an alternative ftp log path/file(s) to be used instead of the configured default path/file (for the **EcDIRollupFtpLogs.pl** script only). Wildcards may be used, but must be escaped (i.e., preceded with a \).
- The **-web <path/file>** parameter optionally indicates an alternative web log path/file(s) to be used instead of the configured default path/file (for the **EcDIRollupWebLogs.pl** script only). Wildcards may be used, but must be escaped (i.e., preceded with a \).
- The **-start <date>** parameter optionally indicates an alternative start date for the rollup period, using the format MM/DD, and may be used to process a previously uncovered period.

With the exception of the mandatory **<MODE>** parameter, which must appear first after the command, the other parameters may be used in various orders and combinations. For example, to run without screen prompts or information, starting from December 22, and to retain the flat file, the command for accumulating statistics on web access should be entered as follows:

EcDIRollupWebLogs.pl OPS -noprompt -nodelete -start 12/22.

To run with normal screen information display, starting from February 15, but using an alternative file with wildcards for the web log, the command should be similar to the following:

EcDIRollupWebLogs.pl OPS - start 2/15 -web /usr/var/^.log.

Table 17.10-24 presents the steps required to specify Data Pool Access Statistics Utility execution from the command line, with normal screen information display. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

Table 17.10-24. Specify Data Pool Access Statistics Utility Execution from the Command Line

Step	What to Do	Action to Take
1	Log in at the host for the DPASU scripts and their configuration file	enter text; press Return/Enter
2	cd /usr/ecs/<MODE>/CUSTOM/utilities	enter text; press Return/Enter
3	EcDIRollupWebLogs.pl <MODE> (Results in normal information display; options include: -noprompt, -nodelete, -flatfile <path/file>, -web <path/file> -start <date>)	enter text; press Return/Enter
4	EcDIRollupFtpLogs.pl <MODE> (Results in normal information display; options include: -noprompt, -nodelete, -flatfile <path/file>, -ftp <path/file> -start <date>)	enter text; press Return/Enter

17.10.24 Archive Access Statistics using the Data Pool Archive Access Statistics Data Utility

The three remaining utilities are shell scripts for archiving, deleting, and restoring information in database tables populated by the DPASU. The **Data Pool Archive Access Statistics Data Utility** is run from the command line as needed or desirable to connect to the Data Pool database and write granule access data for a specified time range from the DIGranuleAccess, DIGranuleSubscription, and DIAccessRollup tables to an ASCII file. Once this is done, the operator can run the **Data Pool Delete Access Statistics Data Utility** from the command line to delete the archived data from the Data Pool database. If it is desirable to restore deleted data to the database, the **Data Pool Restore Access Statistics Data Utility** can be run from the command line to restore the data.

Table 17.10-25 presents the steps required to archive access statistics using the Data Pool Archive Access Statistics Data Utility. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in at the host for the Data Pool database (e.g., e0acg11, g0acg01, l0acg02, n0acg01).
- 2 To change directory to the directory containing the Data Pool Archive Access Statistics Data Utility, type **cd /usr/ecs/<MODE>/CUSTOM/dbms/DPL** and then press the **Return/Enter** key.
 - The working directory is changed to **cd /usr/ecs/<MODE>/CUSTOM/dbms/DPL**.

- 3 Type **DIDbArchiveAccessStat** *<MODE>* *<STARTDATE>* *<STOPDATE>* *<ARCHIVEDIR>* *<USERNAME>* *<SERVER>* *<DBNAME>* and then press the **Return/Enter** key.
 - *Note:* *<MODE>* is the mode in which the utility is being executed (e.g., OPS, TS1, TS2). *<STARTDATE>* is the start date time range, in format *yyyymmdd*, for the data to be archived. *<STOPDATE>* is the stop date time range, in format *yyyymmdd*, for the data to be archived. *<ARCHIVEDIR>* is the absolute path where the generated ASCII files are to be stored. *<USERNAME>* is the Sybase login name. *<SERVER>* is the Sybase Server for the Data Pool database (e.g., e0acg11_srvr, g0acg01_srvr, l0acg02_srvr, n0acg01_srvr). *<DBNAME>* is the name of the Data Pool database (e.g., DataPool OPS).
 - The script displays a prompt for entry of the password for the Sybase login.
- 4 Type *<password>* and then press the **Return/Enter** key (*Note:* This may require input from the Database Administrator).
 - The script runs and the Archive Access Statistics Utility log file **DIDbArchiveAccessStat.log** records errors, warnings, and information about utility events.

Table 17.10-25. Archive Access Statistics using the Data Pool Archive Access Statistics Data Utility

Step	What to Do	Action to Take
1	Log in at the host for the Data Pool database	enter text; press Return/Enter
2	cd /usr/ecs/<MODE>/CUSTOM/dbms/DPL	enter text; press Return/Enter
3	DIDbArchiveAccessStat <MODE> <STARTDATE> <STOPDATE> <ARCHIVEDIR> <USERNAME> <SERVER> <DBNAME>	enter text; press Return/Enter
4	<i><password></i> (from Database Administrator)	enter text; press Return/Enter

17.10.25 Delete Access Statistics using the Data Pool Delete Access Statistics Data Utility

Table 17.10-26 presents the steps required to delete access statistics using the Data Pool Delete Access Statistics Data Utility. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in at the host for the Data Pool database (e.g., e0acg11, g0acg01, l0acg02, n0acg01).
- 2 To change directory to the directory containing the Data Pool Delete Access Statistics Data Utility, type `cd /usr/ecs/<MODE>/CUSTOM/ dbms/DPL` and then press the **Return/Enter** key.
 - The working directory is changed to `cd /usr/ecs/<MODE>/CUSTOM/ dbms/DPL`.
- 3 Type `DIDbDeleteAccessStat <MODE> <STARTDATE> <STOPDATE> <USERNAME> <SERVER> <DBNAME>` and then press the **Return/Enter** key.
 - *Note:* <MODE> is the mode in which the utility is being executed (e.g., OPS, TS1, TS2). <STARTDATE> is the start date time range, in format `yyyymmdd`, for the data to be deleted. <STOPDATE> is the stop date time range, in format `yyyymmdd`, for the data to be deleted. <USERNAME> is the Sybase login name. <SERVER> is the Sybase Server for the Data Pool database (e.g., e0acg11_srvr, g0acg01_srvr, l0acg02_srvr, n0acg01_srvr). <DBNAME> is the name of the Data Pool database (e.g., DataPool OPS).
 - The script displays a prompt for entry of the password for the Sybase login.
- 4 Type <password> and then press the **Return/Enter** key (*Note:* This may require input from the Database Administrator).
 - The script runs and the Delete Access Statistics Utility log file `DIDbDeleteAccessStat.log` records errors, warnings, and information about utility events.

Table 17.10-26. Delete Access Statistics using the Data Pool Delete Access Statistics Data Utility

Step	What to Do	Action to Take
1	Log in at the host for the Data Pool database	enter text; press Return/Enter
2	<code>cd /usr/ecs/<MODE>/CUSTOM/dbms/DPL</code>	enter text; press Return/Enter
3	<code>DIDbDeleteAccessStat <MODE> <STARTDATE> <STOPDATE> <ARCHIVEDIR> <USERNAME> <SERVER> <DBNAME></code>	enter text; press Return/Enter
4	<password> (from Database Administrator)	enter text; press Return/Enter

17.10.26 Restore Access Statistics using the Data Pool Restore Access Statistics Data Utility

Table 17.10-27 presents the steps required to restore access statistics using the Data Pool Restore Access Statistics Data Utility. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in at the host for the Data Pool database (e.g., e0acg11, g0acg01, l0acg02, n0acg01).
- 2 To change directory to the directory containing the Data Pool Restore Access Statistics Data Utility, type `cd /usr/ecs/<MODE>/CUSTOM/ dbms/DPL` and then press the **Return/Enter** key.
 - The working directory is changed to `cd /usr/ecs/<MODE>/CUSTOM/ dbms/DPL`.
- 3 Type `DIDbRestoreAccessStat <MODE> <STARTDATE> <STOPDATE> <ARCHIVEDIR> <USERNAME> <SERVER> <DBNAME>` and then press the **Return/Enter** key.
 - *Note:* <MODE> is the mode in which the utility is being executed (e.g., OPS, TS1, TS2). <STARTDATE> is the start date time range, in format `yyyymmdd`, for the data to be restored. <STOPDATE> is the stop date time range, in format `yyyymmdd`, for the data to be restored. <ARCHIVEDIR> is the absolute path of the storage location for the ASCII files containing the data to be restored. <USERNAME> is the Sybase login name. <SERVER> is the Sybase Server for the Data Pool database (e.g., e0acg11_srvr, g0acg01_srvr, l0acg02_srvr, n0acg01_srvr). <DBNAME> is the name of the Data Pool database (e.g., DataPool OPS).
 - The script displays a prompt for entry of the password for the Sybase login.
- 4 Type <password> and then press the **Return/Enter** key (*Note:* This may require input from the Database Administrator).
 - The script runs and the Archive Access Statistics Utility log file `DIDbRestoreAccessStat.log` records errors, warnings, and information about utility events.

Table 17.10-27. Restore Access Statistics using the Data Pool Restore Access Statistics Data Utility

Step	What to Do	Action to Take
1	Log in at the host for the Data Pool database	enter text; press Return/Enter
2	<code>cd /usr/ecs/<MODE>/CUSTOM/dbms/DPL</code>	enter text; press Return/Enter
3	<code>DIDbRestoreAccessStat <MODE> <STARTDATE> <STOPDATE> <ARCHIVEDIR> <USERNAME> <SERVER> <DBNAME></code>	enter text; press Return/Enter
4	<password> (from Database Administrator)	enter text; press Return/Enter

17.10.27 Use the Batch Insert Utility for Batch Insert of Data into the Data Pool

The Batch Insert Utility allows operators to specify Data Pool insert for granules residing in the ECS archive, as well as data from outside ECS (non-ECS granules). The utility queues the granules up for dispatch by the Data Pool Action Dispatcher (DPAD) for insertion by the Data Pool Insert Utility (DPIU). It accepts either a list of ECS granule identifiers or a list of non-ECS

names; the list can be provided either as an input file or as standard input. A label identifying a batch of granules is specified as a command-line parameter, using the option **-label**, so that operators can monitor a batch with the DPM GUI.

Granules to be inserted can also be linked to a theme, using the option **-theme**. In fact, the Batch Insert Utility can also be used with that option to link granules already present in the Data Pool to a theme, or to additional themes. However, it is important to note that if the granules were originally inserted into the Data Pool using the Batch Insert Utility, you must use a different batch label when linking the granules to the theme than was used for the original insert. This is necessary because the Batch Insert Utility is designed to reject inserts that are in a batch with a label identical to one for which granules are already being processed. So, even if the batch has been inserted, if the inserts are still in the queue (e.g., with a status of **Completed**), you cannot run another batch with the same label to link them to a theme.

Table 17.10-28 presents the steps required to use the Batch Insert Utility for Batch Insert of Data into the Data Pool. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Log in at the machine where the Data Pool Batch Insert Utility is installed (e.g., e0dps01, g0dps01, l0dps01, n0dps01).
 - *Note:* The login must be as either cmshared or allmode to ensure correct permissions.
- 2 To change to the directory for starting the Batch Insert Utility, type **cd /usr/ecs/<MODE>/CUSTOM/utilities** and then press the **Return/Enter** key.
 - The working directory is changed to **/usr/ecs/<MODE>/CUSTOM/utilities**.
- 3 At the UNIX prompt, enter the command to start the Batch Insert Utility, in the form **EcDIBatchInsert.pl <MODE> -ecs | -nonecs [-file <pathname>] [options]**.
 - *Note:* The following are examples of valid command-line entries for initiating the Batch Insert Utility:
 - **EcDIBatchInsert.pl <MODE> -ecs -file /home/cmshared/<filename>** (to add actions to the action insert queue for all ECS granules specified by granule IDs in the specified file. Because the command does not specify a **-label** parameter, the label is formed from the first 16 characters of the input file name).
 - **EcDIBatchInsert.pl <MODE> -nonecs -file /home/cmshared/<filename> -label Chig_volcano -theme “Chiginagak Volcano 2002”** (to add actions to the insert action queue for all non-ECS granules specified by XML pathnames in the specified input file, with all granules linked with the theme name “Chiginagak Volcano 2002” in the Data Pool database). *Note:* The theme name must already be in the Data Pool database in the DIThemes table; if necessary, use the DPM GUI **Manage Themes** tab to define the theme before running the batch insert.
 - *Note:* You can use Batch Insert with the **-theme** option to link granules already in the Data Pool to a theme, but if the granules were originally inserted using the

Batch Insert Utility, you must use a different batch label than was used for the original insert; otherwise, the insert of the theme links may be rejected.

- **EcDIBatchInsert.pl <MODE> -ecs -file /home/cmshared/<filename> -mdonly** (to add actions to the action insert queue for all ECS granules specified by granule IDs in the specified file, but insert metadata only. Because the command does not specify a **-label** parameter, the label is formed from the first 16 characters of the input file name).
 - **EcDIBatchInsert.pl <MODE> -ecs -file /home/cmshared/<filename> -rpriority 255** (to add actions to the action insert queue for all ECS granules specified by granule IDs in the specified file, and to set their retention priority to 255. Because the command does not specify a **-label** parameter, the label is formed from the first 16 characters of the input file name).
 - **EcDIBatchInsert.pl <MODE> -ecs -file /home/cmshared/<filename> -rpriority 255 -rperiod 10 -dpriority 5** to add actions to the action insert queue for all ECS granules specified by granule IDs in the specified file, and to set their retention priority to 255 and their retention period to 10 days, with dispatch priority set to 5. Because the command does not specify a **-label** parameter, the label is formed from the first 16 characters of the input file name).
- The Batch Insert Utility runs and events and errors are recorded in the Batch Insert Utility log file **EcDIBatchInsert.log**.

Table 17.10-28. Use the Batch Insert Utility for Batch Insert of Data into the Data Pool

Step	What to Do	Action to Take
1	Log in at the host for EcDIBatchInsert.pl	enter text; press Return/Enter
2	cd /usr/ecs/<MODE>/CUSTOM/utilities	enter text; press Return/Enter
3	EcDIBatchInsert.pl <MODE> -ecs -nonecs [-file <pathname>] [options]	enter text; press Return/Enter

17.10.28 Launch the DataPool Order Status & Control GUI

The **DataPool Order Status & Control** application is a set of HTML pages that allows the operator to view the status of orders and order items for Data Pool orders (*i.e.*, orders placed using the Data Pool Web Access GUI Shopping Cart order capability or the single granule converter dialog). It also allows the operator to control key aspects of the order process such as the queue control. The application is split into four functional areas: **Queue Control**, **Orders**, **Order Items**, and **Help**. Each page of the DataPool Order Status & Control application provides access to these four functions through links at the top of the page. The **help** function is the primary source of information in this section of the Archive Procedures and is therefore not addressed separately.

Table 17.10-29 presents the steps required to launch the DataPool Order Status & Control GUI. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the UNIX command shell prompt, type **setenv DISPLAY *clientname*:0.0** and then press the **Return/Enter** key.
 - For *clientname*, use either the local terminal/workstation IP address or its machine name.
- 2 Start the log-in to a Netscape host by typing **/tools/bin/ssh *hostname*** (*e.g.*, g0ins02, e0ins02, l0ins02, n0ins02) at the UNIX command shell prompt, and press the **Return/Enter** key.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type **yes** (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 3.
 - If you have not previously set up a secure shell passphrase; go to Step 4.
- 3 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your **Passphrase** and then press the **Return/Enter** key. Go to Step 5.
- 4 At the **<user@remotehost>'s password:** prompt, type your **Password** and then press the **Return/Enter** key.
 - You are logged in and a UNIX command shell prompt is displayed.
- 5 Type **netscape** and then press the **Return/Enter** key.
 - The Netscape web browser is displayed.
- 6 Click in the **Netsite:** field.
 - The field is highlighted.
- 7 Type the Universal Resource Locator (URL) for the DataPool Order Status & Control GUI and then press the **Return/Enter** key.
 - The DataPool Order Status & Control GUI **Orders** page is displayed, offering links to access Data Pool order status and control functions (**Queue Control**, **Orders**, **Order Items**, and **Help**) and a table of information on orders currently in the order queue.

Table 17.10-29. Launch the DataPool Order Status & Control GUI

Step	What to Do	Action to Take
1	setenv DISPLAY clientname:0.0	enter text; press Return/Enter
2	/tools/bin/ssh hostname	enter text; press Return/Enter
3	Passphrase (or Step 4)	enter text; press Return/Enter
4	Password	enter text; press Return/Enter
5	netscape	enter text; press Return/Enter
6	Move cursor to Netsite: field	single-click
7	http://<URL>	enter text; press Return/Enter

17.10.29 Use the DataPool Order Status & Control GUI to Review Orders and Order Items

Table 17.10-30 presents the steps required to use the DataPool Order Status & Control GUI to review orders and associated order items. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DataPool Order Status & Control GUI (refer to Procedure 17.10.28 **Launch the DataPool Order Status & Control GUI**).
 - The DataPool Order Status & Control GUI **Orders** page is displayed, offering links to access Data Pool order status and control functions (**Queue Control**, **Orders**, **Order Items**, and **Help**) as well as a table of information on orders currently in the order queue.
 - You can observe an order of interest by locating it in the **Order ID** column, scrolling if necessary.
 - Filtering and sorting capabilities are available through controls in the table header and footer.
- 2 It may be useful to filter the list. For example, if you receive notice that an order failed and you want to restrict the listed orders to display only those that have failed and for which notice has been sent to you, click on the pull-down arrow at the end of the **By Status** field, select FAILOPERN, and then click on the **Do Filtering** button.
 - The table displays only failed orders for which a notice has been sent to the operator.
- 3 It may be helpful to sort the list, using the column-heading links. For example, if the window displays many failed orders and you are looking for a failed order from a specific user, click on the **User_Name** link at the top of the column listing user names.
 - The listed orders are sorted by user name, permitting the operator to see all the failed orders from the user of interest in a single contiguous block.

- 4 If desired, in the **Order_ID** column click on the magnifier icon () for the order of interest to obtain the **Order Details Viewer**.
 - The **Order Details Viewer** is displayed with additional details concerning the order of interest.
- 5 To close the **Order Details Viewer**, click on the folder icon () in the viewer.
 - The **Order Details Viewer** is closed.
- 6 To check the status of items in the order of interest, click on the order ID link in the **Order ID** column.
 - The system displays the **Order Items** page with the **Items** table listing the items in the order for which the Order ID was clicked.
 - For each listed item, the **Items** table shows the **Item_ID**, **Status**, any **Error Code**, the **Granule_ID**, the **Input_File**, and the **Order_ID**.
- 7 If desired, click on the magnifier icon () to obtain the **Order Item Details Viewer**.
 - The **Order Item Details Viewer** is displayed with additional details concerning the selected order item.
- 8 To close the **Order Item Details Viewer**, click on the folder icon () in the viewer.
 - The **Order Item Details Viewer** is closed.

Table 17.10-30. Use the DataPool Order Status & Control GUI to Review Orders and Order Items

Step	What to Do	Action to Take
1	Launch the DataPool Order Status & Control GUI	use Procedure 17.10.28
2	To filter the list, use pull-down arrow to select filter category and activate Do Filtering button	clicks
3	To sort the list, activate the link at top of column	single-click
4	To view details of an order, activate its magnifier icon ()	single-click
5	To close order details viewer, activate folder icon ()	single-click
6	To view items of an order, activate its order ID link	single-click
7	To view the details of an item, activate its magnifier icon ()	single-click
8	To close item details viewer, activate folder icon ()	single-click

17.10.30 Intervene in a Failed Data Pool Order Susceptible to Operator Intervention

The DataPool Order Status & Control GUI provides icons permitting the operator to take action on orders and/or order items that have failed in a way that may allow an operator intervention to reprocessing of the items that failed. The system is designed to send the operator an e-mail

notification of the necessity for intervention. The operator may intervene to re-try the order or order items, or may choose to mark the order in question as complete, which results in the order being placed in one of the following states:

- **DONE** – some items are successfully completed and any failed items are left in the failed state.
- **FAILED** – all items were failed and are left in the failed state.

Table 17.10-31 presents the steps required to intervene in a failed data pool order susceptible to operator intervention. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1** Launch the DataPool Order Status & Control GUI (refer to Procedure 17.10.28 **Launch the DataPool Order Status & Control GUI**).
 - The DataPool Order Status & Control GUI **Orders** page is displayed, offering links to access Data Pool order status and control functions (**Queue Control**, **Orders**, **Order Items**, and **Help**) as well as a table of information on orders currently in the order queue.
 - You can observe an order of interest by locating it in the **Order ID** column, scrolling if necessary.
 - Filtering and sorting capabilities are available through controls in the table header and footer.
- 2** Locate the order of interest (e.g., an order for which you receive e-mail notification of failure that may permit intervention to recover).
 - See Procedure 17.10.29 **Use the DataPool Order Status & Control GUI to Review Orders and Order Items**, steps 2 and 3 (page 186).
 - The **Status** column for a failed order of which the operator is notified indicates **FAILOPERN** and also contains two icon links: retry (🔄) and "mark as complete" (📁).
- 3** If desirable, review detailed information on the order and its order items (see the Procedure 17.10.29 **Use the DataPool Order Status & Control GUI to Review Orders and Order Items**, steps 4 - 8 (page 187).
- 4** To retry a failed order, click on the retry icon (🔄).
 - A retry confirmation message asks **You have opted to retry an order. This will automatically retry all of the failed items within the order if there are any. Are you sure you want to do this?** and offers **Yes** and **No** buttons.
- 5** Click on the **Yes** button in the retry confirmation message.
 - A confirmation message indicates **Your request has been submitted. Please reload the corresponding page.** and offers a **Reload** button.

- 6 Click on the **Reload** button in the confirmation message.
 - On the **Orders** page, the **Status** of the order is shown as **ENTERED**.
 - On the **Order Items** page, the **Status** of the items in the order should be **NULL** (entered but not yet being processed) or **PROCESSING**.
- 7 To mark a failed order as complete, click on the “Mark as Complete” icon ().
 - A “Mark as Complete” confirmation message asks **You have opted to complete this order despite its failure status. This means that at least some granules in this order will not be delivered to the user as requested. Marking this order for completion means that it will never be able to be retried (at least from this user interface). Note that the user e-mail notice will automatically be sent at this point. If you wish to enter comments FOR THE USER regarding this order, please enter them below.** (A text entry box is provided for the entry.) **Change order status and send e-mail?** The message then offers **Yes** and **No** buttons.
- 8 Click on the **Yes** button in the “Mark as Complete” confirmation message.
 - A confirmation message indicates **Your request has been submitted. Please reload the corresponding page.** and offers a **Reload** button.
- 9 Click on the **Reload** button in the confirmation message.
 - On the **Orders** page, the **Status** of the order is shown as **DONE**.
 - On the **Order Items** page, the **Status** of the items in the order is shown as **FAILED**.

Table 17.10-31. Intervene in a Failed Data Pool Order Susceptible to Operator Intervention

Step	What to Do	Action to Take
1	Launch the DataPool Order Status & Control GUI	use Procedure 17.10.28
2	Locate the order of interest	use steps 2 and 3 of Procedure 17.10.29
3	If desirable, review details of the order and its items	use steps 4 - 8 of Procedure 17.10.29
4	To retry a failed order order, activate its retry icon ()	single-click
5	Activate the Yes button in the retry confirmation	single-click
6	Activate the Reload button in the confirmation message	single-click
7	To mark a failed order as complete, activate its “Mark as Complete” icon ()	single-click
8	Activate the Yes button in the “Mark as Complete” confirmation	single-click
9	Activate the Reload button in the confirmation message	single-click

17.10.31 Use DataPool Order Status & Control GUI to Manage HEG Converter Front End Server

The DataPool Order Status & Control GUI **Queue Control** function provides a means for starting and stopping the HEG Front End Server (there is also a script named **EcDIHEGFrontEndControl** on the Data Pool host that provides an alternative method of starting and stopping the HEG Front End). The Queue Control function of the GUI also permits an operator to set the HEG Front End Processing State to process orders in the converter order queue or not, and to set limits on the maximum number of HEG Converter processes and the maximum number of orders in the Order Queue.

Table 17.10-32 presents the steps required to use the DataPool Order Status & Control GUI to Manage the HEG Converter Front End Server. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the DataPool Order Status & Control GUI (refer to Procedure 17.10.28 **Launch the DataPool Order Status & Control GUI**).
 - The DataPool Order Status & Control GUI **Orders** page is displayed, offering links to access Data Pool order status and control functions (**Queue Control**, **Orders**, **Order Items**, and **Help**) as well as a table of information on orders currently in the order queue.
- 2 Click on the **Queue Control** link near the top of the display.
 - The **Processing and Queue Status** page is displayed.
- 3 To check the status of the HEG Front End Processing Server, observe the **HEG Front End Processing Server** line on the display.
 - The appearance of the line provides indication of the status, as follows:
 - If the server is up, the line indicates **UP** and there are two control buttons one labeled **Exit Gracefully** and one labeled **Exit Immediately (No Cleanup)**.
 - If the server is down, the line indicates **DOWN** and there is one control button labeled **Start Up**.
 - If the server is down and you wish to start it, go to Step 6.
- If the server is up and you wish to stop it, go to Step 4 (graceful exit) or 5 (immediate exit); otherwise continue with Step 7.
- 4 To stop the server gracefully, click on the **Exit Gracefully** button.
 - The server does not begin any new processes and, after the server completes ongoing converter processes and exits, the **HEG Front End Processing Server** line on the display indicates **DOWN** and offers a **Start Up** button.

- 5 To stop the server immediately, click on the **Exit Immediately (No Cleanup)** button.
 - All ongoing converter processes are killed and the server exits immediately; the **HEG Front End Processing Server** line on the display indicates **DOWN** and offers a **Start Up** button.
- 6 To start the server, click on the **Start Up** button.
 - The server starts; the **HEG Front End Processing Server** line on the display indicates **Up** and offers an **Exit Gracefully** button and an **Exit Immediately (No Cleanup)** button.
- 7 If you wish to change the other parameters available on the **Processing and Queue Status** page, enter the new value in the input field, using the appropriate editing method:
 - To change the **HEG Front End Processing State**, click on the pull-down arrow at the end of the field and select the desired state (**Process orders in the order queue** or **STOP processing orders in the order queue**).
 - To change the value for the **Maximum number of HEG Converter Processes** or **Maximum Order Queue Size**, click at the end of the field and either use the **Backspace** key to delete the current value or use the mouse with the primary key held down to drag the cursor and highlight the current value. Then type the desired new value.
 - The field(s) display the desired new value(s).
- 8 Click on the **Apply Changes** button.
 - The screen is refreshed with the new value(s) implemented.
 - The **Reset** button may be used to clear the form values.

Table 17.10-32. Use DataPool Order Status & Control GUI to Manage the HEG Converter Front End Server

Step	What to Do	Action to Take
1	Launch the DataPool Order Status & Control GUI	use Procedure 17.10.28
2	Activate the Queue Control link	single-click
3	To check the status of the HEG Front End Processing Server, note the indications on the HEG Front End Processing Server line on the display	read text; observe button(s)
4	To stop the server gracefully, activate the Exit Gracefully button	single-click
5	To stop the server immediately, activate the Exit Immediately (No Cleanup) button	single-click
6	To start the server, activate the Start Up button	single-click
7	To change other parameter(s), enter new value(s) in the input field(s)	click(s) ; enter text
8	Activate the Apply Changes button	single-click

This page intentionally left blank.

18. Data Distribution

18.1 Data Distribution Process

Data Distribution is a process of retrieving archived data and providing the data to requesters in response to the orders they submit or subscriptions they have entered into the system. The requesters may be classified in either of the following two categories:

- External to ECS.
 - For example, scientists at Science Computing Facilities (SCFs) may have standing orders for the data products that are processed using their science software.
- Internal to ECS.
 - For example, the Data Processing Subsystem depends on Data Distribution to distribute copies of archived science software and input data in support of data processing.

Data retrieved from the archives can be distributed to requesters using any of the following three general methods:

- Electronic pull.
- Electronic push.
- Hard (physical) media distribution on disks or tape cartridges.

Hard (physical) media distribution is accomplished through the Product Distribution System (PDS), which supports the distribution of data on the following types of media:

- 8mm tape cartridges.
- Digital Linear Tape (DLT).
- Compact disk (CD).
- DVD (formerly “digital video disk” or “digital versatile disk” now referred to as just "DVD").

The method of data distribution is dictated by the nature of the data distribution request. (The requester specifies the distribution method when ordering or subscribing to the data.)

Data Distribution includes two general types of activities; i.e., Data Distribution (DDIST) operations and Product Distribution System (PDS) operations. The site M&O Distribution Technicians use the Data Distribution Operator graphical user interface (GUI) within the Data Server Subsystem to perform DDIST operations (i.e., electronic push or pull). They use Product Distribution System (PDS) tools to perform hard (physical) media operations (i.e., to distribute data on disks or tape cartridges).

Subsequent sections related to Data Distribution address the following topics:

- Section 18.2 An overview of the process for processing distribution requests through DDIST and step-by-step procedures for monitoring and controlling distribution requests.
- Section 18.3 An overview of the process for performing storage management server operations and step-by-step procedures for monitoring storage management server operations.
- Section 18.4 An overview of the process and step-by-step procedures for tuning DDIST system parameters related to DDIST operations.
- Section 18.5 An overview of the process and step-by-step procedures for performing Order Manager operations.
- Section 18.6 An overview of the process and step-by-step procedures for troubleshooting DDIST and Order Manager GUI problems.
- Section 18.7 An overview of the process and step-by-step procedures for starting up PDS.
- Section 18.8 An overview of the process and step-by-step procedures for shutting down PDS.
- Section 18.9 An overview of the process for product processing using PDS and step-by-step procedures for monitoring and controlling product processing using PDS.
- Section 18.10 An overview of the process for order processing using the Product Distribution System Interface Server (PDSIS) Operator Interface (OI) and step-by-step procedures for monitoring and controlling order processing using the PDSIS OI.
- Section 18.11 An overview of the process and step-by-step procedures for troubleshooting PDS problems.

18.2 Processing Distribution Requests through DDIST

The Distribution Technicians use the Data Distribution Operator GUI and the Storage Management Control GUI to monitor and control the retrieval of data from the archives and distribution to requesters using either of the following methods:

- Electronic pull.
- Electronic push.

The method of data distribution is dictated by the nature of the data distribution request. (The requester specifies the distribution method when ordering or subscribing to the data.)

If the requester specifies distribution in the electronic “pull” mode, data are retrieved from the archive and placed in the “pull area” on the data server staging disk. The requester is notified that the data are available for retrieval from that particular location for a set period of time. The requester initiates a file transfer procedure (ftp “get”) to move the data electronically (over a communications network) to the requester’s own system.

In response to a request for distribution in the electronic “push” mode, data are retrieved from the archive and placed on a data server staging disk. Then the retrieved data on the staging disk

are transferred electronically (via ftp “put”) to the requester’s designated storage location (specified in the distribution request) under the control of the data server. The requester is notified when the data push has been completed.

Each procedure outlined has an **Activity Checklist** table that provides an overview of the task to be completed. The outline of the **Activity Checklist** is as follows:

Column one - **Order** shows the order in which tasks could be accomplished.

Column two - **Role** lists the Role/Manager/Operator responsible for performing the task.

Column three - **Task** provides a brief explanation of the task.

Column four - **Section** provides the Procedure (P) section number or Instruction (I) section number where details for performing the task can be found.

Column five - **Complete?** is used as a checklist to keep track of which task steps have been completed.

Table 18.2-1, below, provides an Activity Checklist for monitoring/controlling distribution requests.

Table 18.2-1. Monitoring/Controlling Distribution Requests - Activity Checklist

Order	Role	Task	Section	Complete?
1	Distribution Technician	Log in to ECS Hosts	(P) 18.2.1	
2	Distribution Technician	Launch the Data Distribution Operator and Storage Management Control GUIs	(P) 18.2.2	
3	Distribution Technician	Monitor/Control Data Distribution Requests	(P) 18.2.3	
4	Distribution Technician	Configure Data Distribution Polling	(P) 18.2.4	
5	Distribution Technician	Filter Data Distribution Requests	(P) 18.2.5	
6	Distribution Technician	Change the Priority of Data Distribution Requests	(P) 18.2.6	
7	Distribution Technician	Suspend/Resume Data Distribution Requests	(P) 18.2.7	
8	Distribution Technician	Cancel Data Distribution Requests	(P) 18.2.8	
9	Distribution Technician	Modify Preambles	(P) 18.2.9	

18.2.1 Log in to ECS Hosts

Logging in to ECS hosts is accomplished from a UNIX command line prompt. Table 18.2-2 presents (in a condensed format) the steps required to log in to ECS hosts. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

1 At the UNIX command line prompt enter:

setenv DISPLAY <client name>:0.0

- Use either the X terminal/workstation IP address or the machine-name for the client name.
- When using secure shell, the DISPLAY variable is set just once, before logging in to remote hosts. If it were to be reset after logging in to a remote host, the security features would be compromised.

2 If logging in to the PDS Server host, in the terminal window (at the command line prompt) start the log-in to the PDS Server by entering:

/tools/bin/ssh -l <PDS user ID> <PDS host name>

- Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
- The **-l** option used with the ssh command allows logging in to the remote host (or the local host for that matter) with a different user ID (in this case the login ID is changed to a PDS user ID).
- **<PDS user ID>** refers the PDS user ID or PDSIS user ID.
 - The PDS user IDs **pds**, **pds_st**, and **pds_it** are used for PDS operations in the OPS, TS1, and TS2 modes respectively.
 - The PDSIS user IDs **pdsis**, **pdsis_ts1**, and **pdsis_ts2** are used for PDSIS operations in the OPS, TS1, and TS2 modes respectively.
- Depending on the set-up it may or may not be necessary to include the path (i.e., /tools/bin/) with the ssh command. Using ssh alone is often adequate. For example:
ssh -l <PDS user ID> <hostname>
- If you receive the message, “Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?” enter **yes** (“y” alone will not work).
- If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 3.
- If you have not previously set up a secure shell passphrase, go to Step 4.

- 3 If logging in to an ECS host other than the PDS Server host, in the terminal window (at the command line prompt) start the log-in to the appropriate host by entering:

/tools/bin/ssh <host name>

- The **-l** option can be used with the ssh command to allow logging in to the remote host (or the local host for that matter) with a different user ID. For example, to log in to x0acs06 as user cmops enter:

/tools/bin/ssh -l cmops x0acs06

- Depending on the set-up it may or may not be necessary to include the path (i.e., /tools/bin/) with the ssh command. Using ssh alone is often adequate. For example:

ssh x0acs06

- or -

ssh -l cmops x0acs06

- Examples of Sun internal server host names include **e0acs06**, **g0acs06**, **l0acs06**, and **n0acs06**.
- Examples of Sun external server host names include **e0ins01**, **g0ins01**, **l0ins01**, and **n0ins01**.
- Examples of Access/Process Coordinators (APC) Server host names include **e0acg11**, **g0acg01**, **l0acg02**, and **n0acg01**.
- Examples of FSMS Server host names include **e0drg11**, **g0drg01**, **l0drg01**, and **n0drg01**.
- Examples of Operations Workstation host names include **e0acs03**, **g0acs02**, **l0acs01**, and **n0acs03**.
- Examples of Ingest Server host names include **e0icg11**, **g0icg01**, **l0acg02**, and **n0acg01**.
- If you receive the message, “Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?” enter **yes** (“y” alone will not work).
- If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 4.
- If you have not previously set up a secure shell passphrase, go to Step 5.

- 4 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, enter:

<passphrase>

- If a command line prompt is displayed, log-in is complete.
- If the passphrase is unknown, press **Return/Enter**, which should cause a **<user@remotehost>'s password:** prompt to appear (after the second or third try if not after the first one), then go to Step 5.

- If the passphrase is entered improperly, a **<user@remotehost>'s password:** prompt should appear (after the second or third try if not after the first one); go to Step 5.

5 If a prompt for **<user@remotehost>'s password:** appears, enter:

<password>

- A command line prompt is displayed.
- Log-in is complete.

Table 18.2-2. Log in to ECS Hosts - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	setenv DISPLAY <client name>:0.0	enter text, press Enter
2	/tools/bin/ssh -l <pds user id> <pds host name> or /tools/bin/ssh <host name> (as applicable)	enter text, press Enter
3	<passphrase> (if applicable)	enter text, press Enter
4	<password> (if applicable)	enter text, press Enter

18.2.2 Launch the Data Distribution Operator and Storage Management Control GUIs

The **Data Distribution Operator GUI** is intended to run continually to allow the monitoring and management of data distribution requests. The **Storage Management Control GUI** is intended to be run as it is needed; e.g., in support of Storage Management configuration parameter modifications.

The **Data Distribution Operator** and **Storage Management Control GUIs** are invoked from a UNIX command line prompt. Table 18.2-3 presents (in a condensed format) the steps required to launch the **Data Distribution Operator** and **Storage Management Control GUIs**. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the Operations Workstation.
 - Examples of Operations Workstation host names include **e0acs03**, **g0acs02**, **l0acs01**, and **n0acs03**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 In the terminal window, at the command line prompt enter:
cd /usr/ecs/<MODE>/CUSTOM/utilities
 - <MODE> is current mode of operation.
 - TS1 - Science Software Integration and Test (SSI&T)
 - TS2 - New Version Checkout
 - OPS - Normal Operations
 - “utilities” is the directory containing the **Data Distribution Operator GUI** and **Storage Management Control** GUI start-up scripts (e.g., EcDsDdistGuiStart, EcDsStmgtGuiStart).

- 3 Start the **Data Distribution Operator GUI** by entering:
EcDsDdistGuiStart <MODE>
 - The **Data Distribution Operator GUI** is launched.
 - The **Data Distribution Operator GUI Distrib’n Requests** tab is displayed.

- 4 Start the **Storage Management Control GUI** by entering:
EcDsStmgtGuiStart <MODE>
 - The **Storage Management Control** GUI is launched.
 - The **Storage Management Control** GUI **Storage Config.** tab is displayed.

Table 18.2-3. Launch the Data Distribution Operator and Storage Management Control GUIs - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (Operations Workstation)	single-click or use procedure in Section 18.2.1
2	cd /usr/ecs/<MODE>/CUSTOM/utilities	enter text, press Enter
3	EcDsDdistGuiStart <MODE>	enter text, press Enter
4	EcDsStmgtGuiStart <MODE>	enter text, press Enter

18.2.3 Monitor/Control Data Distribution Requests

The Distribution Technician monitors and manages data distribution requests primarily via the **Data Distribution - Track Activity** window of the **Distrib’n Requests** tab on the **Data Distribution Operator GUI**. From the **Data Distribution - Track Activity** window the DAAC Distribution Technician can perform the following functions:

- View data distribution requests.
- Change the priority of a selected distribution request.
- Cancel or suspend a request.

- Resume processing of a suspended request.
- Filter on all or specific requests by...
 - Request ID.
 - Requester.
 - All Requests.
 - Media Type.
 - State (current status).

Table 18.2-4 presents (in a condensed format) the steps required to monitor/control data distribution requests. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If it is not already being displayed, launch the **Data Distribution Operator GUI** (refer to Section 18.2.2).
 - The **Data Distribution Operator GUI** is displayed.

- 2 Configure Data Distribution polling (refer to Section 18.2.4).
 - DDist Polling Rate is set.
 - Error Retry Rate is set (if applicable).

- 3 Observe the distribution request information displayed on the **Distrib'n Requests** tab of the **Data Distribution Operator GUI**.
 - By default, all current distribution requests are shown in the **Data Distribution Requests** list of the **Data Distribution - Track Activity** window (**Distrib'n Requests** tab).
 - Note that Data Distribution controls much of the data retrieval from the archive (excluding retrieval for Data Pool insert); therefore, there may be a lot of activity on the **Data Distribution - Track Activity** screen, especially if data processing is operating at or near capacity.
 - Consequently, it may be useful to restrict the number of distribution requests displayed by filtering them as described in the next step of this procedure.
 - Horizontal and vertical scroll bars allow viewing data that are not readily visible in the window.
 - **Single-click** on any of the column headers of the **Data Distribution - Track Activity** screen to sort the listed requests in order by the column selected.
 - For example, **single-click** on the **Submission Time** column header to list requests in the order in which the requests were submitted (i.e., oldest first).
 - The **Refresh** button provides a means of updating the data on the screen.
 - An alternative is to execute the following menu path from the pull-down menu:
View → Refresh

- The **Find** button provides a means of performing a keyword search of the distribution requests.
 - To perform a keyword search, in the text entry box to the right of the **Find** button enter: <text> then **single-click** on the **Find** button. Request(s) that have the search text are highlighted.
 - The **Operator Messages** field at the bottom of the GUI displays messages concerning events occurring in distribution operations.
 - Error messages are described in Table 18.6-3, Data Distribution Operator GUI User Messages and Table 18.6-4, Storage Management User Messages.
 - To select (highlight) all requests being displayed in the **Data Distribution - Track Activity** window execute the following menu path from the pull-down menu:
Selected → Select All
 - To deselect all highlighted requests being displayed in the **Data Distribution - Track Activity** window execute the following menu path from the pull-down menu:
Selected → Deselect All
 - To access more detailed information concerning the status of a distribution request, **single-click** on the distribution request in the **Data Distribution - Track Activity** window then execute the following menu path from the pull-down menu:
View→ Detailed
 - The detailed information is displayed in the **Operator Messages** field at the bottom of the GUI.
- 4 If the list of data distribution requests shown in the **Data Distribution - Track Activity** window needs to be filtered, filter data distribution requests (refer to Section 18.2.5).
 - Only requests that meet the specified filter criteria appear in the list in the **Data Distribution - Track Activity** window.
 - 5 Observe the distribution request information displayed on the **Distrib'n Requests** tab of the **Data Distribution Operator GUI**.
 - 6 If necessary, change the priority of a data distribution request (refer to Section 18.2.6).
 - Priority of the request, as displayed in the **Priority** column of the **Data Distribution Requests** list, changes from its original value to the newly selected priority.
 - A check mark is displayed in the **Mod** column of the **Data Distribution Requests** list to indicate that the request has been changed.
 - 7 If necessary, suspend data distribution request(s) (refer to Section 18.2.7).
 - Status of request(s), as displayed in the **State** column of the **Data Distribution Requests** list, change(s) to the appropriate state(s).
 - Check mark(s) is (are) displayed in the **Mod** column of the **Data Distribution Requests** list to indicate that changes have been made to the request(s).

- 8 If necessary, resume processing of suspended request(s) (refer to Section 18.2.7).
 - Status of request(s), as displayed in the **State** column of the **Data Distribution Requests** list, change(s) to the appropriate state(s).
 - Check mark(s) is (are) displayed in the **Mod** column of the **Data Distribution Requests** list to indicate that changes have been made to the request(s).
- 9 If necessary, cancel a data distribution request (refer to Section 18.2.8).
 - Status of the request, as displayed in the **State** column of the **Data Distribution Requests** list, changes from its original value to “Canceled.”
 - A check mark is displayed in the **Mod** column of the **Data Distribution Requests** list to indicate that the request has been changed.
- 10 If the system creates an open intervention with respect to a request (e.g., due to the failure of a request), respond to the intervention.
 - For detailed instructions refer to the **Respond to Open Interventions** procedure (Section 18.5.2).
- 11 If it becomes necessary to reprocess or check on a data distribution request that has failed, been cancelled, or been shipped, check/resubmit the request.
 - For detailed instructions refer to the **Resubmit Completed Distribution Requests** procedure (Section 18.5.3).
- 12 If it is necessary to update the data displayed in the **Data Distribution - Track Activity** window, **single-click** on the **Refresh** button.
 - Current data concerning data distribution requests is displayed in the **Data Distribution - Track Activity** window.
- 13 If it is necessary to access more detailed information concerning the status of a particular distribution request, first **single-click** on (highlight) the distribution request in the **Data Distribution - Track Activity** window.
- 14 To complete accessing more detailed information concerning the status of a particular distribution request execute the following menu path from the pull-down menu:
View→ Detailed
 - Information is displayed in the **Operator Messages** field at the bottom of the GUI.
- 15 If there is a data distribution failure, perform the applicable procedure(s) in the **Troubleshooting DDIST and Order Manager GUI Problems** section (Section 18.6).
- 16 Repeat Steps 4 through 15 as necessary to monitor data distribution requests.

17 If necessary, exit from the **Data Distribution Operator GUI** by executing the following menu path:

File → Exit

- The **Data Distribution Operator GUI** disappears.

Table 18.2-4. Monitor/Control Data Distribution Requests - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Launch the Data Distribution Operator GUI (if necessary)	Use procedure in Section 18.2.2
2	Configure Data Distribution polling	Use procedure in Section 18.2.4
3	Observe distribution request information	read text
4	Filter data distribution requests if necessary	Use procedure in Section 18.2.5
5	Observe distribution request information	read text
6	Change the priority of a data distribution request if necessary	Use procedure in Section 18.2.6
7	Suspend data distribution request(s) if necessary	Use procedure in Section 18.2.7
8	Resume processing of suspended request(s) if necessary	Use procedure in Section 18.2.7
9	Cancel a data distribution request if necessary	Use procedure in Section 18.2.8
10	Respond to an open intervention if necessary	Use procedure in Section 18.5.2
11	Check/resubmit a completed request if necessary	Use procedure in Section 18.5.3
12	Refresh button (as necessary)	single-click
13	<distribution request> (in the Data Distribution - Track Activity window) (as necessary to access detailed information concerning request status)	single-click
14	View→ Detailed (as necessary to access detailed information concerning request status)	single-click
15	Repeat Steps 4 through 14 as necessary	
16	File → Exit (to exit from the Data Distribution Operator GUI)	single-click

18.2.4 Configure Data Distribution Polling

The procedure to **Configure Data Distribution Polling** is performed as part of the **Monitor/Control Data Distribution Requests** procedure (Section 18.2.3). The **Options** menu on the **Data Distribution Operator GUI** provides the Distribution Technician with a means of

switching the Data Distribution database polling function on or off. In addition, there are several parameters that the technician can modify:

- **DDist Polling Rate**
 - How often (in seconds) the system updates the information displayed in the Data Distribution - Track Activity window.
- **Error Retry Rate**
 - Amount of time (in seconds) that the system waits before trying to poll the Data Server after a failed attempt.
- **Select Confirmation Min**
 - Number of records that triggers a confirmation dialogue box for a selected action.
- **Overdue Limit**
 - Time limit (in hours) for declaring requests “overdue.”

Table 18.2-5 presents (in a condensed format) the steps required to configure Data Distribution polling. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Execute the following menu path:
Options → System Settings
 - The **Refresh Options** dialogue box is displayed.
- 2 If the DDist Polling state is to be changed (from off to on or vice versa), **single-click** on the **DDist Polling On** button.
 - If the button does not have a check mark in it, clicking on it turns DDist Polling on.
 - If the button already has a check mark in it, clicking on it turns DDist Polling off.
- 3 If the polling rate value is to be changed, in the **DDist Polling Rate** field enter:
<polling rate>
 - The default value for polling rate is 30 seconds.
- 4 If an error retry rate value is to be specified, in the **Error Retry Rate** field enter:
<error retry rate>
 - The value for error retry rate is specified as a number of seconds.

- 5 If it is necessary to specify a number of records that would trigger a confirmation dialogue box if selected, in the **Select Confirmation Min** field enter:
- <number of records>**
- When specifying a common action for a multiple requests that have been highlighted (e.g., when “resuming” a large group of suspended requests), a dialogue box is displayed to confirm that the action should be applied to all of the requests in the group.
 - The **Select Confirmation Min** field specifies the minimum number of records for displaying the confirmation dialogue box.
 - The default value is 100. If 100 requests (or more) are selected for a particular action, a dialogue box is displayed to confirm the action. If 99 requests (or fewer) are selected for a particular action, no confirmation dialogue box is displayed.
- 6 If it is necessary to specify a time limit for declaring requests “overdue,” in the **Overdue Limit** field enter:
- <hours>**
- Requests that exceed the number of hours specified in the **Overdue Limit** field are marked “Yes” in the **Overdue** column on the **Data Distribution - Track Activity** window.
- 7 When the appropriate data have been entered in the **Refresh Options** dialogue box fields, **single-click** on the appropriate button from the following selections:
- **Ok** - to apply the selections and dismiss the **Refresh Options** dialogue box.
 - **Cancel** - to dismiss the **Refresh Options** dialogue box without applying the selections.
- 8 Return to the **Monitor/Control Data Distribution Requests** procedure (Section 18.2.3).

Table 18.2-5. Configure Data Distribution Polling - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Options → System Settings	single-click
2	DDist Polling On button (if applicable)	single-click
3	<polling rate> (if applicable)	enter text
4	<error retry rate> (if applicable)	enter text
5	<number of records> (if applicable)	enter text
6	<hours> (if applicable)	enter text
7	OK button	single-click
8	Return to the procedure to Monitor/Control Data Distribution Requests	Use procedure in Section 18.2.3

18.2.5 Filter Data Distribution Requests

The procedure to **Filter Data Distribution Requests** is performed as part of the **Monitor/Control Data Distribution Requests** procedure (Section 18.2.3). The **Data Distribution Operator GUI** provides the Distribution Technician with a means of filtering data distribution requests.

The distribution requests to be displayed in the **Data Distribution Requests** list (**Data Distribution - Track Activity** window) can be filtered using the **Distribution Filter Requests** dialogue box. The filtering can be done on the basis of the following criteria, either individually or in combination:

- Request ID.
- Requester.
- Media Type.
- State [of the request].

Table 18.2-6 presents (in a condensed format) the steps required to filter data distribution requests. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

1 Execute the following menu path:

View → Filter

- The **Distribution Filter Requests** dialogue box is displayed.
- If data distribution requests are to be filtered on the basis of...
 - **Request ID**, perform Steps 2 and 3.
 - **Requester**, perform Steps 4 and 5.
 - **All Requests**, perform Step 6.
 - **Media Type**, perform Step 7.
 - **State**, perform Step 8.

2 If a specific distribution request is desired and the request ID is known, **single-click** on the **Request ID** radio button.

3 If a specific distribution request is desired and the request ID is known, in the text box adjacent to the **Request ID** radio button enter:

<request ID>

4 If data distribution requests submitted by a particular requester are desired, **single-click** on the **Requester** radio button.

- 5 If data distribution requests submitted by a particular requester are desired, in the text box adjacent to the **Requester** radio button enter:
- <requester>
- In the text box the requester must be identified exactly as known to the Data Server Subsystem.
- 6 If all data distribution requests are to be displayed in the **Data Distribution Requests** list, **single-click** on the **All Requests** radio button.
- The **All Requests** button is particularly useful for restoring the **Data Distribution Requests** list after reviewing a previously filtered set of requests.
 - Go to Step 9.
- 7 If a list of data distribution requests filtered by media type(s) is needed, in the **Media Type** section of the **Filter Requests** dialogue box **single-click** on the type(s) of media to be displayed in the **Data Distribution - Track Activity** window.
- Options are: **8 MM, CDROM, D3, DLT, FtpPull, FtpPush, DVD, All, None.**
 - **8 MM** (tape), **CDROM** (Compact Disk – Read-Only Memory), **DLT** (Digital Linear Tape), and **DVD** are not relevant in Release 6B (handled through PDS not DDIST).
 - **FtpPull** and **FtpPush** are applicable in Release 6B.
 - One media type or several media types may be selected.
 - If other filters (e.g., requester or state) are to be applied, it is possible to **single-click** on the **Apply** button to implement the media type filter and leave the **Filter Requests** dialogue box open.
- 8 If a list of data distribution requests filtered by state(s) is needed, **single-click** on the applicable button(s) in the **State** section of the **Filter Requests** dialogue box.
- Options are: **Pending, Active, Staging, Transferring, Cancelled, Suspended, Suspended with Errors, Waiting for Shipment, Shipped, Failed, All, None.**
 - One button or several buttons may be selected.
 - If other filters (e.g., requester or media type) are to be applied, it is possible to **single-click** on the **Apply** button to implement the state filter and leave the **Filter Requests** dialogue box open.
- 9 When all filter criteria have been selected, **single-click** on the appropriate button from the following selections:
- **OK** - to implement the selections and dismiss the **Distribution Filter Requests** dialogue box.
 - The **Data Distribution - Track Activity** window reappears; only requests that meet the specified filter criteria appear in the list.

- **Apply** - to implement the selections without dismissing the **Distribution Filter Requests** dialogue box.
 - The **Distribution Filter Requests** dialogue box remains open.
- **Cancel** - to dismiss the **Distribution Filter Requests** dialogue box without implementing the selections.
 - The previously available **Data Distribution Requests** list is shown in the **Data Distribution - Track Activity** window.

10 Return to the **Monitor/Control Data Distribution Requests** procedure (Section 18.2.3).

Table 18.2-6. Filter Data Distribution Requests - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	View → Filter	single-click
2	Request ID radio button (if applicable)	single-click
3	<request ID> (in Request ID text box) (if applicable)	enter text
4	Requester radio button (if applicable)	single-click
5	<requester> (in Requester text box) (if applicable)	enter text
6	All Requests radio button (if applicable)	single-click
7	<media types> (in Media Type section) (if applicable)	single-click
8	<state> button(s) (in State section) (if applicable)	single-click
9	OK button	single-click
10	Return to the procedure to Monitor/Control Data Distribution Requests	Use procedure in Section 18.2.3

18.2.6 Change the Priority of Data Distribution Requests

The procedure to **Change the Priority of Data Distribution Requests** is performed as part of the **Monitor/Control Data Distribution Requests** procedure (Section 18.2.3). The **Change Priority** area of the **Data Distribution - Track Activity** window on the **Data Distribution Operator GUI** allows the Distribution Technician to change the priority of data distribution requests.

Table 18.2-7 presents (in a condensed format) the steps required to change the priority of data distribution requests. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If the list of data distribution requests shown in the **Data Distribution - Track Activity** window of the **Data Distribution Operator GUI** needs to be filtered, filter data distribution requests (refer to Section 18.2.5).
 - Only requests that meet the specified filter criteria appear in the list in the **Data Distribution - Track Activity** window.

- 2 In the **Data Distribution Requests** list **single-click** on (highlight) the row corresponding to the distribution request to be assigned a different priority.
 - The selected data distribution request is highlighted.

- 3 **Single-click** and **hold** the **Change Priority** option button to display a menu of priorities, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
 - Options are: **Xpress, Vhigh, High, Normal, Low.**
 - Selected code is displayed on the **Change Priority** option button when the mouse button is released.

- 4 To implement the priority change **single-click** on the **Apply** button to the right of the priority option button.

- 5 **Single-click** on the **Refresh** button to update the data displayed on the screen.
 - Priority of the request, as displayed in the **Priority** column of the **Data Distribution Requests** list, changes from its original value to the newly selected priority.
 - A check mark is displayed in the **Mod** column of the **Data Distribution Requests** list to indicate that the request has been changed.

- 6 Repeat the preceding steps as necessary to change the priority of additional data distribution requests.

- 7 Return to the **Monitor/Control Data Distribution Requests** procedure (Section 18.2.3).

Table 18.2-7. Change the Priority of Data Distribution Requests - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Filter data distribution requests (if necessary)	Use procedure in Section 18.2.5
2	<distribution request> (in Data Distribution Requests list)	single-click
3	<priority> (Change Priority option button)	single-click
4	Apply button	single-click
5	Refresh button (if applicable)	single-click
6	Repeat the preceding steps as necessary	
7	Return to the procedure to Monitor/Control Data Distribution Requests	Use procedure in Section 18.2.3

18.2.7 Suspend/Resume Data Distribution Requests

Under certain circumstances it may be advisable to suspend the processing of a data distribution request and resume it at a later time. For example, if there is a very large request that is taking up resources and causing other requests to back up waiting (especially requests from data processing that must be filled to allow processing to proceed), the request should be suspended. Processing of the request might be resumed at a time when the demand on data distribution was relatively light. Another example is that of a request that has been suspended by the system due to a system error. Processing of the request should be resumed after the conditions that caused the error have been corrected.

The procedure to **Suspend/Resume Data Distribution Requests** is performed as part of the **Monitor/Control Data Distribution Requests** procedure (Section 18.2.3). The **Data Distribution Operator GUI** provides the Distribution Technician with a means of suspending or resuming data distribution requests.

Table 18.2-8 presents (in a condensed format) the steps required to suspend/resume data distribution requests. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If the list of data distribution requests shown in the **Data Distribution - Track Activity** window of the **Data Distribution Operator GUI** needs to be filtered, filter data distribution requests (refer to Section 18.2.5).
 - Only requests that meet the specified filter criteria appear in the list in the **Data Distribution - Track Activity** window.
 - If data distribution request are to be...
 - **Suspended**, perform Steps 2 through 6.
 - **Resumed**, perform Steps 7 through 11.
- 2 If all new requests displayed in the **Data Distribution Requests** list are to be suspended, click on the **Suspend New Requests** button.
 - The data distribution requests are suspended.
 - Go to Step 6.
- 3 If a single request displayed in the **Data Distribution Requests** list is to be suspended, in the **Data Distribution Requests** list **single-click** on (highlight) the row corresponding to the request.
 - The selected data distribution request is highlighted.
- 4 If a single request displayed in the **Data Distribution Requests** list is to be suspended, **single-click** on the **Suspend** button.
 - The selected data distribution request is suspended.

- 5 **Single-click** on the **Refresh** button to update the data displayed on the screen.
 - Status of request(s), as displayed in the **State** column of the **Data Distribution Requests** list, change(s) from original value to “Suspended.”
 - Check mark(s) is (are) displayed in the **Mod** column of the **Data Distribution Requests** list to indicate that changes have been made to the request(s).

- 6 If there are no suspended requests to be resumed at this time, return to the **Monitor/Control Data Distribution Requests** procedure (Section 18.2.3).

- 7 If processing of all new requests displayed in the **Data Distribution Requests** list is to be resumed, **single-click** on the **Resume New Requests** button.
 - The data distribution requests resume processing.
 - Go to Step 10.

- 8 If processing of a single request displayed in the **Data Distribution Requests** list is to be resumed, in the **Data Distribution Requests** list **single-click** on the row corresponding to the request.
 - The selected data distribution request is highlighted.

- 9 If processing of a single request displayed in the **Data Distribution Requests** list is to be resumed, **single-click** on the **Resume** button.
 - The selected data distribution request resumes processing.

- 10 **Single-click** on the **Refresh** button to update the data displayed on the screen.
 - Status of request(s), as displayed in the **State** column of the **Data Distribution Requests** list, changes from “Suspended” to whatever state(s) is (are) appropriate for the continuation of request processing (depending on each request’s status when it was suspended).
 - Check mark(s) is (are) displayed in the **Mod** column of the **Data Distribution Requests** list to indicate that changes have been made to the request(s).

- 11 Return to the **Monitor/Control Data Distribution Requests** procedure (Section 18.2.3).

Table 18.2-8. Suspend/Resume Data Distribution Requests - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Filter data distribution requests (if necessary)	Use procedure in Section 18.2.5
2	Suspend New Requests button (if applicable)	single-click
3	<distribution request> (in Data Distribution Requests list) (if applicable)	single-click
4	Suspend button (if applicable)	single-click
5	Refresh button (if applicable)	single-click

Table 18.2-8. Suspend/Resume Data Distribution Requests - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
6	Return to the procedure to Monitor/Control Data Distribution Requests (if applicable)	Use procedure in Section 18.2.3
7	Resume New Requests button (if applicable)	single-click
8	<distribution request> (in Data Distribution Requests list) (if applicable)	single-click
9	Resume button (if applicable)	single-click
10	Refresh button (if applicable)	single-click
11	Return to the procedure to Monitor/Control Data Distribution Requests	Use procedure in Section 18.2.3

18.2.8 Cancel Data Distribution Requests

The procedure to **Cancel Data Distribution Requests** is performed as part of the **Monitor/Control Data Distribution Requests** procedure (Section 18.2.3). The **Data Distribution Operator GUI** provides the Distribution Technician with a means of canceling data distribution requests.

Table 18.2-9 presents (in a condensed format) the steps required to cancel data distribution requests. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1** If the list of data distribution requests shown in the **Data Distribution - Track Activity** window of the **Data Distribution Operator GUI** needs to be filtered, filter data distribution requests (refer to Section 18.2.5).
 - Only requests that meet the specified filter criteria appear in the list in the **Data Distribution - Track Activity** window.

- 2** In the **Data Distribution Requests** list **single-click** on (highlight) the row corresponding to the distribution request to be canceled.
 - The selected data distribution request is highlighted.

- 3** **Single-click** on the **Cancel** button near the bottom of the **Distrib'n Requests** tab.
 - The selected data distribution request is canceled.

- 4 **Single-click** on the **Refresh** button to update the data displayed on the screen.
 - Status of the request, as displayed in the **State** column of the **Data Distribution Requests** list, changes from its original value to “Canceled.”
 - A check mark is displayed in the **Mod** column of the **Data Distribution Requests** list to indicate that the request has been changed.
- 5 Return to the **Monitor/Control Data Distribution Requests** procedure (Section 18.2.3).

Table 18.2-9. Cancel Data Distribution Requests - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Filter data distribution requests (if necessary)	Use procedure in Section 18.2.5
2	<distribution request> (in Data Distribution Requests list)	single-click
3	Cancel button	single-click
4	Refresh button	single-click
5	Return to the procedure to Monitor/Control Data Distribution Requests	Use procedure in Section 18.2.3

18.2.9 Modify Preambles

The **Preamble Editor** tab on the **Data Distribution Operator GUI** allows the Distribution Technician to review and/or modify the text of preambles to the following types of documents:

- Packing list.
- Successful e-mail.
- Failed e-mail.

The preambles are accessible in the `/usr/ecs/<MODE>/CUSTOM/data/DSS` directory on the Distribution Server host (Sun internal server host). The directory contains preambles for the different types of distribution. For example, the file `EcDsDdFtpPushEMSuccessPreamble.txt` (in the `/usr/ecs/<MODE>/CUSTOM/data/DSS` directory) would be an “ftp push successful e-mail” preamble file.

The following two types of distribution only are relevant for Release 6B:

- Ftp pull.
- Ftp push.

Consequently, preambles for those types of distribution are the only preambles that are applicable in the Release 6B time frame.

Table 18.2-10 presents (in a condensed format) the steps required to modify preambles. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If necessary, launch the **Data Distribution Operator GUI** (refer to Section 18.2.2).
 - The **Data Distribution Operator GUI** is displayed.
- 2 **Single-click** on the **Data Distribution Operator GUI Preamble Editor** tab.
 - The **Preamble Editor** screen is displayed.
- 3 **Single-click** on (highlight) the media type for which the preamble is to be modified in the **Media Type** window.
 - Options are: **8mm** [obsolete], **CDROM** [obsolete], **D3** [obsolete], **DLT** [obsolete], **DVD** [obsolete], **FtpPull**, and **FtpPush**.
 - Currently **FtpPull** and **FtpPush** are the only relevant options.
 - The selected media type is highlighted.
- 4 **Single-click** and **hold** the **Preamble Type** option button to display a menu of types of preambles, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
 - Options are: **Packing List**, **Successful Email**, and **Failed Email**.
 - The selected preamble type is displayed on the **Preamble Type** option button.
 - The selected preamble is displayed in the **Preamble Text** window.
 - If the **Preamble Text** window is blank, either there is no current preamble of the specified type or the preamble file is empty. Proceed to Step 5 and create a new preamble.
- 5 In the **Preamble Text** window enter:
<text>
 - Enter modifications to the preamble text as necessary.
 - The following editing functions are available from the **Edit** pull-down menu or by clicking on the right mouse button:
 - **Cut**.
 - **Copy**.
 - **Paste**.
- 6 **Single-click** on the appropriate button from the following selections:
 - **Save** - to save the preamble text as modified.
 - **Reset** - to discard any changes and revert to the original (unmodified) preamble text.
 - **Clear** - to remove all text from the **Preamble Text** window.
 - When the **Clear** button has been selected, a **Preamble Save Confirmation Dialogue Box** is displayed.

- 7 If the **Preamble Save Confirmation Dialogue Box** is displayed, **single-click** on the appropriate button from the following selections:
- **Yes** - to save the preamble text as modified.
 - **No** - to revert to the original (unmodified) preamble text.

Table 18.2-10. Modify Preambles - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Launch the Data Distribution Operator GUI (if necessary)	Use procedure in Section 18.2.2
2	Preamble Editor tab	single-click
3	<media type> (in Media Type window)	single-click
4	<preamble type> (Preamble Type option button)	single-click
5	<text> (in Preamble Text window)	enter text
6	Save button	single-click
7	Yes button (if applicable)	single-click

18.3 Monitoring Storage Management Server Operations

Distribution Technicians use the Storage Management Control GUI primarily to monitor Storage Management server operations. Configuring Storage Management polling and deleting files from cache are activities that are included in the overall process.

Table 18.3-1, below, provides an Activity Checklist for monitoring Storage Management server operations.

Table 18.3-1. Monitoring Storage Management Server Operations - Activity Checklist

Order	Role	Task	Section	Complete?
1	Distribution Technician	Configure Storage Management Polling	(P) 18.3.1	
2	Distribution Technician	Delete Files from Cache	(P) 18.3.2	
3	Distribution Technician	View Storage Management Event Log Information	(P) 18.3.3	
4	Distribution Technician	Monitor Storage Management Server Operations	(P) 18.3.4	

18.3.1 Configure Storage Management Polling

The **Storage Management Control GUI Options** menu provides the Distribution Technician with a means of switching the **Operator Notification Timer Polling** on or off: In addition, the technician can modify the following parameters:

- Database Polling Rate.
 - How often (in seconds) the system updates the information displayed on the GUI.
- Error Retry Rate.
 - Amount of time (in seconds) that the system waits before trying to poll the database server after a failed attempt.

Table 18.3-2 presents (in a condensed format) the steps required to configure Storage Management polling. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If necessary, launch the **Storage Management Control GUI** (refer to Section 18.2.2).
 - The **Storage Management Control GUI** is displayed.
- 2 Execute the following menu path:
Options → System Settings
 - The **Session Settings** dialogue box is displayed.
- 3 To change the **Operator Notification Timer Polling** state (from off to on or vice versa), **single-click** on the **Polling** button.
 - If **OFF** is displayed in the **Polling** field , **single-clicking** on the adjacent button turns Polling on.
 - If **ON** is displayed in the **Polling** field , **single-clicking** on the adjacent button turns Polling off.
- 4 To change the database polling rate for the **Operator Notification Timer** in the **Database Polling Rate** field enter:
<value>
 - <value> is expressed in seconds.
 - The default value is 30 seconds.
- 5 To change the error retry rate for the **Operator Notification Timer**, in the **Error Retry Rate** field enter:
<value>
 - <value> is expressed in seconds.

- 6 When the appropriate data have been entered in the **Session Settings** dialogue box fields, **single-click** on the appropriate button from the following selections:
- **Ok** - to apply the selections and dismiss the **Session Settings** dialogue box.
 - **Apply** - to apply the selections without dismissing the **Session Settings** dialogue box.
 - **Cancel** - to dismiss the **Session Settings** dialogue box without applying the selections.

Table 18.3-2. Configure Storage Management Polling - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Launch the Storage Management Control GUI (if necessary)	Use procedure in Section 18.2.2
2	Options → System Settings	single-click
3	Either <on> or <off> (Polling button) (as applicable)	single-click
4	<value> (in Database Polling Rate field)	enter text
5	<value> (in Error Retry Rate field)	enter text
6	Ok button	single-click

18.3.2 Delete Files from Cache

The **Storage Management Control** GUI's **Cache Stats.** tab displays all of the files that are in the cache areas, including the Pull Monitor and other staging areas. The data displayed on the **Cache Stats.** tab reports general statistics on the selected cache and allows the operator to manually delete expired files in cache areas.

In Release 6A a just-enough-cache cleanup strategy was implemented. A principal effect of the strategy is that caches (including the Pull Area) generally remain full because each cache manager (including the cache manager that is configured as the Pull Monitor or Pull Area Manager) automatically identifies and removes just enough old files to accommodate new ones. Consequently, it is likely that manual cache cleanup will not be performed very often. The procedure that follows is provided as a guide for those rare occasions when it is necessary to manually delete files from cache.

Table 18.3-3 presents (in a condensed format) the steps required to delete files from cache. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If necessary, launch the **Storage Management Control** GUI (refer to Section 18.2.2).
 - The **Storage Management Control** GUI is displayed.

- 2 **Single-click** on the **Cache Stats.** tab.
 - The **Cache Stats.** tab is displayed.

- 3 To define the size of a “page” of data displayed in the **Cache Information** table on the **Cache Stats.** tab type the number of rows per page in the **Max Rows Returned** text box.
 - **Max Rows Returned** defines the size of a “page” of data displayed in the **Cache Information** table on the **Cache Stats.** tab.
 - For example, setting **Max Rows Returned** to 50 would cause data to be displayed in the **Cache Information** table in pages (groups) of 50 rows of data.
 - If there were 500 files in the selected cache and **Max Rows Returned** were set to 50, there would be 10 pages of data available for display, with the first 50 items being displayed in the **Cache Information** table.
 - The **Prev** and **Next** buttons provide means of displaying additional pages of data.

- 4 To view the contents of a particular cache (e.g., **FTP Pull Cache**) **single-click** and **hold** on the option button to the right of the **Cache** field, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
 - The selected cache is displayed in the **Cache** field of the **Cache Stats.** tab.
 - The following cache statistics are displayed in the **Cache Statistics** area:
 - **Current Utilization.**
 - **Used Space (Blocks).**
 - **Free Space (Blocks).**
 - **Total Space (Blocks).**
 - **Number of Resident Files.**
 - **Maximum File Size (Blocks).**
 - **Minimum File Size (Blocks).**
 - **Average File Size (Blocks).**
 - The following information concerning the files in the selected cache is listed in the **Cache Information** table:
 - **Filename.**
 - **File Size.**
 - **Expiration** [date/time].
 - **Last Accessed.**
 - **Delete Flag** [displays either N or Y].
 - **State.**

NOTE: The only view currently accessible using the **Text** (view) option button is **Text**. The **Graphic** view is not currently available.

- 5 Observe cache statistics/information displayed on the **Cache Stats.** tab.
 - As previously mentioned, cache statistics are displayed in the **Cache Statistics** area of the GUI and information concerning the files in the selected cache is listed in the **Cache Information** table.
 - The **Refresh** button can be used to update the data on (refresh) the screen.
 - The **Prev** and **Next** buttons provide means of displaying additional pages of data.
 - The **Operator Messages** field at the bottom of the GUI displays messages concerning events (i.e., information, warnings, or errors) occurring in **Storage Management Control** GUI operations.
 - Error messages are described in Table 18.6-4, Storage Management User Messages.

- 6 If deleting files, **single-click** on the row(s) corresponding to the file(s) to be deleted in the **Cache Information** table on the **Cache Stats.** tab.
 - Multiple rows may be selected.

- 7 If deleting files, **single-click** on the **Mark Delete** button near the bottom of the **Cache Stats.** tab.
 - **Y** is displayed in the **Delete Flag** field for the row in the **Cache Information** table.

- 8 If any file that should be left in the cache has been inadvertently marked **Delete**, first **single-click** on the row corresponding to the file.

- 9 If any file that should be left in the cache has been inadvertently marked **Delete**, **single-click** on the **Unmark Delete** button near the bottom of the **Cache Stats.** tab.
 - **N** is displayed in the **Delete Flag** field for the row in the **Cache Information** table.

- 10 If it becomes necessary to exit from the **Storage Management Control** GUI execute the following menu path:
File → Exit

Table 18.3-3. Delete Files from Cache - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Launch the Storage Management Control GUI (if necessary)	Use procedure in Section 18.2.2
2	Cache Stats. tab	single-click
3	<cache> (in Cache field)	single-click
4	Observe cache statistics/information (Cache Stats. tab)	read text
5	<file> (to delete) (Cache Information table)	single-click
6	Mark Delete button	single-click

Table 18.3-3. Delete Files from Cache - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
7	<file> (to preserve) (Cache Information table) (if applicable)	single-click
8	Unmark Delete button (if applicable)	single-click
9	File → Exit (when applicable)	single-click

18.3.3 View Storage Management Event Log Information

The **Storage Events** tab on the **Storage Management Control** GUI provides the Distribution Technician with the ability to search the Event Log and obtain reports on events that have occurred in Storage Management. It is possible to review the following information concerning any particular Storage Management event:

- Number.
- Date.
- Level.
- Type.
- Message.

The following search criteria can be used individually or in combination to view entries in the Event Log:

- Date Interval.
- Event Type.
- Event Level.
- Message.

Table 18.3-4 presents (in a condensed format) the steps required to view Storage Management Event Log information. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If necessary, launch the **Storage Management Control** GUI (refer to Section 18.2.2).
 - The **Storage Management Control** GUI is displayed.
- 2 **Single-click** on the **Storage Events** tab.
 - The **Storage Events** screen is displayed.
 - If Event Log entries are to be displayed on the basis of a particular....
 - Time period, perform Step 3. (If no time period is specified, log entries for the current day will be displayed.)
 - Event type, perform Step 4.
 - Event level, perform Step 5.
 - Message, perform Step 6.

- Any of the preceding criteria (time period, event type, event level, or message) may be used individually or in combination to view entries in the Event Log.
- 3 To view Event Log entries for a particular time period, enter the desired data start date in the **Date Interval: Begin** field in the following format:
<MM/DD/YYYY>
 - The **Tab** key may be pressed to move from field to field.
 - Another method of changing date settings (other than typing the numbers) is to **single-click** in the **Date Interval: Begin** field and **single-click** on the up/down buttons adjacent to the **Date Interval: Begin** field until the correct date is indicated.
 - 4 To view Event Log entries for a particular time period, enter the desired data ending date in the **Date Interval: End** field in the following format:
<MM/DD/YYYY>
 - The **Tab** key may be pressed to move from field to field.
 - Another method of changing date settings (other than typing the numbers) is to **single-click** in the **Date Interval: End** field and **single-click** on the up/down buttons adjacent to the **Date Interval: End** field until the correct date is indicated.
 - 5 To view log entries for a particular **event type**, **single-click** and **hold** on the **Event Type** option button, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
 - Options are: **Any, Device, Cache, Software, COTS, Sybase, Pulldisk, Unknown.**
 - The selected event type is displayed on the **Event Type** option button.
 - 6 To view log entries for a particular **event level**, **single-click** and **hold** on the **Event Level** option button, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
 - Options are: **Any, Information, Warning, Error, Severe, Fatal, Unknown.**
 - The selected event level is displayed on the **Event Level** option button.
 - 7 To view log entries for a particular **message** in the **Message** field enter:
<message>
 - The search results are displayed in the **Event Log** table of the **Storage Management Control GUI Storage Events** tab.
 - 8 **Single-click** on the **Search** button to search the event log for events that meet the specified criteria.
 - The search results are displayed in the **Event Log** table of the **Storage Management Control GUI Storage Events** tab.
 - 9 Observe event information displayed in the **Event Log** table.
 - Log entries are displayed in the **Event Log** table of the GUI.

- **Single-click** on any of the column headers of the **Event Log** table to sort the listed events in order by the column selected.
 - For example, **single-click** on the **Message** column header to list the events in alphabetical order by message text.
 - The **Operator Messages** field at the bottom of the GUI displays messages concerning events (i.e., information, warnings, or errors) occurring in **Storage Management Control** GUI operations.
 - Error messages are described in Table 18.6-4, Storage Management User Messages.
- 10** If it becomes necessary to clear entries in the Event Log Search Parameter fields, **single-click** on the **Clear Parameters** button.
- Entries in the Event Log Search Parameter fields are cleared.
- 11** If it becomes necessary to purge entries from the Event Log, **single-click** on (highlight) each row corresponding to an event to be deleted in the **Event Log** table.
- Multiple entries may be selected.
- 12** If it becomes necessary to purge entries from the Event Log, **single-click** on the **Purge Selected** button.
- Selected entries are deleted from the Event Log.
- 13** If a new Event Log search is to be performed on the basis of a particular...
- time period, return to Step 3.
 - event type, return to Step 5.
 - event level, return to Step 6.
 - message, return to Step 7.
- 14** If it becomes necessary to exit from the **Storage Management Control** GUI execute the following menu path:
- File → Exit**

Table 18.3-4. View Storage Management Event Log Information - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Launch the Storage Management Control GUI (if necessary)	Use procedure in Section 18.2.2
2	Storage Events tab	single-click
3	<MM/DD/YYYY> (in Date Interval: Begin field) (if applicable)	enter text
4	<MM/DD/YYYY> (in Date Interval: End field) (if applicable)	enter text

Table 18.3-4. View Storage Management Event Log Information - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
5	<event type> (Event Type option button) (if applicable)	single-click
6	<event level> (Event Level option button) (if applicable)	single-click
7	<message> (in Message field)	enter text
8	Search button	single-click
9	Observe event information (Event Log table)	read text
10	Clear Parameters button (if applicable)	single-click
11	<event> (in Event Log table) (if applicable)	single-click
12	Purge Selected button (if applicable)	single-click
13	Return to applicable step to perform a new Event Log search	
14	File → Exit (when applicable)	single-click

18.3.4 Monitor Storage Management Server Operations

The **Request Status** tab on the **Storage Management Control** GUI provides the Distribution Technician with the ability to monitor processing activity in all of the storage management servers for a given mode. The **Request Status Information** table lists the requests that are currently being serviced by storage management servers and those that have been completed within the last 24 hours. It is possible to review the following information concerning any particular storage management request:

- Operation [type of operation represented by the request].
- Request ID.
- Progress [stage of processing on which the request is currently working (may include a numeric progress indication)].
- Status.
- Priority.
- When Submitted [time and date when the request was received by the Storage Management server that is responsible for the request].
- Last Updated [time and date when the status was last updated for the request].

Using the **Request Status** tab the Distribution Technician can detect stalled requests or servers that appear to be idle.

Table 18.3-5 presents (in a condensed format) the steps required to monitor storage management server operations. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If necessary, launch the **Storage Management Control** GUI (refer to Section 18.2.2).
 - The **Storage Management Control** GUI is displayed.
- 2 **Single-click** on the **Storage Management Control** GUI **Request Status** tab.
 - The **Request Status** tab is displayed.
- 3 Observe information displayed on the **Request Status** tab of the **Storage Management Control** GUI.
 - The **Request Status Information** table displays the following information:
 - **Operation.**
 - **Request ID.**
 - **Progress.**
 - **Status.**
 - **Priority.**
 - **When Submitted.**
 - **Last Updated.**
 - By default, all storage management server requests for the last 24 hours are shown in the **Request Status Information** table of the **Request Status** tab.
 - Note that virtually all data inserted into or retrieved from the archive is controlled by storage management servers; consequently there may be a lot of activity on the **Request Status** tab.
 - Consequently, it may be useful to restrict the number of requests displayed by filtering them as described in the next step of this procedure.
 - **Single-clicking** on any of the column headers of the **Request Status Information** table causes the listed requests to be sorted in order by the column selected.
 - For example, **single-clicking** on the **Last Updated** column header causes the requests to be listed in order from the least recently updated to the most recently updated.
 - The **Operator Messages** field at the bottom of the GUI displays messages concerning events (i.e., information, warnings, or errors) occurring in **Storage Management Control** GUI operations.
 - Error messages are described in Table 18.6-4, Storage Management User Messages.
- 4 If the list of Storage Management requests shown in the **Request Status Information** table needs to be filtered, **single-click** and **hold** the **Filtering** pull-down menu to display a menu of filtering options, **move** the mouse cursor to the appropriate selection (highlighting it), then **release** the mouse button.
 - The **Filtering** pull-down menu offers the following options for filtering Storage Management requests:

- Options are: **Server, Operation, Processing State, and Submitter.**
 - **Server** controls what activity is displayed by limiting the list to the requests being/having been serviced by a specific server. Selecting **All** displays all requests throughout the Storage Management CSCI. Other selections include the individual archive servers, cache manager servers, ftp servers, request manager server, and staging disk servers.
 - **Operation** allows the Distribution Technician to focus on a specific type of operation. The list of operations is dynamically generated to reflect those operations for which requests are currently in queue, for example (among others): **All, CMLink, ArStore, FtpPull, FtpPush.**
 - **Processing State** allows the Distribution Technician to differentiate among requests that are being actively processed; have been completed, either successfully or to a retryable error state; or have been suspended and are awaiting the outcome of another event. The following selections are available: **All, Processing, Suspended, Completed.**
 - **Submitter** allows the Distribution Technician to see the status of requests submitted by a specific client process. The list of possible clients is dynamically generated to reflect the list of clients with outstanding requests for example (among others): **All, DSDD, SDSV, this,** individual ftp server, individual archive server, individual staging disk server.

- 5 Observe the Storage Management requests displayed in the **Request Status Information** table.
- 6 Repeat Steps 4 and 5 as necessary to monitor Storage Management requests.
- 7 If it becomes necessary to exit from the **Storage Management Control** GUI execute the following menu path:
File → Exit

Table 18.3-5. Monitor Storage Management Server Operations - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Launch the Storage Management Control GUI (if necessary)	Use procedure in Section 18.2.2
2	Request Status tab	single-click
3	Observe request status information (Request Status Information table)	read text
4	<filtering option> (Filtering pull-down menu) (If applicable)	single-click
5	Observe request status information (Request Status Information table)	read text

Table 18.3-5. Monitor Storage Management Server Operations - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
6	Repeat Steps 4 and 5 (as necessary)	
7	File → Exit (when applicable)	single-click

18.4 Tuning Data Server Subsystem Configuration Parameters

The values assigned to system parameters affect the functioning and performance of the system. When certain parameters are modified, the system operates differently. Changes to some other parameters may not appear to affect the system although there may in fact be subtle effects. In any case before system parameters are modified it is essential to understand what will happen to system functioning and performance.

Many system parameters may be subject to control by Configuration Management (CM). When making or requesting a change to system parameters, the CM process at the particular site must be followed (if applicable).

Values are assigned to Storage Management and Data Distribution parameters in the following databases:

- Configuration Registry database.
- Storage Management and Data Distribution database.

With respect to Storage Management servers the Registry contains database connectivity information only. All other configuration information is in the Storage Management and Data Distribution database and is typically entered or modified using the **Storage Management Control GUI**.

Table 18.4-1, below, provides an Activity Checklist for tuning DDIST system parameters.

Table 18.4-1. Tuning DDIST System Parameters - Activity Checklist

Order	Role	Task	Section	Complete?
1	Distribution Technician	Modify System Parameters in the Storage Management and Data Distribution Database Using the Storage Management Control GUI	(P) 18.4.1	
2	Distribution Technician	Modify System Parameters in the Storage Management and Data Distribution Database Using ISQL	(P) 18.4.2	
3	Distribution Technician	Modify Parameters in the DsDdThreadPool Table Using ISQL	(P) 18.4.3	

Modifying System Parameters in the Configuration Registry Database

The Configuration Registry Server provides a single interface (via a Sybase server) for retrieving configuration attribute-value pairs for ECS servers from the Configuration Registry database. When ECS servers are started, they access the Configuration Registry Database to obtain needed configuration parameters.

The Database Administrator has access to a Configuration Registry GUI for viewing and editing configuration data in the database. Therefore, it is necessary to coordinate with the Database Administrator when changes to configuration parameters are needed. Also, as previously mentioned, changes to configuration-controlled parameters are subject to approval through the site CM process.

Default and adjusted values assigned to system parameters vary from site to site. For guidance concerning the assignment of values to parameters included in the Configuration Registry refer to document 910-TDA-022, *Custom Code Configuration Parameters for ECS*. The document is available at <http://cmdm.east.hitc.com/baseline/> under “Technical Documents.”

The following parameters are examples of parameters whose values may be modified to enhance system functioning or performance:

- AppLogSize [parameter applies to all servers].
 - Maximum size of the application log (ALOG) file for a particular application.
 - Recommended size varies considerably depending the nature of the application for which the file is being written.
- AppLogLevel [parameter applies to all servers].
 - Level of detail provided in the ALOG file for a particular application.
 - Acceptable values are 0, 1, 2, or 3.
 - A setting of “0” provides the most data.
- DebugLevel [parameter applies to all servers].
 - Level of detail provided in the debug log file for a particular application.
 - Normally acceptable values are 0, 1, 2, or 3.
 - A setting of "0" turns off logging; a setting of “3” provides a significant amount of data.
 - STMGT offers "enhanced" debugging based on bitmaps including Level 7 (the 4 bit), which provides detailed database debugging, and Level 15 (the 8 bit), which frequently dumps the in-memory request queue (in the Request Manager). [Both Level 7 and Level 15 quickly create enormous log files.]
- DBMaxConnections [EcDsDistributionServer and EcDsDdistGui parameter].
 - Maximum number of database open connections (e.g., 15) allowed a particular application.
 - Increasing the assigned value may prevent other applications from getting access to the database.

- FtpPushThreshold [EcDsDistributionServer parameter].
 - Maximum number of bytes (e.g., 15000000000) per ftp push request.
 - The FtpPushThreshold should always be greater than the size of the largest input granule used by the Planning and Data Processing Subsystems (PDPS) to ensure that PDPS distribution requests are processed without manual intervention.
 - When a distribution request exceeds a threshold (e.g., FtpPushThreshold or FtpPullThreshold), the request is suspended in DDIST.
- FtpPullThreshold [EcDsDistributionServer parameter].
 - Maximum number of bytes (e.g., 20000000000) per ftp pull request.
- RETRIEVAL_CHUNK_SIZE [EcDsDistributionServer parameter].
 - Number of per-request archived files (e.g., 40) to be retrieved from the archive server.
 - Must be greater than zero (0).
 - Should not be greater than half the number of service threads used by the STMGT cache managers for archive reading.
- SocketLimit [EcDsDistributionServer parameter].
 - Number of connections (e.g., 620) to a server through the Hubble Space Telescope (HST) sockets middleware.
 - Too low a number misses connections.
 - Too high a number may adversely affect the memory of the server's host.

When the value assigned to a parameter has been changed and saved in the Configuration Registry, the modified value does not take effect until the affected server has been restarted. For example, if the debug level for the Distribution Server log has been changed from “2” to “3” in the Configuration Registry, the modification does not affect the recording of data in the log until after a warm restart of the Distribution Server (at which time the server would read the parameters in the Configuration Registry).

Tuning System Parameters in the Storage Management and Data Distribution Database

Checksum Status

It is possible to have a CRC-32 checksum calculated for each file stored (inserted) in archive. In addition, there is an option for having a checksum computed for each file retrieved from the archive and validating it by comparing it with the checksum previously computed. In the DsStArchiveServer database table there are entries for each archive server (EcDsStArchiveServer) that control whether or not a checksum is calculated for each file inserted into or retrieved from the archive.

Checksums are calculated on retrieval only when the file is first moved from the archive to the read-only cache. As long as the file remains resident in the read-only cache, the checksum is not recalculated.

Checksum calculation is a highly time-consuming process and makes intensive use of central processing unit (CPU) resources. Consequently, enabling check-summing has significant negative effects on the performance of both archive and cache manager servers. For that reason check-summing is typically disabled during normal operations.

The status of check-summing (i.e., enabled or disabled) is determined by the values assigned to individual archive servers in the following two columns of the DsStArchiveServer table in the Storage Management and Data Distribution database:

- IsRetrieveCksumEnabled.
- IsStoreCksumEnabled.

The value in the IsRetrieveCksumEnabled column indicates whether check-summing is enabled for acquires. The value in the IsStoreCksumEnabled column indicates whether check-summing is enabled for inserts. The values are set (and can be checked) using the **Storage Config.** tab of the **Storage Management Control** GUI. [Refer to the **Modify System Parameters in the Storage Management and Data Distribution Database Using the Storage Management Control** GUI procedure (Section 18.4.1).]

Staging Area Size and Read-Only Cache Size

Prior to Release 6A the TotalSpace column in the Storage Management and Data Distribution database indicated the total size of raid allocated to a cache manager and staging disk combined. Now cache and staging disk space requirements are defined in separate columns in different database tables.

- The TotalStagingSpace column in the DsStStagingDiskServer table contains the overall size of the space (in blocks) available for a staging disk.
 - It should reflect the available disk space in the file partition that is configured.
- The TotalCacheSpace column in the DsStCache table contains the overall size (in blocks) of a cache.
 - TotalCacheSpace is seen as "Original Cache Space" from the **Storage Management Control** GUI.
 - The value assigned to the cache manager that is configured as the Pull Monitor (Pull Area Manager) should be the size (in blocks) of the partition that houses the Pull Area.
 - If the value assigned to the Pull Monitor (Pull Area Manager) is changed while there are files in the Pull Area, the value should be higher than the cumulative size of files in the cache.

NOTE: In Storage Management configurations, capacity ("space") is consistently specified in blocks. File size is specified in bytes.

The change in the specification of staging disk/cache space is an effect of the way cache structure has been modified. Currently cache has its own path as shown in the following comparison of staging disk and cache paths:

- EcDsStCacheManagerServerACM1 cache path:
 - /usr/ecs/OPS/CUSTOM/apc/x0acg01/data/staging/cache (The cache area is no longer identified as "user1".)
- EcDsStStagingDiskServerACM1 root path:
 - /usr/ecs/OPS/CUSTOM/apc/x0acg01/data/staging//disks (Now each staging disk has a unique number (e.g., disk1132), even across servers.)

The cache and staging disk space parameters are modified using the **Storage Management Control GUI**. [Refer to the **Modify System Parameters in the Storage Management and Data Distribution Database Using the Storage Management Control GUI** procedure (Section 18.4.1).]

Setting Expiration Thresholds for Cache Managers

In Release 6A a just-enough-cache cleanup strategy was implemented. A principal effect of the strategy is that caches (including the Pull Area) generally remain full because each cache manager (including the cache manager that is configured as the Pull Monitor or Pull Area Manager) identifies and removes just enough old files to accommodate new ones.

Prior to Release 6A the PullExpirationTime column in the Storage Management and Data Distribution database indicated the number of hours after which files could be considered for deletion. Now in the DsStCache table there is an ExpirationThreshold column that contains the number of hours it takes for files to expire in the cache area managed by each cache manager. The ExpirationThreshold for the cache manager that is configured as the Pull Monitor (i.e., EcDsStCacheManagerServerPULL) specifies the number of hours it takes for files to expire in the Pull Area.

When setting the ExpirationThreshold for each cache manager the following factors should be taken into consideration:

- ExpirationThreshold specifies the number of hours a lien will be held against a cached file.
- If a lien expires and space is required, the lien will be automatically removed unless the ConfirmDelete flag (for expired files) is set to "Yes."
- ExpirationThreshold entries are typically set at 72 (hours) but may be set at some other value (usually in the range of 24 - 72).
 - Too short a time limits the ability of users to get their data before it is deleted (if ConfirmDelete is set to "No").
 - Too long a time increases the chance of filling up the cache.
- The ConfirmDelete column in the DsStCache table is a flag that indicates whether to automatically delete upon reaching the ExpirationThreshold.
 - Typically set to "No" (do not require confirmation before deleting).

- Since Release 6A files are pulled to the Pull Area by the Pull Monitor (Pull Area Manager); they are not pushed there by the ftp server.
- The Fault Level and Warning Level parameters are ignored.

Expiration thresholds and ConfirmDelete flags for expired files are modified using the **Storage Management Control GUI**. [Refer to the **Modify System Parameters in the Storage Management and Data Distribution Database Using the Storage Management Control GUI** procedure (Section 18.4.1).]

Storage Management Service Thread Allocation

Service threads are not the same as listen threads. [Listen threads are specific to the Distributed Computing Environment (DCE).] Service threads process requests submitted to the applicable server (e.g., EcDsStRequestManagerServer, EcDsStArchiveServer, EcDsStCacheManagerServer, EcDsStStagingDiskServer, EcDsStFtpServer). The number of service threads assigned to a server should be set on the basis of the resources available and the server throughput.

The DsStServiceThreadConfig database table contains the number, types, and priorities of service threads for Storage Management servers.

- The following columns in the DsStServiceThreadConfig database table indicate the number of service threads assigned to each priority:
 - XpressThreads
 - VhighThreads
 - HighThreads
 - NormalThreads
 - LowThreads
- The PoolType column identifies the type of threads within a certain pool. (i.e., Service Threads, Read Threads, Write Threads) applicable to the server.
 - In Storage Management Read Threads and Write Threads apply to the archive servers only.
- The NumThreads column contains the number of threads in a particular pool.

Table 18.4-2 lists representative default values as listed in the DsStServiceThreadConfig database table. In the table ServerId 1 refers to EcDsStArchiveServerACM4 and ServerId 2 refers to EcDsStArchiveServerDRP3.

Table 18.4-2. Representative Default Values Listed in the DsStServiceThreadConfig Database Table (1 of 2)

ServerId	PoolType	Num Threads	Xpress Threads	Vhigh Threads	High Threads	Normal Threads	Low Threads
1	ReadThreadPool	30	0	10	10	0	10
1	ThreadPool	30	0	10	10	0	10
1	WriteThreadPool	30	0	10	10	0	10
2	ReadThreadPool	10	0	0	0	0	10

Table 18.4-2. Representative Default Values Listed in the DsStServiceThreadConfig Database Table (2 of 2)

ServerId	PoolType	Num Threads	Xpress Threads	Vhigh Threads	High Threads	Normal Threads	Low Threads
2	ThreadPool	50	0	10	10	0	30
2	WriteThreadPool	100	0	20	70	0	10

Storage Management service thread-related values are modified using the **Storage Management Control GUI**. [Refer to the **Modify System Parameters in the Storage Management and Data Distribution Database Using the Storage Management Control GUI** procedure (Section 18.4.1).]

Data Distribution Priority Thread Allocation

Data Distribution (DDIST) has been enhanced to support a DAAC-configurable number of thread pools with each pool having a separate thread limit. The pools are defined in a new DDIST database table called DsDdThreadPool. Each row in the table contains a unique pool identifier, a thread pool name, and the number of threads (thread limit) associated with the pool. Table 18.4-3 shows an example of DsDdThreadPool table contents.

Table 18.4-3. Example of DsDdThreadPool Table Contents

ThreadPoolId	ThreadPoolName	ThreadLimit
1	MODAPS	20
2	DLT_ORDERS	2
3	DEFAULT	30

The DsDdThreadPool table in the example (Table 18.4-3) defines the following three pools:

- MODAPS (20 threads maximum).
- DLT_ORDERS (two (2) threads maximum).
- DEFAULT (30 threads maximum).

There must always be a DEFAULT pool present in the DsDdThreadPool table because a distribution request that fails to match any of the other rules for assigning requests to thread pools is automatically assigned to the DEFAULT pool.

The rules for assigning requests to thread pools are specified in the DsDdAssignmentRule table. The rules are DAAC-configurable and are based on request attributes. The following attributes are used for establishing a thread pool assignment:

- ECSUserId.
- Priority.

- EsdtType.
- MediaType.

Each row in the DsDdAssignmentRule table defines an assignment rule. Table 18.4-4 shows an example of DsDdAssignmentRule table contents.

Table 18.4-4. Example of DsDdAssignmentRule Table Contents

SeqNum	EcsUserId	Priority	EsdtType	MediaType	ThreadPoolId
100	Robbie	ANY	ANY	FtpPush	1
200	ANY	ANY	ANY	DLT	2

For each new request, the rules (in the DsDdAssignmentRule table) are evaluated in order by SeqNum until a rule is found where all conditions evaluate to true, in which case the request is assigned to the pool specified in the ThreadPoolId column. A rule evaluates to true if the values of the request attributes (i.e., ECSUserId, Priority, EsdtType, and MediaType) match the values contained in the rule's row in the table. Note that a value of "ANY" automatically evaluates to true for that attribute. So, in the example, any FtpPush request with an ECSUserId of "Robbie" is allocated to the MODAPS thread pool and all DLT requests are allocated to the DLT_ORDERS thread pool. Any requests that fail to match the rules for either MODAPS or DLT_ORDERS are assigned to the DEFAULT thread pool.

When DDIST receives a request, a stored procedure executes to assign the request to the appropriate thread pool based on the rules contained in the DsDdAssignmentRule table.

- Once all threads in a given thread pool have been allocated, new requests assigned to that pool are put in a "pending" state until a thread becomes available.
- Requests are no longer automatically assigned to threads in other pools if there are no available threads in their assigned pool.
- Pending requests for each pool are activated in first-in-first-out order by request priority.

DAACs may adjust configurations by updating the DsDdThreadPool and DsDdAssignmentRule tables.

- Assignment rules may be added, deleted or updated at any time without warm-starting DDIST.
 - Changes to assignment rules take effect immediately upon being entered in the database.
 - All new requests entering DDIST are subject to the updated rules.
- The ThreadLimit attribute in the DsDdThreadPool table may be dynamically changed as well.
 - The DDIST server reloads thread limits every 90 seconds so thread limit changes take effect within 90 seconds after being entered.
 - New thread pools can be added by inserting rows in the DsDdThreadPool table.

- However, they are not used until the DDIST server is warm-started.
- A thread pool can be deleted as long as there are no rules in the DsDdAssignmentRule table that point to the thread pool and all requests that have been assigned to the thread pool have been completed and have migrated out of the DDIST database.

When DDIST is warm-started, all requests are reassigned to thread pools based on the current set of rules.

If necessary, it is possible to reassign requests after they have been assigned to a thread pool. The following process is used:

- Update the rules in the DsDdAssignmentRule table as necessary to ensure that the request will be assigned to the desired thread pool.
- Warm-start DDIST (EcDsDistributionServer).

There is no GUI support for making changes to the thread pool configuration. Thread pool configuration changes are made by a DAAC DBA using the isql interface to update the DsDdThreadPool and DsDdAssignmentRule tables in the database.

The following guidelines are provided for tuning DDIST priority thread allocation:

- In most cases, each FtpPush destination site should have its own thread pool.
- For each FtpPush destination, the DAAC should determine the number of concurrent file transfers it takes to fully utilize the available network bandwidth.
 - The number represents a parameter called "MaxTransfers."
- For subscription-based FtpPush distribution, the thread limit for the associated thread pool should be set to 130% of MaxTransfers (rounded up).
 - This should provide a sufficient number of threads to utilize the available network bandwidth plus allow for one or more threads to be concurrently staging data out of the AMASS cache.
- For non-subscription-based FtpPush distribution, the thread limit for the associated thread pool should be set to 200% of MaxTransfers (rounded up).
 - This should provide sufficient threads to utilize the available network bandwidth plus allow for staging of data from archive tapes.
- The total number of threads in DsDdThreadPool (i.e., sum of ThreadLimit for all rows) represents the maximum number of threads that can be active concurrently in DDIST.
 - The total must be less than the number of worker threads configured for DDIST.
 - The default number of worker threads configured for DDIST is 228.
- Although DDIST thread pools can be configured around request attributes other than priority, it is important to remember that STMGT CacheManager thread pools are organized by priority; consequently, it is important to ensure that STMGT thread pools are configured to optimally handle the likely mix of request priorities.

- During warm-start, it takes DDIST 0.83 second to recover each active or pending request; consequently, for a 2000-request backlog, it takes DDIST approximately 28 minutes to reach the end of start monitoring and begin accepting new requests.
 - However, note that DDIST immediately begins to work off its request backlog as requests are assigned to thread pools.

Methods for modifying thread pools and thread-pool-assignment rules are described in the **Modify System Parameters in the Storage Management and Data Distribution Database Using ISQL** procedure (Section 18.4.2) and the **Modify Parameters in the DsDdThreadPool Table Using ISQL** procedure (Section 18.4.3).

18.4.1 Modify System Parameters in the Storage Management and Data Distribution Database Using the Storage Management Control GUI

The effects on system functioning and performance must be considered before modifying system parameters. In addition, when making or requesting a change to system parameters, the CM process at the particular site must be followed (if applicable). Depending on circumstances (e.g., operator permissions) at a particular site, it may be necessary to request that someone else make parameter modifications using the **Storage Management Control** GUI. The procedure that follows is provided to assist Distribution Technicians who have to make parameter modifications using the **Storage Management Control** GUI.

Table 18.4-5 presents (in a condensed format) the steps required to modify system parameters in the Storage Management and Data Distribution Database using the **Storage Management Control** GUI. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If necessary, launch the **Storage Management Control** GUI (refer to Section 18.2.2).
 - The **Storage Management Control** GUI is displayed.
- 2 If necessary, **single-click** on the **Storage Config.** tab.
- 3 **Single-click** on the appropriate server type in the **Configuration Parameter Reporting** window on the **Storage Config.** tab.
 - The selected server type is highlighted in the **Configuration Parameter Reporting** window on the **Storage Config.** tab.
 - The following server types are listed in the **Configuration Parameter Reporting** window on the **Storage Config.** tab:
 - **8mm** (8mm Stacker Server).
 - **ARCHIVE** (Archive Server).
 - **CACHE MANAGER** (Cache Management Server).
 - **CDROM** (CDROM Device Server).
 - **D3** (D3 Device Server) [obsolete].

- **DLT** (DLT Stacker Server).
 - **DTF** (DTF Device Server).
 - **FTP** (FTP Server).
 - **REQUEST MANAGER** (Request Manager Server).
 - **STAGING DISK** (Staging Disk Server).
 - Associated servers are listed in the server information window on the **Storage Config.** tab.
- 4** **Single-click** on the appropriate server in the server information window on the **Storage Config.** tab.
- The selected server is highlighted in the server information window on the **Storage Config.** tab.
 - For example, if **CACHE MANAGER** were selected from the **Configuration Parameter Reporting** window on the **Storage Config.** tab, the following servers might be listed in the server information window:
 - EcDsStCacheManagerServerACM1.
 - EcDsStCacheManagerServerDRP3.
 - EcDsStCacheManagerServerPULL.
 - EcDsStCacheManagerServerWKS1.
- 5** **Single-click** on the **Modify Server/View Stackers** button.
- The applicable server configuration dialogue box is displayed.
 - For example, if **CACHE MANAGER** had been selected, the **Cache Manager Server Configuration** dialogue box would be displayed. The **Cache Manager Server Configuration** dialogue box displays data in the following fields (as applicable):
 - **Server Name.**
 - **RPC** [remote procedure call] Tag.
 - **Original Cache Space (blocks).**
 - **Available Cache Space (blocks)** [cannot be modified from GUI].
 - **Allocation Block Size (bytes).**
 - **Description** [e.g., "Cache Manager"].
 - **Expiration Threshold (hours).**
 - **Expired Files Confirm Delete** [option button with Yes and No as the options].
 - **Disk Capacity: Fault Level** [currently ignored].
 - **Disk Capacity: Warning Level** [currently ignored].
 - **File I/O Block Size (bytes)** [typically set to 4194304 (4MB)].
 - **Retries** [typically set to 5].
 - **Sleeptime (seconds)** [typically set to 2].
 - **Service Threads** [number of worker threads that are allocated within the server instance to process requests - modified through the Allocate by Priority button].
 - **Pull Area Manager** [option button with Yes and No as the options].

- **Cache Path.**
 - **User Request Directory.**
 - **FTP Notification File.**
 - **FTP Notification Freq (Sec).**
 - Refer to the installation instructions for the applicable software release to find recommended values for the configuration of Storage Management servers.
 - Installation instructions for each software release are available at <http://cmdm.east.hitc.com/baseline/> under "Pre-Ship Reviews."
- 6 In the appropriate field(s) of the server configuration dialogue box enter:
<value>
- 7 If service-thread (or read-thread or write-thread) priority allocations are to be modified, **single-click** on the corresponding **Allocate by Priority** button.
- The appropriate **Allocate by Priority** window (e.g., the **Service Threads: Allocate by Priority** window) is displayed.
- 8 If thread priority allocations are being modified, in the appropriate field(s) of the **Allocate by Priority** window enter:
<value>
- When entering desired values in the appropriate fields of the **Allocate by Priority** window, start with the **Total** field.
 - Lower-priority threads may be used to service higher priority requests, but never vice versa.
 - By default, all service threads are created as low priority service threads, since they may be pre-empted by any priority request.
 - The number of low threads is automatically re-calculated whenever the number of any of the other thread types is changed.
 - Consequently, the total of the numbers in each of the five different thread type fields equals the number in the **Total** field.
- 9 If thread priority allocations are being modified, **single-click** on the appropriate button from the following selections:
- **OK** - to approve the new value(s) and dismiss the **Allocate by Priority** window.
 - The **Cache Manager Server Configuration** dialogue box is displayed.
 - **Cancel** - to return to the **Cache Manager Server Configuration** dialogue box without saving the new value(s).
 - The **Cache Manager Server Configuration Dialogue Box** is displayed.

NOTE: Sometimes when a secondary window (such as Service Threads: Allocate by Priority Window) has been accessed to modify parameters (e.g., to configure service threads), changes that were previously made in the primary window (such as the Cache Manager Server Configuration Dialogue Box) are lost. Consequently, it is recommended that either values be changed in the secondary window first or that changes already made in the primary window be verified after the secondary window has been closed.

- 10 When new values have been entered in all fields to be modified, **single-click** on the appropriate button from the following selections:
 - **OK** - to approve the new value(s) and dismiss the configuration dialogue box.
 - The **Storage Config.** screen is displayed.
 - **Cancel** - to return to the **Storage Config.** screen without saving the new value(s).
 - The **Storage Config.** screen is displayed.

- 11 Repeat Steps 3 through 10 as necessary.

Table 18.4-5. Modify System Parameters in the Storage Management and Data Distribution Database Using the Storage Management Control GUI - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Launch the Storage Management Control GUI (if necessary)	Use procedure in Section 18.2.2
2	Storage Config. tab	single-click
3	<server type> (in Configuration Parameter Reporting window)	single-click
4	<server name> (in the server information window)	single-click
5	Modify Server/View Stackers button	single-click
6	<value> [in appropriate field(s) of the server configuration dialogue box]	enter text
7	Allocate by Priority button (if applicable)	single-click
8	<value> [in appropriate field(s) of the Allocate by Priority window]	enter text
9	OK (if applicable)	single-click
10	OK	single-click
11	Repeat Steps 3 through 10 (as necessary)	

18.4.2 Modify System Parameters in the Storage Management and Data Distribution Database Using ISQL

The effects on system functioning and performance must be considered before modifying system parameters. In addition, when making or requesting a change to system parameters, the CM process at the particular site must be followed (if applicable). Depending on circumstances at a particular site it may be necessary to request that the Database Administrator modify parameters in the Storage Management and Data Distribution database. The procedures that follow are provided to assist Distribution Technicians who have to make the database modifications themselves.

The procedures vary somewhat depending on what database table is to be modified. For example:

- Modifications can be made to the DsDdAssignmentRule table at any time as described in the **Modify System Parameters in the Storage Management and Data Distribution Database Using ISQL** procedure that follows.
 - If the Distribution Server is running when the table is updated, the changes will take effect immediately (i.e., any new distribution requests will be allocated to a thread pool using the updated rules).
 - Consequently, rule changes must be self-consistent and are typically made within the scope of a single Sybase transaction.
- Modifications to the DsDdThreadPool table must be made while the Distribution Server is idle, as described in the **Modify Parameters in the DsDdThreadPool Table Using ISQL** procedure (Section 18.4.3).

Table 18.4-6 presents (in a condensed format) the steps required to modify system parameters in the Storage Management and Data Distribution Database using isql. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: If modifications to the DsDdThreadPool table are to be made, go to the **Modify Parameters in the DsDdThreadPool Table Using ISQL** procedure (Section 18.4.3).

- 1 Access a terminal window logged in to the Access/Process Coordinators (APC) Server host.
 - Examples of APC Server host names include **e0acg11**, **g0acg01**, **l0acg02**, and **n0acg01**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:
isql -U <user ID> -S <database server>
 - <user ID> is the database user's identification; e.g., **stmgt_role**.
 - <database server> is the database server; e.g., **x0acg01_srvr**.
 - For example:
isql -U stmgt_role -S x0acg01_srvr

- 3 At the **Password:** prompt enter:
<database password>
 - <database password> is the password for logging in to the database using the specified <user ID>.
 - A **1>** prompt is displayed, indicating that a connection has been made with the database.

- 4 At the **1>** prompt enter:
use <database name>
 - The <database name> is likely to be one of the following names:
 - **stmgtdb1** [OPS mode].
 - **stmgtdb1_TS1** [TS1 mode].
 - **stmgtdb1_TS2** [TS2 mode].
 - A **2>** prompt is displayed.

- 5 At the **2>** prompt enter:
go
 - A **1>** prompt is displayed.

- 6 At the **1>** prompt enter:
select * from <table name>
 - For example:
select * from DsDdAssignmentRule
 - Alternatively, at the **1>** prompt enter:
select <column name> from <table name>
 - For example:
select ThreadPoolId from DsDdAssignmentRule

- Another alternative is to enter:
select <column name 1>,<column name 2>[,<column name 3>,...] from <table name>
 - For example:
select ThreadPoolId,Priority from DsDdAssignmentRule
- A 2> prompt is displayed.

7 At the 2> prompt enter:

go

- Table contents are displayed.
 - If * (wildcard) was specified, all entries in the table are displayed.
 - If specific columnNames were entered, the data associated with those columns only are displayed.
- For example:

```
1> select * from DsDdAssignmentRule
2> go
SeqNum  ThreadPoolId ECSUserId
Priority  EsdtType
MediaType
```

800	1	ANY
XPRESS		ANY
ANY		
700	2	ANY
VHIGH		ANY
ANY		
600	3	ANY
HIGH		ANY
ANY		
400	4	ANY
NORMAL		ANY
ANY		
500	5	ANY
LOW		ANY
ANY		

(5 rows affected)

- 8** If updating a row in a database table, at the **1>** prompt enter:
update <table name> set <column name 1>=<value 1> where <column name 2>=<value 2>
- For example:
update DsDdAssignmentRule set ECSUserId="\$EcDpPrEM" where ThreadPoolId=1
 - The effect of the modification shown in the example would be to assign all distribution requests with an ECSUserId of "\$EcDpPrEM" and a priority of "XPRESS" to ThreadPoolId 1.
 - Distribution requests with any other ECSUserId or "\$EcDpPrEM" requests with any priority other than "XPRESS" would be assigned to one of the other ThreadPoolId categories.
 - Distribution requests with a priority of "XPRESS" and an ECSUserId other than "\$EcDpPrEM" would be assigned to the DEFAULT thread pool.
 - Go to Step 12.
- 9** If deleting a row in a database table, at the **1>** prompt enter:
delete <table name> where <column name 1>=<value 1>
- For example:
1> delete DsDdAssignmentRule where ThreadPoolId=6
 - The effect of the modification shown in the example would be to delete any database row(s) with "6" in the ThreadPoolId column.
 - Go to Step 12.
- 10** If adding a row in a database table, at the **1>** prompt enter:
insert <table name> (<column name 1>,<column name 2>,<column name 3>...)
- For example:
**1> insert DsDdAssignmentRule
(SeqNum,ThreadPoolId,ECSUserId,Priority,EsdtType,MediaType)**
- 11** If adding a row in a database table, at the **2>** prompt enter:
values (<value 1>,<value 2>,<value 3>...)
- For example:
2> values (900,6,"MODAPS","HIGH","ANY","FtpPush")

12 At the > prompt (e.g., **2>** or **3>**) enter:

go

- The effect of the modification shown in the examples in Steps 10 and 11 would be to insert in the DsDdAssignmentRule database table a row containing the following values:
 - 900 (SeqNum column).
 - 6 (ThreadPoolId column).
 - MODAPS (ECSUserId column).
 - HIGH (Priority column).
 - ANY (EsdtType column).
 - FtpPush (MediaType column).
- If modifying the DsDdAssignmentRule table (as shown in the examples in this procedure) the following attributes must be specified for each row:
 - SeqNum.
 - ThreadPoolId.
 - ECSUserId.
 - Priority.
 - EsdtType.
 - MediaType.
- SeqNum.
 - Determines the order in which a rule is evaluated.
 - Integer whose value is greater than or equal to zero.
 - Each rule must have a unique sequence number.
 - Rules are evaluated in order from the lowest sequence number to the highest sequence number.
 - It is recommended that sequence numbers not be created consecutively (e.g., instead of numbering 1, 2, 3, use 100, 200, 300) so new rules can be inserted without having to renumber subsequent rules.
- ThreadPoolId.
 - Unique identifier of the thread pool to be assigned if the rule is the first one to evaluate to true.
 - Integer with a value greater than zero.
 - Must match one of the values in the ThreadPoolId column in the DsDdThreadPool table.
 - Multiple rules can assign the same ThreadPoolId.
- ECSUserId.
 - User identifier associated with a distribution request.
 - String of up to 24 characters in length.
 - If the user identifier of a distribution request matches the string, the attribute evaluates to true.

- If the string is set to the reserve word "ANY," the attribute always evaluates to true.
- String comparisons are case-sensitive.
- Priority.
 - Request priority associated with a distribution request.
 - String that must be set to one of the following six values: "XPRESS", "VHIGH", "HIGH", "NORMAL", "LOW", or "ANY".
 - If the priority of a distribution request matches the string then the attribute evaluates to true.
 - If the string is set to the reserved word "ANY," the attribute always evaluates to true.
 - String comparisons are case-sensitive.
- EsdtType.
 - Data type associated with a distribution request.
 - String of up to twelve (12) characters in length.
 - Must be set to a valid ESDT name and version number or the reserved words "MULTIPLE" or "ANY."
 - When an ESDT name and version number are specified, the string has the form "Name.Version" (e.g., "MOD021KM.003").
 - A distribution request has its EsdtType set to "MULTIPLE" if granules from more than one ESDT are being distributed. If the data type of a distribution request matches the string, the attribute evaluates to true.
 - If the string is set to the reserve word "ANY," the attribute always evaluates to true.
 - String comparisons are case-sensitive.
- MediaType.
 - Type of distribution medium to be used in fulfilling a distribution request.
 - String that must be set to one of the following six values: "FtpPush", "FtpPull", "8MM", "CDROM", "DLT", "ANY."
 - If the "media type" of a distribution request matches the string then the attribute evaluates to true.
 - If the string is set to the reserved word "ANY," the attribute always evaluates to true.
 - String comparisons are case-sensitive.
 - Currently "8MM", "CDROM", and "DLT" never appear in distribution requests because media requests are redirected to PDS.

13 To start verification of the update at the **1>** prompt enter:

select * from <table name>

- Alternatively, use one of the options described in Step 6.

14 At the 2> prompt enter:

go

- Table contents are displayed.
- Specified value(s) should have been updated.
- For example:

1> select * from DsDdAssignmentRule

2> go

SeqNum	ThreadPoolId	ECSUserId
Priority	EsdtType	
MediaType		

800	1	\$EcDpPrEM
XPRESS	ANY	
ANY		
700	2	ANY
VHIGH	ANY	
ANY		
600	3	ANY
HIGH	ANY	
ANY		
400	4	ANY
NORMAL	ANY	
ANY		
500	5	ANY
LOW	ANY	
ANY		

(5 rows affected)

15 To exit from isql at the 1> prompt enter:

quit

- The connection with the database is discontinued.
- A UNIX command line prompt is displayed.

Table 18.4-6. Modify PriorityThread Table Values in the Storage Management and Data Distribution Database Using the EcDsDdPTEdit.pl Script - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (APC Server)	single-click or use procedure in Section 18.2.1
2	isql -U <user ID> -S <database server>	enter text, press Enter
3	<database password>	enter text, press Enter
4	select * from <table name> * from <table name>	enter text, press Enter
5	go	enter text, press Enter
6	select * from <table name>	enter text, press Enter
7	go	enter text, press Enter
8	update <table name> set <column name 1>=<value 1> where <column name 2>=<value 2> (if applicable)	enter text, press Enter
9	delete <table name> where <column name 1>=<value 1> (if applicable)	enter text, press Enter
10	insert <table name> (<column name 1>,<column name 2>,<column name 3>...) (if applicable)	enter text, press Enter
11	values (<value 1>,<value 2>,<value 3>...) (if applicable)	enter text, press Enter
12	go	enter text, press Enter
13	select * from <table name>	enter text, press Enter
14	go	enter text, press Enter
15	quit	enter text, press Enter

18.4.3 Modify Parameters in the DsDdThreadPool Table Using ISQL

Modifications to the DsDdThreadPool table must be made while the Distribution Server is idle, as described in the procedure that follows.

Table 18.4-7 presents (in a condensed format) the steps required to modify parameters in the DsDdThreadPool table using isql. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If any rule in the DsDdAssignmentRule table references a thread pool that is going to be deleted from the DsDdThreadPool table, update the rules in the DsDdAssignmentRule table so that no additional requests will be assigned to the thread pool that is to be deleted.
 - Refer to the **Modify System Parameters in the Storage Management and Data Distribution Database Using ISQL** procedure (Section 18.4.2).
 - Thread pool assignment rules are defined by the rows in the DsDdAssignmentRule table.
 - A thread pool should not be deleted while any rule in the DsDdAssignmentRule table references that thread pool.
- 2 If any request in the DsDdRequest table references a thread pool that is to be deleted, wait until all requests that are currently assigned to the thread pool have been completed before continuing.
 - A thread pool should not be deleted while there is a request in the DsDdRequest table that references the thread pool.
- 3 When there are no current requests assigned to any thread pool to be deleted (if any), make a request to the Operations Controller/System Administrator to bring down (stop) the Distribution Server (EcDsDistributionServer) in the appropriate mode.
 - If a new pool is added to DsDdThreadPool and new rules are added to DsDdAssignmentRule while the Distribution Server is running and the new rules result in a request being assigned to the new pool, the request will be suspended with a DsEDdMissingPool error code.
 - The suspended request cannot be resumed until the Distribution Server is warm-started.
- 4 Wait until the Distribution Server has stopped.
- 5 If a thread pool is to be deleted, use isql to set the ThreadLimit in the DsDdThreadPool table to zero.
 - Refer to the **Modify System Parameters in the Storage Management and Data Distribution Database Using ISQL** procedure (Section 18.4.2).
- 6 If a thread pool is to be added to the DsDdThreadPool table or an existing thread pool is to be modified, modify the DsDdThreadPool table using isql.
 - Refer to the **Modify System Parameters in the Storage Management and Data Distribution Database Using ISQL** procedure (Section 18.4.2).
 - Each thread pool is defined by a row in the DsDdThreadPool table.
 - The following attributes must be specified for each row in the DsDdThreadPool table:
 - ThreadPoolId.
 - ThreadPoolName.
 - ThreadLimit.

- ThreadPoolId.
 - Unique identifier for the thread pool.
 - Integer with a value greater than zero.
 - Each row in DsDdThreadPool must have a unique ThreadPoolId.
- ThreadPoolName.
 - Name of the thread pool.
 - String with a length less than or equal to 24 characters.
 - Each row in DsDdThreadPool must have a unique ThreadPoolName.
- ThreadLimit.
 - Number of threads available for processing requests assigned to the thread pool.
 - Integer with a value greater than or equal to zero.
 - If the ThreadLimit for a given thread pool is zero, any requests that are assigned to the thread pool will remain in the pending state until the ThreadLimit is set to a value greater than zero.
 - If the ThreadLimit for a given thread pool is updated from a non-zero value to zero, no new requests assigned to the thread pool will be activated; however, any currently active requests will be allowed to complete.
 - The total of the thread limits for all thread pools must be less than the number of worker threads configured for DDIST.
 - The default worker thread configuration for DDIST is 228 threads.

7 When the appropriate modifications to the DsDdThreadPool table have been made using isql, make a request to the Operations Controller/System Administrator to perform a warm start of the Distribution Server (EcDsDistributionServer) in the appropriate mode.

8 If a thread pool is to be deleted (i.e., the ThreadLimit in the DsDdThreadPool table has been set to zero), wait until all completed requests that were assigned to the thread pool have been subject to garbage collection from the DsDdRequest table before continuing.

- A waiting time of 24 hours should be adequate.

9 If a thread pool is to be deleted (i.e., the ThreadLimit in the DsDdThreadPool table has been set to zero) and the waiting period has expired, use isql to delete the relevant row from DsDdThreadPool table.

- Refer to the **Modify System Parameters in the Storage Management and Data Distribution Database Using ISQL** procedure (Section 18.4.2).

Table 18.4-7. Modify Parameters in the DsDdThreadPool Table Using ISQL - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Update the rules in the DsDdAssignmentRule table so that no additional requests will be assigned to the thread pool that is to be deleted (if applicable)	Use procedure in Section 18.4.2

Table 18.4-7. Modify Parameters in the DsDdThreadPool Table Using ISQL - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
2	Wait until all requests that are currently assigned to the thread pool have been completed before continuing (if applicable)	wait
3	Make a request to the Operations Controller/System Administrator to bring down the Distribution Server in the appropriate mode (if applicable)	contact Operations Controller
4	Wait until the Distribution Server has stopped	wait
5	Use isql to set the ThreadLimit in the DsDdThreadPool table to zero (if applicable)	Use procedure in Section 18.4.2
6	Modify the DsDdThreadPool table using isql	Use procedure in Section 18.4.2
7	Make a request to the Operations Controller/System Administrator to perform a warm start of the Distribution Server in the appropriate mode (if applicable)	contact Operations Controller
8	Wait until all completed requests that were assigned to the thread pool have been subject to garbage collection from the DsDdRequest table (if applicable)	wait
9	Use isql to delete the relevant row from DsDdThreadPool table (if applicable)	Use procedure in Section 18.4.2

18.5 Performing Order Manager Operations

The **Order Manager (OM) GUI** provides ECS operators with access to the Order Manager database. The GUI is based on web standards. It performs most of its functions by accessing the database directly, in contrast to most current ECS operator GUIs, which interface with servers. The GUI allows operators to view and modify requests that the Order Manager Server has placed on hold because they require operator intervention. In addition, operators can resubmit requests or portions of a request that failed. For Synergy III the **OM GUI** supplements the existing MSS Order Tracking GUI and the DDIST GUI (rather than replacing them).

Order Manager activities in which the Distribution Technician is likely to be involved are performed using the **OM GUI - Request Management** page and the **OM Queue Status** page. The **Request Management** page provides links to the following screens:

- View Open Interventions.
- View Completed Interventions.
- View Distribution Requests.

The **OM Queue Status** page shows the current status of request queues for all media as well as the request queues for PDS, SDSRV and e-mail. In addition, the **OM Queue Status** page allows

the Distribution Technician to determine the status (“up” or “down”) of the Order Manager Server.

Table 18.5-1, below, provides an Activity Checklist for performing Order Manager operations.

Table 18.5-1. Performing Order Manager Operations - Activity Checklist

Order	Role	Task	Section	Complete?
1	Distribution Technician	Launch the Order Manager GUI	(P) 18.5.1	
2	Distribution Technician	Respond to Open Interventions	(P) 18.5.2	
3	Distribution Technician	Set Refresh Options on OM GUI Pages	(P) 18.5.2.1	
4	Distribution Technician	Resubmit Completed Distribution Requests	(P) 18.5.3	
5	Distribution Technician	Filter Data Displayed on the Distribution Requests Screen	(P) 18.5.3.1	
6	Distribution Technician	View Completed Interventions	(P) 18.5.4	
7	Distribution Technician	Filter Data Displayed on the Requests with Completed Interventions Screen	(P) 18.5.4.1	
8	Distribution Technician	Check/Modify OM Queue Status	(P) 18.5.5	
9	Distribution Technician	Monitor Order Manager Server Statistics	(P) 18.5.6	
10	Distribution Technician	View the OM GUI Log	(P) 18.5.7	
11	Distribution Technician	Check/Modify OM Configuration Parameters	(P) 18.5.8	

18.5.1 Launch the Order Manager GUI

Launching the Order Manager GUI is accomplished using the Netscape browser. Table 18.5-2 presents (in a condensed format) the steps required to launch the Order Manager GUI. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to a host (e.g., the Operations Workstation or Sun external server) that has access to the Netscape web browser.
 - Examples of Operations Workstation host names include **e0acs03**, **g0acs02**, **l0acs01**, and **n0acs03**.

- Examples of Sun external server host names include **e0ins01**, **g0ins01**, **l0ins01**, and **n0ins01**.
- For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

2 In the terminal window, at the command line prompt, enter:

netscape &

- It may be necessary to type the path as well as the netscape command (e.g., **/tools/bin/netscape &**).
- It may be necessary to respond to dialogue boxes, especially if the browser is already being used by someone else who has logged in with the same user ID.
- The Netscape web browser is displayed.

3 If a bookmark has been created for the **OM GUI**, select the appropriate bookmark from those listed on the browser's **Bookmarks** button (or the **Communicator** → **Bookmarks** pull-down menu).

- The **Order Manager Page** [**"Home" Page**] is displayed.

4 If no bookmark has been created for the **OM GUI**, in the browser's **Location (Go To)** field enter:

http://<host>:<port>/<path>/

- For example:
http://x0dps01.daac.ecs.nasa.gov:54321/cgi-bin/
- The **Order Manager Page** [**"Home" Page**] is displayed.

Table 18.5-2. Launch the Order Manager GUI - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window with access to Netscape browser (Operations Workstation, Interface Server 02, etc.)	single-click or use procedure in Section 18.2.1
2	netscape &	enter text, press Enter
3	<OM GUI bookmark> (if available)	single-click
4	http://<host>:<port>/<path>/ (if necessary)	enter text, press Enter

18.5.2 Respond to Open Interventions

The **OM GUI - Request Management** page **View Open Interventions** screen provides the Distribution Technician with a means of responding to open interventions. The **View Open Interventions** screen provides the Distribution Technician with a means of performing the following kinds of interventions:

- Select a different granule to replace a granule that is unavailable.

- Fail selected granule(s).
- Disable limit checking.
- Change the distribution medium for a request.
- Resubmit a request.
- Fail a request.
- Partition (divide) a request.

Table 18.5-3 presents (in a condensed format) the steps required to respond to open interventions. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: The response to an intervention may require coordination between the Distribution Technician and a User Services representative, especially when determining a more suitable type of distribution medium, selecting a replacement granule, or taking any other action that would require contacting the person who submitted the order. In fact, depending on the circumstances and DAAC policy it may be appropriate for User Services to assume responsibility for the eventual disposition of some interventions.

- 1 If it is not already being displayed, launch the **Order Manager GUI** (refer to Section 18.5.1).
 - The **Order Manager GUI** is displayed.
- 2 **Single-click** on the **Request Management** link on the **Order Manager Page** [“Home” Page].
 - The **OM GUI - Request Management** page **View Open Interventions** screen is displayed.
 - The **Requests with Open Interventions** table is displayed; the table has the following columns:
 - **Order Id.**
 - **Request Id.**
 - **Size (MB).**
 - **Media.**
 - **Status.**
 - **Worked by.**
 - **Created.**
 - **Acknowledged.**
 - **Explanation(s).**

- 3 Observe information displayed in the **Requests with Open Interventions** table of the **OM GUI - Request Management** page **View Open Interventions** screen.
- By default, data concerning up to 50 open interventions are displayed at a time (with the oldest intervention at the top of the table).
 - **Single-click** on a link in the column header row of the table to sort table contents on that column.
 - For example, **single-click** on the **Created** link to organize the table by “Creation Time,” with the most recent distribution request in the top row of the table.
 - To bring up a screen containing more detailed data concerning a particular order **single-click** on the specific Order ID.
 - **The OM GUI - Request Management** page **ECS Order** screen displays the following types of data concerning the order: **Request ID(s), Order Type, Order Source, Receive Date, Last Update, Description, Start Date, User ID, Status, Ship Date, Order Home DAAC.**
 - If the order is a bundled order (Order Type “Bundled Order” or “BO”), the order page includes a link to the **Spatial Subscription Server GUI.**
 - When reviewing the data concerning a particular order, use the Netscape browser **Back** button to redisplay the **OM GUI - Request Management** page **View Open Interventions** screen.
 - Clicking on a specific Request ID in the **Requests with Open Interventions** table of the **OM GUI - Request Management** page **View Open Interventions** screen brings up a screen containing detailed data concerning the intervention for that particular request (refer to Steps 4 and 5).
 - Horizontal and vertical scroll bars appear when necessary to allow viewing data that are not readily visible in the window.
 - The Netscape browser **Reload** button can be used to update the data on the screen.
 - By default, the **View Open Interventions** screen refreshes automatically every five (5) minutes; if a different refresh option is preferred, perform the **Set Refresh Options on OM GUI Pages** procedure (Section 18.5.2.1).
 - The Netscape browser **Edit → Find in Page** menu provides a means of performing a keyword search of the data currently being displayed on the screen.
 - Number(s) indicating the first order number in a group of up to 50 orders provide one means of displaying additional pages of data.
 - The **first, previous, next, and last** links provide means of displaying additional pages of data.
 - The **Go directly to row...** window provides a means of displaying a page of data starting with a particular row of the table.
 - For example, if **Go directly to row _____ of 415 rows** is being displayed, typing **315** in the window and clicking on the **ok** button would result in the display of a page of data containing rows 315 through 364.

- 4 **Single-click** on a specific Request ID in the **Requests with Open Interventions** table of the **OM GUI - Request Management** page **View Open Interventions** screen to bring up a screen containing detailed data concerning the intervention for that particular request.
 - For example, clicking on Request ID **0800003248** brings up an **Open Intervention Detail** page (i.e., **Intervention for Request 0800003248**).

- 5 Observe information displayed on the **Open Intervention Detail** page.
 - The following items are displayed on the **Open Intervention Detail** page.
 - **User ID.**
 - **email.**
 - **Priority.**
 - **Order ID.**
 - **Request ID.**
 - **Size (est, MB).**
 - **Media.**
 - **Status.**
 - **Worked by.**
 - **Created.**
 - **Acknowledged.**
 - **Explanation.**
 - **Worked by:** data entry field.
 - **Assign New Worker** button or **Override Current Worker** button.
 - **Granule List:** **DBID**, text box (for entering new DBID), and **Apply** button (if applicable); **ESDT**; **Size (MB)**; **Status**; **Explanation**; **Fail this granule** button (if applicable).
 - **Request Level Disposition: Request Attributes:** **Disable limit checking** box, **Change Media to:** box, **New Medium** option button, and **Update FtpPush Parameters** box (if applicable; i.e., if the current distribution medium is ftp push); **Request Disposition: Keep on hold | Submit | Fail Request | Partition (current size is x MB)** buttons | and **spread request over d days h hours** boxes.
 - **OPERATOR NOTES:** Text box (for entering comments); **Apply Disposition Request** button; **Reset** button.
 - Use the Netscape browser **Back** button to redisplay the **OM GUI - Request Management** page **View Open Interventions** screen.

- 6 If it is desirable to work on the selected intervention, observe information displayed in the **Worked by** column of the **Open Intervention Detail** page.
 - If someone is already working on the intervention, that person is identified in the **Worked by:** field.
 - In general working on an intervention is left to the person who has already been signed up to work on it unless the change is coordinated with that person or they are going to be unavailable (e.g., due to illness or vacation).
 - If necessary (e.g., due to illness, vacation, or prior coordination), it is possible to override the assignment of a person to work on an intervention.
- 7 To assign oneself to work on the intervention, On the **Open Intervention Detail** page in the **Worked by:** text entry box enter:
<name>

- or -
<user ID>
 - If necessary, overwrite the ID of the previously assigned person.
- 8 To continue the process of assigning oneself to work on the intervention, **single-click** on the **Assign New Worker** button or **Override Current Worker** button (as applicable).
- 9 If no granule in the request is to be “failed” or if all granules in the request are to be “failed,” skip Steps 10 through 15 and go to Step 16.
- 10 If a granule is to be replaced (e.g., because of an “Invalid UR/Granule Not Found” entry in the **Explanation** column of the **Granule List**), in the **DBID** text box enter:
<Database ID>
 - The DBID for a replacement granule can be determined by doing a search using the EDG.
- 11 To continue the process of specifying a replacement granule, **single-click** on the **Apply** button associated with the DBID.
 - A dialogue box is displayed to confirm the change to the granule.
- 12 To continue the process of specifying a replacement granule, **single-click** on the appropriate button from the following selections:
 - **OK** - to confirm the specification of a replacement granule and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The **Open Intervention Detail** page is displayed.
 - **Cancel** - to dismiss the dialogue box without specifying a replacement granule.
 - The dialogue box is dismissed.

- The **Open Intervention Detail** page is displayed.
- 13** If a granule is to be “failed” (e.g., because of an “Invalid UR/Granule Not Found” entry in the **Explanation** column of the **Granule List**), **single-click** on the **Fail this granule** button in the row for the granule in the **Granule List**.
- A dialogue box is displayed to confirm the change to the granule.
- NOTE:** “Failing” a granule is a permanent action and cannot be canceled after having been confirmed.
- 14** To continue the process of failing a granule, **single-click** on the appropriate button from the following selections:
- **OK** - to confirm the failure of the granule and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The **Open Intervention Detail** page is displayed.
 - **Cancel** - to dismiss the dialogue box without failing the granule.
 - The dialogue box is dismissed.
 - The **Open Intervention Detail** page is displayed.
- 15** Repeat Steps 10 through 14 (as necessary) to replace or fail any additional granules.
- 16** If limit checking should be disabled, **single-click** on the **Disable limit checking** box.
- If the **Disable limit checking** attribute is selected and subsequently applied, the request size limit checking is disabled.
 - The **Disable limit checking** option makes it possible to override the standard media capacity limits for a particular media type and is most likely to be applied to a non-physical media type (i.e., ftp push or ftp pull).
 - The **Disable limit checking** option should be used for unusually large requests only.
- 17** If the distribution medium should be changed, first **single-click** on the **Change Media to:** box.
- 18** To continue the process of changing the distribution medium, **single-click** and **hold** the **New Medium** option button to display a menu of media, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
- The following choices are available: - -, **FtpPull**, **FtpPush**, **CDROM**, **DLT**, **DVD**, **8MM**.
 - Selected medium is displayed on the **New Medium** option button when the mouse button is released.
 - The **Update FtpPush Parameters** option appears when applicable (i.e., when the current distribution medium for the request is ftp push).
 - The **Update FtpPush Parameters** option provides a means of editing the existing ftp push information when the intervention is closed.

- 19 If a note should be entered concerning the request, in the **OPERATOR NOTES** text box enter:
<text>
- For example, the note may explain the reason for resubmitting the request.
- 20 To select the disposition for the request **single-click** on the appropriate button from the following selections:
- **Keep on hold** - to delay applying any intervention action (keep the intervention open) and dismiss the **Open Intervention Detail** page.
 - Placing an intervention on hold does not allow changing the request's attributes, but saves the operator notes and allows opening the intervention at a later time (essentially, the intervention is being “saved”).
 - **Submit** - to apply the intervention actions (if any) specified in the **Granule List** and **Request Attributes** sections of the **Open Intervention Detail** page and dismiss the **Open Intervention Detail** page.
 - **Fail Request** - to fail the entire request (including all granules) and dismiss the **Open Intervention Detail** page.
 - **Partition (current size is x MB)** - to start the process of partitioning a request that exceeds maximum request size.
- 21 If the **Partition (current size is x MB)** button was selected in the preceding step and distribution of the granules should be spread over a period of time, first **single-click** on the box in front of **and spread request over**.
- 22 If the **Partition (current size is x MB)** button was selected in Step 20 and distribution of the granules should be spread over a period of time, in the corresponding text box(es) enter:
<number of days>
<number of hours>

NOTE: There are **Apply Disposition Request** and **Reset** buttons at the bottom of the **Open Intervention Detail** page. The **Reset** button does not cancel any changes made to the request or changes made to the DBIDs (changed or failed). It simply resets the form buttons for the **Request Level Disposition** section to their original states.

- 23 **Single-click** on the **Apply Disposition Request** button.
- A **Close Confirmation** page is displayed.
 - The **Close Confirmation** page displays the actions to be taken; for example, the following types of actions may be listed: **Disposition** [e.g., keep on hold, submit, fail, or partition], **Limit Checking Disabled** [yes, no, or blank], **New Media** [no, yes: (type), or blank].
 - If the intervention involved changing the medium to ftp push or updating the ftp push parameters, text boxes for the following ftp push parameters are displayed on the **Close Confirmation** page: **Ftp node** [Destination host name], **Ftp Address** [FTP user name], **Password**, **Confirm Password**, **User String** [message to be sent to the user], **Destination Directory** [full path].
 - If it was necessary to fail a request or granule(s) within a request, the **Close Confirmation** page includes options for either appending additional text to the default e-mail message to be sent to the requester or choosing not to send an e-mail message to the requester. An **Additional e-mail text** text box for appending text (if desired) to the standard e-mail text is displayed on the **Close Confirmation** page; a **Don't send e-mail** box to suppress the sending of an e-mail message is displayed on the **Close Confirmation** page.
- 24 If the intervention involved changing the medium to ftp push or updating the ftp push parameters, in the corresponding text boxes enter:
- <FTP Node>
- <FTP Address>
- <Password>
- <Confirm Password>
- <User String>
- <Destination Directory>
- <FTP Node> represents the destination host name.
 - <FTP Address> represents the FTP user name.
 - <User String> represents a message to be sent to the user.
 - <Destination Directory> represents the full path.
- 25 If the intervention involved request/granule failure, and additional text is to be appended to the corresponding standard e-mail text, in the **Additional e-mail text** text box on the **Close Confirmation** page enter:
- <text>

- 26 If the intervention involved request/granule failure, and no e-mail message is to be sent, **single-click** on the **Don't send e-mail** box on the **Close Confirmation** page to suppress the sending of an e-mail message indicating request/granule failure.
- Unless the **Don't send e-mail** button is activated, an e-mail message indicating request/granule failure will be sent to the requester.
- 27 **Single-click** on the appropriate button from the following selections:
- **OK** - to apply the specified intervention actions (if any) and dismiss the **Close Confirmation** page.
 - The **Close Confirmation** page is dismissed.
 - An intervention disposition page is displayed.
 - **Cancel** - to dismiss the **Close Confirmation** page without applying the specified intervention actions.
 - The **Close Confirmation** page is dismissed.
 - A warning dialogue box is displayed with the message “WARNING: The disposition and actions you have taken for this intervention will be lost. Continue?”
- 28 If a warning dialogue box is displayed with the message “WARNING: The disposition and actions you have taken for this intervention will be lost. Continue?” **single-click** on the appropriate button from the following selections:
- **OK** - to dismiss the warning dialogue box and the **Close Confirmation** page and return to the **Open Intervention Detail** page.
 - **Cancel** - to dismiss the warning dialogue box and return to the **Close Confirmation** page.
- 29 To exit from the intervention disposition page, **single-click** on the **Open interventions** link (in the “Go back to the Open interventions page” statement).
- The intervention disposition page is dismissed.
 - The **OM GUI - Request Management** page **View Open Interventions** screen is displayed.
- 30 To exit from the **OM GUI** execute either of the following menu paths from the Netscape browser pull-down menu:
- File → Close**
- or -
- File → Exit**
- The Netscape browser is dismissed.

Table 18.5-3. Respond to Open Interventions - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Launch the Order Manager GUI (if necessary)	Use procedure in Section 18.5.1
2	Request Management link (Order Manager Page [“Home” Page])	single-click
3	Observe information displayed in the Requests with Open Interventions table	read text
4	<Request ID> (in the Requests with Open Interventions table)	single-click
5	Observe information displayed on the Open Intervention Detail page	read text
6	<name> (or <user ID>)	enter text
7	Assign New Worker button or Override Current Worker button (as applicable)	single-click
8	<Database ID> (DBID text box) (if applicable)	enter text
9	Apply button	single-click
10	OK button	single-click
11	Repeat Steps 8 through 10 (as necessary)	
12	Disable limit checking box (if applicable)	single-click
13	Change Media to: box (if applicable)	single-click
14	<medium> (New Medium option button) (if applicable)	single-click
15	<text> (OPERATOR NOTES text box) (if applicable)	enter text
16	Keep on hold button (if applicable)	single-click
17	Submit button (if applicable)	single-click
18	Fail Request button (if applicable)	single-click
19	Partition (current size is x MB) button (if applicable)	single-click
20	and spread request over button (if applicable)	single-click
21	<number of days> (days text box) (if applicable)	enter text
22	<number of hours> (hours text box) (if applicable)	enter text
23	Apply Disposition Request button	single-click
24	<FTP Node> (FTP Node text box) (if applicable)	enter text
25	<FTP Address> (FTP Address text box) (if applicable)	enter text
26	<FTP Password> (Password text box) (if applicable)	enter text
27	<FTP Password> (Confirm Password text box) (if applicable)	enter text
28	<User String> (User String text box) (if applicable)	enter text

Table 18.5-3. Respond to Open Interventions - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
29	<Destination Directory> (Destination Directory text box) (if applicable)	enter text
30	<text> (Additional e-mail text text box) (if applicable)	enter text
31	Don't send e-mail button (if applicable)	single-click
32	OK button	single-click
33	Open interventions link (if applicable)	single-click
34	File → <u>C</u> lose (or File → <u>E</u> xit) (when applicable)	single-click

18.5.2.1 Set Refresh Options on OM GUI Pages

Buttons at the bottom of **OM GUI** pages provide the Distribution Technician with a means of setting refresh options. Table 18.5-4 presents (in a condensed format) the steps required to set refresh options on **OM GUI** pages. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If applicable, **single-click** on the appropriate radio button at the bottom of the **OM GUI** page.
 - The following options are available:
 - **Suspend refresh** - It is useful to “suspend refresh” when a large volume of orders/requests is being processed and it is desirable to preserve the orders/requests displayed on the current screen.
 - **Auto refresh screen every x minutes** - It is useful to “auto refresh” when working with current orders/requests that are expected to change status at any time and it is desirable to see the new status right away.

- 2 If the **Auto refresh screen every x minutes** is selected, **single-click** and **hold** the number of minutes option button to display a menu of numbers of minutes, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
 - The following choices are available:
 - 1.
 - 5.
 - 10.
 - 15.
 - 30.
 - 45.
 - 60.
 - Selected number is displayed on the number of minutes option button when the mouse button is released.

- 3 Return to the procedure that recommended setting refresh options on OM GUI pages.

Table 18.5-4. Set Refresh Options on OM GUI Pages - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Suspend refresh radio button or Auto refresh screen every x minutes radio button (as applicable)	single-click
2	<minutes> (number of minutes option button) (if applicable)	single-click
3	Return to the procedure that recommended setting refresh options on OM GUI pages	

18.5.3 Resubmit Completed Distribution Requests

The **OM GUI - Request Management** page **View Distribution Requests** screen provides the Distribution Technician with a means of resubmitting completed distribution requests. Only distribution requests that are in a terminal state (e.g., aborted, cancelled, terminated, or shipped) can be resubmitted.

Table 18.5-5 presents (in a condensed format) the steps required to resubmit completed distribution requests. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: The procedure for resubmitting completed distribution requests assumes proper justification/authorization for resubmitting the requests. Resubmitting requests may require coordination between the Distribution Technician and a User Services representative, especially when changing the type of distribution medium, specifying a replacement granule, or taking any other action that would require the approval of the person who submitted the order. In fact, depending on the circumstances and DAAC policy it may be appropriate for User Services to assume responsibility for resubmitting some requests.

- 1 If it is not already being displayed, launch the **Order Manager GUI** (refer to Section 18.5.1).
 - The **Order Manager GUI** is displayed.

- 2 **Single-click** on the **Request Management** link on the **Order Manager Page** [“Home” Page].
 - The **OM GUI - Request Management** page **View Open Interventions** screen is displayed.

- 3 **Single-click** on the **View Distribution Requests** link on the **Request Management** page.
 - The **OM GUI - Request Management** page **Distribution Requests** screen is displayed.
 - The **Distribution Requests** table is displayed; the table has the following columns:
 - **Order Type** [“Regular” or “BO” (Bundling Order)].
 - **Order ID.**
 - **Request ID.**
 - **Request Size (MB).**
 - **Granule Count.**
 - **Media.**
 - **Priority.**
 - **Status.**
 - **ESDT.**
 - **UserID.**
 - **Resubmit Count.**
 - **Created.**
 - **Last Update.**
 - **Resubmit.**

- 4 Observe information displayed in the **Distribution Requests** table.
 - By default, data concerning up to 50 distribution requests with a “creation time” within the last 24 hours are displayed at a time.
 - **Single-click** on a link in the column header row of the table to sort table contents on that column.
 - For example, **single-click** on the **Created** link to organize the table by date, with the most recent distribution request in the top row of the table.
 - To bring up a screen containing more detailed data concerning a particular order or request **single-click** on the specific Order ID or Request ID.
 - For example, **single-clicking** on Order ID **0800001206** would bring up an **ECS Order** page (i.e., **ECS ORDER 0800001206**) that displays the following types of data concerning the order: **Request ID(s), Order Type, Order Source, Receive Date, Last Update, Description, Start Date, User ID, Status, Ship Date, Home DAAC.**
 - If the order is a bundling order (Order Type “Bundled Order” or “BO”), the **ECS Order** page includes a link to the **Spatial Subscription Server GUI.**

- When reviewing the data concerning a particular order or request, use the Netscape browser **Back** button to redisplay the **OM GUI - Request Management** page **Distribution Requests** screen.
- For example, **single-clicking** on Request ID **0800001331** would bring up a **Distribution Request Detail** page (i.e., **DISTRIBUTION REQUEST 0800001331**) that displays the following types of data concerning the request:
 - **UserID.**
 - **E-mail.**
 - **Priority.**
 - **# Granules.**
 - **Receive Date/Time.**
 - **Start Date/Time.**
 - **Last Update.**
 - **End Date/Time.**
 - **Request Size (MB).**
 - **OrderId.**
 - **Order Type.**
 - **Request Status.**
 - **Media Type.**
 - **Resubmit Count.**
 - **Granule List: DBID; ESDT; Size (MB); Status; RESUBMIT** (button).
- **Single-click** on a specific User ID to bring up a screen that shows user profile information for that user, including the following types of data:
 - **Personal Information (Name, E-Mail Address, Organization, User ID, User Verification Key, Affiliation, Project, Home DAAC, Primary area of study).**
 - **Account Information (Date created, Expiration date, Privilege level, NASA user, Access privilege, V0 Gateway user type, V0 Gateway category).**
 - **Mailing Address (Address, City, State/Province, Country, Zip/Postal code, Telephone, Fax).**
 - **Shipping Address.**
 - **Billing Address.**
 - **DAR [Data Acquisition Request] Information (Aster category, DAR expedited data).**
- Horizontal and vertical scroll bars appear when necessary to allow viewing data that are not readily visible in the window.
- The Netscape browser **Reload** button can be used to update the data on (refresh) the screen.
- By default, the **Distribution Requests** screen refreshes automatically every five (5) minutes; if a different refresh option is preferred, perform the **Set Refresh Options on OM GUI Pages** procedure (Section 18.5.2.1).

- The Netscape browser **Edit** → **Find in Page** menu provides a means of performing a keyword search of the data currently being displayed on the screen.
 - Number(s) indicating the first order number in a group of up to 50 orders provide one means of displaying additional pages of data.
 - The **first**, **previous**, **next**, and **last** links provide means of displaying additional pages of data.
 - The **Go directly to row...** window provides a means of displaying a page of data starting with a particular row of the table.
 - For example, if **Go directly to row _____ of 415 rows** is being displayed, typing **315** in the window and clicking on the **ok** button would result in the display of a page of data containing rows 315 through 364.
- 5 If the request to be resubmitted is not listed in the **Distribution Requests** table, filter the data displayed in the table.
- For detailed instructions refer to the **Filter Data Displayed on the Distribution Requests Screen** procedure (Section 18.5.3.1).
- 6 **Single-click** on the **RESUBMIT** button in the **Resubmit** column for the row listing the request to be resubmitted.
- A dialogue box is displayed with the message “Are you sure you want to create an intervention and submit this Request xxxxxxxx?”
 - In order to “resubmit” a request, first an “intervention” is created, then it is possible to make any modifications (e.g., change distribution medium or partition the request) that can be made for an intervention automatically created by the Order Manager Subsystem.
 - An alternative is to bring up the relevant **Distribution Request Detail** page (by **single-clicking** on the Request ID in the **Distribution Requests** table) then **single-click** on the **RESUBMIT** button on the **Distribution Request Detail (DISTRIBUTION REQUEST x)** page.
- 7 **Single-click** on the appropriate button from the following selections:
- **OK** - to dismiss the dialogue box and open an intervention.
 - The dialogue box is dismissed.
 - The **Open Intervention Detail** page is displayed.
 - **Cancel** - to dismiss the dialogue box without accepting the changes made to the data on the form.
 - The dialogue box is dismissed.
 - The **OM GUI - Request Management** page **Distribution Requests** screen is displayed.
- 8 Observe information displayed on the **Open Intervention Detail** page.
- The following items are displayed on the **Open Intervention Detail** page.
 - **User ID.**

- **email.**
- **Priority.**
- **Order ID.**
- **Request ID.**
- **Size (est, MB).**
- **Media.**
- **Status.**
- **Worked by.**
- **Created.**
- **Acknowledged.**
- **Explanation.**
- **Worked by:** data entry field.
- **Assign New Worker** button or **Override Current Worker** button.
- **Granule List: DBID**, text box (for entering new DBID), and **Apply** button (if applicable); **ESDT**; **Size (MB)**; **Status**; **Explanation**; **Fail this granule** button (if applicable).
- **Request Level Disposition: Request Attributes: Disable limit checking** box, **Change Media to:** box, **New Medium** option button, and **Update FtpPush Parameters** box (if applicable; i.e., if the current distribution medium is ftp push); **Request Disposition: Keep on hold | Submit | Fail Request | Partition (current size is *x* MB)** buttons | **and spread request over *d* days *h* hours** boxes.
- **OPERATOR NOTES:** Text box (for entering comments); **Apply Disposition Request** button; **Reset** button.

9 On the **Open Intervention Detail** page in the **Worked by:** text entry box enter:

<name>

- or -

<user ID>

10 To continue the process of assigning oneself to work on the intervention, **single-click** on the **Assign New Worker** button.

11 If no granule in the request is to be “failed” or if all granules in the request are to be “failed,” skip Steps 12 through 17 and go to Step 18.

12 If a granule is to be replaced (e.g., because of an “Invalid UR/Granule Not Found” entry in the **Explanation** column of the **Granule List**), in the **DBID** text box enter:

<Database ID>

- The Database ID (DBID) for a replacement granule can be determined by doing a search using the EOS Data Gateway (EDG).

- 13 To continue the process of specifying a replacement granule, **single-click** on the **Apply** button associated with the DBID.
- A dialogue box is displayed to confirm the change to the granule.
- 14 To continue the process of specifying a replacement granule, **single-click** on the appropriate button from the following selections:
- **OK** - to confirm the specification of a replacement granule and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The **Open Intervention Detail** page is displayed.
 - **Cancel** - to dismiss the dialogue box without specifying a replacement granule.
 - The dialogue box is dismissed.
 - The **Open Intervention Detail** page is displayed.
- 15 If a granule is to be “failed” (e.g., because of an “Invalid UR/Granule Not Found” entry in the **Explanation** column of the **Granule List**), **single-click** on the **Fail this granule** button in the row for the granule in the **Granule List**.
- A dialogue box is displayed to confirm the change to the granule.

NOTE: “Failing” a granule is a permanent action and cannot be canceled after having been confirmed.

- 16 To continue the process of failing a granule, **single-click** on the appropriate button from the following selections:
- **OK** - to confirm the failure of the granule and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The **Open Intervention Detail** page is displayed.
 - **Cancel** - to dismiss the dialogue box without failing the granule.
 - The dialogue box is dismissed.
 - The **Open Intervention Detail** page is displayed.
- 17 Repeat Steps 12 through 16 (as necessary) to replace or fail any additional granules.
- 18 If limit checking should be disabled, **single-click** on the **Disable limit checking** box.
- If the **Disable limit checking** attribute is selected and subsequently applied, the request size limit checking is disabled.
 - The **Disable limit checking** option makes it possible to override the standard media capacity limits for a particular media type and is most likely to be applied to a non-physical media type (i.e., ftp push or ftp pull).
 - The **Disable limit checking** option should be used for unusually large requests only.

- 19 If the distribution medium should be changed, first **single-click** on the **Change Media to:** box.
- 20 To continue the process of changing the distribution medium, **single-click** and **hold** the **New Medium** option button to display a menu of media, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
- The following choices are available: - -, **FtpPull**, **FtpPush**, **CDROM**, **DLT**, **DVD**, **8MM**.
 - Selected medium is displayed on the **New Medium** option button when the mouse button is released.
 - The **Update FtpPush Parameters** option appears when applicable (i.e., when the current distribution medium for the request is ftp push).
 - The **Update FtpPush Parameters** option provides a means of editing the existing ftp push information when the intervention is closed.
- 21 If a note should be entered concerning the intervention, in the **OPERATOR NOTES** text box enter:
<text>
- For example, the note may explain the reason for resubmitting the request.
- 22 To select the disposition for the request **single-click** on the appropriate button from the following selections:
- **Keep on hold** - to delay applying any intervention action (keep the intervention open) and dismiss the **Open Intervention Detail** page.
 - Placing an intervention on hold does not allow changing the request's attributes, but saves the operator notes and allows opening the intervention at a later time (essentially, the intervention is being “saved”).
 - **Submit** - to apply the intervention actions (if any) specified in the **Granule List** and **Request Attributes** sections of the **Open Intervention Detail** page and dismiss the **Open Intervention Detail** page.
 - **Fail Request** - to fail the entire request (including all granules) and dismiss the **Open Intervention Detail** page.
 - **Partition (current size is x MB)** - to start the process of partitioning a request that exceeds maximum request size.
- 23 If the **Partition (current size is x MB)** button was selected in the preceding step and distribution of the granules should be spread over a period of time, first **single-click** on the box in front of **and spread request over**.

24 If the **Partition (current size is x MB)** button was selected in Step 22 and distribution of the granules should be spread over a period of time, in the corresponding text box(es) enter:

<number of days>

<number of hours>

NOTE: There are **Apply Disposition Request** and **Reset** buttons at the bottom of the **Open Intervention Detail** page. The **Reset** button does not cancel any changes made to the request or changes made to the DBIDs (changed or failed). It simply resets the form buttons for the **Request Level Disposition** section to their original states.

25 **Single-click** on the **Apply Disposition Request** button.

- A **Close Confirmation (CLOSE CONFIRMATION FOR INTERVENTION X)** page is displayed.
 - The **Close Confirmation** page displays the actions to be taken; for example, the following types of actions may be listed: **Disposition** [e.g., keep on hold, submit, fail, or partition]; **Limit Checking Disabled** [yes, no, or blank]; **New Media** [no, yes: (type), or blank].
 - If the intervention involved changing the medium to ftp push or updating the ftp push parameters, text boxes for the following ftp push parameters are displayed on the **Close Confirmation** page: **FTP Node** [Destination host name]; **FTP Address** [FTP user name]; **Password**; **Confirm Password**; **User String** [message to be sent to the user]; **Destination Directory** [full path].
 - If it was necessary to fail a request or granule(s) within a request, the **Close Confirmation** page includes options for either appending additional text to the default e-mail message to be sent to the requester or choosing not to send an e-mail message to the requester. An **Additional e-mail text** text box for appending text (if desired) to the standard e-mail text is displayed on the **Close Confirmation** page; a **Don't send e-mail** box to suppress the sending of an e-mail message is displayed on the **Close Confirmation** page.

26 If the intervention involved changing the medium to ftp push or updating the ftp push parameters, in the corresponding text boxes enter:

<FTP Node>

<FTP Address>

<Password>

<Confirm Password>

<User String>

<Destination Directory>

- **<FTP Node>** represents the destination host name.
- **<FTP Address>** represents the FTP user name.
- **<User String>** represents a message to be sent to the user.
- **<Destination Directory>** represents the full path.

27 If the intervention involved request/granule failure and additional text is to be appended to the corresponding standard e-mail text, in the **Additional e-mail text** text box on the **Close Confirmation** page enter:

<text>

28 If the intervention involved request/granule failure, and no e-mail message is to be sent, **single-click** on the **Don't send e-mail** box on the **Close Confirmation** page to suppress the sending of an e-mail message indicating request/granule failure.

- Unless the **Don't send e-mail** box is checked, an e-mail message indicating request/granule failure will be sent to the requester.

29 **Single-click** on the appropriate button from the following selections:

- **OK** - to apply the specified intervention actions (if any) and dismiss the **Close Confirmation** page.
 - The **Close Confirmation** page is dismissed.
 - An intervention disposition page is displayed.
- **Cancel** - to dismiss the **Close Confirmation** page without applying the specified intervention actions.
 - The **Close Confirmation** page is dismissed.
 - A warning dialogue box is displayed with the message “WARNING: The disposition and actions you have taken for this intervention will be lost. Continue?”

30 If a warning dialogue box is displayed with the message “WARNING: The disposition and actions you have taken for this intervention will be lost. Continue?” **single-click** on the appropriate button from the following selections:

- **OK** - to dismiss the warning dialogue box and the **Close Confirmation** page and return to the **Open Intervention Detail** page.
- **Cancel** - to dismiss the warning dialogue box and return to the **Close Confirmation** page.

31 To exit from the intervention disposition page, click on the **Open interventions** link (in the “Go back to the Open interventions page” statement).

- The intervention disposition page is dismissed.
- The **OM GUI - Request Management** page **View Open Interventions** screen is displayed.

32 To exit from the **OM GUI** execute either of the following menu paths from the Netscape browser pull-down menu:

File → Close

- or -

File → Exit

- The Netscape browser is dismissed.

Table 18.5-5. Resubmit Completed Distribution Requests - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Launch the Order Manager GUI (if necessary)	Use procedure in Section 18.5.1
2	Request Management link (Order Manager Page [“Home” Page])	single-click
3	View Distribution Requests link (Request Management page)	single-click
4	Observe information displayed in the Distribution Requests table	read text
5	Filter the data displayed in the table (if necessary)	Use procedure in Section 18.5.3.1
6	RESUBMIT button	single-click
7	OK button	single-click
8	Observe information displayed on the Open Intervention Detail page	read text
9	<name> (or <user ID>)	enter text
10	Assign New Worker button	single-click
11	<Database ID> (DBID text box) (if applicable)	enter text
12	Apply button	single-click
13	OK button	single-click
14	Repeat Steps 11 through 13 (as necessary)	
15	Disable limit checking box (if applicable)	single-click
16	Change Media to: box (if applicable)	single-click
17	<medium> (New Medium option button) (if applicable)	single-click
18	<text> (OPERATOR NOTES text box) (if applicable)	enter text
19	Keep on hold button (if applicable)	single-click
20	Submit button (if applicable)	single-click
21	Fail Request button (if applicable)	single-click
22	Partition (current size is x MB) button (if applicable)	single-click
23	and spread request over button (if applicable)	single-click

Table 18.5-5. Resubmit Completed Distribution Requests - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
24	<number of days> (days text box) (if applicable)	enter text
25	<number of hours> (hours text box) (if applicable)	enter text
26	Apply Disposition Request button	single-click
27	<FTP Node> (FTP Node text box) (if applicable)	enter text
28	<FTP Address> (FTP Address text box) (if applicable)	enter text
29	<FTP Password> (Password text box) (if applicable)	enter text
30	<FTP Password> (Confirm Password text box) (if applicable)	enter text
31	<User String> (User String text box) (if applicable)	enter text
32	<Destination Directory> (Destination Directory text box) (if applicable)	enter text
33	<text> (Additional e-mail text text box) (if applicable)	enter text
34	Don't send e-mail button (if applicable)	single-click
35	OK button	single-click
36	Open interventions link (if applicable)	single-click
37	File → C lose (or File → E xit) (when applicable)	single-click

18.5.3.1 Filter Data Displayed on the Distribution Requests Screen

There are features at the top of the **Distribution Requests** screen that provide the Distribution Technician with a means of filtering data displayed on the **Distribution Requests** screen. By default, data concerning up to 50 distribution requests with a “creation time” within the last 24 hours are displayed at a time.

Table 18.5-6 presents (in a condensed format) the steps required to filter data displayed on the **Distribution Requests** screen. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: By default, distribution requests are sorted by “creation time,” providing access to all distribution requests created within the last 24 hours. If it becomes necessary to restore the default filtering criteria, click on the **Set Defaults** button near the top of the **Distribution Requests** window.

- 1 If the distribution request with a particular Request ID only should be displayed on the **Distribution Requests** screen, in the **Request ID** text box enter:
<**Request ID**>
 - Filtering by request ID may be combined with other filtering options (refer to Steps 2 through 6).
 - Filtering by “Creation Time” (Step 4) is unnecessary when filtering by request ID because the specified request is displayed on the **Distribution Requests** screen (if it is in the database) regardless of “Creation Time.”
 - If all filtering criteria have been selected, go to Step 7.

- 2 If distribution request(s) with a particular Order ID only should be displayed on the **Distribution Requests** screen, in the **Order ID** text box enter:
<**Order ID**>
 - Filtering by order ID may be combined with other filtering options (refer to Steps 1 through 6).
 - Filtering by “Creation Time” (Step 4) is unnecessary when filtering by order ID because the specified order is displayed on the **Distribution Requests** screen (if it is in the database) regardless of “Creation Time.”
 - If all filtering criteria have been selected, go to Step 7.

- 3 If distribution requests submitted by a particular user only should be displayed on the **Distribution Requests** screen, in the **User ID** text box enter:
<**User ID**>
 - The specified user’s requests are displayed for the time period identified on the **Creation Time** option buttons (**Start Month, Start Day, Start Year, Start Hour, Start Minute, End Month, End Day, End Year, End Hour, and End Minute** buttons) only.
 - Filtering by user ID may be combined with other filtering options (refer to Steps 1 through 6).
 - If all filtering criteria have been selected, go to Step 7.

- 4 If the relevant distribution request(s) has (have) creation time outside the range indicated on the **Start Month, Start Day, Start Year, Start Hour, Start Minute, End Month, End Day, End Year, End Hour, and End Minute** buttons, as necessary **single-click** and **hold** each date/time option button to display a menu of month, day, year, hour, or minute options, **move** the mouse cursor to each desired selection (highlighting it), then **release** the mouse button.
 - Selected number is displayed on each date/time option button when the mouse button is released.
 - Filtering by “Creation Time” may be combined with other filtering options (refer to Steps 1 through 6).

- If all filtering criteria have been selected, go to Step 7.

NOTE: By default all statuses are highlighted in the **Status** window on the **Distribution Requests** screen; consequently, unless some statuses are unhighlighted, requests with all statuses can be displayed on the **Distribution Requests** screen.

5 If distribution requests with particular status(es) only should be displayed on the **Distribution Requests** screen, **single-click** on all undesired statuses (if any) in the **Status** window to remove the highlight and prevent them [requests with unhighlighted status(es)] from being displayed.

- The following choices are available:
 - **ALL.**
 - **Abort.**
 - **Aborted.**
 - **Active.**
 - **Canceled.**
 - **Cancelled.**
 - **Expired.**
 - **Not Found.**
 - **Operator Intervention.**
 - **Partitioned.**
 - **Pending.**
 - **Prep for Distribution.**
 - **Queued.**
 - **SDSRV Staging.**
 - **Shipped.**
 - **Staging.**
 - **Subsetting.**
 - **Terminated.**
 - **Transferring.**
 - **Waiting for Shipment.**
- Selected status(es) is (are) highlighted in the **Status** window; undesired status(es) is (are) not highlighted in the **Status** window.
- A vertical scroll bar allows viewing data that are not readily visible in the **Status** window.
- Filtering by “Status” may be combined with other filtering options (refer to Steps 1 through 6).
- If all filtering criteria have been selected, go to Step 7.

- 6 If distribution requests for a particular type of medium only should be displayed on the **Distribution Requests** screen, **single-click** and **hold** the **Media Type** option button to display a menu of media options, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
 - The following choices are available:
 - **ALL.**
 - **FtpPull.**
 - **FtpPush.**
 - **CDROM.**
 - **DLT.**
 - **DVD.**
 - **8MM.**
 - The desired type of medium is displayed on the **Media Type** option button.
 - Filtering by “Media Type” may be combined with other filtering options (refer to all previous steps of this procedure).

- 7 When all relevant filtering criteria have been selected (as described in Steps 1 through 6), **single-click** on the **Apply Filter** button.
 - The **Distribution Requests** window refreshes.
 - Only requests that meet the specified filter criteria appear in the **Distribution Requests** table.

- 8 Return to the **Resubmit Completed Distribution Requests** procedure (Section 18.5.3).

Table 18.5-6. Filter Data Displayed on the Distribution Requests Screen - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	<Request ID> (RequestID text box) (if applicable)	enter text
2	<Order ID> (OrderID text box) (if applicable)	enter text
3	<User ID> (UserID text box) (if applicable)	enter text
4	<date/time values> (Start Month, Start Day, Start Year, Start Hour, Start Minute, End Month, End Day, End Year, End Hour, and End Minute option buttons) (as applicable)	single-click
5	<status> (Status option button) (if applicable)	single-click
6	<medium> (Media Type option button) (if applicable)	single-click
7	Apply Filter button (if applicable)	single-click
8	Return to the Resubmit Completed Distribution Requests procedure	Use procedure in Section 18.5.3

18.5.4 View Completed Interventions

The **OM GUI - Request Management** page **View Completed Interventions** screen provides the Distribution Technician with a means of viewing completed interventions. By default, data concerning up to 50 requests with completed interventions (and “creation time” within the last 24 hours) are displayed at a time.

Table 18.5-7 presents (in a condensed format) the steps required to view completed interventions. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If it is not already being displayed, launch the **Order Manager GUI** (refer to Section 18.5.1).
 - The **Order Manager GUI** is displayed.
- 2 **Single-click** on the **Request Management** link on the **Order Manager Page** [“Home” Page].
 - The **OM GUI - Request Management** page **View Open Interventions** screen is displayed.
- 3 **Single-click** on the **View Completed Interventions** link on the **Request Management** page.
 - The **OM GUI - Request Management** page **Requests with Completed Interventions** screen is displayed.
 - The **Requests with Completed Interventions** table is displayed; the table has the following columns:
 - **Order Id.**
 - **Request Id.**
 - **User ID.**
 - **Size (MB).**
 - **Media.**
 - **Worked by.**
 - **Created.**
 - **Completed.**
 - **Disposition.**
- 4 Observe information displayed in the **Requests with Completed Interventions** table.
 - By default, data concerning up to 50 requests with completed interventions (and “creation time” within the last 24 hours) are displayed at a time.

- **Single-click** on a link in the column header row of the table to sort table contents on that column.
 - For example, **single-click** on the **Completed** link to organize the table by date, with the most recently completed intervention in the top row of the table.
 - To bring up a screen containing more detailed data concerning a particular order or request **single-click** on the specific Order ID or Request ID.
 - The **ECS Order** screen displays the following types of data concerning an order: **Request ID(s), Order Type, Order Source, Receive Date, Last Update, Description, Start Date, User ID, Status, Ship Date, Home DAAC.**
 - The **Completed Intervention Detail (Completed Intervention for Request x)** page displays the following types of data concerning the request: **User Id; email; Priority; Order ID; Size (est, MB); Media; Worked by; Created; Acknowledged; Disposition; Explanation; Granule List: DBID, ESDT, Size (MB), Status, Explanation; OPERATOR NOTES.**
 - When reviewing the data concerning a particular order or request, use the Netscape browser **Back** button to redisplay the **OM GUI - Request Management** page **Requests with Completed Interventions** screen.
 - Horizontal and vertical scroll bars appear when necessary to allow viewing data that are not readily visible in the window.
 - The Netscape browser **Reload** button can be used to update the data on the screen.
 - By default, the **Requests with Completed Interventions** screen refreshes automatically every five (5) minutes; if a different refresh option is preferred, perform the **Set Refresh Options on OM GUI Pages** procedure (Section 18.5.2.1).
 - The Netscape browser **Edit → Find in Page** menu provides a means of performing a keyword search of the data currently being displayed on the screen.
 - Number(s) indicating the first order number in a group of up to 50 orders provide one means of displaying additional pages of data.
 - The **first, previous, next, and last** links provide means of displaying additional pages of data.
 - The **Go directly to row...** window provides a means of displaying a page of data starting with a particular row of the table.
 - For example, if **Go directly to row _____ of 415 rows** is being displayed, typing **315** in the window and clicking on the **ok** button would result in the display of a page of data containing rows 315 through 364.
- 5** If the desired request with completed intervention is not listed in the **Requests with Completed Interventions** table, filter the data displayed in the table.
- For detailed instructions refer to the **Filter Data Displayed on the Requests with Completed Interventions Screen** procedure (Section 18.5.4.1).
- 6** If request filtering was necessary, return to Step 4.

- 7 **Single-click** on a specific Request ID in the **Requests with Completed Interventions** table of the **OM GUI - Request Management** page **Requests with Completed Interventions** screen to bring up a screen containing more detailed data concerning that particular request.
 - For example, clicking on Request ID **0800001330** brings up a **Completed Intervention Detail** (i.e., **Completed Intervention for Request 0800001330**) page.

- 8 Observe information displayed on the **Completed Intervention Detail (Completed Intervention for Request x)** page.
 - The following items are displayed on the **Completed Intervention Detail (Completed Intervention for Request x)** page.
 - **User Id.**
 - **email.**
 - **Priority.**
 - **Order ID.**
 - **Size (est, MB).**
 - **Media.**
 - **Worked by.**
 - **Created.**
 - **Acknowledged.**
 - **Disposition.**
 - **Explanation.**
 - **Granule List: DBID, ESDT, Size (MB), Status, Explanation.**
 - **OPERATOR NOTES.**
 - Use the Netscape browser **Back** button to redisplay the **OM GUI - Request Management** page **Requests with Completed Interventions** screen.

- 9 Return to Step 4 to view information concerning another completed intervention (if applicable).

- 10 To exit from the **OM GUI** execute either of the following menu paths from the Netscape browser pull-down menu:
File → Close

- or -
File → Exit
 - The Netscape browser is dismissed.

Table 18.5-7. View Completed Interventions - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Launch the Order Manager GUI (if necessary)	Use procedure in Section 18.5.1
2	Request Management link (Order Manager Page [“Home” Page])	single-click
3	View Completed Interventions link (Request Management page)	single-click
4	Observe information displayed in the Requests with Completed Interventions table	read text
5	Filter requests displayed in the Requests with Completed Interventions table (if necessary)	Use procedure in Section 18.5.4.1
6	Return to Step 4 (if applicable)	
7	< Request ID > (Requests with Completed Interventions table)	single-click
8	Observe information displayed on the Completed Intervention Detail (Completed Intervention for Request x) page	read text
9	Return to Step 4 to view information concerning another intervention (if applicable)	
10	File → C lose (or File → E xit) (when applicable)	single-click

18.5.4.1 Filter Data Displayed on the Requests with Completed Interventions Screen

Features at the top of the **Requests with Completed Interventions** screen provide the Distribution Technician with a means of filtering data displayed on the **Requests with Completed Interventions** screen. By default, data concerning up to 50 requests with completed interventions (and “creation time” within the last 24 hours) are displayed at a time.

Table 18.5-8 presents (in a condensed format) the steps required to filter data displayed on the **Requests with Completed Interventions** screen. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: By default, completed interventions are sorted by “Completion Time,” providing access to all interventions completed within the last 24 hours. If it becomes necessary to restore the default filtering criteria, click on the **Reset (Reset to Defaults)** button near the top of the **Requests with Completed Interventions** window.

- 1 If interventions “worked by” a particular individual only should be displayed on the **Requests with Completed Interventions** screen, **single-click** and **hold** the **Worked by:** option button to display a menu of individuals, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
 - In addition to a list of individuals, the **Worked by:** option button has an **ALL** option.
 - Selected individual (or “**ALL**”) is displayed on the **Worked by:** option button when the mouse button is released.
 - Filtering by the individual who worked on interventions may be combined with filtering by “Completion Time” (refer to Step 2).
 - If “Completion Time” filtering criteria are not going to be selected, go to Step 3.

- 2 If the intervention(s) to be viewed has (have) “Completion Time” outside the range indicated on the **Start Month, Start Day, Start Year, Start Hour, Start Minute, End Month, End Day, End Year, End Hour, and End Minute** buttons, as necessary **single-click** and **hold** each date/time option button to display a menu of month, day, year, hour, or minute options, **move** the mouse cursor to each desired selection (highlighting it), then **release** the mouse button.
 - Selected number is displayed on each date/time option button when the mouse button is released.

- 3 When all relevant filtering criteria have been selected (as described in Steps 1 and 2), **single-click** on the **Apply (Apply Filter)** button.
 - The **Requests with Completed Interventions** window refreshes.
 - Only requests that meet the specified filter criteria appear in the **Requests with Completed Interventions** table.

- 4 Return to the **View Completed Interventions** procedure (Section 18.5.4).

Table 18.5-8. Filter Data Displayed on the Requests with Completed Interventions Screen - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	<individual> (Worked by: option button) (if applicable)	single-click
2	<date/time values> (Start Month, Start Day, Start Year, Start Hour, and Start Minute option buttons) (as applicable)	single-click
3	<date/time values> (End Month, End Day, End Year, End Hour, and End Minute option buttons) (as applicable)	single-click
4	Apply (Apply Filter) button	single-click
5	Return to the View Completed Interventions procedure	Use procedure in Section 18.5.4

18.5.5 Check/Modify OM Queue Status

The **OM GUI - OM Queue Status** page provides the Distribution Technician with a means of checking and modifying OM queue status. The **OM Queue Status** page allows the Distribution Technician to monitor and change (if appropriate) the current status of request queues for all media as well as the request queues for PDS, SDSRV and e-mail. In addition, the **OM Queue Status** page allows the Distribution Technician to determine the status (“up” or “down”) of the Order Manager Server.

Table 18.5-9 presents (in a condensed format) the steps required to check and modify OM Queue status. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: Only authorized personnel should change the state of request queues. Refer to DAAC policy or ask the supervisor to what extent or under what conditions Distribution Technicians may be authorized to change the state of request queues.

- 1 If it is not already being displayed, launch the **Order Manager GUI** (refer to Section 18.5.1).
 - The **Order Manager GUI** is displayed.
- 2 **Single-click** on the **OM Queue Status** link on the **Order Manager Page** [“Home” Page].
 - The **OM Queue Status** page is displayed.
 - If the **OM Queue Status** page is not displayed within a minute, it is likely that the OM Server is not operating properly.
 - For example, it may have stalled while trying to process requests that it could not process.
- 3 Observe information displayed in the **Current Request Processing States** table.
 - Directly under the **Current Request Processing States** header, one of the following statements is displayed:
 - **The OM Server is: UP** [indicates that the OM Server is currently operating].
 - **The OM Server is: DOWN** [indicates that the OM Server is not currently operating].

NOTE: The status of the OM Server is determined by a program called “Sweeper,” which makes an attempt to connect with the OM Server. If a connection cannot be made, it is assumed that the OM Server is down. If Sweeper was not installed correctly, the error screen will be displayed indicating the message, or you will see an error message right on the page itself. This does not necessarily mean that the OM Server is down.

- The row in the table directly under the OM Server status line includes codes that indicate the status of the request queues for the following three entities:
 - **PDS.**
 - **SDSRV.**
 - **EMAIL.**
 - The code in parentheses next to each entity indicates the corresponding request queue status, specifically:
 - **A** – Active.
 - **S** – Suspended by server.
 - **O** – Suspended by operator.
 - Although rare, if a state is simply not available from the Order Manager Database, it is listed as **ERROR: State not available.**
 - The left-hand column of the **Current Request Processing States** table includes codes that indicate the status of the request queues for the following media types:
 - **FtpPull.**
 - **FtpPush.**
 - **CDROM.**
 - **DLT.**
 - **DVD.**
 - **8MM.**
 - Option buttons are available for authorized operators to change the request queue states.
 - The Netscape browser **Reload** button can be used to update the data on (refresh) the screen.
 - By default, the **OM Queue Status** screen refreshes automatically every five (5) minutes; if a different refresh option is preferred, perform the **Set Refresh Options on OM GUI Pages** procedure (Section 18.5.2.1).
 - The Netscape browser **Edit → Find in Page** menu provides a means of performing a keyword search of the data currently being displayed on the screen.
- 4** If it is necessary to change the state of a request queue (and there is authorization to do so), click and **hold** the corresponding **Change State** option button to display a menu of priorities, move the mouse cursor to the desired selection (highlighting it), then release the mouse button.
- The following states are available:
 - **Activate** [or **Activate All**].
 - **Suspend** [or **Suspend All**].
- 5** Repeat Step 4 as necessary to indicate a change of state for additional request queues.

- 6 If applicable, when the appropriate settings have been made on the **Change State** option buttons, click on the appropriate button:
- **Apply** - to apply the modification of states to the queues.
 - The Netscape browser **Reload** button can be used to update the data on (refresh) the screen.
 - **Reset** - to change the states displayed on all request queue **Change State** option buttons back to **Change State**.
- 7 To exit from the **OM GUI** execute either of the following menu paths from the Netscape browser pull-down menu:
- File → Close**
- or -
- File → Exit**
- The Netscape browser is dismissed.

Table 18.5-9. Check OM Queue Status - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Launch the Order Manager GUI (if necessary)	Use procedure in Section 18.5.1
2	OM Queue Status link (Order Manager Page ["Home" Page])	single-click
3	Observe information displayed in the Current Request Processing States table	read text
4	<state> (Change State option button) (if applicable and authorized)	single-click
5	Repeat Step 4 (if applicable and authorized)	
6	Apply button (if applicable and authorized)	single-click
7	File → <u>C</u>lose (or File → <u>E</u>xit) (when applicable)	single-click

18.5.6 Monitor Order Manager Server Statistics

The **OM Server Statistics** page provides the Distribution Technician with a means of monitoring Order Manager Server statistics.

Table 18.5-10 presents (in a condensed format) the steps required to monitor Order Manager Server statistics. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If it is not already being displayed, launch the **Order Manager GUI** (refer to Section 18.5.1).
 - The **Order Manager GUI** is displayed.
- 2 **Single-click** on the **OM Server Statistics** link on the **Order Manager Page** [**“Home” Page**].
 - The **OM Server Statistics** page is displayed.
- 3 Observe information displayed in the **OM Server Statistics** table.
 - By default, the **OM Server Statistics** displays the number of requests for the last 24 hours.
 - To change the period for which statistics are displayed, go to Step 4.
 - Directly under the **Number of requests for the last x hours** entry, one of the following statements is displayed:
 - **The OM Server is: UP** [indicates that the OM Server is currently operating].
 - **The OM Server is: DOWN** [indicates that the OM Server is not currently operating].

NOTE: The OM GUI determines the status of the OM Server through a program called “Sweeper,” which makes an attempt to connect with the OM Server. If a connection cannot be made, it is assumed that the OM Server is down. If Sweeper was not installed correctly, the error screen will be displayed indicating the message, or you will see an error message right on the page itself. This does not necessarily mean that the OM Server is down.

- The **OM Server Statistics** table has the following columns:
 - [Unlabeled column - type of statistic].
 - **Total.**
 - **FTP Push.**
 - **FTP Pull.**
 - **8MM Tape.**
 - **CD-ROM.**
 - **DVD.**
 - **DLT.**
- For each type of Order Manager Server input or output there are three (3) rows of data:
 - **Requests** [number of requests].
 - **Volume Requested (GB).**
 - **Granule Count.**

NOTE: It is possible that the request sizes for some media types are so small that they cannot be accurately displayed on the screen. In such cases, the volume is displayed as a floating-point number up to the precision that is returned from the database. Currently, the precision is limited to three (3) decimal places. This means that a request size of 0.000056 MB would be displayed as "0.000". Please keep in mind that the statistics page is meant to give a general idea only of what and how much has been sent through the system, and is not meant to be a precise metrics tool.

- The table shows data for the following types of **input** to the Order Manager Server (including number of **Requests**, **Volume Requested**, and **Granule Count**):
 - **OmSrCliDriver.**
 - **V0 Gateway.**
 - **Spatial Subscription Server.**
 - The table shows data for the following types of **output** from the Order Manager Server (including number of **Requests**, **Volume Requested**, and **Granule Count**):
 - **PDS Requests.**
 - **SDSRV Requests.**
 - Scroll bars appear when necessary to allow viewing data that are not readily visible in the window.
 - The Netscape browser **Reload** button can be used to update the data on (refresh) the screen.
 - The Netscape browser **Edit** → **Find in Page** menu provides a means of performing a keyword search of the data currently being displayed on the screen.
 - By default, the **OM Server Statistics** screen refreshes automatically every five (5) minutes; if a different refresh option is preferred, perform the **Set Refresh Options on OM GUI Pages** procedure (Section 18.5.2.1).
- 4 If it is necessary to change the period for which statistics are displayed, in the **Number of requests for the last ___ hours** text box enter:
<number of hours>
- 5 To continue changing the period for which statistics are displayed, **single-click** on the **Apply** button immediately after the **Number of requests for the last ___ hours** statement.
- The **OM Server Statistics** table is updated with data relevant to the specified period of time.
- 6 If the period for which statistics are displayed has been changed, return to Step 3.

7 To exit from the **OM GUI** execute either of the following menu paths from the Netscape browser pull-down menu:

File → Close

- or -

File → Exit

- The Netscape browser is dismissed.

Table 18.5-10. Monitor Order Manager Server Statistics - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Launch the Order Manager GUI (if necessary)	Use procedure in Section 18.5.1
2	OM Server Statistics link (Order Manager Page ["Home" Page])	single-click
3	Observe information displayed in the OM Server Statistics table	read text
4	<number of hours> (in Number of requests for the last ___ hours text box) (if applicable)	enter text
5	Apply button (if applicable)	single-click
6	Return to Step 3 (if applicable)	
7	File → C<u>l</u>ose (or File → E<u>x</u>it) (when applicable)	single-click

18.5.7 View the OM GUI Log

The **OM GUI Log Viewer** page provides the Distribution Technician with a means of checking entries in the **OM GUI** log. The log file that the log viewer displays is located under the cgi-bin/logs directory where the **OM GUI** is installed. It is not the web server log or the SYSLOG. It is a log that is specifically generated by and for the **OM GUI**.

Table 18.5-11 presents (in a condensed format) the steps required to view the **OM GUI** log. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If it is not already being displayed, launch the **Order Manager GUI** (refer to Section 18.5.1).
 - The **Order Manager GUI** is displayed.
- 2 **Single-click** on the **OM GUI Log Viewer** link on the **Order Manager Page** ["Home" Page].
 - The **OM GUI Log Viewer** page is displayed.

- 3 Observe information displayed in the **Log Summary**.
- The **Log Summary** provides the following kinds of information:
 - **Size** (size of the log file).
 - **Lines** (number of lines in the log file).
 - **Last Modified** (when the log file was last modified).
- 4 In the **View the last ___ line(s) of the log file** text box enter:
<number of lines>
- The log viewer's functioning is similar to that of the UNIX "tail" command: to see a particular number of lines at the end of the log, specify the number of lines in the **View the last ___ line(s) of the log file** text box.
 - Entering 0 (zero) or leaving the text box blank indicates that the entire log file should be displayed.
 - It is possible to specify a number that is equal to or greater than the total number of lines in the log file.
 - The total number of lines in the log file is shown in the **Log Summary** on the **OM GUI Log Viewer** page.
 - After long periods of usage, the log file may grow to considerable size and it may take some time to load the entire log into the **OM GUI Log Viewer** page.
 - In most cases viewing the last 100 - 500 lines would be adequate to assess recent activity and it would greatly decrease the amount of time it would take to load the log file onto the page.
- 5 **Single-click** on the **OK** button.
- The specified lines from the log file are displayed.
- 6 Observe information displayed in the log file.
- The GUI log is a record of every page that runs and every stored procedure that is called within those pages.
 - The actual log file (EcOmGui.log) is typically located in the /usr/ecs/<MODE>/CUSTOM/WWW/OMS/cgi-bin/logs directory on the Data Pool Server host (x0dps01).
 - If preferred, the log file can be viewed with any UNIX editor or visualizing command (e.g., **pg**, **vi**, **view**, or **more**).
- 7 To exit from the **OM GUI** execute either of the following menu paths from the Netscape browser pull-down menu:
- File → C**lose
- or -
- File → E**xit
- The Netscape browser is dismissed.

Table 18.5-11. View the OM GUI Log - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Launch the Order Manager GUI (if necessary)	Use procedure in Section 18.5.1
2	OM GUI Log Viewer link (Order Manager Page ["Home" Page])	single-click
3	Observe information displayed in the Log Summary	read text
4	<number of lines> (in View the last ___ line(s) of the log file text box)	enter text
5	OK button	single-click
6	Observe information displayed in the log file	
7	File → C lose (or File → E xit) (when applicable)	single-click

18.5.8 Check/Modify OM Configuration Parameters

The **OM GUI - OM Configuration** page provides a means of checking and modifying OM configuration parameters. The **OM Configuration** page allows viewing and changing (if necessary) the values assigned to OM Server parameters. In addition, the **OM Configuration** page allows viewing and changing (if necessary) the values assigned to parameters for the various types of distribution media.

Table 18.5-12 presents (in a condensed format) the steps required to check and modify OM configuration parameters. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: Only authorized personnel should modify OM configuration parameters. Refer to DAAC policy or ask the supervisor to what extent or under what conditions Distribution Technicians may be authorized to modify OM configuration parameters.

- 1 If it is not already being displayed, launch the **Order Manager GUI** (refer to Section 18.5.1).
 - The **Order Manager GUI** is displayed.
- 2 **Single-click** on the **OM Configuration** link on the **Order Manager Page** ["Home" Page].
 - The **OM Configuration** page **Server Configuration** screen is displayed.
- 3 If server parameter values are not going to be checked/modified, skip Steps 4 through 7 and go to Step 8.

4 If server parameter values are to be checked/modified, observe information displayed in the **Server Configuration** table.

- The **Server Configuration** table has the following columns:
 - **Parameter.**
 - **Current Value.**
 - **Change to...**
 - **Description.**
- The rows in the table indicate the current values and descriptions of the following parameters:
 - **Action Check Interval.**
 - **Action Retry Wait.**
 - **Billing Agency Email Address.**
 - **Billing Agency Name.**
 - **Child Process Time Limit.**
 - **Cleanup Check Interval.**
 - **Ddist Retention Value.**
 - **Delay Partition.**
 - **Delete Completion Actions After.**
 - **Delete Complete Interventions After.**
 - **Idle Sleep Time.**
 - **Max Action Retries.**
 - **Max Concurrent Requests Processed.**
 - **Max Request Granules.**
 - **Max Subset Granules.**
 - **Num of Allowed Email Submissions.**
 - **Num of Allowed PDS Submissions.**
 - **Num of Allowed SDSRV Submissions.**
 - **Num of Allowed Validations.**
 - **Suspend Check Interval.**
- The Netscape browser **Reload** button can be used to update the data on (refresh) the screen.
- The Netscape browser **Edit → Find in Page** menu provides a means of performing a keyword search of the data currently being displayed on the screen.

5 If server parameter value(s) is (are) to be modified (and there is authorization to do so), in the text entry box(es) in the **Change to...** column enter:

<value(s)>

NOTE: Server parameters cannot be set to 0 (zero).

- 6 If server parameter value(s) is (are) to be modified, **single-click** on the appropriate button from the following selections:
 - **Apply** - to apply the new value(s) to the parameter(s).
 - A warning dialogue box is displayed with the message “Your present values have been changed and will be permanently changed in the database. Continue?”
 - **Reset** - to clear the new value(s) from the text entry box(es) without changing the current value(s).

- 7 If a warning dialogue box is displayed with the message “Your present values have been changed and will be permanently changed in the database. Continue?” **single-click** on the appropriate button from the following selections:
 - **OK** - to apply the new value(s) to the parameter(s) in the database and dismiss the warning dialogue box.
 - The Netscape browser **Reload** button can be used to update the data on (refresh) the screen: The **Current Value** column contains the new value(s).
 - **Cancel** – to dismiss the warning dialogue box without applying the new value(s) to the parameter(s) in the database.

- 8 If media parameter values are not going to be checked/modified, skip Steps 9 through 13 and go to Step 14.

- 9 If media parameter values are to be checked/modified, **single-click** on the **Media Configuration** link.
 - The **Media Configuration** page is displayed.

- 10 If media parameter values are to be checked/modified, observe information displayed in the **Media Configuration** table.
 - The **Media Configuration** table has the following columns:
 - **Parameter.**
 - **Current Value.**
 - **Change to...**
 - The rows in the table indicate the current values of the following parameters:
 - **FtpPull: Media Capacity (GB); Maximum Request Size (GB); Partition Size Limit (GB); Partition Granule Limit.**
 - **FtpPush: Media Capacity (GB); Maximum Request Size (GB); Partition Size Limit (GB); Partition Granule Limit.**
 - **CDROM: Media Capacity (GB); Maximum Request Size (GB); Partition Size Limit (GB); Partition Granule Limit.**
 - **DLT: Media Capacity (GB); Maximum Request Size (GB); Partition Size Limit (GB); Partition Granule Limit.**
 - **DVD: Media Capacity (GB); Maximum Request Size (GB); Partition Size Limit (GB); Partition Granule Limit.**

- **8MM: Media Capacity (GB); Maximum Request Size (GB); Partition Size Limit (GB); Partition Granule Limit.**
 - The Netscape browser **Reload** button can be used to update the data on (refresh) the screen.
 - The Netscape browser **Edit** → **Find in Page** menu provides a means of performing a keyword search of the data currently being displayed on the screen.
- 11** If media parameter value(s) is (are) to be modified (and there is authorization to do so), in the text entry box(es) in the **Change to...** column enter:
<value(s)>
- The initial setting for **Media Capacity** should be the maximum capacity for the type of medium, but later should be adjusted to a lower or higher value depending on whether or not data compression is used.
 - The **Maximum Request Size** should be the maximum total number of megabytes that can be requested for that type of medium, regardless of whether or not it can be partitioned.
 - The **Partition Size Limit** should be the size (in MB) at which point partitioning of a request can occur.
 - The **Partition Granule Limit** is the maximum number of granules that may be partitioned for the media type.
- 12** If media parameter value(s) is (are) to be modified, **single-click** on the appropriate button from the following selections:
- **Apply** - to apply the new value(s) to the parameter(s).
 - A warning dialogue box is displayed with the message “You have modified the present values. They will be permanently changed in the OMS database. Continue?”
 - **Reset** - to clear the new value(s) from the text entry box(es) without changing the current value(s).
- 13** If a warning dialogue box is displayed with the message “You have modified the present values. They will be permanently changed in the OMS database. Continue?” **single-click** on the appropriate button from the following selections:
- **OK** - to apply the new value(s) to the parameter(s) in the database and dismiss the warning dialogue box.
 - The Netscape browser **Reload** button can be used to update the data on (refresh) the screen: The **Current Value** column contains the new value(s).
 - **Cancel** – to dismiss the warning dialogue box without applying the new value(s) to the parameter(s) in the database.

14 To exit from the **OM GUI** execute either of the following menu paths from the Netscape browser pull-down menu:

File → Close

- or -

File → Exit

- The Netscape browser is dismissed.

Table 18.5-12. Check/Modify OM Configuration Parameters - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Launch the Order Manager GUI (if necessary)	Use procedure in Section 18.5.1
2	OM Configuration link (Order Manager Page ["Home" Page])	single-click
3	Observe information displayed in the Server Configuration table	read text
4	<value(s)> (in text entry box(es) in the Server Configuration table Change to... column) (if applicable and authorized)	enter text
5	Apply button (if applicable and authorized)	single-click
6	OK button (if applicable and authorized)	single-click
7	Media Configuration link (if applicable)	single-click
8	Observe information displayed in the Media Configuration table (if applicable)	read text
9	<value(s)> (in text entry box(es) in the Media Configuration table Change to... column) (if applicable and authorized)	enter text
10	Apply button (if applicable and authorized)	single-click
11	OK button (if applicable and authorized)	single-click
12	File → C lose (or File → E xit) (when applicable)	single-click

18.6 Troubleshooting DDIST and Order Manager GUI Problems

Troubleshooting is a process of identifying the source of problems on the basis of observed trouble symptoms. Most problems with data distribution can be traced to some part of the Data Server Subsystem:

- Data Distribution.
- Science Data Server.
- Storage Management.

However, a common source of problems involves the reliance on messages or data from other subsystems. Like many other operational areas in ECS, data distribution has interfaces with other subsystems. Consequently, it is possible to trace some problems to another ECS subsystem, including (but not necessarily limited to) those in the following list:

- Communications Subsystem (CSS).
- System Management Subsystem (MSS).
- Order Manager Subsystem (OMS).

The general process of troubleshooting involves the following activities:

- Review the trouble symptoms.
- Check the status of relevant hosts/servers (as necessary).
- Check log files (as necessary).
- Take action to correct the problem(s).

If the problem cannot be identified and fixed without help within a reasonable period of time, the appropriate response is to call the help desk and submit a trouble ticket in accordance with site Problem Management policy.

Table 18.6-1, below, provides an Activity Checklist for troubleshooting DDIST problems.

Table 18.6-1. Troubleshooting DDIST and Order Manager GUI Problems - Activity Checklist (1 of 2)

Order	Role	Task	Section	Complete?
1	Distribution Technician	Troubleshoot a Data Distribution or Order Manager GUI Failure	(P) 18.6.1	
2	Distribution Technician	Check Connections to Hosts/Servers	(P) 18.6.1.1	
3	Distribution Technician	Check Log Files	(P) 18.6.1.2	
4	Distribution Technician	Recover from a Data Distribution Failure	(P) 18.6.2	
5	Distribution Technician	Respond to Requests that Exceed the Distribution Request Threshold	(P) 18.6.2.1	
6	Distribution Technician	Check the Connection to the Remote FTP Host	(P) 18.6.2.2	
7	Distribution Technician	Check the Request Manager Server Debug Log	(P) 18.6.2.3	
8	Distribution Technician	Check the Science Data Server Log Files	(P) 18.6.2.4	
9	Distribution Technician	Check the Archive Server Log Files	(P) 18.6.2.5	
10	Distribution Technician	Check the Staging Disk	(P) 18.6.2.6	

Table 18.6-1. Troubleshooting DDIST and Order Manager GUI Problems - Activity Checklist (2 of 2)

Order	Role	Task	Section	Complete?
12	Distribution Technician	Check the Space Available in the Staging Area	(P) 18.6.2.8	
11	Distribution Technician	Check the Staging Disk ALOG File	(P) 18.6.2.7	
13	Distribution Technician	Check Database Connections	(P) 18.6.2.9	

Fault Recovery

Each request that crosses a client/server boundary is assigned a system-unique identifier referred to as an RPC ID. (RPC refers to Remote Procedure Call, the mechanism by which requests are submitted from client to server.) The RPC ID facilitates the automatic fault recovery events that occur whenever there is a client or server failure.

- As a request propagates through the system, each associated client/server exchange is assigned a unique RPC ID.
 - The RPC ID for each interaction is derived from the previous RPC ID received by the client for the request. Consequently, all RPC IDs associated with a given request have a common portion that relates the various client/server calls to one another.
 - Given the previous RPC ID, clients consistently reproduce the same RPC ID that was submitted to the server on the subsequent event.
- The concept of reproducible RPC IDs is central to the ECS fault recovery capability.
 - When requests are retried from client to server, they are always submitted with the same RPC ID that was used in the original submission of the request, even if either the client or server has crashed between retries.
- The RPC ID is also central to the check-pointing aspect of fault recovery.
 - As requests arrive at fault recovery-enabled servers, they are recorded in a persistent store (typically a database), tagged with the RPC ID, which identifies the request.
 - As the request is serviced, check-pointing state information may be updated in the persistent store, up to and including the completion status of the request.
 - This allows the servers to resume servicing from the last check-pointed state, particularly upon resubmission from a client.

Data Server Subsystem and Order Manager Subsystem components check-point the following types of information:

- **EcDsScienceDataServer** - Asynchronous “acquire” requests that have been accepted for processing and subscription server event notifications.
- **EcDsHdfEosServer** - None.

- **EcDsDistributionServer** - Requests (which have been accepted for processing).
- **EcDsStArchiveServer** - “Store” and “retrieve” request state information.
- **EcDsStStagingDiskServer** - Resource allocation and ownership for staging disks.
- **EcDsStFtpServer** - Request state information.
- **EcDsStCacheManagerServer** - None.
- **EcDsStDTFServer** - None.
- **EcDsStRequestManagerServer** - None.
- **EcOmOrderManager** - Requests (which have been submitted).

Fault Handling

Failure events are classified according to the following three severity levels:

- Fatal error.
 - Returned when a request cannot be serviced, even with operator intervention.
 - For example, if a request is made to distribute data via ftp to a non-existent host, the request is failed with a fatal error.
- Retry error.
 - Potentially recoverable error.
 - Normally, a retry error would be returned to the client only when the server cannot recover from the error automatically.
 - A retry error may require operator assistance during recovery. For example, a tape left in a tape drive might have to be removed manually.
- Warning.
 - Provided when operations can proceed without interruption, but an unexpected circumstance was detected.
 - For example, the Distribution Technician would use the Data Distribution Operator GUI to manually request resumption of a distribution request that had been “suspended with errors.”

Transient errors (such as network errors) are always retry errors.

- In general, clients and servers that experience transient retry errors first attempt to recover by retrying the operation automatically.
- One special case of this is “rebinding,” which refers to the process by which a client automatically attempts to re-establish communication with a server in the event communication is disrupted.
 - The disruption may be caused by transient network failure, or by the server crashing or being brought down.
 - In any case, the client automatically attempts to reconnect to the server for a configurable period of time on a client-by-client basis.

ECS processes encountering an error or receiving an error from a server request can either pass the error back to a higher-level client or present it to the operator for operator intervention. The specific fault handling policies for Data Server Subsystem and Order Manager Subsystem client processes are shown in Table 18.6-2.

Table 18.6-2. Data Server Subsystem and Order Manager Subsystem Fault Handling Policies

Client Process	Fault Handling Policy
EcDsScienceDataServer EcDsHdfEosServer	<p>Retry errors: Errors are retried a configurable number of times, then passed back to the calling client process unchanged. The default retry policy for Science Data Servers is “retry forever.” For asynchronous “acquire” requests involving subsetting, retry errors encountered with the HDF servers are not returned to the client. Instead, the request is queued for future execution.</p> <p>Fatal errors: Errors are passed back to the calling client process.</p> <p>NOTE: Errors associated with asynchronous requests are logged but do not appear on any GUI. The Operator restarts HDF servers manually.</p>
EcDsDistributionServer	<p>Errors are presented to the operator via the DDIST GUI.</p> <p>Retry errors: Errors are presented as “Suspended with Errors” and can be resumed by the operator.</p> <p>Fatal errors: Errors are presented as “Failed.” For synchronous requests, fatal errors are also passed back to the calling client process. For asynchronous requests, fatal errors are sent as part of the e-mail notification.</p>
EcDsStRequestManagerServer EcDsStDTFServer	<p>Retry errors: Errors are passed back to the calling client process.</p> <p>Fatal errors: Errors are passed back to the calling client process.</p>
EcOmOrderManager	<p>Retry errors: Errors are retried a configurable number of times and then the request status is changed to “Operator Intervention” in the MSS database.</p>

Client Crash and Restart

When a client of a SDSRV or DDIST server crashes, the server (i.e., EcDsScienceDataServer, EcDsHdfEosServer, or EcDsDistributionServer) continues to service the requests that were in process at the time of the client’s crash. When a client of a STMGT server (i.e., EcDsStArchiveServer, EcDsStRequestManagerServer, EcDsStCacheManagerServer, EcDsStPullMonitorServer, EcDsStFtpServer, EcDsStDTFServer, or EcDsStStagingDiskServer) crashes, the requests that were in process are cancelled by another client process and there is no impact to the outside requester server.

The EcOmOrderManager does not care whether or not a client crashes.

When a client restarts in the ECS system, it sends a restart notification to each server with which it interacts.

- Clients notify servers that they have come up either “cold” or “warm.”
- Generally, the notification temperature sent to the server matches the temperature at which the client process is restarted.
- However, there are some exceptions; for example:
 - EcDsScienceDataServer always notifies EcDsDistributionServer that it has performed a warm restart.
 - The default behavior for both EcDsHdfEosServer and EcDsStDTFServer is to send EcDsStRequestManagerServer cold restart notification.
- When a client sends restart notification to the EcDsStRequestManagerServer, the server calls a stored procedure to clean up the old request and staging disk (if any) created by the client, based on whether it was a cold or warm start.
 - The Storage Management Servers are not directly notified when a restart has occurred.
 - The Storage Management Servers respond to the event according to the fact that a previous request has been marked as failed and any staging disk resources they have allocated have been released.

The default server behavior in response to startup notification from a client is as follows:

- Warm Notification.
 - Outstanding requests for the restarted clients remain available in the persistent store.
 - The outstanding requests may be resubmitted by the client, and are serviced to completion upon resubmission.
 - Associated resources are left allocated until the requests are completed.
- Cold Notification.
 - All outstanding requests for the restarted client are cancelled.
 - If the client resubmits any cancelled request using the same RPC ID (e.g., by pressing the Retry button from an operator GUI), it is failed with a fatal error due to the client cold startup notification.
 - Any resources associated with the cancelled requests are released and reclaimed by the system.

The following servers have some non-standard responses to startup notification:

- **EcDsStArchiveServer.**
 - **Warm Notification:** Default server behavior (as previously described).
 - **Cold Notification:** For partially completed Ingest operations, all files stored are removed. (Partial granules are never permitted in the archive.)
- **EcDsStStagingDiskServer.**
 - **Warm Notification:** All staging disks owned by the restarted client are retained, including temporary staging disks.
 - **Cold Notification:** All staging disks owned by the restarted client are released.

Server Crash and Restart

When a server crashes, clients cannot continue to submit requests for processing.

- Synchronous requests in progress result in a Distributed Computing Environment (DCE) exception being thrown back to the client process, which enters a rebinding failure recovery mode (as previously mentioned).
- Attempts to submit requests while the server is down result in the client blocking until a communication timeout has been reached.
- Although DCE has been replaced by socket-based library calls (i.e., CCS Middleware), the DCE exception code is handled by the CCS Middleware.

When a server restarts, it may perform various resynchronization activities in order to recover from an unexpected termination.

- In the event of a server cold start or cold restart, the server typically cancels all outstanding requests and reclaims all associated resources.
- In general, existing request queues are retained for warm restarts and cleared for cold starts or cold restarts.
- **EcDsScienceDataServer-** and **EcDsHdfEosServer-**specific activities upon start/restart:
 - **Warm Restart:** Restart asynchronous “acquire” requests that were in progress before the crash; retain the queue of asynchronous “acquire” requests; it is expected that synchronous requests would be resubmitted by the respective senior client applications (i.e., PRONG or INGST); send event notifications to the Subscription Server for any services completed before the crash for which a subscribed event is registered but has not been sent to the Subscription Server.
 - **Cold Start or Cold Restart:** Purge the queue of asynchronous “acquire” requests; purge the queue of Subscription Server Event Notifications.
- **EcDsDistributionServer-**specific activities upon start/restart:
 - **Warm Restart:** Request Processing is restarted from the last check-pointed state.
 - **Cold Start or Cold Restart:** EcDsDistributionServer deletes all (prior) request information from its database.
- **EcDsStArchiveServer-**specific activities upon start/restart:
 - **Warm Restart:** Retains existing request queues.
 - **Cold Start or Cold Restart:** For partially completed “store” requests, the files copied into the archive are removed; for partially completed “retrieve” requests, the access count is decremented in the read-only cache.
- **EcDsStCacheManagerServer-**specific activities upon start/restart:
 - **Warm Restart:** The contents of the read-only cache are synchronized with the database; discrepancies are logged and removed.
 - **Cold Start or Cold Restart:** All files are removed from the read-only cache; links to files in the read-only cache are left dangling.

- **EcDsStStagingDiskServer**-specific activities upon start/restart:
 - **Warm Restart:** The set of staging disks in the staging area is synchronized with the database; discrepancies are logged and removed; existing request queues are cleared.
 - **Cold Start or Cold Restart:** All staging disks are removed.
- **EcDsStPullMonitorServer**-specific activities upon start/restart:
 - **Warm Restart:** The contents of the Pull Area and user request areas are synchronized with the database; discrepancies are logged and removed.
 - **Cold Start or Cold Restart:** All files in the Pull Area and all user request areas are removed.
- **EcDsStFtpServer**-specific activities upon start/restart:
 - **Warm Restart:** Existing request queues are retained.
 - **Cold Start or Cold Restart:** Existing request queues are cleared.

Request Resubmission

Upon restarting a crashed client or server, requests are typically resubmitted. If the restarted process was started warm, the fault-recovery capabilities permit the server to resume processing of the request from its last check-pointed state. This prevents needless repetition of potentially time-consuming activities.

- **EcDsScienceDataServer**- and **EcDsHdfEosServer**-specific activities upon resubmission of a request:
 - All requests are serviced as if they are new requests.
 - RPC IDs are generated automatically and reproducibly; consequently, the Science Data Server typically recreates the same allocation requests on a resubmission; this can trigger special logic to handle requests for which an allocated staging disk has been transferred to the Data Distribution Server.
- **EcDsDistributionServer**-specific activities upon resubmission of a request:
 - If previously submitted and completed, the request status is returned based on the check-pointed request status.
 - Otherwise, the client request thread is synchronized with the worker thread actually servicing the request.
- **EcDsStArchiveServer**-specific activities upon resubmission of a request:
 - The request is restored from the last check-pointed state.
 - For “store” requests, copies into the archive are resumed from the last file copied.
 - For “retrieve” requests, the entire “retrieve” request is reprocessed; however, files previously retrieved for the request are, in all likelihood, still in the read-only cache.
- **EcDsStCacheManagerServer**- and **EcDsStFtpServer**-specific activities upon resubmission of a request:
 - If previously submitted and completed, the request status is returned based on the check-pointed request status.
 - Otherwise, the request is processed anew.

- **EcDsStStagingDiskServer**-specific activities upon resubmission of a request:
 - For staging disk allocation, the results are returned to the client if the client resubmits the allocation request under which the disk was created.
- **EcDsStPullMonitorServer**- and **EcDsStDTFServer**-specific activities upon resubmission of a request:
 - The resubmitted request is processed as if it were a new request.
- **EcOmOrderManager**-specific activities upon resubmission of a request:
 - EcOmOrderManager uses a different RPC ID for request resubmission.

18.6.1 Troubleshoot a Data Distribution or Order Manager GUI Failure

- 1 If it is not possible to log in to the Operations Workstation host or any other host, ask the Operations Controller/System Administrator to verify that the host is “up.”
 - Examples of Operations Workstation host names include **e0acs03**, **g0acs02**, **l0acs01**, and **n0acs03**.
- 2 If the GUI (e.g., the **Data Distribution Operator GUI** or the **Storage Management Control GUI**) or web browser is not displayed when the start-up script or command has been properly invoked, ensure that the DISPLAY variable was set properly.
 - For detailed instructions refer to the applicable procedure.
 - **Log in to ECS Hosts** (Section 18.2.1).
 - **Launch the Data Distribution Operator and Storage Management Control GUIs** (Section 18.2.2).
- 3 If an error message associated with the **Data Distribution Operator GUI** is received, refer to Table 18.6-3, Data Distribution Operator GUI User Messages and/or Table 18.6-4, Storage Management User Messages.
 - Table 18.6-3, Data Distribution Operator GUI User Messages, is adapted from the corresponding table in 609-CD-610-003, *Release 6B Operations Tools Manual for the ECS Project*.
 - Table 18.6-4, Storage Management User Messages, is adapted from DsShErrorMessage.txt and DsStErrorMessage.txt in the /usr/ecs/<MODE>/CUSTOM/data/DSS directory on the DSS hosts.
- 4 If an error message associated with the **Storage Management Control GUI** is received, refer to Table 18.6-4, Storage Management User Messages.
 - The table is adapted from DsShErrorMessage.txt and DsStErrorMessage.txt in the /usr/ecs/<MODE>/CUSTOM/data/DSS directory on the DSS hosts.
- 5 If an error message associated with the **Order Manager GUI** is received, refer to Table 18.6-5, Order Manager GUI User Messages.
 - The table is adapted from the corresponding table in 609-CD-610-003, *Release 6B Operations Tools Manual for the ECS Project*.

- 6 If the status of a request changes to “Suspended with Errors” (indicating a data distribution failure) and the suspended request is an FtpPush request to a remote host (e.g., ftp.averstar.com), ensure that it is possible to connect to the remote host.
 - For detailed instructions refer to the **Check the Connection to the Remote FTP Host** procedure (Section 18.6.2.2).
- 7 If the status of a request changes to “Suspended with Errors,” indicating a data distribution failure, ensure that it is possible to connect to the necessary hosts and servers.
 - For detailed instructions refer to the **Check Connections to Hosts/Servers** procedure (Section 18.6.1.1).
- 8 If the status of a request changed to “Suspended with Errors” and if the necessary hosts/servers are all “up,” notify the Operations Controller/System Administrator to have the STMGT servers bounced.
 - Bouncing servers involves shutting down and immediately restarting the servers.
- 9 If the status of a request changed to “Suspended with Errors” and if the STMGT servers have been bounced, resume processing of the suspended request.
 - For detailed instructions refer to the **Suspend/Resume Data Distribution Requests** procedure (Section 18.2.7).
- 10 If processing of a suspended request does not resume, go to the **Recover from a Data Distribution Failure** procedure (Section 18.6.2).
- 11 If some other type of problem is encountered, check the log files for error messages.
 - Examples of log files include EcDsDdistGui.ALOG, EcDsDistributionServer.ALOG, EcDsStRequestManagerServer.ALOG, and EcDsStStagingDiskServerDIP1.ALOG.
 - Log files are located in the /usr/ecs/<MODE>/CUSTOM/logs directory.
 - For detailed instructions refer to the **Check Log Files** procedure (Section 18.6.1.2).
- 12 If the problem cannot be identified and fixed without help within a reasonable period of time, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.

Table 18.6-3. Data Distribution Operator GUI User Messages (1 of 6)

Message Text	Impact	Cause and Corrective Action
Cannot create connection pool.	Attempt to create connection pool to database failed.	<ol style="list-style-type: none"> 1. Refresh the GUI display (single-click on the Refresh button). 2. Check the database connections. [For detailed instructions refer to the Check Database Connections procedure (Section 18.6.2.8).] 3. Refresh the GUI display (single-click on the Refresh button). 4. If the problem recurs, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
Cannot create the DsDdDistRequestList.	The Data Distribution Request List was not created.	<ol style="list-style-type: none"> 1. Refresh the GUI display (single-click on the Refresh button). 2. Check the database connections. [For detailed instructions refer to the Check Database Connections procedure (Section 18.6.2.8).] 3. Refresh the GUI display (single-click on the Refresh button). 4. If the problem recurs, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
Cannot get a dbInterface connection pool.	Attempt to get a dbInterface from connection pool to database failed.	<ol style="list-style-type: none"> 1. Refresh the GUI display (single-click on the Refresh button). 2. Check the database connections. [For detailed instructions refer to the Check Database Connections procedure (Section 18.6.2.8).] 3. Refresh the GUI display (single-click on the Refresh button). 4. If the problem recurs, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
DDist Cancel Failure.	GUI received failure from server. Request was not canceled.	<ol style="list-style-type: none"> 1. Check the current state of the distribution request (State column of the Data Distribution Requests list on the Distrib'n Requests tab). Canceling the request may not be a valid operation in the current state (e.g., if the current state is "Shipped"). 2. Enter: ps -ef grep EcDsDistributionServer (Ensure that the Distribution Server is "up.") 3. If the Distribution Server has gone down, notify the Operations Controller/System Administrator to have the server brought back up. 4. Refresh the GUI display (single-click on the Refresh button). 5. Try again to cancel the request. [For detailed instructions refer to the Cancel Data Distribution Requests procedure (Section 18.2.8).] 6. If repeated attempts to cancel the request fail, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.

Table 18.6-3. Data Distribution Operator GUI User Messages (2 of 6)

Message Text	Impact	Cause and Corrective Action
DDist Mark Shipped Failure.	GUI received failure from server. Request was not marked "Shipped."	No Longer Applicable.
DDist Refresh Failure.	Data Distribution Refresh Error. Dialogue Message GUI was not able to get new request list from server.	<ol style="list-style-type: none"> 1. Check the database connections. [For detailed instructions refer to the Check Database Connections procedure (Section 18.6.2.8).] 2. Refresh the GUI display (single-click on the Refresh button). 3. If the problem recurs, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
DDist Resume All Failure.	GUI received failure from server. Requests were not resumed.	<ol style="list-style-type: none"> 1. Check the current state of the distribution request(s) (State column of the Data Distribution Requests list on the Distrib'n Requests tab). Resuming the request(s) may not be a valid operation in the current state(s) (e.g., if the current state is "Shipped"). 2. Enter: ps -ef grep EcDsDistributionServer (Ensure that the Distribution Server is "up.") 3. If the Distribution Server has gone down, notify the Operations Controller/System Administrator to have the server brought back up. 4. Refresh the GUI display (single-click on the Refresh button). 5. Try again to resume the request(s). [For detailed instructions refer to the Suspend/Resume Data Distribution Requests procedure (Section 18.2.7).] 6. If repeated attempts to resume request processing fail, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.

Table 18.6-3. Data Distribution Operator GUI User Messages (3 of 6)

Message Text	Impact	Cause and Corrective Action
DDist Resume Failure.	GUI received failure from server. Request was not resumed.	<ol style="list-style-type: none"> 1. Check the current state of the distribution request (State column of the Data Distribution Requests list on the Distrib'n Requests tab). Resuming the request may not be a valid operation in the current state (e.g., if the current state is "Shipped"). 2. Enter: ps -ef grep EcDsDistributionServer (Ensure that the Distribution Server is "up.") 3. If the Distribution Server has gone down, notify the Operations Controller/System Administrator to have the server brought back up. 4. Refresh the GUI display (single-click on the Refresh button). 5. Try again to resume the request. <p>[For detailed instructions refer to the Suspend/Resume Data Distribution Requests procedure (Section 18.2.7).]</p> <ol style="list-style-type: none"> 6. If repeated attempts to resume request processing fail, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
DDist Set Priority Failure.	GUI received failure from server. Request set priority failed.	<ol style="list-style-type: none"> 1. Check the current state of the distribution request (State column of the Data Distribution Requests list on the Distrib'n Requests tab). Setting priority may not be a valid operation in the current state (e.g., if the current state is "Shipped"). 2. Enter ps -ef grep EcDsDistributionServer (Ensure that the Distribution Server is "up.") 3. If the server has gone down, notify the Operations Controller/System Administrator to have it brought back up. 4. Try again to set the priority of the selected distribution request. <p>[For detailed instructions refer to the Change the Priority of Data Distribution Requests procedure (Section 18.2.6).]</p> <ol style="list-style-type: none"> 5. If repeated attempts to set the request priority fail, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.

Table 18.6-3. Data Distribution Operator GUI User Messages (4 of 6)

Message Text	Impact	Cause and Corrective Action
DDist Suspend All Failure.	GUI received failure from server. Requests will not be submitted in a SuspendAll state.	<ol style="list-style-type: none"> 1. Check the current state of the distribution request(s) (State column of the Data Distribution Requests list on the Distrib'n Requests tab). Suspending the request(s) may not be a valid operation in the current state(s) (e.g., if the current state is "Shipped"). 2. Invalid text field entry.	Invalid data was entered.	<ol style="list-style-type: none"> 1. Enter valid data in the relevant field. 2. Retry the operation that led to the error message.
No Ddist request selected. Please select one.	An operation was performed without first selecting a request from the scrolled list.	<ol style="list-style-type: none"> 1. Single-click on (highlight) the appropriate request in the list. 2. Retry the operation that led to the error message.

Table 18.6-4. Storage Management User Messages (1 of 36)

Message Text	Impact	Cause and Corrective Action
.lib section in a.out corrupted	Standard system error.	
550 The file to be ftp pulled does not exist at the source location. Either the file never existed at the source location or the source locations file system or network is having problems.	Error returned by the FTP protocol.	Retry.
553 The destination for the file does not exist or the destination exist but the permissions are such on the directory that the file cannot be written or the file already exist and can not be overwritten.	Error returned by the FTP protocol.	Retry.
A command to remove a file failed	Error from DsStStagingMonitor.	
A component of the path prefix is not a directory.	Error from SCSI.	
A configuration parameter had a null or invalid value	Error from DsStStagingMonitor.	
A daemon process was cold restarted so your request has been cancelled	Error returned from DsStCacheManagerServer.	
A [sic] error occurred [sic] using a class destructor [sic].	Error for Archive.	[This is an internal error in ECS.] 1. Note all circumstances associated with the error (including capturing the Debug.log and ALOGs for both the reporting server and the Request Manager). 2. Submit a high-priority trouble ticket against STMGT. (Send logs in support of the trouble ticket.)
A file name was not found as expected in the database	Error from DsStStagingMonitor.	
A file size was not the length expected.	Error for Archive.	Retry.
A [sic] interrupted signal was caught.	Error from SCSI.	Retry.

Table 18.6-4. Storage Management User Messages (2 of 36)

Message Text	Impact	Cause and Corrective Action
A network error has occurred	Staging disk error message.	Retry.
A request has completed all processing	Error from DsStStagingMonitor.	[No action necessary.]
A request has not completed all processing	Error from DsStStagingMonitor.	[No action necessary.]
A Restart Backup request has failed.	Error for Archive.	Retry.
A search for a file to be retrieved has exhausted all locations.	Error for Archive.	Retry.
A staging disk object was not created in GetLocation()	Error for Archive.	1. Note all possible details related to the error. 2. Report all possible details to the vendor. 3. Retry.
A Store request failed because the volume group is closed.	Error for Archive.	1. Modify the desired volume group location to the valid path. 2. Retry.
Accessing a corrupted shared library	Standard system error.	
Address already in use	Standard system error.	Specify a free port on the server or specify a different server.
Address family not supported by protocol family	Standard system error.	
Advertise error	Standard system error.	
After the directory was made, the directory could not be stat [sic]	Staging disk error message.	1. Check the SYSLOG for errors. [For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).] 2. Retry after problems have been corrected.
All request slots are currently busy	Error returned from DsStCacheManagerServer.	Retry.
An attempt to delete a file failed.	Error for Archive.	1. Change the permissions on the file. 2. Retry the request.
An attempt to find a Cache Manager serverId has failed.	Error for Archive.	Retry.
An attempt to find a needed server has failed.	Error for Archive.	Retry.

Table 18.6-4. Storage Management User Messages (3 of 36)

Message Text	Impact	Cause and Corrective Action
An attempt to generate Restart Backup File requests failed.	Error for Archive.	Retry.
An attempt to generate Store File requests failed.	Error for Archive.	Retry.
An attempt to reserve space for a Retrieve request failed.	Error for Archive.	Retry.
An attempt to retrieve data values from the database failed.	Error from DsStStagingMonitor.	
An attempt to spawn a read thread failed.	Error for Archive.	Retry.
An attempt to spawn a service thread failed.	Error for Archive.	Retry.
An attempt to spawn a write thread failed.	Error for Archive.	Retry.
An attempt to submit a reserve file for a Retrieve request failed.	Error for Archive.	Retry.
An attempt to submit a reserve space for a Retrieve request failed.	Error for Archive.	Retry.
An error was encountered generating ArDeleteFile requests.	Error for Archive.	Retry.
An internal error has occurred while communicating with Sybase	Error from database.	<ol style="list-style-type: none"> 1. Check the Sybase error log for Sybase communication errors. 2. Ensure that Sybase is up and running properly. 3. Bounce the STMGT server warm to clear any transient error that may have corrupted the connection to the database.
An unknown exception has occurred	DsSt error.	<p>[This error is an internal error in STMGT. It should never happen.]</p> <p>Report the error to the ECS DAAC Help Desk immediately.</p>

Table 18.6-4. Storage Management User Messages (4 of 36)

Message Text	Impact	Cause and Corrective Action
An unknown request checkpoint state was found in the database.	Error for Archive.	[This is an internal error in ECS.] 1. Note all circumstances associated with the error (including capturing the Debug.log and ALOGs for both the reporting server and the Request Manager). 2. Submit a high-priority trouble ticket against STMGT. (Send logs in support of the trouble ticket.)
An unknown request type has been submitted to this server	Error returned from DsStCacheManagerS erver.	[This is an internal error in ECS.] 1. Note all circumstances associated with the error (including capturing the Debug.log and ALOGs for both the reporting server and the Request Manager). 2. Submit a high-priority trouble ticket against STMGT. (Send logs in support of the trouble ticket.)
Anode table overflow	Standard system error.	
Archive location does not contain requested file	Error for Archive.	Verify the spelling/path name of the requested file.
Archive location does not exist as defined in db tables	Error for Archive.	1. Check the spelling of the archive location that was entered. 2. If the spelling is correct, contact the System Administrator to determine whether the name should be made a new entry.
Archive location does not have adequate permissions	Error for Archive.	1. Ensure that the user ID used when logging in has the proper permissions. 2. If necessary, contact the Archive Administrator to have the permissions set properly.
Archive location does not have adequate permissions for files	Error for Archive.	1. Ensure that the user ID used when logging in has the proper permissions. 2. If necessary, contact the Archive Administrator to have the permissions set properly. 3. Retry.
Archive Store failed due to illegal file path	Error for Archive.	1. Verify that the file path given is a valid file path. 2. Retry.
Archive Store Failed EcUtFileCopy.Copy() failed	Error for Archive.	
Arg list too long	Standard system error.	
Attempting to link in more shared libraries than system limit	Standard system error.	
BackupOffsite() failed -- Offsite ID == DsCStEmptyString	Error for Archive.	1. Modify the ID of the desired offsite location. (The ID of the desired offsite location must be given and must not be an empty string.) 2. Retry

Table 18.6-4. Storage Management User Messages (5 of 36)

Message Text	Impact	Cause and Corrective Action
BackupOnlineLocation failed -- SP DsCStVGSelectHistory execute failed	Error for Archive.	Retry.
BackupTemporaryAndOffsite() failed -- Offsite ID == DsCStEmptyString	Error for Archive.	1. Modify the ID of the desired offsite location. (The ID of the desired offsite location must be given and must not be an empty string.) 2. Retry
Bad address	Standard system error.	If the error arose from a gethostname() call, check the name and namelen parameters.
Bad command sequence -- error in ftp #503	Error returned by the FTP protocol.	
Bad exchange descriptor	Standard system error.	
Bad file descriptor	Standard system error.	1. Check whether the file exists. 2. Check file permissions.
Bad font file format	Standard system error.	
Bad request code	Standard system error.	
Bad request descriptor	Standard system error.	
Bad XDR Stream	Error from DsStFileInfo.	Retry.
Block device required	Standard system error.	
Broken pipe	Standard system error.	
Cache file entry not in db	Error returned from DsStCacheManagerServer.	[No action necessary.]
calculate checksum is disabled	DsSt error.	[Not an error.]
calculated checksum not equal to specified	DsSt error.	
Cancelled by a STMGT client	STMGT restart code.	
Cancelled due to client restart	STMGT restart code.	
Cancelled due to STMGT server cold start	STMGT restart code.	[The STMGT server reporting the error was cold started while the submitted request was in queue.] Resubmit the request. (It will be re-processed as if it were a new request.)

Table 18.6-4. Storage Management User Messages (6 of 36)

Message Text	Impact	Cause and Corrective Action
Cannot access a needed shared library	Standard system error.	
Cannot assign requested address	Standard system error.	Specify a free port on the server.
Cannot delete from DsStBackup Table -- SP DsCStBDelete execute() failed	Error for Archive.	[No action necessary.]
Cannot delete from DsStRestore Table -- SP DsCStRDelete execute() failed	Error for Archive.	[No action necessary.]
Cannot exec a shared library directly	Standard system error.	
Cannot insert key -- file already exist [sic] in list	Error from DsStStagingDataList.	[No action necessary.]
Cannot open input file	Error from DsStPosixUtil.	Verify that the current user ID has read permission for the file.
Cannot open output file	Error from DsStPosixUtil.	1. Verify that the file is not already open for output. 2. Verify that the current user ID has write permission for the file.
Cannot send after socket shutdown	Standard system error.	
Can't open data connection -- error in ftp #425	Error returned by the FTP protocol.	
CDS path is null	Error for DsStArchiveProxy.	
Channel number out of range	Standard system error.	
Command not available -- error in ftp #502	Error returned by the FTP protocol.	
Command not implemented for that parameter -- error in ftp #504	Error returned by the FTP protocol.	
Communication error on send	Standard system error.	

Table 18.6-4. Storage Management User Messages (7 of 36)

Message Text	Impact	Cause and Corrective Action
Components of path require hopping to multiple remote machines and the file system does not allow it.	Error from SCSI.	
Connection closed, transfer aborted -- error in ftp #426	Error returned by the FTP protocol.	
Connection refused	Standard system error.	1. Verify that the target machine is connected. 2. Verify that the listening server is running.
Connection reset by peer	Standard system error.	
Connection timed out	Standard system error.	1. Check the condition of the network. 2. Retry.
could not close input file	Error from DsStPosixUtil.	[No action necessary.]
could not close output file	Error from DsStPosixUtil.	[No action necessary.]
could not create a pull monitor object	Error from DsStDistributionFtp.	Retry.
could not create a stagingdisk for inftp	Error from inftp.	Retry.
could not create global pointer	Error from DsStDistributionFtp.	
could not create pointer to config file	Error from DsStDistributionFtp.	
Could not determine file size of file.	Error for Archive.	Verify the spelling/path name of the requested file.
Could not remove the staging disk entry from the database	Staging disk error message.	1. Check whether the staging disk exists in the database. (Probable that the disk does not exist.) 2. Retry.
Could not stat [sic] the file, possible NFS problems or file does not exist	Staging disk error message.	1. Check whether the file exists in the file system. 2. If the file does exist, check the SYSLOG for network file system (NFS) errors. [For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).] 3. Retry after problems have been corrected.
Cross-device link	Standard system error.	Substitute a symbolic link.
DB Session unusable to previous error	Error from database.	[An attempt has been made to continue with a database operation when the previous operation failed. The previous failure has left the connection in a state that is unsuitable for continuing.] Retry.

Table 18.6-4. Storage Management User Messages (8 of 36)

Message Text	Impact	Cause and Corrective Action
DCE object not created	Error for DsStArchiveProxy.	Retry.
Deadlock situation detected/avoided	Standard system error.	
default	Error from DsStDistributionFtp.	
Denial of service -- error in ftp #702	Error returned by the FTP protocol.	
Destination address required	Standard system error.	
Device busy	Standard system error.	
Device is already open.	Error from SCSI.	
Device is not open.	Error from SCSI.	
Device Name should be specified to this device control operation	Media error message.	
Directory not empty	Standard system error.	
Drive element number in database does not match any of the physical drives.	Media error message.	
Eject tape Failed	Media error message.	
Empty archive location -- (myArchiveLocation == DsCStEmptyString)	Error for Archive.	[The name of the desired archive location must be given.]
empty archive location -- failed in SetBackupOnlineLocation()	Error for Archive.	Retry.
Empty file in move request not added to database	Error from DsStStagingMonitor.	
Empty Offline Location	Error for Archive.	[The name of the off-line location must be given.]
empty VG Key	Error for Archive.	
Empty Volume group error	Error for DsStArchiveProxy.

Error setting user password	Error from DsStNetworkResource.	Retry.
Error setting user password function	Error for DsStFtpUtility.	Retry.
Error updating the initial RegMgrNotifiedFlag	Media error message.	[No action necessary.]
Error writing file in fast copy	Error from DsStPosixUtil.	Retry.
Exceeded maximum number of allowable connections to Sybase	Error from database.	1. Verify that the Sybase database configuration has been configured with an adequate number of connections. 2. Retry.
Exceeded storage allocation for current directory or dataset -- error in ftp #552	Error returned by the FTP protocol.	
Exec format error	Standard system error.	
execute() of Stored Procedure -- DsStGRInsert -- failed	Error from DsStDistributionFtp.	[No action necessary.]
Failed attempting to connect to Sybase server	Error from database.	1. Ensure that DBServer for the server has been set properly in the Registry database. 2. Ensure that DBName for the server has been set properly in the Registry database. 3. Retry.

Table 18.6-4. Storage Management User Messages (12 of 36)

Message Text	Impact	Cause and Corrective Action
Failed attempting to login to Sybase	Error from database.	1. Verify that the Application ID for the server has been properly set in the Registry database. 2. Verify that login accounts have been properly set up in the Sybase database. 3. Retry.
Failed in checking the slot status.	Media error message.	
Failed in checking the status of tape drive	Media error message.	
Failed in executing stored procedure to retrieve device info by stackerId.	Media error message.	
Failed in executing stored procedure to retrieve slot info by stackerId.	Media error message.	
Failed in executing stored procedure to retrieve stacker info by stackerId.	Media error message.	
Failed to allocate a tape device	Error from SCSI.	
failed to build the client object with parameters for the CDS path	Error for DsStArchiveProxy.	
Failed to deallocate a tape device	Error from SCSI.	
Failed to get necessary information from database	Error for Archive.	[No action necessary.]
Failed to get the cellname	Error for DsStArchiveProxy.	
Failed to get the client mode	Error for DsStArchiveProxy.	1. Ensure that a mode has been specified as an option on the command line or in the calling script. 2. If a mode has been entered, ensure that it is a valid mode and that all other required command-line options have been entered.
Failed to get the PF config File Pointer	Error for DsStArchiveProxy.	[This command requires a ConfigFile option, where the word ConfigFile is followed by a valid PF config file name.]

Table 18.6-4. Storage Management User Messages (13 of 36)

Message Text	Impact	Cause and Corrective Action
Failed to get the PF Global pointer	Error for DsStArchiveProxy.	
Failed to insert the file into the staging disk inventory	Staging disk error message.	(This error should not occur.) 1. Verify that the staging disk exists. 2. Retry.
Failed to load tape (time out).	Error from SCSI.	Retry.
Failed to rename the file in the file system	Staging disk error message.	1. Check the SYSLOG for errors. [For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).] 2. Resubmit the request after problems have been corrected.
Failed to rename the file in the file system and could not reset the original file in the staging disk inventory	Staging disk error message.	Retry.
Failed to rename the file in the staging disk inventory	Staging disk error message.	1. Check the staging disk inventory for the file to be renamed. 2. Retry if the file exists. (If the file does not exist, the request should not be attempted again.)
Failed to stat [sic] the created staging disk directory and the staging disk entry could not be removed from the database	Staging disk error message.	1. Check NFS for errors. 2. The directory entry should be cleaned out of the database upon a warm or cold startup. 3. Retry.
Failed to stat [sic] the created staging disk directory.	Staging disk error message.	1. Check for NFS errors. 2. Retry. [If the directory does exist, the directory entry should be removed upon a warm or cold start of the server.]
Failed trying to make the directory entry in the file system.	Staging disk error message.	1. Check the SYSLOG for NFS errors. [For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).] 2. Check the permissions of the rootpath. 3. Retry after problems have been corrected.
Failed trying to make the directory entry in the file system. The directory entry could not be removed from the Database.	Staging disk error message.	1. Check the SYSLOG for NFS errors. [For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).] 2. Check the permissions on the rootpath. (the directory entry will be cleaned out of the database upon a warm start or cold start of the server.)
Failure in updating database table(s).	Media error message.	

Table 18.6-4. Storage Management User Messages (14 of 36)

Message Text	Impact	Cause and Corrective Action
Failure to close file -- not enough space to flush unwritten bytes	Error from DsStStream.	Retry.
Failure to close file in DsStStream	Error from DsStStream.	
Failure to establish a tcp connection	Error returned by the FTP protocol.	
Failure to open file in DsStStream	Error from DsStStream.	Verify that the file name is spelled correctly and the path is correct.
Fatal error returned by Data Distribution.	Error detected by Data Distribution.	
Fildes is not a valid open file descriptor.	Error from SCSI.	
Fildes is not associated with a device driver that accepts control functions.	Error from SCSI.	
File descriptor in bad state	Standard system error.	
File does not exist	Error from DsStUnixCompress.	Verify that the file name is spelled correctly and its path is correct.
File does not exist to copy	Error from DsStPosixUtil.	Verify the path and the spelling of the file name.
File exists	Standard system error.	
File locking deadlock	Standard system error.	
File name of type RWCString is null	Error from DsStFileCompress.	[The file to be compressed was not given a name.] Enter a non-empty string to indicate file name before attempting this operation.
File name too long	Standard system error.	
File not found	Error from DsStFileCompress.	
File table overflow	Standard system error.	
file to [sic] big for buffer -- cannot do fast copy	Error from DsStPosixUtil.	
file to [sic] big to read	Error from DsStPosixUtil.	
File too large	Standard system error.	

Table 18.6-4. Storage Management User Messages (15 of 36)

Message Text	Impact	Cause and Corrective Action
FTP file transfer failed without an FTP error code (unknown cause)	Error returned from DsStCacheManagerServer.	Retry.
Generic error returned by Data Distribution.	Error detected by Data Distribution.	
Get Location failed -- pathIndex > DsStNullIndex	Error for Archive.	
Get Sense Data failed.	Error from SCSI.	
GetVolGroupLocation failed -- SP DsCStVGSelectHistory execute failed	Error for Archive.	Retry.
Host is down	Standard system error.	
I/O error	Standard system error.	Retry.
ID not set	Error from DsStDistributionFtp.	[Could not find the parameter that indicates the request ID for this request (request parameter is currently an empty string).]
Identifier removed	Standard system error.	
If the file exist [sic] with enforced record locking enabled, record locks are on the file	Error from SCSI.	
Illegal byte sequence	Standard system error.	
Illegal seek	Standard system error.	
Inappropriate I/O control operation for device	Standard system error.	
Ingest starts	Media error message.	[No action necessary.]
InsertBackupTable() failed -- Unable to Insert into the DsStBackup table -- SP DsCStBInsert execute() failed	Error for Archive.	

Table 18.6-4. Storage Management User Messages (16 of 36)

Message Text	Impact	Cause and Corrective Action
InsertRestoreTable() failed - Unable to Insert into the DsStRestore table -- SP DsCStRInsert execute() failed	Error for Archive.	
Insufficient space to move file to the read only cache area	Error from DsStStagingMonitor.	Retry.
Insufficient storage -- error in ftp #452	Error returned by the FTP protocol.	
Interrupted system call, possibly during a select() call	Standard system error.	
Invalid Archive area specified for retrieve	Error for Archive.	
Invalid drive path.	Media error message.	
Invalid function argument.	Standard system error.	[If this occurred after the bind() command, the namelen parameter may indicate an incorrect size, or the indicated socket may already be bound.]
Invalid put method type	Error returned from DsStCacheManagerServer.	
Invalid slot	Standard system error.	
Invalid slot number.	Media error message.	
Invalid stacker path.	Media error message.	
Invalid Transfer stage returned from DB -- err in RestartBackup() or RestartRestore()	Error for Archive.	
Is a directory	Standard system error.	Either select a different file name, select a file under the specified directory, or delete the directory.
Level 2 halted	Standard system error.	
Level 2 not synchronized	Standard system error.	
Level 3 halted	Standard system error.	
Level 3 reset	Standard system error.	
Link exists	Error returned from DsStCacheManagerServer.	

Table 18.6-4. Storage Management User Messages (17 of 36)

Message Text	Impact	Cause and Corrective Action
Link has been severed	Standard system error.	
Link number out of range	Standard system error.	
Link of files failed	Staging disk error message.	1. Check the staging disk log to identify the reason for the symlink failure. 2. Retry.
Local error in processing -- error in ftp #451	Error returned by the FTP protocol.	
Machine is not on the network	Standard system error.	
Making space	Error returned from DsStCacheManagerServer.	[Space needed in cache.] Retry
Managed directory path is invalid	Error returned from DsStCacheManagerServer.	Check path and mount points.
Math argument out of domain of function	Standard system error.	
Message tables full	Standard system error.	
Message too long for message buffer	Standard system error.	
Missing request parameters	Media error message.	
MountTape Failed	Media error message.	
msg	Error for DsStArchiveProxy.	Retry.
Multihop attempted	Standard system error.	
Name not unique on network	Standard system error.	
Need account for storing files -- error in ftp #532	Error returned by the FTP protocol.	
Network dropped connection because of reset	Standard system error.	
Network is down	Standard system error.	Wait for the network to come back up.

Table 18.6-4. Storage Management User Messages (18 of 36)

Message Text	Impact	Cause and Corrective Action
Network is unreachable	Standard system error.	
No available drive.	Media error message.	
No buffer space available	Standard system error.	
No child processes	Standard system error.	
No CSI structure available	Standard system error.	
No data available	Standard system error.	
No disk space in pull monitor	Error from DsStDistributionFtp.	Retry.
No entries available to be deleted by Batch Delete function	Error for Archive.	[No action necessary.]
No entries in the queue	From DsStDiskRequestManager.	[No action necessary.]
No filename to delete from the amass cache	Error for DsStArchiveProxy.	Retry.
NO hwci	Error for DsStArchiveProxy.	1. Ensure that a Hardware Configuration Item (HWCI) has been specified as an option on the command line or in the calling script. 2. If an HWCI has been entered, ensure that it is valid and that all other required command-line options have been entered.
No hwci:volgrp error	Error for DsStArchiveProxy.	
No HWCI:volume group was passed	Error for Archive.	
No instance of queue exists	Error from DsStDiskRequestManager.	1. Note all circumstances related to the error. 2. Submit a trouble ticket.
No message of desired type	Standard system error.	
No online stacker.	Media error message.	
No record locks available	Standard system error.	
No records found in file to FTP	Error from DsStNetworkResource.	Check staging disk for file with list. Retry.

Table 18.6-4. Storage Management User Messages (19 of 36)

Message Text	Impact	Cause and Corrective Action
No requests have been cancelled for this server	Error returned from DsStCacheManagerServer.	[Not an error.] [The server is checking to see if any requests have been cancelled in order to process the cancellation. No requests have been cancelled. This error can be safely ignored as it is internal to STMGT.]
No resource (drive/slot) available for request	Error for tape.	1. Check stacker/drive status. 2. If appropriate, refill stacker. 3. Retry.
No route to host	Standard system error.	
NO SCSI device	Error from SCSI.	
No servers need to be awakened to service this request	Error returned from DsStCacheManagerServer.	[Not an error.] [The submitted request is a trivial request that can be fulfilled solely from the database. No servers will be notified as part of the request processing.]
No space left on device	Standard system error.	
No space left on device.	Error from SCSI.	
No such device	Standard system error.	
No such device or address; server exited before connection was complete	Standard system error.	
No such file or directory	Standard system error.	Verify the path name of the file or directory.
No such process	Standard system error.	
No such volume group	Error for Archive.	
No value for Capacity set in configuration file	Error from DsStFtpResourceConfig.	1. Ensure that the capacity has been queried on a valid device. 2. Ensure that the ftp resource config file exists. 3. Ensure that the ftp resource config file contains a value for CAPACITY.
Not a data message	Standard system error.	
Not a directory	Standard system error.	Verify the directory path.
Not a stream device	Standard system error.	

Table 18.6-4. Storage Management User Messages (20 of 36)

Message Text	Impact	Cause and Corrective Action
Not enough space	Standard system error.	1. Kill unnecessary processes. 2. Re-nice necessary processes if possible.
Not logged in - error in ftp #530 - username or password incorrect	Error returned by the FTP protocol.	
Not owner	Standard system error.	Either change the permissions or ownership of the file/executable, or run as a different user.
Null UserId or Password	Error for Archive.	[A valid UNIX userID must be entered and must contain at least one character.]
Number of symbolic links encountered during path name traversal exceeds MAXSYMLINKS	Standard system error.	[There are probably symbolic links pointing to each other.]
Object is remote	Standard system error.	
Online Backup Failed EcUtFileCopy.Copy() failed	Error for Archive.	[No action necessary.]
Operation already in progress	Standard system error.	Wait for an operation on the socket or other object to complete.
Operation not applicable/not implemented	Standard system error.	
Operation not supported on transport endpoint	Standard system error.	
Operation now in progress	Standard system error.	
Option not supported by protocol	Standard system error.	
Out of stream resources	Standard system error.	Wait for other processes to release resources.
Package not installed	Standard system error.	
Page type unknown -- error in ftp #551	Error returned by the FTP protocol.	
Parameter syntax error in FTP -- error in ftp #501	Error returned by the FTP protocol.	

Table 18.6-4. Storage Management User Messages (21 of 36)

Message Text	Impact	Cause and Corrective Action
Path points to a remote machine, and the link to that machine is no longer active.	Error from SCSI.	
Path points to an illegal address.	Error from SCSI.	
path to pull monitor not set	Error from DsStDistributionFtp.	[Could not find the parameter that indicates the effective root directory for the pull monitor.] Verify that a path is being supplied.
Pending write is greater than the allocated space	Error from DsStStream.	Temporarily write data to a disk with more free space.
Permission denied	Standard system error.	1. Execute as root. 2. If already root, choose another socket type or protocol.
Possible space limitation or the disk does not exist in the database	Staging disk error message.	1. Check whether the server has space available. 2. Retry when sufficient space exists. (If the disk does not exist in the database, the request should be failed.)
Process chosen as database deadlock victim	Error from database.	[Command is automatically re-run.]
Protocol driver not attached	Standard system error.	
Protocol error	Standard system error.	
Protocol family not supported	Standard system error.	
Protocol not supported	Standard system error.	Call socket() with a different protocol.
Protocol wrong type for socket	Standard system error.	[Source code needs to be checked; name struct passed to connect command must reflect the protocol type used to open the socket.]
Pull monitors [sic] pull directory is null	Error from DsStDistributionFtp.	[Could not find the parameter that indicates the pull directory for this ftp request.] Verify that a path is being supplied.
Read only cache location does not have adequate permissions	Error for Archive.	1. Ensure that the user ID used when logging in has the proper permissions. 2. If necessary, contact the Cache Manager Administrator to have the permissions set properly.
Read-only file system	Standard system error.	1. Determine whether it is possible to write to the destination directory (i.e., check permissions). 2. If it is possible to write to the destination directory, remount the device that contains the directory.

Table 18.6-4. Storage Management User Messages (22 of 36)

Message Text	Impact	Cause and Corrective Action
Remote address changed	Standard system error.	
Remote archive not created for BackupOnline or BackupOffline	Error for Archive.	Retry.
Request or arg is not valid for this device.	Error from SCSI.	
Request size exceeds Capacity or Threshold.	Error detected by Data Distribution.	Retry.
Requested file action not taken -- error in ftp #450	Error returned by the FTP protocol.	
Resource temporarily unavailable	Standard system error.	Either kill all unnecessary processes or wait for other processes to terminate.
RestartBackup() failed -- SP DsCStBSelectByName execute() failed	Error for Archive.	
RestartNotification function failed	Error for DsStArchiveProxy.	[No action necessary.]
RestartRestore() failed -- SP DsCStRSelectByName execute() failed	Error for Archive.	
Restore Offline failed	Error for Archive.	
Result too large	Standard system error.	
Retry error returned by Data Distribution.	Error detected by Data Distribution.	Retry.
SCSI device is busy	Error from SCSI.	Retry.
SCSI device is in check status	Error from SCSI.	Retry.
SCSI device is not accessible.	Error from SCSI.	
Server crashed	STMGT restart code.	<ol style="list-style-type: none"> 1. Check the logs for the identified server to ascertain the cause of the crash. 2. Restart the server as soon as possible 3. Contact the ECS Help Desk for additional support.
Server crashed and is being automatically restarted (warm)	STMGT restart code.	Check the logs for the identified server to ascertain the cause of the crash.

Table 18.6-4. Storage Management User Messages (23 of 36)

Message Text	Impact	Cause and Corrective Action
Server is temporarily unavailable	STMGT restart code.	[The requested server is not running.] 1. If the server is expected to be running, check the logs to determine why the server is no longer running. 2. Restart the server. 3. Resubmit the request.
Service not available -- error in ftp #421	Error returned by the FTP protocol.	
Slot number in database does not match any of the physical slot numbers.	Media error message.	
Socket operation on non-socket	Standard system error.	[Source code needs to be checked; program should not attempt to perform socket operations on non-socket file descriptors.] Submit a trouble ticket.
Socket type not supported	Standard system error.	
Software caused connection abort	Standard system error.	
Some physical I/O error has occurred.	Error from SCSI.	
Source file for a retrieve request was not found	Error for Archive.	1. Verify the spelling and pathname of the file to be retrieved. 2. Retry.
Source file for link or delete not found	Staging disk error message.	Verify the spelling and pathname of the file to be deleted or linked.
source parameters are not set	Error from DsStDistributionFtp.	[Could not find the parameter that indicates the source for the ftp transfer (source parameter is currently an empty string).] Ensure that the source is being supplied.
Space has not been reserved in cache for this file	Error returned from DsStCacheManagerServer.	1. Check for server cold start. 2. Resubmit request.
space not available on staging disk for inftp	Error from inftp.	1. If the file is bigger than the space allocated for staging disk, modify the staging disk configuration. 2. If the file is not bigger, wait for other requests to complete so that space will be freed on the staging disk. 3. Retry.
Srmount error	Standard system error.	
StagingMonitor object was not created in GetStagingMonitor()	Error for Archive.	Retry.

Table 18.6-4. Storage Management User Messages (24 of 36)

Message Text	Impact	Cause and Corrective Action
Stale NFS file handle	Standard system error.	
Stored procedure not found or invalid	Error from database.	<ol style="list-style-type: none"> 1. Check the database and/or contact the Database Administrator. 2. Retry.
Sybase does not recognize the specified login name	Error from database.	<ol style="list-style-type: none"> 1. Ensure that, if the DBLoginName parameter has been set in the Registry database, it has been set to a login that actually exists in the Sybase database. 2. Retry.
system compress 'compress' function failed	Error from DsStUnixCompress.	<p>[There may not be enough space on the partition for the compressed and uncompressed versions to exist simultaneously.]</p> <ol style="list-style-type: none"> 1. Temporarily move the file to a partition with more space. 2. Compress the file in the temporary location. 3. Move the compressed file back to the original location.
System copy function failed	Error from DsStFileCompress.	
system move 'mv' failed	Error from DsStUnixCompress.	<ol style="list-style-type: none"> 1. Verify that the current user ID has write permission for the file. 2. Verify that the current user ID has write permission in the target directory. 3. Verify that the destination file does not exist already.
system symlink failed to make a symbolic link from a source file to the target filename	Error from DsStUtility.C.	
system uncompress 'uncompress' failed	Error from DsStUnixCompress.	<p>[There may not be enough space on the partition for the compressed and uncompressed versions to exist simultaneously.]</p> <ol style="list-style-type: none"> 1. Temporarily move the file to a partition with more space. 2. Compress the file in the temporary location. 3. Move the compressed file back to the original location.
Temporary Backup Failed EcUtFileCopy.Copy() failed	Error for Archive.	[No action necessary.]
Text file busy	Standard system error.	
The named file does not exist.	Error from SCSI.	

Table 18.6-4. Storage Management User Messages (25 of 36)

Message Text	Impact	Cause and Corrective Action
The Cache Manager Copy Into Cache function failed	Error for Archive.	Retry.
The Cache Manager Reserve Space function failed	Error for Archive.	Retry.
The child of a daemon process servicing your request crashed	Error returned from DsStCacheManagerServer.	Retry.
The construction invoked is not valid for use.	Error for Archive.	
The database could not create a staging disk. Possible space limitations	Staging disk error message.	1. Check the available space of the staging disk server on the Storage Management Control GUI (Storage Config tab). 2. Retry.
The destination directory where the file is to be copied does not exist	Staging disk error message.	1. Check the SYSLOG for NFS errors. [For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).] 2. If the destination is a staging disk, verify that the staging disk exists. 3. Retry after problems have been corrected.
The execute() failed in Commit Transaction	Error for Archive.	Retry.
The execute() failed in DsStCommonDBIF	Error for Archive.	Retry.
The file could not be removed from the staging disk database inventory and no attempt will be made to remove the file from the file system	Staging disk error message.	1. Check the staging disk logs for database errors concerning the removal of the file from the database. 2. Retry.
The file does not exist and write permission is denied by the parent directory of the file to be created.	Error from SCSI.	
The file to be deleted does not exist in the file system	Staging disk error message.	1. Check the SYSLOG for NFS errors. [For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).] 2. Verify that the staging disk exists. 3. Retry after problems have been corrected.

Table 18.6-4. Storage Management User Messages (26 of 36)

Message Text	Impact	Cause and Corrective Action
The file was deleted from the staging disk database inventory but was unable to be removed from the file system.	Staging disk error message.	<ol style="list-style-type: none"> 1. Verify that the file exists. 2. Check for NFS errors in the SYSLOG. [For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).] 3. Retry after problems have been corrected.
The file was not found	DsSt error.	<ol style="list-style-type: none"> 1. Verify that the file name is spelled correctly. 2. Verify that the path is correct. 3. Retry.
The host for ftp does not have a valid IP address and can not be connect to.	Media error message.	<ol style="list-style-type: none"> 1. Verify the host name. 2. Retry.
The host for ftp exist [sic] but cannot be connected to. Check the FtpServers [sic] debug log for the errno.	Media error message.	<ol style="list-style-type: none"> 1. Check the FtpServer debug log for the errno. 2. Respond to the error. 3. Retry.
The input path is neither a regular file nor a directory	Error from DsStUtility.C.	<p>[It appears that a device-special file has been passed as a source path for a copy operation. This type of operation is not supported.]</p> <ol style="list-style-type: none"> 1. Verify that the input path is correct. 2. Retry.
The length of the path argument exceeds {PATH_MAX}, or the length of a path component exceeds {NAME_MAX}.	Error from SCSI.	
The linked file created by the Cache Manger does not exist	Staging disk error message.	<ol style="list-style-type: none"> 1. Check the SYSLOG for NFS errors. [For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).] 2. Check the CacheManager logs for errors. 3. Retry after problems have been corrected.
The method to suspend a request to be deleted failed	Error for DsStArchiveProxy.	Retry.
the mode the client passed does not match the mode the client is running in -- backup mode should match primary mode	Error for Archive.	Retry.
the move request failed during the copy	Error from DsStStagingMonitor.	Retry.

Table 18.6-4. Storage Management User Messages (27 of 36)

Message Text	Impact	Cause and Corrective Action
The move request was failed because it is a dupe of a failed request	Error from DsStStagingMonitor.	Retry.
The named file exists	Error from SCSI.	
The named file is a character special or block special file, and the device associated with this special file does not exist.	Error from SCSI.	
The named file is a directory and flag is write or read/write	Error from SCSI.	
The named file resides on a read-only file system.	Error from SCSI.	
the passed MasterList must be same size as retrieve from DB in ResumeStoreRequest or ResumeRetrieveRequest	Error for Archive.	
The process has too many open files	Error from SCSI.	
The request has invalid input parameters	Error for Archive.	
The request has invalid input parameters	Error from DsStStagingMonitor.	
The request has not completed in the maximum amount of time allocated	Error from DsStStagingMonitor.	Retry.
The request is already being serviced	Error returned from DsStCacheManagerServer.	[This is an internal error detected by STMGT. A request that is already being serviced by a thread was identified by a manager thread as being available for servicing. The attempt to assign the request to a second thread has failed.]
The request was cancelled because of a failure earlier in the processing.	Error for Archive.	1. Check the error code of all sub-requests of the main request. 2. Retry.

Table 18.6-4. Storage Management User Messages (28 of 36)

Message Text	Impact	Cause and Corrective Action
The requested function cannot be performed due to the permission settings on the file/directory	Staging disk error message.	<ol style="list-style-type: none"> 1. Change the permissions on the file. 2. Retry.
The server was unable to allocate a socket for listening	Error returned from DsStCacheManagerS server.	<p>[A UNIX error has occurred preventing the allocation of a socket for listening purposes. This is an extremely unusual circumstance.]</p> <ol style="list-style-type: none"> 1. Document the error. 2. Refer the error to the System Administrator for investigation.
The slot or drive returned from allocate is invalid	Error for tape.	<ol style="list-style-type: none"> 1. Check stacker/drive status. 2. If appropriate, refill stacker. 3. Retry.
The source file for a link does not exist	Staging disk error message.	<ol style="list-style-type: none"> 1. Check the file system for the source file. 2. If the source file exists in the file system, check the SYSLOG for NFS errors. <p>[For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).]</p> <ol style="list-style-type: none"> 3. Retry after problems have been corrected.
The source file to be copied does not exist in the file system	Staging disk error message.	<ol style="list-style-type: none"> 1. Check the SYSLOG for NFS error. <p>[For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).]</p> <ol style="list-style-type: none"> 2. Retry after problems have been corrected.
The specified tape drive is empty.	Media error message.	
The specified tape drive is occupied.	Media error message.	
The Staging Disk no longer exist [sic] in the Database	Staging disk error message.	<ol style="list-style-type: none"> 1. Check whether the staging disk was cold started, which would have destroyed the disks. 2. If the disk was a virtual disk, check whether the path still exists. 3. Check the SYSLOG for file system errors. <p>[For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).]</p> <ol style="list-style-type: none"> 4. Retry if possible after problems have been corrected.
The Staging Monitor Move function failed	Error for Archive.	
The staging monitor request queue encountered an error retrieving or writing data.	Error from DsStStagingMonitor.	

Table 18.6-4. Storage Management User Messages (29 of 36)

Message Text	Impact	Cause and Corrective Action
The submission of a Cache Manager Copy Into Cache function failed	Error for Archive.	Retry.
The system file table is full.	Error from SCSI.	
The system is unable to allocate a send descriptor.	Error from SCSI.	
The system remove function failed in Delete()	Error for Archive.	[No action necessary.]
The thread pool is not configured for the server	Error returned from DsStCacheManagerServer.	1. Check the configuration of the server to be started (i.e., verify from the Storage Management Control GUI that the service thread pool has been defined.) 2. Retry.
This is not an error -- detailed portion is null	Error returned by the FTP protocol.	[Not an error.]
Timer expired	Standard system error.	
Too many links	Standard system error.	
Too many open files	Standard system error.	1. Direct the process to close some open files. 2. Retry.
Too many references: cannot splice	Standard system error.	
Too many symbolic links were encountered in translating path.	Error from SCSI.	
Too many users	Standard system error.	
Transport endpoint is already connected	Standard system error.	[It may not be necessary to attempt to establish a connection.] 1. If necessary, disconnect. 2. Retry.
Transport endpoint is not connected	Standard system error.	
Type mismatch in retrieving [sic] data from database	Error for Archive.	[A stored procedure is returning a different type of data than is expected by the code.] 1. Set the debug level (for the relevant server) at 3 in the Registry database. 2. Reproduce the error.

Table 18.6-4. Storage Management User Messages (30 of 36)

Message Text	Impact	Cause and Corrective Action
Type mismatch in retrieving [sic] data from database	Error from DsStDistributionFtp.	[A stored procedure is returning a different type of data than is expected by the code.] 1. Set the debug level (for the relevant server) at 3 in the Registry database. 2. Reproduce the error.
Unable to allocate a stream.	Error from SCSI.	
Unable to attach/stat [sic] to source location	Error returned from DsStCacheManagerServer.	1. Create/verify source path. 2. Retry.
Unable to checkpoint file -- SP DsCStSPCheckpointFile execute() failed	Error from DsStFileParameters.	[No action necessary.]
Unable to checkpoint inftp request as generic request -- SP DsCStSPCheckpointGenericRequest execute() failed	Error from inftp.	[No action necessary.]
Unable to checkpoint inftp request as inftp request	Error from inftp.	[No action necessary.]
Unable to checkpoint retrieve request as generic request	Error for Archive.	[No action necessary.]
Unable to checkpoint store request as generic request	Error for Archive.	[No action necessary.]
Unable to clean files from destination dir when cancelling a push	Error from DsStNetworkResource.	1. Check destination permissions. 2. Retry.
Unable to clean files from pull cache when cancelling a pull	Error from DsStNetworkResource.	1. Check pull cache permissions. 2. Retry.
Unable to create entry for link	Error returned from DsStCacheManagerServer.	1. Check the database for permissions/errors. 2. Verify that the entry exists. 3. Retry.
Unable to free sufficient space	Error returned from DsStCacheManagerServer.	1. Manually expire cache files to free more space. 2. Retry.

Table 18.6-4. Storage Management User Messages (31 of 36)

Message Text	Impact	Cause and Corrective Action
Unable to get the temporary directory from Backup -- SP DsCStBSelectTempDir execute() failed	Error for Archive.	
Unable to get the temporary directory from restore -- SP DsCStRSelectTempDir execute() failed	Error for Archive.	
Unable to insert BackupID -- BackupID is Null	Error from DsStFileParameters.	1. Modify the BackupID. (A valid BackupID is required. It must be a string with at least one character.) 2. Retry.
Unable to insert checksum of file -- CheckSum = 0	Error from DsStFileParameters.	If possible, rerun the checksum on the file. (A checksum of 0 is meaningless.)
Unable to insert current position of a search of a volume group	Error from DsStFileParameters.	[This is an internal error in ECS.] 1. Note all circumstances associated with the error (including capturing the Debug.log and ALOGs for both the reporting server and the Request Manager). 2. Submit a high-priority trouble ticket against STMGT. (Send logs in support of the trouble ticket.)
Unable to insert file size of file -- file size = 0	Error from DsStFileParameters.	Try to get file size again. (File size of 0 represents a file containing no information.)
Unable to insert managed directory entry	Error returned from DsStCacheManagerServer.	1. Check the database for permissions/errors. 2. Verify that the entry exists. 3. Retry
Unable to insert OffsiteID -- OffsiteID is Null	Error from DsStFileParameters.	1. Modify the ArchiveID. (A valid ArchiveID is required. It must be a string with at least one character.) 2. Retry.
Unable to insert the archive unique name of file -- UniqueFileName is Null	Error from DsStFileParameters.	[A non-empty unique file name must be entered here.]
Unable to Insert the ArchiveID -- ArchiveID is Null	Error from DsStFileParameters.	1. Modify the ArchiveID. (A valid ArchiveID is required. It must be a string with at least one character.) 2. Retry.
Unable to insert the checkpoint state of the request -- CheckpointState is Null	Error from DsStFileParameters.	[This is an internal error in ECS.] 1. Note all circumstances associated with the error (including capturing the Debug.log and ALOGs for both the reporting server and the Request Manager). 2. Submit a high-priority trouble ticket against STMGT. (Send logs in support of the trouble ticket.)

Table 18.6-4. Storage Management User Messages (32 of 36)

Message Text	Impact	Cause and Corrective Action
Unable to insert the file index of the request -- EventMessage is Null	Error from DsStFileParameters.	
Unable to insert the file index of the request -- file index is less than 0	Error from DsStFileParameters.	[This is an internal error in ECS.] 1. Note all circumstances associated with the error (including capturing the Debug.log and ALOGs for both the reporting server and the Request Manager). 2. Submit a high-priority trouble ticket against STMGT. (Send logs in support of the trouble ticket.)
Unable to insert the location of a source file.	Error from DsStFileParameters.	[This is an internal error in ECS.] 1. Note all circumstances associated with the error (including capturing the Debug.log and ALOGs for both the reporting server and the Request Manager). 2. Submit a high-priority trouble ticket against STMGT. (Send logs in support of the trouble ticket.)
Unable to insert the serverid of a remote archive server.	Error from DsStFileParameters.	[This is an internal error in ECS.] 1. Note all circumstances associated with the error (including capturing the Debug.log and ALOGs for both the reporting server and the Request Manager). 2. Submit a high-priority trouble ticket against STMGT. (Send logs in support of the trouble ticket.)
Unable to Insert the StagingID -- StagingID is Null	Error from DsStFileParameters.	1. Modify the ArchiveID. (A valid StagingID is required. It must be a string with at least one character.) 2. Retry.
Unable to insert the status of the file (success or failure) -- errorMsg is Null	Error from DsStFileParameters.	[No action necessary.]
Unable to insert the user(client) name of file -- UserFileName is Null	Error from DsStFileParameters.	1. Modify the path/filename. (The file name must have a full path or staging disk ID, and must be non-empty.) 2. Retry.
Unable to insert the VolumeGroupId.	Error from DsStFileParameters.	[This is an internal error in ECS.] 1. Note all circumstances associated with the error (including capturing the Debug.log and ALOGs for both the reporting server and the Request Manager). 2. Submit a high-priority trouble ticket against STMGT. (Send logs in support of the trouble ticket.)
Unable to insert type of search on a retrieve request.	Error from DsStFileParameters.	[This is an internal error in ECS.] 1. Note all circumstances associated with the error (including capturing the Debug.log and ALOGs for both the reporting server and the Request Manager). 2. Submit a high-priority trouble ticket against STMGT. (Send logs in support of the trouble ticket.)

Table 18.6-4. Storage Management User Messages (33 of 36)

Message Text	Impact	Cause and Corrective Action
Unable to make the directory	Staging disk error message.	1. Check the SYSLOG for errors. [For detailed instructions refer to the Check Log Files procedure (Section 18.6.1.2).] 2. Retry after problems have been corrected.
Unable to mark request as suspended	Error returned from DsStCacheManagerS server.	[The stored procedure used to mark a request as suspended (or internally pending) failed. The request cannot be marked as suspended. This may result in the request needlessly being processed repeatedly.] Retry.
Unable to mark server as up in the database	Error returned from DsStCacheManagerS server.	[The database could not be updated to reflect that the server is up.] 1. Check for previous errors that might indicate why the stored procedure could not be executed. 2. Correct the errors.
Unable to remove a stored file from the archive.	Error from DsStFileParameters.	1. Check the archive for permission errors. 2. Submit a request to the System Administrator to correct permission errors. 3. Retry when permission errors have been corrected.
Unable to remove link entry	Error returned from DsStCacheManagerS server.	1. Check the database for permissions/errors. 2. Verify that the entry exists. 3. Retry
Unable to remove managed directory entry	Error returned from DsStCacheManagerS server.	1. Check the database for permissions/errors. 2. Verify that the entry exists. 3. Retry
Unable to restore checkpointed IngestFtp request from DB	Error from inftp.	
Unable to restore checkpointed retrieve request from database	Error for Archive.	
Unable to restore checkpointed store request from database	Error for Archive.	
Unable to retrieve the base block size value from configuration file	Error from DsStFtpResourceCon fig.	1. Ensure that the block size has been queried on a valid device. 2. Ensure that the ftp resource config file exists. 3. Ensure that the ftp resource config file contains a value for BLOCKSIZE.
Unable to retrieve the number of FTP retries from configuration file	Error from DsStFtpResourceCon fig.	1. Ensure that the number of retries has been queried on a valid device. 2. Ensure that the ftp resource config file exists. 3. Ensure that the ftp resource config file contains a value for RETRIES.

Table 18.6-4. Storage Management User Messages (34 of 36)

Message Text	Impact	Cause and Corrective Action
Unable to retrieve the pause time from the resource configuration file	Error from DsStFtpResourceCon fig.	<ol style="list-style-type: none"> 1. Ensure that the sleep time has been queried on a valid device. 2. Ensure that the ftp resource config file exists. 3. Ensure that the ftp resource config file contains a value for SLEEPTIME.
Unable to retrieve the value for Pullfile from the configuration file	Error from DsStFtpResourceCon fig.	<ol style="list-style-type: none"> 1. Ensure that the pullfile name has been queried on a valid device. 2. Ensure that the ftp resource config file exists. 3. Ensure that the ftp resource config file contains a value for PULLFILENAME.
Unable to update checkpoint state for checkpointed request	Error for Archive.	[No action necessary.]
Unable to update checkpoint state for checkpointed request	Error from inftp.	[No action necessary.]
Unable to update checkpoint state for file -- SP DsCStSPCheckpoint FileState execute() failed	Error from DsStFileParameters.	[No action necessary.]
Unable to update checkpoint status for checkpointed request	Error for Archive.	
Unable to update checksum for file -- SP DsCStSPCheckpoint Checksum execute() failed	Error from DsStFileParameters.	<p>[A checksum is a way of validating a file. From this point, it may not be possible to verify the file's completeness and genuineness.]</p> <p>[No action necessary.]</p>
Unable to update file index for checkpointed request	Error for Archive.	[No action necessary.]
Unable to update file size	Error returned from DsStCacheManagerS erver.	<ol style="list-style-type: none"> 1. Check the database for permissions/errors. 2. Verify that the entry exists. 3. Retry.
Unable to update file state	Error returned from DsStCacheManagerS erver.	<ol style="list-style-type: none"> 1. Check the database for permissions/errors. 2. Verify that the entry exists. 3. Retry
Unable to update fileSize for file -- SP DsStFUpdateFileSize execute() failed	Error from DsStFileParameters.	N/A

Table 18.6-4. Storage Management User Messages (35 of 36)

Message Text	Impact	Cause and Corrective Action
Unable to update physical location for file -- SP DsCStSPCheckpoint FileLoc execute() failed	Error from DsStFileParameters.	[No action necessary.]
Unable to update stage and status in DsStBackup table -- SP DsCStBUpdStageAnd Status execute() failed	Error for Archive.	[No action necessary.]
Unable to update stage and status in DsStRestoreTable -- SP DsCStRUpdStageAndStatus execute() failed	Error for Archive.	[No action necessary.]
Unable to update staging disk tag for file -- SP DsCStSPCheckpoint SDTag execute() failed	Error from DsStFileParameters.	[No action necessary.]
Unable to update status(failed) for file -- SP DsCStSPCheckpoint FileFailure execute() failed	Error from DsStFileParameters.	
Unable to write a block of data. Check if the destination directory is full or if there are network errors	Error from DsStNetworkResource.	1. Check whether the destination directory has space available. 2. Check for network errors. 3. Retry when sufficient space exists or network errors have been corrected.
Unauthenticated [sic] kftp user -- error in ftp #705	Error returned by the FTP protocol.	
Unknown command -- error in ftp #500	Error returned by the FTP protocol.	
Unknown device error returned.	Error from SCSI.	

Table 18.6-4. Storage Management User Messages (36 of 36)

Message Text	Impact	Cause and Corrective Action
Unknown Error	Error returned by the FTP protocol.	
Unknown RPC failure	Staging disk error message.	Retry.
UnMountTape Failed	Media error message.	
Update of multiple row selects not supported	Error from database.	[This is an internal STMGT error.] 1. Note all circumstances associated with the error, including the identity of the server reporting the error. 2. Report the error to the ECS DAAC Help Desk as soon as possible.
Users [sic] quota full	Error from SCSI.	
Value too large for defined data type	Standard system error.	
Your request is still in process -- please be patient	Error returned from DsStCacheManagerServer.	1. Wait. 2. Retry if necessary.

Table 18.6-5. Order Manager GUI User Messages (1 of 12)

Message Text	Impact	Cause and Corrective Action
<p>!!! ERROR: It appears that all granules have been failed. You can not submit or partition a request with all FAILED granules. This request should be failed. To do this, Select "Fail Request" from the Request Disposition section and try again. [Displayed in a dialogue box]</p>	<p>Intervention cannot be resolved.</p>	<p>The message appears on the Open Intervention Detail page. If all the granules in a request have been failed, the request can no longer be submitted or partitioned. The only corrective action is to fail the entire request or place it on hold. 1. Single-click on the OK button to dismiss the dialogue box. 2. Either fail the entire request or place it on hold. [For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>
<p>All of the granules for this request have been failed. You can not submit or partition the request because the submission will fail and another operator intervention will be created for it. This request should be failed. Return to the previous page and select "Fail Request" under the Request Disposition section.</p>	<p>Intervention cannot be resolved.</p>	<p>The operator failed all the granules for a particular request and tried to submit or partition it. Since there are no granules, there is nothing to submit or partition. The entire request should be failed. 1. Single-click on the Netscape browser Back button to redisplay the Open Intervention Detail (Intervention for Request x) page. 2. Fail the entire request. [For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>
<p>An error has occurred with the page you are requesting. Error Message: <message></p>	<p>Various.</p>	<p>The message appears on the Error page and is displayed in response to a stored procedure or system fault. Although the previously attempted operation can be retried, in most cases the error is a fatal one (e.g., a binary was installed incorrectly or is missing). 1. If feasible, retry the operation that resulted in the error message. 2. If repeated attempts to perform the operation fail, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.</p>
<p>An error message was not available. Please contact the system administrator for further assistance.</p>	<p>Various.</p>	<p>The message appears on the Error page when there is a problem with the Perl code or a stored procedure that did not give a specific reason as to why it failed. There is no operator-level corrective action to take in this case. Call the help desk and submit a trouble ticket in accordance with site Problem Management policy.</p>

Table 18.6-5. Order Manager GUI User Messages (2 of 12)

Message Text	Impact	Cause and Corrective Action
An undefined error occurred executing the stored procedure	Various.	<p>The problem is an internal error due to a bad database connection, incorrect stored procedure arguments, or a system fault. It is not due to operator error. The first possible solution is to resubmit the changes for the Intervention (essentially retrying the database connection).</p> <ol style="list-style-type: none"> 1. Resubmit the changes for the intervention. [For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).] 2. If resubmitting the changes for the intervention is not successful, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
Error executing SweeperStart: <message>	Server Statistics or Queue Status page does not display correct information, or the affected pages do not display at all.	<p>The message appears either on the Error page, OM Queue Status page, or OM Server Statistics page. SweeperStart is a shell script that runs the Sweeper binary, which tells the system whether or not certain servers are up and running. If either the shell script or the Sweeper binary is corrupt, missing, not executable, or has the wrong permissions, the error message is displayed. The OM GUI must be reinstalled or the binary or shell script must be manually copied to its proper location and given the proper permissions. Call the help desk and submit a trouble ticket in accordance with site Problem Management policy.</p>
Error: <VALUE> is an invalid number for this parameter." [Displayed in a dialogue box]	A parameter value does not get modified.	<p>The error message can appear on the Media Configuration page or Server Configuration page. It is probably the result of trying to change a parameter value (which requires a number) to a value that either contains non-numeric characters, is outside the valid range for the parameter, or contains a decimal point when the value should be an integer.</p> <ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the dialogue box. 2. Enter a valid value for the parameter. <p>[For detailed instructions refer to the Check/Modify OM Configuration Parameters procedure (Section 18.5.8).]</p>

Table 18.6-5. Order Manager GUI User Messages (3 of 12)

Message Text	Impact	Cause and Corrective Action
<p>ERROR: An [sic] database error was encountered: deadlock could not be resolved after <NUMBER> tries</p>	<p>An action requiring a call to a stored procedure or access to a database table is not taken.</p>	<p>The message appears on the Error page after a stored procedure could not be executed due to a database (or table) deadlock. The command is retried a number of times (depending on the DEADLOCK_RETRIES parameter in the configuration file) before the message is displayed. Retrying later may be successful. However, it may be that the OMS or MSS database is experiencing a heavy load or is corrupt in some way. If the problem cannot be quickly resolved, there might be a performance issue or the stored procedure may contain an error.</p> <ol style="list-style-type: none"> 1. At a later time retry the operation that resulted in the error message. 2. If the operation fails again, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
<p>ERROR: Can't open session file: <message></p>	<p>Requested page does not display.</p>	<p>This error message can occur on any page. The session file is like a cookie – it can expire or become corrupt. For this reason, bookmarks should not be saved for specific OM GUI pages. If a session is more than five (5) days old, and the GUI has not been restarted in that amount of time, the error is certain to occur.</p> <p>Reload the GUI by starting it from a bookmark or manually typing the base URL (without a session ID). [For detailed instructions refer to the Launch the Order Manager GUI procedure (Section 18.5.1).]</p>
<p>ERROR: Invalid name entered into Worked by field. You must enter a name into this field before proceeding. [Displayed in a dialogue box]</p>	<p>Actions cannot be taken on an intervention.</p>	<p>The message appears on the Open Intervention Detail page when the operator attempts to enter non-alphanumeric characters, nothing, or just white space into the Worked by: field. A real name or a user ID must be entered in the field. Numbers and spaces are allowed.</p> <ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the dialogue box. 2. In the Worked by: text entry box on the Open Intervention Detail page enter: <name> [valid name] [For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]

Table 18.6-5. Order Manager GUI User Messages (4 of 12)

Message Text	Impact	Cause and Corrective Action
<p>ERROR: It appears that all granules have been failed. You can not submit or partition a request with all FAILED granules. This request should be failed. To do this, Select "Fail Request" from the Request Disposition section and try again. [Displayed in a dialogue box]</p>	<p>Intervention cannot be resolved.</p>	<p>The message appears on the Open Intervention Detail page. If all the granules in a request have been failed, the request can no longer be submitted or partitioned. The only corrective action is to fail the entire request or place it on hold. 1. Single-click on the OK button to dismiss the dialogue box. 2. Either fail the entire request or place it on hold. [For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>
<p>Error: Not that many rows or invalid row number. [Displayed in a dialogue box]</p>	<p>The Operator is unable to navigate through rows (on various pages).</p>	<p>An invalid row number was entered in the navigation box at the top of a listing. The error can appear on any page with the navigation feature. 1. Single-click on the OK button to dismiss the dialogue box. 2. In the navigation box enter: <number> [row number within the range of rows displayed on the GUI screen] 3. Single-click on the ok button.</p>
<p>ERROR: Partition days must be an integer. [Displayed in a dialogue box]</p>	<p>Intervention cannot be resolved.</p>	<p>The message appears on the Open Intervention Detail page if the operator was partitioning the request and entered a fractional number (or some garbage characters) in the days field. The number of days should be entered as a whole number only. 1. Single-click on the OK button to dismiss the dialogue box. 2. Verify that the Partition (current size is x MB) button has been selected (single-click on the button if necessary). 3. In the days text box enter: <number of days> [whole number of days for the time period] 4. Complete the intervention. [For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>

Table 18.6-5. Order Manager GUI User Messages (5 of 12)

Message Text	Impact	Cause and Corrective Action
<p>ERROR: Partition hours must be an integer. [Displayed in a dialogue box]</p>	<p>Intervention cannot be resolved.</p>	<p>The message appears on the Open Intervention Detail page if the operator was partitioning the request and entered a fractional number (or some garbage characters) in the hours field. The number of hours should be entered as a whole number only.</p> <ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the dialogue box. 2. Verify that the Partition (current size is x MB) box has been selected (single-click on the box if necessary). 3. In the hours text box enter: <number of hours> [whole number of hours for the time period] 4. Complete the intervention. <p>[For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>
<p>ERROR: You can not change the media type and update the FTP Push parameters. [Displayed in a dialogue box]</p>	<p>Intervention cannot be resolved.</p>	<p>The message appears on the Open Intervention Detail page, probably due to inadvertently checking the Update FtpPush Parameters box. Either the button should be un-checked or the distribution medium should be changed the proper way.</p> <ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the dialogue box. 2. If the Update FtpPush Parameters box was inadvertently checked, single-click on the box to uncheck it. 3. If the Update FtpPush Parameters box was checked on purpose, verify that the Change Media to: box is not checked. (Single-click on it if necessary). 4. If the Update FtpPush Parameters box was checked on purpose, verify that the New Medium option button is displaying " - ". [If necessary, single-click and hold the New Medium option button to display a menu of media, move the mouse cursor to the desired selection (highlighting it), then release the mouse button.] 5. Complete the intervention. <p>[For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>

Table 18.6-5. Order Manager GUI User Messages (6 of 12)

Message Text	Impact	Cause and Corrective Action
<p>ERROR: You can not change the media type from <MEDIA> to <MEDIA> - the media types are the same.</p> <p>[Displayed in a dialogue box]</p>	<p>Intervention cannot be resolved.</p>	<p>The message appears on the Open Intervention Detail page if the operator tried to change the media type to whatever it already is. If the media type should not be changed, the New Medium option button should be set to "- -".</p> <ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the dialogue box. 2. Verify that the Change Media to: box is not checked. (Single-click on it if necessary). 3. Verify that the New Medium option button is displaying "- -". [If necessary, single-click and hold the New Medium option button to display a menu of media, move the mouse cursor to the desired selection (highlighting it), then release the mouse button.] 4. Complete the intervention. <p>[For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>
<p>ERROR: You can not modify request-level attributes and place the intervention on hold.</p> <p>[Displayed in a dialogue box]</p>	<p>Intervention cannot be resolved.</p>	<p>The message appears on the Open Intervention Detail page if the operator attempted to modify request-level attributes (e.g., change the media type, update ftp push parameters, or disable limit checking) and then tried to place the intervention on hold. If the selected request-level attribute(s) should be implemented, the request should either be submitted or partitioned. If the selected request-level attribute(s) should not be implemented, the intervention may be placed on hold.</p> <ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the dialogue box. 2. If the selected request-level attribute(s) should be implemented, either submit or partition the request. [For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).] 3. If the selected request-level attribute(s) should not be implemented, single-click on the Reset button, then place the intervention on hold. [For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]

Table 18.6-5. Order Manager GUI User Messages (7 of 12)

Message Text	Impact	Cause and Corrective Action
<p>ERROR: You can not modify request-level attributes if you are failing the request. [Displayed in a dialogue box]</p>	<p>Intervention cannot be resolved.</p>	<p>The message appears on the Open Intervention Detail page if the operator attempted to modify request-level attributes (e.g., change the media type, update ftp push parameters, or disable limit checking), then tried to fail the entire request. If the request should be failed, the request-level attribute changes should be deselected, then the request can be failed.</p> <ol style="list-style-type: none"> 1. Single-click on the Netscape browser Back button to redisplay the Open Intervention Detail page. 2. In the Worked by: text entry box on the Open Intervention Detail page enter: <name> [valid name] [For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]

Table 18.6-5. Order Manager GUI User Messages (9 of 12)

Message Text	Impact	Cause and Corrective Action
Please hit your browser's Back button and select a disposition.	Intervention cannot be resolved.	<p>No disposition was selected on the Open Intervention Detail page. Go to the previous page and select a disposition.</p> <ol style="list-style-type: none"> 1. Single-click on the Netscape browser Back button to redisplay the Open Intervention Detail page. 2. Select an appropriate disposition on the Open Intervention Detail page. <p>[For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>
Sweeper error: <message>	Server Statistics or Queue Status page does not display correct information, or the affected pages do not display at all.	<p>The message appears either on the Error page, Queue Status page, or OM Server Statistics page. SweeperStart is a shell script that runs the Sweeper binary, which tells the system whether or not certain servers are up and running. If either the shell script or the Sweeper binary is corrupt, missing, not executable, or has the wrong permissions, the error message is displayed. The OM GUI must be reinstalled or the binary or shell script must be manually copied to its proper location and given the proper permissions. Call the help desk and submit a trouble ticket in accordance with site Problem Management policy.</p>
The e-mail text box is empty – it should contain a message to the user if you want e-mail sent out. [Displayed in a dialogue box]	Intervention resolution cannot be submitted.	<p>The message appears if there is an e-mail text box on the Close Confirmation page and the operator did not enter any message text. Some text should be entered and the form should be resubmitted.</p> <ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the dialogue box. 2. Either single-click on the Don't send e-mail box or in the e-mail text box enter: <text> [supplemental e-mail text] (as applicable). 3. Complete the intervention. <p>[For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>
You can not change the FTP Push parameters and change the media type at the same time. Please hit your browser's Back button and correct this	Intervention cannot be resolved.	<p>The message appears if the media type for the request is ftp push. The operator probably elected to change the media type and checked the Update FtpPush Parameters box at the same time. The operator should go back to the previous page and uncheck the box.</p> <ol style="list-style-type: none"> 1. Single-click on the Netscape browser Back button to redisplay the Open Intervention Detail page. 2. Single-click on the Update FtpPush Parameters box to uncheck it. 3. Complete the intervention. <p>[For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>

Table 18.6-5. Order Manager GUI User Messages (10 of 12)

Message Text	Impact	Cause and Corrective Action
<p>You can not update the FTP Push parameters for this request because the media type is <old media>. Please hit your browser's Back button and correct this.</p>	<p>Intervention cannot be resolved.</p>	<p>This message appears if the operator inadvertently checked the Update FtpPush Parameters box, even though the media type for the request is not ftp push. The operator should go back and uncheck this box. The error message should be quite rare, because normally the Update FtpPush Parameters box does not appear if the media type is not ftp push.</p> <ol style="list-style-type: none"> 1. Single-click on the Netscape browser Back button to redisplay the Open Intervention Detail page. 2. Single-click on the Update FtpPush Parameters box to uncheck it. 3. Complete the intervention. <p>[For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>
<p>You have entered partitioning days/hours, but have not indicated that you want to spread the request over this time period! (you probably forgot to check the AND box). Hit your browser's Back button to correct this.</p>	<p>Intervention cannot be resolved.</p>	<p>The operator probably intended to partition the request but forgot to check the "and" box. The redundancy is intended to ensure that the correct action is taken.</p> <ol style="list-style-type: none"> 1. Single-click on the Netscape browser Back button to redisplay the Open Intervention Detail page. 2. Single-click on the box in front of and spread request over. 3. Complete the intervention. <p>[For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>

Table 18.6-5. Order Manager GUI User Messages (11 of 12)

Message Text	Impact	Cause and Corrective Action
<p>You have indicated you want to change the media, but did not select the media type. Hit your browser's Back button to correct this</p>	<p>Intervention cannot be resolved.</p>	<p>The operator checked the Change Media to: but did not select a different medium from the New Medium option button. The operator should go back to the previous page and either select a new medium or uncheck the Change Media to: box and ensure that the New Medium option button is set to "- -".</p> <ol style="list-style-type: none"> 1. Single-click on the Netscape browser Back button to redisplay the Open Intervention Detail page. 2. If a new distribution medium is being selected, verify that the Change Media to: box is checked. (Single-click on it if necessary). 3. If a new distribution medium is being selected, verify that the New Medium option button is displaying the appropriate medium. [If necessary, single-click and hold the New Medium option button to display a menu of media, move the mouse cursor to the desired selection (highlighting it), then release the mouse button.] 4. If the old distribution medium is being retained, verify that the Change Media to: box is not checked. (Single-click on it if necessary). 5. If the old distribution medium is being retained, verify that the New Medium option button is displaying "- -". [If necessary, single-click and hold the New Medium option button to display a menu of media, move the mouse cursor to the desired selection (highlighting it), then release the mouse button.] 6. Complete the intervention. <p>[For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>

Table 18.6-5. Order Manager GUI User Messages (12 of 12)

Message Text	Impact	Cause and Corrective Action
<p>You have selected a new media type, but not did indicate you actually wanted the media changed. Hit your browser's Back button to correct this.</p>	<p>Intervention cannot be resolved.</p>	<p>The operator changed the distribution medium for the request on the Open Intervention Detail page but did not check the Change Media to: box. The redundancy is intended to ensure that the operator does indeed want to change the distribution medium. The operator should go back to the previous page and either check the Change Media to: box or ensure that the New Medium option button is set to "- -". (indicating no change).</p> <ol style="list-style-type: none"> 1. Single-click on the Netscape browser Back button to redisplay the Open Intervention Detail page. 2. If a new distribution medium is being selected, verify that the Change Media to: box is checked. (Single-click on it if necessary). 3. If a new distribution medium is being selected, verify that the New Medium option button is displaying the appropriate medium. [If necessary, single-click and hold the New Medium option button to display a menu of media, move the mouse cursor to the desired selection (highlighting it), then release the mouse button.] 4. If the old distribution medium is to be retained, verify that the Change Media to: box is not checked. (Single-click on it if necessary). 5. If the old distribution medium is to be retained, verify that the New Medium option button is displaying "- -". [If necessary, single-click and hold the New Medium option button to display a menu of media, move the mouse cursor to the desired selection (highlighting it), then release the mouse button.] 6. Complete the intervention. <p>[For detailed instructions refer to the Respond to Open Interventions procedure (Section 18.5.2).]</p>

18.6.1.1 Check Connections to Hosts/Servers

The procedure to **Check Connections to Hosts/Servers** is a part of the **Troubleshoot a Data Distribution or Order Manager GUI Failure** procedure (Section 18.6.1). Table 18.6-6 presents (in a condensed format) the steps required to check connections to hosts/servers. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the Distribution Server host.
 - Examples of Distribution Server host (Sun internal server host) names include **e0acs06**, **g0acs06**, **l0acs06**, and **n0acs06**.
 - Most other ECS hosts are acceptable for checking connections.
 - Log-in is described in the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the command line prompt enter:

```
cd /usr/ecs/<MODE>/CUSTOM/utilities
```

 - Change directory to the directory containing the utility scripts.

- 3 At the command line prompt enter:

```
EcCsIdPingServers <MODE>
```

 - The following type of response is displayed (only a few representative lines are shown):

```
/usr/ecs/TS2/CUSTOM/bin/CSS/Sweeper -nsh x0icg01 -nsp 18202
FoSwSweeper application started...
We made a connection with EntryId =x0acs06:38709:23057 ---
EcSrTransportSubServer
We made a connection with EntryId =x0acs06:38712:23057 ---
EcSrTransportSubEventServer
We made a connection with EntryId =x0acs06:33379:17033 --- DsShQuitIDL
[...]
```

- 4 Observe the results displayed on the screen to determine whether connections can be made with the necessary hosts and servers.
 - The necessary hosts and servers are listed in Table 18.6-7, Hosts, Servers, Clients and Other Software Relevant to Data Distribution and the Order Manager GUI.

- 5 If pinging the servers (Step 3) indicated a problem with any connection, ping the servers again (at the command line prompt enter: **EcCsIdPingServers <MODE>**).

- 6 Observe the results displayed on the screen to determine whether connections can be made with the necessary hosts and servers.

- 7 If it is not possible to connect to any needed host(s)/server(s), notify the Operations Controller/System Administrator to check the hosts/servers and bring them back up if necessary.

- 8 Return to the procedure that recommended checking connections to hosts.

Table 18.6-6. Check Connections to Hosts/Servers - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (Sun internal server)	single-click or use procedure in Section 18.2.1
2	<code>cd /usr/ecs/<MODE>/CUSTOM/utilities</code>	enter text, press Enter
3	<code>EcCslidPingServers <MODE></code>	enter text, press Enter
4	<code>EcCslidPingServers <MODE> [again]</code>	enter text, press Enter
5	Identify hosts and servers with which connections cannot be made	read text
6	Notify the Operations Controller/System Administrator to bring hosts/servers back up (if applicable)	contact Operations Controller
7	Return to the procedure that recommended checking connections to hosts	

Table 18.6-7. Hosts, Servers, Clients and Other Software Relevant to Data Distribution and the Order Manager GUI (1 of 2)

HOST	SERVER/CLIENT/OTHER SOFTWARE
Sun internal server (e.g., x0acs06)	Distribution Server (EcDsDistributionServer) 8mm Server (EcDsSt8MMServer) Storage Management Request Manager (EcDsStRequestManagerServer) Staging Disk Server (EcDsStStagingDiskServer) Granule Deletion Process (EcDsGranuleDelete) Science Data Server (EcDsScienceDataServer) Science Data Server Client (EcDsScienceDataServerClient) Subscription Server (EcSbSubServer)
Operations Workstation (e.g., x0acs02)	Data Distribution Operator GUI (EcDsDdistGui) Storage Management Control GUI (EcDsStmgtGui) Science Data Server GUI (EcDsSdSrvGui)
Access/Process Coordinators (APC) Server (e.g., x0acg01)	Archive Server (EcDsStArchiveServer) Cache Manager Servers (EcDsStCacheManagerServer) (including Pull Area Manager) FTP Server (EcDsStFtpServer) Staging Disk Server (EcDsStStagingDiskServer)
FSMS Server (e.g., x0drg01)	HDF EOS Server (EcDsHdfEosServer) Archive Server (EcDsStArchiveServer) Cache Manager Server (EcDsStCacheManagerServer) FTP Server (EcDsStFtpServer) Staging Disk Server (EcDsStStagingDiskServer)

Table 18.6-7. Hosts, Servers, Clients and Other Software Relevant to Data Distribution and the Order Manager GUI (2 of 2)

HOST	SERVER/CLIENT/OTHER SOFTWARE
Ingest Server (e.g., x0icg01)	Name Server (EcCsIdNameServer) Registry Server (EcCsRegistry)
Data Pool Server (e.g., x0dps01)	Order Manager GUI (EcOmGuiHomePage.pl)

18.6.1.2 Check Log Files

The procedure to **Check Log Files** is a part of the **Troubleshoot a Data Distribution or Order Manager GUI Failure** procedure (Section 18.6.1). Checking log files can provide indications of the following types of problems (among others):

- Communication problems.
- Database problems.
- Lack of disk space.

Table 18.6-8 presents (in a condensed format) the steps required to check log files. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the appropriate host.
 - Sun internal server (e.g., **e0acs06**, **g0acs06**, **l0acs06**, or **n0acs06**) has the following data distribution, storage management, science data server, and subscription server (SBSRV) log files:
 - EcDsDistributionServer.ALOG.
 - EcDsSt8MMServerNONE.ALOG.
 - EcDsStRequestManagerServer.ALOG
 - EcDsStStagingDiskServerDIP1.ALOG.
 - EcDsGranuleDelete.ALOG.
 - EcDsScienceDataServer.ALOG.
 - EcDsScienceDataServerClient.ALOG.
 - EcDsSdSrvGui.ALOG.
 - EcSbSubServer.ALOG file.
 - APC Server (e.g., **e0acg11**, **g0acg01**, **l0acg02**, or **n0acg01**) has the following storage management ALOG files:
 - EcDsStArchiveServerACM1.ALOG.
 - EcDsStCacheManagerServerACM1.ALOG.
 - EcDsStFtpServerNONE.ALOG.
 - EcDsStStagingDiskServerACM1.ALOG.

- FSMS Server (e.g., **e0drg11**, **g0drg01**, **l0drg01**, or **n0drg01**) has the following storage management ALOG files:
 - EcDsHdfEosServer.ALOG.
 - EcDsStArchiveServerDRP1.ALOG
 - EcDsStCacheManagerServerDRP1.ALOG.
 - EcDsStFtpServerDRP1.ALOG.
 - EcDsStStagingDiskServerDRP1.ALOG.
- Operations Workstation (e.g., **e0acs03**, **g0acs02**, **l0acs01**, or **n0acs03**) has the following science data server log files:
 - EcDsDdistGui.ALOG.
 - EcDsStmgtGui.ALOG.
 - EcDsSdSrvGui.ALOG.
- In addition to the ALOG files mentioned the preceding hosts have corresponding debug log files.

2 At the command line prompt enter:

cd /usr/ecs/<MODE>/CUSTOM/logs

- **<MODE>** is current mode of operation.
 - TS1 - Science Software Integration and Test (SSI&T)
 - TS2 - New Version Checkout
 - OPS - Normal Operations
- **"logs"** is the directory containing data distribution, science data server, or storage management log files (e.g., EcDsDdistGui.ALOG, EcDsDistributionServer.ALOG).

3 At the command line prompt enter:

pg <file name>

- **<file name>** refers to the log file to be reviewed (e.g., EcDsDdistGui.ALOG, EcDsDistributionServer.ALOG).
- The first page of the log file is displayed.
- Although this procedure has been written for the **pg** command, any UNIX editor or visualizing command (e.g., **more**, **vi**, **view**) can be used to review the log file.

- 4 Review the log file to identify problems that have occurred.
 - To exit from **pg** at the **:** prompt enter:
 - q**
 - The command line prompt is displayed.

- 5 Respond to problems as follows:
 - DDIST- or STMGT-related problems.
 - Perform the appropriate procedure(s) from those listed in Table 18.6-1, Troubleshooting DDIST Problems.
 - Communication problems.
 - Notify the Operations Controller/System Administrator of suspected communication problems.
 - Database problems.
 - Verify that relevant database servers are running.
 - Check for lack of (or corruption of) data in the database using either a database browser or interactive structured query language (isql) commands.
 - Notify the Database Administrator of suspected database problems.
 - Lack of disk space.
 - Remove unnecessary files.
 - Notify the Operations Controller/System Administrator of recurring disk space problems.

Table 18.6-8. Check Log Files - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window logged in to appropriate host	single-click or use procedure in Section 18.2.1
2	cd /usr/ecs/<MODE>/CUSTOM/logs	enter text, press Enter
3	pg <file name>	enter text, press Enter
4	Identify problems indicated in the log file	read text
5	Respond to problems as necessary	

18.6.2 Recover from a Data Distribution Failure

The automated data distribution processes (push and pull) normally do not require intervention by the Distribution Technician. However, when a data distribution fault (error) occurs, there may be a requirement for action to recover from the error. For example, recovery actions may be made necessary by the failure of storage management to acquire granules from the archive so they can be distributed. When a fault (error) occurs, the request status on the **Distrib'n Requests** tab of the **Data Distribution Operator GUI** is likely to change to “Suspended with Errors.”

The Distribution Technician may use the **Data Distribution Operator GUI Distrib'n Requests** tab and/or log files on various host machines to review the failure event.

Diagnosing an acquire failure involves examining the following system log files and directories involved in the process:

- Request Manager server debug log file (EcDsStRequestManagerServerDebug.log), if available.
- Science Data Server ALOG file (EcDsScienceDataServer.ALOG) and/or Science Data Server debug log file (EcDsScienceDataServerDebug.log).
- Archive Server ALOG file (EcDsStArchiveServer<HWCIn>.ALOG) and/or Archive Server debug log file (EcDsArchiveServerDebug.log).
 - <HWCIn> represents a particular hardware configuration item; for example, EcDsStArchiveServerACM1.ALOG would be located on the APC Server x0acg01.
- Staging Area.
 - Presence of the relevant file(s).
 - Staging disk log files (EcDsStStagingDiskServer<HWCIn>.ALOG, EcDsStagingDiskServerDebug.log) or cache manager log files (EcDsStCacheManagerServer<HWCIn>.ALOG, EcDsCacheManagerServerDebug.log).
 - Space available in the staging area.

Table 18.6-9 presents (in a condensed format) the steps required to respond to recover from a data distribution failure. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Observe the information displayed on the **Distrib'n Requests** tab of the **Data Distribution Operator GUI** to identify distribution requests with a status of “Suspended with Errors.”
- 2 If a suspended request has the error mnemonic **DsEDdXLargeRequest** associated with it, perform the **Respond to Requests that Exceed the Distribution Request Threshold** procedure (Section 18.6.2.1).
- 3 Perform the appropriate procedure(s) for responding to an acquire failure:
 - **Check the Connection to the Remote FTP Host** (Section 18.6.2.2).
 - **Check the Request Manager Server Debug Log** (Section 18.6.2.3).
 - **Check the Science Data Server Log Files** (Section 18.6.2.4).
 - **Check the Archive Server Log Files** (Section 18.6.2.5).
 - **Check the Staging Disk** (Section 18.6.2.6).
 - **Check the Staging Disk ALOG File** (Section 18.6.2.7).
 - **Check the Space Available in the Staging Area** (Section 18.6.2.8).

- 4 If additional information is needed, open and read the appropriate log file in the `/usr/ecs/<MODE>/CUSTOM/logs` directory on the appropriate host machine(s).
 - Applicable host machines are listed in Table 18.6-7, Hosts, Servers, Clients and Other Software Relevant to Data Distribution and the Order Manager GUI.
 - For detailed instructions refer to the **Check Log Files** procedure (Section 18.6.1.2).
- 5 If the problem could not be identified through any of the preceding steps, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
- 6 When the problem has been corrected, review the information displayed on the **Distrib'n Requests** tab of the **Data Distribution Operator GUI** to determine whether the distribution request resumed processing.
- 7 If the distribution request does not resume processing after the problem has been corrected, return to Step 3.

Table 18.6-9. Recover from a Data Distribution Failure - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Identify distribution requests with a status of "Suspended with Errors" (on the Distrib'n Requests tab of the Data Distribution Operator GUI)	read text
2	Respond to requests that exceed the distribution request threshold (if applicable)	Use procedure in Section 18.6.2.1
3	Respond to the acquire failure (if applicable)	Use applicable procedure(s) in Sections 18.6.2.2 through 18.6.2.8
4	Check log files (if applicable)	Use procedure in Section 18.6.1.2
5	Submit a trouble ticket (if applicable)	Use procedure in Chapter 8
6	Determine whether the distribution request resumed processing (on the Distrib'n Requests tab of the Data Distribution Operator GUI)	read text
7	Return to Step 3 (if necessary)	

18.6.2.1 Respond to Requests that Exceed the Distribution Request Threshold

The procedure to **Respond to Requests that Exceed the Distribution Request Threshold** is a part of the **Recover from a Data Distribution Failure** procedure (Section 18.6.2).

When a distribution request exceeds the corresponding distribution request threshold (e.g., FtpPushThreshold or FtpPullThreshold), the request is suspended in DDIST with the following error mnemonic:

- DsEDdXLargeRequest

Table 18.6-10 presents (in a condensed format) the steps required to respond to requests that exceed the distribution request threshold. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Record (e.g., write down) the Request ID (as displayed on the **Distrib'n Requests** tab of the **Data Distribution Operator GUI**) for the request that exceeds the distribution request threshold.
- 2 Cancel the request.
 - For detailed instructions refer to the **Cancel Data Distribution Requests** procedure (Section 18.2.8).
- 3 Contact User Services to determine whether or not the user's request should be processed.
 - User Services may contact the requester to verify whether or not the requester intended to order so much data.
- 4 If User Services responds that the request should be completed, determine whether User Services or Distribution will partition and resubmit the request.
- 5 If User Services responds that the request should be completed and that Distribution should partition the request, partition and resubmit the request.
 - For detailed instructions refer to the **Resubmit Completed Distribution Requests** procedure (Section 18.5.3).

Table 18.6-10. Respond to Requests that Exceed the Distribution Request Threshold - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Record the Request ID	write text
2	Cancel the data distribution request	Use procedure in Section 18.2.8
3	Determine whether or not the user's request should be processed	contact User Services
4	Determine whether User Services or Distribution will partition and resubmit the request	contact User Services
5	Partition/resubmit the request (as applicable)	Use procedure in Section 18.5.3

18.6.2.2 Check the Connection to the Remote FTP Host

The problem is that a distribution request for FtpPush of data to a remote host (e.g., ftp.averstar.com) shows a status of “Suspended with Errors” and it is suspected that it may not be possible to connect to the remote host.

In order to check the connection to remote hosts the necessary script to support ping (e.g., “st”) must be available on ECS and the Distribution Technician must know its location. For example, at one DAAC the script “st” (written to support operations in the OPS mode) might be available in the home directory for the “train1” user.

Table 18.6-11 presents (in a condensed format) the steps required to check the connection to the remote ftp host. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the APC Server host.
 - Examples of APC Server host names include **e0acg11**, **g0acg01**, **l0acg02**, and **n0acg01**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:
cd <path>
 - **<path>** represents the directory path (e.g., /home/train1) to the directory containing the necessary script.
 - The necessary script (e.g., “st”) to support ping (e.g., “st”) to support ping the remote host through the firewall must be available and the Distribution Technician must know its location.

- 3 At the UNIX command line prompt enter:
./st -ping <remotehost>
 - **<remotehost>** represents the remote host to be checked.
 - For example:
./st -ping ftp.averstar.com
 - The following type of response indicates successful ping (e.g., “st”) to support ping the remote host:
PING 192.5.114.4: (192.5.114.4): 56 data bytes
64 bytes from 192.5.114.4: icmp_seq=0 ttl=247 time=26 ms
64 bytes from 192.5.114.4: icmp_seq=1 ttl=247 time=23 ms
64 bytes from 192.5.114.4: icmp_seq=2 ttl=247 time=23 ms
64 bytes from 192.5.114.4: icmp_seq=3 ttl=247 time=28 ms
64 bytes from 192.5.114.4: icmp_seq=4 ttl=247 time=25 ms
 - If there is no such response within a few seconds (no more than 20 seconds), it is likely that ping (e.g., “st”) to support ping has failed and the remote host is not currently accessible.

- The same general syntax can be used to perform a trace; i.e., at the UNIX command line prompt enter:

./st -trace <remotehost>

4 To stop sending packets to the remote host at the UNIX command line prompt enter:

Ctrl-c

- The following type of response after entering **Ctrl-c** is another type of indication that pinging failed:

----ftp.averstar.com PING Statistics----
43 packets transmitted, 0 packets received, 100.0% packet loss

5 If pinging the remote host failed, go to Step 12.

6 If pinging the remote host was successful, at the UNIX command line prompt enter:

ftp <firewall host>

- **<firewall host>** represents the firewall host.
 - The System Administrator can identify the firewall host if necessary.

- The following type of response should be displayed:

Connected to x0host0.daac.ecs.nasa.gov.

ftp>

```

- The purpose of this step is to verify accessibility to directories on the remote host.

12 At the **ftp>** prompt enter:

quit

- The connection to the ftp host is terminated.

13 If a connection could not be made with the remote ftp server or if pinging was successful but the ftp could not be negotiated, notify the remote system’s point of contact of the problem.

14 If the remote system’s point of contact has been notified of a problem pinging or making an ftp connection, wait until the communication problem has been resolved.

15 When the communication problem has been resolved (or after waiting a reasonable period of time), return to Step 1.

- If necessary, the supervisor can provide guidance concerning what is a “reasonable” period of time to wait.

16 After a successful ftp test of the connection with the remote host, resume the affected distribution request(s).

- For detailed instructions refer to the **Suspend/Resume Data Distribution Requests** procedure (Section 18.2.7).

17 If the same distribution request(s) show(s) a status of “Suspended with Errors” again, recover from the data distribution failure using the **Recover from a Data Distribution Failure** procedure (Section 18.6.2).

Table 18.6-11. Check the Connection to the Remote FTP Host - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	UNIX window (APC Server)	single-click or use procedure in Section 18.2.1
2	cd <path>	enter text, press Enter
3	./st -ping <remotehost>	enter text, press Enter
4	Ctrl-c	enter text
5	Go to Step 12 (if pinging failed)	
6	ftp <firewall host>	enter text, press Enter

Table 18.6-11. Check the Connection to the Remote FTP Host - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
7	Enter key	press
8	quote site <remotehost>	enter text, press Enter
9	user anonymous	enter text, press Enter
10	<password>	enter text, press Enter
11	ls	enter text, press Enter
12	quit	enter text, press Enter
13	Notify the remote system's point of contact of the problem (if applicable)	contact remote system's point of contact
14	Wait until the communication problem has been resolved (if applicable)	wait
15	Return to Step 1 (if applicable)	
16	Resume the affected distribution request(s) (after successful ftp test)	Use procedure in Section 18.2.7
17	Go the Recover from a Data Distribution Failure procedure [if the same distribution request(s) is (are) suspended with errors again]	Use procedure in Section 18.6.2

18.6.2.3 Check the Request Manager Server Debug Log

The procedure to **Check the Request Manager Server Debug Log** is a part of the **Recover from a Data Distribution Failure** procedure (Section 18.6.2). It is performed in response to an acquire failure.

The Request Manager server processes requests from external clients (processes outside of Storage Management). Requests between Storage Management servers are passed directly from one server to another.

- Requests that require one of the Storage Management servers to perform processing are checkpointed (except requests that can be serviced solely through SQL).
 - Checkpointing involves recording the request's state (e.g., "checkpointed," "failed," "completed") in the database to assist in error recovery.
- Requests that can be serviced solely through SQL are considered "trivial" requests.
 - Trivial requests are not checkpointed.
 - Examples include attaching to a staging disk, getting capacity, and getting block size.
 - Trivial requests submitted from outside Storage Management are serviced by the Request Manager server.
 - Trivial requests originating within Storage Management are passed directly from the client to the database server.

The Request Manager server (like other Storage Management servers) can manage several concurrent activities. This is accomplished through the use of threads. There are several different kinds of threads:

- Manager thread.
 - One per Storage Management server.
 - Responsible for dequeuing requests and assigning them to service threads.
 - Checks for cancelled requests.
- Service thread.
 - Multiple threads per Storage Management server.
 - Responsible for the actual servicing of requests.
 - Logs all progress including all changes of request state.
 - Notifies submitter when request has been completed.
- Receptionist thread.
 - One per Storage Management server.
 - Registers the server as "up" in the database.
 - Sits on a socket, waiting for connections from other Storage Management servers.
 - Unregisters the server at shutdown.
- Inbound RPC thread.
 - Spawned by a request from a Storage Management client.
 - Hands off the request to the manager thread and waits for completion of the request.
- Housekeeper thread.
 - Watches for completed requests, which haven't previously been seen and processed.

Information concerning Request Manager server processing of requests (identified by thread) is recorded in the Request Manager server debug log (assuming some level of debug log recording is specified in the Registry database).

Trivial requests typically involve the following types of activities:

- Inbound RPC thread appears with a request.
- Manager thread dequeues the request and assigns it to a service thread.
- Service thread recognizes the thread as "trivial."
 - A "No checkpointing required -- going straight to responded" message is recorded in the Request Manager server debug log.
- Service thread executes the database transaction for results.
 - When the request is completed, a "Done servicing" message is recorded in the Request Manager server debug log.
 - If the request fails, an "Unable to service" message is recorded in the Request Manager server debug log.

- Service thread hands the results to the inbound RPC thread.
 - A "Notifying the client" message is recorded in the Request Manager server debug log.
- Inbound RPC thread silently returns to the client with the results.

Non-trivial requests are forwarded to the appropriate Storage Management server (e.g., EcDsStFtpServer, EcDsStStagingDiskServer, EcDsStArchiveServer) for processing.

- Some of the same types of entries are made in the Request Manager server debug log for non-trivial requests as for trivial requests. For example:
 - "Waking up service thread" (Request Manager is preparing to process the request).
 - "Done servicing" (request processing has been completed).
 - "Unable to service" (the request has failed).
- Although some trivial requests include "token" statements, tokens are characteristic of non-trivial requests.
- A token includes request information that varies with the type of operation to be performed.
- For example, a token for an ftp request might include the following types of data:
 - Stored procedure (e.g., DsStFRInsert) [other types of stored procedures include DsStSDRInsert and DsStGRMapLogicalArchiveId].
 - RPC ID (e.g., RPCId=1821_535_1109-1124464729_171062001_x0acs06.xdc.ecs.nasa.gov:SBSVSDSV1DSDD1DSDD4:).
 - Username.
 - Encrypted password.
 - Host.
 - Source path.
 - Destination path.
 - External request ID.
 - Server name (e.g., EcDsStFtpServerNONE) [other types of operations might involve the EcDsStStagingDiskServerDRP1 for example].
 - Type of operation (e.g., FtpPush) [other types of operations include ArRetrieve, SDAllocateDisk, SDLinkFile].
 - Submitter (e.g., DSDD) [other types of operations might involve SDSV].
 - Priority.
- The server to which the request was sent is identified by name (ServerName).
- Transaction ID is embedded in the RPC ID (the portion before the first colon in the RPC ID).

A "transaction" may involve multiple operations on a host or several hosts. Consequently, multiple threads may be used on each relevant host.

Table 18.6-12 presents (in a condensed format) the steps required to check the Request Manager Server debug log. If you are already familiar with the procedures, you may prefer to use the

quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the Distribution Server host.
 - Examples of Distribution Server host (Sun internal server host) names include **e0acs06**, **g0acs06**, **l0acs06**, and **n0acs06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:
cd /usr/ecs/<MODE>/CUSTOM/logs
 - **<MODE>** is current mode of operation.
 - **"logs"** is the directory containing Request Manager Server debug log files (e.g., **EcDsStRequestManagerServerDebug.log**).

- 3 At the command line prompt enter:
pg <file name>
 - **<file name>** refers to the appropriate Request Manager debug log file.
 - For example:
pg EcDsStRequestManagerServerDebug.log
 - The content of the first page of the specified file is displayed.
 - Although this procedure has been written for the **pg** command, any UNIX editor or visualizing command (e.g., **vi**, **view**, **more**) can be used to review the log file.

- 4 At the **:** prompt enter:
/<date> <time>
 - **<date> <time>** refers to the approximate date and time of the problem.
 - For example:
06/18/01 12:17:31
 - The file is searched for the specified text.
 - If the specified text is in the log file, the following type of response is displayed.
...skipping forward
06/18/01 12:17:31: Thread ID : 105 : DsShTSSStorage: creating the MutexVec for this thread
[...]
 - If the specified text is not in the log file, the following type of response is displayed.
Pattern not found:
 - If the specified text is not in the log file, verify that the proper file was opened (Step 3) and that the date and time were entered correctly (Step 4).

- 5 At the `:` prompt enter:
/Unable to service
- **pg** searches the file for the specified text.
 - If the specified text is in the log file, the following type of response is displayed.

```
...skipping forward
2:IngestRQ409GR1 Unable to service | Thread 52
[...]
```
 - If the specified text is not in the log file, the following type of response is displayed.

```
Pattern not found:
```
 - If the specified text is in the file, go to Step 7.
 - If the specified text is not in the file, go to Step 6.
- 6 Examine the contents of the log file to determine which thread is associated with the problem being investigated.
- The following **pg** commands (at the `:` prompt) are useful:
 - **n** then **Return/Enter** (go to Page *n*).
 - **Return/Enter** or **+1** then **Return/Enter** (go down to the next page).
 - **-1** then **Return/Enter** (go back to the preceding page).
 - **+n** then **Return/Enter** (go down *n* number of pages).
 - **-n** then **Return/Enter** (go back *n* number of pages).
 - **+nl** then **Return/Enter** (go down *n* number of lines).
 - **-nl** then **Return/Enter** (go back *n* number of lines).
 - **\$** then **Return/Enter** [go to the last page (end of file)].
 - **q** then **Return/Enter** (exit from **pg**).
- 7 At the `:` prompt enter:
<search text>
- To search back toward the beginning of the file enter:
^Waking up service thread <number>^
 - To search back toward the end of the file enter:
/Waking up service thread <number>
 - For example:
^Waking up service thread 52^
 - The file is searched back toward the beginning of the file for the specified text.

- If the specified text is in the log file, the following type of response is displayed.
...skipping backward
06/18/01 12:17:31: Thread ID : 102 : Waking up service thread 52 | Thread 102
[...]
- If the specified text is not in the log file, the following type of response is displayed.
Pattern not found:
- The entries "Waking up service thread <number>" and "Unable to service | Thread <number>" bracket the thread servicing in which an error occurred.

NOTE: Thread IDs are reused frequently. There are likely to be many processes with the same thread ID in any particular log file. It is important to follow the correct instance of the thread.

NOTE: It is likely that the Request Manager would try again to process a failed request. Subsequent request processing may use the same thread ID or a different thread ID. However, it would involve the same transaction ID.

- A "No checkpointing required -- going straight to responded" entry associated with the thread ID indicates that the request is "trivial."

8 At the : prompt enter:

/SEARCHING

- The file is searched for the specified text.
 - If the specified text is in the log file, the following type of response is displayed.
...skipping forward
06/18/01 12:17:31: Thread ID : 52 : SEARCHING FOR: 30148 (Found) | Thread 52
06/18/01 12:17:31: Thread ID : 52 : SEARCHING FOR: 30148 (Found) | Thread 52
06/18/01 12:17:31: Thread ID : 52 : DsStStoredProcedures::Execute - ERROR: Could not execute stored procedure | Thread 52
06/18/01 12:17:31: Thread ID : 52 : Error encountered in stored procedure | Thread 52
06/18/01 12:17:31: Thread ID : 52 : DBIF:Execute: Ultimate SQL: ROLLBACK TRANSACTION OUTER_7077776 | Thread 52
06/18/01 12:17:32: Thread ID : 52 : 1_4501810_1217-1124633447_169062001_x0icg01.xdc.ecs.nasa.gov:IPOBIPOB1INRM1IGS A15:IngestRQ409GR1 Done servicing | Thread 52

```

06/18/01 12:17:32: Thread ID : 52 : 1_4501810_1217-
1124633447_169062001_x0icg01.xdc.ecs.nasa.gov:IPOBIPOB1INRM1IGS
A15:IngestRQ409GR1 Unable to service | Thread 52
06/18/01 12:17:32: Thread ID : 52 : 1_4501810_1217-
1124633447_169062001_x0icg01.xdc.ecs.nasa.gov:IPOBIPOB1INRM1IGS
A15:IngestRQ409GR1 Marked as unassigned | Thread 52
06/18/01 12:17:32: Thread ID : 52 : 1_4501810_1217-
1124633447_169062001_x0icg01.xdc.ecs.nasa.gov:IPOBIPOB1INRM1IGS
A15:IngestRQ409GR1 Notifying the client | Thread 52
06/18/01 12:17:32: Thread ID : 52 : Waiting for work | Thread 52
06/18/01 12:17:32: Thread ID : 52 : Waking up manager thread | Thread
52
[...]

```

- In the example the expression **SEARCHING** is associated with Thread ID 52.
- The context of the **SEARCHING** statement indicates the type and source of the problem; in this case there appears to be a problem executing a stored procedure.
- If the specified text is not in the log file, the following type of response is displayed.

Pattern not found:

9 If the expression **SEARCHING** is not associated with the specified thread in the lines displayed, repeat Step 8.

10 If necessary, at the **:** prompt enter:

-21

- **pg** simulates scrolling the screen backward two lines (or any other number of lines that is typed at the prompt).
 - The file is redisplayed to include the two lines that preceded the page previously displayed.
 - For example:

...skipping backward

```

06/18/01 12:17:31: Thread ID : 52 : DBIF:Execute: Ultimate SQL: exec
DsStSDAttachDisk

```

```

"/usr/ecs/TS2/CUSTOM/pdps/x0spg01/data/DpPrRm/x0spg01_disk",
"SDSV", 0 | Thread 52

```

```

06/18/01 12:17:31: Thread ID : 52 : SEARCHING FOR: 30148 (Found) |
Thread 52

```

```

06/18/01 12:17:31: Thread ID : 52 : SEARCHING FOR: 30148 (Found) |
Thread 52

```

```

06/18/01 12:17:31: Thread ID : 52 : DsStStoredProcedures::Execute -
ERROR: Could not execute stored procedure | Thread 52

```

**06/18/01 12:17:31: Thread ID : 52 : Error encountered in stored procedure
| Thread 52
[...]**

- The additional lines preceding "SEARCHING FOR" in the example indicate that the stored procedure in which the error was encountered is DsStSDAttachDisk.

11 To quit the **pg** application at the **:** prompt enter:

q

- **pg** exits from the Request Manager server debug log file.

12 If the request is a trivial request, go to Step 22.

13 If the request is a non-trivial request, open a separate UNIX window.

- The results of related operations on the server involved in performing copy or ftp functions for the transaction are going to be checked in a separate UNIX window.

14 Access a terminal window logged in to the appropriate server host for the server involved in performing copy or ftp functions for the transaction.

- Examples of appropriate server host names include **e0drg11**, **g0drg01**, **l0drg01**, and **n0drg01**.
- For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

15 At the shell prompt enter:

grep '<Transaction ID>' <file name> | grep 'LogProgress'

- For example:
grep 'af610628-' EcDsStArchiveServerDebug.log | grep 'LogProgress'
- **<file name>** refers to the name of the log file for the process involved in performing copy or ftp functions for the transaction.
- **<Transaction ID>** refers to the Transaction ID associated with the applicable request.
- In this example af610628-1dd1-11b2-a047-af3a589fd88e is the relevant Transaction ID.
 - However, usually it is not necessary to use the entire Transaction ID in the command; a representative sample (e.g., af610628- from the example) should be sufficient.
 - References to other Transaction IDs and entries that do not contain the string "LogProgress" are filtered out so references to the specified Transaction ID that contain the string "LogProgress" are the only log entries displayed. (The string "LogProgress" is a filter for references to stored procedure DsStGRLogProgress.)
 - Progress is logged for copy and ftp input/output at each block.

- The following type of response is displayed:

```
06/26/01 12:46:00: Thread ID : 65674 : myTransactionList[1]: exec
DsStGRLogProgress "af610628-1dd1-11b2-a047-

12:46:43: | Thread : 65714read 65674 : 74
```

- If no progress is indicated, go to Step 22.

16 **Single-click** in the UNIX window for the Distribution Server host (Sun internal server host).

17 In the UNIX window for the Distribution Server host (Sun internal server host) at the command line prompt enter:

```
/usr/ecs/<MODE>/CUSTOM/logs
```

- Change to the "logs" directory in the appropriate mode.

18 At the command line prompt enter:

```
grep '<Transaction ID>' <file name> | grep 'Done servicing'
```

- <file name> refers to the appropriate Request Manager debug log.
- For example:

```
grep 'af610628-' EcDsStRequestManagerServerDebug.log | grep 'Done
servicing'
```

- If the operation has been completed, the following type of response is displayed:

```

06/26/01 12:46:00: Thread ID : 52 : af610628-1dd1-11b2-a047-

3.001:55732 Done servicing | Thread 52

```

- The statement "Done servicing" shows that the operation has been completed; however, it provides no indication as to whether the operation succeeded or failed.
- If "Done servicing" is followed by "Unable to service," (as described in Step 19) the operation failed.
- If the operation has not been completed, no file entries are displayed (the UNIX prompt is displayed).
 - It may just be slow to complete.
- If the operation has been completed, go to Step 19.
- If the operation has not been completed, go to Step 20.

19 At the shell prompt enter:

```
grep '<Transaction ID>' <file name> | grep 'Unable to service'
```

- <file name> refers to the appropriate Request Manager debug log.
- For example:

```
grep '2a7d4168-' EcDsStRequestManagerServerDebug.log | grep 'Unable to service'
```

- If the request has failed, the following type of response is displayed:

```
06/26/01 12:56:22: Thread ID : 52 : 2a7d4168-1dd2-11b2-8c52-99d0f708dce5:PDPSSDSV1:MoPGE02#sy14182000TS2MOD02OBC Unable to service | Thread 52
```

```
06/26/01 12:56:22: Thread ID : 52 : 2a7d4168-1dd2-11b2-8c52-99d0f708dce5:PDPSSDSV4:MoPGE02#sy14182000TS2MOD02OBC Unable to service | Thread 52
```

- If the operation has failed, return to Step 7.
- If the operation has not failed, no file entries are displayed (the UNIX prompt is displayed).

20 At the shell prompt enter:

```
tail -f <file name> | grep '<Transaction ID>'
```

- <file name> refers to the appropriate Request Manager debug log.
- <Transaction ID> refers to the Transaction ID associated with the applicable request.
- For example:

```
tail -f EcDsStRequestManagerServerDebug.log | grep 'af610628-'
```

- If new entries are being posted to the log, the operation has not finished yet.
 - If the same entries continue to be repeated over and over, there could be a problem with the server.
 - Notify the Operations Controller/System Administrator of suspected server problems.
- If it is necessary to exit from a tailed log, enter:

```
^c [Ctrl-c]
```

21 If the operation has not finished yet, monitor the tailed log for awhile.

- If the operation does not seem to finish (i.e., if entries continue to be made to the tailed log) after a reasonable period of time (e.g., 30 minutes), notify the Operations Controller/System Administrator of the problem.
- If it is necessary to exit from a tailed log, enter:

```
^c [Ctrl-c]
```

- 22 If problems were detected in the Request Manager server debug log and/or the log file for the process involved in performing copy or ftp functions for the transaction, notify the Operations Controller/System Administrator of the problem.
- 23 If problems were detected and corrected in the preceding steps, return to the **Recover from a Data Distribution Failure** procedure (Section 18.6.2).
- 24 If no problems were detected in the Request Manager server debug log or the log file for the process involved in performing copy or ftp functions for the transaction, continue with the **Check the Science Data Server Log Files** procedure (Section 18.6.2.4).

Table 18.6-12. Check the Request Manager Server Debug Log - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	UNIX window (Sun internal server)	single-click or use procedure in Section 18.2.1
2	<code>cd /usr/ecs/<MODE>/CUSTOM/logs</code>	enter text, press Enter
3	<code>pg <file name></code> (Request Manager debug log)	enter text, press Enter
4	<code>/<date> <time></code>	enter text, press Enter
5	<code>/Unable to service</code>	enter text, press Enter
6	Determine which thread is associated with the problem being investigated	read text
7	<code><search text></code> (Waking up service thread <number>)	enter text, press Enter
8	<code>/SEARCHING</code>	enter text, press Enter
9	Repeat the preceding step (if necessary)	
10	<code>-2I</code> (if necessary)	enter text, press Enter
11	<code>q</code> (when necessary)	enter text, press Enter
12	UNIX window (appropriate server host)	single-click or use procedure in Section 18.2.1
13	<code>grep '<Transaction ID>' <file name> grep 'LogProgress'</code>	enter text, press Enter
14	UNIX window (Sun internal server)	single-click
15	<code>/usr/ecs/<MODE>/CUSTOM/logs</code>	enter text, press Enter
16	<code>grep '<Transaction ID>' <file name> grep 'Done servicing'</code>	enter text, press Enter
17	<code>grep '<Transaction ID>' <file name> grep 'Unable to service'</code>	enter text, press Enter
18	<code>tail -f <file name> grep '<Transaction ID>'</code>	enter text, press Enter
19	Monitor the tailed log for awhile (if applicable)	read text
20	If problems were detected in the log files, notify the Operations Controller/System Administrator of the problem	contact Operations Controller

Table 18.6-12. Check the Request Manager Server Debug Log - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
21	If problems were detected and corrected in preceding steps, return to the Recover from a Data Distribution Failure procedure	Use procedure in Section 18.6.2
22	If problems were detected, continue with the Check the Science Data Server Log Files procedure	Use procedure in Section 18.6.2.4

18.6.2.4 Check the Science Data Server Log Files

The procedure to **Check the Science Data Server Log Files** is a part of the **Recover from a Data Distribution Failure** procedure (Section 18.6.2). It is performed in response to an acquire failure.

Acquire requests are processed through the Science Data Server. Consequently, it may be useful to inspect the Science Data Server log files (e.g., EcDsScienceDataServer.ALOG) to check for error messages associated with the ShortName of the file type.

Table 18.6-13 presents (in a condensed format) the steps required to check the Science Data Server log files. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the SDSRV Server host.
 - Examples of SDSRV Server host (Sun internal server host) names include **e0acs06**, **g0acs06**, **l0acs06**, and **n0acs06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:

```
cd /usr/ecs/<MODE>/CUSTOM/logs
```

 - **<MODE>** is current mode of operation.
 - **"logs"** is the directory containing archive server log files (e.g., EcDsScienceDataServer.ALOG).

- 3 At the command line prompt enter:

```
view <file name>
```

 - **<file name>** is the name of the applicable Science Data Server ALOG file.
 - For example:

```
view EcDsScienceDataServer.ALOG
```

- Although this procedure has been written for the **view** command, any UNIX editor or visualizing command (e.g., **vi**, **pg**, **more**) can be used to review the log file.

4 Review the log file to determine whether the relevant file(s) was (were) successfully acquired.

- The following **view** editor commands are useful:
 - **h** (move cursor left).
 - **j** (move cursor down).
 - **k** (move cursor up).
 - **l** (move cursor right).
 - **a** (append text).
 - **i** (insert text).
 - **x** (delete a character).
 - **u** (undo previous change).
 - **Esc** (switch to command mode).
- The EcDsScienceDataServer.ALOG file should contain entries identifying the file to be acquired by the ShortName of the corresponding ESDT.
- The EcDsScienceDataServer.ALOG file should contain entries regarding the acquire activity. The following types of messages should be included in the ALOG file:

**PID : 5497:Thread ID : 525 : MsgLink :0 meaningfulname
:DsSrWorkingCollectionDistributeOneDistributFile**

**Msg: File 1 to be distributed: :SC:MOD03.001:55732:1.HDF-EOS, rpcID =

- If the ShortName does not appear in the ALOG file, with a timestamp corresponding to the time of the attempted acquire, SDSRV may not be running, or may not be communicating with other servers.
- If the ALOG file does contain entries for that ShortName and indicates that two files (the file and its associated metadata file) are being distributed, SDSRV has completed its role in the acquire.

- If the ALOG contains the ShortName and also contains an error showing that the data file time stamp does not match the time stamp required by the acquire, the data file needs to be removed from the Science Data Server and reinserted.
 - This is usually done using a script called DsDbCleanGranules.
- 5 To quit the view application at the **view** program prompt enter:
:q!
 - 6 If the ShortName does **not** appear in the ALOG file, with a timestamp corresponding to the time of the attempted acquire, ensure that it is possible to connect to the necessary hosts and servers.
 - For detailed instructions refer to the **Check Connections to Hosts/Servers** procedure (Section 18.6.1.1).
 - 7 If the ALOG contains the ShortName and also contains an error showing that the data file time stamp does not match the time stamp required by the acquire, notify the Archive Manager to have the data file(s) removed from the Science Data Server and reinserted.
 - 8 If a problem was detected and corrected in one of the preceding steps (as indicated in the log file), return to the **Recover from a Data Distribution Failure** procedure (Section 18.6.2).
 - 9 If the ALOG file does contain entries for the ShortName and indicates that the relevant data file(s) and associated metadata file(s) are being distributed, continue with the **Check the Archive Server Log Files** procedure (Section 18.6.2.5).

Table 18.6-13. Check the Science Data Server Log Files - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	UNIX window (Sun internal Server)	single-click or use procedure in Section 18.2.1
2	cd /usr/ecs/<MODE>/CUSTOM/logs	enter text, press Enter
3	view <file name> (Science Data Server ALOG)	enter text, press Enter
4	Determine whether the relevant file(s) was (were) successfully acquired	read text
5	:q! (when applicable)	enter text, press Enter
6	If the ShortName does not appear in the ALOG file, check the connections to hosts	Use procedure in Section 18.6.1.1
7	If the ALOG contains an error showing that the data file time stamp does not match the time stamp required by the acquire, notify the Archive Manager to have the data file(s) reacquired	contact Archive Manager

Table 18.6-13. Check the Science Data Server Log Files - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
8	If a problem was detected and corrected in one of the preceding steps, return to the Recover from a Data Distribution Failure procedure	Use procedure in Section 18.6.2
9	If the file(s) was (were) successfully acquired, continue with the Check the Archive Server Log Files procedure	Use procedure in Section 18.6.2.5

18.6.2.5 Check the Archive Server Log Files

The procedure to **Check the Archive Server Log Files** is a part of the **Recover from a Data Distribution Failure** procedure (Section 18.6.2). It is performed in response to an acquire failure.

Files to be acquired are retrieved from storage in the archive so the Archive Server is involved during an acquire. Consequently, it may be useful to inspect the Archive Server log files (e.g., EcDsStArchiveServer<HWCIn>.ALOG) to check for error messages associated with the ShortName of the file type.

Table 18.6-14 presents (in a condensed format) the steps required to check the Archive Server log files. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1** Access a terminal window logged in to the APC Server host.
 - Examples of APC Server host names include **e0acg11**, **g0acg01**, **l0acg02**, and **n0acg01**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2** At the UNIX command line prompt enter:

cd /usr/ecs/<MODE>/CUSTOM/logs

 - **<MODE>** is current mode of operation.
 - **"logs"** is the directory containing archive server log files (e.g., EcDsStArchiveServerACM1.ALOG).

- 3** At the command line prompt enter:

view <file name>

 - **<file name>** is the name of the applicable archive server ALOG file.

- For example:
view EcDsStArchiveServerACM1.ALOG
 - Although this procedure has been written for the **view** command, any UNIX editor or visualizing command (e.g., **vi**, **pg**, **more**) can be used to review the log file.
- 4 Review the log file to determine whether the relevant file(s) was (were) successfully acquired.
- The following **view** editor commands are useful:
 - **h** (move cursor left).
 - **j** (move cursor down).
 - **k** (move cursor up).
 - **l** (move cursor right).
 - **a** (append text).
 - **i** (insert text).
 - **x** (delete a character).
 - **u** (undo previous change).
 - **Esc** (switch to command mode).
- 5 To quit the view application at the **view** program prompt enter:
:q!
- 6 If the relevant file(s) was (were) **not** successfully acquired, notify the Archive Manager to have the data file(s) reacquired.
- 7 If a problem was detected and corrected in one of the preceding steps, return to the **Recover from a Data Distribution Failure** procedure (Section 18.6.2).
- 8 If the relevant file(s) had been successfully acquired (as indicated in the log file), continue with the **Check the Staging Disk** procedure (Section 18.6.2.6).

Table 18.6-14. Check the Archive Server Log Files - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	UNIX window (APC Server)	single-click or use procedure in Section 18.2.1
2	cd /usr/ecs/<MODE>/CUSTOM/logs	enter text, press Enter
3	view <file name>(Archive Server ALOG)	enter text, press Enter
4	Determine whether the relevant file(s) was (were) successfully acquired	read text
5	:q! (when applicable)	enter text, press Enter

**Table 18.6-14. Check the Archive Server Log Files - Quick-Step Procedures
(2 of 2)**

Step	What to Enter or Select	Action to Take
6	If the file(s) was (were) not successfully acquired, notify the Archive Manager to have the data file(s) reacquired	contact Archive Manager
7	If a problem was detected and corrected in one of the preceding steps, return to the Recover from a Data Distribution Failure procedure	Use procedure in Section 18.6.2
8	If the file(s) had been successfully acquired, continue with the Check the Staging Disk procedure	Use procedure in Section 18.6.2.6

18.6.2.6 Check the Staging Disk

The procedure to **Check the Staging Disk** is a part of the **Recover from a Data Distribution Failure** procedure (Section 18.6.2). It is performed in response to an acquire failure.

During an acquire, files are copied to a staging area as an intermediate step before distributing them to their destination. As part of diagnosing an acquire failure it is useful to check the staging area to ascertain whether the files have completed part of their journey. A subdirectory containing both the data granule and metadata file should have been written to the staging area.

Table 18.6-15 presents (in a condensed format) the steps required to check the staging disk. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the Distribution Server host.
 - Examples of Distribution Server host (Sun internal server host) names include **e0acs06**, **g0acs06**, **l0acs06**, and **n0acs06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
- 2 At the UNIX command line prompt enter:

```
cd /usr/ecs/<MODE>/CUSTOM/drp/<archive host>/data/staging/<disk number>
```

 - **<MODE>** is current mode of operation.
 - **<archive host>** refers to the applicable archive host (e.g., e0drg11, g0drg01, l0drg01, or n0drg01).
 - **<disk number>** is the relevant staging disk for the distribution.

- 3 At the UNIX command line prompt enter:
ls -lrt
 - A listing of the staging disk subdirectory contents is displayed.
- 4 Review the subdirectory contents to determine whether the relevant file(s) was (were) successfully staged.
 - The subdirectory should contain both the relevant data granule(s) and corresponding metadata file(s).
- 5 If the relevant file(s) was (were) successfully staged, ensure that it is possible to connect to the necessary hosts and servers.
 - For detailed instructions refer to the **Check Connections to Hosts/Servers** procedure (Section 18.6.1.1).
- 6 If the relevant file(s) was (were) successfully staged and if it is possible to connect to the necessary hosts and servers, return to the **Recover from a Data Distribution Failure** procedure (Section 18.6.2).
- 7 If the relevant file(s) was (were) **not** successfully staged, continue with the **Check the Staging Disk ALOG File** procedure (Section 18.6.2.7) to determine why the data were not successfully staged.

Table 18.6-15. Check the Staging Disk - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (Sun internal server)	single-click or use procedure in Section 18.2.1
2	cd /usr/ecs/<MODE>/CUSTOM/drp/<archive host>/data/staging/<disk number>	enter text, press Enter
3	ls -lrt	enter text, press Enter
4	Determine whether the relevant file(s) was (were) successfully staged	read text
5	If the relevant file(s) was (were) successfully staged, check the connections to hosts	Use procedure in Section 18.6.1.1
6	If the file(s) was (were) successfully staged, return to the Recover from a Data Distribution Failure procedure	Use procedure in Section 18.6.2
7	If the file(s) was (were) not successfully staged, continue with the Check the Staging Disk ALOG File procedure	Use procedure in Section 18.6.2.7

18.6.2.7 Check the Staging Disk ALOG File

The procedure to **Check the Staging Disk ALOG File** is a part of the **Recover from a Data Distribution Failure** procedure (Section 18.6.2). It may be performed in conjunction with the procedure to **Check the Staging Disk** (Section 18.6.2.6) in response to an acquire failure. If a failure occurs in copying files to the staging area, then the staging disk ALOG files (e.g., `EcDsStStagingDiskServer.ALOG` or `EcDsStCacheManagerServer.ALOG`) may reveal the cause.

Table 18.6-16 presents (in a condensed format) the steps required to check the staging disk ALOG file. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the Distribution Server host.
 - Examples of Distribution Server host (Sun internal server host) names include **e0acs06**, **g0acs06**, **l0acs06**, and **n0acs06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:
cd /usr/ecs/<MODE>/CUSTOM/logs
 - **<MODE>** is current mode of operation.
 - TS1 - Science Software Integration and Test (SSI&T)
 - TS2 - New Version Checkout
 - OPS - Normal Operations
 - **"logs"** is the directory containing data distribution, science data server, or storage management log files (e.g., `EcDsDdistGui.ALOG`, `EcDsDistributionServer.ALOG`).

- 3 At the command line prompt enter:
view <file name>
 - **<file name>** refers to the Staging Disk Server ALOG or Cache Manager Server ALOG as applicable.
 - For example:
view EcDsStStagingDiskServer.ALOG
 - Although this procedure has been written for the **view** command, any UNIX editor or visualizing command (e.g., **vi**, **pg**, **more**) can be used to review the log file.

- 4 Review the log file to determine whether the relevant file(s) was (were) successfully staged.
 - The following **view** editor commands are useful:
 - **h** (move cursor left).
 - **j** (move cursor down).

- **k** (move cursor up).
 - **l** (move cursor right).
 - **a** (append text).
 - **i** (insert text).
 - **x** (delete a character).
 - **u** (undo previous change).
 - **Esc** (switch to command mode).
- 5 To quit the view application at the **view** program prompt enter:
:q!
- 6 If the relevant file(s) was (were) successfully staged, ensure that it is possible to connect to the necessary hosts and servers.
- For detailed instructions refer to the **Check Connections to Hosts/Servers** procedure (Section 18.6.1.1).
- 7 If the relevant file(s) was (were) successfully staged and if it is possible to connect to the necessary hosts and servers, return to the **Recover from a Data Distribution Failure** procedure (Section 18.6.2).
- 8 If the relevant file(s) was (were) **not** successfully staged, continue with the **Check the Space Available in the Staging Area** procedure (Section 18.6.2.8).

Table 18.6-16. Check the Staging Disk ALOG File - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (Sun internal server)	single-click or use procedure in Section 18.2.1
2	cd /usr/ecs/<MODE>/CUSTOM/logs	enter text, press Enter
3	view <file name> (Staging Disk Server ALOG or Cache Manager Server ALOG as applicable)	enter text, press Enter
4	Determine whether the relevant file(s) was (were) successfully staged	read text
5	:q! (when applicable)	enter text, press Enter
6	If the relevant file(s) was (were) successfully staged, check the connections to hosts	Use procedure in Section 18.6.1.1
7	If the file(s) was (were) successfully staged, return to the Recover from a Data Distribution Failure procedure	Use procedure in Section 18.6.2
8	If the file(s) was (were) not successfully staged, continue with the Check the Space Available in the Staging Area procedure	Use procedure in Section 18.6.2.8

18.6.2.8 Check the Space Available in the Staging Area

The procedure to **Check the Space Available in the Staging Area** is a part of the **Recover from a Data Distribution Failure** procedure (Section 18.6.2). It may be performed in conjunction with the procedures to **Check the Staging Disk ALOG File** (Section 18.6.2.7) and **Check the Staging Disk** (Section 18.6.2.6) in response to an acquire failure. An acquire failure can be caused by a lack of space in the staging area.

Table 18.6-17 presents (in a condensed format) the steps required to check the space available in the staging area. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the Distribution Server host.
 - Examples of Distribution Server host (Sun internal server host) names include **e0acs06**, **g0acs06**, **l0acs06**, and **n0acs06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
- 2 At the UNIX command line prompt enter:
cd /usr/ecs/<MODE>/CUSTOM/drp/<archive host>/data/
 - Change to the appropriate data subdirectory.
 - **<MODE>** is current mode of operation.
 - **<archive host>** refers to the applicable archive host (e.g., **e0drg11**, **g0drg01**, **l0drg01**, or **n0drg01**).
- 3 At the UNIX command line prompt enter:
df -k .
 - Be sure to include the dot at the end of the command.
 - The **df -k .** command generates a report of the number of free disk blocks and files.
 - For example:

Filesystem	kbytes	used	avail	capacity	Mounted on
x0drg01:/usr/ecs/TS2/CUSTOM/drp/x0drg01/data	278586880	156217472	122369408	57%	
/data1/ecs/TS2/CUSTOM/drp/x0drg01/data					
- 4 Review the available space listed to determine whether there is adequate space for staging the relevant file(s).
- 5 If there is **not** adequate space for staging the relevant file(s), notify the Operations Controller/System Administrator of the lack of space.

- 6 If there is adequate space for staging the relevant file(s), notify the Archive Manager to have the data file(s) reacquired.
- 7 Return to the **Recover from a Data Distribution Failure** procedure (Section 18.6.2) after the problem has been corrected.

Table 18.6-17. Check the Space Available in the Staging Area - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (Sun internal server)	single-click or use procedure in Section 18.2.1
2	cd /usr/ecs/<MODE>/CUSTOM/drp/<archive host>/data/	enter text, press Enter
3	df -k .	enter text, press Enter
4	Determine whether there is adequate space for staging the relevant file(s)	read text
5	Notify the Operations Controller/System Administrator of the lack of space (if applicable)	contact Operations Controller
6	Notify the Archive Manager to have the data file(s) reacquired (if there is adequate space)	contact Archive Manager
7	Return to the Recover from a Data Distribution Failure procedure	Use procedure in Section 18.6.2

18.6.2.9 Check Database Connections

The storage management/data distribution shared database is the repository of data concerning data distribution requests. If applications (including the **Data Distribution Operator GUI**) are unable to connect to the database, the data distribution request data cannot be retrieved or (in the case of the GUI) displayed. Consequently, if the GUI does not display data or if the display does not refresh, checking the database connections is a logical step in trying to isolate the problem.

Table 18.6-18 presents (in a condensed format) the steps required to check database connections. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Submit a request to the Database Administrator to identify the values for the following parameters associated with the EcDsDistributionServer:
 - **DBName.**
 - **DBServer.**
 - **DBMaxConnections.**

- 2 Access a terminal window logged in to the APC Server host.
 - Examples of APC Server host names include **e0acg11**, **g0acg01**, **l0acg02**, and **n0acg01**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
 - APC Server typically hosts Sybase for the storage management/data distribution shared database.

- 3 At the UNIX command line prompt enter:

isql -U <user ID> -S <database server>

 - **<user ID>** is the database user's identification; e.g., **stmgt_role**.
 - **<database server>** is the database server; e.g., **x0acg01_srvr**.
 - For example:

```
isql -U stmgt_role -S x0acg01_srvr
```

- 4 At the **Password:** prompt enter:

<database password>

 - **<database password>** is the password for logging in to the database using the specified **<user ID>**.
 - A **1>** prompt is displayed, indicating that a connection has been made with the database.

- 5 At the **1>** prompt enter:

sp_who

 - A **2>** prompt is displayed.

- 6 At the **2>** prompt enter:

go

 - A listing of current log-ins to the database is displayed; it includes data in the following columns:
 - **spid.**
 - **status.**
 - **loginame.**
 - **hostname.**
 - **blk.**
 - **dbname.**
 - **cmd.**
 - A listing similar to the following one is displayed (most lines have been deleted):

```

spid status loginame hostname blk
      dbname          cmd
-----
```

```

-----
1 recv sleep  stmgt_role          x0acs03  0
  stmgt_db1_TS1      AWAITING COMMAND
2 sleeping  NULL                      0
  master          NETWORK HANDLER
3 sleeping  NULL                      0
  master          DEADLOCK TUNE

```

7 At the 1> prompt enter:
sp_configure "user connections"

8 At the 2> prompt enter:
go

- A listing similar to the following one is displayed:

Parameter Name	Default	Memory Used	Config Value
number of user connections	25	20195	255

Run Value

number of user connections 25 20195 255
 255
 (1 row affected)
 (return status = 0)

9 At the 1> prompt enter:
quit

- The connection with the database is discontinued.
- A UNIX command line prompt is displayed.

10 Compare the number of actual connections with the number of connections for which the database has been configured.

- Number of actual connections is displayed in response to the **sp_who** isql command.
- Number of connections for which the database has been configured is displayed in response to the **sp_configure "user connections"** isql command.

11 If the number of actual connections is very close to the number of connections for which the database has been configured, notify the Database Administrator of the fact.

- 12** If the number of actual connections is **not** very close to the number of connections for which the database has been configured, compare the number of actual connections with the value for DBMaxConnections that the Database Administrator specified (Step 1).
- In Step 1 of this procedure a request was made to the Database Administrator to identify the value assigned to DBMaxConnections.
- 13** If the number of actual connections is very close to the value for DBMaxConnections, notify the Database Administrator of the fact.
- It may be advisable to increase the value assigned to the DBMaxConnections parameter in the Configuration Registry.

Table 18.6-18. Check Database Connections - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Request the Database Administrator to identify values for EcDsDistributionServer parameters DBName , DBServer , and DBMaxConnections	contact Database Administrator
2	UNIX window (APC Server)	single-click or use procedure in Section 18.2.1
3	isql -U <user ID> -S <database server>	enter text, press Enter
4	<database password>	enter text, press Enter
5	sp_who	enter text, press Enter
6	go	enter text, press Enter
7	sp_configure "user connections"	enter text, press Enter
8	go	enter text, press Enter
9	quit	enter text, press Enter
10	Compare the number of actual connections with the number for which the database has been configured	read text
11	Notify the Database Administrator that the number of actual connections is very close to the number of connections for which the database has been configured (if applicable)	contact Database Administrator
12	Compare the number of actual connections with the value for DBMaxConnections (If applicable)	read text
13	Notify the Database Administrator that the number of actual connections is very close to the value for DBMaxConnections (if applicable)	contact Database Administrator

18.7 Starting Up PDS

Hard (physical) media distribution on disks or tape cartridges is accomplished through the Product Distribution System (PDS), which supports distribution on the following types of media:

- 8mm tape cartridges.
- Digital Linear Tape (DLT).
- Compact disk (CD).
- DVD (formerly digital video disk or digital versatile disk now referred to as just "DVD").

The method of data distribution is dictated by the nature of the data distribution request. (The requester specifies the distribution method when ordering the data.)

When a requester submits a request for hard media distribution, the retrieved data and metadata files on the staging disk are transferred via ftp push to the designated PDS staging area. The PDS generates and mails the media; and sends an e-mail distribution notice (order shipment notification) in standard ECS format to the requester's e-mail address (as specified in the original order).

Table 18.7-1, below, provides an Activity Checklist for starting up PDS.

Table 18.7-1. Starting Up PDS - Activity Checklist

Order	Role	Task	Section	Complete?
1	Distribution Technician	Start the PDSIS Server and PDSIS Cron	(P) 18.7.1	
2	Distribution Technician	Start the PDS Cron	(P) 18.7.2	
3	Distribution Technician	Start the PDS Operator Interface (PDSOI)	(P) 18.7.3	
4	Distribution Technician	Start the PDSIS Operator Interface (PDSIS OI)	(P) 18.7.4	
5	Distribution Technician	Start the PDS Job Monitor	(P) 18.7.5	
6	Distribution Technician	Start the Rimage CD Production Software	(P) 18.7.6	
7	Distribution Technician	Start the PDS Verification Tool	(P) 18.7.7	
8	Distribution Technician	Start the PDS Maintenance Module	(P) 18.7.8	
9	Distribution Technician	Start the PDSIS Maintenance Module	(P) 18.7.9	

18.7.1 Start the PDSIS Server and PDSIS Cron

On rare occasions it may be necessary to start the PDSIS Server and/or the PDSIS cron processes.

The applications are invoked from a UNIX command line prompt. Table 18.7-2 presents (in a condensed format) the steps required to start the PDSIS Server and/or the PDSIS cron processes. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: A PDSIS user ID (e.g., **pdsis**, **pdsis_ts1**, **pdsis_ts2**) is used in this procedure.

- 1 Log in to the PDS Server host using the appropriate PDSIS user ID for the operating mode being used.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - PDSIS user IDs are **pdsis**, **pdsis_ts1**, and **pdsis_ts2**, which are used for PDSIS operations in the OPS, TS1, and TS2 modes respectively.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 To determine whether the PDSIS Server is running, in the terminal window, at the command line prompt, enter:

```
ps -ef | grep <userID>
```

- For example:

```
ps -ef | grep pdsis_ts2
```

- The following type of message is displayed:

```
pdsis_ts 13484969 13319855 0 Nov 17 ? 0:00 /tools/bin/perl -w  
/usr/local/pdsis_ts2/utilities/EcPdIsPdsisActivator -load 10  
pdsis_ts 26601639 26278381 0 13:34:34 pts/14 0:00 grep pdsis_ts2  
pdsis_ts 24679415 26856424 0 17:01:00 pts/12 0:27  
/usr/java/bin/./bin32/sgi/native_threads/java -classpath /data1/pdsis_ts2/lib/  
pdsis_ts 13319855 724 0 Nov 17 ? 0:00 /bin/ksh -  
/usr/local/pdsis_ts2/utilities/EcPdIsStartActivateCron pdsis_ts2 sup
```

- If the PDSIS Server were **not** running, the following type of message only would be displayed:

```
pdsis_ts 26601639 26278381 0 13:34:34 pts/14 0:00 grep pdsis_ts2
```

3 At the UNIX command line prompt enter:

cd /usr/local/pdsis_<mode>/utilities

- Change directory to the directory containing the PDSIS Server start-up script (e.g., EcPdPDSISServerStart).
- **pdsis_<mode>** refers to one of the following subdirectories:
 - pdsis (for OPS-mode operations).
 - pdsis_ts1 (for TS1-mode operations).
 - pdsis_ts2 (for TS2-mode operations).

4 If starting the PDSIS Server is desired, at the UNIX command line prompt enter:

EcPdPDSISServerStart <MODE> <debug> &

- **<MODE>** is one of the following values:
 - **pdsis.**
 - **pdsis_ts1.**
 - **pdsis_ts2.**
- **<debug>** is one of the following values:
 - **false** [no debug information is printed to the debug log].
 - **true** [debug information is printed to the debug log].
 - **super** [maximum debug information is printed to the debug log].
- The PDSIS Server starts.

5 If starting the PDSIS cron jobs is desired, at the UNIX command line prompt enter:

crontab EcPdIsCrontab

- The PDSIS cron jobs will start at the appropriate times (as specified in the crontab file **EcPdIsCrontab**).
- If an error message is displayed, verify that the proper PDSIS log-in was used (refer to Step 1).

6 To verify that the crons were started, at the UNIX command line prompt enter:

crontab -l

- The following type of response is displayed:

```
0,5,10,15,20,25,30,35,40,45,50,55 * * * * *
/usr/local/$USER/utilities/EcPdPDSISCronStart $USER scli super >>
/usr/local/$USER/logs/EcPdPDSISCronStartScli.log 2>&1
#
0,2,4,8,10,12,14,16,18,20,22,24,26,28,30,32,34,36,38,40,42,44,46,48,50,52,54,56,58
* * * * /usr/local/$USER/utilities/EcPdPDSISCronStart $USER status super >>
/usr/local/$USER/logs/EcPdPDSISCronStartStatus.log 2>&1
#
```

```

0,2,4,8,10,12,14,16,18,20,22,24,26,28,30,32,34,36,38,40,42,44,46,48,50,52,54,56,58
* * * * /usr/local/$USER/utilities/EcPdPDSISCronStart $USER cleanup super
>> /usr/local/$USER/logs/EcPdPDSISCronStartCleanup.log 2>&1
#
# Midnight cleanup cron
0 0 * * * /usr/local/$USER/utilities/EcPdPDSISMidnightCronStart $USER super
>> /usr/local/$USER/logs/EcPdPDSISMidnightCronStart.log 2>&1
#
# Auto activation script
# Skip Thursday
2,22,42 * * * 0,1,2,3,5,6 /usr/local/$USER/utilities/EcPdIsStartActivateCron
$USER super >> /usr/local/$USER/logs/EcPdIsActivateCronStart.log 2>&1
#
# Thursday's activation cron (deactivated from 1142 - 2002)
2,22,42 0,1,2,3,4,5,6,7,8,9,10,11,20,21,22,23 * * 4
/usr/local/$USER/utilities/EcPdIsStartActivateCron $USER super >>
/usr/local/$USER/logs/EcPdIsActivateCronStart.log 2>&1

```

7 If verifying that the crons were started, at the UNIX command line prompt enter:

pg EcPdIsCrontab

- The response should be identical to the response from the **crontab -l** command.
 - If the response is not identical to that of the **crontab -l** command, verify that the proper PDSIS log-in was used (refer to Step 1).
- To exit from **pg** type **q** then press **Return/Enter**.

Table 18.7-2. Start the PDSIS Server and PDSIS Cron - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server) (using appropriate PDSIS user ID)	single-click or use procedure in Section 18.2.1
2	ps -ef grep pdsis	enter text, press Enter
3	cd /usr/local/pdsis_<mode>/utilities	enter text, press Enter
4	EcPdPDSISServerStart <MODE> <debug> & (if applicable)	enter text, press Enter
5	crontab EcPdIsCrontab (if applicable)	enter text, press Enter
6	crontab -l (if applicable)	enter text, press Enter
7	pg EcPdIsCrontab (if applicable)	enter text, press Enter

18.7.2 Start the PDS Cron

On rare occasions it may be necessary to start the PDS cron processes. There are three CRONS that need to be started for each PDS user account. The CRONS check flags in the database and automatically update tables during product generation. The CRONS are defined in a file named “pdscrontbl” and are started with the UNIX **crontab** command.

The applications are invoked from a UNIX command line prompt. Table 18.7-3 presents (in a condensed format) the steps required to start the PDS cron processes. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: A PDS user ID (e.g., **pds**, **pds_st**, **pds_it**) is used in this procedure.

- 1 Log in to the PDS Server host using the appropriate PDS user ID for the operating mode being used.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - PDS user IDs are **pds**, **pds_st**, and **pds_it**, which are used for PDS operations in the OPS, TS1, and TS2 modes respectively.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:
cd /usr/local/pds_<mode>/pdscrons
 - Change directory to the directory containing the appropriate pdscrontbl file.
 - **pds_<mode>** refers to one of the following subdirectories:
 - pds (for OPS-mode operations).
 - pds_st (for TS1-mode operations).
 - pdsis_it (for TS2-mode operations).

- 3 At the UNIX command line prompt enter:
crontab pdscrontbl
 - The PDS cron jobs will start at the appropriate times (as specified in the cronfile **pdscrontbl**).
 - If an error message is displayed, verify that the proper PDS log-in was used (refer to Step 1).

- 4 To verify that the crons were started, at the UNIX command line prompt enter:
crontab -l
 - The following type of response is displayed:
**0,5,10,15,20,25,30,35,40,45,50,55 * * * * /data1/\$USER/pdscrons/pds_insert.cron
>> /data1/\$USER/logs/pds_insert.log 2>&1**

```

0,2,4,6,8,10,12,14,16,18,20,22,24,26,28,30,32,34,36,38,40,42,44,46,48,50,52,54,56,5
8 * * * * /data1/$USER/pdscrons/pds_job.cron >>
/data1/$USER/logs/pds_job.log 2>&1
3,8,13,18,23,28,33,38,43,48,53,58 * * * *
/data1/$USER/pdscrons/pds_completion.cron >>
/data1/$USER/logs/pds_completion.log 2>&1

```

5 At the UNIX command line prompt enter:

pg pdscrontbl

- The response should be identical to the response from the **crontab -l** command.
 - If the response is not identical to that of the **crontab -l** command, verify that the proper **PDS** log-in was used (refer to Step 1).
- To exit from **pg** at the **:** prompt enter:
 - q**

Table 18.7-3. Start the PDS Cron - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server) (using appropriate PDS user ID)	single-click or use procedure in Section 18.2.1
2	cd /usr/local/pds_<mode>/pdscrons	enter text, press Enter
3	crontab pdscrontbl	enter text, press Enter
4	crontab -l	enter text, press Enter
5	pg pdscrontbl	enter text, press Enter

18.7.3 Start the PDS Operator Interface (PDSOI)

The PDS Operator Interface (PDSOI) is intended to run continually to allow the monitoring and control of jobs in PDS.

The PDS Operator Interface (PDSOI) is invoked from a UNIX command line prompt. Table 18.7-4 presents (in a condensed format) the steps required to start the PDS Operator Interface (PDSOI). If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

2 In the terminal window, at the command line prompt, enter:

pdsoi

- The PDSOI Startup Window is displayed.
 - It may take a few seconds for the window to be displayed.
- The following information is displayed near the top of the screen:
 - Name of the Oracle Form (e.g., PDSMTOIX).
 - Current version of the PDS (e.g., 2.3).
 - Database instance being run (e.g., PRODUCTION).
 - Current date.
- **pdsoi** is an alias for a UNIX script (pdsoi_prod.sh) that is used to start up the PDSOI.
 - The script is located in the “run” directory (e.g., /data1/pds_it/run).
 - The alias may vary somewhat depending on the site set-up.

3 **Single-click** and **hold** the **PDS Machine** option button to display a menu of machines, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.

- Selected machine is displayed on the **PDS Machine** option button when the mouse button is released.

4 In the **Console ID** window enter:

<console ID>

- The PDSOI Start-Up Selection Screen is displayed.
- The **Machine ID** and **Console ID** (linked with an underscore) are displayed in the header of the window.
 - For example, “PDS1_test” in the header of the window indicates that “PDS1” was chosen as the Machine ID and that “test” was typed in as the Console ID.
- Together the **PDS Machine** and **Console ID** constitute the **OI ID** for all jobs started up from the current window.
 - If the OI is shut down or goes down for some reason, it is necessary to log in to the system with the same Machine ID and Console ID to be able to continue work on any jobs started with the OI ID being used in the current session.

5 **Single-click** on the toggle button(s) corresponding to the desired priority(ies) in the **Priority** list.

- Options are: **All, 1, 2, 3, 4, 5, 6, 7, 8, 9.**
- Priority meanings might be assigned (in the database) as follows (for example):

1 - Emergency -	Eight-hour turn-around required.
2 - High Priority -	Less than 24-hour turn-around.
3 - Priority -	Turn around in less than five working days.
4 - 6 - Rush -	Two-week turn-around.
7 - 9 - Standard Orders -	Four- to six-week turn-around.

- One button or several buttons may be selected.
 - Options may change.
 - Single-clicking on a button changes its state from unselected to selected or vice versa.
 - Buttons have a depressed or sunken appearance rather than a raised appearance when selected.
- 6** **Single-click** on the toggle button(s) corresponding to the desired product media type(s) in the **Product Media** list.
- Options are: All, **CD**, 8H, D7, DVD.
 - Product media types might be defined (in the database) as follows (for example):
 - CD** - CDROM.
 - 8H** - 8mm tape.
 - D7** - DLT.
 - DVD** - DVD.
 - Options may change.
 - One button or several buttons may be selected.
 - Single-clicking on a button changes its state from unselected to selected or vice versa.
 - Buttons have a depressed or sunken appearance rather than a raised appearance when selected.
- 7** **Single-click** on the toggle button(s) corresponding to the desired due date(s) in the **Due Date** list.
- Options are: **All, Past Due, Today, 1 Week**.
 - Options may change.
 - One button or several buttons may be selected.
 - Single-clicking on a button changes its state from unselected to selected or vice versa.
 - Buttons have a depressed or sunken appearance rather than a raised appearance when selected.
- 8** **Single-click** on the toggle button(s) corresponding to the desired product code(s) in the **Product Code** list.
- Options are: **All** and all valid individual product codes.
 - One button or several buttons may be selected.
 - Single-clicking on a button changes its state from unselected to selected or vice versa.
 - Buttons have a depressed or sunken appearance rather than a raised appearance when selected.
- 9** **Single-click** and **hold** the appropriate **Sort By** option button to display a list of numbers indicating the order in which the sort criteria should be evaluated, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
- Options are: **Job Key, Priority, Job Status, Product Media, Project Id, Product Code, Due Date**.

- Selected sort order number is displayed on the selected **Sort By** option button when the mouse button is released.
 - It is not possible to select a sort order number for a sorting category if the number has already been assigned to another category.
 - For example, if Job Status was assigned Number 1, Product Media cannot be assigned Number 1 as well. If jobs should be sorted by Product Media first, it is necessary to change the Job Status assignment to some (unused) number other than one (1) then one (1) can be assigned to Product Media.
- 10** Repeat Step 9 as necessary to assign sorting order to additional categories.
- It is possible to select more than one **Sort By** item.
 - If more than one **Sort By** option is selected the jobs will be selected by the sort order for the selection assigned Number 1, then within that sort order they would be sorted by the category assigned Number 2, etc.
 - For example, if Job Status were assigned the first sort order (1) and Due Date were assigned the second sort order (2), the jobs would be sorted by Job Status, then within each status the jobs would be sorted by Due Date. So the jobs containing the same status would be displayed together with the earliest due date for each status at the top of the list for that status.
- 11** **Single-click** on the **Execute** button.
- A **Querying Database** notice is displayed temporarily in a blue box.
 - The message line at the bottom of the screen displays “Working” while the Querying Database notice is being displayed.
 - If there are status files waiting to be read, another blue box may be displayed indicating “Reading Status files. Please wait...”
 - If no selection criteria were selected, a **Selection Error Dialogue** is displayed in a purple box.
 - **Single-click** on the **OK** button to dismiss the error window.
 - The **Main OI Screen** is displayed when the **Querying Database** notice quits (indicating that database has been queried and the results are being displayed).
- 12** Set timer intervals.
- The timer interval determines how often the data displayed on the **Main OI Screen** are refreshed.
 - For detailed instructions refer to the **Set Timer Intervals** procedure (Section 18.9.2).

Table 18.7-4. Start the PDS Operator Interface (PDSOI) - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	pdsoi	enter text, press Enter
3	<machine> (from PDS Machine option button)	single-click
4	<console ID> (in <console ID> window)	enter text, press Enter
5	<priority> (in Priority list)	single-click
6	<product media> (in Product Media list)	single-click
7	<due date> (in Due Date list)	single-click
8	<product code> (in Product Code list)	single-click
9	<sort order> (on the applicable Sort By option button)	single-click
10	Repeat preceding step as necessary to assign sorting order	
11	Execute button	single-click
12	Set timer intervals	Use procedure in Section 18.9.2

18.7.4 Start the PDSIS Operator Interface (PDSIS OI)

Like the PDSOI, the PDSIS Operator Interface (PDSIS OI) is intended to run continually to allow the monitoring and control of orders in PDS. It may be useful to start the **PDSIS OI Main Screen** in a separate workspace from the **PDS Main OI Screen** to prevent crowding in the PDS workspace.

The **PDSIS OI Main Screen** is invoked from a UNIX command line prompt. Table 18.7-5 presents (in a condensed format) the steps required to start the PDSIS Operator Interface (PDSIS OI). If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:
- cd**
- The alias **cd** changes the current directory to the PDS root directory for the PDS user ID of the log-in.
 - To identify the PDS root directory for the current PDS user ID at the UNIX command line prompt enter:

echo \$PDSROOT
- 3 At the UNIX command line prompt enter:
- pdsisoi**
- The **PDSIS OI Main Screen** is displayed.
 - It may take a few seconds for the window to be displayed.
 - The following information is displayed near the top of the screen: Name of the Oracle Form (e.g., PDSISMTOIX); Current version of the PDS (e.g., 1.0); Database instance being run (e.g., PDSIS); Current date.
 - **pdsisoi** is an alias for a UNIX script (pdsisoi_prod.sh) that is used to start up the PDSIS OI.
 - The script is located in the “run” directory (e.g., /data1/pds_it/run).
 - The alias may vary somewhat depending on the site set-up.

Table 18.7-5. Start the PDSIS Operator Interface (PDSIS OI) - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd	enter text, press Enter
3	pdsisoi	enter text, press Enter

18.7.5 Start the PDS Job Monitor

The PDS **Job Monitor Main Window** is intended to run continually in conjunction with the PDS **Main OI Screen**.

The PDS **Job Monitor Main Window** is invoked from a UNIX command line prompt. Table 18.7-6 presents (in a condensed format) the steps required to start the PDS Job Monitor. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:

cd

 - The alias **cd** changes the current directory to the PDS root directory for the PDS user ID of the log-in.
 - To identify the PDS root directory for the current PDS user ID at the UNIX command line prompt enter:

echo \$PDSROOT

- 3 At the command line prompt enter:

cd jobmon

 - Change to the “jobmon” subdirectory.

- 4 At the command line prompt enter:

jobmonitor &

 - The **Job Monitor Main Window** is displayed.
 - The PDS **Job Monitor Main Window** is intended to run continually in conjunction with the PDS **Main OI Screen**.
 - Hypothetically, there is no limit to the number of PDS Job Monitors that can be running at once; however, since the application consumes a small amount of resources, care should be taken to not run multiple instances excessively.

Table 18.7-6. Start the PDS Job Monitor - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd	enter text, press Enter
3	cd jobmon	enter text, press Enter
4	jobmonitor &	enter text, press Enter

18.7.6 Start the Rimage CD Production Software

The following Rimage CD production software programs have to be started on the Rimage personal computer (PC):

- Data Publisher.
- Production Server.

NOTE: A Network File System (NFS) mount is needed in order to see the job control directory (e.g., /pdssa/rimage_jobcontrol) on the PDS system. When the Windows NT system for the Rimage PC is set up, the PDS job control directory on the PDS Server host (e.g., x0dig06) is typically mapped to the PC's Z: drive. Data Publisher watches the job control directory looking for order files that describe data to be transferred (so they can be written to disk). The order files are identified by a ".ORD" extension, which indicates that data are ready to be transferred. Data Publisher transfers the data (i.e., image files) via ftp from PDSSA to the "CD-R_Images" folder (directory) on one of the Rimage PC hard disk drives (e.g., the E: drive) and changes the ".ORD" extension on the order file to a ".dn0" extension.

Table 18.7-7 presents (in a condensed format) the steps required to start the Rimage CD production software. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Double-click** on the Data Publisher icon on the PC desktop.
 - The program starts and a Data Publisher window is displayed on the PC.
 - Data Publisher watches the job control directory looking for order files that describe data to be transferred (so they can be written to disk).
 - The order files are identified by a ".ORD" extension, which indicates that data are ready to be transferred.
 - Data Publisher transfers data (i.e., image files) via ftp from PDSSA to the "CD-R_Images" folder (directory) on one of the Rimage PC hard drives (e.g., the E: drive) and changes the ".ORD" extension on the order file to a ".dn0" extension.
- 2 Double-click** on the Production Server icon on the PC desktop.
 - The program starts and a Production Server window is displayed on the PC.
 - The Production Server does an initial hardware check on the Rimage CD/DVD burners, internal printer and the media carousel. The Production Server transfers data to disk media after Data Publisher has transferred the data onto one of the Rimage PC hard drives (e.g., the E: drive).
- 3 Single-click** on the **Start** button in the Production Server window.

Table 18.7-7. Start the Rimage CD Production Software - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Data Publisher icon (on PC desktop)	double-click
2	Production Server icon (on PC desktop)	double-click
3	Start button (in Production Server window)	single-click

18.7.7 Start the PDS Verification Tool

The **PDS Verification Tool** is intended to run continually in conjunction with the **PDS Main OI Screen**.

The **PDS Verification Tool** is invoked from a UNIX command line prompt. Table 18.7-8 presents (in a condensed format) the steps required to start the **PDS Verification Tool**. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
- 2 At the UNIX command line prompt enter:
cd
 - The alias **cd** changes the current directory to the PDS root directory for the PDS user ID of the log-in.
 - To identify the PDS root directory for the current PDS user ID at the UNIX command line prompt enter:
echo \$PDSROOT
- 3 At the command line prompt enter:
ckwin &
 - The **PDS Verification Tool** is displayed.
 - The **PDS Verification Tool** is intended to run continually in conjunction with the **PDS Main OI Screen**.

Table 18.7-8. Start the PDS Verification Tool - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd	enter text, press Enter
3	ckwin &	enter text, press Enter

18.7.8 Start the PDS Maintenance Module

The PDS Maintenance Module contains Oracle Forms, which are used to look at and update the data within the database used by the PDSOI. The PDS **Maintenance Module** is intended to be run as it is needed to change data in certain fields in the database. It would not normally be running continuously.

The PDS Maintenance Module is invoked from a UNIX command line prompt. Table 18.7-9 presents (in a condensed format) the steps required to start the PDS Maintenance Module. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
- 2 At the UNIX command line prompt enter:
cd
 - The alias **cd** changes the current directory to the PDS root directory for the PDS user ID of the log-in.
 - To identify the PDS root directory for the current PDS user ID at the UNIX command line prompt enter:
echo \$PDSROOT
- 3 At the command line prompt enter:
pds_maint
 - The PDS **Maintenance Module Login Screen** is displayed.

- **pds_maint** is an alias for a UNIX script (pdsmaint.sh) that is used to start up the PDS Maintenance Module.
 - The script is located in the \$PDSROOT/run directory (e.g., /data1/pds_it/run).
 - The alias may vary somewhat depending on the site set-up.

4 In the **Username** field of the **PDS Maintenance Module Login Screen** enter:
 <user ID>

5 In the **Password** field of the **PDS Maintenance Module Login Screen** enter:
 <password>

NOTE: It is not necessary to fill in the **Database** field on the **PDS Maintenance Module Login Screen**; it defaults to the correct database if left blank.

- 6 **Single-click** on the appropriate button from the following selections:
- **Connect** - to log in to the PDS Maintenance Module.
 - The **PDS Maintenance Module Main Menu** is displayed.
 - **Cancel** - to dismiss the **PDS Maintenance Module Login Screen** without logging in to the PDS Maintenance Module.

Table 18.7-9. Start the PDS Maintenance Module - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd	enter text, press Enter
3	pds_maint	enter text, press Enter
4	<user ID> (in Username field)	enter text, press Tab
5	<password> (in Password field)	enter text, press Enter
6	Connect button	single-click

18.7.9 Start the PDSIS Maintenance Module

The PDSIS Maintenance Module contains Oracle Forms, which are used to look at and update the data within the database tables used by the PDSIS OI. The **PDSIS Maintenance Module** is intended to be run as it is needed to change data in certain fields in the database. It would not normally be running continuously.

The PDSIS Maintenance Module is invoked from a UNIX command line prompt. Table 18.7-10 presents (in a condensed format) the steps required to start the PDSIS Maintenance Module. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you

are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
- 2 At the UNIX command line prompt enter:
cd
 - The alias **cd** changes the current directory to the PDS root directory for the PDS user ID of the log-in.
 - To identify the PDS root directory for the current PDS user ID at the UNIX command line prompt enter:
echo \$PDSROOT
- 3 At the command line prompt enter:
pdsismaint
 - The **PDSIS Maintenance Module Login Screen** is displayed (identical to the **PDS Maintenance Module Login Screen**).
 - **pdsismaint** is an alias for a UNIX script (**pdsismaint_<MODE>.sh**) that is used to start up the PDSIS Maintenance Module.
 - The script is located in the **\$PDSROOT/run** directory (e.g., **/data1/pds_it/run**).
 - The alias may vary somewhat depending on the site set-up.
- 4 In the **Username** field of the **PDSIS Maintenance Module Login Screen** enter:
<user ID>
- 5 In the **Password** field of the **PDSIS Maintenance Module Login Screen** enter:
<password>

NOTE: It is not necessary to fill in the **Database** field on the **PDSIS Maintenance Module Login Screen**; it defaults to the correct database if left blank.

- 6 **Single-click** on the appropriate button from the following selections:
 - **Connect** - to log in to the PDSIS Maintenance Module.
 - The **PDSIS Maintenance Module Main Menu** is displayed.
 - **Cancel** - to dismiss the **PDSIS Maintenance Module Login Screen** without logging in to the PDSIS Maintenance Module.

Table 18.7-10. Start the PDSIS Maintenance Module - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd	enter text, press Enter
3	pdsismaint	enter text, press Enter
4	<user ID> (in Username field)	enter text, press Tab
5	<password> (in Password field)	enter text, press Enter
6	Connect button	single-click

18.8 Shutting Down PDS

Shutting down PDS is best done only after all executing PDS jobs have completed or are at a logical stopping point.

Table 18.8-1, below, provides an Activity Checklist for shutting down PDS.

Table 18.8-1. Shutting Down PDS - Activity Checklist

Order	Role	Task	Section	Complete?
1	Distribution Technician	Shut Down the PDS Maintenance Module	(P) 18.8.1	
2	Distribution Technician	Shut Down the PDS Job Monitor	(P) 18.8.2	
3	Distribution Technician	Shut Down the PDS Operator Interface (PDSOI)	(P) 18.8.3	
4	Distribution Technician	Shut Down the Rimage CD Production Software	(P) 18.8.4	
5	Distribution Technician	Shut Down the PDS Verification Tool	(P) 18.8.5	
6	Distribution Technician	Shut Down the PDSIS Maintenance Module	(P) 18.8.6	
7	Distribution Technician	Shut Down the PDSIS Operator Interface (PDSIS OI)	(P) 18.8.7	
8	Distribution Technician	Shut Down the PDSIS Server	(P) 18.8.8	

18.8.1 Shut Down the PDS Maintenance Module

The PDS **Maintenance Module Main Menu** provides the Distribution Technician with a means of shutting down the PDS Maintenance Module.

Table 18.8-2 presents (in a condensed format) the steps required to shut down the PDS Maintenance Module. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If one of the maintenance modules is being displayed, **single-click** on the **Exit** button at the bottom of the window.
 - If the **Exit** button is not visible on the maintenance module form, **single-click** on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - Either the maintenance module window is dismissed or a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved.
 - If the maintenance module window was dismissed, the PDS **Maintenance Module Main Menu** is displayed.

- 2 If a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved, **single-click** on the appropriate button from the following selections:
 - **Yes** - to accept the changes and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The PDS **Maintenance Module Main Menu** is displayed.
 - **No** - to dismiss the dialogue box without accepting the changes made to the data on the form.
 - The dialogue box is dismissed.
 - The PDS **Maintenance Module Main Menu** is displayed.

- 3 **Single-click** on the **Exit** button at the bottom of the PDS **Maintenance Module Main Menu** window.
 - The PDS **Maintenance Module Main Menu** is dismissed.
 - The PDS maintenance module has been shut down.

Table 18.8-2. Shut Down the PDS Maintenance Module - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Exit button (on PDS maintenance module) (if applicable)	single-click
2	Yes button (if applicable)	single-click
3	Exit button (on PDS Maintenance Module Main Menu)	single-click

18.8.2 Shut Down the PDS Job Monitor

The **Job Monitor Main Window** provides the Distribution Technician with a means of shutting down the PDS Job Monitor.

Table 18.8-3 presents (in a condensed format) the steps required to shut down the PDS Job Monitor. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 **Single-click** on the **Exit** button at the bottom of the **Job Monitor Main Window**.
 - The **Job Monitor Main Window** is dismissed.

Table 18.8-3. Shut Down the PDS Job Monitor - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Exit button (on Job Monitor Main Window)	single-click

18.8.3 Shut Down the PDS Operator Interface (PDSOI)

The **PDS Main OI Screen** provides the Distribution Technician with a means of shutting down the PDS Operator Interface (PDSOI).

Table 18.8-4 presents (in a condensed format) the steps required to shut down the PDS Operator Interface (PDSOI). If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Execute the following menu path from the pull-down menu (on the PDS **Main OI Screen**):
 - Shutdown → Stop All Jobs**
 - A yellow **Shutdown Confirmation** dialogue box is displayed.
- 2 **Single-click** on the appropriate button from the following selections:
 - **Yes** - to shut down the PDSOI and dismiss the **Shutdown Confirmation** dialogue box.
 - The message line at the bottom of the screen displays a message indicating that the system is in shutdown mode.
 - The OI stops checking the status of jobs or starting jobs; however, the products may continue to be produced and status files may be generated.
 - Any status files generated while the OI is shut down will not be processed until the OI is up and running.
 - **Cancel** - to dismiss the **Shutdown Confirmation** dialogue box without shutting down the PDSOI.

Table 18.8-4. Shut Down the PDS Operator Interface (PDSOI) - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Shutdown → Stop All Jobs (on PDS Main OI Screen)	single-click
2	Yes button	single-click

18.8.4 Shut Down the Rimage CD Production Software

The Rimage Production Server and Data Publisher provide the Distribution Technician with means of shutting down the production programs.

Table 18.8-5 presents (in a condensed format) the steps required to shut down the Rimage CD production software. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 **Single-click** on the **X** in the box at the upper right-hand corner of the Rimage Production Server window.
 - The Production Server window is dismissed.
- 2 **Single-click** on the **X** in the box at the upper right-hand corner of the Rimage Data Publisher window.
 - The Data Publisher window is dismissed.

Table 18.8-5. Shut Down the Rimage CD Production Software - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	X (upper right-hand corner of the Rimage Production Server window)	single-click
2	X (upper right-hand corner of the Rimage Data Publisher window)	single-click

18.8.5 Shut Down the PDS Verification Tool

The **PDS Verification Tool** provides the Distribution Technician with a means of shutting down the tool.

Table 18.8-6 presents (in a condensed format) the steps required to shut down the **PDS Verification Tool**. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1** **Single-click** on the **Exit** button at the bottom of the **PDS Verification Tool**.
 - A verification tab is displayed below the **Exit** button inquiring whether the **PDS Verification Tool** should really be exited.

- 2** **Single-click** on the verification tab below the **Exit** button.
 - The **PDS Verification Tool** is dismissed.

Table 18.8-6. Shut Down the PDS Verification Tool - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Exit button (on PDS Verification Tool)	single-click
2	Verification tab	single-click

18.8.6 Shut Down the PDSIS Maintenance Module

The **PDSIS Maintenance Module Main Menu** provides the Distribution Technician with a means of shutting down the PDSIS Maintenance Module.

Table 18.8-7 presents (in a condensed format) the steps required to shut down the PDSIS Maintenance Module. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If one of the PDSIS maintenance modules is being displayed, **single-click** on the **Exit** button at the bottom of the window.
 - If the **Exit** button is not visible on the maintenance module form, **single-click** on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - Either the maintenance module window is dismissed or a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved.
 - If the maintenance module window was dismissed, the **PDSIS Maintenance Module Main Menu** is displayed.

- 2 If a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved, **single-click** on the appropriate button from the following selections:
 - **Yes** - to accept the changes and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The **PDSIS Maintenance Module Main Menu** is displayed.
 - **No** - to dismiss the dialogue box without accepting the changes made to the data on the form.
 - The dialogue box is dismissed.
 - The **PDSIS Maintenance Module Main Menu** is displayed.

- 3 **Single-click** on the **Exit** button at the bottom of the **PDSIS Maintenance Module Main Menu** window.
 - The **PDSIS Maintenance Module Main Menu** is dismissed.
 - The PDSIS maintenance module has been shut down.

Table 18.8-7. Shut Down the PDSIS Maintenance Module - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Exit button (on PDSIS maintenance module) (if applicable)	single-click
2	Yes button (if applicable)	single-click
3	Exit button (on PDSIS Maintenance Module Main Menu)	single-click

18.8.7 Shut Down the PDSIS Operator Interface (PDSIS OI)

The **PDSIS OI Main Screen** provides the Distribution Technician with a means of shutting down the **PDSIS Operator Interface (PDSIS OI)**.

Table 18.8-8 presents (in a condensed format) the steps required to shut down the **PDSIS Operator Interface (PDSIS OI)**. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Execute the following menu path from the pull-down menu (on the **PDSIS OI Main Screen**):
 - Action → Shutdown**
 - The **PDSIS OI** is shut down.

Table 18.8-8. Shut Down the PDSIS Operator Interface (PDSIS OI) - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Action → Shutdown (on PDSIS OI Main Screen)	single-click

18.8.8 Shut Down the PDSIS Server

On rare occasions it may be necessary to shut down the PDSIS Server.

The application is shut down from a UNIX command line prompt. Table 18.8-9 presents (in a condensed format) the steps required to shut down the PDSIS Server. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: A PDSIS user ID (e.g., **pdsis**, **pdsis_ts1**, **pdsis_ts2**) is used in this procedure.

- 1 Log in to the PDS Server host using the appropriate PDSIS user ID for the operating mode being used.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - PDSIS user IDs are **pdsis**, **pdsis_ts1**, and **pdsis_ts2**, which are used for PDSIS operations in the OPS, TS1, and TS2 modes respectively.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 To identify the PDSIS Server that is running, at the UNIX command line prompt enter:

```
ps -ef | grep java | grep <userID>
```

 - For example:

```
ps -ef | grep java | grep pdsis_ts2
```

- The following type of message is displayed:

```
pdsis_ts 26947322      1 0 16:03:56 ?    1:52
/usr/java/bin/./bin32/sgi/native_threads/java -classpath /data1/pdsis_ts2/lib/
```

3 At the UNIX command line prompt enter:

kill -15 <processID>

- For example:

```
kill -15 26947322
```

 - The command would kill the process in the example in Step 2.
- The PDSIS Server process should be terminated.

4 To verify that the PDSIS Server is no longer running, at the UNIX command line prompt enter:

ps -ef | grep java | grep <userID>

- For example:

```
ps -ef | grep java | grep pdsis_ts2
```
- If the process is still running (if the same message as that received in Step 2 is displayed), return to Step 3 and use **kill -9** (kill) instead of **kill -15** (terminate).

Table 18.8-9. Shut Down the PDSIS Server - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server) (using appropriate PDSIS user ID)	single-click or use procedure in Section 18.2.1
2	ps -ef grep java grep <userID>	enter text, press Enter
3	kill -15 <processID>	enter text, press Enter
4	ps -ef grep java grep <userID>	enter text, press Enter

18.9 Monitoring/Controlling Product Processing Using PDS

Distribution Technicians use the following tools to monitor and control PDS activities:

- **PDS Main OI Screen.**
- **OI Detail Screen.**
- **Job Monitor Main Window.**
- **Verification Tool.**

Table 18.9-1, below, provides an Activity Checklist for monitoring/controlling product processing using PDS.

Table 18.9-1. Monitoring/Controlling Product Processing Using PDS - Activity Checklist

Order	Role	Task	Section	Complete?
1	Distribution Technician	Monitor/Control Product Processing Using PDS	(P) 18.9.1	
2	Distribution Technician	Set Timer Intervals	(P) 18.9.2	
3	Distribution Technician	Specify Job Selection Criteria	(P) 18.9.3	
4	Distribution Technician	Use the OI Detail Screen	(P) 18.9.4	
5	Distribution Technician	Sort Units	(P) 18.9.5	
6	Distribution Technician	Select Multiple Units	(P) 18.9.6	
7	Distribution Technician	Activate a Job	(P) 18.9.7	
8	Distribution Technician	Compare the Number of Units in an Order and a Job	(P) 18.9.8	
9	Distribution Technician	Determine the Current Grouping Factor	(P) 18.9.9	
10	Distribution Technician	Stop/Terminate a Job Using the Main OI Screen Display	(P) 18.9.10	
11	Distribution Technician	Stop/Terminate a Job Using the Job Monitor Main Window	(P) 18.9.11	
12	Distribution Technician	Respond to a Status of QC-Hold (Perform a QC Check or Verification)	(P) 18.9.12	
13	Distribution Technician	Complete a Job	(P) 18.9.13	
14	Distribution Technician	Enter Notes about a Job	(P) 18.9.14	
15	Distribution Technician	Promote a Job	(P) 18.9.15	
16	Distribution Technician	Cancel a Job	(P) 18.9.16	
17	Distribution Technician	Generate PDS Production Reports	(P) 18.9.17	
18	Distribution Technician	Select an Alternate Printer	(P) 18.9.18	
19	Distribution Technician	Use the PDS Cleanup Manager	(P) 18.9.19	
20	Distribution Technician	Use the PDSIS Cleanup Manager	(P) 18.9.20	

18.9.1 Monitor/Control Product Processing Using PDS

Monitoring/controlling product processing using PDS (PDSSA) involves the following activities (among others):

- Determining the status of a job and/or taking action with respect to a job (using the Main OI Screen).
- Determining the status of units associated with a particular job or taking action with respect to units associated with a particular job (using the OI Detail Screen).
- Activating a Job.
- Stopping/Terminating a Job.
- Responding to a Status of QC-Hold (Perform a QC Check or Verification).
- Completing a Job.
- Entering Notes about a Job.
- Promoting a Job.
- Generating PDS Production Reports.

PDS activities are monitored and controlled using the **Main OI Screen**, the **OI Detail Screen**, the **Job Monitor Main Window** and the **Verification Tool**.

The **Main OI Screen** displays the following items for each individual PDS job:

- Action Button [not labeled].
 - Allows access to a list of actions that can be taken with respect to the job.
- Job Stopped [not labeled].
 - "STOP" is displayed in the field if the job has been stopped.
- Job Key.
 - Unique label for the job composed of the order number, an underscore and a zero-padded unit number of the first unit of the job.
- To_Do Units.
 - Number of units left in the job in either a pending, active or status of QC-Hold state [waiting for a quality-control (QC) check].
- Pri.
 - Priority of the job from 1 to 9, with "1" the highest priority.
- Product Media.
 - The pds_description of the output specifications.
- Project Id.
 - An optional field that indicates whether there is a particular project associated with the job.
- Due Date.
 - Date that the order is due to the customer.
- Copy Flag.
 - An "*" is displayed if the total number of copies does not equal the total number of units. (Used if multiple copies are needed for a specific unit.)

- Product Code.
 - The pds_description of the product code.
- Note.
 - An “*” is displayed if there is a current note for the job.
- Job Status.
 - Status of the job.

The **OI Detail Screen** displays the following items for the selected individual PDS job:

- Job Key.
 - The dynamically generated identifier tying the units in the job together.
- Copies.
 - Number of copies the customer wants for each unit.
- Pri.
 - Priority code for the job.
- Product Media.
 - PDS's description of the output specifications.
- Due Date.
 - Date that the job needs to be delivered to the customer.
- Product Code.
 - PDS's description of the product code.

The **OI Detail Screen** displays the following items for each unit within the selected PDS job:

- "Select" button [not labeled].
 - Used for selecting or deselecting each individual unit to which an action (e.g., "Activate") will be applied.
- Unit # .
 - Unit number.
- Status.
 - PDS's description of the status.
- PPF Key.
 - Blank if the unit is in pending status; otherwise the PPF Key for the unit is displayed.
 - Ties to the .ppf file used during the product generation process.
 - Composed of the order number, an underscore and the zero-padded unit number.
- ECS Order ID.
 - ECS Order Id. (blank if there is no ECS Order ID in the PDT_PDSINFO table).
- Source Data Path.
 - Location of the source data needed to produce the customer's product.
 - Could be either a media storage identifier in the digital archive or a storage location on a mass media device or a location on a remote machine.

The **Job Monitor Main Window** displays the following types of information:

- Running Jobs.
 - **Job Key.**
 - **Type** [of product].
 - **Stage** [What the job is currently doing (if the information is available)].
- Assembly Disk Usage.
 - Graphical displays of the free space remaining on the PDS assembly and ftp staging disks.
 - Intended to give the operator advance warning when one (or more) of the disks is running low on available space.
- Rimage Pending Orders.
 - Displays how many orders are pending on the Rimage systems [Refers to how many CD images are *waiting* to be pulled over to the Rimage system; it does *not* refer to the number of jobs that are actually active on the Rimage itself. Useful when balancing the distribution of jobs among Rimage systems. Displays whether PDS's AutoRimage mode is enabled or disabled.]

The **Verification Tool** displays the following types of information:

- Drives available for or in use performing verification of disks and tapes.

Table 18.9-2 presents (in a condensed format) the steps required to monitor and control product processing using PDS. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If any of the following PDS tools are not currently in operation, perform the corresponding procedure(s):
 - **Main OI Screen - Start the PDS Operator Interface (PDSOI)** (Section 18.7.3).
 - **Job Monitor Main Window - Start the PDS Job Monitor** (Section 18.7.5).
 - **Production Server - Start the Rimage CD Production Software** (Section 18.7.6).
 - **Data Publisher - Start the Rimage CD Production Software** (Section 18.7.6).
 - **Verification Tool - Start the PDS Verification Tool** (Section 18.7.7).
- 2 If desired, set timer intervals.
 - The timer interval determines how often the data displayed on the **Main OI Screen** are refreshed.
 - For detailed instructions refer to the **Set Timer Intervals** procedure (Section 18.9.2).
- 3 Observe information displayed on the **Main OI Screen**.
 - The following items are displayed on a **job line** for each individual PDS job:
 - Action Button [not labeled].
 - Job Stopped [not labeled].
 - **Job Key.**

- **To_Do Units.**
 - **Pri.**
 - **Product Media.**
 - **Project Id.**
 - **Due Date.**
 - **Copy Flag.**
 - **Product Code.**
 - **Note.**
 - **Job Status.**
 - Each **job line** display is color-coded to draw attention to job status. The colors are interpreted as follows:
 - **Red** Either Error or Error-Partial status. (Error indicates that all units in the job are in error. Error Partial indicates that part of the job is in error and there are no actives or QC-holds.)
 - **Green** Either Active or Active-Partial status. (Active indicates that all units in the job are active. Active-Partial indicates that part of the job is active.)
 - **Yellow** Either QC-Hold or QC-Hold-Partial status. (QC-Hold indicates that all units in the job are in QC-hold. QC-Hold-Partial indicates that part of the job is in QC-hold and there are no actives.)
 - **Grey** Pending status. (Pending indicates that all units in the job are pending.)
 - If there are more records than can be displayed on the screen, use the scroll bar on the right hand side of the form to view the additional records.
 - The **status line** at the bottom of the screen displays information about the form (for example, the status line might display “Record: 1/16” and “INSERT”).
 - The **message line** near the bottom of the screen (just above the **status line**) displays informational messages and error messages pertinent to what is happening on the form.
 - For example, an informational message might indicate “Working...”.
 - Messages are displayed on the screen as long as they are pertinent.
- 4** If the list of jobs on the **Main OI Screen** needs to be filtered and/or sorted, go to the **Specify Job Selection Criteria** procedure (Section 18.9.3).
- 5** If more specific information is required or action should be taken with respect to units associated with a particular job, go to the **Use the OI Detail Screen** procedure (Section 18.9.4).
- 6** Observe information displayed on the **Main OI Screen** and **Job Monitor Main Window**.
- Refer to Step 3 for a description of features on the **Main OI Screen**.

- For each individual PDS job that is running the following items are displayed on a **running jobs** line on the **Job Monitor Main Window**:
 - **Job Key.**
 - **Type** [of product].
 - **Stage.**
- The following values are among those that may be displayed in the **Stage** field (based on data from the job log) on the **Job Monitor Main Window**:
 - **Unknown** - does not mean that there is anything wrong; it simply means that the job monitor was unable to determine what a particular job is currently doing.
 - **Initializing** - getting job parameters from the PPF file, setting up data structures, and doing whatever else is required before the job can actually start producing the output media.
 - **Retrieving Data From Source** - indicates that the job is assembling the data for the product. [The source varies depending on the type of product it is. The stage may take quite some time, particularly for orders coming off peak loads systems.]
 - **Making Browse Image** - (for satellite and other types of raster data that require small browse images on the CD insert label) indicates that PDS is subsampling the image data and creating the browse image. [Typically does not take a large amount of time, although for sizable multi-scene Landsat-7 data, it can be a fairly lengthy process.]
 - **Waiting For Drive Selection** - currently waiting for the operator to respond to the Media Drive Selection window to select a tape drive or a CD writer. [The job has retrieved all data for the product. If a job is in this stage but no selection window is visible, it may be "hidden" behind another window. After locating the Media Drive Selection window go to Step 4 of the **Activate a Job** procedure (Section 18.9.7). If the Media Drive Selection window cannot be located, go to the **Respond to a "Waiting for Drive Selection" Message on the Job Monitor** procedure (Section 18.11.29).]
 - **Writing Data To Tape Drive** - currently writing the product to the specifically named tape drive.
 - **Making ISO9660 Image(s)** - generating "raw" CD image files that will be passed to the Rimage systems for CD generation. [May be a somewhat lengthy process, depending on the size of the job and the load on the system.]
 - **Waiting For Rimage Status** - product has been submitted to the Rimage machine chosen by the operator and the job is waiting for the completion of the output CD(s). [May be a lengthy process, depending on product size and/or system load.]
 - **Cleaning Up** - PDS is cleaning up the job after having generated the product media. [Generally involves removing the assembly directory from \$PDSASSM, writing status and summary files, and removing the Rimage order files.]

- The following items are displayed in the **Assembly Disk Usage** section of the **Job Monitor Main Window**:
 - Assembly disk usage bars, which display (graphically) the free space remaining on the PDS assembly staging disks. [Provide advance warning when one (or more) disk(s) is (are) running low on available space. Disk bar changes color to yellow if the disk becomes unavailable for some reason. If disk space becomes low, perform the procedure for **Respond to Low Disk Space** (Section 18.11.31).]
- The **Toggle AutoRimage** button is for use with systems that have multiple Rimage units. [AutoRimage should be **disabled** at sites that have a single Rimage unit.]

7 If it becomes necessary to perform any of the following actions, go to the corresponding section/procedure:

- **Set Timer Intervals** (Section 18.9.2) (to set the amount of time between refresh events for the OI Main Screen and/or the amount of time between episodes of processing the status files from the product generation code).
- **Specify Job Selection Criteria** (Section 18.9.2) (to specify the selection and sorting criteria for jobs to be displayed on the OI Main Screen).
- **Use the OI Detail Screen** (Section 18.9.4) (to determine the status of units associated with a particular job or take action with respect to units associated with a particular job).
- **Activate a Job** (Section 18.9.7) (to activate a job).
- **Compare the Number of Units in an Order and a Job** (Section 18.9.8) (to compare the number of units in an order and a job).
- **Determine the Current Grouping Factor** (Section 18.9.9) (to determine the current grouping factor).
- **Stop/Terminate a Job Using the Main OI Screen Display** (Section 18.9.10) (to suspend a job).
- **Stop/Terminate a Job Using the Job Monitor Main Window** (Section 18.9.11) (to suspend a job).
- **Respond to a Status of QC-Hold (Perform a QC Check or Verification)** (Section 18.9.12) (to perform a QC check or media verification).
- **Complete a Job** (Section 18.9.13) (to complete a job after a QC check).
- **Enter Notes about a Job** (Section 18.9.14) (to enter comments or notes about a job).
- **Promote a Job** (Section 18.9.15) (to process a job ahead of other jobs).
- **Cancel a Job** (Section 18.9.16) (not supported by the operator tools).
- **Generate PDS Production Reports** (Section 18.9.17) (to generate PDS reports).
- **Select an Alternate Printer** (Section 18.9.18) (to select an alternate printer for printing reports or jewel cases).
- **Troubleshoot PDS Problems** (Section 18.11) (to troubleshoot problems/failures affecting product processing).

8 If it is necessary to update the data on the **Main OI Screen** from the database without having to wait for the interval set on the timer, execute the following menu path from the pull-down menu:

Display → Refresh

- The data on the **Main OI Screen** is refreshed.

9 If it is necessary to requery the status of running jobs and display the data on the **Job Monitor Main Window**, **single-click** on the **Refresh Display** button.

- Current status of running jobs is displayed on the **Job Monitor Main Window**.
 - Every two minutes the PDS Job Monitor provides an automatic update to the information displayed in the running jobs listbox, assembly disk usage bars, and Rimage pending orders sections.

10 If it is necessary to cause the entire **Main OI Screen** to be redrawn without accessing the database for data, execute the following menu path from the pull-down menu:

Display → Repaint

- The **Main OI Screen** (including borders, buttons, and data) is redrawn.
 - The **Repaint** option is used in case the window becomes garbled.

11 If it is necessary to access help information concerning the **Main OI Screen**, execute the following menu path from the pull-down menu:

Help → On Form

- A web browser pops up in another window, positioned to the start of the document about the Operator Interface.

12 If it is necessary to access information concerning the last error encountered by the PDSOI, execute the following menu path from the pull-down menu on the **Main OI Screen**:

Help → Show Error

- A message is displayed on the **message line** of the **Main OI Screen** stating the last error encountered.
 - Frequently a “No errors encountered recently” message is displayed in response to the **Show Error** option.

13 If it is necessary to print a report that contains the data currently being displayed **Main OI Screen**, execute the following menu path from the pull-down menu:

Reports → Queue

- The report is printed on the designated report printer.

14 Repeat Steps 4 through 13 as necessary to monitor/control jobs.

- 15 If it becomes necessary to shut down the Job Monitor, **single-click** on the **Exit** button at the bottom of the **Job Monitor Main Window**.
- The Job Monitor Main Window is dismissed.
- 16 If it becomes necessary to shut down the operator interface, perform the **Shut Down the PDS Operator Interface** procedure (Section 18.8.3).

Table 18.9-2. Monitor/Control Product Processing Using PDS - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Start PDS tools (if necessary)	Use applicable procedure(s) in Sections 18.7.1, 18.7.3, 18.7.5, 18.7.6, and/or 18.7.16
2	Set timer intervals (if applicable)	Use procedure in Section 18.9.2
3	Observe information displayed on the Main OI Screen	read text
4	Specify job selection criteria (if applicable)	Use procedure in Section 18.9.3
5	Use the OI Detail Screen (if applicable)	Use procedure in Section 18.9.4
6	Observe information displayed on the Main OI Screen and Job Monitor Main Window	read text
7	Perform the appropriate operational procedure as needed	Use applicable procedure(s) in Sections 18.9.2 through 18.9.18
8	Display → Refresh (on the Main OI Screen) (as necessary)	single-click
9	Refresh Display button (on the Job Monitor Main Window) (as necessary)	single-click
10	Display → Repaint (on the Main OI Screen) (as necessary)	single-click
11	Help → On Form (on the Main OI Screen) (as necessary)	single-click
12	Help → Show Error (on the Main OI Screen) (as necessary)	single-click
13	Reports → Queue (on the Main OI Screen) (as necessary)	single-click
14	Repeat Steps 4 through 13 as necessary to monitor/control jobs	
15	Exit button (on the Job Monitor Main Window) (when applicable)	single-click
16	Shut down the operator interface (when applicable)	Use procedure in Section 18.8.3

18.9.2 Set Timer Intervals

The procedure to **Set Timer Intervals** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). The **Main OI Screen Display** menu provides the Distribution Technician with a means of setting timer intervals. There are two timers that the technician can set:

- Refresh Timer.
 - Amount of time (in minutes) between refresh events for the **OI Main Screen**.
- Status Timer.
 - Amount of time (in minutes) between episodes of processing the status files from the product generation code.

Timer changes do not affect the default values for the timers. The changed values are in effect until they are changed again or a shutdown occurs. The default values in the database are used each time the OI is started up.

Table 18.9-3 presents (in a condensed format) the steps required to set timer intervals. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Execute the following menu path from the pull-down menu (on the **Main OI Screen**):
Display → Timers
 - The **Set Timer Intervals** dialogue box is displayed.
- 2 In the **Refresh Timer** field enter:
<minutes>
- 3 In the **Status Timer** field enter:
<minutes>
- 4 **Single-click** on the **Return** button.
- 5 Return to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.9-3. Set Timer Intervals - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Display → Timers (on Main OI Screen)	single-click
2	<minutes> (in Refresh Timer field)	enter text, press Enter

Table 18.9-3. Set Timer Intervals - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
3	<minutes> (in Status Timer field)	enter text, press Enter
4	Return button	single-click
5	Return to the Monitor/Control Product Processing Using PDS procedure	Use procedure in Section 18.9.1

18.9.3 Specify Job Selection Criteria

The procedure to **Specify Job Selection Criteria** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section Section 18.9.1). The jobs to be displayed on the **Main OI Screen** can be selected and/or sorted using the **PDSOI Selection Criteria Screen**. The selection can be done on the basis of the following criteria, either individually or in combination:

- Priority.
- Product Media [type].
- Due Date.
- Product Code.

Jobs can be sorted on the following fields, either individually or in combination:

- Job Key.
- Priority.
- Job Status.
- Product Media.
- Project Id.
- Product Code.
- Due Date.

Table 18.9-4 presents (in a condensed format) the steps required to specify job selection criteria. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

1 Execute the following menu path from the pull-down menu (on the **Main OI Screen**):

Display → Data/Sort

- The **PDSOI Selection Criteria Screen** is displayed.

2 **Single-click** on the toggle button(s) corresponding to the desired priority(ies) in the **Priority** list.

- Options are: **All, 1, 2, 3, 4, 5, 6, 7, 8, 9.**

- Priority meanings might be assigned (in the database) as follows (for example):

1 - Emergency -	Eight-hour turn-around required.
2 - High Priority -	Less than 24-hour turn-around.
3 - Priority -	Turn around in less than five working days.
4 - 6 - Rush -	Two-week turn-around.
7 - 9 - Standard Orders -	Four- to six-week turn-around.
- One button or several buttons may be selected.
- Options may change.
- Single-clicking on a button changes its state from unselected to selected or vice versa.
- Buttons have a depressed or sunken appearance rather than a raised appearance when selected.

3 Single-click on the toggle button(s) corresponding to the desired product media type(s) in the **Product Media** list.

- Options are: **All, CD, 8H, D7, DVD.**
- Product media types might be defined (in the database) as follows (for example):

CD -	CDROM.
8H -	8mm tape.
D7 -	DLT.
DVD -	DVD.
- Options may change.
- One button or several buttons may be selected.
- Single-clicking on a button changes its state from unselected to selected or vice versa.
- Buttons have a depressed or sunken appearance rather than a raised appearance when selected.

4 Single-click on the toggle button(s) corresponding to the desired due date(s) in the **Due Date** list.

- Options are: **All, Past Due, Today, 1 Week.**
- Options may change.
- One button or several buttons may be selected.
- Single-clicking on a button changes its state from unselected to selected or vice versa.
- Buttons have a depressed or sunken appearance rather than a raised appearance when selected.

5 Single-click on the toggle button(s) corresponding to the desired product code(s) in the **Product Code** list.

- Options are: **All** and all valid individual product codes.
- One button or several buttons may be selected.
- Single-clicking on a button changes its state from unselected to selected or vice versa.

- Buttons have a depressed or sunken appearance rather than a raised appearance when selected.
- 6 **Single-click** and **hold** the appropriate **Sort By** option button to display a list of numbers indicating the order in which the sort criteria should be evaluated, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
- Options are: **Job Key, Priority, Job Status, Product Media, Project Id, Product Code, Due Date**.
 - Selected sort order number is displayed on the selected **Sort By** option button when the mouse button is released.
 - It is not possible to selected a sort order number for a sorting category if the number has already been assigned to another category.
 - For example, if Job Status was assigned Number 1, Product Media cannot be assigned Number 1 as well. If jobs should be sorted by Product Media first, it is necessary to change the Job Status assignment to some (unused) number other than one (1) then one (1) can be assigned to Product Media.
- 7 Repeat Step 6 as necessary to assign sorting order to additional categories.
- It is possible to select more than one **Sort By** item.
 - If more than one **Sort By** option is selected the jobs will be selected by the sort order for the selection assigned Number 1, then within that sort order they would be sorted by the category assigned Number 2, etc.
 - For example, if Job Status were assigned the first sort order (1) and Due Date were assigned the second sort order (2), the jobs would be sorted by Job Status, then within each status the jobs would be sorted by Due Date. So the jobs containing the same status would be displayed together with the earliest due date for each status at the top of the list for that status.
- 8 **Single-click** on the appropriate button from the following selections:
- **Execute** - to query the database for the specified selections and dismiss the **PDSOI Selection Criteria Screen**.
 - A **Querying Database** notice is displayed temporarily in a blue box. The **message line** at the bottom of the screen displays “Working” while the **Querying Database** notice is being displayed. If there are status files waiting to be read, another blue box may be displayed indicating “Reading Status files. Please wait...”
 - If no selection criteria were selected, a **Selection Error Dialogue** is displayed in a purple box. (**Single-click** on the **OK** button to dismiss the error window.)
 - The **Main OI Screen** is displayed when the **Querying Database** notice quits (indicating that database has been queried and the results are being displayed).

- **Cancel** - to dismiss the **PDSOI Selection Criteria Screen** without specifying any selection or sorting criteria.
 - The **Main OI Screen** is displayed with the original selection/sorting criteria results.

9 Return to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.9-4. Specify Job Selection Criteria - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Display → Data/Sort (on Main OI Screen)	single-click
2	<priority> (in Priority list)	single-click
3	<product media> (in Product Media list)	single-click
4	<due date> (in Due Date list)	single-click
5	<product code> (in Product Code list)	single-click
6	<sort order> (on the applicable Sort By option button)	single-click
7	Repeat preceding step as necessary to assign sorting order	
8	Execute button	single-click
9	Return to the Monitor/Control Product Processing Using PDS procedure	Use procedure in Section 18.9.1

18.9.4 Use the OI Detail Screen

The procedure to **Use the OI Detail Screen** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). The **OI Detail Screen** provides the Distribution Technician with a means of accomplishing the following objectives:

- Obtaining specific information with respect to units associated with a particular job.
- Taking action with respect to units associated with a particular job.

Table 18.9-5 presents (in a condensed format) the steps required to use the **OI Detail Screen**. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: It is recommended that the operator not stay in the Detail window for long periods of time because the processing initiated by the Main screen timers does not occur while the Detail window is open. If the Detail window is left open for a long time, the amount of processing that might occur when the Detail window was closed and control returned to the Main screen could be extensive and might cause the Main screen to be inactive for quite a period of time.

- 1 **Single-click** on the action button at the beginning of the job line for the relevant job (on the **Main OI Screen**).
 - The **Action List** box is displayed.
 - Not all actions are available for every job.
 - The available actions depend on the job's current status and processing.
- 2 **Single-click** on (highlight) **Detail** in the **Action List** box.
 - **Detail** is highlighted.
- 3 **Single-click** on the appropriate button from the following selections:
 - **OK** - to bring up the **OI Detail Screen** and dismiss the **Action List** box.
 - The **OI Detail Screen** is displayed.
 - **Cancel** - to dismiss the **Action List** box and return to the **Main OI Screen**.
 - The **Main OI Screen** is displayed.
- 4 Observe information displayed on the **OI Detail Screen**.
 - The following items are displayed on the **OI Detail Screen** for the selected individual PDS job:
 - **Job Key.**
 - **Copies.**
 - **Pri.**
 - **Product Media.**
 - **Due Date.**
 - **Product Code.**
 - The following items are displayed on the **OI Detail Screen** for each unit within the selected PDS job:
 - "Select" button.
 - **Unit # .**
 - **Status.**
 - **PPF Key.**
 - **ECS Order ID.**
 - **Source Data Path.**
 - Each **unit line** display is color-coded to draw attention to unit status. The colors are interpreted as follows:
 - **Red** Error.
 - **Green** Active.
 - **Yellow** QC-Hold.
 - **Grey** Pending.
 - There is a "Select" button [not labeled] at the beginning of each unit line.
 - Used for selecting or deselecting each individual unit.

- It is possible to select multiple units to be affected by the same action (e.g., "Activate") at the same time.
 - If there are more records than can be displayed on the screen, use the scroll bar on the right hand side of the form to view the additional records.
 - If the entire entry is not visible in a field, click in the field and use the arrow keys on the keyboard to scroll to the end of the entry.
 - The **status line** at the bottom of the screen displays information about the form (for example, the status line might display “Record: 1/4” and “INSERT”).
 - The **message line** near the bottom of the screen (just above the **status line**) displays informational messages and error messages pertinent to what is happening on the form.
 - The following three "Action" buttons are located at the bottom of the screen:
 - **Complete** - completes all appropriate unit status changes (for the selected units) in the system. Units with current status either **QC-Hold** or **Error** are the only units that can be completed using the **Complete** button.
 - **Activate** - starts the data generation process (creates the .ppf file) for the selected units that are needed by product generation. Units with current status either **Pending** or **Error** are the only units that can be activated using the **Activate** button.
 - **Return** - causes any selected units to be deselected, closes the **OI Detail Screen**, and returns control to the **Main OI Screen**. If any timers went off while the **OI Detail Screen** was activated, the associated processing occurs upon selection of the **Return** button.
- 5** If the list of units on the **OI Detail Screen** needs to be sorted, perform the **Sort Units** procedure (Section 18.9.5).
- 6** If it is desirable to select a unit for the application of an action, **single-click** on the "Select" button at the beginning of the unit line for the relevant unit.
- To select multiple units for the application of the same action, perform the **Select Multiple Units** procedure (Section 18.9.6).
- 7** To deselect all currently selected units execute the following menu path from the pull-down menu:
- Select → Clear All**
- The "Select" buttons for all units go to the unselected state.
- 8** If it becomes necessary to activate unit(s), **single-click** on the **Activate** button near the bottom of the **OI Detail Screen**.
- Unit status before activation must be either **Pending** or **Error**.
 - **Single-clicking** on the **Activate** button starts the data generation process (creates the .ppf file) for the selected unit(s) only.

- A pop-up window appears indicating that the activation is being performed.
 - When the activation process has been completed, the database is queried, the **OI Detail Screen** is refreshed, all selected units are deselected and all active units are shown in green.
 - If no units were selected for activation, a “No units were selected, no action taken” message is displayed in a purple box.
 - **Single-click** on the **OK** button to dismiss the error window.
- 9** If it becomes appropriate to complete unit(s) [e.g., the unit(s) has (have) passed the QC check], **single-click** on the **Complete** button near the bottom of the **OI Detail Screen**.
- Unit status before initiating a "complete" action must be either **QC-Hold** or **Error**.
 - Clicking on the **Complete** button completes all appropriate unit status changes in the system for the selected unit(s) only.
 - A pop-up window appears indicating that the "complete" action is being performed.
 - When the "complete" action has finished, the database is queried, the **OI Detail Screen** is refreshed, all selected units are deselected and all completed units have been removed from the display (are no longer visible).
 - If no units were selected for completion, a “No units were selected, no action taken” message is displayed in a purple box.
 - **Single-click** on the **OK** button to dismiss the error window.
 - When it is done, the database will be requeryed causing the Detail Window to refresh and all selected units to be deselected, and completed units will no longer be visible.
- 10** If it becomes necessary to stop the job (that includes the units currently being displayed on the **OI Detail Screen**), select **Stop Job** from the pull-down menu.
- A confirmation dialogue box is displayed to inquire "Are you sure you want to stop this job?"
- 11** If **Stop Job** was selected from the pull-down menu, click on the appropriate button from the following selections:
- **Yes** - to stop the job and dismiss the confirmation dialogue box.
 - The system performs no further actions on the job except to process status files from the product generation code.
 - Any status files generated while the OI is shut down will not be processed until the OI is up and running again.
 - When the **Main OI Screen** is refreshed the next time, the field adjacent to the action button on the job line for the specified job displays the word **STOP**.
 - **Cancel** - to dismiss the confirmation dialogue box without stopping the job.

- 12 If it is necessary to update the data on the **OI Detail Screen** from the database, execute the following menu path from the pull-down menu:
- Display → Refresh**
- The data in the database is requeried and redisplayed using the current detail window default sort preference. (The data on the **OI Detail Screen** is refreshed.)
- 13 If it is necessary to cause the entire **OI Detail Screen** to be redrawn without accessing the database for data, execute the following menu path from the pull-down menu:
- Display → Repaint**
- The **OI Detail Screen** (including borders, buttons, and data) is redrawn.
 - The **Repaint** option is used in case the window becomes garbled.
- 14 If it is necessary to access help information concerning the **OI Detail Screen**, execute the following menu path from the pull-down menu:
- Help → On Form**
- A web browser pops up in another window, positioned to the start of the document about the Operator Interface.
- 15 If it is necessary to access information concerning the last error encountered, execute the following menu path from the pull-down menu on the **OI Detail Screen**:
- Help → Show Error**
- A message is displayed on the **message line** of the **Main OI Screen** stating the last error encountered.
 - Frequently a “No errors encountered recently” message is displayed in response to the Show Error option.
- 16 Repeat Steps 4 through 15 as necessary to obtain additional information with respect to units associated with the selected job and/or take action with respect to units associated with the job.
- 17 To return to the **Main OI Screen** **single-click** on the **Return** button.
- **Single-clicking** on the **Return** button deselects any selected units, closes the **OI Detail Screen**, and returns control to the **Main OI Screen**.
 - If any timers went off while the **OI Detail Screen** was activated, the associated processing occurs upon selection of the **Return** button.
 - The **Main OI Screen** is refreshed, showing any new information and status changes.
- 18 Return to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.9-5. Use the OI Detail Screen - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Action button (on Main OI Screen)	single-click
2	Detail	single-click
3	OK button	single-click
4	Observe information displayed on the OI Detail Screen	read text
5	Sort units (as necessary)	Use procedure in Section 18.9.5
6	"Select" button (or select multiple units) (as necessary)	single-click (or use procedure in Section 18.9.6) (as applicable)
7	Select → Clear All (as necessary)	single-click
8	Activate button (as necessary)	single-click
9	Complete button (as necessary)	single-click
10	Stop Job (as necessary)	single-click
11	Yes button (if applicable)	
12	Display → Refresh (on the Main OI Screen) (as necessary)	single-click
13	Display → Repaint (on the Main OI Screen) (as necessary)	single-click
14	Help → On Form (on the Main OI Screen) (as necessary)	single-click
15	Help → Show Error (on the Main OI Screen) (as necessary)	single-click
16	Repeat Steps 4 through 15 as necessary	
17	Return button (when appropriate)	single-click
18	Return to the Monitor/Control Product Processing Using PDS procedure	Use procedure in Section 18.9.1

18.9.5 Sort Units

The procedure to **Sort Units** is performed as part of the **Use the OI Detail Screen** procedure (Section 18.9.4). The units to be displayed on the **OI Detail Screen** can be sorted using the **Sort Dialogue Box**. The sorting can be done on the basis of the following criteria, either individually or in combination:

- Unit Nbr [number] (default sort preference that is used whenever the **OI Detail Screen** is opened).
- Unit Status.
- PPF Key.

Table 18.9-6 presents (in a condensed format) the steps required to sort units. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the

system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Execute the following menu path from the pull-down menu (on the **OI Detail Screen**):
Display → Sort
 - The **Sort Dialogue Box** is displayed.
- 2 **Single-click** and **hold** the appropriate **Sort By** option button to display a list of numbers indicating the order in which the sort criteria should be evaluated, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
 - Options are: **Unit Nbr, Unit Status, PPF Key**.
 - Selected sort order number is displayed on the selected **Sort By** option button when the mouse button is released.
 - It is not possible to selected a sort order number for a sorting category if the number has already been assigned to another category.
- 3 Repeat Step 2 as necessary to assign sorting order to additional categories.
 - It is possible to select more than one **Sort By** item.
 - If more than one **Sort By** option is selected the units will be selected by the sort order for the selection assigned Number 1, then within that sort order they would be sorted by the category assigned Number 2, etc.
 - For example, if Unit Status were assigned the first sort order (1) and Unit Nbr were assigned the second sort order (2), the jobs would be sorted by Unit Status, then within each status the jobs would be sorted by Unit Nbr. So the units containing the same status would be displayed together with the lowest unit number for each status at the top of the list for that status.
- 4 **Single-click** on the appropriate button from the following selections:
 - **Execute** - to query the database for the specified selections and dismiss the **Sort Dialogue Box**.
 - A **Querying Database** notice is displayed temporarily in a blue box.
 - The **message line** at the bottom of the screen displays “Working” while the **Querying Database** notice is being displayed.
 - If there are status files waiting to be read, another blue box may be displayed indicating “Reading Status files. Please wait...”
 - If no selection criteria were selected, a **Selection Error Dialogue** is displayed in a purple box. (**Single-click** on the **OK** button to dismiss the error window.)
 - The **OI Detail Screen** is displayed when the **Querying Database** notice quits (indicating that database has been queried and the results are being displayed).
 - **Cancel** - to dismiss the **Sort Dialogue Box** without specifying any sorting criteria.
 - The **OI Detail Screen** is displayed with the original sorting criteria results.

- 5 Return to the **Use the OI Detail Screen** procedure (Section 18.9.4).

Table 18.9-6. Sort Units - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Display → Sort (on OI Detail Screen)	single-click
2	<sort order> (on the applicable Sort By option button)	single-click
3	Repeat preceding step as necessary to assign sorting order	
4	Execute button	single-click
5	Return to the Use the OI Detail Screen procedure	Use procedure in Section 18.9.4

18.9.6 Select Multiple Units

The procedure to **Select Multiple Units** is performed as part of the **Use the OI Detail Screen** procedure (Section 18.9.4).

Table 18.9-7 presents (in a condensed format) the steps required to select multiple units. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Execute the following menu path from the pull-down menu (on the **OI Detail Screen**):
Select → Range
 - The **Range Dialogue Box** is displayed.
- 2 In the **Begin Unit** field enter:
<unit number>
 - **<unit number>** represents the unit number of the first unit in the range of units to be selected.
- 3 In the **End Unit** field enter:
<unit number>
 - **<unit number>** represents the unit number of the last unit in the range of units to be selected.

- 4 **Single-click** on the appropriate button from the following selections:
 - **Select Units** - to query the database for the specified selections and dismiss the **Range Dialogue Box**.
 - The **OI Detail Screen** is displayed and the "Select" buttons for all units within the specified range go to the selected state.
 - Already selected units remain selected and units that are not within the specified range are ignored.
 - **Return** - to dismiss the **Sort Dialogue Box** without specifying any sorting criteria.
 - The **OI Detail Screen** is displayed with the "Select" buttons in their original states.

- 5 Return to the **Use the OI Detail Screen** procedure (Section 18.9.4).

Table 18.9-7. Select Multiple Units - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Select → Range (on OI Detail Screen)	single-click
2	<unit number> (in Begin Unit field)	enter text, press Enter
3	<unit number> (in End Unit field)	enter text, press Enter
4	Select Units button	single-click
5	Return to the Use the OI Detail Screen procedure	Use procedure in Section 18.9.4

18.9.7 Activate a Job

The procedure to **Activate a Job** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). The **Main OI Screen** provides the Distribution Technician with a means of activating jobs that are in a **Pending** status. The **Activate** option is available just once for each job. If it is necessary to reactivate the same job, the activation must be done at the detail level, which is accomplished using the **OI Detail Screen** as described in the **Use the OI Detail Screen** procedure (Section 18.9.4).

Table 18.9-8 presents (in a condensed format) the steps required to activate a job. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 On the PDS **Main OI Screen** observe the number of units in the **To_Do Units** column for the pending job to be activated.
 - The number of units in the **To_Do Units** column can provide a rough approximation of the size of the job.

- 2 If the job to be activated is a large job, determine whether all units for the order are included in the pending job that is displayed on the PDS **Main OI Screen**.
 - For detailed instructions refer to the **Compare the Number of Units in an Order and a Job** procedure (Section 18.9.8).

- 3 **Single-click** on the action button at the beginning of the job line for the relevant job (on the **Main OI Screen**).
 - The **Action List** box is displayed.
 - Not all actions are available for every job.
 - The available actions depend on the job's current status and processing.

- 4 **Single-click** on (highlight) **Activate** in the **Action List** box.
 - **Activate** is highlighted.
 - The **Activate** option is available if the job status is **Pending** only.
 - Once selected, the **Activate** option is no longer available for the selected job.
 - Subsequent activation/reactivation must be done at the detail level, which is accomplished using the **OI Detail Screen** as described in the **Use the OI Detail Screen** procedure (Section 18.9.4).

- 5 **Single-click** on the appropriate button from the following selections:
 - **OK** - to start the process of generating the data (in the form of a .ppf file) that the product generation code needs by using this machine's job limitation information and other data stored in the database.
 - A blue pop-up window is displayed with one of the following types of messages indicating that the activation is being performed:
 - Activating Job <job key>.**
 - Activating next units <job key>.**
 - When the activation process has been completed, the database is queried, the **Main OI Screen** is refreshed and after the job has retrieved all data for the product the **Media Drive Selection** window is displayed.
 - The **Media Drive Selection** window is not displayed for Rimage units if AutoRimage mode has been enabled.
 - AutoRimage may be enabled on systems that have multiple Rimage units only.
 - AutoRimage should be disabled at sites that have a single Rimage unit.
 - **Cancel** - to dismiss the **Action List** box and return to the **Main OI Screen**.
 - The **Main OI Screen** is displayed.

- 6 If the job is a CD or DVD job, ensure that the input bins of the Rimage unit contain blank disks.
 - Load the input bin(s) if necessary, ensuring that the disks are inserted right-side up (shiny side down).
 - For detailed instructions refer to the Rimage unit operating manual.

- 7 If the data are to be recorded on a tape, ensure that there is a blank tape in the drive to be used for recording the data.
 - A list of the available drives is displayed in the **Media Drive Selection** window.
- 8 If the data are to be recorded on a tape, wait for the drive to come on line before responding to the **Media Drive Selection** window.
 - Wait for light to stop flashing.
- 9 In the **Media Drive Selection** window **single-click** on (highlight) the drive (i.e., tape drive or Rimage unit) to be used for the job.
 - For CD and DVD jobs it is possible to activate more jobs than can be accommodated by the number of currently available drives.
 - Activating more jobs than can be accommodated by the number of currently available drives is not possible for 8MM or DLT jobs.
- 10 **Single-click** on the **OK** button.
 - The **Media Drive Selection** window is dismissed.
 - The process of writing data to the selected drive starts.
- 11 Return to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.9-8. Activate a Job - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Observe the number of units in the To_Do Units column for the job (PDS Main OI Screen)	read text
2	Determine whether all units for the order are included in the pending job displayed on the PDS Main OI Screen (if the job is large)	Use procedure in Section 18.9.8
3	Action button (on Main OI Screen)	single-click
4	Activate	single-click
5	OK button	single-click
6	Insert blank disks in the input bins of the Rimage unit (if applicable)	stack
7	Insert a blank tape in the appropriate tape drive (if applicable)	push in or push in and close door (as applicable)
8	Wait for the drive to come on line (if applicable)	wait
9	<drive> (in Media Drive Selection window)	single-click
10	OK button	single-click
11	Return to the Monitor/Control Product Processing Using PDS procedure	Use procedure in Section 18.9.1

18.9.8 Compare the Number of Units in an Order and a Job

The **Compare the Number of Units in an Order and a Job** procedure may be performed as part of the **Activate a Job** procedure (Section 18.9.7). The purpose of comparing the number of units in an order and a job is to determine whether all units for a large order are included in a pending job that is displayed on the **PDS Main OI Screen**. The result is useful in deciding whether to activate the job or wait until the data for more or all units in the order become available.

The procedure for comparing the number of units in an order and a job involves a comparison between the number of units in the order on the **PDSIS OI Detail Screen** and the number of units specified on the **Main OI Screen**. It is possible for the number of units in the order on the **PDSIS OI Detail Screen** to be greater than the number of units specified on the **Main OI Screen**. If the number of units in the PDSIS order were greater than the number of units in the corresponding PDSSA job and the job was activated, only the units that were accessible to PDSSA would be copied to the specified medium. Depending on the circumstances (including DAAC policy) activating part of an order may be acceptable. However, for high-capacity media types such as DLT, activation of a partial job could be a very inefficient use of the media.

Discrepancies in the number of units in an order (as displayed on the **PDSIS OI Detail Screen**) and the number of units in the corresponding job (as displayed on the **PDS Main OI Screen**) are generally due to PDSIS data “grouping” (also known as “chunking”). There are two possible grouping factors but only one of them is in effect at a time.

The two grouping factors are as follows:

- Granule size.
- Group limits.

When the current grouping factor is “granule size,” PDSIS makes a chunk of a large order available to PDSSA after a specified number of megabytes of data have been received from ECS. The granule size limit is specified in the `group_data_size` column of the `pdsis_serverconfig_tbl` database table. If the total size of an order is smaller than the granule size limit, granule-size grouping is irrelevant for that order.

If the current grouping factor is “group limits,” PDSIS makes a chunk of an order available to PDSSA when a specified number of units has been received from ECS. The number of units is specified in the `group_unit_size` column of the `pdsis_serverconfig_tbl` database table. If the value is NULL, all units are made available to PDSSA only after all unit data have been staged by ECS. If the total number of units in an order is less than the group limit, group-limit grouping is irrelevant for that order.

The grouping factor in use is specified by the value in the `grouping_config` column of the `pdsis_serverconfig_tbl` database table. Valid grouping values for the `pdsis_serverconfig_tbl` are as follows:

- **S** - “granule size” grouping.
- **G** - “group limits” grouping.

To determine the current grouping factor use the **Determine the Current Grouping Factor** procedure (Section 18.9.9).

The grouping factor is relevant for orders that are larger than the value assigned to the current grouping factor only. For example, if **Grouping Config** equals “S” and **Group Data Size** is set to “35,000,” an order for 600 megabytes of data would not be broken up into chunks.

The **Main OI Screen** provides the Distribution Technician with a means of determining the number of units in a job. The **PDSIS OI Detail Screen** provides the Distribution Technician with a means of determining the total number of units in the order.

Table 18.9-9 presents (in a condensed format) the steps required to compare the number of units in an order and a job. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Activate the **PDSIS OI Detail Screen** for the order to be filled.
 - For detailed instructions refer to the **Use the PDSIS OI Detail Screen** procedure (Section 18.10.2).
 - The **PDSIS OI Detail Screen** is displayed.
- 2 Scroll to the bottom of the **PDSIS OI Detail Screen** to find the last unit in the order.
- 3 Observe the number of units in the **To_Do Units** column for the corresponding job on the **Main OI Screen**.
- 4 Compare the number of units in the order on the **PDSIS OI Detail Screen** with the number of units specified in the **To_Do Units** column for the corresponding job on the **Main OI Screen**.
 - If the number of units is equal, the job can be activated.
 - For detailed instructions refer to the **Activate a Job** procedure (Section 18.9.7).
 - If the number of units is not equal, consider the effects on job processing before activating the job:
 - If the job is activated, only the units that are accessible to PDSSA (in the PDT_PDSINFO table) will be activated.
 - Activating a partial order may be acceptable, depending on the circumstances and DAAC policy.
 - For a high-capacity type of medium (e.g., DLT) activating a partial order would be an inefficient use of the media if all units in the order could be recorded on a single tape or disk.
 - Distribution of a partial order may be authorized by User Services when some granules are currently unavailable but the customer has an immediate need for the granules that are available.

- Activating a partial order may be acceptable when multiple media are required to fill the order and there is a sufficient quantity of data available to fill one disk or tape.
 - Activating a partial order may lead to manual intervention to correct the information on the labels affixed to the media, especially if more tapes or disks are used than originally expected. [Alternatively, DAAC policy may allow distribution of media volumes even when the numbering is not consistent with the original numbering scheme (e.g., 1 of 2, 2 of 2, 3 of 2.)]
- 5 If all units currently available to PDSSA should be activated immediately, activate the job.
 - For detailed instructions refer to the **Activate a Job** procedure (Section 18.9.7).
 - 6 If some of the units currently available to PDSSA should be activated immediately, activate the applicable units.
 - For detailed instructions refer to the **Use the OI Detail Screen** procedure (Section 18.9.4).
 - 7 If none of the units currently available to PDSSA should be activated immediately, wait until the appropriate number of units is available to PDSSA before continuing.
 - 8 If it was necessary to wait until the appropriate number of units became available to PDSSA before continuing, return to Step 3.

Table 18.9-9. Compare the Number of Units in an Order and a Job - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	PDSIS OI Detail Screen (for the order to be filled)	Use procedure in Section 18.10.2
2	Last unit in the order	scroll down
3	Number of units in the To_Do Units column (on PDSIS OI Detail Screen) for the corresponding job on the Main OI Screen	read text
4	Number of units in the order (on PDSIS OI Detail Screen) vs. number of units specified in the To_Do Units column for the corresponding job (on Main OI Screen)	compare
5	Activate job (If all units should be activated now)	Use procedure in Section 18.9.7
6	Activate units (if some units should be activated now)	Use procedure in Section 18.9.4
7	Wait until the appropriate number of units is available to PDSSA before continuing (if no units should be activated now)	wait

Table 18.9-9. Compare the Number of Units in an Order and a Job - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
8	Return to Step 3 (if waiting for units was necessary)	

18.9.9 Determine the Current Grouping Factor

It may be necessary to determine the current grouping factor when comparing the number of units in an order and a job.

Table 18.9-10 presents (in a condensed format) the steps required to determine the current grouping factor. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Perform the **Start the PDSIS Maintenance Module** procedure (Section 18.7.9).
- 2 **Single-click** on the **Server Config** button on the **PDSIS Maintenance Module Main Menu**.
 - The **Server Config Maintenance (PDSISMTPST)** window is displayed.
- 3 **Single-click** on the **Execute Query** button on the **Server Config Maintenance** window.
 - Server configuration is displayed in the **Server Config Maintenance** window.
- 4 Observe the value in the **Grouping Config** field of the **Server Config Maintenance** window.
 - Valid grouping values are as follows:
 - **S** - “granule size” grouping.
 - **G** - “group limits” grouping.
- 5 Observe the value in the **Group Data Size** field of the **Server Config Maintenance** window.
 - Value indicates the maximum size (in megabytes) of each chunk of data made available to PDSSA if **Grouping Config** is set to “S.”
 - For example, a value of “35000” would indicate a grouping factor of 35,000 megabytes (35 gigabytes).
- 6 Observe the value in the **Group Unit Size** field of the **Server Config Maintenance** window.
 - Value indicates the maximum number of units in each chunk of data made available to PDSSA if **Grouping Config** is set to “G.”

- For example, a value of “10” would indicate a grouping factor of 10 units.
- 7 To close the **Server Config Maintenance** window **single-click** on the **Exit** button at the bottom of the window.
 - If the **Exit** button is not visible on the maintenance module form, click on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - The **PDSIS Maintenance Module Main Menu** is displayed.
 - 8 To shut down the **PDSIS Maintenance Module** **single-click** on the **Exit** button at the bottom of the **PDSIS Maintenance Module Main Menu** window.
 - The **PDSIS Maintenance Module Main Menu** is dismissed.
 - 9 Return to the procedure that recommended determining the current grouping factor.
 - For example, the **Compare the Number of Units in an Order and a Job** procedure (Section 18.9.8)

Table 18.9-10. Determine the Current Grouping Factor - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Start the PDSIS Maintenance Module	Use procedure in Section 18.7.9
2	Server Config button (on PDSIS Maintenance Module Main Menu)	single-click
3	Execute Query button (on Server Config Maintenance window)	single-click
4	<value> (in Grouping Config field)	read text
5	<value> (in Group Data Size field)	read text
6	<value> (in Group Unit Size field)	read text
7	Exit button (on Server Config Maintenance window)	single-click
8	Exit button (on PDSIS Maintenance Module Main Menu)	single-click
9	Return to procedure that recommended determining the current grouping factor	

18.9.10 Stop/Terminate a Job Using the Main OI Screen Display

The procedure to **Stop/Terminate a Job Using the Main OI Screen Display** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). Although the procedures for stopping/terminating (suspending) jobs are rarely used, both the **Main OI Screen** and the **Job Monitor Main Window** provide the Distribution Technician with means of doing so. Note that if a job has proceeded to the stage where the data are being written

to the specified medium that process (writing to the medium) continues even after an attempt to stop/terminate the job.

Table 18.9-11 presents (in a condensed format) the steps required to stop/terminate a job using the **Main OI Screen** display. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 **Single-click** on the action button at the beginning of the job line for the relevant job on the **Main OI Screen**.
 - The **Action List** box is displayed.
 - Not all actions are available for every job.
 - The available actions depend on the job's current status and processing.
- 2 **Single-click** on (highlight) **Stop Job** in the **Action List** box.
 - **Stop Job** is highlighted.
- 3 **Single-click** on the appropriate button from the following selections:
 - **OK** - to start the process of stopping the job.
 - A confirmation dialogue box is displayed to inquire "Are you sure you want to stop this job?"
 - **Cancel** - to dismiss the **Action List** box and return to the **Main OI Screen**.
 - The **Main OI Screen** is displayed. [End of procedure.]
- 4 If a confirmation dialogue box is being displayed, click on the appropriate button from the following selections:
 - **Yes** - to stop the job and dismiss the confirmation dialogue box.
 - The system performs no further actions on the job except to process status files from the product generation code.
 - When the screen is refreshed the next time, the field adjacent to the action button on the job line for the specified job displays the word **STOP**.

NOTE: It may be useful to manually refresh the screen.

- **Cancel** - to dismiss the confirmation dialogue box without stopping the job.
 - When the activation process has been completed, the database is queried, the **Main OI Screen** is refreshed.
- 5 Return to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.9-11. Stop/Terminate a Job Using the Main OI Screen Display - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Action button (on Main OI Screen)	single-click
2	Stop Job	single-click
3	OK button	single-click
4	Yes button	single-click
5	Return to the Monitor/Control Product Processing Using PDS procedure	Use procedure in Section 18.9.1

18.9.11 Stop/Terminate a Job Using the Job Monitor Main Window

The procedure to **Stop/Terminate a Job Using the Job Monitor Main Window** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). Although the procedures for stopping/terminating (suspending) jobs are rarely used, both the **Main OI Screen** and the **Job Monitor Main Window** provide the Distribution Technician with means of doing so. Note that if a job has proceeded to the stage where the data are being written to the specified medium that process (writing to the medium) continues even after an attempt to stop/terminate the job.

Table 18.9-12 presents (in a condensed format) the steps required to stop/terminate a job using the **Job Monitor Main Window**. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 **Place** the mouse cursor on the relevant job in the running job list of the **Job Monitor Main Window**, **single-click** and **hold** the **right** mouse button, **move** the mouse cursor to **Terminate Job** (highlighting it), then **release** the mouse button.
 - Pop-up menu appears with the options **View Job Log**, **View Job PPF**, **Force AutoRimage Completion** [appears only when the selected job is waiting for a completion message from a Rimage writer], **Terminate Job**.
 - Select **Terminate Job** from the pop-up menu.
 - A confirmation window is displayed.

- 2 **Single-click** on the appropriate button from the following selections:
 - **Proceed** - to suspend the job and dismiss the confirmation window.
 - The confirmation window is dismissed.
 - **Cancel** - to dismiss the confirmation window without suspending the job.
 - The confirmation window is dismissed.

- 3 Return to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.9-12. Stop/Terminate a Job Using the Job Monitor Main Window - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Terminate Job (Job Monitor Main Window)	right-click
2	Proceed button	single-click
3	Return to the Monitor/Control Product Processing Using PDS procedure	Use procedure in Section 18.9.1

18.9.12 Respond to a Status of QC-Hold (Perform a QC Check or Verification)

The procedure to **Respond to a Status of QC-Hold (Perform a QC Check or Verification)** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). A status of **QC-Hold** on the **PDS Operator Interface (PDSOI)** indicates that a job requires a QC check or media verification. The **PDS Verification Tool** provides the Distribution Technician with a means of selecting a verification drive for checking a disk or tape. The **PDSIS OI Main Screen** provides a means of marking the job "shipped."

Table 18.9-13 presents (in a condensed format) the steps required to respond to a status of QC-Hold (perform a QC check or verification). If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Retrieve the product summary from the report printer.
- 2 Review the product summary to determine whether there were any problems in writing to the medium.
 - The status of each file on the medium is indicated on the report by a "Y" or "N."
 - If there were problems in writing to the medium, go to the **Reprocess a Job** procedure (Section 18.11.20).
 - If a disk was created but no product summary was printed, go to the **Reprocess a Job** procedure (Section 18.11.20).
- 3 Remove the medium (tape or disk) from the unit in which the data were written.
 - 8mm tapes are ejected from the drive when completed.
 - When a DLT tape is finished, the **Operate Handle** light on the DLT drive turns green.
 - To extract the completed DLT tape from the drive, lift the handle on the front of the drive and pull the tape out of the drive.

- The access door to the Rimage unit may be opened whenever the media arm is not moving media.
 - If the label on a disk was not printed, go to the **Reprint a Label Stamped on a Disk** procedure (Section 18.11.18).
- 4 If the medium is a tape, set the write-protect switch on the tape cartridge at the **Read-Only** (write-protected) position.
- 5 If the medium is a tape, retrieve the tape label from the label printer.
- If the tape label is not correct or damaged, go to the **Reprint PDS Documents and Labels** procedure (Section 18.11.19).
- 6 If the medium is a tape, affix the tape label in the appropriate place.
- Labels are typically affixed directly to the tape cartridge unless DAAC policy states otherwise (e.g., affix the label to the case for the tape).
- 7 If the medium is a disk, retrieve the corresponding jewel-case insert from the jewel-case insert printer.
- If the jewel-case insert is not correct or is damaged, go to the **Respond to a Jewel-Case Insert Printing Failure** procedure (Section 18.11.23).
- 8 If the medium is a disk, insert the jewel-case insert in a jewel case.
- If the DAAC is supplied with CD jewel cases and DVD jewel cases, ensure that each type of disk is placed in the appropriate type of jewel case (i.e., CDs in CD cases, DVDs in DVD cases).
- 9 Observe the PDS **Verification Tool** to identify an available drive for verifying writing to the medium (tape or disk).
- The color of the buttons on the PDS **Verification Tool** provides an indication as to the status of each drive.
 - Dark blue typically indicates "available."
 - Red typically indicates "in use."
 - The colors may vary in meaning because the color settings are configurable.
 - If there is no CD drive available for verification (e.g., if all CD drives are out of service), CDs can be verified by reading their contents using a verification DVD drive, a CD drive in a PC or a DVD drive in a PC.
 - Verify that there are data and metadata files for all units in the job and that the file sizes indicate the presence of data [e.g., file size of 0 (zero) indicates that there is no data in the file].
 - If there is no DVD drive available for verification (e.g., if all verification DVD drives are out of service), DVDs can be verified by reading their contents using a DVD drive in a PC.

- 10 Load the medium (tape or disk) in an available drive.
- 11 Wait for the drive to come on line before continuing.
 - Generally the lights on the drive stop blinking when the drive comes on line.
- 12 On the PDS **Verification Tool** **single-click** on the button corresponding to the drive in which the medium was loaded.
 - The following events occur when the reader in which the medium was loaded has completed the verification:
 - The drive opens (except DLT drives, which do not open automatically).
 - The button corresponding to the drive on the PDS **Verification Tool** changes color.
- 13 When the reader in which the medium was loaded has completed the verification, retrieve the corresponding verification report from the printer.
 - It is important to match the verification report with the corresponding tape or disk before you remove the medium from the drive because the verification report makes reference to the verification drive only.
 - The verification report does not make reference to the order number, request ID, or job number.
- 14 Remove the medium from the drive.
 - Keep the medium and its verification report together.
 - If verification reports for media are lost, it is necessary to reverify the tape or disk.
 - 8mm tapes are ejected from the drive when completed.
 - When a DLT tape is finished, the **Operate Handle** light on the DLT drive turns green.
 - To extract the completed DLT tape from the drive, lift the handle on the front of the drive then pull the tape out of the drive.
 - The access door to the Rimage unit may be opened whenever the media arm is not moving media.
- 15 Insert the medium in its case.
 - If the DAAC is supplied with CD jewel cases and DVD jewel cases, ensure that each type of disk is placed in the appropriate type of jewel case (i.e., CDs in CD cases, DVDs in DVD cases).
- 16 Review the verification report for read errors.
 - If the medium is a tape with read errors and the tape has just been verified for the first time, repeat the verification on a different drive (return to Step 3).
 - If the medium is a tape with read errors and the errors have been verified for a second time, reprocess the job by performing the **Reprocess a Job** procedure (Section 18.11.20).

- Successful verification of a DVD using the PDS Verification Tool is possible only when the disk contains less than 2.5 GB of data.
 - A DVD that exceeds the 2.5-GB limit can be verified successfully up to the limit then errors occur for the remainder of the units.
 - To verify that the remainder of the files were written properly, read the DVD in the DVD drive of a PC. Starting with the first unit number that failed the QC verification, open each folder for the unit that failed and verify the files (i.e., verify that there are data and metadata files for all units in the job and that the file sizes indicate the presence of data).
 - If the verification report for a disk (CD or DVD) does not list any contents, turn the power switch for the affected CD or DVD drive **off** then **on** and retry the verification check in the same drive (return to Step 10).
 - If the medium is a disk with read errors and the disk has just been verified for the first time, visually inspect the disk for obvious damage.
 - If the disk has obvious unrecoverable damage (such as a scratch), discard the disk and reprocess the job by performing the **Reprocess a Job** procedure (Section 18.11.20).
 - If the disk does not have obvious damage or has a recoverable problem (such as a fingerprint that can be wiped off), fix the problem and repeat the verification on a different drive (return to Step 3).
 - If the medium is a disk with read errors and the errors have been verified for a second time, reprocess the job by performing the **Reprocess a Job** procedure (Section 18.11.20).
- 17** Place the medium (in its case), product summary, and verification report (indicating that the medium is good) together in an appropriate place.
- 18** Perform the **Complete a Job** procedure (Section 18.9.13).
- About five to fifteen minutes after the job has been marked complete on the **PDSOI**, its status on the **PDSIS OI** changes from "I" (In Progress) to "C" (Completed).
 - About five to fifteen minutes after the job has been marked "C" on the **PDSIS OI** the shipping labels and packing lists are printed.
- 19** When the shipping label and packing list have been printed, retrieve the items and put them with the medium (in its case) in the appropriate area for pick-up by or delivery to the shipping (dissemination) area.
- Disposition of the paperwork depends on site policy.
 - For example, both shipping labels and one packing list may go to the shipping (dissemination) area while all remaining paperwork is recycled.
- 20** Verify that all items (i.e., disk/tape, shipping labels, packing list) to be sent to the shipping (dissemination) area are for the same order.

- 21 When the shipping labels and packing lists have been printed and the job status on the **PDSIS OI** has changed from "I" (In Progress) to "C" (Completed), **single-click** on the action button (on the **PDSIS OI Main Screen**) at the beginning of the job line for the job.
 - The **Action List** box is displayed.
- 22 **Single-click** on (highlight) **Ship** in the **Action List** box.
 - **Ship** is highlighted.
- 23 **Single-click** on the appropriate button from the following selections:
 - **OK** - to mark the job "shipped."
 - **Cancel** - to dismiss the **Action List** box and return to the **PDSIS OI Main Screen** without marking the job "shipped."
 - The **PDSIS OI Main Screen** is displayed.
- 24 Return to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.9-13. Respond to a Status of QC-Hold (Perform a QC Check or Verification) - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Retrieve product summary from report printer	pick up
2	Determine whether there were any problems in writing to the medium (review product summary)	read text
3	Remove the medium (tape or disk) from the unit in which the data were written	pull out or open door and pull out (as applicable)
4	Read-Only position (tape cartridge write-protect switch) (if applicable)	set switch
5	Retrieve tape label from label printer (if applicable)	pick up
6	Affix tape label (if applicable)	attach
7	Retrieve jewel-case insert from jewel-case insert printer (if applicable)	pick up
8	Insert jewel-case insert in jewel case (if applicable)	insert
9	Identify an available drive for verifying writing to the medium (on PDS Verification Tool)	observe
10	Load medium in an available drive	push in or push in and close door (as applicable)
11	Wait for the drive to come on line	wait
12	Applicable drive button (on PDS Verification Tool)	single-click
13	Retrieve verification report from report printer (when applicable)	pick up

Table 18.9-13. Respond to a Status of QC-Hold (Perform a QC Check or Verification) - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
14	Remove medium from verification drive	pull out or open door and pull out (as applicable)
15	Insert medium in its case	insert
16	Identify read errors (review the verification report)	read text
17	Place the medium (in its case), product summary, and verification report together in an appropriate place	place
18	Complete the job	Use procedure in Section 18.9.13
19	When the shipping label and packing list have been printed, retrieve the items and put them with the medium (in its case) in the appropriate area for pick-up by or delivery to the shipping function	place
20	Verify that all items (i.e., disk/tape, shipping labels, packing list) are for the same order	read text
21	Action button (PDSIS OI Main Screen)	single-click
22	Ship	single-click
23	OK button	single-click
24	Return to the Monitor/Control Product Processing Using PDS procedure	Use procedure in Section 18.9.1

18.9.13 Complete a Job

The procedure to **Complete a Job** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). The **Main OI Screen** provides the Distribution Technician with a means of completing jobs that are in a **QC-Hold** status once they have passed the QC check. This "Complete" action first checks the status of the units of the job. If any unit(s) of the job is (are) not in QC-Hold status, some unit(s) may not be ready for completion; consequently, the completion must be performed using the **OI Detail Screen** as described in the **Use the OI Detail Screen** procedure (Section 18.9.4).

Table 18.9-14 presents (in a condensed format) the steps required to complete a job. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 **Single-click** on the action button at the beginning of the job line for the relevant job (on the **Main OI Screen**).
 - The **Action List** box is displayed.
 - Not all actions are available for every job.
 - The available actions depend on the job's current status and processing.

- 2 **Single-click** on (highlight) **Complete** in the **Action List** box.
 - **Complete** is highlighted.
 - The **Complete** option is available if the job status is **QC-Hold** only.

- 3 **Single-click** on the appropriate button from the following selections:
 - **OK** - to start the process of completing the units in the job and the job itself.
 - A blue pop-up window is displayed with the following type of message indicating that the job's units are being completed:
Completing Job <job key>.
 - When the completion process has finished, the database is queried, the **Main OI Screen** is refreshed, showing any new information or status changes.
 - The job that was completed should no longer be displayed after the screen is refreshed because there are no units to be processed.
 - **Cancel** - to dismiss the **Action List** box and return to the **Main OI Screen**.
 - The **Main OI Screen** is displayed.

- 4 Return to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.9-14. Complete a Job - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Action button (on Main OI Screen)	single-click
2	Complete	single-click
3	OK button	single-click
4	Return to the Monitor/Control Product Processing Using PDS procedure	Use procedure in Section 18.9.1

18.9.14 Enter Notes about a Job

The procedure to **Enter Notes about a Job** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). The **Main OI Screen** provides the Distribution Technician with a means of entering comments or notes about jobs. If a note has been entered for a job, an “*” is displayed in the **Note** field of the **Main OI Screen**.

Table 18.9-15 presents (in a condensed format) the steps required to enter notes about a job. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 **Single-click** on the action button at the beginning of the job line for the relevant job (on the **Main OI Screen**).
 - The **Action List** box is displayed.
 - Not all actions are available for every job.
 - The available actions depend on the job's current status and processing.

- 2 **Single-click** on (highlight) **Notes** in the **Action List** box.
 - **Notes** is highlighted.

- 3 **Single-click** on the appropriate button from the following selections:
 - **OK** - to gain access to the **Job Notes** dialogue box.
 - The **Job Notes** dialogue box is displayed.
 - **Cancel** - to dismiss the **Action List** box and return to the **Main OI Screen**.
 - The **Main OI Screen** is displayed.

- 4 In the **Job Notes** dialogue box enter:
<text>
 - If notes had already been entered for the selected job, the notes are displayed in the **Job Notes** dialogue box and it is possible to add to or modify them.

- 5 **Single-click** on the **Return** button to dismiss the **Job Notes** dialogue box and return to the **Main OI Screen**.
 - The **Main OI Screen** is displayed.
 - When the **Main OI Screen** is refreshed next an "*" is displayed in the **Note** field on the job line for the specified job (on the **Main OI Screen**) indicating that there is a note concerning the job.

- 6 Return to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.9-15. Enter Notes about a Job - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Action button (on Main OI Screen)	single-click
2	Notes	single-click
3	OK button	single-click
4	<text> (in Job Notes dialogue box)	enter text
5	Return button	single-click
6	Return to the Monitor/Control Product Processing Using PDS procedure	Use procedure in Section 18.9.1

18.9.15 Promote a Job

A job would most likely be promoted at the request of User Services. The only practical means the Distribution Technician has of promoting jobs is to activate the pending job ahead of any other pending jobs.

18.9.16 Cancel a Job

Jobs are not normally canceled using the PDSSA operator tools. Jobs (orders) can be "rejected" using PDSIS tools. (Refer to the **Reject a Unit/Order** procedure (Section 18.10.4).

18.9.17 Generate PDS Production Reports

The procedure to **Generate PDS Production Reports** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). The **Main OI Screen** provides the Distribution Technician with a means of generating PDS production reports.

Table 18.9-16 presents (in a condensed format) the steps required to generate PDS production reports. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If the report is to be printed on the currently assigned report printer, continue with Step 2; otherwise, perform the **Select an Alternate Printer** procedure (Section 18.9.18).
- 2 If a report that contains the data currently being displayed **Main OI Screen** is desired, execute the following menu path from the pull-down menu:
Reports → Queue
 - The report is printed on the designated report printer.
 - The report is fired off in the background and uses the printer definition for reports.
 - The file generated for the report is \$PDSROOT/summary/queue<timestamp>.rpt.
- 3 If a report of all orders that still need to be produced (broken down by various time frame ranges) is desired, execute the following menu path from the pull-down menu:
Reports → Lag
 - The report is printed on the designated report printer.
 - The report is fired off in the background and uses the printer definition for reports.
 - The file generated for the report is \$PDSROOT/summary/lag<timestamp>.rpt.
- 4 If an error report for a particular job is desired, first **single-click** in one of the fields on the job line for the relevant job.

- 5 If an error report for a particular job is desired, execute the following menu path from the pull-down menu:
Reports → Error
 - The report provides information about errors that have occurred with the specified job.
 - The report is fired off in the background.
 - The report is printed on the designated report printer.
- 6 Return to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.9-16. Generate PDS Production Reports - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Select an alternate printer (if applicable)	Use procedure in Section 18.9.18
2	Either Reports → Queue or Reports → Lag or Reports → Error (on Main OI Screen) (as applicable)	single-click
3	Return to the Monitor/Control Product Processing Using PDS procedure	Use procedure in Section 18.9.1

18.9.18 Select an Alternate Printer

The procedure to **Select an Alternate Printer** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). The **Main OI Screen** provides the Distribution Technician with a means of selecting an alternate printer.

Table 18.9-17 presents (in a condensed format) the steps required to select an alternate printer. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 **Single-click** on **Printers** on the menu bar of the **Main OI Screen**.
 - The **Default Printers** dialogue box is displayed.
 - The current selections for printers for reports and jewel-case inserts are displayed.
- 2 **Single-click** and **hold** the applicable option button (either **Report Printer** or **Jewel Case Printer**) to display a menu of printers, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
 - If the desired printer is not available on the list of printers, submit a request to the supervisor to have it added to the list.
 - Selected printer is displayed on the option button when the mouse button is released.

- 3 If an alternate printer is to be designated for the other type of printer, repeat Step 2 for the other printer.
- 4 **Single-click** on the **Return** button.
 - The **Main OI Screen** is displayed.
- 5 Return to the **Generate PDS Production Reports** procedure (Section 18.9.17) or the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1) as applicable.

Table 18.9-17. Select an Alternate Printer - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Printers (on Main OI Screen)	single-click
2	<printer> (from either the Report Printer or the Jewel Case Printer option button as applicable)	single-click
3	Repeat Step 2 for the other printer (if applicable)	
4	Return button	single-click
5	Return to the Generate PDS Production Reports procedure or the Monitor/Control Product Processing Using PDS procedure as applicable	Use procedure in Section 18.9.17 or 18.9.1 as applicable

18.9.19 Use the PDS Cleanup Manager

The PDS Cleanup Manager is a GUI that is used for specifying a file cleanup strategy for the following types of PDSSA files:

- Summary files.
- Master list files.
- Log files.
- Operator Interface log files.
- Status files.
- Jewel-case insert files.
- Label files.
- Text files.
- TIFF (Tag Image File Format) files.

PDSIS files are not included in the PDS Cleanup Manager's cleanup strategy. The PDSIS Cleanup Manager is used for specifying a file cleanup strategy for PDSIS files.

The PDS Cleanup Manager generates or modifies a Bourne shell script (i.e., cleanup.sh) that implements the file cleanup strategy. In addition, the PDS Cleanup Manager may modify the crontab file to adjust the time intervals for deletion or archiving of files.

The large number of files generated by PDS activities would overwhelm the system if some of the files were not removed from the working directories on a fairly frequent basis. However, some files may be required for a limited period of time in order to troubleshoot a job if there is a problem with it or if it is returned from the customer.

The PDS Cleanup Manager is not used very often, especially if a manageable retention period has been established for PDSSA files.

Table 18.9-18 presents (in a condensed format) the steps required to use the PDS Cleanup Manager. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:
cd
 - The alias **cd** changes the current directory to the PDS root directory for the PDS user ID of the log-in.
 - To identify the PDS root directory for the current PDS user ID at the UNIX command line prompt enter:
echo \$PDSROOT

- 3 At the UNIX command line prompt enter:
cd run
 - Change to the “run” directory.

- 4 At the UNIX command line prompt enter:
pdscleanup
 - The **PDS Cleanup Manager** GUI is displayed.

- 5 If any of the types of files in the “summary” directory or “label” directory are to be archived or deleted, in the **Summary Directory** or **Label Directory** section (as applicable) of the **PDS Cleanup Manager** GUI **single-click** on either the **Archive** or **Delete** radio button (as applicable) to the right of one of those types of file.
- When one of the radio buttons is selected, the button color changes from gray to red and the button gives the appearance of being depressed.
- 6 If any of the types of files in the “summary” directory or “label” directory are to be archived or deleted, in the text box adjacent to the button selected in the previous step enter:
- <number of days>**
- **<number of days>** represents the number of days after which files of that type are to be either archived or deleted.
 - The following types of files are listed in the **Summary Directory** section of the **PDS Cleanup Manager** GUI:
 - **Summary files.**
 - **Masterlist files.**
 - **Log files.**
 - **OILog files.**
 - **Status files.**
 - **Insert files.**
 - The following types of files are listed in the **Label Directory** section of the **PDS Cleanup Manager** GUI:
 - **Label files.**
 - **Text files.**
 - **TIFF files.**
- 7 Repeat Steps 5 and 6 for each additional type of file in the “summary” directory or “label” directory that is to be archived or deleted.
- 8 If files older than a particular number of days should be deleted, **single-click** on the **Delete any files older than** radio button.
- When the **Delete any files older than** button is selected, the button color changes from gray to red.
- 9 If files older than a particular number of days should be deleted, in the text box adjacent to the **Delete any files older than** radio button enter:
- <number of days>**
- **<number of days>** represents the number of days after which files older than that number of days are to be deleted.

- 10** In the **Run cleanup daily at** fields enter:
<cleanup run time>
- **<cleanup run time>** represents the time when the cleanup should run [in 12-hour (rather than 24-hour) format].
 - For example, type **2:00** for either two o'clock in the morning or two o'clock in the afternoon.
- 11** **Single-click** on either the **AM** or **PM** radio button (as applicable).
- When one of the radio buttons is selected, the button color changes from gray to red and the button gives the appearance of being depressed.
- 12** **Single-click** on the appropriate button from the following selections:
- **Apply & Exit** - to set the cleanup parameters as specified on the **PDS Cleanup Manager GUI**.
 - A **This will modify the PDS cleanup script and/or crontab** dialogue box is displayed.
 - Go to Step 13.
 - **Cancel** - to dismiss the **PDS Cleanup Manager GUI** without applying any new cleanup parameters.
 - The **PDS Cleanup Manager GUI** is dismissed.
 - End of procedure.
- 13** **Single-click** on the appropriate button from the following selections:
- **Proceed** - to set the cleanup parameters as specified on the **PDS Cleanup Manager GUI**.
 - The cleanup script is generated, incorporating the parameters specified on the **PDS Cleanup Manager GUI**.
 - The **PDS Cleanup Manager GUI** is dismissed.
 - **Cancel** - to dismiss the **PDS Cleanup Manager GUI** without applying any new cleanup parameters.
 - The **PDS Cleanup Manager GUI** is dismissed.

Table 18.9-18. Use the PDS Cleanup Manager - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd	enter text, press Enter
3	cd run	enter text, press Enter
4	pdscleanup	enter text, press Enter
5	Either the Archive or Delete radio button (if applicable)	single-click

Table 18.9-18. Use the PDS Cleanup Manager - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
6	<number of days> (in text box corresponding to the type of file) (if applicable)	enter text
7	Repeat Steps 5 and 6 (as necessary)	
8	Delete any files older than radio button (if applicable)	single-click
9	<number of days> (in text box for Delete any files older than) (if applicable)	enter text
10	<cleanup run time> (in Run cleanup daily at fields)	enter text
11	Either AM or PM radio button (as applicable)	single-click
12	Apply & Exit button	single-click
13	Proceed button	single-click

18.9.20 Use the PDSIS Cleanup Manager

The PDSIS Cleanup Manager is a GUI that is used for specifying a file cleanup strategy for the following types of PDSIS files:

- Product request (“ODL”) files.
- Product result (“Prodres”) files.
- Socket log files.

The PDSIS Cleanup Manager generates or modifies a Bourne shell script (i.e., pdsiscleanup.sh) that implements the file cleanup strategy. In addition, the PDSIS Cleanup Manager may modify the crontab file to adjust the time intervals for deletion or archiving of files.

The large number of files generated by PDSIS activities would overwhelm the system if some of the files were not removed from the working directories on a fairly frequent basis. However, some files may be required for a limited period of time in order to troubleshoot an order if there is a problem with it or if it is returned from the customer.

The PDSIS Cleanup Manager is not used very often, especially if a manageable retention period has been established for PDSIS files.

Table 18.9-19 presents (in a condensed format) the steps required to use the PDSIS Cleanup Manager. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: A PDSIS user ID (e.g., pdsis, pdsis_ts1, pdsis_ts2) is used in this procedure.

- 1 Log in to the PDS Server host using the appropriate PDSIS user ID for the operating mode being used.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - PDSIS user IDs are **pdsis**, **pdsis_ts1**, and **pdsis_ts2**, which are used for PDSIS operations in the OPS, TS1, and TS2 modes respectively.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:
cd utilities
 - Change to the PDSIS “utilities” directory (e.g., /data1/pdsis/utilities).

- 3 At the UNIX command line prompt enter:
EcPdIsPdsisCleanup &
 - The **PDSIS Cleanup Manager** GUI is displayed.

- 4 If any of the types of files in the “in_msg” directory, “out_msg” directory, or “socket” directory are to be archived or deleted, in the **In_msg Directory**, **Out_msg Directory**, or **Socket Directory** section (as applicable) of the **PDSIS Cleanup Manager** GUI **single-click** on either the **Archive** or **Delete** radio button (as applicable) to the right of one of those types of file.
 - When one of the radio buttons is selected, the button color changes from gray to red and the button gives the appearance of being depressed.

- 5 If any of the types of files in the “in_msg” directory, “out_msg” directory, or “socket” directory are to be archived or deleted, in the text box adjacent to the button selected in the previous step enter:
<number of days>
 - **<number of days>** represents the number of days after which files of that type are to be either archived or deleted.
 - The following type of file is listed in the **In_msg Directory** section of the **PDSIS Cleanup Manager** GUI:
 - **Odl files** (product request files).
 - The following type of file is listed in the **Out_msg Directory** section of the **PDSIS Cleanup Manager** GUI:
 - **Prodres files** (product result files).
 - The following type of file is listed in the **Socket Directory** section of the **PDSIS Cleanup Manager** GUI:
 - **Socket Log files**.

- 6 Repeat Steps 4 and 5 for each additional type of file in the “in_msg” directory, “out_msg” directory, or “socket” directory that is to be archived or deleted.
- 7 If files older than a particular number of days should be deleted, **single-click** on the **Delete any files older than** radio button.
 - When the **Delete any files older than** button is selected, the button color changes from gray to red.
- 8 If files older than a particular number of days should be deleted, in the text box adjacent to the **Delete any files older than** radio button enter:
<number of days>
 - <number of days> represents the number of days after which files older than that number of days are to be deleted.
- 9 In the **Run cleanup daily at** fields enter:
<cleanup run time>
 - <cleanup run time> represents the time when the cleanup should run [in 12-hour (rather than 24-hour) format].
 - For example, type **2:00** for either two o'clock in the morning or two o'clock in the afternoon.
- 10 **Single-click** on either the **AM** or **PM** radio button (as applicable).
 - When one of the radio buttons is selected, the button color changes from gray to red and the button gives the appearance of being depressed.
- 11 **Single-click** on the appropriate button from the following selections:
 - **Apply & Exit** - to set the cleanup parameters as specified on the **PDSIS Cleanup Manager GUI**.
 - A **This will modify the PDSIS cleanup script and/or crontab** dialogue box is displayed.
 - Go to Step 12.
 - **Cancel** - to dismiss the **PDSIS Cleanup Manager GUI** without applying any new cleanup parameters.
 - The **PDSIS Cleanup Manager GUI** is dismissed.
 - End of procedure.
- 12 **Single-click** on the appropriate button from the following selections:
 - **Proceed** - to set the cleanup parameters as specified on the **PDSIS Cleanup Manager GUI**.
 - The cleanup script is generated, incorporating the parameters specified on the **PDSIS Cleanup Manager GUI**.
 - The **PDSIS Cleanup Manager GUI** is dismissed.

- **Cancel** - to dismiss the **PDSIS Cleanup Manager** GUI without applying any new cleanup parameters.
 - The **PDSIS Cleanup Manager** GUI is dismissed.

Table 18.9-19. Use the PDSIS Cleanup Manager - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server) (using appropriate PDSIS user ID)	single-click or use procedure in Section 18.2.1
2	cd utilities	enter text, press Enter
3	EcPdisPdisCleanup &	enter text, press Enter
4	Either the Archive or Delete radio button (if applicable)	single-click
5	<number of days> (in text box corresponding to the type of file) (if applicable)	enter text
6	Repeat Steps 4 and 5 (as necessary)	
7	Delete any files older than radio button (if applicable)	single-click
8	<number of days> (in text box for Delete any files older than) (if applicable)	enter text
9	<cleanup run time> (in Run cleanup daily at fields)	enter text
10	Either AM or PM radio button (as applicable)	single-click
11	Apply & Exit button	single-click
12	Proceed button	single-click

18.10 Monitoring/Controlling Order Processing Using the PDSIS OI

Distribution Technicians use the following tools to monitor and control PDSIS activities:

- **PDSIS OI Main Screen.**
- **PDSIS OI Detail Screen.**
- **PDSIS OI Error Screen.**

Table 18.10-1, below, provides an Activity Checklist for monitoring/controlling order processing using the PDSIS OI.

Table 18.10-1. Monitoring/Controlling Order Processing Using the PDSIS OI - Activity Checklist

Order	Role	Task	Section	Complete?
1	Distribution Technician	Monitor/Control Order Processing Using the PDSIS OI	(P) 18.10.1	
2	Distribution Technician	Use the PDSIS OI Detail Screen	(P) 18.10.2	
3	Distribution Technician	Mark a Job Shipped	(P) 18.10.3	
4	Distribution Technician	Reject a Unit/Order	(P) 18.10.4	

18.10.1 Monitor/Control Order Processing Using the PDSIS OI

Monitoring/controlling order processing using the PDSIS OI involves the following activities (among others):

- Determining the status of an order and/or taking action with respect to an order (using the PDSIS OI Main Screen).
- Determining the status of units associated with a particular order or taking action with respect to units associated with a particular order (using the PDSIS OI Detail Screen).
- Marking a job "Shipped."
- Rejecting a unit/order.

PDSIS activities are monitored and controlled using the **PDSIS OI Main Screen**, the **PDSIS OI Detail Screen** and the **PDSIS OI Error Screen**.

The **PDSIS OI Main Screen** displays the following items for each individual PDS order:

- Action Button [not labeled].
 - Allows access to a list of actions that can be taken with respect to the order.
- Order Nbr.
 - Unique PDS order number given to the customer request.
 - The software creates an order number each time the ECS VOGW sends an order.
- Ecs Ordid.
 - ECS order number for the customer request in the MSS database.
- Ecs Reqid.
 - ECS Request ID number for the customer request in the MSS database.
- Sta.
 - PDSIS status of the order.
- Status Date.
 - Last date any database status has changed on the order.

- Date Entered.
 - Date when the order was entered in the system.

The **PDSIS OI Detail Screen** displays the following items for the selected individual PDS order:

- Order Number.
 - Unique PDS order number given to the customer request.
- ECS Order ID.
 - ECS order number of the customer request in the MSS database.
- ECS Req ID.
 - ECS Request ID number of the customer request in the MSS database.
- Status.
 - PDSIS status of the order.

The **PDSIS OI Detail Screen** displays the following items for each unit within the selected PDS order:

- Action Button [not labeled].
 - Allows access to a list of actions that can be taken with respect to the job.
- Unit Number.
 - Unit number.
- Ordering ID.
 - Unique reference for the relevant granule in the ECS archive.
- Prod Code.
 - PDSIS's description of the product code.
 - It is loaded from customizable tables.
- Output Specs.
 - PDSSA's description of the output specifications selected by the customer.
- Subset Data.
 - Yes/No flag indicating whether the unit is a subsetted request (L7 floating scene).
- Size.
 - Size in MB of the granule.
 - May be an estimate in some cases.
- Status.
 - PDSIS status of the order.
- Status Date.
 - Last date any database status has changed on the unit.

The **PDSIS OI Error Screen** displays the following types of information:

- Action Button [not labeled].
 - Allows access to a list of actions that can be taken with respect to the item.
- Date/Time.
 - Time when the error occurred.
- Order Number.
 - Order number of the order in which the error occurred.

- Unit Number.
 - PDS unit number in which the error occurred.
- Error Source.
 - Source of the error.
- Error Message.
 - PDSIS coded error message.

Table 18.10-2 presents (in a condensed format) the steps required to monitor/control order processing using the PDSIS OI. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If the **PDSIS OI Main Screen** is not already in operation, start the PDSIS Operator Interface (PDSIS OI) (refer to Section 18.7.4).
 - The **PDSIS OI Main Screen** is displayed.

- 2 Observe information displayed on the **PDSIS OI Main Screen**.
 - The following items are displayed on an **order status line** for each individual PDS order:
 - Action Button [not labeled].
 - **Order Nbr.**
 - **Ecs Ordid.**
 - **Ecs Reqid.**
 - **Sta.**
 - **Status Date.**
 - **Date Entered.**
 - Each **order status line** display is color-coded to draw attention to job status. The colors are interpreted as follows:
 - **Red** The error flag for the order is set at "Y" in the database.
 - **Green** In Progress status.
 - **Yellow** Completed status.
 - **Grey** Order Received status.
 - If there are more records than can be displayed on the screen, use the scroll bar on the right hand side of the form to view the additional records.
 - The **status line** at the bottom of the screen displays information about the form (for example, the status line might display "Record: 1/?" and "INSERT").
 - The **message line** near the bottom of the screen (just above the **status line**) displays informational messages and error messages pertinent to what is happening on the form.
 - Messages are displayed on the screen as long as they are pertinent.

- 3 If more specific information is required or action should be taken with respect to units associated with a particular order, perform the **Use the PDSIS OI Detail Screen** procedure (Section 18.10.2).
- 4 If it becomes necessary to perform any of the following actions, go to the corresponding procedure:
 - **Use the PDSIS OI Detail Screen** (Section 18.10.2) (to determine the status of units associated with a particular order or take action with respect to units associated with a particular order).
 - **Mark a Job Shipped** (Section 18.10.3) (to mark a completed job shipped).
 - **Reject a Unit/Order** (Section 18.10.4) (to change the status of a unit or order to "X" ("Reject"), effectively canceling the unit or order).
 - **Check/Clear Errors on PDSIS** procedure (Section 18.11.4) (to see the error(s) associated with a particular job).
 - **Troubleshoot PDS Problems** (Section 18.11) (to troubleshoot problems/failures affecting order processing).
- 5 If it is necessary to update the data on the screen from the database without having to wait for the interval set on the timer, execute the following menu path from the pull-down menu:

Display → Refresh

 - The data on the screen is refreshed.
- 6 If it is necessary to cause the entire screen to be redrawn without accessing the database for data, execute the following menu path from the pull-down menu:

Display → Repaint

 - The screen (including borders, buttons, and data) is redrawn.
 - The **Repaint** option is used in case the window becomes garbled.
- 7 Repeat Steps 2 through 6 as necessary to monitor/control orders.
- 8 If it becomes necessary to shut down the PDSIS OI, perform the **Shut Down the PDSIS Operator Interface (PDSIS OI)** procedure (Section 18.8.7).

Table 18.10-2. Monitor/Control Order Processing Using the PDSIS OI - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Start the PDSIS Operator Interface (PDSIS OI) (if necessary)	Use procedure in Section 18.7.4
2	Observe information displayed on the PDSIS OI Main Screen	read text
3	Use the PDSIS OI Detail Screen (if applicable)	Use procedure in Section 18.10.2

Table 18.10-2. Monitor/Control Order Processing Using the PDSIS OI - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
4	Perform the appropriate operational procedure as needed	Use applicable procedure(s) in Sections 18.10.2 through 18.10.4 or 18.11.4
5	Display → Refresh (on the PDSIS OI Main Screen) (as necessary)	single-click
6	Display → Repaint (on the PDSIS OI Main Screen) (as necessary)	single-click
7	Repeat Steps 2 through 6 as necessary to monitor/control jobs	
8	Shut down the operator interface (when applicable)	Use procedure in Section 18.8.7

18.10.2 Use the PDSIS OI Detail Screen

The procedure to **Use the PDSIS OI Detail Screen** is performed as part of the **Monitor/Control Order Processing Using the PDSIS OI** procedure (Section 18.10.1). The **PDSIS OI Detail Screen** provides the Distribution Technician with a means of accomplishing the following objectives:

- Obtaining specific information with respect to units associated with a particular order.
- Taking action with respect to units associated with a particular order.

Table 18.10-3 presents (in a condensed format) the steps required to use the **PDSIS OI Detail Screen**. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1** **Single-click** on the action button at the beginning of the order status line (on the **PDSIS OI Main Screen**) for the relevant order.
 - An **Action List** box is displayed.
 - Not all actions are available for every order.
 - The available actions depend on the order's current status.

- 2** **Single-click** on (highlight) **Details** in the **Action List** box.
 - **Details** is highlighted.

- 3** **Single-click** on the appropriate button from the following selections:
 - **OK** - to bring up the **PDSIS OI Detail Screen** and dismiss the **Action List** box.
 - The **PDSIS OI Detail Screen** is displayed.
 - **Cancel** - to dismiss the **Action List** box and return to the **Main OI Screen**.
 - The **PDSIS OI Main Screen** is displayed.

- 4 Observe information displayed on the **PDSIS OI Detail Screen**.
- The following items are displayed on the **PDSIS OI Detail Screen** for the selected individual order:
 - **Order Number.**
 - **ECS Order ID.**
 - **ECS Req ID.**
 - **Status.**
 - The following items are displayed on the **PDSIS OI Detail Screen** for each unit within the selected PDS order:
 - Action Button [not labeled].
 - **Unit Number.**
 - **Ordering ID.**
 - **Prod Code.**
 - **Output Specs.**
 - **Subset Data.**
 - **Size.**
 - **Status.**
 - **Status Date.**
 - Each **unit line** display is color-coded to draw attention to unit status. The colors are interpreted as follows:
 - **Red** The error flag for the unit is set at "Y" in the database.
 - **Green** In Progress status.
 - **Yellow** Completed status.
 - **Grey** Order Received status.
 - There is an action button [not labeled] at the beginning of each unit line. The button allows access to a list of actions that can be taken with respect to the job:
 - **Errors** (displays an Error Window).
 - **Reject** (changes the status of the selected unit to Reject).
 - If there are more records than can be displayed on the screen, use the scroll bar on the right hand side of the form to view the additional records.
 - The **status line** at the bottom of the screen displays information about the form.
 - The **message line** near the bottom of the screen (just above the **status line**) displays informational messages and error messages pertinent to what is happening on the form.
- 5 If it is desirable to see the error(s) associated with a particular unit, perform the **Check/Clear Errors on PDSIS** procedure (Section 18.11.4).
- 6 If it becomes necessary to reject unit(s), perform the **Reject a Unit/Order** procedure (Section 18.10.4).

7 If it is necessary to update the data on the screen from the database without having to wait for the interval set on the timer, execute the following menu path from the pull-down menu:

Display → Refresh

- The data on the screen is refreshed.

8 If it is necessary to cause the entire screen to be redrawn without accessing the database for data, execute the following menu path from the pull-down menu:

Display → Repaint

- The screen (including borders, buttons, and data) is redrawn.
 - The **Repaint** option is used in case the window becomes garbled.

9 Repeat Steps 4 through 8 as necessary to obtain additional information with respect to units associated with the selected order and/or take action with respect to units associated with the order.

10 To return to the **PDSIS OI Main Screen** execute the following menu path from the pull-down menu:

Action → Return

- The **PDSIS OI Detail Screen** is dismissed.
- The **PDSIS OI Main Screen** is displayed.

Table 18.10-3. Use the PDSIS OI Detail Screen - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Action button (on PDSIS OI Main Screen)	single-click
2	Details	single-click
3	OK button	single-click
4	Observe information displayed on the PDSIS OI Detail Screen	read text
5	Check/clear errors on PDSIS (if applicable)	Use procedure in Section 18.11.4
6	Reject a unit/order (if applicable)	Use procedure in Section 18.10.4
7	Display → Refresh (on the PDSIS OI Detail Screen) (as necessary)	single-click
8	Display → Repaint (on the PDSIS OI Detail Screen) (as necessary)	single-click
9	Repeat Steps 4 through 8 as necessary	
10	Action → Return (when applicable)	single-click

18.10.3 Mark a Job Shipped

The procedure to **Mark a Job Shipped** is performed as part of the **Monitor/Control Order Processing Using the PDSIS OI** procedure (Section 18.10.1). The **PDSIS OI Main Screen** provides the Distribution Technician with a means of marking a completed job shipped.

Table 18.10-4 presents (in a condensed format) the steps required to mark a job "shipped." If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Verify that the following conditions have been met:
 - The **Sta** [status] of the job (as displayed on the **PDSIS OI Main Screen**) is **C** (completed).
 - The packing lists for the job have been printed.
 - The shipping labels for the job have been printed.
- 2 **Single-click** on the action button at the beginning of the relevant order status line (on the **PDSIS OI Main Screen**).
 - The **Action List** box is displayed.
- 3 **Single-click** on (highlight) **Ship** in the **Action List** box.
 - **Ship** is highlighted.
- 4 **Single-click** on the appropriate button from the following selections:
 - **OK** - to mark the order shipped and dismiss the **Action List** box.
 - The **PDSIS OI Main Screen** is displayed.
 - The status of the order changes to shipped and the order is removed from (is no longer visible on) the **PDSIS OI Main Screen**.
 - **Cancel** - to dismiss the **Action List** box without marking the order shipped.
 - The **PDSIS OI Error Screen** is displayed.
- 5 Return to the **Monitor/Control Order Processing Using the PDSIS OI** procedure (Section 18.10.1).

Table 18.10-4. Mark a Job Shipped - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Verify that the job is ready to be marked shipped	read text
2	Action button (on PDSIS OI Main Screen)	single-click
3	Ship	single-click
4	OK button	single-click
5	Return to the Monitor/Control Order Processing Using the PDSIS OI procedure	Use procedure in Section 18.10.1

18.10.4 Reject a Unit/Order

The procedure to **Reject a Unit/Order** is performed as part of either the **Monitor/Control Order Processing Using the PDSIS OI** procedure (Section 18.10.1) or the **Use the PDSIS OI Detail Screen** procedure (Section 18.10.2). Both the **PDSIS OI Main Screen** and the **PDSIS OI Detail Screen** provide the Distribution Technician with means of rejecting a unit/order.

CAUTION

Before rejecting a unit or order it is advisable to have in hand written authorization to do so. Selecting "Reject" changes the status of the unit or order to a Reject (X) or cancelled state. Care is recommended because the reject function does not have a confirmation button. All units in process will be marked for rejection and no further processing will occur. The customer's completion report will reflect the specified unit as having a Reject status.

Table 18.10-5 presents (in a condensed format) the steps required to reject a unit/order. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 **Single-click** on the action button at the beginning of the relevant order status line or unit line (on the **PDSIS OI Main Screen** or **PDSIS OI Detail Screen** as applicable).
 - The **Action List** box is displayed.
- 2 **Single-click** on (highlight) **Reject** in the **Action List** box.
 - **Reject** is highlighted.
- 3 **Single-click** on the appropriate button from the following selections:
 - **OK** - to reject the unit/order, dismiss the **Action List** box and return to the screen that was displayed before the action button was selected.
 - Either the **PDSIS OI Main Screen** or the **PDSIS OI Detail Screen** (as applicable) is displayed.

- **Cancel** - to dismiss the **Action List** box and return to the screen that was displayed before the action button was selected.
 - Either the **PDSIS OI Main Screen** or the **PDSIS OI Detail Screen** (as applicable) is displayed.
- 4 Return to the procedure being performed before the action button was selected.
- Either **Monitor/Control Order Processing Using the PDSIS OI** (Section 18.10.1) or **Use the PDSIS OI Detail Screen** (Section 18.10.2) (as applicable).

Table 18.10-5. Reject a Unit/Order - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Action button (on PDSIS OI Main Screen or PDSIS OI Detail Screen as applicable)	single-click
2	Reject	single-click
3	OK button	single-click
4	Return to the Monitor/Control Order Processing Using the PDSIS OI procedure or the Use the PDSIS OI Detail Screen procedure as applicable	Use procedure in Section 18.10.1 or 18.10.2 as applicable

18.11 Troubleshooting PDS Problems

Troubleshooting is a process of identifying the source of problems on the basis of observed trouble symptoms. Many problems with PDS can be traced to some part of the PDS itself. However, a common source of problems involves the reliance on messages or data from other subsystems. Like many other operational areas, PDS has interfaces with several ECS subsystems. Consequently, it is possible to trace some problems to an ECS subsystem, including (but not necessarily limited to) those in the following list:

- Data Management Subsystem (DMS).
- Data Server Subsystem (DSS).
- Science Data Server.
- Data Distribution.
- Storage Management.
- System Management Subsystem (MSS).
- Communications Subsystem (CSS).

The general process of troubleshooting involves the following activities:

- Review the trouble symptoms.
- Check the status of relevant hosts/servers (as necessary).
- Check log files (as necessary).
- Take action to correct the problem(s).

If a problem is suspected in one of the subsystems in the preceding list, refer to Section 18.6, **Troubleshooting DDIST Problems**.

If the problem cannot be identified and fixed without help within a reasonable period of time, the appropriate response is to call the help desk and submit a trouble ticket in accordance with site Problem Management policy.

Table 18.11-1, below, provides an Activity Checklist for troubleshooting PDS problems.

Table 18.11-1. Troubleshooting PDS Problems - Activity Checklist (1 of 3)

Order	Role	Task	Section	Complete?
1	Distribution Technician	Troubleshoot a PDS Failure	(P) 18.11.1	
2	Distribution Technician	Change the Values of Job Parameters Using the PDS Maintenance Module	(P) 18.11.2	
3	Distribution Technician	Change the Values of Order Parameters Using the PDSIS Maintenance Module	(P) 18.11.3	
4	Distribution Technician	Check/Clear Errors on PDSIS	(P) 18.11.4	
5	Distribution Technician	Check PDSSA or PDSIS Log Files	(P) 18.11.5	
6	Distribution Technician	Check/Restore Synchronization of the Rimage PC Time with PDS System Time	(P) 18.11.6	
7	Distribution Technician	Check/Restore the Rimage PC NFS Connection	(P) 18.11.7	
8	Distribution Technician	Clean Up the CD-R_Images Folder on the Rimage PC	(P) 18.11.8	
9	Distribution Technician	Clear an Error Displayed on the PDSIS OI Error Screen	(P) 18.11.9	
10	Distribution Technician	Determine Output Specifications Using the PDS Maintenance Module	(P) 18.11.10	
11	Distribution Technician	Determine Output Specifications Using the PDSIS Maintenance Module	(P) 18.11.11	
12	Distribution Technician	Determine Product Codes Using the PDS Maintenance Module	(P) 18.11.12	
13	Distribution Technician	Determine Product Codes Using the PDSIS Maintenance Module	(P) 18.11.13	
14	Distribution Technician	Determine the Status of PDS Tape/Disk Drives	(P) 18.11.14	
15	Distribution Technician	Determine Which Instance of PDSOI Was Used to Activate a Job	(P) 18.11.15	
16	Distribution Technician	Force AutoRimage Completion	(P) 18.11.16	

Table 18.11-1. Troubleshooting PDS Problems - Activity Checklist (2 of 3)

Order	Role	Task	Section	Complete?
17	Distribution Technician	Reactivate Units	(P) 18.11.17	
18	Distribution Technician	Reprint a Label Stamped on a Disk	(P) 18.11.18	
19	Distribution Technician	Reprint PDS Documents and Labels	(P) 18.11.19	
20	Distribution Technician	Reprocess a Job	(P) 18.11.20	
21	Distribution Technician	Reset an Order or a Unit	(P) 18.11.21	
22	Distribution Technician	Respond to a CD/DVD Job Error Indicated on PDSOI	(P) 18.11.22	
23	Distribution Technician	Respond to a Jewel-Case Insert Printing Failure	(P) 18.11.23	
24	Distribution Technician	Respond to a Job's Status Not Changing to QC-Hold Upon Successful Completion	(P) 18.11.24	
25	Distribution Technician	Respond to a Job on a Lag Report	(P) 18.11.25	
26	Distribution Technician	Respond to a Locked-Up Screen	(P) 18.11.26	
27	Distribution Technician	Respond to a Problem Starting PDSOI	(P) 18.11.27	
28	Distribution Technician	Respond to a Save Changes Dialogue Box When Exiting a Maintenance Module Window	(P) 18.11.28	
29	Distribution Technician	Respond to a "Waiting for Drive Selection" Message on the Job Monitor	(P) 18.11.29	
30	Distribution Technician	Respond to Duplicate Jobs on the PDSOI	(P) 18.11.30	
31	Distribution Technician	Respond to Low Disk Space	(P) 18.11.31	
32	Distribution Technician	Respond to No Printouts (Either Jewel-Case Inserts or Paper Reports)	(P) 18.11.32	
33	Distribution Technician	Respond to PDSOI's Failure to Update Status	(P) 18.11.33	
34	Distribution Technician	View a Job Log or Job Production Parameter File (PPF) Using UNIX Commands	(P) 18.11.34	
35	Distribution Technician	View a Job Log Using the PDS Job Monitor	(P) 18.11.35	
36	Distribution Technician	View a Job PPF Using the PDS Job Monitor	(P) 18.11.36	

Table 18.11-1. Troubleshooting PDS Problems - Activity Checklist (3 of 3)

Order	Role	Task	Section	Complete?
37	Distribution Technician	View an Extended Error Message	(P) 18.11.37	

18.11.1 Troubleshoot a PDS Failure

- 1 If it is not possible to log in to the PDS Server or any other host, ask the Operations Controller/System Administrator to verify that the host is "up."
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
- 2 If there is a general problem with the PDS GUIs (e.g., the **PDS Main OI Screen**, **PDSIS OI Main Screen**, **OI Detail Screen**, **Job Monitor Main Window**), refer to Table 18.11-2, General Problems.
- 3 If an error message or other problem associated with the **PDS Operator Interface (PDSOI)** is identified, refer to Table 18.11-3, PDS Operator Interface (PDSOI) Problems.
- 4 If an error message or other problem associated with the **Job Monitor** is identified, refer to Table 18.11-4, Job Monitor Problems.
- 5 If an error message or other problem associated with the **PDS Maintenance Module** is identified, refer to Table 18.11-5, PDS Maintenance Module Problems.
- 6 If an error message or other problem associated with the **PDSIS Operator Interface (PDSIS OI)** is identified, refer to Table 18.11-6, PDSIS Operator Interface (PDSIS OI) Problems.
- 7 If an error message or other problem associated with the **PDSIS Maintenance Module** is identified, refer to Table 18.11-7, PDSIS Maintenance Module Problems.
- 8 If some other type of problem is encountered, go to the appropriate procedure for identifying and/or correcting the problem as indicated in Table 18.11-1, Troubleshooting PDS Problems - Activity Checklist.
- 9 If the problem cannot be identified and fixed without help within a reasonable period of time, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.

Table 18.11-2. General Problems

Symptom	Response
A selection has been made from an Action List window but the action is not invoked	Single-click on the OK button near the bottom of the Action List window to start the action or go to the appropriate screen.
Buttons are not visible at the bottom of the screen but they should be visible	1. Move the mouse to the outside edge of the form. (The cursor changes shape.) 2. Single-click and hold the mouse button and move the mouse to resize the screen until the buttons are visible.
Disk label needs to be reprinted	Perform the Reprint a Label Stamped on a Disk procedure (Section 18.11.18).
Jewel-case insert did not print	Perform the Respond to a Jewel-Case Insert Printing Failure procedure (Section 18.11.23).
Jewel-case insert needs to be reprinted	Perform the Respond to a Jewel-Case Insert Printing Failure procedure (Section 18.11.23).
Job needs to be reprocessed [e.g., product has stalled in the media production process or fails the media quality control (QC) check]	Perform the Reprocess a Job procedure (Section 18.11.20).
Lag report includes a job that is not displayed on the PDSOI	Perform the Respond to a Job on a Lag Report procedure (Section 18.11.25).
Media Drive Selection window does not appear in the workspace within a couple of minutes after a job/unit has been activated	Perform the Respond to a "Waiting for Drive Selection" Message on the Job Monitor procedure (Section 18.11.29).
No printouts	Perform the Respond to No Printouts (Either Jewel-Case Inserts or Paper Reports) procedure (Section 18.11.32).
Not all text is showing in a text box or the box appears to be too small	1. Single-click in the text box. 2. Move the cursor using the arrow keys. [The text scrolls in the box and hidden text becomes visible.]
Packing list for a completed order (i.e., an order with a status of "C") needs to be reprinted	Set the action flag to "S" using the PDSIS Maintenance Module as described in the Change the Values of Order Parameters Using the PDSIS Maintenance Module procedure (Section 18.11.3).
Rimage (CD or DVD) drive goes off line.	Verify that the blank media were placed in the Rimage input bins with the shiny side down.
Shipping label for a completed order (i.e., an order with a status of "C") needs to be reprinted	Set the action flag to "S" using the PDSIS Maintenance Module as described in the Change the Values of Order Parameters Using the PDSIS Maintenance Module procedure (Section 18.11.3).
Summary report is not printed but disk or tape is produced	Perform the Respond to No Printouts (Either Jewel-Case Inserts or Paper Reports) procedure (Section 18.11.32).
Tape label needs to be reprinted	Perform the Reprint PDS Documents and Labels procedure (Section 18.11.19).
Units that were previously completed need to be reset/reactivated	Perform the Reactivate Units procedure (Section 18.11.17) or the Reset an Order or a Unit procedure (Section 18.11.21) (as applicable).

Table 18.11-3. PDS Operator Interface (PDSOI) Problems (1 of 3)

Symptom	Response
<p>"Already activated" message is displayed in a purple box (error dialogue box).</p>	<ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the error window. 2. Perform the Change the Values of Job Parameters Using the PDS Maintenance Module procedure (Section 18.11.2) to determine the value of the OI ID field in the PDS Maintenance Module PDSINFO Jobs Table. [The message indicates that the job was already started by another PDSOI with a different OI ID (machine_id/console_id).] 3. Start another PDSOI using the OI ID specified in the PDSINFO Jobs Table. [Refer to the Start the PDS Operator Interface (PDSOI) procedure (Section 18.7.3).] 4. Process the job using the PDSOI started using the OI ID specified in the PDSINFO Jobs Table. [Refer to the Monitor/Control Product Processing Using PDS procedure (Section 18.9.1).]
<p>"Cannot activate because the selected field in the PWT_PDS_WORK_TBL contains an incorrect value" message is displayed in a purple box (error dialogue box).</p>	<ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the error window. 2. Perform the Change the Values of Job Parameters Using the PDS Maintenance Module procedure (Section 18.11.2) to set the value of the Selected field to N in the PDS Maintenance Module PDSINFO Work Table. [The message indicates that an attempt was made to activate the unit before and the Selected field in the PDS Maintenance Module PDSINFO Work Table did not get set correctly.]
<p>"No job limit" message is displayed in a purple box (error dialogue box).</p>	<ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the error window. 2. Call the help desk and submit a trouble ticket in accordance with site Problem Management policy. [The PDS Maintenance Module Machine Parameters Maintenance Form (PDSMTMPX) is used to set the job limits for the particular Product Code.]

Table 18.11-3. PDS Operator Interface (PDSOI) Problems (2 of 3)

Symptom	Response
<p>"No job" message is displayed in a purple box (error dialogue box).</p>	<ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the error window. 2. Record (make a note of) the job_key displayed in the purple box. 3. Perform the Change the Values of Job Parameters Using the PDS Maintenance Module procedure (Section 18.11.2) to query the PDSINFO Jobs Table and the PDSINFO Work Table to determine whether there is a job with the specified job_key in the system. [If a unit was rejected after it was already in process, it is possible that the job no longer exists when the status file is written.] 4. If there is no such job currently in the system, single-click in or open a UNIX (terminal) window. 5. If there is no such job currently in the system, enter: mv <filename>.status tmp.<filename>.status then press the Return/Enter key. [<filename> represents the body of the file name for the status file for the job; it includes the PDSOI ID and the PPF_KEY. The status file must either be moved or removed (deleted) or no other status files can be processed. For example: mv PDS1_drg_0110011130207_0001.status tmp.PDS1_drg_0110011130207_0001.status An alternative: rm PDS1_drg_0110011130207_0001.status]
<p>"No units were selected, no action taken" message is displayed in a purple box (error dialogue box).</p>	<ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the error window. 2. Perform Steps 6 through 9 (as applicable) of the Use the OI Detail Screen procedure (Section 18.9.4). [The message indicates that no units were selected from the OI Detail Screen for activation or completion before clicking on the corresponding Activate or Complete button.]
<p>"Stopped" job is not identified as stopped on the Main OI Screen</p>	<p>Select Display → Refresh from the pull-down menu on the Main OI Screen to force querying of the database. [The stop does not appear until the next time the database is queried.]</p>
<p>"You must select at least one selection criteria" message is displayed in a purple box (error dialogue box).</p>	<ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the error window. 2. Perform Steps 5 through 12 of the Start the PDS Operator Interface (PDSOI) procedure (Section 18.7.3). [The message indicates that no selection criteria were selected from the PDSOI Start-Up Selection Screen.]
<p>"You must select at least one sort criteria" [sic] message is displayed in a purple box (error dialogue box).</p>	<ol style="list-style-type: none"> 1. Single-click on the OK button to dismiss the error window. 2. Perform Steps 9 through 12 of the Start the PDS Operator Interface (PDSOI) procedure (Section 18.7.3). [The message indicates that no sorting criteria were selected from the PDSOI Start-Up Selection Screen.]
<p>Duplicate jobs are displayed on the PDSOI</p>	<p>Perform the Respond to Duplicate Jobs on the PDSOI procedure (Section 18.11.30).</p>

Table 18.11-3. PDS Operator Interface (PDSOI) Problems (3 of 3)

Symptom	Response
No status updates on PDSOI	Perform the Respond to PDSOI's Failure to Update Status procedure (Section 18.11.33).
Problem starting PDSOI	Perform the Respond to a Problem Starting PDSOI procedure (Section 18.11.27).
Red job status line associated with a CD or DVD job on the PDSOI (indicating an error condition)	Perform the Respond to a CD/DVD Job Error Indicated on PDSOI procedure (Section 18.11.22).
Screen (PDSOI) has locked up	Perform the Respond to a Locked-Up Screen procedure (Section 18.11.26).

Table 18.11-4. Job Monitor Problems

Symptom	Response
CD or DVD job has produced optical media and is waiting needlessly (and AutoRimage is enabled)	Perform the Force AutoRimage Completion procedure (Section 18.11.17).
Disk space is low (as displayed on the Job Monitor Main Window)	Perform the Respond to Low Disk Space procedure (Section 18.11.31).
Log file needs to be checked for error messages	Perform either the View a Job Log Using the PDS Job Monitor procedure (Section 18.11.35) or the View a Job Log or Job Production Parameter File (PPF) Using UNIX Commands procedure (Section 18.11.34).
PPF file needs to be checked for job-related data	Perform either the View a Job PPF Using the PDS Job Monitor procedure (Section 18.11.36) or the View a Job Log or Job Production Parameter File (PPF) Using UNIX Commands procedure (Section 18.11.34).
"Waiting for Drive Selection" message is displayed	<ol style="list-style-type: none"> 1. If the Media Drive Selection window is visible in the workspace, go to Step 6 of the Activate a Job procedure (Section 18.9.7). 2. If the Media Drive Selection window does not appear in the workspace within a couple of minutes, perform the Respond to a "Waiting for Drive Selection" Message on the Job Monitor procedure (Section 18.11.29).
"Waiting For Rimage Status" message is displayed for an excessive period of time	<ol style="list-style-type: none"> 1. Wait a reasonable period of time for the message to disappear. [The wait may be lengthy depending on product size and/or system load.] 2. If the Rimage status is not provided (if the message does not disappear) within a reasonable period of time, go to the Reprocess a Job procedure (Section 18.11.20).

Table 18.11-5. PDS Maintenance Module Problems

Symptom	Response
Dialogue box is displayed inquiring as to whether changes should be saved before exiting a maintenance module window	Perform the Respond to a Save Changes Dialogue Box When Exiting a Maintenance Module Window procedure (Section 18.11.28).
No Exit button on a Maintenance Screen (PDS Maintenance Module or PDSIS Maintenance Module)	Single-click on the Cancel Query button. [The buttons change and the Exit button becomes visible.]
Output specification is unknown/needed	Perform the Determine Output Specifications Using the PDS Maintenance Module procedure (Section 18.11.10).
Product code is unknown/needed	Perform the Determine Product Codes Using the PDS Maintenance Module procedure (Section 18.11.12).
Value of a job parameter is missing, incorrect, or needs to be modified	Perform the Change the Values of Job Parameters Using the PDS Maintenance Module procedure (Section 18.11.2).

Table 18.11-6. PDSIS Operator Interface (PDSIS OI) Problems

Symptom	Response
Red order status line on the PDSIS OI Main Screen (an error flag for the order is set at "Y" in the database)	Perform the Check/Clear Errors on PDSIS procedure (Section 18.11.4).

Table 18.11-7. PDSIS Maintenance Module Problems

Symptom	Response
Output specification is unknown/needed	Perform the Determine Output Specifications Using the PDSIS Maintenance Module procedure (Section 18.11.11).
Product code is unknown/needed	Perform the Determine Product Codes Using the PDSIS Maintenance Module procedure (Section 18.11.13).
Value of an order parameter is missing, incorrect, or needs to be modified	Perform the Change the Values of Order Parameters Using the PDSIS Maintenance Module procedure (Section 18.11.3).

18.11.2 Change the Values of Job Parameters Using the PDS Maintenance Module

The PDS Maintenance Module provides the Distribution Technician with a means of changing the values assigned to job parameters, especially the following types of parameters:

- Status of an order (job).
 - May be changed (for example) to "Pending" so the job will rerun (e.g., if there was a problem with the previous run of the job).

- Media type assigned to an order (job) or unit within an order.
 - Typically changed in response to a request from the user that has been forwarded by User Services.
- Output specification assigned to change the output specifications for a unit.
 - Typically have to be changed if the media type is changed.
- Number of copies in an order (job).
 - May be changed in response to a request from the user that has been forwarded by User Services.
 - Usually involves in-house orders.
- Directory path for pulling data for an order (job).
 - May be necessary if (for example) a problem occurs with the disk on which the normal directory resides.
- E-Mail address for ftp notification of order (job) completion.
 - Typically changed in response to a request from the user that has been forwarded by User Services.

In order to maintain consistency between PDSIS packing lists and PDSSA media generation, changes to the values assigned to order/job parameters may need to be made using both the PDSIS and PDSSA maintenance modules.

- Changes that affect both PDSIS and PDSSA should be made in PDSIS first, then PDSSA.
- Some changes affect PDSIS only.
 - For example, PDSSA does not contain customer shipping address information, so no shipping-address changes are necessary in PDSSA.
 - No changes are needed in PDSSA if order processing in PDSIS has not made any data for an order available to PDSSA yet.

The PDS **Maintenance Module Main Menu** has the following buttons available for selection:

- Lookups.
- Product Code Descriptions.
- Product Media Descriptions.
- Status Code Descriptions.
- Printers.
- PPF Definitions.
- Jewel Cases.
- Machine Parameter/Job Limits.
- PDSINFO Jobs Table.
- PDSINFO Work Table.
- Query Only PDSINFO.
- Mass Update PDSINFO.
- Restage a Job.
- Exit.

Along the top of the PDS **Maintenance Module Main Menu** are the following features:

- Name of the Oracle Form (e.g., PDSMNMSM).
- Current version of the PDS in use (e.g., 2.3).
- Database instance that is being running against (e.g., PRODUCTION).
- Current date (e.g., 2000/01/19).

At the bottom of the PDS **Maintenance Module Main Menu** are the following features:

- The **status line** displays information about the form (e.g., "Record: 1/1" and "INSERT").
- The **message line** (just above the **status line**) displays informational messages and error messages pertinent to what is happening on the form (e.g., "Working...").
 - Messages are displayed on the screen as long as they are pertinent.

CAUTION

Before changing product media type, number of copies, or customer's e-mail address it is advisable to have in hand written authorization to do so.

Table 18.11-8 presents (in a condensed format) the steps required to change the values of job parameters using the PDS Maintenance Module. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: In order to maintain consistency between PDSIS packing lists and PDSSA media generation, changes to the values assigned to order/job parameters may need to be made using both the PDSIS and PDSSA maintenance modules. Changes that affect both PDSIS and PDSSA should be made in PDSIS first, then PDSSA. However, there are changes that affect PDSIS only. For example, PDSSA does not contain customer shipping address information, so no shipping-address changes are necessary in PDSSA. Furthermore, no changes are needed in PDSSA if order processing in PDSIS has not made any data for an order available to PDSSA yet.

- 1** Perform the **Start the PDS Maintenance Module** procedure (Section 18.7.8).
 - The **PDS Maintenance Module Main Menu** is displayed.

NOTE: If parameter values (except Input Directory or Email Address) are to be changed for a job or all units within a job, continue with Step 2. If parameters are to be changed for specific units only associated with a job, go to Step 12. Output Specs, Input Directory, or Email Address parameter values can be changed on the **PDSINFO Work Table** only (go to Step 12).

- 2 **Single-click** on the **PDSINFO Jobs Table** button on the **PDS Maintenance Module Main Menu**.
 - The **PDSINFO Jobs Table Maintenance Form (PDSMTPJT)** or **PDSINFO Jobs Table** is displayed.
- 3 **Single-click** and **drag** (to highlight the text) in the **Job Key** field for the appropriate job on the **Main OI Screen**.
 - **Job Key** text is highlighted on the **Main OI Screen**.
- 4 **Single-click** in the **Job Key** field on the **PDSINFO Jobs Table** with the **center** mouse button.
 - **Job Key** is pasted in the **Job Key** field on the **PDSINFO Jobs Table**.
- 5 **Single-click** on the **Execute Query** button near the bottom of the **PDSINFO Jobs Table**.
 - The database is queried for data concerning the job represented by the **Job Key** and the relevant data are displayed on the **PDSINFO Jobs Table**.
- 6 In the appropriate field of the **PDSINFO Jobs Table** enter:
<value>
 - Clicking on the **List** button on the **PDSINFO Jobs Table** causes a list of valid values for the field to be displayed in a dialogue box if the value of certain parameters is being changed.
 - Lists are available for at least the following parameters:
 - **Status**.
 - **Product Media**.
 - Valid **Status** values for the **PDSINFO Jobs Table** are as follows:
 - **Q** - Pending.
 - **I** - Active.
 - **IP** - Active Partial.
 - **F** - QC-Hold.
 - **FP** - QC-Hold Partial.
 - **G** - Error.
 - **GP** - Error Partial.
 - **C** - Completed.
 - Valid **Product Media** values for the **PDSINFO Jobs Table** are as follows:
 - **CD** - compact disk.
 - **8H** - 8-mm tape.
 - **D7** - DLT.
 - **DVD** - DVD.
 - **FT** - ftp.
 - Valid **Copies** value is the desired number of copies of the unit.

- 7 Repeat Step 6 to modify values in other fields of the **PDSINFO Jobs Table**.
- 8 **Single-click** on the **Save** button on the **PDSINFO Jobs Table**.
 - The record is saved in the database with the new value entered in the appropriate field.
 - It is recommended that each record be saved immediately after it is changed (before making changes to another record).
- 9 **Single-click** on the **Exit** button at the bottom of the **PDSINFO Jobs Table**.
 - If the **Exit** button is not visible on the form, **single-click** on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - Either the maintenance module window is dismissed or a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved.
 - If the maintenance module window was dismissed, the PDS **Maintenance Module Main Menu** is displayed.
- 10 If a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved, **single-click** on the appropriate button from the following selections:
 - **Yes** - to accept the changes and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The PDS **Maintenance Module Main Menu** is displayed.
 - **No** - to dismiss the dialogue box without accepting the changes made to the data on the form.
 - The dialogue box is dismissed.
 - The PDS **Maintenance Module Main Menu** is displayed.
- 11 **Single-click** on the **PDSINFO Work Table** button on the PDS **Maintenance Module Main Menu**.
 - The **PDSINFO Table Maintenance Form (PDSMTPDT)** or **PDSINFO Work Table** is displayed.
- 12 **Single-click** and **drag** (to highlight the text) in the **Job Key** field for the appropriate job on the **Main OI Screen**.
 - **Job Key** text is highlighted on the **Main OI Screen**.
- 13 **Single-click** in the **Job Key** field on the **PDSINFO Work Table** with the **center** mouse button.
 - **Job Key** is pasted in the **Job Key** field on the **PDSINFO Work Table**.

- 14 **Single-click** on the **Execute Query** button near the bottom of the **PDSINFO Work Table**.
- The database is queried for data concerning the job represented by the **Job Key** and the relevant data are displayed on the **PDSINFO Work Table**.
- 15 If the values of any of the following parameters were changed in the **PDSINFO Jobs Table** (Steps 2 through 10), determine whether the values have changed in the **PDSINFO Work Table**:
- **Status.**
 - **Product Media.**
 - **Copies.**
- 16 If the values of any of the preceding parameters were changed in the **PDSINFO Jobs Table** and the changed values are not displayed in the **PDSINFO Work Table**, continue with Step 17; otherwise, go to Step 23.
- 17 If the data displayed on the **PDSINFO Work Table** do not refer to the appropriate record, **single-click** on the next/previous record buttons (> >> < <<) near the bottom of the form as necessary to display the appropriate record.
- The current record is listed in the **Unit Nbr** field.
- 18 In the appropriate field of the **PDSINFO Work Table** enter:
<value>
- Clicking on the **List** button on the **PDSINFO Work Table** causes a list of valid values for the field to be displayed in a dialogue box if the value of certain parameters is being changed.
 - Lists are available for at least the following parameters:
 - **Status.**
 - **Product Media.**
 - Valid **Status** values for the **PDSINFO Work Table** are as follows:
 - **Q** - Pending.
 - **I** - Active.
 - **F** - QC-Hold.
 - **G** - Error.
 - **C** - Completed.
 - Valid **Output Specifications** for a particular media type can be determined by performing the **Determine Output Specifications Using the PDS Maintenance Module** procedure (Section 18.11.10); however, representative **Output Specs** values are as follows:
 - **CDRMS** - compact disk.
 - **8MHAU** - 8-mm tape.
 - **DLUCS** - DLT.
 - **DVD** - DVD.

- **FTP** - ftp.
 - Valid **Product Media** values for the **PDSINFO Work Table** are as follows:
 - **CD** - compact disk.
 - **8H** - 8-mm tape.
 - **D7** - DLT.
 - **DVD** - DVD.
 - **FT** - ftp.
 - Valid **Copies** value is the number of copies of the unit desired by the requester.
 - Valid **Input Directory** value is the correct directory path for pulling data for the order (job).
 - Valid **Email Address** value is the correct e-mail address for ftp notification of order (job) completion.
- 19** Repeat Step 18 to modify values in other fields of the **PDSINFO Work Table**.
- 20** **Single-click** on the **Save** button on the **PDSINFO Work Table**.
- The record is saved in the database with the new value entered in the appropriate field.
 - It is recommended that each record be saved immediately after it is changed (before making changes to another record).
- 21** Repeat Steps 17 through 20 for all additional records that need to be modified for the job.
- 22** **Single-click** on the **Exit** button at the bottom of the **PDSINFO Work Table**.
- If the **Exit** button is not visible on the form, **single-click** on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - Either the maintenance module window is dismissed or a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved.
 - If the maintenance module window was dismissed, the PDS **Maintenance Module Main Menu** is displayed.
- 23** If a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved, **single-click** on the appropriate button from the following selections:
- **Yes** - to accept the changes and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The PDS **Maintenance Module Main Menu** is displayed.
 - **No** - to dismiss the dialogue box without accepting the changes made to the data on the form.
 - The dialogue box is dismissed.
 - The PDS **Maintenance Module Main Menu** is displayed.

- 24 **Single-click** on the **Exit** button at the bottom of the **PDS Maintenance Module Main Menu** window.
- The **PDS Maintenance Module Main Menu** is dismissed.
 - The PDS maintenance module has been shut down.
- 25 Return to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1) or the **Reprocess a Job** procedure (Section 18.11.20) as applicable.

Table 18.11-8. Change the Values of Job Parameters Using the PDS Maintenance Module - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Start the PDS Maintenance Module	Use procedure in Section 18.7.8
2	PDSINFO Jobs Table button	single-click
3	Copy <Job Key> (in the Job Key field on the Main OI Screen)	single-click and drag
4	Paste <Job Key> (in the Job Key field on the PDSINFO Jobs Table)	center-click
5	Execute Query button	single-click
6	<value> (in appropriate field of the PDSINFO Jobs Table)	enter text
7	Repeat the preceding step to modify values in other fields (if applicable)	
8	Save button	single-click
9	Exit button	single-click
10	Yes button (if applicable)	single-click
11	PDSINFO Work Table button	single-click
12	Copy <Job Key> (in the Job Key field on the Main OI Screen)	single-click and drag
13	Paste <Job Key> (in the Job Key field on the PDSINFO Work Table)	center-click
14	Execute Query button	single-click
15	Determine whether the values changed in the PDSINFO Jobs Table have changed in the PDSINFO Work Table	read text
16	next/previous record buttons (> >> < <<) as necessary to display additional records (if applicable)	single-click
17	<value> (in appropriate field of the PDSINFO Work Table) (if applicable)	enter text
18	Repeat the preceding step to modify values in other fields of the PDSINFO Work Table	
19	Save button (if applicable)	single-click

Table 18.11-8. Change the Values of Job Parameters Using the PDS Maintenance Module - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
20	Repeat Steps 16 through 19 for all additional records that need to be modified for the job (if applicable)	
21	Exit button	single-click
22	Yes button (if applicable)	single-click
23	Exit button	single-click
24	Return to the Monitor/Control Product Processing Using PDS procedure or the Reprocess a Job procedure as applicable	Use procedure in Section 18.9.1 or 18.11.20 as applicable

18.11.3 Change the Values of Order Parameters Using the PDSIS Maintenance Module

The PDSIS Maintenance Module provides the Distribution Technician with a means of changing the values assigned to order parameters, especially the following types of parameters:

- Status of an order or unit.
 - May be changed (for example) to "ODL Order Received" so the order processing will restart (e.g., if the order is hung up in PDSIS).
- Action to be sent to an order or unit.
 - Used for stimulating the order or unit to perform functions consistent with the current status.
- Error flag for an order or unit.
 - Reset the error flag for the order/unit.
- Output specification for a unit.
 - Must be changed if a different media type is requested.
- Number of copies of a unit.
 - May be changed in response to a request from the user that has been forwarded by User Services.
 - Usually involves in-house orders.
- Directory (location) for PDSSA to pull data for a unit.
 - May be necessary if (for example) a problem occurs with the disk on which the normal directory resides.
- E-Mail address for ftp notification of order completion.
 - Typically changed in response to a request from the user that has been forwarded by User Services.

In addition the PDSIS Maintenance Module provides the Distribution Technician with a means of determining the values assigned to various output specifications.

In order to maintain consistency between PDSIS packing lists and PDSSA media generation, changes to the values assigned to order/job parameters may need to be made using both the PDSIS and PDSSA maintenance modules.

- Changes that affect both PDSIS and PDSSA should be made in PDSIS first, then PDSSA.
- Some changes affect PDSIS only.
 - For example, PDSSA does not contain customer shipping address information, so no shipping-address changes are necessary in PDSSA.
 - No changes are needed in PDSSA if order processing in PDSIS has not made any data for an order available to PDSSA yet.

The **PDSIS Maintenance Module Main Menu** has the following buttons available for selection:

- PDSIS Orders.
- PDSIS Units.
- PDSIS Address.
- Server Config.
- ODL Lookup.
- Outspec Info.
- Prod Code Info.
- Lookups.
- Exit.

Along the top of the **PDSIS Maintenance Module Main Menu** are the following features:

- Name of the Oracle Form (e.g., PDSISMTMNU).
- Current version of the PDS in use (e.g., 1.0).
- "PDSIS".
- Current date (e.g., 03-APR-2001).

At the bottom of the **PDSIS Maintenance Module Main Menu** are the following features:

- The **status line** displays information about the form (e.g., "Record: 1/1" and "INSERT").
- The **message line** (just above the **status line**) displays informational messages and error messages pertinent to what is happening on the form (e.g., "Working...").
 - Messages are displayed on the screen as long as they are pertinent.

CAUTION

Before changing output specs or number of copies it is advisable to have in hand written authorization to do so.

Table 18.11-9 presents (in a condensed format) the steps required to change the values of order parameters using the PDSIS Maintenance Module. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: In order to maintain consistency between PDSIS packing lists and PDSSA media generation, changes to the values assigned to order/job parameters may need to be made using both the PDSIS and PDSSA maintenance modules. Changes that affect both PDSIS and PDSSA should be made in PDSIS first, then PDSSA. However, there are changes that affect PDSIS only. For example, PDSSA does not contain customer shipping address information, so no shipping-address changes are necessary in PDSSA. Furthermore, no changes are needed in PDSSA if order processing in PDSIS has not made any data for an order available to PDSSA yet.

- 1 Perform the **Start the PDSIS Maintenance Module** procedure (Section 18.7.9).
 - The **PDSIS Maintenance Module Main Menu** is displayed.

NOTE: If parameter values (except Output Specs) are to be changed for an order or all units within an order, continue with Step 2. If parameters are to be changed for specific units only associated with an order, go to Step 10. Output Specs or Directory parameter values can be changed on the **PDSIS Units Maintenance Form** only (go to Step 10). E-mail address parameter values can be changed on the **PDSIS Address Maintenance Form** only (go to Step 22).

- 2 **Single-click** on the **PDSIS Orders** button on the **PDSIS Maintenance Module Main Menu**.
 - The **PDSIS Orders Maintenance Form (PDSISMTPOT)** is displayed.
- 3 **Single-click** and **drag** (to highlight the text) in the **Order Nbr** field for the appropriate order on the **PDSIS OI Main Screen**.
 - **Order Nbr** text is highlighted on the **PDSIS OI Main Screen**.
- 4 **Single-click** in the **Order Nbr** field on the **PDSIS Orders Maintenance Form** with the **center** mouse button.
 - **Order Nbr** is pasted in the **Order Nbr** field on the **PDSIS Orders Maintenance Form**.
- 5 **Single-click** on the **Execute Query** button near the bottom of the **PDSIS Orders Maintenance Form**.
 - The database is queried for data concerning the order represented by the **Order Nbr** and the relevant data are displayed on the **PDSIS Orders Maintenance Form**.

- 6 In the appropriate field of the **PDSIS Orders Maintenance Form** enter:
<value>
- Valid **Status** field values for the **PDSIS Orders Maintenance Form** are as follows:
 - **O** - ODL Order Received (initial status in PDSIS).
 - **I** - In Progress.
 - **C** - Completed.
 - **S** - Shipped.
 - **X** - Rejected.
 - Valid **Action** field values for the **PDSIS Orders Maintenance Form** are as follows:
 - **A** - activate (activate entire order).
 - **S** - print shipping labels and packing lists.
 - **M** - mail the distribution notice to the customer (unless dorran is listed in the Special Action field of the PDSIS Orders Maintenance Form, in which case the DORRAN billing and accounting system (EDC only) is notified of the order status).
 - **D** - delete all order data in all tables associated with the specified order.
 - **X** - reject (reject the entire order).
 - Valid **Error Flag** field values for the **PDSIS Orders Maintenance Form** are as follows:
 - **Y** - Yes, an error condition exists.
 - **N** - No error condition exists.
- 7 **Single-click** on the **Save** button on the **PDSIS Orders Maintenance Form**.
- The record is saved in the database with the new value entered in the appropriate field.
 - It is recommended that each record be saved immediately after it is changed (before making changes to another record).
- 8 **Single-click** on the **Exit** button at the bottom of the **PDSIS Orders Maintenance Form**.
- If the **Exit** button is not visible on the form, click on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - Either the maintenance module window is dismissed or a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved.
 - If the maintenance module window was dismissed, the **PDSIS Maintenance Module Main Menu** is displayed.
- 9 If a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved, **single-click** on the appropriate button from the following selections:
- **Yes** - to accept the changes and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The **PDSIS Maintenance Module Main Menu** is displayed.

- **No** - to dismiss the dialogue box without accepting the changes made to the data on the form.
 - The dialogue box is dismissed.
 - The **PDSIS Maintenance Module Main Menu** is displayed.
- 10** **Single-click** on the **PDSIS Units** button on the **PDSIS Maintenance Module Main Menu**.
- The **PDSIS Units Maintenance Form (PDSISMTPUT)** is displayed.
- 11** **Single-click** and **drag** (to highlight the text) in the **Order Nbr** field for the appropriate order on the **PDSIS OI Main Screen**.
- **Order Nbr** text is highlighted on the **PDSIS OI Main Screen**.
- 12** **Single-click** in the **Order Nbr** field on the **PDSIS Units Maintenance Form** with the **center** mouse button.
- **Order Nbr** is pasted in the **Order Nbr** field on the **PDSIS Units Maintenance Form**.
- 13** **Single-click** on the **Execute Query** button near the bottom of the **PDSIS Units Maintenance Form**.
- The database is queried for data concerning the order represented by the **Order Nbr** and the relevant data are displayed on the **PDSIS Units Maintenance Form**.
- 14** If the values of any of the following parameters were changed in the **PDSIS Orders Maintenance Form** (Steps 2 through 9), determine whether the values have changed in the **PDSIS Units Maintenance Form**:
- **Status.**
 - **Action.**
 - **Error Flag.**
- 15** If the values of any of the preceding parameters were changed in the **PDSIS Orders Maintenance Form** and the changed values are not displayed in the **PDSIS Units Maintenance Form**, continue with Step 16; otherwise, go to Step 20.
- 16** If the data displayed on the **PDSIS Units Maintenance Form** do not refer to the appropriate record **single-click** on the next/previous record buttons (> >> < <<) near the bottom of the form as necessary to display additional records (units) for the order.
- The current record is listed in the **Unit Nbr** field.

- 17 In the appropriate field of the **PDSIS Units Maintenance Form** enter:
<value>
- Valid **Status** values for the **PDSIS Units Maintenance Form** are as follows:
 - **O** - ODL Order Received (initial status in PDSIS).
 - **D** - ECS Data Requested.
 - **R** - ECS Data Received.
 - **P** - PDS Products Requested.
 - **C** - PDS Completed.
 - **S** - Shipped.
 - **X** - Rejected.
 - Valid **Action** values for the **PDSIS Units Maintenance Form** are as follows:
 - **A** - activate (activate the unit).
 - **E** - request ECS data.
 - **P** - request PDS data.
 - **C** - clean/delete the directory associated with the unit.
 - **X** - reject (reject the unit).
 - Valid **Error Flag** values for the **PDSIS Units Maintenance Form** are as follows:
 - **Y** - Yes, an error condition exists.
 - **N** - No error condition exists.
 - Valid **Output Specs** for a particular media type can be determined by performing the **Determine Output Specifications Using the PDSIS Maintenance Module** procedure (Section 18.11.11); however, representative **Output Specs** values are as follows:
 - **CDRMS** - compact disk.
 - **8MHAU** - 8-mm tape.
 - **DLUCS** - DLT.
 - **DVD** - DVD.
 - **FTP** - ftp.
 - Valid **Copies** value is the desired number of copies of the unit.
 - Valid **Directory** where the data are staged.
- 18 **Single-click** on the **Save** button on the **PDSIS Units Maintenance Form**.
- The record is saved in the database with the new value entered in the appropriate field.
 - It is recommended that each record be saved immediately after it is changed (before making changes to another record).
- 19 Repeat Steps 16 through 18 for all additional records that need to be modified for the order.

- 20** **Single-click** on the **Exit** button at the bottom of the **PDSIS Units Maintenance Form**.
- If the **Exit** button is not visible on the form, click on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - Either the maintenance module window is dismissed or a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved.
 - If the maintenance module window was dismissed, the **PDSIS Maintenance Module Main Menu** is displayed.
- 21** If a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved, **single-click** on the appropriate button from the following selections:
- **Yes** - to accept the changes and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The **PDSIS Maintenance Module Main Menu** is displayed.
 - **No** - to dismiss the dialogue box without accepting the changes made to the data on the form.
 - The dialogue box is dismissed.
 - The **PDSIS Maintenance Module Main Menu** is displayed.
- 22** **Single-click** on the **PDSIS Address** button on the **PDSIS Maintenance Module Main Menu**.
- The **PDSIS Address Maintenance Form (PDSISMTADD)** is displayed.
- 23** **Single-click** and **drag** (to highlight the text) in the **Order Nbr** field for the appropriate order on the **PDSIS OI Main Screen**.
- **Order Nbr** text is highlighted on the **PDSIS OI Main Screen**.
- 24** **Single-click** in the **Order Nbr** field on the **Address Maintenance Form** with the **center** mouse button.
- **Order Nbr** is pasted in the **Order Nbr** field on the **Address Maintenance Form**.
- 25** **Single-click** on the **Execute Query** button near the bottom of the **PDSIS Address Maintenance Form**.
- The database is queried for data concerning the order represented by the **Order Nbr** and the relevant data are displayed on the **PDSIS Address Maintenance Form**.

- 26 If the data displayed on the **PDSIS Address Maintenance Form** do not refer to the appropriate record (e.g., as indicated in the **Address Type** field) **single-click** on the next/previous record buttons (> >> < <<) near the bottom of the form as necessary to display the appropriate record.
- The following codes specify the **Address Type**:
 - **C** -contact.
 - **B** - billing.
 - **S** - shipping.
- 27 In the **Email** field of the **PDSIS Address Maintenance Form** enter:
<e-mail address>
- 28 **Single-click** on the **Save** button on the **PDSIS Address Maintenance Form**.
- The record is saved in the database with the new value entered in the appropriate field.
 - It is recommended that each record be saved immediately after it is changed (before making changes to another record).
- 29 Repeat Steps 26 through 28 for all additional records that need to be modified for the order.
- 30 **Single-click** on the **Exit** button at the bottom of the **PDSIS Address Maintenance Form**.
- If the **Exit** button is not visible on the form, **single-click** on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - Either the maintenance module window is dismissed or a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved.
 - If the maintenance module window was dismissed, the **PDSIS Maintenance Module Main Menu** is displayed.
- 31 If a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved, **single-click** on the appropriate button from the following selections:
- **Yes** - to accept the changes and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The **PDSIS Maintenance Module Main Menu** is displayed.
 - **No** - to dismiss the dialogue box without accepting the changes made to the data on the form.
 - The dialogue box is dismissed.
 - The **PDSIS Maintenance Module Main Menu** is displayed.

- 32 To shut down the **PDSIS Maintenance Module** **single-click** on the **Exit** button at the bottom of the **PDSIS Maintenance Module Main Menu** window.
- The **PDSIS Maintenance Module Main Menu** is dismissed.
- 33 Return to the **Monitor/Control Order Processing Using the PDSIS OI** procedure (Section 18.10.1).

Table 18.11-9. Change the Values of Order Parameters Using the PDSIS Maintenance Module - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Start the PDSIS Maintenance Module	Use procedure in Section 18.7.9
2	PDSIS Orders button	single-click
3	Copy <Order Nbr> (in the Order Nbr field on the PDSIS OI Main Screen)	single-click and drag
4	Paste <Order Nbr> (in the Order Nbr field on the PDSIS Orders Maintenance Form)	center-click
5	Execute Query button	single-click
6	<value> (in appropriate field of the PDSIS Orders Maintenance Form)	enter text
7	Save button	single-click
8	Exit button	single-click
9	Yes button (if applicable)	single-click
10	PDSIS Units button	single-click
11	Copy <Order Nbr> (in the Order Nbr field on the PDSIS OI Main Screen)	single-click and drag
12	Paste <Order Nbr> (in the Order Nbr field on the PDSIS Units Maintenance Form)	center-click
13	Execute Query button	single-click
14	Determine whether the values changed in the PDSIS Orders Maintenance Form have changed in the PDSIS Units Maintenance Form	read text
15	next/previous record buttons (> >> < <<) as necessary to display additional records (if applicable)	single-click
16	<value> (in appropriate field of the PDSIS Units Maintenance Form) (if applicable)	enter text
17	Save button (if applicable)	single-click
18	Repeat Steps 15 through 17 for all additional records that need to be modified for the order (if applicable)	
19	Exit button	single-click

Table 18.11-9. Change the Values of Order Parameters Using the PDSIS Maintenance Module - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
20	Yes button (if applicable)	single-click
21	PDSIS Address button	single-click
22	Copy <Order Nbr> (in the Order Nbr field on the PDSIS OI Main Screen)	single-click and drag
23	Paste <Order Nbr> (in the Order Nbr field on the PDSIS Address Maintenance Form)	center-click
24	Execute Query button	single-click
25	next/previous record buttons (> >> < <<) as necessary to display additional records (if applicable)	single-click
26	<e-mail address> (in Email field of the PDSIS Address Maintenance Form)	enter text
27	Save button (if applicable)	single-click
28	Repeat Steps 25 through 27 for all additional records that need to be modified for the order (if applicable)	
29	Exit button	single-click
30	Yes button (if applicable)	single-click
31	Exit button	single-click
32	Return to the Monitor/Control Order Processing Using the PDSIS OI procedure	Use procedure in Section 18.10.1

18.11.4 Check/Clear Errors on PDSIS

The procedure to **Check/Clear Errors on PDSIS** is performed as part of either the **Monitor/Control Order Processing Using the PDSIS OI** procedure (Section 18.10.1) or the **Use the PDSIS OI Detail Screen** procedure (Section 18.10.2). Both the **PDSIS OI Main Screen** and the **PDSIS OI Detail Screen** provide the Distribution Technician with means of checking and/or clearing errors associated with PDS orders.

Table 18.11-10 presents (in a condensed format) the steps required to check/clear errors on PDSIS. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 **Single-click** on the action button at the beginning of the relevant order status line or unit line (on the **PDSIS OI Main Screen** or **PDSIS OI Detail Screen** as applicable).
 - The **Action List** box is displayed.
- 2 **Single-click** on **Errors** in the **Action List** box.
 - **Errors** is highlighted.
- 3 **Single-click** on the appropriate button from the following selections:
 - **OK** - to display the **PDSIS OI Error Screen**.
 - The **PDSIS OI Error Screen** is displayed.
 - **Cancel** - to dismiss the **Action List** box and return to the screen that was displayed before the action button was selected.
 - Either the **PDSIS OI Main Screen** or the **PDSIS OI Detail Screen** (as applicable) is displayed.
- 4 Observe information displayed on the **PDSIS OI Error Screen**.
 - The following items are displayed on the **PDSIS OI Error Screen**:
 - Action Button [not labeled].
 - **Date/Time**.
 - **Order Number**.
 - **Unit Number**.
 - **Error Source**.
 - **Error Message**.
 - If the entire entry is not visible in a field, **single-click** in the field and use the arrow keys on the keyboard to scroll to the end of the entry.
- 5 If it is desirable to see an extended error message associated with a particular unit, perform the **View an Extended Error Message** procedure (Section 18.11.37).
- 6 If it is desirable to clear an error displayed on the **PDSIS OI Error Screen**, perform the **Clear an Error Displayed on the PDSIS OI Error Screen** procedure (Section 18.11.9).
- 7 Repeat Steps 4 through 6 as necessary.
- 8 **Single-click** on the **Return** button to return to the procedure being performed before the action button was selected.
 - Either **Monitor/Control Order Processing Using the PDSIS OI** (Section 18.10.1) or **Use the PDSIS OI Detail Screen** (Section 18.10.2) (as applicable).
 - The **PDSIS OI Error Screen** is dismissed.
 - Either the **PDSIS OI Main Screen** or the **PDSIS OI Detail Screen** is displayed (as applicable).

Table 18.11-10. Check/Clear Errors on PDSIS - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Action button (on PDSIS OI Main Screen or PDSIS OI Detail Screen as applicable)	single-click
2	Errors	single-click
3	OK button	single-click
4	Review error information displayed on the PDSIS OI Error Screen	read text
5	View an extended error message (if applicable)	Use procedure in Section 18.11.37
6	Clear an error (if applicable)	Use procedure in Section 18.11.9
7	Repeat Steps 4 through 6 as necessary	
8	Return button	single-click
9	Either monitor/control order processing using the PDSIS OI or use the PDSIS OI Detail Screen (as applicable)	Use procedure in Section 18.10.1 or 18.10.2 (as applicable)

18.11.5 Check PDSSA or PDSIS Log Files

PDSIS maintains the following kinds of daily logs for PDSIS troubleshooting purposes:

- Error log.
 - May give slightly more information on the nature of a problem than the PDSIS Error screen.
 - Provides a history of daily problems.
- Debug log.
 - Provides a record of all pertinent server information as the cron runs every five minutes.
 - Nominal/successful processing is logged in the debug log file; consequently, debug logs can grow large.
 - Problems may be logged below the level of a declared error in the debug log file. (May provide the operator with indications as to the health of the PDSIS server:)
- Socket log.
 - Provides a record of socket activity, including connection information, product request data, and product result data.

PDSSA maintains the following kinds of logs:

- Operator Interface log (oilog).
 - Describes the events that occur with respect to the jobs that are being processed through the operator interface (PDSOI).

- Among the entries in the Operator Interface log are items related to the activation of jobs, eventual status of jobs processed by the production modules (as reported in job status files), and errors detected by the operator interface.
- Job log.
 - Describes the events that occur during the processing of an individual job.
 - Procedures available for checking a job log include the **View a Job Log or Job Production Parameter File (PPF) Using UNIX Commands** procedure (Section 18.11.34) and the **View a Job Log Using the PDS Job Monitor** procedure (Section 18.11.35).

Table 18.11-11 presents (in a condensed format) the steps required to check PDSSA or PDSIS log files. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
 - PDS Server host has the following PDSSA log files:
 - Operator Interface log (e.g., DIG06_ops_05022002102727.oilog).
 - Job log (e.g., YEA0203190048_0001.log).
 - PDS Server host has the following PDSIS log files:
 - Debug log (e.g., debug.log).
 - Error log (e.g., error.log).
 - Socket log (e.g., 1045668430144.log).

- 2 At the UNIX command line prompt enter:

cd <path>

 - Change directory to the directory containing the PDSSA or PDSIS log files.
 - **<path>** represents the full directory path to the directory containing the log files.
 - **/usr/local/pds_<mode>/summary** is the typical directory path for PDSSA logs (i.e., Operator Interface logs and job logs).
 - **/usr/local/pdsis_<mode>/logs/debug** is the typical directory path for PDSIS debug logs.
 - The **pdsis_<mode>** refers to one of the following subdirectories:
 - pdsis (for OPS-mode operations).
 - pdsis_ts1 (for TS1-mode operations).
 - pdsis_ts2 (for TS2-mode operations).
 - **/usr/local/pdsis_<mode>/logs/errors** is the typical directory path for PDSIS error logs.

- `/usr/local/pdsis_<mode>/logs/socket` is the typical directory path for PDSIS socket logs.
- 3 At the UNIX command line prompt enter:
pg <file name>
 - **<file name>** refers to the PDSSA or PDSIS log file to be reviewed (e.g., DIG06_ops_05022002102727.oilog, YEA0203190048_0001.log, error log, debug.log, 1045668430144.log).
 - The first page of the log file is displayed.
 - Although this procedure has been written for the **pg** command, any UNIX editor or visualizing command (e.g., **vi**, **view**, **more**) can be used to review the log file.
 - 4 Review the log file to identify problems that have occurred.
 - 5 Respond to problems as follows:
 - PDSIS- or PDSSA-related problems.
 - Perform the appropriate procedure(s) from the list near the beginning of the Troubleshooting PDS Problems section (Table 18.11-1).
 - Communication problems.
 - Notify the Operations Controller/System Administrator of suspected communication problems.
 - Database problems.
 - Verify that relevant database servers are running.
 - Check for lack of (or corruption of) data in the database using either a database browser or isql commands.
 - Notify the Database Administrator of suspected database problems.
 - Lack of disk space.
 - Remove unnecessary files.
 - Notify the Operations Controller/System Administrator of recurring disk space problems.

Table 18.11-11. Check PDSSA or PDSIS Log Files - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd <path>	enter text, press Enter
3	pg <file name>	enter text, press Enter
4	Identify problems indicated in the log file	read text
5	Respond to problems as necessary	Use applicable procedure(s)

18.11.6 Check/Restore Synchronization of the Rimage PC Time with PDS System Time

The time on the Rimage PC must be set to within five (5) minutes of the time on the PDS Server host (e.g., x0dig06). If the time is not properly synchronized, CD and DVD jobs cannot proceed to a QC-Hold status.

Table 18.11-12 presents (in a condensed format) the steps required to check/restore synchronization of the Rimage PC time with PDS system time. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
- 2 At the UNIX command line prompt on the PDS Server host enter:
date
 - The date and time (as known to the PDS Server host) are displayed as follows:
Thu Jun 20 15:42:15 EDT 2002
 - If the date or time values shown on the PDS Server host appear to be incorrect, notify the System Administrator.
- 3 On the Rimage PC **double-click** on the time displayed on the Windows task bar.
 - A **Date/Time Properties** window is displayed.
 - The current date and time (as known to the Rimage PC) are displayed.
 - An alternative method of displaying the **Date/Time Properties** window is to select **Start → Settings → Control Panel** from the Windows task bar, then **double-click** on the **Date/Time** icon.
- 4 If the date and time displayed on the Rimage PC are the same as those displayed on the PDS Server host, **single-click** on the **Cancel** button in the **Date/Time Properties** window on the Rimage PC.
 - End of procedure.

NOTE: If the date or time zone displayed on the Rimage PC is not the same as that displayed on the PDS Server host, change the date/time zone on the Rimage PC before changing the time. No specific steps for doing so are provided in this procedure because they are not likely to be needed.

- 5 If the time displayed on the Rimage PC is not the same as that displayed on the PDS Server host, on the Rimage PC (in the **Date/Time Properties** window) enter:
<hour/minute/second>
 - **<hour/minute/second>** represent the correct value(s) (as displayed on the PDS Server host) for the hour, minute and/or second in the digital time display.
 - The clock stops when a new time value is entered.
 - The new time values are displayed but not applied yet.

- 6 If the time displayed on the Rimage PC was not the same as that displayed on the PDS Server host, on the Rimage PC (in the **Date/Time Properties** window) **single-click** on the appropriate button from the following selections:
 - **OK** - to restart the Rimage PC clock with the new time values and dismiss the **Date/Time Properties** window.
 - Rimage PC time is reset.
 - The **Date/Time Properties** window is dismissed.
 - **Cancel** - to restart the Rimage PC clock with the old time values and dismiss the **Date/Time Properties** window.
 - Rimage PC time is not reset.
 - The **Date/Time Properties** window is dismissed.
 - **Apply** - to restart the Rimage PC clock with the new time values without dismissing the **Date/Time Properties** window.
 - Rimage PC time is reset.
 - The **Date/Time Properties** window is still displayed.

- 7 Return to the procedure that recommended checking/restoring synchronization of the Rimage PC time with PDS system time.
 - For example, the **Respond to No Printouts (Either Jewel-Case Inserts or Paper Reports)** procedure (Section 18.11.32).

Table 18.11-12. Check/Restore Synchronization of the Rimage PC Time with PDS System Time - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	date	enter text, press Enter
3	<time> (on Windows task bar of Rimage PC)	double-click
4	Cancel button (in Date/Time Properties window on Rimage PC) (if applicable)	single-click
5	<hour/minute/second> (in Date/Time Properties window on Rimage PC) (as necessary)	single-click

Table 18.11-12. Check/Restore Synchronization of the Rimage PC Time with PDS System Time - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
6	OK button (in Date/Time Properties window on Rimage PC)	single-click
7	Return to the procedure that recommended checking/restoring synchronization of the Rimage PC time with PDS system time	

18.11.7 Check/Restore the Rimage PC NFS Connection

A Network File System (NFS) mount is needed in order for the Rimage software to see the job control directory (e.g., /pdssa/rimage_jobcontrol) on the PDS system. When the Windows NT system for the Rimage PC is set up, the PDS job control directory on the PDS Server host (e.g., x0dig06) is typically mapped to the PC's Z: drive.

Table 18.11-13 presents (in a condensed format) the steps required to check/restore the Rimage PC NFS connection. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 On the Rimage PC select **Start → Programs → Windows NT Explorer** from the Windows task bar.
 - An **Exploring – [C:]** window is displayed.
- 2 In the left (**All Folders**) frame, scroll down to determine whether there is a network drive Z: to which rimage_jobcontrol is assigned.
 - If no drive associated with the rimage_jobcontrol directory, there is a problem with the NFS connection.
 - Go to Step 5.
- 3 If there is a network drive Z: to which rimage_jobcontrol is assigned, **single-click** on the icon for the drive.
 - Folders (subdirectories) and files in the rimage_jobcontrol directory should be displayed in the right (**Contents of...**) frame of the **Exploring – [C:]** window.
 - If no folders (subdirectories) or files are displayed in the **Exploring – [C:]** window, there is a problem with the NFS connection.
- 4 If there is no problem with the NFS connection, go to Step 15.

- 5 If there is a problem with the NFS connection, shut down the Rimage CD production software.
- For detailed instructions refer to the **Shut Down the Rimage CD Production Software** procedure (Section 18.8.4).
 - Shutting down the Rimage CD production software is a preparatory step for rebooting the computer.
 - When logging back on to the computer as a user with NFS privileges, the NFS connection should be restored.
- 6 To start the process of rebooting the computer select **Start → Shut Down** from the Windows task bar.
- A **Shut Down Windows** window is displayed.
- 7 **Single-click** on the appropriate radio button from the following selections (which are alternate endings to the question, **Are you sure you want to:**):
- **Shut down the computer?** - to indicate an intention to shut down the computer for the purpose of turning it off.
 - **Restart the computer?** - to indicate an intention to shut down the computer and immediately restart it.
 - This is the optimum choice for rebooting the computer (the goal in this procedure) although **Shut down the computer?** is an acceptable choice as well.
 - **Close all programs and log on as a different user?** - to indicate an intention to close all programs and log on as a different user.
- 8 **Single-click** on the appropriate button from the following selections:
- **Yes** - to implement the choice indicated in the preceding step.
 - The **Shut Down Windows** window is dismissed.
 - If **Shut down the computer?** was selected in the preceding step, eventually a **Shutdown Computer** window (containing the text “It is now safe to turn off your computer” and a **Restart** button) is displayed. (**Single-clicking** on the **Restart** button causes the screen to go black, then a variety of text is displayed on the screen as the computer checks its configuration and loads and starts the operating system, and eventually a **Begin Logon** window (containing the text “Press Ctrl + Alt + Delete to log on”) is displayed.)
 - If **Restart the computer?** was selected in the preceding step, the screen goes black, then a variety of text is displayed on the screen as the computer checks its configuration and loads and starts the operating system, and eventually a **Begin Logon** window (containing the text “Press Ctrl + Alt + Delete to log on”) is displayed.
 - If **Close all programs and log on as a different user?** was selected in the preceding step, eventually a **Begin Logon** window (containing the text “Press Ctrl + Alt + Delete to log on”) is displayed.

- **No** - to dismiss the **Shut Down Windows** window without shutting down the computer.
 - The **Shut Down Windows** window is dismissed.
 - The Windows desktop is displayed.
- 9** If the **Begin Logon** window contains the text “Press Ctrl + Alt + Delete to log on,” simultaneously press the **Ctrl**, **Alt**, and **Delete** keys on the keyboard.
- The **Begin Logon** window is dismissed.
 - An **Acceptance of ... Computer Policy** window (containing policy text and an **OK** button) is displayed.
- 10** If an **Acceptance of ... Computer Policy** window is displayed, **single-click** on the **OK** button.
- The **Acceptance of ... Computer Policy** window is dismissed.
 - A **Logon Information** window is displayed.
 - The **Logon Information** window contains the text “Enter a user name and password that is valid for this system” and fields for **Username**, **Password**, and **Domain**.
- 11** Ensure that the entries in the **Username** and **Domain** fields of the **Logon Information** window are correct.
- Enter the appropriate information in the fields if necessary.
 - The user name entered in the **Username** field must have NFS access privileges.
- 12** In the **Password** field of the **Logon Information** window enter:
<password>
- If the **Return/Enter** key on the keyboard is pressed after the password has been typed, go to Step 14.
- 13** **Single-click** on the appropriate button from the following selections:
- **OK** - to start log-on to Windows.
 - The **Logon Information** window is dismissed.
 - Scripts run in log-on windows and eventually the Windows desktop is displayed.
 - **Cancel** - to dismiss the **Logon Information** window without starting the log-on to Windows.
 - The **Logon Information** window is dismissed.
 - The **Begin Logon** window is displayed.
 - Return to Step 9.
 - **Shut Down** - to dismiss the **Logon Information** window and select choices for computer shutdown.
 - The **Logon Information** window is dismissed.
 - A **Shutdown Computer** window is displayed.

– Return to Step 7.

- 14** Return to Step 1 to recheck the Rimage PC NFS connection.
- 15** If the Rimage CD production software was shut down, restart the Rimage CD production software.
- For detailed instructions refer to the **Start the Rimage CD Production Software** procedure (Section 18.7.6).
- 16** Return to the procedure that recommended checking/restoring the Rimage PC NFS connection.
- For example, **Respond to No Printouts (Either Jewel-Case Inserts or Paper Reports)** (Section 18.11.32).

Table 18.11-13. Check/Restore the Rimage PC NFS Connection - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Start → Programs → Windows NT Explorer (Windows task bar on Rimage PC)	single-click
2	Determine whether there is a network drive Z: to which rimage_jobcontrol is assigned	read text
3	Icon for the drive (network drive Z:) (if available)	single-click
4	Go to Step 15 (if no problem with NFS connection)	
5	Shut down the Rimage CD production software (if problem with NFS connection)	Use procedure in Section 18.8.4
6	Start → Shut Down (Windows task bar)	single-click
7	Restart the computer? (Shut Down Windows window)	single-click
8	Yes (Shut Down Windows window)	single-click
9	Ctrl, Alt, Delete keys (if Begin Logon window contains text "Press Ctrl + Alt + Delete to log on")	press Ctrl, Alt, Delete simultaneously
10	OK button (if an Acceptance of ... Computer Policy window is displayed)	single-click
11	<Username> <Domain> (Logon Information window) (if necessary)	enter text
12	<password> (Logon Information window)	enter text, press Enter
13	Return to Step 1 (recheck the Rimage PC NFS connection)	
14	Restart the Rimage CD production software (if necessary)	Use procedure in Section 18.7.6
15	Return to the procedure that recommended checking/restoring the Rimage PC NFS connection	

18.11.8 Clean Up the CD-R_Images Folder on the Rimage PC

From time to time the CD-R_Images folder on one of the Rimage PC hard drives (e.g., the E: drive) needs cleaning to remove files that result from ftp errors, disk space issues, or problems producing an output.

Table 18.11-14 presents (in a condensed format) the steps required to clean up the CD-R_Images folder (directory) on the Rimage PC. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 **Double-click** on the **My Computer** icon (on the Rimage PC).
 - A window is displayed containing icons for the accessible drives.
 - Unneeded files should be deleted from the CD-R_Images folder before attempting to delete them through the Rimage Production Server Production Order Editor.
- 2 **Double-click** on the icon for the appropriate drive (e.g., the **E:** drive).
 - A window is displayed containing icons for the folders (directories) and files on the specified drive.
- 3 **Double-click** on the icon for the **CD-R_Images** folder.
 - A window is displayed containing icons for the files in the **CD-R_Images** folder.
- 4 **Hold** the **Ctrl** key and **single-click** on the icons (highlighting them) for all unneeded files to be deleted from the **CD-R_Images** folder.
 - All unneeded files in the **CD-R_Images** folder are highlighted.
- 5 **Single-click** on one of the highlighted icons with the **right** mouse button.
 - Pop-up menu appears.
- 6 **Single-click** on **Delete** from the pop-up menu.
 - A **Confirm File Delete** dialogue box is displayed containing the message "Are you sure you want to send '<file name>' to the Recycle Bin?".
- 7 **Single-click** on the appropriate button from the following selections:
 - **Yes** - to send the selected files to the recycle bin and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The selected files are transferred to the recycle bin (folder).
 - **No** - to dismiss the dialogue box without sending the selected files to the recycle bin.
 - The dialogue box is dismissed.
- 8 **Single-click** on the **X** in the box at the upper right-hand corner of the **CD-R_Images** folder window.
 - The **CD-R_Images** folder window is dismissed.

- 9 Execute the following menu path from the pull-down menu in the **Production Server** window on the PC:
File → Production Order Editor
 - The **pofile** window is displayed.
- 10 **Hold** the **Ctrl** key and **single-click** on the icons (highlighting them) for all unneeded files to be deleted.
 - All unneeded files are highlighted.
- 11 **Single-click** on one of the highlighted icons with the **right** mouse button.
 - Pop-up menu appears.
- 12 **Single-click** on **Delete** from the pop-up menu.
 - A **Confirm File Delete** dialogue box is displayed containing the message "Are you sure you want to send '<file name>' to the Recycle Bin?".
- 13 **Single-click** on the appropriate button from the following selections:
 - **Yes** - to send the selected files to the recycle bin and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The selected files are transferred to the recycle bin (folder).
 - **No** - to dismiss the dialogue box without sending the selected files to the recycle bin.
 - The dialogue box is dismissed.
- 14 **Single-click** on the **Recycle Bin** icon on the PC desktop with the **right** mouse button.
 - Pop-up menu appears.
- 15 **Single-click** on **Empty Recycle Bin** from the pop-up menu.
 - A **Confirm Multiple File Delete** dialogue box is displayed containing the message "Are you sure you want to delete these *n* items?".
- 16 **Single-click** on the appropriate button from the following selections:
 - **Yes** - to delete the selected files and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The selected files are deleted.
 - **No** - to dismiss the dialogue box without deleting the selected files.
 - The dialogue box is dismissed.

- 17 **Single-click** on the **X** in the box at the upper right-hand corner of the **pofile** window.
 - The **pofile** window is dismissed.
- 18 **Single-click** on the **X** in the box at the upper right-hand corner of the hard drive (e.g., **E:** drive) window.
 - The drive window is dismissed.
- 19 **Single-click** on the **X** in the box at the upper right-hand corner of the **My Computer** window.
 - The **My Computer** window is dismissed.

Table 18.11-14. Clean Up the CD-R_Images Folder on the Rimage PC - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	My Computer icon (on the Rimage PC)	double-click
2	E drive icon	double-click
3	CD-R_Images folder icon	double-click
4	<file> icons (in the CD-R_Images folder)	hold the Ctrl key and single-click
5	<file> icon (in the CD-R_Images folder)	right-click
6	Delete (from the pop-up menu)	single-click
7	Yes button	single-click
8	X (upper right-hand corner of the CD-R_Images folder window)	single-click
9	File → Production Order Editor	single-click
10	<file> icons	hold the Ctrl key and single-click
11	<file> icon	right-click
12	Delete (from the pop-up menu)	single-click
13	Yes button	single-click
14	Recycle Bin icon (on the Rimage PC desktop)	right-click
15	Empty Recycle Bin (from the pop-up menu)	single-click
16	Yes button	single-click
17	X (pofile window)	single-click
18	X (E drive window)	single-click
19	X (My Computer window)	single-click

18.11.9 Clear an Error Displayed on the PDSIS OI Error Screen

The procedure to **Clear an Error Displayed on the PDSIS OI Error Screen** is performed as part of the procedure to **Check/Clear Errors on PDSIS** (Section 18.11.4).

Table 18.11-15 presents (in a condensed format) the steps required to clear an error displayed on the **PDSIS OI Error Screen**. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: It is generally good practice to ensure that the condition that caused an error has been corrected before clearing the error on the GUI (operator interface); otherwise, the error may recur.

- 1 **Single-click** on the action button at the beginning of the relevant error status line (on the **PDSIS OI Error Screen**).
 - The **Action List** box is displayed.
- 2 **Single-click** on **Clear Error** in the **Action List** box.
 - **Clear Error** is highlighted.
- 3 **Single-click** on the appropriate button from the following selections:
 - **OK** - to clear the error and dismiss the **Action List** box.
 - The **PDSIS OI Error Screen** is displayed.
 - The status of the order/unit changes to its pre-error state and condition.
 - The error is removed (logged) and is no longer visible on the **PDSIS OI Error Screen**.
 - The order/unit restarts from its pre-error state.
 - The same error or a different error may occur if the root cause of the error has not been corrected.
 - **Cancel** - to dismiss the **Action List** box without clearing the error and return to the **PDSIS OI Error Screen**.
 - The **PDSIS OI Error Screen** is displayed.
- 4 Return to the **Check/Clear Errors on PDSIS** procedure (Section 18.11.4).

Table 18.11-15. Clear an Error Displayed on the PDSIS OI Error Screen - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Action button (on PDSIS OI Error Screen)	single-click
2	Clear Error	single-click
3	OK button	single-click
4	Return to the Check/Clear Errors on PDSIS procedure	Use procedure in Section 18.11.4

18.11.10 Determine Output Specifications Using the PDS Maintenance Module

It may be necessary to determine product output specifications when performing other procedures associated with PDS processing; e.g., responding to a job on a Lag Report or changing the values of job or order parameters.

Table 18.11-16 presents (in a condensed format) the steps required to determine output specifications using the PDS Maintenance Module. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Perform the **Start the PDS Maintenance Module** procedure (Section 18.7.8).
 - The **PDS Maintenance Module Main Menu** is displayed.
- 2 **Single-click** on the **Product Media Descriptions** button on the **PDS Maintenance Module Main Menu**.
 - The **Product Media Descriptions Maintenance Form (PDSMTPMD)** is displayed.
- 3 **Single-click** on the **Execute Query** button on the **Product Media Descriptions Maintenance Form**.
 - Product codes are displayed on the **Product Media Descriptions Maintenance Form**.
 - The following types of data are displayed on the **Product Media Descriptions Maintenance Form**:
 - **Output Spec** - output specification of the product ordered.
 - **Description** - a longer (more understandable) description of what the output specification is.
 - **PDS Description** - Grouping of output specifications.
- 4 Observe the data displayed on the **Product Media Descriptions Maintenance Form** to determine whether the relevant output specification has appropriate values.
 - The entries displayed on the **Product Media Descriptions Maintenance Form** are the values in the OUT_OTSP_TBLV_TBL database table.
- 5 If the relevant output specification does not have the appropriate value on the **Product Media Descriptions Maintenance Form**, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
- 6 To close the **Product Media Descriptions Maintenance Form** **single-click** on the **Exit** button at the bottom of the window.
 - If the **Exit** button is not visible on the maintenance module form, click on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - The **PDS Maintenance Module Main Menu** is displayed.

- 7 To shut down the PDS **Maintenance Module** **single-click** on the **Exit** button at the bottom of the PDS **Maintenance Module Main Menu** window.
 - The PDS **Maintenance Module Main Menu** is dismissed.

Table 18.11-16. Determine Output Specifications Using the PDS Maintenance Module - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Start the PDS Maintenance Module	Use procedure in Section 18.7.8
2	Product Media Descriptions button	single-click
3	Execute Query button	single-click
4	Determine whether the relevant output specification has the appropriate value	read text
5	Submit a trouble ticket (if applicable)	Use procedure in Chapter 8
6	Exit button (Product Media Descriptions Maintenance Form) (when applicable)	single-click
7	Exit button (PDS Maintenance Module Main Menu) (when applicable)	single-click

18.11.11 Determine Output Specifications Using the PDSIS Maintenance Module

It may be necessary to determine product output specifications when performing other procedures associated with PDS processing; e.g., responding to a job on a Lag Report or changing the values of job or order parameters.

Table 18.11-17 presents (in a condensed format) the steps required to determine output specifications using the PDSIS Maintenance Module. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Perform the **Start the PDSIS Maintenance Module** procedure (Section 18.7.9).
 - The **PDSIS Maintenance Module Main Menu** is displayed.
- 2 **Single-click** on the **Outspec Info** button on the **PDSIS Maintenance Module Main Menu**.
 - The **PDSIS Output Specifications Window (PDSISMTLOT)** is displayed.
- 3 **Single-click** on the **Execute Query** button on the **PDSIS Output Specifications Window**.
 - Output specifications are displayed on the **PDSIS Output Specifications Window**.

- The following types of data are displayed on the **PDSIS Output Specifications Window**:
 - **Output Specs** - output specifications.
 - **Prod Media** - product medium on which the data are to be recorded.
 - **Media Type** - type of input medium (ET = Electronic Transfer).
 - **Input Media** - format of the incoming data.
 - **Product Density** - density of the product (primarily used for tape density).
 - **Tape Blocking** - tape blocking factor.
 - **Compress Type** - compression type (default is NONE).
 - **Media Size** - storage size of the product medium in megabytes.
 - **Size Check** - whether or not PDSIS issues errors for units that are too large to fit on the specified medium (Y = Yes, PDSIS checks; N = No, PDSIS does not check).
- 4 Observe the data displayed on the **PDSIS Output Specifications Window** to determine the relevant output specification(s).
 - 5 To close the **PDSIS Output Specifications Window** **single-click** on the **Exit** button at the bottom of the window.
 - If the **Exit** button is not visible on the maintenance module form, click on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - The **PDSIS Maintenance Module Main Menu** is displayed.
 - 6 To shut down the **PDSIS Maintenance Module** **single-click** on the **Exit** button at the bottom of the **PDSIS Maintenance Module Main Menu** window.
 - The **PDSIS Maintenance Module Main Menu** is dismissed.

Table 18.11-17. Determine Output Specifications Using the PDSIS Maintenance Module - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Start the PDSIS Maintenance Module	Use procedure in Section 18.7.9
2	Outspec Info button	single-click
3	Execute Query button	single-click
4	Identify the relevant output specification(s)	read text
5	Exit button (PDSIS Output Specifications Window) (when applicable)	single-click
6	Exit button (PDSIS Maintenance Module Main Menu) (when applicable)	single-click

18.11.12 Determine Product Codes Using the PDS Maintenance Module

It may be necessary to determine product codes when troubleshooting problems with PDS processing; e.g., responding to a job on a Lag Report.

Table 18.11-18 presents (in a condensed format) the steps required to determine product codes using the PDS Maintenance Module. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Perform the **Start the PDS Maintenance Module** procedure (Section 18.7.8).
 - The **PDS Maintenance Module Main Menu** is displayed.
- 2 **Single-click** on the **Product Code Descriptions** button on the **PDS Maintenance Module Main Menu**.
 - The **Product Code Descriptions Maintenance Form (PDSMTPCD)** is displayed.
- 3 **Single-click** on the **Execute Query** button on the **Product Code Descriptions Maintenance Form**.
 - Product codes are displayed on the **Product Code Descriptions Maintenance Form**.
 - The following types of data are displayed on the **Product Code Descriptions Maintenance Form**:
 - **Prod Code** - product code used to describe what is being ordered.
 - **Description** - a longer (more understandable) description of what the product code is.
 - **PDS Description** - Grouping of product codes.
- 4 Observe the data displayed on the **Product Code Descriptions Maintenance Form** to determine whether the relevant product code has the appropriate value.
 - The entries displayed on the **Product Code Descriptions Maintenance Form** are the values in the PVT_PRCDTBL_TBL database table.
- 5 If the relevant product code does not have appropriate values on the **Product Code Descriptions Maintenance Form**, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
- 6 To close the **Product Code Descriptions Maintenance Form** **single-click** on the **Exit** button at the bottom of the window.
 - If the **Exit** button is not visible on the maintenance module form, click on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - The **PDS Maintenance Module Main Menu** is displayed.

- 7 To shut down the PDS **Maintenance Module** **single-click** on the **Exit** button at the bottom of the PDS **Maintenance Module Main Menu** window.
 - The PDS Maintenance Module Main Menu is dismissed.

Table 18.11-18. Determine Product Codes Using the PDS Maintenance Module - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Start the PDS Maintenance Module	Use procedure in Section 18.7.8
2	Product Code Descriptions button	single-click
3	Execute Query button	single-click
4	Determine whether the relevant product code has the appropriate value	read text
5	Submit a trouble ticket (if applicable)	Use procedure in chapter 8
6	Exit button (Product Code Descriptions Maintenance Form) (when applicable)	single-click
7	Exit button (PDS Maintenance Module Main Menu) (when applicable)	single-click

18.11.13 Determine Product Codes Using the PDSIS Maintenance Module

It may be necessary to determine product codes when troubleshooting problems with PDS processing; e.g., responding to a job on a Lag Report.

Table 18.11-19 presents (in a condensed format) the steps required to determine product codes using the PDSIS Maintenance Module. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Perform the **Start the PDSIS Maintenance Module** procedure (Section 18.7.9).
 - The **PDSIS Maintenance Module Main Menu** is displayed.
- 2 **Single-click** on the **Prod Code Info** button on the **PDSIS Maintenance Module Main Menu**.
 - The **PDSIS Product Code Info Window (PDSISMTLPT)** is displayed.
- 3 **Single-click** on the **Execute Query** button on the **PDSIS Product Code Info Window**.
 - Product codes are displayed on the **PDSIS Product Code Info Window**.
 - The following types of data are displayed on the **PDSIS Product Code Info Window**:
 - **Prod Code** - product code.
 - **Product Format** - product format of the output data (e.g., GENERIC).

- **PDS Project** - PDS Project (e.g., LP DAAC, LaRC, MODIS).
 - **Order Node** - first three characters of an order number for an order of this type.
 - **Default Size** - default size of a granule in megabytes (used if the ECS query returns a NULL size).
 - **Receive Email** - indicates whether (Y or N) PDSIS sends an e-mail for the particular product code on initial receipt of an order.
- 4 Observe the data displayed on the **PDSIS Product Code Info Window** to determine the relevant product code.
 - 5 To close the **PDSIS Product Code Info Window** **single-click** on the **Exit** button at the bottom of the window.
 - If the **Exit** button is not visible on the maintenance module form, click on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - The **PDSIS Maintenance Module Main Menu** is displayed.
 - 6 To shut down the **PDSIS Maintenance Module** **single-click** on the **Exit** button at the bottom of the **PDSIS Maintenance Module Main Menu** window.
 - The PDSIS Maintenance Module Main Menu is dismissed.

Table 18.11-19. Determine Product Codes Using the PDSIS Maintenance Module - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Start the PDSIS Maintenance Module	Use procedure in Section 18.7.9
2	Prod Code Info button	single-click
3	Execute Query button	single-click
4	Identify the relevant product code	read text
5	Exit button (PDSIS Product Code Info Window) (when applicable)	single-click
6	Exit button (PDSIS Maintenance Module Main Menu) (when applicable)	single-click

18.11.14 Determine the Status of PDS Tape/Disk Drives

The purpose of the procedure is to determine the current status of PDS tape and/or disk drives.

Table 18.11-20 presents (in a condensed format) the steps required to determine the status of PDS tape/disk drives. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:

tpstat

- The following type of response is displayed:

DRIVE NAME	DRIVE TYPE	HOST	USER	DEVICE
dlt1	dlt7000	x0dig06	----	/dev/rmt/tps42d4nrnsv.7000c
dlt2	dlt7000	x0dig06	----	/dev/rmt/tps42d5nrnsv.7000c
drive1	8mm	x0dig06	----	/dev/rmt/tps2d5nrnsv.8500
drive2	8mm	x0dig06	----	/dev/rmt/tps3d2nrnsv.8500
dvdrimage1	dvdr	x0dig06	----	/pdssa/rimage_jobcontrol
cdimage1	cdr	x0dig06	----	/pdssa/rimage_jobcontrol

- **tpstat** shows each of the drives connected to the PDS Server host and the owner of each drive.

- 3 To determine the current status of one of the devices connected to the PDS Server, at the UNIX command line prompt enter:

mt -f <device> status

- **<device>** is a device identifier such as those specified as a result of running the **tpstat** command.
- The following type of response is displayed:

Controller: SCSI
Device: EXABYTE: EXB-85058HE-00000112
Status: 0x20262
Drive type: 8mm(8500) cartridge
Media : READY, writable, at BOT

- The example shows the report from an 8mm drive that is ready, will accept commands to write to tape (is not write-protected or read-only), and is positioned at the beginning of the tape.

- 4 To determine other commands available for manual tape control (in addition to **status**), at the UNIX command line prompt enter:

mt -f <device> help

- Some other commands include (but are not limited to) the following commands:
 - **erase**.

- **offline.**
- **rewind.**
- **unload.**

Table 18.11-20. Determine the Status of PDS Tape/Disk Drives - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	tpstat	enter text, press Enter
3	mt -f <device> status (if applicable)	enter text, press Enter
4	mt -f <device> help (if applicable)	enter text, press Enter

18.11.15 Determine Which Instance of PDSOI Was Used to Activate a Job

The purpose of the procedure for determining which instance of PDSOI was used to activate a job is to identify the instance of the PDSOI that can be used for completing the job. The instance is important because each activated job's status file name starts with the OI ID (which identifies the PDSOI instance). Only an instance of the PDSOI with that OI ID can change the job's status to "QC-Hold" after the production module has sent the job's status file to the "status" subdirectory. So typically the procedure for determining which instance of PDSOI was used to activate a job is performed while trying to determine why a PDS job does not change to a QC-Hold status although production was successful.

There are at least two sources of information for determining which instance of PDSOI was used to activate a job:

- Name of the status file for the job.
- Contents of the PPF for the job.

Table 18.11-21 presents (in a condensed format) the steps required to determine which instance of PDSOI was used to activate a job. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:
cd
 - The alias **cd** changes the current directory to the PDS root directory for the PDS user ID of the log-in.
 - To identify the PDS root directory for the current PDS user ID enter:
echo \$PDSROOT
- 3 At the UNIX command line prompt enter:
cd status
 - Change to the “status” directory.
- 4 At the UNIX command line prompt enter:
ls
 - A list of the subdirectories and files in the current directory is displayed.
- 5 Observe the entries in the list of subdirectories and files in the current directory to identify the status file for the job.
 - The file has the format <MachineID>_<ConsoleID>_<JobKey>.status
 - For example:
DIG06_ops_YEA0203190048_0001.status
 - **DIG06** is the Machine ID.
 - **ops** is the Console ID.
 - **YEA0203190048_0001** is the Job Key.
- 6 If there is a status file for the job (and if applicable), return to the appropriate step of the **Respond to a Job’s Status Not Changing to QC-Hold Upon Successful Completion** procedure (Section 18.11.24).
- 7 If the current directory is the status directory, continue with Step 8; otherwise, go to Step 10.
- 8 If there is no status file for the job in the status directory, at the UNIX command line prompt enter:
cd ../summary
 - Change to the “summary” directory.
- 9 Return to Step 4.

- 10** If there is no status file for the job in either the status directory or the summary directory, at the UNIX command line prompt enter:
- pg <filename>**
- **<filename>** refers to the PPF to be reviewed (e.g., YEA0203190048_0001.ppf).
 - The order ID (e.g., YEA0203190048) portion of the filename is listed on the product summary that was printed for the job.
 - The PPF is displayed.
 - Although this procedure has been written for the **pg** command, any UNIX editor or visualizing command (e.g., **vi**, **view**, **more**) can be used to review the log file.
- 11** Observe the entries in the PPF to determine the OI ID of the PDSOI instance that initiated the job.
- The PPF contains the following type of entry identifying the OI ID of the PDSOI instance that initiated the job:

OI_ID S 1 DIG06_ops

 - In the example the OI ID is **DIG06_ops**.
- 12** If applicable, return to the appropriate step of the **Respond to a Job's Status Not Changing to QC-Hold Upon Successful Completion** procedure (Section 18.11.24).

Table 18.11-21. Determine Which Instance of PDSOI Was Used to Activate a Job - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd	enter text, press Enter
3	cd status	enter text, press Enter
4	ls	enter text, press Enter
5	Identify the status file for the job	read text
6	Return to the appropriate step of the Respond to a Job's Status Not Changing to QC-Hold Upon Successful Completion procedure (if there is a status file for the job and if applicable),	Use procedure in Section 18.11.24
7	If the current directory is the status directory, continue with Step 8; otherwise, go to Step 10	
8	cd ../summary	enter text, press Enter
9	Return to Step 4	
10	pg <PPF file name> (if no status file for the job in either status directory or summary directory)	enter text, press Enter
11	Determine the OI ID of the PDSOI instance that initiated the job (in PPF)	read text

Table 18.11-21. Determine Which Instance of PDSOI Was Used to Activate a Job - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
12	Return to the appropriate step of the Respond to a Job's Status Not Changing to QC-Hold Upon Successful Completion procedure (if applicable)	Use procedure in Section 18.11.24

18.11.16 Force AutoRimage Completion

The PDS Job Monitor provides the Distribution Technician with a means of forcing AutoRimage completion. It results in a signal being sent to the job telling it to stop waiting needlessly and complete processing in a normal fashion. This is useful when a number of jobs are queued for a Rimage, but the waiting job has produced the media and is waiting needlessly.

Table 18.11-22 presents (in a condensed format) the steps required to force AutoRimage completion. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If the **Job Monitor Main Window** is not already in operation, start the PDS Job Monitor (refer to Section 18.7.5).
 - The **Job Monitor Main Window** is displayed.

- 2 **Place** the mouse cursor on the relevant job in the running job list of the **Job Monitor Main Window**, **single-click** and **hold** the **right** mouse button, **move** the mouse cursor to **Force AutoRimage Completion** (highlighting it), then **release** the mouse button.
 - Pop-up menu appears with the options **View Job Log**, **View Job PPF**, **Force AutoRimage Completion** [appears only when the selected job is waiting for a completion message from a Rimage writer], **Terminate Job**.
 - Select **View Job PPF** from the pop-up menu.
 - A confirmation prompt is displayed.

- 3 **Single-click** on the appropriate button from the following selections:
 - **Yes** - to force AutoRimage completion and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The Rimage unit stops waiting and completes processing of the medium.
 - **No** - to dismiss the dialogue box without forcing AutoRimage completion.
 - The dialogue box is dismissed.

Table 18.11-22. Force AutoRimage Completion - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Start the PDS Job Monitor (if necessary)	Use procedure in Section 18.7.5
2	Force AutoRimage Completion (Job Monitor Main Window)	right-click
3	Yes button	single-click

18.11.17 Reactivate Units

The problem is that units of a job were completed and later need to be redone.

Both the **Main OI Screen** and the **PDS Maintenance Module Main Menu** are involved in reactivating units.

Table 18.11-23 presents (in a condensed format) the steps required to reactivate units. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 In the **PDSINFO Work Table** reset the **Status** field value for all affected units to **Q** (pending).
 - For detailed instructions refer to the **Change the Values of Job Parameters Using the PDS Maintenance Module** procedure (Section 18.11.2).
 - The job key is either available on the **Main OI Screen** or can be derived from the order number on the **PDSIS OI Main Screen**.
 - The job key is derived from the order number by adding an underscore and the zero padded unit number of the first unit of the job (typically 0001); for example, job key YEA0203060028_0001 is composed of order number YEA0203060028, an underscore, and unit number 0001.

- 2 In the **PDSINFO Jobs Table** reset the **Status** field value for the job to **Q** (pending).
 - For detailed instructions refer to the **Change the Values of Job Parameters Using the PDS Maintenance Module** procedure (Section 18.11.2).

- 3 Reactivate the job using the **Main OI Screen**.
 - For detailed instructions refer to the **Activate a Job** procedure (Section 18.9.7).
 - The units may not be displayed immediately on the PDSOI; however, they should appear on the **Main OI Screen** within 15 to 30 minutes.

Table 18.11-23. Reactivate Units - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Reset the Status field value (in PDSINFO Work Table) for all affected units to Q	Use procedure in Section 18.11.2
2	Reset the Status field value (in PDSINFO Jobs Table) for the job to Q	Use procedure in Section 18.11.2
3	Reactivate the job	Use procedure in Section 18.9.7

18.11.18 Reprint a Label Stamped on a Disk

The problem is that the Rimage unit failed to print a legible label on a CD or DVD.

Table 18.11-24 presents (in a condensed format) the steps required to reprint a label stamped on a disk. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Clean any ink from the disk with a cloth and alcohol-based cleaner.
 - The surface may need to be cleaned twice to eliminate all ink smears.
- 2 **Double-click** on the **Label Editor** icon on the Windows desktop (on the Rimage PC).
 - A **Label Editor** window is displayed.
- 3 Execute the following menu path from the pull-down menu in the **Label Editor** window on the PC:
File → Open
 - An **Open** window is displayed containing a list of files.
 - The folder/directory should contain a template for each product type.
 - The template for the appropriate product type should be selected as the basis for creating an appropriate file for the use during the restamping.
- 4 Select the appropriate drive (e.g., C:) in the **Open** window.
 - The appropriate drive may vary with system set-up.
 - If necessary, **single-click** and **hold** the option button to display a list of drives/folders, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
- 5 **Single-click** on the icon for **reprint.lab** in the list of files in the **Open** window.
 - The selected file is selected (highlighted).

- If there is no icon labeled “reprint.lab,” **single-click** on a label icon for a similar type of job.
- 6 **Single-click** on the **Open** button.
 - The **Open** window is dismissed.
 - The selected file is opened and displayed in the **Label Editor** window.
 - 7 Edit the file in the **Label Editor** window.
 - Use the jewel-case insert for the disk as a guide to the appropriate data to be entered.
 - 8 Execute the following menu path from the pull-down menu in the **Label Editor** window on the PC:
File → Save As
 - A **Save As** window is displayed.
 - 9 In the **File Name** field enter:
reprint.lab
 - Save the template with the name **reprint.lab** (do not change the name).
 - 10 **Single-click** on the **Save** button.
 - The **Save As** window is dismissed.
 - The file is saved with the specified file name.
 - The file is displayed in the **Label Editor** window.
 - 11 Execute the following menu path from the pull-down menu in the **Label Editor** window on the PC:
File → Exit
 - 12 **Double-click** on the **CD-R Workstation** icon on the Windows desktop.
 - A window similar to the **Production Server** window is displayed.
 - 13 **Single-click** on the **Start** button on the **CD-R Workstation** toolbar.
 - 14 **Single-click** on the **Add** button on the **CD-R Workstation** toolbar.
 - The **Add Job Wizard - Select Job Option** window is displayed.
 - 15 **Single-click** on the button corresponding to **Print Labels Only** on the **Add Job Wizard**.
 - 16 **Single-click** on the **Next** button on the **Add Job Wizard**.

- 17 **Single-click** on the **Next** button again on the **Add Job Wizard**.
- 18 Ensure that **Rimage Label (No Merge Fields)** is selected in the **Label Type** field on the **Add Job Wizard**.
 - If necessary, **single-click** and **hold** the **Label Type** option button to display a list of label types, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
- 19 **Single-click** on the **Next** button again on the **Add Job Wizard**.
- 20 **Single-click** on the **Browse** button adjacent to the **Enter the Label File Name** field on the **Add Job Wizard**.
 - A window containing a list of file icons is displayed.
- 21 **Double-click** on the icon for **reprint.lab** (the file name of the label template created and saved in Steps 5 through 8).
 - An alternative is to **single-click** on the icon for the file name of the label template then **single-click** on the **Open** button.
- 22 Place the disk that needs the label in the appropriate Rimage input bin.
 - If a CD is to be labeled, it should be placed in the CD input bin.
 - If a DVD is to be labeled, it should be placed in the DVD input bin.
 - The disk needing to be re-labeled may be placed on top of blank disks.
- 23 **Single-click** on the **Finish** button on the **Add Job Wizard**.
 - The robot picks and labels the disk and places it in the output bin.
- 24 When the label has been reprinted, execute the following menu path from the **CD-R Workstation** pull-down menu:
File → Exit

Table 18.11-24. Reprint a Label Stamped on a Disk - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Clean ink from the disk with a cloth and alcohol-based cleaner (as necessary)	Wipe
2	Label Editor icon (on the Rimage PC)	double-click
3	File → Open	single-click
4	<drive> (e.g., C:) (in Open window)	single-click
5	reprint.lab icon (in Open window)	single-click
6	Open button	single-click

**Table 18.11-24. Reprint a Label Stamped on a Disk - Quick-Step Procedures
(2 of 2)**

Step	What to Enter or Select	Action to Take
7	Edit the file (in Label Editor window)	enter text
8	File → Save As (in Label Editor window)	single-click
9	reprint.lab (in File Name field)	enter text
10	Save button	single-click
11	File → Exit (in Label Editor window)	single-click
12	CD-R Workstation icon (on the Rimage PC)	double-click
13	Start button (on CD-R Workstation)	single-click
14	Add button (on CD-R Workstation)	single-click
15	Print Labels Only (on Add Job Wizard)	single-click
16	Next (on Add Job Wizard)	single-click
17	Next (on Add Job Wizard)	single-click
18	Rimage Label (No Merge Fields) (in Label Type field on the Add Job Wizard)	single-click
19	Next (on Add Job Wizard)	single-click
20	Browse button (adjacent to the Enter the Label File Name field)	single-click
21	reprint.lab icon (label template)	double-click
22	Place the disk that needs the label in the appropriate Rimage input bin	place
23	Finish button (on the Add Job Wizard)	single-click
24	File → Exit (on CD-R Workstation) (when applicable)	single-click

18.11.19 Reprint PDS Documents and Labels

The problem may be that PDSSA or PDSIS has failed to print one of the following items or one of the following items has been damaged, lost, or misprinted:

- Summary report.
- Tape label.
- Packing list.
- Shipping label.

Packing lists and shipping labels can be reprinted in another way as well as by using the method described in the procedure for reprinting PDS documents and labels. The process involves the use of the **PDSIS Orders Maintenance Form** to set the **Action Code** for the relevant order to “S”, which provides a stimulus for PDSIS to print packing lists and shipping labels. (Both types of documents are printed in response to an “S” action code.) For detailed instructions refer to the **Change the Values of Order Parameters Using the PDSIS Maintenance Module** procedure (Section 18.11.3).

To reprint a jewel-case insert go to the **Respond to a Jewel-Case Insert Printing Failure** procedure (Section 18.11.23).

Verification [i.e., quality control (QC) check] report files are not saved; consequently, if a verification report is needed, rerun the verification by performing the **Respond to a Status of QC-Hold (Performing a QC Check or Verification)** procedure (Section 18.9.12).

The Distribution Technician must have ensured that the printer input is loaded with blank paper, labels, or inserts (as applicable) and that there are no obvious printer faults (e.g., paper jam).

Table 18.11-25 presents (in a condensed format) the steps required to reprint PDS documents and labels. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: If a packing list or shipping label is needed, consider using the **Change the Values of Order Parameters Using the PDSIS Maintenance Module** procedure (Section 18.11.3) unless access to the **PDSIS Maintenance Module** is not currently feasible. As previously mentioned, the process involves the use of the **PDSIS Orders Maintenance Form** to set the **Action Code** for the relevant order to “S”, which provides a stimulus for PDSIS to print both packing lists and shipping labels.

If use of the **PDSIS Maintenance Module** is not an option, use the procedure that follows.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - Use the appropriate PDSSA log-in (i.e., pds, pds_st, or pds_it) for printing the following types of documents:
 - Summary report.
 - Tape label.
 - Use the appropriate PDSIS log-in (i.e., pdsis, pdsis_ts1, or pdsis_ts2) for printing the following types of documents:
 - Packing list.
 - Shipping label.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

2 At the UNIX command line prompt enter:

cd

- The alias **cd** changes the current directory to the PDS root directory.
 - To identify the PDS root directory at the command line prompt enter:
echo \$PDSROOT
- Typical PDS root directories for PDS user IDs are as follows:
 - /usr/local/pds (linked to /data1/pds) (for PDSSA user “pds”).
 - /usr/local/pds_st (linked to /data1/pds_st) (for PDSSA user “pds_st”).
 - /usr/local/pds_it (linked to /data1/pds_it) (for PDSSA user “pds_it”).
 - /usr/local/pdsis (linked to /data1/pdsis) (for PDSIS user “pdsis”).
 - /usr/local/pdsis_ts1 (linked to /data1/pdsis_ts1) (for PDSSA user “pdsis_ts1”).
 - /usr/local/pdsis_ts2 (linked to /data1/pdsis_ts2) (for PDSSA user “pdsis_ts2”).

3 At the UNIX command line prompt enter:

<path>

- Change to the appropriate subdirectory:
 - **label** (to reprint a tape label); for example, /usr/local/pds/label or /data1/pds/label.
 - **summary** (to reprint a summary report); for example, /usr/local/pds/summary or /data1/pds/summary.
 - **logs/labels** (to reprint a packing list or shipping label); for example, /usr/local/pdsis/logs/labels or /data1/pdsis/logs/labels.
- Actual subdirectories may vary from site to site.

4 At the UNIX command line prompt enter:

lp -d <printerID> <filename>

- An alternative is to enter:
lpr -P <printerID> <filename>
- The document prints on the specified printer.
- **<printerID>** is the name of the appropriate printer. For example, ...
 - **x0dih05** prints summary reports and packing lists.
 - **x0dil09** prints tape labels.
 - **x0dil10** prints shipping labels.
 - Actual printer names vary from site to site.
- **<filename>** is the name of the document or label file to be printed.
- **<filename>** is composed of the order number (as displayed on the **PDSIS OI Main Screen**) or job key (as displayed on the **Main OI Screen**) and a file-name extension that indicates the type of document. For example, ...
 - **TS20112020001_0001_1.lbl** is a tape label for job TS20112020001_0001.
 - **TS20112130001_0001.sum** is the summary report for job TS20112130001_0001.

- **TS20112130001.lbl** is the shipping label for order TS20112130001.
- **TS20112130001.note** is the packing list for order TS20112130001 (actually, it's the text of the e-mail distribution notice).

Table 18.11-25. Reprint PDS Documents and Labels - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd	enter text, press Enter
3	cd <path>	enter text, press Enter
4	lp -d <printerID> <filename>	enter text, press Enter

18.11.20 Reprocess a Job

In general jobs are reprocessed in response to one of the following problems:

- Processing of an order will not complete.
- An error occurs during processing.
- The medium does not pass verification.

If a job is in an error status, it may be possible to reprocess the job by activating the units associated with the job. If the job is not in an error status or if it has failed the QC check (and is in QC-Hold status), it will probably be necessary to perform the following actions:

- Remove (delete) the associated PPF, status file, and image files.
- Reset the unit and job status to Pending.
- Reactivate the job.

Table 18.11-26 presents (in a condensed format) the steps required to reprocess a job. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If the job requiring reprocessing is an 8mm job, check the job log to determine whether there was an I/O (input/output) error.
 - For detailed instructions refer to either the **View a Job Log or Job Production Parameter File (PPF) Using UNIX Commands** procedure for (Section 18.11.34) or the **View a Job Log Using the PDS Job Monitor** procedure (Section 18.11.35).
- 2 If the job requiring reprocessing is an 8mm job and the job log indicated an I/O (input/output) error, turn the power switch for the affected 8mm drive **off** then **on**.

- 3 If the job is in an **Error** status (as indicated by the job line turning red on the **Main OI Screen**), reactivate units in the job.
 - For detailed instructions refer to the **Use the OI Detail Screen** procedure (Section 18.9.4).
 - All units that require reprocessing must be selected before activating.
 - Unit status before activation must be either **Pending** or **Error**.
 - If multiple media are involved in processing the job, PDS starts numbering the media volumes being produced with one and numbering consecutively even though the volume numbers do not coincide with the original production.
 - This may or not be acceptable at a particular site. Refer to DAAC policy.
- 4 If units in a job should not be reactivated as described in the preceding step, go to Step 6.
- 5 If a job (or units in a job) has (have) been reactivated, go to Step 16.
- 6 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
- 7 At the UNIX command line prompt enter:
cd
 - The alias **cd** changes the current directory to the PDS root directory.
 - To identify the PDS root directory at the command line prompt enter:
echo \$PDSROOT
- 8 At the command line prompt enter:
ls
 - A list of subdirectories and files in the PDS root directory is displayed.
- 9 At the UNIX command line prompt enter:
rm <job key>.ppf
 - Remove the PPF for the job.
 - **<job key>.ppf** refers to the PPF for the job.
 - For example:
YEA0203190048_0001.ppf
 - The job key is a unique label for the job composed of the order number, an underscore and a zero-padded unit number of the first unit of the job.

- 10 At the UNIX command line prompt enter:
rm <machine ID>_<console ID>_<job key>.status
- Remove the status file for the job.
 - **<machine ID>_<console ID>_<job key>.status** refers to the applicable status file.
- 11 At the UNIX command line prompt enter:
cd /pdssa/assemble
- Change to the “assemble” directory.
- 12 At the command line prompt enter:
ls
- A list of subdirectories and files in the “assemble” directory is displayed.
- 13 At the command line prompt enter:
rm -r <job key>
- Remove data directory associated with the job (and identified by the job key).
- 14 At the command line prompt enter:
rm <job key>.image
- Remove image data associated with the job from the directory.
 - **<job key>.image** refers to the applicable image file.
- 15 Change the status of the job and its units to **Q** (Pending) and reactivate the units/job.
- For detailed instructions refer to the **Reactivate Units** procedure (Section 18.11.17).
- 16 Monitor job processing.
- For detailed instructions refer to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.11-26. Reprocess a Job - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Determine whether there was an I/O error (review job log) (if 8mm job)	Use procedure in Section 18.11.34 or Section 18.11.35
2	off then on (power switch for affected 8mm drive) (if I/O error)	press switch
3	Reactivate units in the job (if job is in Error status)	Use procedure in Section 18.9.4
4	Go to Step 6 (if units should not be reactivated)	

Table 18.11-26. Reprocess a Job - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
5	Go to Step 16 [if job (or units in job) has (have) been reactivated]	
6	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
7	cd	enter text, press Enter
8	ls	enter text, press Enter
9	rm <job key>.ppf	enter text, press Enter
10	rm <machine ID>_<console ID>_<job key>.status	enter text, press Enter
11	cd /pdssa/assemble	enter text, press Enter
12	ls	enter text, press Enter
13	rm -r <job key>	enter text, press Enter
14	rm <job key>.image	enter text, press Enter
15	Change the status of the job and its units to Q (Pending) and reactivate the units/job	Use procedure in Section 18.11.17
16	Monitor job processing	Use procedure in Section 18.9.1

18.11.21 Reset an Order or a Unit

The problem is that an order or a unit within an order needs to be reset.

Table 18.11-27 presents (in a condensed format) the steps required to reset an order or a unit. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: A **PDSIS** user ID (e.g., **pdsis**, **pdsis_ts1**, **pdsis_ts2**) is used in this procedure.

- 1 Log in to the PDS Server host using the appropriate PDSIS user ID for the operating mode being used.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - PDSIS user IDs are **pdsis**, **pdsis_ts1**, and **pdsis_ts2**, which are used for PDSIS operations in the OPS, TS1, and TS2 modes respectively.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the UNIX command line prompt enter:
cd /usr/local/pdsis_<mode>/utilities
 - Change directory to the directory containing the PDSIS ResetOrder script (e.g., EcPdPDSISResetOrder).
 - **pdsis_<mode>** refers to one of the following subdirectories:
 - pdsis (for OPS-mode operations).
 - pdsis_ts1 (for TS1-mode operations).
 - pdsis_ts2 (for TS2-mode operations).

- 3 At the UNIX command line prompt enter:
EcPdPDSISResetOrder <MODE> <Order ID> [<Unit ID>] &
 - <MODE> is one of the following values:
 - **pdsis.**
 - **pdsis_ts1.**
 - **pdsis_ts2.**
 - <Order ID> is the applicable PDSIS order ID (e.g., 0000302190001).
 - <Unit ID> is the applicable PDSIS unit ID (e.g., 1).
 - <Unit ID> is specified when a particular unit within an order (rather than the whole order) is to be reset.
 - The PDSIS Reset Order process starts.

- 4 Repeat Step 3 as necessary to reset additional order(s)/unit(s).

Table 18.11-27. Reset an Order or a Unit - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server) (using appropriate PDSIS user ID)	single-click or use procedure in Section 18.2.1
2	cd /usr/local/pdsis_<mode>/utilities	enter text, press Enter
3	EcPdPDSISResetOrder <MODE> <Order ID> [<Unit ID>] &	enter text, press Enter
4	Repeat Step 3 (as necessary)	

18.11.22 Respond to a CD/DVD Job Error Indicated on PDSOI

The problem is that an error with a CD or DVD job is indicated on PDSOI.

Table 18.11-28 presents (in a condensed format) the steps required to respond to a CD/DVD job error indicated on PDSOI. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the command line prompt enter:

cd /pdssa/rimage_jobcontrol

 - Change to the Rimage job control directory.

- 3 At the command line prompt enter:

more pwrtool.log

 - The content of the PowerTools log is displayed.
 - Although this procedure has been written for the **more** command, any UNIX editor or visualizing command (e.g., **pg**, **vi**, **view**) can be used to review the log file.

- 4 Examine the content of the PowerTools log for the following types of entries:
 - File already exists.
 - File not found.

- 5 If one of the preceding types of problems is found in the PowerTools log, perform the **Clean Up the CD-R_Images Folder on the Rimage PC** procedure (Section 18.11.8).

Table 18.11-28. Respond to a CD/DVD Job Error Indicated on PDSOI - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd /pdssa/rimage_jobcontrol	enter text, press Enter
3	more pwrtool.log	enter text, press Enter
4	Examine the PowerTools log for error messages	read text
5	Clean up the CD-R_Images folder on the Rimage PC (if applicable)	Use procedure in Section 18.11.8

18.11.23 Respond to a Jewel-Case Insert Printing Failure

The problem is that a jewel-case insert has failed to print and the following circumstances exist:

- Data have been written to the medium.
- Status has changed to QC-Hold.
- Summary sheet has printed.
- There are no obvious printer faults (e.g., paper supply empty, paper jam).
- Jewel-case insert has not printed.

Table 18.11-29 presents (in a condensed format) the steps required to respond to a jewel-case insert printing failure. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: Do not change the status of units that have no inserts to "Complete."

- 1** Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
- 2** At the command line prompt enter:
cd
 - The alias **cd** changes the current directory to the PDS root directory for the PDS user ID of the log-in.
 - To identify the PDS root directory for the current PDS user ID at the command line prompt enter:
echo \$PDSROOT
- 3** At the command line prompt enter:
cd summary
 - Change to the “summary” directory.
- 4** At the command line prompt enter:
ls
 - A list of the subdirectories and files in the “summary” directory is displayed.
- 5** Observe the entries in the list of subdirectories and files in the “summary” directory to identify the status file for the job.
 - The file has the format <Machine ID>_<Console ID>_<Job Key>.status

- For example:
DIG6-IT_pds_TS20112130001_0001.status
 - **DIG6-IT** is the Machine ID.
 - **pds** is the Console ID.
 - **TS20112130001_0001** is the Job Key.

6 If reprinting all jewel-case inserts for a multiple CD/DVD job, at the command line prompt enter:

mv <status file name> ../status

- For example:
mv DIG6-IT_pds_TS20112130001_0001.status ../status
- **<status file name>** refers to the status file for the job.

NOTE: The units in the status file cannot have been completed or subsequent reading of the status file will return an error.

7 If the printer still does not provide output or if reprinting an individual jewel-case insert, at the command line prompt enter:

lp -d <printer ID> <insert file name>

- **<printer ID>** refers to the jewel-case insert printer to be tested.
- **<insert file name>** refers to the name of a jewel-case insert file to be printed on the printer to be tested.
- For example:

lp -d x0dit09 PDSGENDAAC_TS20112130001_0001_1.1

- **x0dit09** is the printer being tested.
- **PDSGENDAAC_TS20112130001_0001_1.1** is a jewel-case insert for Job Key TS20112130001_0001.
- The jewel-case insert file should be printed on x0dit09 (the jewel-case insert printer).
- When jewel-case inserts are reprinted using the **lp** command, the bar code is not printed on the insert.
- Check the local DAAC policy to determine whether jewel-case inserts without bar codes are acceptable.

8 If the specified file did not print on the printer, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.

9 Return to Step 7 if it is necessary to print jewel-case inserts for additional disks associated with the job.

Table 18.11-29. Respond to a Jewel-Case Insert Printing Failure - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd	enter text, press Enter
3	cd summary	enter text, press Enter
4	ls	enter text, press Enter
5	Identify the status file for the job	read text
6	mv <status file name> ../status (if reprinting all jewel-case inserts for a multiple CD/DVD job)	enter text, press Enter
7	lp -d <printer ID> <insert file name> (if applicable)	enter text, press Enter
8	Submit a trouble ticket (if applicable)	Use procedure in Chapter 8
9	Return to Step 7 (if necessary)	

18.11.24 Respond to a Job's Status Not Changing to QC-Hold Upon Successful Completion

The problem is that a PDS job does not change to a QC-Hold status although production was successful. The possible causes include the following items:

- At least two instances of PDSOI with the same OI ID are currently active.
- The instance of PDSOI with the OI ID that activated the job is not currently active.
- The time on the Rimage PC is not set to within five minutes of the time on the PDS Server host (CD or DVD job only).

Table 18.11-30 presents (in a condensed format) the steps required to respond to a job's status not changing to QC-Hold upon successful completion. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Review the contents of the job log to verify that production of the affected job was in fact successful.
 - For detailed instructions refer to either the **View a Job Log or Job Production Parameter File (PPF) Using UNIX Commands** procedure for (Section 18.11.34) or the **View a Job Log Using the PDS Job Monitor** procedure (Section 18.11.35).
 - If job production was successful, the following types of entries should be observed at the end of the job log:

```
volcount = 1
volsize = 520279040.000000
```

ENTERING STAGE: Cleaning Up
request id is x0dph10-45 (standard input)
Job complete

- If the types of entries shown in the example (i.e., volcount, volsize, “ENTERING STAGE: Cleaning Up”, request id, and “Job complete”) are not present at the end of the job log, job production was not successful.
- 2 If job production was not successful, go to the procedure to **Reprocess a Job**.
 - For detailed instructions refer to the **Reprocess a Job** procedure (Section 18.11.20).
 - 3 If the affected job is a CD or DVD job, check the synchronization of the Rimage PC time with PDS system time.
 - The time on the Rimage PC must be set to within five (5) minutes of the time on the PDS Server host (e.g., x0dig06).
 - If the time is not properly synchronized, CD and DVD jobs cannot proceed to a QC-Hold status.
 - For detailed instructions refer to the **Check/Restore Synchronization of the Rimage PC Time with PDS System Time** procedure (Section 18.11.6).
 - 4 If the affected job is not a CD or DVD job or if checking/restoring synchronization of the Rimage PC time with PDS system time is not effective, determine which instance of PDSOI was used to activate the job.
 - For detailed instructions refer to the **Determine Which Instance of PDSOI Was Used to Activate a Job** procedure (Section 18.11.15).
 - 5 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
 - 6 At the UNIX command line prompt enter:
ps -ef | grep PDSMTOIX
 - The command searches the current processes on the host for the string “PDSMTOIX” and displays the results of the search.
 - **PDSMTOIX** is the name of the Oracle Form for the PDSOI.
 - The following type of response is displayed:

```
pds 4174557      1 0 10:13:25 pts/5  0:03 f45runm PDSMTOIX pdssa/xxx  
pds 4167754 4161497 0 10:17:03 pts/9  0:00 grep PDSMTOIX
```

 - The example shown indicates that there is only one instance of PDSOI currently running and it is user “pds” who is running it.
 - The entry that ends in “grep PDSMTOIX” is the process that was searching for PDSMTOIX.

- The following example is another type of response:

```
pds 4179615 4161497 0 11:00:43 pts/9 0:00 grep PDSMTOIX
pds 4174557      1 0 10:13:25 pts/5 0:03 f45runm PDSMTOIX pdssa/xxx
pds 4180400      1 0 10:58:11 pts/10 0:03 f45runm PDSMTOIX pdssa/xxx
```

 - The second example indicates that there are two instances of PDSOI currently running and user “pds” is running both, although through different connections (i.e., pts/5 and pts/10). (It is possible that there are different individuals running the two instances of PDSOI with the same user ID.)
 - If both instances of PDSOI were launched using the same OI ID (i.e., Machine ID and Console ID), there is a significant chance of causing confusion when writing to the Operator Interface log (oilog).

7 If there are any active instances of PDSOI currently running, observe the header of each **Main OI Screen** to identify the OI ID that applies to each open instance of the PDSOI.

- The format of the **Main OI Screen** header is PDS <OI_ID>, where <OI_ID> has the format <MachineID>_<ConsoleID>.
- For example:

PDS DIG06_ops is in the header of a Main OI Screen.

 - **DIG06_ops** is the OI ID.
 - **DIG06** is the Machine ID.
 - **ops** is the Console ID.

8 If there are multiple instances of PDSOI currently running with what should be the single controlling OI ID on each instance of the GUI, shut down all but one instance of the PDSOI with that OI ID.

- For detailed instructions refer to the **Shut Down the PDS Operator Interface (PDSOI)** procedure (Section 18.8.3).
- In general it is good practice to have only one controlling instance of the PDSOI active at a time.
- Any other instances of the PDSOI that are launched for monitoring purposes should have different OI IDs (i.e., different Console IDs).
- For example:
 - **DIG06_ops** might be the instance of PDSOI that is always brought up on a workstation in the PDS area for the purpose of controlling the processing of jobs in OPS mode.
 - **DIG06_mon** might be brought up on a workstation in a remote location to allow monitoring jobs in OPS mode without ever being used to activate or otherwise control jobs.
- If for some reason there are multiple controlling instances of the PDSOI, it is crucial for each to have a different OI ID (i.e., different Console ID) to avoid conflicts.

- 9 If there is no current instance of PDSOI with the OI ID indicated in the status file name or .ppf contents, start another PDSOI using the specified OI ID.
 - For detailed instructions refer to the **Start the PDS Operator Interface (PDSOI)** procedure (Section 18.7.3).

- 10 Change the values of the following job parameters using the PDS Maintenance Module as described in the **Change the Values of Job Parameters Using the PDS Maintenance Module** procedure (Section 18.11.2):
 - PDSINFO Work Table:
 - Change the **Status** of each unit in the job to **F**.
 - PDSINFO Jobs Table:
 - Change the **Status** of the job to **F**.
 - Change the **Job Status** of the job to **QC-Hold**.

- 11 Observe the information displayed on the PDSOI **Main OI Screen** to determine whether the **Job Status** for the job has changed to **QC-Hold**.
 - If the **Job Status** for the job has changed to **QC-Hold**, the job line for the job is yellow.

- 12 If the **Job Status** for the job has changed to **QC-Hold**, perform the QC check.
 - For detailed instructions refer to the **Respond to a Status of QC-Hold (Performing a QC Check or Verification)** procedure (Section 18.9.12).

- 13 If the **Job Status** for the job has not changed to **QC-Hold**, reprocess the job.
 - For detailed instructions refer to the **Reprocess a Job** procedure (Section 18.11.20).

Table 18.11-30. Respond to a Job's Status Not Changing to QC-Hold Upon Successful Completion - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Verify that production of the affected job was successful (review job log)	Use procedure in Section 18.11.34 or Section 18.11.35
2	Go to the procedure to reprocess a job (if job production was not successful)	Use procedure in Section 18.11.20
3	Check the synchronization of the Rimage PC time with PDS system time (if CD or DVD job)	Use procedure in Section 18.11.6
4	Determine which instance of PDSOI was used to activate the job (if not a CD or DVD job or if checking/restoring synchronization of the Rimage PC time with PDS system time is not effective)	Use procedure in Section 18.11.15
5	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
6	<code>ps -ef grep PDSMTOIX</code>	enter text, press Enter

Table 18.11-30. Respond to a Job's Status Not Changing to QC-Hold Upon Successful Completion - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
7	Observe the header of each Main OI Screen to identify the OI ID on each (if applicable)	read text
8	Shut down all but one instance of the PDSOI with the relevant OI ID (if applicable)	Use procedure in Section 18.8.3
9	Start PDSOI using the specified OI ID (if applicable)	Use procedure in Section 18.7.3
10	Change the values of job parameters: PDSINFO Work Table: Status (each unit) → F PDSINFO Jobs Table: Status → F Job Status → QC-Hold	Use procedure in Section 18.11.2
11	Determine whether Job Status has changed to QC-Hold (PDSOI Main OI Screen)	read text
12	Perform the QC check (if Job Status is QC-Hold)	Use procedure in Section 18.9.12
13	Go to the procedure to reprocess a job (if Job Status not QC-Hold)	Use procedure in Section 18.9.18

18.11.25 Respond to a Job on a Lag Report

A lag report specifies all orders that still need to be produced, broken down by various time-frame ranges. A corresponding file (i.e., \$PDSROOT/summary/lag<timestamp>.rpt) is generated.

A job may show up on the lag report but not show up on the PDSOI. This condition is usually due to a data problem.

Table 18.11-31 presents (in a condensed format) the steps required to respond to a job on a lag report. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1** Perform the **Start the PDS Maintenance Module** procedure (Section 18.7.8).
- 2** **Single-click** on the **PDSINFO Work Table** button on the **PDS Maintenance Module Main Menu**.
 - The **PDSINFO Table Maintenance Form (PDSMTPDT)** or **PDSINFO Work Table** is displayed.

- 3 In the **Job Key** field on the **PDSINFO Work Table** enter:
<job key>
 - <job key> is shown on the Lag Report.
- 4 **Single-click** on the **Execute Query** button near the bottom of the **PDSINFO Work Table**.
 - The database is queried for data concerning the job represented by the **Job Key** and the relevant data are displayed on the **PDSINFO Work Table**.
- 5 Observe the data in all of the various fields on the **PDSINFO Work Table** to determine whether there is missing data in any field, especially the **Product Code** and **Output Specs** fields.
 - At least during the initial implementation of PDS in ECS there is only one **Product Code**; i.e., G001.
 - To determine acceptable product codes perform the **Determine Product Codes Using the PDS Maintenance Module** procedure (Section 18.11.12).
 - To check the **Output Specs** compare the entries in the **Output Specs** and **Product Media** fields of the **PDSINFO Work Table** to determine whether the entries are consistent.
 - To determine acceptable output specifications perform the **Determine Output Specifications Using the PDS Maintenance Module** procedure (Section 18.11.10).
- 6 If there is missing or incorrect data in any field, in the appropriate field enter:
<value>
- 7 **Single-click** on the **Save** button on the **PDSINFO Work Table**.
 - The record is saved in the database with the new value entered in the appropriate field.
 - It is recommended that each record be saved immediately after it is changed (before making changes to another record).
- 8 **Single-click** on the next/previous record buttons (> >> < <<) near the bottom of the form as necessary to display additional records (units) for the job.
- 9 Repeat Steps 5 through 8 for all additional records that need to be modified for the job.
- 10 When all records that need to be modified for the job have been corrected, **single-click** on the **Exit** button at the bottom of the window.
 - If the **Exit** button is not visible on the maintenance module form, **single-click** on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.

- Either the maintenance module window is dismissed or a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved.
 - If the maintenance module window was dismissed, the PDS **Maintenance Module Main Menu** is displayed.
- 11** If a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved, **single-click** on the appropriate button from the following selections:
- **Yes** - to accept the changes and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The PDS **Maintenance Module Main Menu** is displayed.
 - **No** - to dismiss the dialogue box without accepting the changes made to the data on the form.
 - The dialogue box is dismissed.
 - The PDS **Maintenance Module Main Menu** is displayed.
- 12** Perform the **Determine Product Codes Using the PDS Maintenance Module** procedure (Section 18.11.12) to determine whether there are appropriate entries in the **PVT_PRCDTBL_TBL** database table for **Product Code**.
- Includes determining whether there is an appropriate entry for **Product Code** in the **PDS Description** field (**PVT_PRCDTBL_TBL** database table).
- 13** Perform the **Determine Output Specifications Using the PDS Maintenance Module** procedure (Section 18.11.10) to determine whether there are appropriate entries in the **OUT_OTSPOTBLV_TBL** database table for **Output Spec**.
- Includes determining whether there is an appropriate entry for **Output Spec** in the **PDS Description** field (**OUT_OTSPOTBLV_TBL** database table).
- 14** Perform the **Specify Job Selection Criteria** procedure (Section 18.9.3).
- The **Main OI Screen** is displayed.
 - Includes ensuring that the specified criteria include the values for the job on the lag report.
- 15** Observe information displayed on the **Main OI Screen**.
- The job on the lag report should be displayed on the **Main OI Screen**.
- 16** If the problem could not be identified through any of the preceding steps, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
- If the job on the lag report is still not displayed on the **Main OI Screen**, that is an indication that the problem was not identified through any of the preceding steps.

Table 18.11-31. Respond to a Job on a Lag Report - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Start the PDS Maintenance Module	Use procedure in Section 18.7.8
2	PDSINFO Work Table button	single-click
3	<job key> (in the Job Key field)	enter text, press Enter
4	Execute Query button	single-click
5	Determine whether there is missing data in any field	read text
6	<value> [field(s) on the PDSINFO Work Table] (if applicable)	enter text, press Enter
7	Save button	single-click
8	next/previous record buttons (> >> < <<) as necessary to display additional records	single-click
9	Repeat Steps 5 through 8 for all additional records that need to be modified for the job	
10	Exit button	single-click
11	Yes (if applicable)	single-click
12	Determine whether there are appropriate entries in the PVT_PRCDTBL_TBL database table for Product Code	Use procedure in Section 18.11.12
13	Determine whether there are appropriate entries in the OUT_OTSPBLV_TBL database table for Output Spec.	Use procedure in Section 18.11.10
14	Specify job selection criteria	Use procedure in Section 18.9.3
15	Observe information displayed on the Main OI Screen	read text
16	Submit a trouble ticket (if applicable)	Use procedure in Chapter 8

18.11.26 Respond to a Locked-Up Screen

The problem is that the PDSOI screen is locked up and it is not possible to get access to the main menu in order to shut down the GUI.

Table 18.11-32 presents (in a condensed format) the steps required to respond to a locked-up screen. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

1 In the UNIX window where the PDSOI was originally started at the command line prompt enter:

ps -ef | grep PDSMTOIX

- The following type of message is displayed:

```
pds 790367 790059 0 10:15:11 pts/8 0:00 grep PDSMTOIX
pds 233139          1 0 Feb 08 pts/66 0:27 f45runm PDSMTOIX
pds 779612          1 0 09:25:06 pts/8 0:03 f45runm PDSMTOIX
```

- All current processes owned by the user ID are displayed.
- PDSMTOIX is the name of the Oracle Form for PDSOI.
- In the preceding example the **grep** command returns the same pts/8 as one of the PDSMTOIX lines.
- In the example the process ID (pid) of the PDSMTOIX process is 779612.

2 At the command line prompt enter:

kill -15 <process ID>

- The PDSOI screen is dismissed.
- **<process ID>** refers to the process ID of the process to be killed.

Table 18.11-32. Respond to a Locked-Up Screen - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server) (where the PDSOI was originally started)	single-click
2	ps -ef grep PDSMTOIX	enter text, press Enter
3	kill -15 <process ID>	enter text, press Enter

18.11.27 Respond to a Problem Starting PDSOI

The problem is that the pdsOI alias was typed but the PDSOI GUI was not displayed. Likely causes include improper setting of the DISPLAY environmental variable and inadvertent deletion of the pdsOI alias from the alias list.

Table 18.11-33 presents (in a condensed format) the steps required to respond to a problem starting PDSOI. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

NOTE: It may take a few seconds for the PDSOI to be displayed.

1 Wait a few seconds for the PDSOI to be displayed.

- 2 If the PDSOI is not displayed after a few seconds, at the command line prompt enter:
echo \$DISPLAY
 - The following type of response should be received:
x0dig06:12.0
 - If a **DISPLAY - Undefined variable** message was received, the DISPLAY environmental variable was not set properly.
- 3 If the DISPLAY environmental variable was not set properly, at the command line prompt enter:
ps -ef | grep PDSMTOIX
 - The following type of message is displayed:
pds 790367 790059 0 10:15:11 pts/8 0:00 grep PDSMTOIX
pds 779612 1 0 09:25:06 pts/8 0:03 f45runm PDSMTOIX
 - All current processes owned by the user ID are displayed.
 - PDSMTOIX is the name of the Oracle Form for PDSOI.
 - In the example the process ID (pid) of the PDSMTOIX process is 779612.
- 4 If the DISPLAY environmental variable was not set properly, at the command line prompt enter:
kill -15 <process ID>
 - The process is terminated.
 - **<process ID>** refers to the process ID of the process to be terminated.
- 5 If the DISPLAY environmental variable was not set properly, at the command line prompt enter:
exit
 - **logout** is an acceptable alternative command.
 - The log-in to the PDS Server host is terminated; control is returned to the previous host.
- 6 If the DISPLAY environmental variable was not set properly, repeat Step 5 as necessary to return to the original log-in host.
 - Exit from as many hosts as necessary to return to the original host.
- 7 If the DISPLAY environmental variable was not set properly, perform the **Start the PDS Operator Interface (PDSOI)** procedure (Section 18.7.3).
 - Set the DISPLAY environmental variable properly this time.

8 If the DISPLAY environmental variable was set properly, at the command line prompt enter:

alias pdsoi

- The actual executable name should be returned.
- For example:

/data1/pds_it/run/pdsoi_prod.sh

9 If the executable name was not returned in response to the **alias pdsoi** command, at the command line prompt enter:

alias pdsoi /<path>/<executable>

- For example:
alias pdsoi /data1/pds_it/run/pdsoi_prod.sh
- **<path>** represents the full directory path to the directory containing the executable program.
- **<executable>** represents the name of the executable program.

Table 18.11-33. Respond to a Problem Starting PDSOI - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Wait a few seconds for the PDSOI to be displayed	wait
2	echo \$DISPLAY (if applicable)	enter text, press Enter
3	ps -ef grep PDSMTOIX (if applicable)	enter text, press Enter
4	kill -15 <process ID> (if applicable)	enter text, press Enter
5	exit (if applicable)	enter text, press Enter
6	Repeat Step 5 as necessary to return to the original log-in host (if applicable)	
7	Start the PDS Operator Interface (PDSOI) (if applicable)	Use procedure in Section 18.7.3
8	alias pdsoi (if applicable)	enter text, press Enter
9	alias pdsoi /<path>/<executable> (if applicable)	enter text, press Enter

18.11.28 Respond to a Save Changes Dialogue Box When Exiting a Maintenance Module Window

The problem is that after having clicked on the **Exit** button to exit a maintenance module window a dialogue box containing the message “Do you want to save changes?” is displayed. The procedure is performed as part of one of the following procedures:

- **Change the Values of Job Parameters Using the PDS Maintenance Module** (Section 18.11.2).

- **Change the Values of Order Parameters Using the PDSIS Maintenance Module** (Section 18.11.3).
- **Respond to a Job on a Lag Report** (Section 18.11.25).

In each case after clicking on the **Exit** button to exit a maintenance module window a dialogue box containing the message “Do you want to save changes?” is displayed.

Table 18.11-34 presents (in a condensed format) the steps required to respond to a save changes dialogue box when exiting a maintenance module window. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 **Single-click** on the appropriate button from the following selections:
 - **Yes** - to accept the changes and dismiss the dialogue box and maintenance module window.
 - The dialogue box is dismissed.
 - The maintenance module window is dismissed.
 - The maintenance module main menu is displayed.
 - If changes have been made that cannot be saved to the database, single-clicking on **Yes** does not override the restrictions; in such a case it is not possible to get out of the maintenance module window except by single-clicking on **No**. A permission problem could cause an inability to save changes.
 - **No** - to dismiss the dialogue box and maintenance module window without accepting the changes made to the data on the form.
 - The dialogue box is dismissed.
 - The maintenance module window is dismissed.
 - The maintenance module main menu is displayed.
 - **Cancel** - to dismiss the dialogue box and return to the maintenance module window.
 - The dialogue box is dismissed.
 - The maintenance module window is displayed.
- 2 If changes should be saved but it is not possible to save changes and get out of the maintenance module window, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
 - If the dialogue does not accept **Yes** as a response, it is not possible to save changes and get out of the maintenance module window.

Table 18.11-34. Respond to a Save Changes Dialogue Box When Exiting a Maintenance Module Window - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Yes	single-click
2	Submit a trouble ticket (if applicable)	Use procedure in Chapter 8

18.11.29 Respond to a "Waiting for Drive Selection" Message on the Job Monitor

The procedure to **Respond to a "Waiting for Drive Selection" Message on the Job Monitor** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). The problem is that a job or unit has been activated from the PDS **Main OI Screen** or **OI Detail Screen** but the **Media Drive Selection** window is not visible.

Table 18.11-35 presents (in a condensed format) the steps required to respond to a "Waiting for Drive Selection" message on the job monitor. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If the **Media Drive Selection** window does not appear within a reasonable period of time (a couple of minutes), minimize other windows in the workspace and see if it was hidden behind another window.
 - The **Media Drive Selection** window can sometimes be found behind other windows.
- 2 If the **Media Drive Selection** window is visible in the workspace, continue with job activation.
 - For detailed instructions refer to the **Activate a Job** procedure (Section 18.9.7).
- 3 If the **Media Drive Selection** window is not visible anywhere in the workspace, access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
- 4 At the command line prompt enter:
cd
 - The alias **cd** changes the current directory to the PDS root directory for the PDS user ID of the log-in.
 - To identify the PDS root directory for the current PDS user ID at the command line prompt enter:
echo \$PDSROOT
- 5 At the command line prompt enter:
cd run
 - Change to the "run" directory.
- 6 At the command line prompt enter:
genericout <job key>
 - Run the **genericout** program using the job ID as an argument.

- The **Media Drive Selection** window should be displayed.
- 7 If the **Media Drive Selection** window is visible in the workspace, continue with job activation.
- For detailed instructions refer to the **Activate a Job** procedure (Section 18.9.7).
- 8 If the **Media Drive Selection** window is not visible anywhere in the workspace, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.

Table 18.11-35. Respond to a "Waiting for Drive Selection" Message on the Job Monitor - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Minimize other windows in the workspace and see if the Media Drive Selection window was hidden behind another window	single-click
2	If the Media Drive Selection window is visible in the workspace, continue with job activation	Use procedure in Section 18.9.7
3	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
4	cd	enter text, press Enter
5	cd run	enter text, press Enter
6	genericout <job key>	enter text, press Enter
7	If the Media Drive Selection window is visible in the workspace, continue with job activation	Use procedure in Section 18.9.7
8	Submit a trouble ticket (if applicable)	Use procedure in Chapter 8

18.11.30 Respond to Duplicate Jobs on the PDSOI

The procedure to **Respond to Duplicate Jobs on the PDSOI** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). The problem is that jobs are displayed on the PDSOI multiple times. If the PDSOI continues to create duplicate jobs after duplicates have been removed, there may be a data problem in the PDSINFO table.

Table 18.11-36 presents (in a condensed format) the steps required to respond to duplicate jobs on the PDSOI. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Observe the job keys of the "duplicate" jobs on the **Main OI Screen** to verify that the jobs are true duplicates.
- Verify that the jobs have the same exact job key (i.e., **all** digits the same).

- 2 Perform the **Start the PDS Maintenance Module** procedure (Section 18.7.8).
- 3 **Single-click** on the **PDSINFO Jobs Table** button on the **PDS Maintenance Module Main Menu**.
 - The **PDSINFO Jobs Table Maintenance Form (PDSMTPJT)** or **PDSINFO Jobs Table** is displayed.
- 4 **Single-click** and **drag** (to highlight the text) in the **Job Key** field for the appropriate job on the **Main OI Screen**.
 - **Job Key** text is highlighted on the **Main OI Screen**.
- 5 **Single-click** in the **Job Key** field on the **PDSINFO Jobs Table** with the **center** mouse button.
 - **Job Key** is pasted in the **Job Key** field on the **PDSINFO Jobs Table**.
- 6 **Single-click** on the **Execute Query** button near the bottom of the **PDSINFO Jobs Table**.
 - The database is queried for data concerning the job represented by the **Job Key** and the relevant data are displayed on the **PDSINFO Jobs Table**.
- 7 Observe the data in all fields of the form.
- 8 **Single-click** on the next/previous record buttons (> >> < <<) near the bottom of the form as necessary to display additional records with the same job key.
- 9 Observe the data in all fields of the form.
 - Check **all** fields to identify any field with data that differs from that shown for the preceding record.
- 10 Repeat Steps 8 and 9 for all records with the same job key in the **PDSINFO Jobs Table**.
- 11 If any field has data that differ from preceding records, determine which record is the correct one.
 - For example, if the **OI ID** is filled in on one record and blank on the others, the one that contains a value is the "correct" one.
 - It means that the job has been started using the specified OI ID and work will be performed using the specified OI ID only.
 - Another OI ID would not work on the job.
- 12 After determining which job is the correct one, record (make a note of) the values in the fields in the **PDSINFO Jobs Table**.
- 13 **Single-click** on the next/previous record buttons (> >> < <<) near the bottom of the form as necessary to display additional records with the same job key.
 - Ensure that the current record being displayed in the table is one of those to be removed, not the record to be kept.

- 14 Execute the following menu path:
Record → Remove
- The removed record is no longer displayed on the screen, but the record to be kept is displayed (unless there are multiple duplicates).
- 15 **Single-click** on the **Save** button on the **PDSINFO Jobs Table**.
- 16 If there are multiple duplicates, repeat Steps 13 through 15 to remove the additional duplicate(s).
- 17 If the **OI ID** specified in the **PDSINFO Jobs Table** is different from the OI ID used in starting the current PDSOI, start another PDSOI using the OI ID specified in the **PDSINFO Jobs Table**.
- For detailed instructions refer to the **Start the PDS Operator Interface (PDSOI)** procedure (Section 18.7.3).
- 18 If the **OI ID** specified in the **PDSINFO Jobs Table** is different from the OI ID used in starting the current PDSOI, process the job using the PDSOI started using the OI ID specified in the **PDSINFO Jobs Table**.
- For detailed instructions refer to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).
- 19 **Single-click** on the **Exit** button at the bottom of the **PDSINFO Jobs Table**.
- If the **Exit** button is not visible on the form, **single-click** on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - Either the maintenance module window is dismissed or a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved.
 - If the maintenance module window was dismissed, the PDS **Maintenance Module Main Menu** is displayed.
- 20 If a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved, **single-click** on the appropriate button from the following selections:
- **Yes** - to accept the changes and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The PDS **Maintenance Module Main Menu** is displayed.
 - **No** - to dismiss the dialogue box without accepting the changes made to the data on the form.
 - The dialogue box is dismissed.
 - The PDS **Maintenance Module Main Menu** is displayed.

- 21 **Single-click** on the **PDSINFO Work Table** button on the **PDS Maintenance Module Main Menu**.
 - The **PDSINFO Table Maintenance Form (PDSMTPDT)** or **PDSINFO Work Table** is displayed.
- 22 **Single-click** and **drag** (to highlight the text) in the **Job Key** field for the appropriate job on the **Main OI Screen**.
 - **Job Key** text is highlighted on the **Main OI Screen**.
- 23 **Single-click** in the **Job Key** field on the **PDSINFO Work Table** with the **center** mouse button.
 - **Job Key** is pasted in the **Job Key** field on the **PDSINFO Work Table**.
- 24 **Single-click** on the **Execute Query** button near the bottom of the **PDSINFO Work Table**.
 - The database is queried for data concerning the job represented by the **Job Key** and the relevant data are displayed on the **PDSINFO Work Table**.
- 25 Compare the values in the fields on the **PDSINFO Work Table** with the values recorded from the fields on the **PDSINFO Jobs Table** to identify all discrepancies.
- 26 If the values of any parameters on the **PDSINFO Work Table** are inconsistent with the values recorded from the fields on the **PDSINFO Jobs Table** (especially **Product Media** and **Product Code**), **single-click** in the appropriate field of the **PDSINFO Work Table**.
- 27 If the values of any parameters on the **PDSINFO Work Table** are inconsistent with the values recorded from the fields on the **PDSINFO Jobs Table**, in the appropriate field of the **PDSINFO Work Table** enter:
<value>
- 28 Repeat Steps 26 and 27 as necessary to modify values in other fields of the **PDSINFO Work Table**.
- 29 **Single-click** on the **Save** button on the **PDSINFO Work Table**.
 - The record is saved in the database with the new value entered in the appropriate field.
 - It is recommended that each record be saved immediately after it is changed (before making changes to another record).
- 30 **Single-click** on the next/previous record buttons (> >> < <<) near the bottom of the form as necessary to display additional records (units) for the job.
- 31 Repeat Steps 25 through 30 as necessary for all additional records that need to be modified for the job.

- 32** **Single-click** on the **Exit** button at the bottom of the **PDSINFO Work Table**.
- If the **Exit** button is not visible on the form, click on the **Cancel Query** button.
 - The buttons change and the **Exit** button becomes visible.
 - Either the maintenance module window is dismissed or a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved.
 - If the maintenance module window was dismissed, the PDS **Maintenance Module Main Menu** is displayed.
- 33** If a dialogue box is displayed with a message requesting whether changes made to the data on the form should be saved, **single-click** on the appropriate button from the following selections:
- **Yes** - to accept the changes and dismiss the dialogue box.
 - The dialogue box is dismissed.
 - The PDS **Maintenance Module Main Menu** is displayed.
 - **No** - to dismiss the dialogue box without accepting the changes made to the data on the form.
 - The dialogue box is dismissed.
 - The PDS Maintenance Module Main Menu is displayed.
- 34** **Single-click** on the **Exit** button at the bottom of the PDS **Maintenance Module Main Menu** window.
- The PDS **Maintenance Module Main Menu** is dismissed.
 - The PDS maintenance module has been shut down.
- 35** If the PDSOI continues to create duplicate jobs, identify and modify fields that are blank or contain invalid values.
- Make changes to the PDS Maintenance Module **PDSINFO Work Table** as necessary.
 - For detailed instructions refer to the **Change the Values of Job Parameters Using the PDS Maintenance Module** procedure (Section 18.11.2).
- 36** If the PDSOI has continued to create duplicate jobs, repeat the preceding steps as necessary to remove duplicate records.

Table 18.11-36. Respond to Duplicate Jobs on the PDSOI - Quick-Step Procedures (1 of 2)

Step	What to Enter or Select	Action to Take
1	Observe the job keys of the "duplicate" jobs on the Main OI Screen to verify that the jobs are true duplicates	read text
2	Start the PDS Maintenance Module	Use procedure in Section 18.7.8
3	PDSINFO Jobs Table button	single-click
4	Copy <job key> (in the Job Key field on the Main OI Screen)	single-click and drag
5	Paste <job key> (in the Job Key field on the PDSINFO Jobs Table)	center-click
6	Execute Query button	single-click
7	Observe the data in all fields of the form	read text
8	Next/previous record buttons (> >> < <<) as necessary to display additional records	single-click
9	Observe the data in all fields of the form	read text
10	Repeat Steps 8 and 9 for all records with the same job key in the PDSINFO Jobs Table	
11	If any field has data that differ from preceding records, determine which record is the correct one	read text
12	Make a note of the values in the fields	write text
13	Next/previous record buttons (> >> < <<) as necessary to display additional records	single-click
14	Record → Remove	single-click
15	Save button	single-click
16	Repeat Steps 13 through 15 to remove duplicate record(s) (if applicable)	
17	Start another PDSOI using the OI ID specified in the PDSINFO Jobs Table (if applicable)	Use procedure in Section 18.7.3
18	Process the job using the PDSOI started using the OI ID specified in the PDSINFO Jobs Table (if applicable)	Use procedure in Section 18.9.1
19	Exit button	single-click
20	Yes button (if applicable)	single-click
21	PDSINFO Work Table button	single-click
22	Copy <job key> (in the Job Key field on the Main OI Screen)	single-click and drag
23	Paste <job key> (in the Job Key field on the PDSINFO Work Table)	center-click
24	Execute Query button	single-click
25	Identify all discrepancies between values in the fields on the PDSINFO Work Table with values in the fields on the PDSINFO Jobs Table	read text

Table 18.11-36. Respond to Duplicate Jobs on the PDSOI - Quick-Step Procedures (2 of 2)

Step	What to Enter or Select	Action to Take
26	<value> (in appropriate field of the PDSINFO Work Table) (if applicable)	enter text
27	Repeat preceding step as necessary to modify values in other fields (if applicable)	
28	Save button (if applicable)	single-click
29	Next/previous record buttons (> >> < <<) as necessary to display additional records	single-click
30	Repeat Steps 25 through 29 to modify additional record(s) (if applicable)	
31	Exit button	single-click
32	Yes button (if applicable)	single-click
33	Exit button (PDS Maintenance Module Main Menu window)	single-click
34	If the PDSOI continues to create duplicate jobs, modify fields that are blank or contain invalid values	Use procedure in Section 18.11.2
35	If the PDSOI has continued to create duplicate jobs, repeat the preceding steps as necessary	

18.11.31 Respond to Low Disk Space

The procedure to **Respond to Low Disk Space** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). The problem is that the available space on a disk has become low (e.g., as indicated in the **Assembly Disk Usage** section of the **Job Monitor Main Window**).

Table 18.11-37 presents (in a condensed format) the steps required to respond to low disk space. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1** Wait before activating any jobs that would use the disk resource.
- 2** Complete orders that are being processed.
 - For detailed instructions refer to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).
- 3** Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 4 At the command line prompt enter:
cd /pdssa/assemble
 - Change to the assembly directory.
- 5 At the command line prompt enter:
ls
 - A list of subdirectories and files in the assembly directory is displayed.
- 6 At the command line prompt enter:
rm <file name>
 - Remove unneeded data from the directory.
 - <file name> refers to unneeded file(s) or subdirectory(ies).
- 7 Repeat Step 6 as necessary to remove unneeded data from the assembly directory.
- 8 Return to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.11-37. Respond to Low Disk Space - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Wait before activating any jobs that would use the disk resource	wait
2	Complete orders that are being processed	Use procedure in Section 18.9.1
3	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
4	cd /pdssa/assemble	enter text, press Enter
5	ls	enter text, press Enter
6	rm <file name>	enter text, press Enter
7	Repeat Step 6 (as necessary)	
8	Return to the Monitor/Control Product Processing Using PDS procedure	Use procedure in Section 18.9.1

18.11.32 Respond to No Printouts (Either Jewel-Case Inserts or Paper Reports)

The procedure to **Respond to No Printouts (Either Jewel-Case Inserts or Paper Reports)** is performed as part of the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1). The problem is that either jewel-case inserts or paper reports (e.g., summary reports, quality check reports) are not printing.

Table 18.11-38 presents (in a condensed format) the steps required to respond to the problem of no printouts (either jewel-case inserts or paper reports). If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Observe the printer to determine whether there are any obvious faults (e.g., power off, paper supply empty, paper jam).
- 2 Respond to obvious faults, if any.
 - Turn the power on, replenish the paper supply, clear the paper jam, etc. as necessary.
 - For detailed instructions refer to the applicable printer manual.
 - If the problem has not been resolved, continue with Step 3.
- 3 If the jewel-case printer is affected and the printer displays a “Wrong Media in Multi-Purpose Tray” message, reset the printer settings.
 - From the Menu on the front panel, select **Printer Settings → Multi-Purpose Tray → Paper Type → Tek Labels** then select **Paper Size → #10 Envelope**.
 - For detailed instructions refer to the jewel-case printer manual.
 - The printer should start printing properly.
 - If the problem has not been resolved, continue with Step 4.
- 4 **Single-click** on **Printers** on the menu bar of the **Main OI Screen**.
 - The **Default Printers** dialogue box is displayed.
 - The current selections for printers for reports and jewel-case inserts are displayed.
- 5 If no printer is selected for either Report Printer or Jewel Case Printer, **single-click** and **hold** the applicable option button (either **Report Printer** or **Jewel Case Printer**) to display a menu of printers, **move** the mouse cursor to the desired selection (highlighting it), then **release** the mouse button.
 - If the desired printer is not available on the list of printers, submit a request to the supervisor to have it added to the list.
 - Selected printer is displayed on the option button when the mouse button is released.
- 6 If an alternate printer is to be designated for the other type of printer, repeat Step 5 for the other printer.
- 7 **Single-click** on the **Return** button.
 - The **Main OI Screen** is displayed.
- 8 If either printer still does not provide output, access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.

- For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
- 9 If either printer still does not provide output, at the command line prompt enter:
- lp -d <printer ID> <file name>**
- <**printer ID**> refers to the printer to be tested.
 - <**file name**> refers to the name of a file to be printed on the printer to be tested.
 - For example:

```
lp -d x0dih04 0000104030361_0001.ppf
```

 - **x0dih04** is the printer being tested.
 - **0000104030361_0001.ppf** is a ppf file being used as a test file.
 - The ppf file should be printed on x0dih04.
 - For additional details refer to the **Reprint PDS Documents and Labels** procedure (Section 18.11.19).
- 10 If the specified file did not print on the printer being tested, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.
- 11 If the test file did print on the printer and it is not the jewel-case printer that is affected, go to Step 15.
- 12 If the test file did print on the printer and it is the jewel-case printer that is affected, examine the job log for an entry indicating that the job has stalled while waiting for status from Rimage.
- For example, if the last message is “Waiting for Rimage to signal status” and there have been no further entries for several minutes or there are multiple entries that include “volsdone:0 sleepcount...,” the NFS connection may have been lost.
 - A Network File System (NFS) mount is needed in order to see the job control directory (e.g., /pdssa/rimage_jobcontrol) on the PDS system.
 - When the Windows NT system for the Rimage PC is set up, the PDS job control directory on the PDS Server host (e.g., x0dig06) is typically mapped to the PC’s Z: drive.
 - For detailed instructions refer to either the **View a Job Log or Job Production Parameter File (PPF) Using UNIX Commands** procedure for (Section 18.11.34) or the **View a Job Log Using the PDS Job Monitor** procedure (Section 18.11.35).
- 13 If the job has stalled while waiting for status from Rimage, check the NFS connection.
- For detailed instructions refer to the **Check/Restore the Rimage PC NFS Connection** procedure (Section 18.11.7).
- 14 If the NFS connection is good or if the job does not go to completion after the NFS connection has been restored, check synchronization of the Rimage PC time with the PDS system time.

- For detailed instructions refer to the **Check/Restore Synchronization of the Rimage PC Time with PDS System Time** procedure (Section 18.11.6).

15 If the problem has not been resolved through any of the preceding actions, call the help desk and submit a trouble ticket in accordance with site Problem Management policy.

Table 18.11-38. Respond to No Printouts (Either Jewel-Case Inserts or Paper Reports) - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Observe the printer for obvious faults	observe
2	Respond to obvious faults (if applicable)	turn the power on, replenish the paper supply, clear the paper jam, etc. (as necessary)
3	Reset the printer settings (if necessary)	Use procedure in jewel-case printer manual
4	Printers (on the menu bar of the Main OI Screen)	single-click
5	<printer> (either Report Printer or Jewel Case Printer option button as applicable)	single-click
6	Repeat Step 5 for the other printer (if applicable)	
7	Return button	single-click
8	UNIX window (PDS Server) (if applicable)	single-click or use procedure in Section 18.2.1
9	lp -d <printer ID> <file name> (if applicable)	read text
10	Submit a trouble ticket (if applicable)	Use procedure in Chapter 8
11	Go to Step 15 (if the test file did print and it is not the jewel-case printer that is affected)	
12	Examine the job log for an entry indicating that the job stalled while waiting for status from Rimage (if applicable)	Use procedure in Section 18.11.34 or Section 18.11.35
13	Check the NFS connection (if applicable)	Use procedure in Section 18.11.7
14	Check synchronization of the Rimage PC time with the PDS system time (if applicable)	Use procedure in Section 18.11.6
15	Submit a trouble ticket (if applicable)	Use procedure in Chapter 8

18.11.33 Respond to PDSOI's Failure to Update Status

The problem is that the PDSOI does not seem to be picking up status files. The likely cause is that there is no corresponding instance of PDSOI currently running.

Table 18.11-39 presents (in a condensed format) the steps required to respond to PDSOI's failure to update status. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the PDS Server host.
 - Examples of PDS Server host names include **e0dig06**, **g0dig06**, **l0dig06**, and **n0dig06**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).

- 2 At the command line prompt, enter:
cd
 - The alias **cd** changes the current directory to the PDS root directory for the PDS user ID of the log-in.
 - To identify the PDS root directory for the current PDS user ID at the command line prompt enter:
echo \$PDSROOT

- 3 At the command line prompt, enter:
cd status
 - Change to the “status” directory.

- 4 At the command line prompt, enter:
ls
 - A list of the subdirectories and files in the “status” directory is displayed.

- 5 Observe the entries in the list of subdirectories and files in the “status” directory to identify the status file for the job.
 - The file has the format <Machine ID>_<Console ID>_<Job Key>.status
 - For example:
DIG6-IT_pds_0000104030361_0001.status
 - **DIG6-IT** is the Machine ID.
 - **pds** is the Console ID.
 - **0000104030361_0001** is the Job Key.

- 6 If there is no status file for the job, go to the **Respond to a Job’s Status Not Changing to QC-Hold Although Production is Successful** procedure (Section 18.11.24).

- 7 Observe the header of each current **Main OI Screen** to identify the OI ID that applies to each open instance of the PDSOI.
 - The format of the **Main OI Screen** header is PDS <OI ID>, where <OI ID> has the format <Machine ID>_<Console ID>
 - For example:
PDS DIG6-ST_pds is in the header of a **Main OI Screen**.
 - **DIG6-ST** is the Machine ID.
 - **pds** is the Console ID.

- 8 If there is no current instance of PDSOI with the OI ID specified in the status file name, start another PDSOI using the OI ID specified in the status file name.
 - For detailed instructions refer to the **Start the PDS Operator Interface (PDSOI)** procedure (Section 18.7.3).

- 9 Process the job (that has the job key specified in the status file name) using the PDSOI started using the OI ID specified in the status file name.
 - For detailed instructions refer to the **Monitor/Control Product Processing Using PDS** procedure (Section 18.9.1).

Table 18.11-39. Respond to PDSOI's Failure to Update Status - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd	enter text, press Enter
3	cd status	enter text, press Enter
4	ls	enter text, press Enter
5	Identify the status file for the job	read text
6	Respond to the job's status not changing to QC-Hold (if no status file)	Use procedure in Section 18.11.24
7	Identify the OI ID that applies to each open instance of the PDSOI	read text
8	Start another PDSOI using the OI ID specified in the status file name (if applicable)	Use procedure in Section 18.7.3
9	Process the job using the OI ID specified in the status file name	Use procedure in Section 18.9.1

18.11.34 View a Job Log or Job Production Parameter File (PPF) Using UNIX Commands

Although the PDS Job Monitor provides the Distribution Technician with a relatively easy means of gaining access to the log for a particular job, if it is not available, UNIX commands can be used to gain access to a log file or job Production Parameter File (PPF).

Table 18.11-40 presents (in a condensed format) the steps required to view a job log or job Production Parameter File (PPF) using UNIX commands. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 Access a terminal window logged in to the Operations Workstation.
 - Examples of Operations Workstation host names include **e0acs03**, **g0acs02**, **l0acs01**, and **n0acs03**.
 - For detailed instructions refer to the **Log in to ECS Hosts** procedure (Section 18.2.1).
- 2 At the UNIX command line prompt enter:
cd
 - Change directory to the PDS root directory, which contains the PPF files for the jobs being processed by PDS.
 - When logged in with a PDS user ID, **cd** is an alias that changes the current working directory to the PDS root directory.
 - If a PPF is to be viewed, go to Step 4.
 - If a job log is to be viewed, continue with Step 3.
- 3 If a job log is to be viewed, at the UNIX command line prompt enter:
cd summary
 - Change directory to the “summary” directory, which contains the log files for the jobs being processed by PDS.
- 4 At the UNIX command line prompt enter:
pg <filename>
 - **<filename>** refers to the PPF or log file to be reviewed and consists of the job key (as displayed on the **Main OI Screen**) and the file-name extension, either “ppf” or “log,” as applicable (e.g., TS20112130001_0001.ppf, TS20112130001_0001.log).
 - Either the PPF file or the first page of the log file (as applicable) is displayed.
 - Although this procedure has been written for the **pg** command, any UNIX editor or visualizing command (e.g., **vi**, **view**, **more**) can be used to review the log file.
- 5 Review the PPF or log.
 - The following **pg** commands (at the **:** prompt) are useful:
 - **n** then **Return/Enter** (go to Page n).

- **Return/Enter** or **+1** then **Return/Enter** (go down to the next page).
- **-1** then **Return/Enter** (go back to the preceding page).
- **+n** then **Return/Enter** (go down n number of pages).
- **-n** then **Return/Enter** (go back n number of pages).
- **+nl** then **Return/Enter** (go down n number of lines).
- **-nl** then **Return/Enter** (go back n number of lines).
- **\$** then **Return/Enter** [go to the last page (end of file)].
- **q** then **Return/Enter** (exit from pg).

Table 18.11-40. View a Job Log or Job Production Parameter File (PPF) Using UNIX Commands - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	UNIX window (PDS Server)	single-click or use procedure in Section 18.2.1
2	cd	enter text, press Enter
3	cd summary (if a job log is to be viewed)	enter text, press Enter
4	pg <filename>	enter text, press Enter
5	Review the PPF or log	read text

18.11.35 View a Job Log Using the PDS Job Monitor

The PDS Job Monitor provides the Distribution Technician with a relatively easy means of gaining access to the log for a particular job. If the PDS Job Monitor is not available, UNIX commands can be used to gain access to log files, as described in the **View a Job Log or Job Production Parameter File (PPF) Using UNIX Commands** procedure (Section 18.11.34).

Table 18.11-41 presents (in a condensed format) the steps required to view a job log using the PDS Job Monitor. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If the **Job Monitor Main Window** is not already in operation, start the PDS Job Monitor (refer to Section 18.7.5).
 - The **Job Monitor Main Window** is displayed.
- 2 **Place** the mouse cursor on the relevant job in the running job list of the **Job Monitor Main Window**, **single-click** and **hold** the **right** mouse button, **move** the mouse cursor to **View Job Log** (highlighting it), then **release** the mouse button.
 - Pop-up menu appears with the options **View Job Log**, **View Job PPF**, **Force AutoRimage Completion** [appears only when the selected job is waiting for a completion message from a Rimage writer], **Terminate Job**.
 - Select **View Job Log** from the pop-up menu.
 - The log file for the selected job is displayed in a text window.

- 3 Review the log.
- 4 To exit from the log **single-click** on the **Exit** button at the bottom of the window.
 - The window is dismissed.

Table 18.11-41. View a Job Log Using the PDS Job Monitor - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Start the PDS Job Monitor (if necessary)	Use procedure in Section 18.7.5
2	View Job Log (Job Monitor Main Window)	right-click
3	Review the log	read text
4	Exit button	single-click

18.11.36 View a Job PPF Using the PDS Job Monitor

The PDS Job Monitor provides the Distribution Technician with a relatively easy means of gaining access to the production parameter file for a particular job. The PPF specifies all of the information that the job needs to run (e.g., the media type, data path, bin number, etc.). If the PDS Job Monitor is not available, UNIX commands can be used to gain access to PPFs, as described in the **View a Job Log or Job Production Parameter File (PPF) Using UNIX Commands** procedure (Section 18.11.34).

Table 18.11-42 presents (in a condensed format) the steps required to view a job PPF using the PDS Job Monitor. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 If the **Job Monitor Main Window** is not already in operation, start the PDS Job Monitor (refer to Section 18.7.5).
 - The **Job Monitor Main Window** is displayed.
- 2 **Place** the mouse cursor on the relevant job in the running job list of the **Job Monitor Main Window**, **single-click** and **hold** the **right** mouse button, **move** the mouse cursor to **View Job PPF** (highlighting it), then **release** the mouse button.
 - Pop-up menu appears with the options **View Job Log**, **View Job PPF**, **Force AutoRimage Completion** [appears only when the selected job is waiting for a completion message from a Rimage writer], **Terminate Job**.
 - Select **View Job PPF** from the pop-up menu.
 - The production parameter file (PPF) for the selected job is displayed in a text window.

- 3 Review the PPF file.
- 4 To exit from the PPF file **single-click** on the **Exit** button at the bottom of the window.
 - The window is dismissed.

Table 18.11-42. View a Job PPF Using the PDS Job Monitor - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Start the PDS Job Monitor (if necessary)	Use procedure in Section 18.7.5
2	View Job PPF (Job Monitor Main Window)	right-click
3	Review the PPF file	read text
4	Exit button	single-click

18.11.37 View an Extended Error Message

The procedure to **View an Extended Error Message** is performed as part of the procedure to **Check/Clear Errors on PDSIS** (Section 18.11.4).

Table 18.11-43 presents (in a condensed format) the steps required to view an extended error message. If you are already familiar with the procedures, you may prefer to use the quick-step table. If you are new to the system, or have not performed this task recently, you should use the detailed procedures that follow.

- 1 **Single-click** on the action button at the beginning of the relevant error status line (on the **PDSIS OI Error Screen**).
 - The **Action List** box is displayed.
- 2 **Single-click** on **Expanded Message** in the **Action List** box.
 - **Expanded Message** is highlighted.
- 3 **Single-click** on the appropriate button from the following selections:
 - **OK** - to display the extended message window.
 - The **Extended Error Message Window** is displayed.
 - **Cancel** - to dismiss the **Action List** box and return to the screen that was displayed before the action button was selected.
 - The **PDSIS OI Error Screen** is displayed.
- 4 Observe information displayed on the extended message window.

- 5 To return to the **Check/Clear Errors on PDSIS** procedure (Section 18.11.4) **single-click** on the **Close** button.
- The Extended Message Window is dismissed.
 - The **PDSIS OI Error Screen** is displayed.

Table 18.11-43. View an Extended Error Message - Quick-Step Procedures

Step	What to Enter or Select	Action to Take
1	Action button (on PDSIS OI Error Screen)	single-click
2	Expanded Message	single-click
3	OK button	single-click
4	Close button	single-click

19. User Services

User Services personnel at the DAACs provide support services to the scientists, graduate and undergraduate students, and students in grades K-12, as well as teachers, or commercial users who may use ECS to pull data products for their programs. In this role, User Services exercises five major responsibilities (at EDC, there are two additional responsibilities):

- help create new users – creating new accounts and performing other account management activities.
- support order tracking – keeping logs of user contacts, retrieving user information, and helping trace and report the status of order processing.
- resolve user requests/problems – respond to user requests and act on behalf of users to provide ECS services and products.
- initiate/track problem reports – initiate an ECS problem report based on a user called-in (or e-mailed) advice of a system problem (i.e., an instance in which the system does not conform to specified or advertised performance).
- coordinate external and internal sources to resolve user issues/problems – respond to user issues and resolve problems by identifying and energizing the necessary resources, both internal (e.g., DAAC operations personnel) and external (e.g., engineering from the Sustaining Engineering Organization, resources from the System Monitoring and Control Center, personnel from other DAACs).
- (EDC only) support users of the ASTER Data Acquisition Request (DAR) tool for preparing and submitting requests for acquisition of data by the ASTER instrument.
- (EDC only) support users of the EOS Data Gateway (EDG) Search and Order tool for preparing and submitting requests for production of ASTER on-demand products.

To fulfill their responsibilities, User Services personnel may use ECS custom software tools, including account management tools, an order tracking tool, ECS subscription tools, the Data Dictionary Maintenance Tool, the ASTER DAR tool, and the ODFRM tool. They may also use a customized commercial software, Remedy, to create and maintain user contact records. Finally, they may use the EOS Data Gateway tool for creating data searches and orders.

Subsequent sections related to User Services address procedures for the following functions:

- Section 19.1 ECS User Account Management.
- Section 19.2 Creating and Maintaining User Contact Log Records.
- Section 19.3 Processing an Order.
- Section 19.4 Working with the Spatial Subscription Server and Data Pool

- Section 19.5 Using the ECS Order Tracking Tool.
- Section 19.6 Using the Data Dictionary Maintenance Tool.
- Section 19.7 (EDC Only) Creating and Managing ASTER Data Acquisition Requests.
- Section 19.8 (EDC Only) On-Demand Product Requests.

For each set of functions, an **Activity Checklist** table provides an overview of the tasks to be completed. The outline of the Activity Checklist is as follows:

Column one - **Order** shows the order in which tasks could be accomplished.

Column two - **Role** lists the Role/Manager/Operator responsible for performing the task.

Column three - **Task** provides a brief explanation of the task.

Column four - **Section** provides the Procedure (P) section number or Instruction (I) section number where details for performing the task can be found.

Column five - **Complete?** is used as a checklist to keep track of which task steps have been completed.

19.1 ECS User Account Management

All registered users of the ECS have a personal "user account" that is maintained within the ECS User Profile database. The account contains the user's name, User ID, e-mail address, preferred shipping address, billing address, and other information regarding the user that is needed when processing user requests. Table 19.1-1 provides an Activity Checklist for ECS User Account Management functions.

Table 19.1-1. ECS User Account Management - Activity Checklist (1 of 2)

Order	Role	Task	Section	Complete?
1	User Services	Launch Account Management Application using UNIX Commands	(P) 19.1.1	
2	User Services	Retrieve Individual Account Screens on Local Read-Only GUI	(P) 19.1.2.1	
3	User Services	Retrieve Full User Profile on SMC GUI	(P) 19.1.2.2	
4	User Services	Enter Personal Information for Account	(P) 19.1.3.1	
5	User Services	Enter Mailing Address for Account	(P) 19.1.3.2	
6	User Services	Enter Shipping Address for Account	(P) 19.1.3.3	
7	User Services	Enter Billing Address for Account	(P) 19.1.3.4	
8	User Services	Enter Account Information and Create the User Account	(P) 19.1.3.5	
9	User Services	Edit/Modify Personal Information	(P) 19.1.4.1	
10	User Services	Edit/Modify Mailing Address	(P) 19.1.4.2	
11	User Services	Edit/Modify Shipping Address	(P) 19.1.4.3	

Table 19.1-1. ECS User Account Management - Activity Checklist (2 of 2)

Order	Role	Task	Section	Complete?
12	User Services	Edit/Modify Billing Address	(P) 19.1.4.4	
13	User Services	Edit/Modify Account Information	(P) 19.1.4.5	
14	User Services	Edit/Modify DAR Information	(P) 19.1.4.6	
15	User Services	Delete an ECS Account	(P) 19.1.5	
16	User Services	Cancel an ECS Account (Probation)	(P) 19.1.6	
17	User Services	Troubleshooting: Check Log Files for Account Management	(P) 19.1.7	

19.1.1 Launch Account Management Application using UNIX Commands

The Account Management tool at the DAAC is read-only, permitting display of information in the local User Profile database. Changes to a user's profile are accomplished through use of the Account Management tool at the SMC; any changes made at the SMC are replicated for read-only access to the DAACs. Access to the Account Management functions at the DAAC or at the SMC is gained through the use of UNIX commands. Launching the Account Management application starts with the assumption that the applicable servers are running and the operator has logged in to the ECS system or has logged in remotely to the SMC. Table 19.1-2 presents the steps required to launch the Account Management application using UNIX commands. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the UNIX command shell prompt, type **setenv DISPLAY *clientname*:0.0** and then press the **Return/Enter** key.
 - For *clientname*, use either the local terminal/workstation IP address or its machine name.
- 2 Start the log-in to the MSS client server by typing **/tools/bin/ssh *hostname*** (e.g., g0mss21, l0mss21, e0mss21, n0mss21, m0mss16) at the UNIX command shell prompt, and then press the **Return/Enter** key.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type yes (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 3.
 - If you have not previously set up a secure shell passphrase; go to Step 4.
- 3 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your **Passphrase** and then press the **Return/Enter** key. Go to Step 5.

- 4 At the `<user@remotehost>`'s **password:** prompt, type your *Password* and then press the **Return/Enter** key.
- 5 To change to the directory containing the utility scripts to start Account Management GUIs, type `cd /usr/ecs/MODE/CUSTOM/utilities`, where *MODE* will likely be **TS1**, **TS2**, or **OPS**, and then press the **Return/Enter** key.
 - The working directory is changed to `/usr/ecs/MODE/CUSTOM/utilities`.
- 6 Type `EcMsAcDAACRegUserGUIStart MODE` (to launch the GUI at your local site) or `EcMsAcSMCRegUserGUIStart MODE` (to launch the GUI at the SMC), where *MODE* is **TS1**, **TS2**, or **OPS** (or other) as selected in Step 5, and then press the **Return/Enter** key.
 - The **ECS User Account Management** window is displayed.
 - On the SMC tool, the window shows two folders: **Request Account** and **Profile Account**; on the DAAC tool, only the **Profile Account** folder appears.

Table 19.1-2. Launch Account Management Application Using UNIX Commands

Step	What to Do	Action to Take
1	<code>setenv DISPLAY clientname:0.0</code>	enter text; press Return/Enter
2	<code>/tools/bin/ssh hostname</code>	enter text; press Return/Enter
3	<i>Passphrase</i> (or Step 4)	enter text; press Return/Enter
4	<i>Password</i>	enter text; press Return/Enter
5	<code>cd /usr/ecs/<i>MODE</i>/CUSTOM/utilities</code>	enter text; press Return/Enter
6	<code>EcMsAcDAACRegUserGUIStart <i>MODE</i></code> (at DAAC) OR <code>EcMsAcSMCRegUserGUIStart <i>MODE</i></code> (at SMC)	enter text; press Return/Enter

19.1.2 Retrieve a User Account/Validate a User

When a user contacts User Services with any request, it is typical for User Services to retrieve the user's account. User account information can be used to validate the user and/or provide information that will be needed to process the user's request. At the DAAC, to view all user profile data for an account it is necessary to retrieve (select tabs for) individual account screens (e.g., Personal Information, Mailing Address, Shipping Address, Account Information) one at a time. Although you are not likely to log into the SMC just to retrieve account information, if you are logged in there, the Account Management tool at the SMC provides for display of a screen showing the entire profile at once. If desired, it is also possible to retrieve individual screens at the SMC. A separate procedure is provided for each of the two different retrieval approaches.

19.1.2.1 Retrieve Individual Account Screens on the Local Read-Only GUI

Table 19.1-3 presents the steps required to retrieve individual account screens on the local read-only GUI. If you are already familiar with the procedure, you may prefer to use this quick-step

table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the local **ECS User Account Management** application GUI (refer to Procedure 19.1.1 **Launch Account Management Application Using UNIX Commands**).
 - The **ECS User Account Management** window is displayed; at the DAAC, the only top-level tab displayed is **Profile Account**.
 - Folders and fields applicable to existing accounts are displayed.
- 2 Click on the **Retrieve by DAAC** option button and select your DAAC from the displayed list, or select **All**.
 - The selected choice is displayed on the option button.
- 3 Click on the **Retrieve** button.
 - The account list field displays the list of accounts for the option selected in Step 2.
- 4 If desired, enter a search criterion, either using the **Find** field (located to the right of the **Find** button just below the account listing box) and clicking **Find**, or by clicking on the **User ID** or **Last Name** button and entering an appropriate ID or name in the associated text field; click on the **Retrieve** button.
 - Account(s) meeting the entered search criterion are displayed (*Note:* The search functions are case-sensitive.)
- 5 Scroll through the accounts listed (if necessary) until the desired account is visible, then click on the account to highlight it.
 - Six folders are displayed that contain detailed information about the selected account: **Account Information**, **Personal Information**, **Shipping Address**, **Billing Address**, **Mailing Address**, and **DAR Information**.
- 6 Click on each folder to display desired information. The user account information needed in order to validate the user is displayed.

Table 19.1-3. Retrieve Individual Account Screens on Local Read-Only GUI

Step	What to Do	Action to Take
1	Launch the ECS User Account Management GUI	use Procedure 19.1.1
2	Select DAAC (Retrieve by DAAC option button)	click option
3	Activate Retrieve button	single-click
4	Filter with Find or search criterion field and Retrieve	enter text; single-click
5	Scroll and highlight desired account	single-click
6	Click tabs to review folders	single-click each tab

19.1.2.2 Retrieve Full User Profile on the SMC GUI

Table 19.1-4 presents the steps required to retrieve a user's entire account profile on the SMC Account Management GUI. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the **ECS User Account Management** application GUI at the SMC (refer to Procedure 19.1.1 **Launch Account Management Application Using UNIX Commands**).
 - The **ECS User Account Management** window is displayed; at the SMC, two top-level tabs are displayed: **Request Account** and **Profile Account**.
- 2 Click on the **Profile Account** tab.
 - Folders and fields applicable to existing accounts are displayed.
- 3 Click on the **Retrieve by DAAC** option button and select your DAAC from the displayed list, or select **All**.
 - The selected choice is displayed on the option button.
- 4 Click on the **Retrieve** button.
 - The account list field displays the list of accounts for the option selected in Step 2.
- 5 If desired, enter a search criterion, either using the **Find** field (located to the right of the **Find** button just below the account listing box) and clicking **Find**, or by clicking on the **User ID** or **Last Name** button and entering an appropriate ID or name in the associated text field; click on the **Retrieve** button.
 - Account(s) meeting the entered search criterion are displayed (*Note*: The search functions are case-sensitive.)
- 6 Scroll through the accounts listed (if necessary) until the desired account is visible, then click on the account to highlight it.
 - Six folders are displayed that contain detailed information about the selected account: **Account Information**, **Personal Information**, **Shipping Address**, **Billing Address**, **Mailing Address**, and **DAR Information**.
- 7 Click on the **View Entire Profile** button at the bottom of the window.
 - The User Profile screen is displayed.
 - This is a read only screen; no changes can be made without going to each individual folder.
 - The User Profile screen displays the information contained in the **Personal Information** folder, **Account Information** folder, **Shipping Address** folder, **Billing Address** folder, **Mailing Address** folder, and the **DAR Information** folder.

- 8 After examining the displayed information to verify the user's account, click the **Close** button to exit from the User Profile screen.

Table 19.1-4. Retrieve Full User Profile on SMC GUI

Step	What to Do	Action to Take
1	Launch the ECS User Account Management GUI	use Procedure 19.1.1
2	Select Profile Account	single-click
3	Select DAAC (Retrieve by DAAC option button)	click option
4	Activate Retrieve button	single-click
5	Filter with Find or search criterion field and Retrieve	enter text; single-click
6	Scroll and highlight desired account	single-click
7	Activate View Entire Profile button	single-click
8	Activate Close button	single-click

19.1.3 Create a User Account

If a user registers through the **Become a registered user** link on the EOS Data Gateway tool (URL: <http://redhook.gsfc.nasa.gov/~imswww/pub/imswelcome/>), a user account with basic privileges is created in the database at the SMC and replicated to the DAAC sites. However, it is possible to create an account for a user by entering user information in five subordinate folders under the **Request Account** tab on the ECS User Account Management tool at the SMC. If User Services is creating an account in this manner, it is essential to have the needed user information. This information should be obtained at the time the user requests assistance in registration. A separate procedure is provided for entering the data in each of the five required subfolders, and a sixth procedure is provided for entering data to authorize an approved user for submission of an ASTER Data Acquisition Request (DAR).

19.1.3.1 Enter Personal Information for Account

The **Personal Information** folder contains the user name, e-mail address, organization, telephone number, mother's maiden name, affiliation, project, home DAAC, and primary area of study. The user may need to be contacted in order to obtain all the information needed. This procedure assumes that the operator has the ECS User Account Management tool opened at the SMC with the **Request Account** tab selected. Table 19.1-5 presents the steps required to enter personal information for an account. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Click the **Personal Information** folder.
 - The **Personal Information** folder opens.

- 2 Click on the **Title** field.
 - The cursor moves to the **Title** field.
- 3 Enter the user's **Title**, then press **Tab**.
 - A pull-down menu is available and may be used instead of typing the **Title**:
 - a Point the mouse on the arrow to the right of the **Title** field.
 - b While holding the mouse pointer button down, **highlight** the **Title** you require.
 - c **Release** the mouse button.
 - The title you have chosen appears in the **Title** field.
 - The Titles in the drop-down box are **Dr, Mr, Ms, Miss, Mrs,** and **Rev.**
 - The cursor moves to the **First Name** field.
- 4 Enter the user's **first name**, then press **Tab**.
 - The cursor moves to the **MI** field.
- 5 Enter the user's **middle initial**, then press **Tab**.
 - The cursor moves to the **Last Name** field.
- 6 Enter the user's **last name**, then press **Tab**.
 - The cursor moves to the **Email:** field.
- 7 Enter the user's **Email:** address, then press **Tab**.
 - The cursor moves to the **User ID:** field.
- 8 Enter the **User ID:**, and then press **Tab**.
 - The cursor moves to the **Organization:** field.
- 9 Enter the user's **organization:**, and then press **Tab**.
 - The cursor moves to pull-down arrow next to the **Affiliation:** field.
- 10 Click on the pull-down arrow next to the **Affiliation:** field.
 - A pull-down menu appears with choices of **K-12, Commercial, Government, University,** and **Other.**
- 11 Click on the choice indicating the user's affiliation.
 - The selected choice appears in the **Affiliation:** field.
- 12 Click on the **User Verification Key:** field.
 - The cursor moves to the **User Verification Key:** field.

- 13 Enter the user's **User Verification Key:**, then press **Tab**.
- The cursor moves to the pull-down arrow next to the **Home DAAC:** field.
- 14 Click on the pull-down arrow next to the **Home DAAC:** field.
- A pull-down menu appears with choices of **ASF, CSN, EDC, GSF, JPL, LAR, MDC, MSF, NSC, ORN, RBD, SMC,** and **VTC**.
- 15 Click on the three-letter choice for the home DAAC.
- The selected three-letter choice appears in the **Home DAAC:** field.
- 16 Click on the **Project:** field.
- The cursor moves to the **Project:** field.
- 17 Enter the **Project:** and then press **Tab**.
- The cursor moves to the pull-down arrow next to the **Primary Area of Study:** field.
- 18 Click on the pull-down arrow next to the **Primary Area of Study:** field.
- A pull-down menu appears with a number of choices.
- 19 Click on the choice reflecting the user's Primary Area of Study.
- The **Personal Information** folder is complete.

Table 19.1-5. Enter Personal Information for Account

Step	What to Do	Action to Take
1	Select Personal Information folder	single-click
2	Move cursor to Title: field	single-click
3	Enter user's Title	enter text; press Tab
4	Enter user's First Name	enter text; press Tab
5	Enter user's Middle Initial	enter text; press Tab
6	Enter user's Last Name	enter text; press Tab
7	Enter user's Email address	enter text; press Tab
8	Enter the User ID	enter text; press Tab
9	Enter the user's Organization	enter text; press Tab
10	Open Affiliation: pull-down menu	single-click
11	Select the user's Affiliation	single-click
12	Move cursor to User Verification Key: field	single-click
13	Enter the user's User Verification Key	enter text; press Tab
14	Open Home DAAC: pull-down menu	single-click
15	Select the user's Home DAAC	single-click
16	Move cursor to Project: field	single-click
17	Enter the user's Project	enter text; press Tab
18	Open Primary Area of Study: pull-down menu	single-click
19	Select the user's Primary Area of Study	single-click

19.1.3.2 Enter Mailing Address for Account

The **Mailing Address** is used for normal correspondence, and may be different from the shipping and billing addresses. User Services is responsible for maintaining up-to-date mailing addresses. This procedure assumes that the operator has the ECS User Account Management tool opened at the SMC with the **Request Account** tab selected. Table 19.1-6 presents the steps required to enter the mailing address for an account. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Click the **Mailing Address** folder tab.
 - The **Mailing Address** folder opens.
- 2 Click on the first **Address:** field.
- 3 Enter the user's **mailing address**, then press **Tab**.
 - The cursor moves to the second **Address:** field.
- 4 If a second address field is needed to complete the user's **mailing address**, enter the **mailing address**, then press **Tab**.
 - If a second address field is not needed, press **Tab** to bypass the field.
 - The cursor moves to the third **Address:** field.
- 5 If a third address field is needed to complete the user's **Mailing Address**, enter the **mailing address**, then press **Tab**.
 - If a third address field is not needed, press **Tab** to bypass the field.
 - The cursor moves to the **City:** field.
- 6 Enter the **City:** to which regular correspondence is sent, then press **Tab**.
 - The cursor moves to the pull-down arrow next to the **State/Province:** field.
- 7 Click on the pull-down arrow next to the **State/Province:** field.
 - A pull-down menu appears permitting choice among a list of states.
- 8 Click on the choice for the user's **State** or **Province** for the **mailing address**, then press **Tab**.
 - The cursor moves to the **Zip/Postal Code:** field.
- 9 Enter the **Zip/Postal Code:** for the mailing address, then press **Tab**.
 - The cursor moves to the pull-down arrow next to the **Country:** field.
- 10 Click on the pull-down arrow next to the **Country:** field.
 - A pull-down menu appears permitting choice among a list of countries.

11 Click on the choice for the **Country:** for the **mailing address**, then press **Tab**.

- The cursor moves to the **Telephone:** field.

12 Enter the **Telephone number** used at the mailing address, then press **Tab**.

- The cursor moves to the **Fax:** field.

13 Enter the **Fax number** used at the mailing address, then press **Tab**.

- The **Mailing Address** folder is now complete.

Table 19.1-6. Enter Mailing Address for Account

Step	What to Do	Action to Take
1	Select Mailing Address folder	single-click
2	Move cursor to first Address: field	single-click
3	Enter user's mailing address	enter text; press Tab
4	Enter any second line of user's mailing address	enter text; press Tab
5	Enter any third line of user's mailing address	enter text; press Tab
6	Enter city of user's mailing address	enter text; press Tab
7	Open State/Province: pull-down menu	single-click
8	Select State/Province of the user's mailing address	single-click ; press Tab
9	Enter the Zip/Postal Code	enter text; press Tab
10	Open Country: pull-down menu	single-click
11	Select Country of the user's mailing address	single-click ; press Tab
12	Enter telephone number	enter text; press Tab
13	Enter fax number	enter text; press Tab

19.1.3.3 Enter Shipping Address for Account

The **Shipping Address** folder contains the address for shipping data and may be different from the mailing and billing addresses. User Services always confirms the shipping address with the user before shipping data. This procedure assumes that the operator has the ECS User Account Management tool opened at the SMC with the **Request Account** tab selected. Table 19.1-7 presents the steps required to enter the shipping address for an account. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

1 Click the **Shipping Address** folder tab.

- The **Shipping Address** folder opens.

2 Click on the **Title:** field.

- The cursor moves to the **Title:** field.

- 3 Enter the user's **Title**, then press **Tab**.
 - A pull-down menu is available and may be used instead of typing the **Title**:
 - a Point the mouse on the arrow to the right of the **Title**: field.
 - b While holding the mouse pointer button down, **highlight** the **Title** you require.
 - c **Release** the mouse button.
 - The title you have chosen appears in the **Title**: field.
 - The Titles in the drop-down box are **Dr**, **Mr**, **Ms**, **Miss**, **Mrs**, and **Rev**.
 - The cursor moves to the **First Name**: field.
- 4 Enter the user's **first name**, then press **Tab**.
 - The cursor moves to the **MI**: field.
- 5 Enter the user's **middle initial**, then press **Tab**.
 - The cursor moves to the **Last Name**: field.
- 6 Enter the user's **last name**, then press **Tab**.
 - The cursor moves to the first **Address**: field.
- 7 Enter the user's **Shipping Address**, then press **Tab**.
 - The cursor moves to the second **Address**: field.
- 8 If a second address field is needed to complete the user's **Shipping Address**, enter the **Shipping Address**, then press **Tab**.
 - If a second address field is not needed, press **Tab** to bypass the field.
 - The cursor moves to the third **Address**: field.
- 9 If a third address field is needed to complete the user's **Shipping Address**, enter the **Shipping Address**, then press **Tab**.
 - If a third address field is not needed, press **Tab** to bypass the field.
 - The cursor moves to the **Organization**: field.
- 10 Enter the user's **Organization**, then press **Tab**.
 - The cursor moves to the **State/Province**: field.
- 11 Click on the pull-down arrow next to the **State/Province**: field.
 - A pull-down menu appears permitting choice among a list of states.
- 12 Click on the choice for the user's **State** or **Province** for the shipping address, then press **Tab**.
 - The cursor moves to the **City**: field.

- 13 Enter the **City:** to which the data will be shipped, then press **Tab**.
- The cursor moves to the pull-down arrow next to the **Zip/Postal Code:** field.
- 14 Enter the **Zip/Postal Code:** for the shipping address, then press **Tab**.
- The cursor moves to the pull-down arrow next to the **Country:** field.
- 15 Click on the pull-down arrow next to the **Country:** field.
- A pull-down menu appears permitting choice among a list of countries.
- 16 Click on the choice for the **Country:** to which the data will be shipped, then press **Tab**.
- The cursor moves to the **Telephone:** field.
- 17 Enter the **Telephone number** used at the shipping address, then press **Tab**.
- The cursor moves to the **Fax:** field.
- 18 Enter the **Fax number** used at the shipping address, then press **Tab**.
- The **Shipping Address** folder is now complete.

Table 19.1-7. Enter Shipping Address for Account

Step	What to Do	Action to Take
1	Select Shipping Address folder	single-click
2	Move cursor to Title: field	single-click
3	Enter user's Title	enter text; press Tab
4	Enter user's First Name	enter text; press Tab
5	Enter user's Middle Initial	enter text; press Tab
6	Enter user's Last Name	enter text; press Tab
7	Enter user's shipping address	enter text; press Tab
8	Enter any second line of user's shipping address	enter text; press Tab
9	Enter any third line of user's shipping address	enter text; press Tab
10	Enter the user's organization	enter text; press Tab
11	Open State/Province: pull-down menu	single-click
12	Select State/Province of the user's shipping address	single-click ; press Tab
13	Enter city of user's shipping address	enter text; press Tab
14	Enter the Zip/Postal Code	enter text; press Tab
15	Open Country: pull-down menu	single-click
16	Select Country of the user's shipping address	single-click ; press Tab
17	Enter telephone number	enter text; press Tab
18	Enter fax number	enter text; press Tab

19.1.3.4 Enter Billing Address for Account

The **Billing Address** is the address to which payment-due billings are sent and may be different from the mailing and shipping addresses. User Services is responsible for maintaining up-to-date billing addresses. This procedure assumes that the operator has the ECS User Account Management tool opened at the SMC with the **Request Account** tab selected. Table 19.1-8 presents the steps required to enter the billing address for an account. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Click the **Billing Address** folder tab.
 - The **Billing Address** folder opens.
- 2 Click on the **Title:** field.
 - The cursor moves to the **Title:** field.
- 3 Enter the user's **Title**, then press **Tab**.
 - A pull-down menu is available and may be used instead of typing the **Title**:
 - a Point the mouse on the arrow to the right of the **Title:** field.
 - b While holding the mouse pointer button down, **highlight** the **Title** you require.
 - c **Release** the mouse button.
 - The title you have chosen appears in the **Title:** field.
 - The Titles in the drop-down box are **Dr, Mr, Ms, Miss, Mrs,** and **Rev.**
 - The cursor moves to the **First Name:** field.
- 4 Enter the user's **first name**, then press **Tab**.
 - The cursor moves to the **MI:** field.
- 5 Enter the user's **middle initial**, then press **Tab**.
 - The cursor moves to the **Last Name:** field.
- 6 Enter the user's **last name**, then press **Tab**.
 - The cursor moves to the first **Address:** field.
- 7 Enter the user's **Billing Address**, then press **Tab**.
 - The cursor moves to the second **Address:** field.
- 8 If a second address field is needed to complete the user's **Billing Address**, enter the **Billing Address**, then press **Tab**.
 - If a second address field is not needed, press **Tab** to bypass the field.
 - The cursor moves to the third **Address:** field.

- 9 If a third address field is needed to complete the user's **Billing Address**, enter the **Billing Address**, then press **Tab**.
 - If a third address field is not needed, press **Tab** to bypass the field.
 - The cursor moves to the **Organization:** field.
- 10 Enter the user's **Organization**, then press **Tab**.
 - The cursor moves to the **City:** field.
- 11 Enter the **City:** to which the payment due billings will be sent, then press **Tab**.
 - The cursor moves to the pull-down arrow next to the **State/Province:** field.
- 12 Click on the pull-down arrow next to the **State/Province:** field.
 - A pull-down menu appears permitting choice among a list of states.
- 13 Click on the choice for the user's **State** or **Province** for the billing address, then press **Tab**.
 - The cursor moves to the **Zip/Postal Code:** field.
- 14 Enter the **Zip/Postal Code:** for the billing address, then press **Tab**.
 - The cursor moves to the pull-down arrow next to the **Country:** field.
- 15 Click on the pull-down arrow next to the **Country:** field.
 - A pull-down menu appears permitting choice among a list of countries.
- 16 Click on the choice for the **Country:** to which the payment due billings will be sent, then press **Tab**.
 - The cursor moves to the **Telephone:** field.
- 17 Enter the **Telephone number** used at the billing address, then press **Tab**.
 - The cursor moves to the **Fax:** field.
- 18 Enter the **Fax number** used at the billing address, then press **Tab**.
 - The **Billing Address** folder is now complete.

Table 19.1-8. Enter Billing Address for Account

Step	What to Do	Action to Take
1	Select Billing Address folder	single-click
2	Move cursor to Title: field	single-click
3	Enter user's Title	enter text; press Tab
4	Enter user's First Name	enter text; press Tab
5	Enter user's Middle Initial	enter text; press Tab
6	Enter user's Last Name	enter text; press Tab
7	Enter user's billing address	enter text; press Tab
8	Enter any second line of user's billing address	enter text; press Tab
9	Enter any third line of user's billing address	enter text; press Tab
10	Enter the user's organization	enter text; press Tab
11	Enter city of user's billing address	enter text; press Tab
12	Open State/Province: pull-down menu	single-click
13	Select State/Province of the user's billing address	single-click ; press Tab
14	Enter the Zip/Postal Code	enter text; press Tab
15	Open Country: pull-down menu	single-click
16	Select Country of the user's billing address	single-click ; press Tab
17	Enter telephone number	enter text; press Tab
18	Enter fax number	enter text; press Tab

19.1.3.5 Enter Account Information and Create the User Account

The **Account Information** folder contains the date the account was created, expiration date, account number, privilege level, NASA User designation, V0 Gateway User Category, V0 Gateway User Type, V0 Gateway Password, and indication whether the user is authorized to order ASTER L1B data. Once the information is entered in this folder, completing all required information in the five sub-folders under the **Request Account** tab, a click on the **Create Account** button at the bottom of the window establishes the account. It also results in automatic dispatch of an e-mail message to the user's e-mail address with notification that the account has been created. The User Services representative will complete the account registration process by providing the user with the initial ECS account password (in this special case where User Services is creating an account for a user; normally, when a user registers through access to the URL and web interface, the password is selected at that time by the user as part of the registration process). The password dissemination is done in accordance with local DAAC policy. The system deletes an account when the expiration date is reached. One week prior to the expiration date, an e-mail message is sent to the user and to User Services with notification that the account will be deleted on the expiration date. This date is ordinarily used when an account is "cancelled" (placed on probation due to non-payment of bills). This procedure assumes that the operator has the ECS User Account Management tool opened at the SMC with the **Request Account** tab selected. Table 19.1-9 presents the steps required to enter the account information. If you are already familiar with the procedure, you may prefer to use this quick-

step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Click the **Account Information** folder.
 - The **Account Information** folder information is displayed.
- 2 Click on the **Expiration Date:** field.
 - The cursor moves to the **Expiration Date:** field.
- 3 Enter the **Expiration Date** only if required by the DAAC for new accounts, then press **Tab**.
 - The cursor moves to the **Privilege Level:** field.
- 4 Click on the pull-down arrow next to the **Privilege Level:** field.
 - A pull-down menu appears with choices of **XPRESS**, **VHigh**, **HIGH**, **NORMAL**, and **LOW**.
- 5 Click on the appropriate choice for **Privilege Level**.
 - The selected choice appears in the **Privilege Level:** field.
- 6 Click on the pull-down arrow next to the **NASA User:** field.
 - A pull-down menu appears with choices of **Privileged**, **Regular**, and **Non-NASA**.
- 7 Click on the appropriate choice for **NASA User**.
 - The selected choice appears in the **NASA User:** field.
- 8 Click on the pull-down arrow next to the **V0 Gateway Category:** field.
 - A pull-down menu appears with the choices of **USA** and **Non-USA**.
- 9 Click on the appropriate choice for **V0 Gateway Category**.
 - The selected choice appears in the **V0 Gateway Category:** field.
- 10 Click on the pull-down arrow next to the **V0 Gateway User Type:** field.
 - A pull-down menu appears with the choices of **DAACOPS**, **ECSDEV**, **V0CERES**, and **GUEST**.
- 11 Click on the appropriate choice for **V0 Gateway User Type**.
 - The selected choice appears in the **V0 Gateway User Type:** field.
- 12 Click in the **V0 Gateway Password:** field.
 - The cursor moves to the **V0 Gateway Password:** field.
- 13 Enter a password that can be used temporarily with the account until the user changes it to a personally selected one, and note the password to be sent to the user.
 - The typed entry appears in the **V0 Gateway Password:** field.

14 If the user is to be authorized for ASTER L1B requests, click on the check button next to **Authorize for ASTER L1B**.

- The check button appears to be depressed.
- The **Account Information** folder is complete.

15 When the information is complete, click the **Create Account** button.

- The account is created; a confirming email is sent to the user and the account and its information is now available in the approved list on the **Profile Account** folder.

Table 19.1-9. Enter Account Information and Create the User Account

Step	What to Do	Action to Take
1	Select Account Information folder	single-click
2	Move cursor to Expiration Date: field	single-click
3	If required by DAAC, enter expiration date	enter text; press Tab
4	Open Privilege Level: pull-down menu	single-click
5	Select appropriate privilege level	single-click
6	Open NASA User: pull-down menu	single-click
7	Select choice for NASA User	single-click
8	Open V0 Gateway Category: pull-down menu	single-click
9	Select choice for V0 Gateway Category	single-click
10	Open V0 Gateway User Type: pull-down menu	single-click
11	Select choice for V0 Gateway User Type	single-click
12	Move cursor to V0 Gateway Password: field	single-click
13	Enter Password	enter text
14	If appropriate, select check button to Authorize for ASTER L1B	single-click
15	Activate the Create Account button	single-click

19.1.4 Edit/Modify an Existing Account

User Services has the responsibility of maintaining ECS user accounts. Part of this responsibility is to stay in close contact with the user to ensure that the records containing the users' shipping and billing addresses, as well as the remainder of the information maintained in the user account folders, are up-to-date. There are six folders containing information about the user. The six folders are maintained in the ECS User Account Management tool. Three of the folders contain addresses: **Mailing Address**, **Shipping Address**, and **Billing Address**. All the addresses can be the same; however, some companies may have different addresses for accounts receivable, regular correspondence, and the shipment of data. When an address change requested by a user does not indicate which address folder to change, User Services must contact the user for this information. User Services may have reviewed the previous address folders and noticed that the

three folders contained the same previous address; however, it is inappropriate to assume that the same circumstances apply now. Always contact the user to make sure. The remaining three folders contain **Personal Information**, **Account Information**, and **DAR Information**. The **Profile Account** folder, which is located in the ECS User Account Management tool, is used for all editing and modifications.

19.1.4.1 Edit/Modify Personal Information

Table 19.1-10 presents the steps required to edit/modify personal information for a user's account. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the **ECS User Account Management** application GUI at the SMC (refer to Procedure 19.1.1 **Launch Account Management Application Using UNIX Commands**).
 - The **ECS User Account Management** window is displayed; at the SMC, two top-level tabs are displayed: **Request Account** and **Profile Account**.
- 2 Click on the **Profile Account** tab.
 - Folders and fields applicable to existing accounts are displayed.
- 3 Click on the **Retrieve by DAAC** option button and select your DAAC from the displayed list, or select **All**.
 - The selected choice is displayed on the option button.
- 4 Click on the **Retrieve** button.
 - The account list field displays the list of accounts for the option selected in Step 2.
- 5 If desired, enter a search criterion, either using the **Find** field (located to the right of the **Find** button just below the account listing box) and clicking **Find**, or by clicking on the **User ID** or **Last Name** button and entering an appropriate ID or name in the associated text field; click on the **Retrieve** button.
 - Account(s) meeting the entered search criterion are displayed (*Note*: The search functions are case-sensitive.)
- 6 Scroll through the accounts listed (if necessary) until the desired account is visible, then click on the account to highlight it.
 - Six folders are displayed that contain detailed information about the selected account: **Account Information**, **Personal Information**, **Shipping Address**, **Billing Address**, **Mailing Address**, and **DAR Information**.
- 7 Click on the **Personal Information** tab.
 - The **Personal Information** folder information is displayed.

- 8 Click in the field where the information is to be modified (e.g., if the organization with which the user is affiliated is to be changed, click in the **Organization:** field).
 - The cursor moves to the selected field.
- 9 Enter the new information, and then press the **Tab** key.
 - The cursor moves to the next field.
- 10 Repeat Steps 8 and 9 for any additional information to be changed.
- 11 Click the **Apply Edit** button to implement the change(s) to the **Personal Information** folder.
 - A confirmation dialog is displayed asking **Do you really want to apply the edit?** and providing buttons labeled **Yes**, **No**, and **Help**.
- 12 Click on the **Yes** button in the dialog box.
 - The edit is applied and the changed information is reflected in the account data.

Table 19.1-10. Edit/Modify Personal Information

Step	What to Do	Action to Take
1	Launch the ECS User Account Management GUI at the SMC	use Procedure 19.1.1
2	Select Profile Account tab	single-click
3	Select DAAC (Retrieve by DAAC option button)	click option
4	Activate Retrieve button	single-click
5	Filter with Find or search criterion field and Retrieve	enter text; single-click
6	Scroll and highlight desired account	single-click
7	Select Personal Information tab	single-click
8	Move cursor to field to be changed	single-click
9	Enter changes	enter text; press Tab
10	Repeat Steps 8 and 9 for any additional changes	
11	Activate the Apply Edit button	single-click
12	Activate the Yes button	single-click

19.1.4.2 Edit/Modify Mailing Address

Table 19.1-11 presents the steps required to edit/modify the mailing address for a user's account. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the **ECS User Account Management** application GUI at the SMC (refer to Procedure 19.1.1 **Launch Account Management Application Using UNIX Commands**).
 - The **ECS User Account Management** window is displayed; at the SMC, two top-level tabs are displayed: **Request Account** and **Profile Account**.
- 2 Click on the **Profile Account** tab.
 - Folders and fields applicable to existing accounts are displayed.
- 3 Click on the **Retrieve by DAAC** option button and select your DAAC from the displayed list, or select **All**.
 - The selected choice is displayed on the option button.
- 4 Click on the **Retrieve** button.
 - The account list field displays the list of accounts for the option selected in Step 2.
- 5 If desired, enter a search criterion, either using the **Find** field (located to the right of the **Find** button just below the account listing box) and clicking **Find**, or by clicking on the **User ID** or **Last Name** button and entering an appropriate ID or name in the associated text field; click on the **Retrieve** button.
 - Account(s) meeting the entered search criterion are displayed (*Note*: The search functions are case-sensitive.)
- 6 Scroll through the accounts listed (if necessary) until the desired account is visible, then click on the account to highlight it.
 - Six folders are displayed that contain detailed information about the selected account: **Account Information**, **Personal Information**, **Shipping Address**, **Billing Address**, **Mailing Address**, and **DAR Information**.
- 7 Click on the **Mailing Address** tab.
 - The **Mailing Address** folder information is displayed.
- 8 Click in the field where the information is to be modified (e.g., if the city in the mailing address is to be changed, click in the **City:** field).
 - The cursor moves to the selected field.
- 9 Enter the new information, and then press the **Tab** key.
 - The cursor moves to the next field.
- 10 Repeat Steps 8 and 9 for any additional information to be changed.
- 11 Click the **Apply Edit** button to implement the change(s) to the **Mailing Address** folder.
 - A confirmation dialog is displayed asking **Do you really want to apply the edit?** and providing buttons labeled **Yes**, **No**, and **Help**.

12 Click on the **Yes** button in the dialog box.

- The edit is applied and the changed information is reflected in the account data.

Table 19.1-11. Edit/Modify Mailing Address

Step	What to Do	Action to Take
1	Launch the ECS User Account Management GUI at the SMC	use Procedure 19.1.1
2	Select Profile Account tab	single-click
3	Select DAAC (Retrieve by DAAC option button)	click option
4	Activate Retrieve button	single-click
5	Filter with Find or search criterion field and Retrieve	enter text; single-click
6	Scroll and highlight desired account	single-click
7	Select Mailing Address tab	single-click
8	Move cursor to field to be changed	single-click

19.1.4.4 Edit/Modify Billing Address

Table 19.1-13 presents the steps required to edit/modify the billing address for a user's account. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the **ECS User Account Management** application GUI at the SMC (refer to Procedure 19.1.1 **Launch Account Management Application Using UNIX Commands**).
 - The **ECS User Account Management** window is displayed; at the SMC, two top-level tabs are displayed: **Request Account** and **Profile Account**.
- 2 Click on the **Profile Account** tab.
 - Folders and fields applicable to existing accounts are displayed.
- 3 Click on the **Retrieve by DAAC** option button and select your DAAC from the displayed list, or select **All**.
 - The selected choice is displayed on the option button.
- 4 Click on the **Retrieve** button.
 - The account list field displays the list of accounts for the option selected in Step 2.

- 5 If desired, enter a search criterion, either using the **Find** field (located to the right of the **Find** button just below the account listing box) and clicking **Find**, or by clicking on the **User ID** or **Last Name** button and entering an appropriate ID or name in the associated text field; click on the **Retrieve** button.
 - Account(s) meeting the entered search criterion are displayed (*Note*: The search functions are case-sensitive.)
- 6 Scroll through the accounts listed (if necessary) until the desired account is visible, then click on the account to highlight it.
 - Six folders are displayed that contain detailed information about the selected account: **Account Information**, **Personal Information**, **Shipping Address**, **Billing Address**, **Mailing Address**, and **DAR Information**.
- 7 Click on the **Billing Address** tab.
 - The **Billing Address** folder information is displayed.
- 8 Click in the field where the information is to be modified (e.g., if the city in the billing address is to be changed, click in the **City:** field).
 - The cursor moves to the selected field.
- 9 Enter the new information, and then press the **Tab** key.
 - The cursor moves to the next field.
- 10 Repeat Steps 8 and 9 for any additional information to be changed.
- 11 Click the **Apply Edit** button to implement the change(s) to the **Billing Address** folder.
 - A confirmation dialog is displayed asking **Do you really want to apply the edit?** and providing buttons labeled **Yes**, **No**, and **Help**.
- 12 Click on the **Yes** button in the dialog box.
 - The edit is applied and the changed information is reflected in the account data.

Table 19.1-13. Edit/Modify Billing Address

Step	What to Do	Action to Take
1	Launch the ECS User Account Management GUI at the SMC	use Procedure 19.1.1
2	Select Profile Account tab	single-click
3	Select DAAC (Retrieve by DAAC option button)	click option
4	Activate Retrieve button	single-click
5	Filter with Find or search criterion field and Retrieve	enter text; single-click
6	Scroll and highlight desired account	single-click
7	Select Billing Address tab	single-click
8	Move cursor to field to be changed	single-click
9	Enter changes	enter text; press Tab
10	Repeat Steps 8 and 9 for any additional changes	
11	Activate the Apply Edit button	single-click
12	Activate the Yes button	single-click

19.1.4.5 Edit/Modify Account Information

Table 19.1-14 presents the steps required to edit/modify the account information for a user's account. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the **ECS User Account Management** application GUI at the SMC (refer to Procedure 19.1.1 **Launch Account Management Application Using UNIX Commands**).
 - The **ECS User Account Management** window is displayed; at the SMC, two top-level tabs are displayed: **Request Account** and **Profile Account**.
- 2 Click on the **Profile Account** tab.
 - Folders and fields applicable to existing accounts are displayed.
- 3 Click on the **Retrieve by DAAC** option button and select your DAAC from the displayed list, or select **All**.
 - The selected choice is displayed on the option button.
- 4 Click on the **Retrieve** button.
 - The account list field displays the list of accounts for the option selected in Step 2.

- 5 If desired, enter a search criterion, either using the **Find** field (located to the right of the **Find** button just below the account listing box) and clicking **Find**, or by clicking on the **User ID** or **Last Name** button and entering an appropriate ID or name in the associated text field; click on the **Retrieve** button.
 - Account(s) meeting the entered search criterion are displayed (*Note*: The search functions are case-sensitive.)
- 6 Scroll through the accounts listed (if necessary) until the desired account is visible, then click on the account to highlight it.
 - Six folders are displayed that contain detailed information about the selected account: **Account Information**, **Personal Information**, **Shipping Address**, **Billing Address**, **Mailing Address**, and **DAR Information**.
- 7 Click on the **Account Information** tab.
 - The **Account Information** folder information is displayed.
- 8 Click in the field where the information is to be modified (e.g., if the user's privilege level is to be changed, click on the pull-down arrow next to the **Privilege Level:** field).
 - A pull-down menu appears with choices of **XPRESS**, **VHigh**, **HIGH**, **NORMAL**, and **LOW**.
- 9 Click on the choice for the new privilege level, and then press the **Tab** key.
 - The selected choice appears in the **Privilege Level:** field.
- 10 Repeat Steps 8 and 9 for any additional information to be changed by use of pull-down menus.
 - *Note*: The **V0 Gateway Password:** field is not available for change (grayed out). If a user forgets the password, there is a link on the EOS Data Gateway (EDG) start page for **Forgot My Password**, through which a user can have a new, system-generated password sent by email. There is no requirement for User Services to change a user's password.
- 11 If the change is to authorize the user for ASTER L1B requests, or if the user is currently authorized for ASTER L1B requests but the authorization is to be removed, click on the check button next to **Authorize for ASTER L1B**.
 - The check button appears to change state, from unselected to depressed or depressed to unselected, respectively.
- 12 Click the **Apply Edit** button to implement the change(s) to the **Account Information** folder.
 - A confirmation dialog is displayed asking **Do you really want to apply the edit?** and providing buttons labeled **Yes**, **No**, and **Help**.
- 13 Click on the **Yes** button in the dialog box.
 - The edit is applied and the changed information is reflected in the account data.

Table 19.1-14. Edit/Modify Account Information

Step	What to Do	Action to Take
1	Launch the ECS User Account Management GUI at the SMC	use Procedure 19.1.1
2	Select Profile Account tab	single-click
3	Select DAAC (Retrieve by DAAC option button)	click option
4	Activate Retrieve button	single-click
5	Filter with Find or search criterion field and Retrieve	enter text; single-click
6	Scroll and highlight desired account	single-click
7	Select Shipping Address tab	single-click
8	Open pull-down menu in field to be changed by selection from pull-down menu	single-click
9	Select choice from pull-down menu	single-click
10	Repeat Steps 8 and 9 for any additional changes for fields with pull-down menus	
11	If ASTER L1B access is to be changed, activate check button for Authorize for ASTER L1B	single-click
12	Activate the Apply Edit button	single-click
13	Activate the Yes button	single-click

19.1.4.6 Edit/Modify DAR Information for Account

The **DAR Information** folder contains an indication of user privileges for ASTER expedited data requests and ASTER categories. Such special privileges cannot be selected by a user when registering on the registration web page accessible from the EOS Data Gateway (EDG) tool. Instead the user who needs special privileges (e.g., permission to submit an ASTER Data Acquisition Request) must contact User Services to request the authorization. For a user approved for the special privilege, User Services then accesses the Account Management tool at the SMC and edits the **DAR Information** folder to provide the authorization. Table 19.1-15 presents the steps required to modify the DAR information for authorization. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the **ECS User Account Management** application GUI at the SMC (refer to Procedure 19.1.1 **Launch Account Management Application Using UNIX Commands**).
 - The **ECS User Account Management** window is displayed; at the SMC, two top-level tabs are displayed: **Request Account** and **Profile Account**.
- 2 Click on the **Profile Account** tab.
 - Folders and fields applicable to existing accounts are displayed.

- 3 Click on the **Retrieve by DAAC** option button and select your DAAC from the displayed list, or select **All**.
 - The selected choice is displayed on the option button.
- 4 Click on the **Retrieve** button.
 - The account list field displays the list of accounts for the option selected in Step 2.
- 5 If desired, enter a search criterion, either using the **Find** field (located to the right of the **Find** button just below the account listing box) and clicking **Find**, or by clicking on the **User ID** or **Last Name** button and entering an appropriate ID or name in the associated text field; click on the **Retrieve** button.
 - Account(s) meeting the entered search criterion are displayed (*Note*: The search functions are case-sensitive.)
- 6 Scroll through the accounts listed (if necessary) until the desired account is visible, then click on the account to highlight it.
 - Six folders are displayed that contain detailed information about the selected account: **Account Information**, **Personal Information**, **Shipping Address**, **Billing Address**, **Mailing Address**, and **DAR Information**.
- 7 Click the **DAR Information** folder.
 - The **DAR Information** folder opens.
 - The displayed fields indicate no ASTER privileges.
- 8 Click on the pull-down arrow to the right of the **Dar Expedited Data** field.
 - A pull-down menu appears with choices of **Yes** and **No**.
- 9 Click on the choice to indicate whether the user is (**Yes**) or is not (**No**) approved for requesting expedited data, then press **Tab**.
 - The selected choice appears in the **Dar Expedited Data** field and the cursor moves to the **Aster Category** field.
- 10 Click on the pull-down arrow to the right of the **Aster Category** field.
 - A pull-down menu appears with numerous choices for ASTER DAR privileges.
- 11 Click on the choice to indicate the category for which the user has been approved.
 - The **Aster Category** field displays the selected category.
- 12 Click the **Apply Edit** button to implement the change(s) to the **DAR Information** folder.
 - A confirmation dialog is displayed asking **Do you really want to apply the edit?** and providing buttons labeled **Yes**, **No**, and **Help**.

13 Click on the **Yes** button in the dialog box.

- The edit is applied and the changed information is reflected in the account data.

Table 19.1-15. Edit/Modify DAR Information

Step	What to Do	Action to Take
1	Launch the ECS User Account Management GUI at the SMC	use Procedure 19.1.1
2	Select Profile Account tab	single-click
3	Select DAAC (Retrieve by DAAC option button)	click option
4	Activate Retrieve button	single-click
5	Filter with Find or search criterion field and Retrieve	enter text; single-click
6	Scroll and highlight desired account	single-click
7	Select DAR Information tab	single-click
8	Open pull-down menu in Dar Expedited Data field	single-click
9	Select choice from pull-down menu	single-click
10	Open pull-down menu in Aster Category field	single-click
11	Select choice from pull-down menu	single-click
12	Activate Apply Edit button	single-click
13	Activate the Yes button	single-click

19.1.5 Delete an ECS Account

An ECS user can be deleted from the ECS database through the ECS User Account Management tool. Upon receipt of instructions to delete a user, User Services retrieves the user's account, validates the account scheduled for deletion, then completes the deletion. The Personal Information folder is generally the folder used to validate an account because it has the most information about the user (e.g., Name, Title, E-mail address, Organization, Telephone Number). Table 19.1-16 presents the steps required to delete an ECS account. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the **ECS User Account Management** application GUI at the SMC (refer to Procedure 19.1.1 **Launch Account Management Application Using UNIX Commands**).
 - The **ECS User Account Management** window is displayed; at the SMC, two top-level tabs are displayed: **Request Account** and **Profile Account**.
- 2 Click on the **Profile Account** tab.
 - Folders and fields applicable to existing accounts are displayed.

- 3 Click on the **Retrieve by DAAC** option button and select your DAAC from the displayed list, or select **All**.
 - The selected choice is displayed on the option button.
- 4 Click on the **Retrieve** button.
 - The account list field displays the list of accounts for the option selected in Step 2.
- 5 If desired, enter a search criterion, either using the **Find** field (located to the right of the **Find** button just below the account listing box) and clicking **Find**, or by clicking on the **User ID** or **Last Name** button and entering an appropriate ID or name in the associated text field; click on the **Retrieve** button.
 - Account(s) meeting the entered search criterion are displayed (*Note*: The search functions are case-sensitive.)
- 6 Scroll through the accounts listed (if necessary) until the desired account is visible, then click on the account to highlight it.
 - Six folders are displayed that contain detailed information about the selected account: **Account Information**, **Personal Information**, **Shipping Address**, **Billing Address**, **Mailing Address**, and **DAR Information**.
- 7 Click the **View Entire Profile** button to review the account information and verify that the selected account is the one to be deleted.
 - The User Profile screen displays the information contained in the **Personal Information** folder, **Account Information** folder, **Shipping Address** folder, **Billing Address** folder, **Mailing Address** folder, and the **DAR Information** folder.
 - View the folder to validate the account scheduled for deletion.
- 8 After examining the displayed information to verify the user's account, click the **Close** button to exit from the User Profile screen.
 - The User Profile screen is closed.
- 9 Click the **Delete Account** button.
 - A confirmation dialog is displayed asking **Do you really want to delete the user account?** and providing buttons labeled **Yes**, **No**, and **Help**.
- 10 Click on the **Yes** button in the dialog box.
 - The account is deleted and its entry is removed from the list of accounts.

Table 19.1-16. Delete an ECS Account

Step	What to Do	Action to Take
1	Launch the ECS User Account Management GUI at the SMC	use Procedure 19.1.1
2	Select Profile Account tab	single-click
3	Select DAAC (Retrieve by DAAC option button)	click option
4	Activate Retrieve button	single-click
5	Filter with Find or search criterion field and Retrieve	enter text; single-click
6	Scroll and highlight desired account	single-click
7	Activate the View Entire Profile button	single-click
8	Activate the Close button	single-click
9	Activate the Delete Account button	single-click
10	Activate the Yes button	single-click

19.1.6 Cancel an ECS Account (Probation)

User Services may cancel an ECS user account, which differs from deleting the account because it does not immediately remove the account from the database. It merely imposes a temporary probation period for the user's privileges, for an appropriate cause, such as failure to satisfy a payment due for services previously provided, or some other abuse of privileges. The process involves establishing an expiration date, upon which the account will be deleted from the database unless the cause of sanction is removed. If it becomes necessary to cancel an account, use the ECS User Account Management tool to retrieve and verify the account, and then proceed with the cancellation/sanction. Then contact the user with information that the account will be deleted and account privileges will be lost if the payment has not been received (or other cause has been rectified) by a specified date. Table 19.1-17 presents the steps required to cancel an ECS account (impose an expiration date). If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the **ECS User Account Management** application GUI at the SMC (refer to Procedure 19.1.1 **Launch Account Management Application Using UNIX Commands**).
 - The **ECS User Account Management** window is displayed; at the SMC, two top-level tabs are displayed: **Request Account** and **Profile Account**.
- 2 Click on the **Profile Account** tab.
 - Folders and fields applicable to existing accounts are displayed.
- 3 Click on the **Retrieve by DAAC** option button and select your DAAC from the displayed list, or select **All**.
 - The selected choice is displayed on the option button.

- 4 Click on the **Retrieve** button.
 - The account list field displays the list of accounts for the option selected in Step 2.
- 5 If desired, enter a search criterion, either using the **Find** field (located to the right of the **Find** button just below the account listing box) and clicking **Find**, or by clicking on the **User ID** or **Last Name** button and entering an appropriate ID or name in the associated text field; click on the **Retrieve** button.
 - Account(s) meeting the entered search criterion are displayed (*Note*: The search functions are case-sensitive.)
- 6 Scroll through the accounts listed (if necessary) until the desired account is visible, then click on the account to highlight it.
 - Six folders are displayed that contain detailed information about the selected account: **Account Information**, **Personal Information**, **Shipping Address**, **Billing Address**, **Mailing Address**, and **DAR Information**.
- 7 Click the **View Entire Profile** button to review the account information and verify that the selected account is the one to be canceled (placed on probation).
 - The User Profile screen displays the information contained in the **Personal Information** folder, **Account Information** folder, **Shipping Address** folder, **Billing Address** folder, **Mailing Address** folder, and the **DAR Information** folder.
 - View the folder to validate the account scheduled for cancellation.
- 8 After examining the displayed information to verify the user's account, click the **Close** button to exit from the User Profile screen.
 - The User Profile screen is closed.
- 9 Click the **Account Information** folder.
 - The **Account Information** folder information is displayed.
- 10 Click on the **Expiration Date:** field.
 - The cursor moves to the **Expiration Date:** field.
- 11 Enter an **Expiration Date** specifying the date on which the account is to be deleted if the user does not remove the cause for the probation.
 - The entered date is displayed in the **Expiration Date:** field.
- 12 Click the **Apply Edit** button to implement the change to the **Account Information** folder.
 - A confirmation dialog is displayed asking **Do you really want to apply the edit?** and providing buttons labeled **Yes**, **No**, and **Help**.
- 13 Click on the **Yes** button in the dialog box.
 - The edit is applied and the changed information is reflected in the account data.

- When the expiration date is reached, the account is automatically deleted from the system.
- If the user takes action to resolve the issue before the expiration date is reached, the account may be reinstated by repeating this procedure, but at Step 11 removing the expiration date or setting it back to any limit specified by DAAC policy.

Table 19.1-17. Cancel an ECS Account (Probation)

Step	What to Do	Action to Take
1	Launch the ECS User Account Management GUI at the SMC	use Procedure 19.1.1
2	Select Profile Account tab	single-click
3	Select DAAC (Retrieve by DAAC option button)	click option
4	Activate Retrieve button	single-click
5	Filter with Find or search criterion field and Retrieve	enter text; single-click
6	Scroll and highlight desired account	single-click
7	Activate the View Entire Profile button	single-click
8	Activate the Close button	single-click
9	Select the Account Information tab	single-click
10	Move the cursor to the Expiration Date: field	single-click
11	Enter Expiration Date	enter text
12	Activate the Apply Edit button	single-click
13	Activate the Yes button	single-click

19.1.7 Troubleshooting: Check Log Files for Account Management

Troubleshooting is a process of identifying the source of problems on the basis of observed trouble symptoms. The User Account Management tool is part of the ECS System Management Support Subsystem (MSS), and uses database functions in that subsystem. If the tool cannot be launched, or does not function (e.g., cannot retrieve accounts), you will need to ask the System Administrator to ensure that the User Registration/User Profile Server is functioning properly. It may be necessary to have the Database Administrator check to ensure that there are no problems with the database.

It is also possible to receive error messages when using the GUI while it is apparently functioning normally. Error messages and suggested corrective actions associated with the User Account Management tool are listed in Appendix A of the *Operations Tools Manual* (Document 609-CD-600-001).

Log files can often provide information that will identify possible sources of disruption in Account Management server function or communications, suggesting additional checks or actions that may help resolve the problem. Table 19.1-18 presents the steps required to check log files for account management. If you are already familiar with the procedure, you may prefer

to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 To log in to the host for the server and log(s) to be examined, type `/tools/bin/ssh <hostname>` and then press the **Return/Enter** key.
 - For `<hostname>`, use `<x>0mss21`, where `<x>` = **e** for EDC, **g** for GSFC, **l** for LaRC, or **n** for NSIDC.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type **yes** (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed `sshremote`, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 2.
 - If you have not previously set up a secure shell passphrase; go to Step 3.
- 2 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your *Passphrase* and then press the **Return/Enter** key. Go to Step 4.
 - The prompt reflects the login to the selected host.
- 3 At the `<user@remotehost>'s password:` prompt, type your *Password* and then press the **Return/Enter** key.
 - The prompt reflects the login to the selected host.
- 4 Type `cd /usr/ecs/<MODE>/CUSTOM/logs` and then press the **Return/Enter** key.
 - The prompt reflects the change to directory `/usr/ecs/<MODE>/CUSTOM/logs`.
- 5 To view a server log, type `pg filename` and then press the **Return/Enter** key.
 - *filename* refers to the account management log file to be reviewed (e.g., **EcMsAcRegUserSrvr.ALOG**, **EcMsAcRegUserSrvrDebug.log**).
 - The first page of the log file is displayed; additional sequential pages can be displayed by pressing the **Return/Enter** key at the `:` prompt.
 - Although this procedure has been written for the `pg` command, any UNIX editor or visualizing command (e.g., **vi**, **more**, **tail**) can be used to review the log file.
 - Typically, the `<server>Debug.log` captures more detailed information than the `<server>.ALOG`. However, for some servers (e.g., **SDSRV**), there may be significant detail in the `<server>.ALOG`. It is also important to note that the **DebugLevel** setting in the `<server>.CFG` file determines the level of detail captured in the `<server>Debug.log` (**0** is off, a setting of **1** captures status and errors, a setting of **2** captures major events, and a setting of **3** is a full trace recording of all activity). If the **DebugLevel** has been set to one of the lower levels during operations, the System Administrator may set it to **3** during troubleshooting.

- 6 Review the log file(s) to determine if there are any indications of connection problems or errors at start up.
 - The **EcMsAcRegUserSrvrDebug.log** file for the User Profile/User Registration server may contain an error message concerning **PF Init** or some connection error or problem (notify the System Administrator).
 - The **EcMsAcRegUserSrvr.ALOG** file may contain evidence of a Sybase error (e.g., **SybaseErrorCode1 =92014;SybaseErrorMessage1 ="x0mss21_srvr"** or **SybaseErrorCode2 =16;SybaseErrorMessage2 =""**) (notify the Database Administrator).
- 7 To exit the **pg** review of the log file, type **q** at the **:** prompt and then press the **Return/Enter** key.

Table 19.1-18. Check Log Files for Account Management

Step	What to Do	Action to Take
1	/tools/bin/ssh hostname	enter text; press Return/Enter
2	Passphrase (or Step 3)	enter text; press Return/Enter
3	Password	enter text; press Return/Enter
4	cd /usr/ecs/MODE/CUSTOM/logs	enter text; press Return/Enter
5	pg filename	enter text; press Return/Enter
6	Review log file	read text
7	To exit, type q at the : prompt	enter text; press Return/Enter

19.2 Create/Update a User Contact Log Record

Any User Services event (user contact for any reason) is a cue for the User Services representative to create a record in the User Contact Log. Each record is assigned a unique Log ID, which can be used later to retrieve the record for review or updating with new information. The record contains other information about the user, referred to as the “contact,” such as name, telephone number, e-mail address, home DAAC, and organization. It also documents the means of contact, the name of the person who received the contact, and the time of the contact, as well as descriptions of the reason for it.

The User Contact Log is a customized application of the Remedy commercial software package. The application is launched from the Remedy initial screen with a menu or button action. The contact log entries may then be saved, searched, retrieved, and modified. The capability to modify existing records permits tracking and updating information related to a user contact that has follow-up actions until it is closed.

Table 19.2-1 provides an Activity Checklist for creating and updating User Contact Log entries.

Table 19.2-1. Create/Update a User Contact Log Record - Activity Checklist

Order	Role	Task	Section	Complete?
1	User Services	Launch the Remedy User Contact Log Application	(P) 19.2.1	
2	User Services	Create a User Contact Log Record	(P) 19.2.2	
3	User Services	Update a User Contact Log Record	(P) 19.2.3	

19.2.1 Launch the Remedy User Contact Log Application

Table 19.2-2 presents the steps required to launch the Remedy User Contact Log application. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the UNIX command shell prompt, type **setenv DISPLAY *clientname*:0.0** and then press the **Return/Enter** key.
 - For *clientname*, use either the local terminal/workstation IP address or its machine name.
- 2 Start the log-in to the MSS client server by typing **/tools/bin/ssh *hostname*** (e.g., g0mss21, l0mss21, e0mss21, n0mss21) at the UNIX command shell prompt, and then press the **Return/Enter** key.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type yes (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 3.
 - If you have not previously set up a secure shell passphrase; go to Step 4.
- 3 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your **Passphrase** and then press the **Return/Enter** key. Go to Step 5.
- 4 At the **<user@remotehost>'s password:** prompt, type your **Password** and then press the **Return/Enter** key.
- 5 To change to the directory containing the utility script to start the Remedy tool, type **cd /usr/ecs/MODE/COTS/remedy/bin**, where **MODE** will likely be **TS1**, **TS2**, or **OPS**, and then press the **Return/Enter** key.
 - The working directory is changed to **/usr/ecs/MODE/COTS/remedy/bin**.

- 6 Type **aruser &** and then press the **Return/Enter** key.
 - A Remedy Action Request System logo window is displayed briefly, followed by a Remedy initial screen from which a number of ECS application forms, including the User Contact Log, may be launched.
- 7 Follow menu path **File → Open** or click on the leftmost button near the top of the window.
 - The **Open** dialog box is displayed, showing choices including: **RelB-Contact Log**, **RelB-TT-ForwardToSite**, **RelB-TroubleTickets**, and **TroubleTicket-Xfer**.
- 8 Click on **RelB-Contact Log** to highlight it and then click on the **New** button.
 - The **New RelB Contact Log** window is displayed.

Table 19.2-2. Launch the Remedy User Contact Log Application

Step	What to Do	Action to Take
1	setenv DISPLAY clientname:0.0	enter text; press Return/Enter
2	/tools/bin/ssh hostname	enter text; press Return/Enter
3	Passphrase (or Step 4)	enter text; press Return/Enter
4	Password	enter text; press Return/Enter
5	cd /usr/ecs/MODE/COTS/remedy/bin	enter text; press Return/Enter
6	aruser &	enter text; press Return/Enter
7	Menu path File → Open	click option
8	Highlight RelB-Contact Log and activate New button	clicks

19.2.2 Create a User Contact Log Record

Table 19.2-3 presents the steps required to create a User Contact Log record. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the **Remedy User Contact Log** application (refer to Procedure 19.2.1 **Launch the Remedy User Contact Log Application**).
 - The **New RelB Contact Log** window is displayed.
- 2 Click on the **Contact Method** field.
 - The cursor moves to the **Contact Method** field.

- 3 Enter the **Contact Method** (optional).
 - A drop-down menu may also be used:
 - Place the mouse pointer on the arrow to the right of the **Contact Method** field.
 - While holding the mouse pointer button down, drag to **highlight** the **Contact Method** of your choice.
 - **Release** the mouse button.
 - The highlighted contact method appears in the **Contact Method** field.
 - The methods in the drop-down box are **Phone**, **E-mail**, **Fax**, **US Mail**, and **Walk-in**.
- 4 Click on the **Short Description** field.
 - The cursor moves to the **Short Description** field, which is 128 characters long.
 - Queries that may later be used to locate existing User Contact Log records will search information in the **Short Description** field. Therefore, when you enter a short description, enter it with “search criteria” in mind.
- 5 Enter the **Short Description** (required).
 - The typed entry appears in the **Short Description** field.
- 6 Click on the **Set Received Time** button (optional).
 - The current time is displayed in the **Received Time** field.
- 7 Click on the **Long Description** field.
 - The cursor moves to the **Long Description** field (used when the description requires more detail than the **Short Description** field will allow).
 - The **Long Description** field is often used when a problem exists: it can help with the resolution of Trouble Tickets.
- 8 Enter a **Long Description** if needed (optional).
 - The typed entry appears in the **Long Description** field.
- 9 Click on the **Contact Id** field.
 - The cursor moves to the **Contact Id** field.
- 10 Enter the **Id** (User ID) of the person who contacted User Services.
 - The **Contact Id** is not required unless a Trouble Ticket is being created from the User Contact Log.

- 11** If a **Contact Id** was entered at **Step 10**, click the **Set Contact Information** button and then go to **Step 22**; otherwise, go to **Step 12**.
 - The system will automatically complete the **Contact Name**, **Contact Phone**, **Contact E-mail**, **Contact Home DAAC**, and **Contact Organization** fields, if the **Contact Id** has been entered (go to **Step 22**).
 - If the contact is not a registered Remedy user, the contact fields must be manually completed (go to **Step 12**).
- 12** If the contact information was not automatically entered at **Step 11**, click in the **Contact Name** field.
 - The cursor moves to the **Contact Name** field.
- 13** Enter the **Contact's Name** (optional).
 - The typed entry appears in the **Contact Name** field.
- 14** Click in the **Contact Phone** field.
 - The cursor moves to the **Contact Phone** field.
- 15** Enter the **Contact Phone** number (optional).
 - The typed entry appears in the **Contact Phone** field.
- 16** Click on the **Contact E-mail** field.
 - The cursor moves to the **Contact E-mail** field.
- 17** Enter the **Contact's E-mail address** (optional).
 - The typed entry appears in the **Contact E-mail** field.
- 18** Click on the **Contact Home DAAC** field.
 - The cursor moves to the **Contact Home DAAC** field.
- 19** Enter the **Contact Home DAAC** (optional).
 - The typed entry appears in the **Contact Home DAAC** field.
- 20** Click on the **Contact Organization** field.
 - The cursor moves to the **Contact Organization** field.
- 21** Enter the **Contact Organization** (optional).
 - The typed entry appears in the **Contact Organization** field.
- 22** When all contact information has been entered, click in the **Receiving Operator** field.
 - The cursor moves to the **Receiving Operator** field.

- 23 In the **Receiving Operator** field, enter the name of the operator (User Services Representative) who is creating the User Contact Log record.
- The typed entry appears in the **Receiving Operator** field.
- 24 Click in the **Category** field.
- The cursor moves to the **Category** field.
- 25 Enter the **Category**.
- A drop-down menu may also be used:
 - Place the mouse pointer on the arrow to the right of the **Category** field.
 - While holding the mouse pointer button down, drag to **highlight** the **Category** of your choice.
 - **Release** the mouse button.
 - The highlighted category appears in the **Category** field.
 - The categories in the drop-down box are **Suggestion, Complaint, Concern, Order, and Subscription**.
- 26 Click the **Save** button near the upper right corner of the window (or follow menu path **Actions→Save**).
- The User Contact Log record is created and submitted to the database.
 - A unique Id is generated for the record and entered into the **Log Id** field.
 - A message **Submit successful: ID=<site><nnn . . .>** to indicate the submission and provide the record ID number.

Table 19.2-3. Create a User Contact Log Record (1 of 2)

Step	What to Do	Action to Take
1	Launch the Remedy User Contact Log application	use Procedure 19.2.1
2	Move cursor to Contact Method field	single-click
3	Enter Contact Method	enter text (or use drop-down menu)
4	Move cursor to Short Description field	single-click
5	Enter Short Description	enter text
6	Activate Set Received Time button	single-click
7	Move cursor to Long Description field	single-click
8	Enter Long Description	enter text
9	Move cursor to Contact Id field	single-click
10	Enter Contact Id (required for Trouble Ticket)	enter text
11	Activate Set Contact Information button (if Id entered at Step 10; Go to Step 22)	single-click
12	Move cursor to Contact Name field	single-click

Table 19.2-3. Create a User Contact Log Record (2 of 2)

Step	What to Do	Action to Take
13	Enter Contact Name	enter text
14	Move cursor to Contact Phone field	single-click
15	Enter Contact Phone	enter text
16	Move cursor to Contact E-mail field	single-click
17	Enter Contact E-mail	enter text
18	Move cursor to Contact Home DAAC field	single-click
19	Enter Contact Home DAAC	enter text
20	Move cursor to Contact Organization field	single-click
21	Enter Contact Organization	enter text
22	Move cursor to Receiving Operator field	single-click
23	Enter Receiving Operator	enter text
24	Move cursor to Category field	single-click
25	Enter Category	enter text (or use drop-down menu)
26	Activate Save button (or menu Actions → Save)	single-click (or use menu)

19.2.3 Update a User Contact Log Record

When action is taken in relation to a user request for which there is an existing User Contact Log record, User Services updates the record. An update to the User Contact Log record therefore provides documentation of response to a request. The total record has several characteristics:

- It documents a user's initial request.
- It shows the progress or resolution of the contact that started the process.
- The User Contact Log record remains open until the request is completed.
- A User Contact Log record can be modified several times.
- For each modification, the log displays the operator that made the modification along with the date and time of the modification.

Table 19.2-4 presents the steps required to update a User Contact Log record. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the **Remedy User Contact Log** application (refer to Procedure 19.2.1 **Launch the Remedy User Contact Log Application**).
 - The **New RelB Contact Log** window is displayed.

- 2 Follow menu path **File→Open** or click on the leftmost button near the top of the window.
 - The **Open** dialog box is displayed, showing choices including: **RelB-Contact Log**, **RelB-TT-ForwardToSite**, **RelB-TroubleTickets**, and **RelB-TT-ForwardToSMC**.
- 3 Click on **RelB-Contact Log** to highlight it and then click on the **Search** button.
 - The **Search RelB Contact Log** window is displayed.
- 4 Click on the field to be used for finding the User Contact Log record to be updated (i.e., **Log Id** field, **Contact Name** field, **E-mail Address** field, or the **Short Description** field).
 - The cursor is displayed in the selected field.
- 5 Enter the information appropriate for the selected field (i.e., **Log Id**, **Contact Name**, **E-mail Address**, or something remembered from the **Short Description**).
 - The typed entry is displayed in the field.
- 6 Follow menu path **Actions→Search**.
 - The User Contact Log record for the data request is displayed.
- 7 Click on the **Comment Log** field.
- 8 Enter a **Comment** describing the update.
 - The comment should indicate the action(s) taken (e.g., **Order for data completed; 10 granules ordered.**).
- 9 Click the **Save** button near the upper right corner of the window (or follow menu path **Actions→Save**).
 - The User Contact Log record update is submitted to the database.
 - The **Modified-date** field will display the date and time of the modification.
 - The **Last-Modified-by** field will display the name of the User Services Representative under whose log-in the edit is made.
- 10 To close a User Contact Log record, select the **Log Status** button, while holding the mouse button down, drag it to **Close**, then release the mouse button. Then save as in Step 9.
 - The User Contact Log record is now closed.

Table 19.2-4. Update a User Contact Log Record

Step	What to Do	Action to Take
1	Launch the Remedy User Contact Log application	use Procedure 19.2.1
2	Menu path File→Open	click option

3	Highlight RelB-Contact Log and activate New button	clicks
4	Move cursor to field for search	single-click
5	Enter search information	enter text
6	Menu path Actions → Search	click option
7	Move cursor to Comment Log field	single-click
8	Enter Comment describing action taken for update	enter text
9	Activate Save button (or menu Actions→Save)	single-click (or use menu)
10	To close a record, use Log Status button to select Close (then save as in Step 9)	click-hold and drag; then single-click (or use menu)

19.3 Process an Order

User Services may be called upon to assist a user in working with the EOS Data Gateway (EDG) Search and Order Tool to locate and order data from ECS archives. Under some circumstances, a user may need even more help, requesting User Services to perform the entire process of locating and ordering data on behalf of that user. User Services may also be called upon to provide user support for access to ECS data through the Data Pool, a repository of selected granules with associated metadata and, if available, browse granules accessible through use of a web browser to search and download by FTP. Table 19.3-1 provides an activity checklist for tasks associated with data search and order.

Table 19.3-1. Process an Order - Activity Checklist

Order	Role	Task	Section	Complete?
1	Science User/ User Services	Search and Order Data using the EDG Search and Order Tool	(P) 19.3.1	
2	Science User/ User Services	Locate and Download Data from the Data Pool using the Data Pool Web Access	(P) 19.3.2	

19.3.1 Search and Order Data using the EDG Search and Order Tool

As a general rule, users trying to locate and obtain data from ECS probably should be directed to the EOS Data Gateway (EDG) web site to conduct their own searches. However, User Services can provide assistance or conduct the search for the user if needed. General information about data search and order, as well as specific on-line instructions, are available as follows:

- Guidance for user (User Manual for EOS Data Gateway) available on the WWW at the following URL: <http://redhook.gsfc.nasa.gov/~imswww/pub/imswelcome/>.
 - User Support links and News: technical information.
 - Frequently Asked Questions (FAQ): captures commonly sought information on terminology, search, data, and ordering with the EOS Data Gateway.

- Tutorial: introduction to the tool and how to find and order data.
- Several approaches are available to the user.
 - Web-based Search and Order tool, for quick data access using simple search criteria; also allows easy downloading of pre-selected popular data and images; available at location <http://redhook.gsfc.nasa.gov/~imswww/pub/imswelcome/>.
 - Data center-specific searches; if user knows where the desired data are stored, the specific center may have a specialized tool for ordering data. Furthermore, at <http://redhook.gsfc.nasa.gov/~imswww/pub/imswelcome/>, the initial page contains a link to "Other Data Gateway Sites" that offer access to the EDG tool at various DAACs with useful information and links specific to those sites.
 - User Services assistance; the user may elect to have User Services do the search instead of personally accessing one of the available tools; use the EDG Web Client Search and Order Tool.

If a user requests support from User Services to locate and order data, it is appropriate to retrieve the (registered) user's account profile (see Procedure 19.1.1.1 **Retrieve Individual Account Screens on Local Read-Only GUI**) and to create a User Contact Log record for the request (see Procedure 19.2.2 **Create a User Contact Log Record**). Table 19.3-2 presents the steps required to search and order data using the EDG search and order tool. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the UNIX command shell prompt, type **setenv DISPLAY *clientname*:0.0** and then press the **Return/Enter** key.
 - For *clientname*, use either the local terminal/workstation IP address or its machine name.
- 2 Start the log-in to a Netscape host by typing **/tools/bin/ssh *hostname*** (*e.g.*, g0ins02, e0ins02, l0ins02, n0ins02) at the UNIX command shell prompt, and press the **Return/Enter** key.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type yes ("y" alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 3.
 - If you have not previously set up a secure shell passphrase; go to Step 4.

- 3 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your *Passphrase* and then press the **Return/Enter** key. Go to Step 5.
- 4 At the *<user@remotehost>'s password:* prompt, type your *Password* and then press the **Return/Enter** key.
 - You are logged in and a UNIX command shell prompt is displayed.
- 5 Type **netscape** and then press the **Return/Enter** key.
 - The Netscape web browser is displayed.
- 6 Click in the **Netsite:** field.
 - The field is highlighted.
- 7 Type <http://redhook.gsfc.nasa.gov/~imswww/pub/imswelcome> and then press the **Return/Enter** key.
 - The EOS Data Gateway welcome screen is displayed, offering choices for types of entry, registration, news, user manual, sample data, and other information.
- 8 Click on the link for **Enter as guest**.
 - If you are a registered user, you may instead click on the link for Enter as registered user and log in with your registered ID and password.
 - The EOS Data Gateway Web Search and Order Tool initial Search Creation: Primary Data Search screen is displayed.
 - Note: At various points in this procedure, you may encounter a security information warning. Unless you know of a specific potential danger that you must avoid, click on the **Continue submission** button when this warning is displayed.
- 9 Click on the **Choose Keywords for Selected Data Sets** button.
 - The search screen displays an option to **Choose Keywords for One or More Categories**.
- 10 In the **Choose Keywords for One or More Categories** field, click on **DATA SET** and then click on the **Choose Keywords for >>** button.
 - The **Keyword Selection: Data Set** screen is displayed.
- 11 On the **Keyword Selection: Data Set** screen, in the **Data Set List 1:** field, scroll down the list and select the data set of your choice, and then click on the **OK!** button.
 - The primary search screen is displayed, indicating the selected choice as the selected data set.
- 12 In the **Choose Keywords for One or More Categories** field, click on **PARAMETER** and then click on the **Choose Keywords for >>** button.
 - The **Keyword Selection: Parameter** screen is displayed.

- **Note:** The Primary Data Search screen provides a user with a button to **Show List of All Data Sets Available** as a first step in data search and order. The user may filter the list by site, or enter patterns and look for matching data sets.
- 13** On the **Keyword Selection: Parameter** screen, in the **Parameters:** field, select the parameter of your choice, and then click on the **OK!** button.
- The primary search screen is displayed, indicating the selected choice as the selected parameter.
 - **Note:** The **Filters for Parameter:** field permits a reduction in the number of parameters from which to choose. For example, if you are searching for **OZONE** and know that it is an **ATMOSPHERIC CHEMISTRY** parameter, you can select **ATMOSPHERIC CHEMISTRY** in the **Filters for Parameter:** field and then click the **Apply** button so that only those parameters are displayed. You can even reduce the choice to one by using a wild card filter, e.g., **OZ***.
- 14** In the **Choose Search Area** section of the primary data search screen, click on the radio button at the left of **Type in Lat/Lon Range** field.
- The radio button is filled in to indicate selection.
 - If you select a radio button for one of the map entries, a map window is displayed; to use the map, follow instructions on the screen to create a rectangle over the area of interest on the map (the corresponding lat/lon values will be displayed in the appropriate fields when you return to the primary search screen).
- 15** In the Latitude and Longitude fields, enter values to define a rectangle corresponding to the requested area.
- The entered values appear in the fields.
 - If desired, a click on the **<-Display lat/lon range on map** button will result in a rectangle corresponding to the selected area on the map on the left side of the **Choose Search Area** section.
- 16** Click in the **Start Date:** field.
- The cursor moves to the **Start Date:** field.
- 17** Type the date for the beginning of the time window desired for the acquisition of the desired data, in format **YYYY-MM-DD**.
- The typed entry is displayed in the field.
- 18** Click in the **End Date:** field.
- The cursor moves to the **End Date:** field.
- 19** Type the date for the end of the time window desired for the acquisition of the desired data in format **YYYY-MM-DD**.
- The typed entry is displayed in the field.

- 20** If desired, in the **Choose Additional Options** block near the bottom of the screen, click in one or more of the available fields to enter data specifying additional restrictions on the search (i.e., number of granules to be returned per data set, limit returns to granules with browse products, limit search time).
- Entered restrictions are reflected in the fields.
 - **Note:** There is also an indication that default metadata are returned in the search results and a **CUSTOMIZE** button for access to a screen permitting a user to select specific metadata to be returned.
 - **Note:** At the bottom of the screen, there is a block permitting a user to save the specified search criteria, and to retrieve a previously saved set of search criteria.
- 21** Click on the **Start Search!** Button.
- The search status screen is displayed, indicating **Search in progress**
 - After a few moments, the **Results: Granule: Listing** screen is displayed.
 - The system offers *Integrated Browse*; if a browse image is available for a listed granule, an **Image** link is available in the **Image Quicklook** column of the listing for that granule. A click on the **Image** link displays the available browse image.
- 22** If desired, click on the **Granule Attributes** link next to one of the listed granules.
- A **Data Granule Attributes** screen is displayed.
 - Attributes for additional granules may be reviewed by clicking on one of the **Next/Previous Granule** links at the top of the **Data Granule Attributes** screen, or by clicking the browser **Back** button and clicking on the **Granule Attributes** link next to other listed items.
- 23** At the **Results: Granule: Listing** screen, click in the **Select** box(es) to select one or more granules to be ordered.
- The selected box(es) is/are filled in to indicate the selection(s).
- 24** Click on the **Add selections to cart** button near the top of the screen to add the *selected* data granules to the shopping cart.
- A **Data Quality Summary** screen may be displayed describing the quality status of any selected granule(s) and requiring a click on an **Accept** button at the bottom to proceed with the order.
 - The **Step 1: Choose Ordering Options** screen is displayed with the list of items to be ordered (i.e., in the shopping cart).
- 25** Click on the **Choose Options** link next to one of the data granules selected for order.
- The **Choose Ordering Options** screen is displayed.

- 26 Click on the **Select** button for the desired option (e.g., **FtpPull FILEFORMAT**).
- The **Select** button is filled to indicate selection of the option.
- 27 Below the list of options, make a selection to indicate whether the selected packaging option is to apply to all items in the data set in the shopping cart, or just to the single granule. If the selection is to apply just to the single granule, use the browser **Back** button to go back and then repeat Steps 25 and 26 for any additional granules.
- 28 Click on the **Ok! Accept my choice & return to the shopping cart!** button.
- The **Step 1: Choose Ordering Options** screen is displayed with indications that the selected granules are ready to order.
- 29 Click on the **Go to Step 2: Order Form** button.
- The **Step 2: Order Form** screen is displayed.
- 30 Click in the **First name:** field
- The cursor moves to the **First name:** field.
- 31 Type the user's **first name**.
- The typed entry appears in the field.
- 32 Click in the **Last name:** field.
- The cursor moves to the **Last name:** field.
- 33 Type the user's **last name**.
- The typed entry appears in the field.
- 34 Fill in the other required fields (**Internet email address:**, **Street Address:**, **City:**, **State/Province:**, **Country:**, and **Telephone:**) by clicking in each field and typing an appropriate entry.
- The typed entries are displayed in the fields.
 - *Note:* The user can save the entered information in a profile, and provide information about ECS access. This is accomplished by clicking on the **User Preferences** link in the "navigator" area on the left side of the screen, and making appropriate entries on the resulting **User Preferences** screen. At the bottom of this screen, a user who is registered as an ECS user can enter a user name and password for ECS access.
- 35 Click on the option button to the right of the **Type:** field and select the appropriate type of organization or location for the user from the displayed list.
- The selected option is displayed in the field.
- 36 Click on the option button to the right of the **Category:** field and select **USA** (or **Non-USA** if appropriate) from the displayed list.
- The selected option is displayed in the field.

- 37 Click on the **Submit Order Now!** button or the **Go to Step 3: Review Order Summary** button.
- If you clicked on **Submit Order Now!**, the order is submitted and an **Order Submitted!** confirmation screen is displayed; the procedure is complete.
 - If you clicked on **Go to Step 3: Review Order Summary**, the **Step 3: Order Summary** screen is displayed; go to Step 38.
- 38 When satisfied that the order information is correct, click on the **Go to Step 4: Submit Order!** button.
- The order is submitted and an **Order Submitted!** confirmation screen is displayed.

**Table 19.3-2. Search and Order Data Using the EDG Search and Order Tool
(1 of 2)**

Step	What to Do	Action to Take
1	setenv DISPLAY <i>clientname</i>:0.0	enter text; press Return/Enter
2	/tools/bin/ssh <i>hostname</i>	enter text; press Return/Enter
3	<i>Passphrase</i> (or Step 4)	enter text; press Return/Enter

33	Enter last name	enter text
34	Move cursor and enter Internet email address; , Street Address; , City; , State/Province; , Country; , and Telephone; .	single-click and enter text; repeat for each entry
35	Select Type (Type: option button)	click option
36	Select Category (Category: option button)	click option
37	Submit Order Now! or Go to Step 3: Review Order Summary	single-click
38	Activate Go to Step 4: Submit Order! button	single-click

19.3.1.1 Data Pool Access Using the EDG

The EDG indicates to a user any granules among the search results that are accessible on line – i.e., in the Data Pool – and provides links to the data, metadata, and browse data to allow download from the Data Pool. When a user searches ECS data holdings and obtains a list of granules, if the Data Pool contains a copy of any of the granules and associated metadata or browse data, there will be links in the **On-line Access** column of the listing. A click on a link for

data or metadata results in display of a filter dialog to specify a location for download of the information from the Data Pool. A click on a link for browse data launches the browse image in a browse viewer.

19.3.2 Locate and Download Data from the Data Pool using the Data Pool Web Access

The Data Pool provides users with a rapid means to obtain granules with associated metadata and any available browse granules. The access is through a web browser and download by FTP. User Services must be familiar with the tool and able to provide user assistance and support. Table 19.3-3 presents the steps required to locate and download data from the Data Pool using the Data Pool web access. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the UNIX command shell prompt, type **setenv DISPLAY *clientname*:0.0** and then press the **Return/Enter** key.
 - For *clientname*, use either the local terminal/workstation IP address or its machine name.
- 2 Start the log-in to a Netscape host by typing **/tools/bin/ssh *hostname*** (*e.g.*, g0ins02, e0ins02, l0ins02, n0ins02) at the UNIX command shell prompt, and press the **Return/Enter** key.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type **yes** (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 3.
 - If you have not previously set up a secure shell passphrase; go to Step 4.
- 3 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your **Passphrase** and then press the **Return/Enter** key. Go to Step 5.
- 4 At the **<user@remotehost>'s password:** prompt, type your **Password** and then press the **Return/Enter** key.
 - You are logged in and a UNIX command shell prompt is displayed.
- 5 Type **netscape** and then press the **Return/Enter** key.
 - The Netscape web browser is displayed.
- 6 Click in the **Netsite:** field.
 - The field is highlighted.

- 7 Type the Universal Resource Locator (URL) for the data pool at the local site and then press the **Return/Enter** key.
 - The **DataPool@DAACsite** welcome screen is displayed, offering a brief description of the data holdings and links enabling the user to start searching the Data Pool by **Data Group** or by **Theme**.
- 8 Click on one of the links to start searching the Data Pool.
 - The first selection screen is displayed. If the search was started by clicking on the **Data Group** link, the screen lists data holdings by data group with a brief description of each group, granule count for each group, and a list of links to data groups for selection to start the search. If the search was started by clicking on the **Theme** link, the screen lists themes with a brief description and granule count for each, with the theme names functioning as links for selection to start the search.
- 9 If the search is by **Theme**, click on the name of the theme for which the Data Pool is to be searched.
 - A list of data groups is displayed for the selected theme.
- 10 Click on the link for the **Data Group** to be searched for appropriate or desired data.
 - The screen displays the selected **Data Group** criteria and a list of links to Earth Science Data Types (**ESDTs**) for selection to narrow the search, along with information about the number of granules and volume of data available in the selected **Data Group**.
- 11 Click on the link for the **ESDT** to be searched for appropriate or desired data.
 - The screen displays the selected criteria through **ESDT**, a calendar tool (for selecting a **day**, **week**, or **month** for which active links indicate the availability of data), and, as an alternative means for selecting a date range, fields with pop-up menu buttons for specifying the **Start** year, month, and day and **End** year, month, and day to narrow the search based on temporal criteria.
 - The screen also displays information about the number of granules and volume of data available in the selected **ESDT**. It offers a **Skip Temporal** link to move on to the next criterion without specifying a temporal criterion, a **Get the granules** link permitting an immediate search for granules based on the criteria narrowing the search to those granules, and a **Start a new search** link. There is also a button permitting the user to add any selected date to the search criteria and continue to narrow the search.

- 12 If desired, click on a **day**, **week**, or **month** on the calendar tool, or click on pop-up menu buttons and select a **Start** year, month, and day and **End** year, month, and day, and then click on the **add it to your search criteria** button. (*Note:* If you click on a month in the shaded box at the left of the calendar tool, the selected month is displayed on the tool.)
- The screen displays the selected criteria through **Date**, a matrix permitting the user to **Select a Time of Day**, and, as an alternative means for selecting a time range, fields with pop-up menu buttons for specifying a **Start Time** hour and minute and an **End Time** hour and minute to narrow the search.
 - The screen also displays information about the number of granules and volume of data available in the selected Temporal period. It offers a **Skip Time-of-Day** link to move on to the next criterion without specifying a time of day, a **Get the granules** link permitting an immediate search for granules based on the criteria narrowing the search to those granules, and a **Start a new search** link. There is also a button permitting the user to add any selected time of day to the search criteria and continue to narrow the search.
- 13 If desired, click on a specific **time** (hour) on the matrix, or click on pop-up menu buttons and select a **Start Time:** hour and minute and **End Time:** hour and minute, and then click on the **add it to your search criteria** button. (*Note:* If you click on the link at the top of the matrix, the times displayed in the matrix can be toggled between starting **On the Hour** and starting **On the Half Hour**.)
- The screen displays the selected criteria through **Time of Day**, a map permitting the user to **Select from Map** (for Java-enabled browsers) to create a spatial search region, and, as an alternative means for creating a spatial search region, fields for specifying **North Latitude**, **South Latitude**, **West Longitude**, and **East Longitude** to select a bounding rectangle to narrow the search.
 - The screen also displays information about the number of granules and volume of data available in the selected Time Range. It offers a **Skip choosing a spatial constraint** link to move on to the next criterion without specifying a time of day, a **Get the granules** link permitting an immediate search for granules based on the criteria narrowing the search to those granules, and a **Start a new search** link. There is also a button permitting the user to add any selected spatial polygon or bounding rectangle to the search constraints and continue to narrow the search.
- 14 If desired (and if using a Java-enabled browser), click repeatedly on the map to indicate successive points defining a polygon as a desired spatial search region, or drag the mouse to highlight a tile on the map, or sequentially click in the four latitude and longitude fields and type the coordinates for a desired spatial search region.
- The bounding polygon, rectangle, or tile appears on the map display, and/or the typed entries appear in the latitude and longitude fields.

15 Click on the **Add to Constraints** button.

- The screen displays the selected criteria through **Spatial Coverage** and a table with links permitting the user to **Select a Day/Night Flag** to narrow the search.
- The screen also displays information about the number of granules and volume of data available in the selected spatial search region. It offers a **Skip DayNightFlag** link to move on to the next criterion without specifying a Day/Night Flag value, a **Get the granules** link permitting an immediate search for granules based on the criteria narrowing the search to those granules, and a **Start a new search** link.

16 If desired, click on one of the links in the **Day/Night** column of the table.

- The screen displays the selected criteria through **Day/Night Flag**, a **Select Science QA for this Data Type Parameter** field with a pop-up menu button permitting the user to specify a parameter on which to select QA values, and a table with links permitting the user to select a QA value for the specified parameter.
- The screen also displays information about the number of granules and volume of data available in the selected day/night flag category. It offers a **Get the granules** link permitting an immediate search for granules based on the criteria narrowing the search to those granules and a **Start a new search** link.

17 If desired, click on the **Select Science QA for this parameter:** option button.

- A pop-up menu displays available parameters.

18 Click on the desired parameter.

- The selected parameter name is displayed on the **Select Science QA for this parameter** option button and the QA links and information in the table reflect the selected parameter.

19 Click on one of the value links in the **Science QA** column of the table.

- The search for granules is executed and the screen displays the selected criteria through selected **Science QA** value along with the results of the search. The located granules are listed in a table showing metadata on **Size**, **Date** and **Time**, and **Day/Night** flag. There are **Metadata Display** links providing access to **Science QA** metadata and **% Cloud Cover** metadata.
- The **Granule** identification column in the results table displays for each listed granule an icon for obtaining the **HDF** data, and icon for displaying metadata in a separate **Granule Metadata Viewer** window, and, for any granule that has a browse image available, an icon for displaying associated browse images in a separate **Browse Viewer** window.

- 20** If desired, click on the **Science QA** link or **% Cloud Cover** link for different **Metadata Display**.
- Columns of the selected metadata are displayed in the results table, and availability of additional columns is indicated by the appearance of navigational arrow(s) on either side of the attribute name above the column labels.
- 21** If desired, click on one of the navigational arrows to display other columns of the selected metadata.
- Additional columns are displayed.
- 22** If desired, in the **Granule** identification column, click on an icon for the **Granule Metadata Viewer** for one of the granules.
- The **Granule Metadata Viewer** is displayed in a separate window, showing XML metadata for the selected granule; a scroll bar permits scrolling through the displayed metadata.
- 23** If desired, in the **Granule** identification column, click on an icon for the **Browse Viewer** for one of the granules.
- The **Browse Viewer** is displayed in a separate window, showing any available browse image for the selected granule; a scroll bar permits scrolling of the image.
- 24** If desired, in the **Granule** identification column, click on the **HDF** folder icon (or on the granule identification link) or on one of the icons for a compression option to initiate download of the granule.
- Compression options include zip, gnu zip (gzip), and UNIX.
 - The save dialog is displayed.
 - There is also a shopping cart icon for each granule, providing the user with the option of adding individual granules to a virtual shopping cart.
- 25** Enter any desired path specification for the download and click on the **OK** button.
- The selected granule is downloaded to the specified location.

Table 19.3-3. Locate and Download Data from the Data Pool using the Data Pool Web Access

Step	What to Do	Action to Take
1	setenv DISPLAY clientname:0.0	enter text; press Return/Enter
2	/tools/bin/ssh hostname	enter text; press Return/Enter
3	Passphrase (or Step 4)	enter text; press Return/Enter
4	Password	enter text; press Return/Enter
5	netscape	enter text; press Return/Enter
6	Move cursor to Netsite: field	single-click
7	Enter URL for Data Pool Web Access	enter text; press Return/Enter
8	Select link to start search (Data Group or Theme)	single-click
9	For a Theme search, select name of desired theme	single-click
10	Select Data Group	single-click
11	Select ESDT	single-click
12	Select Date (or specify Date Range)	single-click (or click options)
13	Select Time (or specify Start Time and End Time)	single-click (or click options)
14	Create spatial search region	click-drag or click and enter latitude and longitude
15	Activate Add Constraints button	single-click
16	Select Day/Night flag	single-click
17	Open Select Science QA for this Data Type Parameter pop-up menu	single-click
18	Select Parameter	single-click
19	Select QA for Parameter value	single-click
20	Select Metadata Display category	single-click
21	Use navigational arrow(s) for more metadata columns	click(s)
22	Display metadata in Granule Metadata Viewer	single-click
23	Display browse image in Browse Viewer	single-click
24	Select HDF download or compression option (or option to add granule to shopping cart)	single-click
25	(Specify any desired path and) activate OK button	enter text; single-click

19.4 Working with the Spatial Subscription Server and Data Pool

User Services and Science Data Specialists use the Spatial Subscription Server (NSBRV) GUI to create subscriptions for inserting data into the Data Pool and to perform other tasks necessary to manage the Data Pool. Table 19.4-1 provides an activity checklist for tasks using the NSBRV GUI for Data Pool Management.

Table 19.4-1. Use the NSBRV GUI for Data Pool Management - Activity Checklist

Order	Role	Task	Section	Complete?
1	User Services/ Science Data Specialist	Launch the NSBRV GUI	(P) 19.4.1	
2	User Services/ Science Data Specialist	Use the NSBRV GUI to List Subscribable Events	(P) 19.4.2	
3	User Services/ Science Data Specialist	Use the NSBRV GUI to List and View Subscriptions in the NSBRV Database	(P) 19.4.3	
4	User Services/ Science Data Specialist	Use the NSBRV GUI to Add a Subscription for Data Pool Insert	(P) 19.4.4	
5	User Services/ Science Data Specialist	Use the NSBRV GUI to Create a Standard Subscription for Distribution/ Notification	(P) 19.4.5	
6	User Services/ Science Data Specialist	Use the NSBRV GUI to Extend the Period of Retention in a Data Pool Insert Subscription	(P) 19.4.6	
7	User Services/ Science Data Specialist	Use the NSBRV GUI to Delete (Cancel) a Subscription in the NSBRV Database	(P) 19.4.7	
8	User Services/ Science Data Specialist	Use the NSBRV GUI to Obtain a List of Bundling Orders and View a Bundling Order	(P) 19.4.8	
9	User Services/ Science Data Specialist	Use the NSBRV GUI to Cancel a Bundling Order and Its Associated Subscriptions	(P) 19.4.9	
10	User Services/ Science Data Specialist	Use the NSBRV GUI to Add a Bundling Order	(P) 19.4.10	
11	User Services/ Science Data Specialist	Use the NSBRV GUI to Update a Bundling Order	(P) 19.4.11	
12	User Services/ Science Data Specialist	Use the NSBRV GUI to Configure Bundling Order Default Values	(P) 19.4.12	
13	User Services/ Science Data Specialist	Use the NSBRV GUI to View the Acquire and Notification Actions Being Processed	(P) 19.4.13	
14	User Services/ Science Data Specialist	Use the NSBRV GUI to View Statistics on Processing of Events and Actions by the NSBRV	(P) 19.4.14	

19.4.1 Launch the NSBRV GUI

Table 19.4-2 presents the steps required to launch the NSBRV GUI. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the UNIX command shell prompt, type **setenv DISPLAY *clientname*:0.0** and then press the **Return/Enter** key.
 - For *clientname*, use either the local terminal/workstation IP address or its machine name.
- 2 Start the log-in to a Netscape host by typing **/tools/bin/ssh *hostname*** (*e.g.*, g0ins02, e0ins02, l0ins02, n0ins02) at the UNIX command shell prompt, and press the **Return/Enter** key.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type **yes** (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 3.
 - If you have not previously set up a secure shell passphrase; go to Step 4.
- 3 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your *Passphrase* and then press the **Return/Enter** key. Go to Step 5.
- 4 At the **<user@remotehost>'s password:** prompt, type your *Password* and then press the **Return/Enter** key.
 - You are logged in and a UNIX command shell prompt is displayed.
- 5 Type **netscape** and then press the **Return/Enter** key.
 - The Netscape web browser is displayed.
- 6 Click in the **Netsite:** field.
 - The field is highlighted.
- 7 Type the Universal Resource Locator (URL) for the NSBRV GUI and then press the **Return/Enter** key.
 - The NSBRV **Home Page** is displayed, offering access to NSBRV functions (**List Events**, **Manage Subscriptions**, **List Action Queue**, and **List Statistics**) as well as a tab for **Help** in navigating the GUI.

Table 19.4-2. Launch the NSBRV GUI

Step	What to Do	Action to Take
1	setenv DISPLAY clientname:0.0	enter text; press Return/Enter
2	/tools/bin/ssh hostname	enter text; press Return/Enter
3	Passphrase (or Step 4)	enter text; press Return/Enter
4	Password	enter text; press Return/Enter
5	netscape	enter text; press Return/Enter
6	Move cursor to Netsite: field	single-click
7	http://<URL>	enter text; press Return/Enter

19.4.2 Use the NSBRV GUI to List Subscribable Events

Table 19.4-3 presents the steps required to use the NSBRV GUI to list subscribable events. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).
- 2 Click on the **List Events** tab.
 - The **List Events** page is displayed with a table of all ECS events for which a subscription can be created.
 - The column headers in the table are links for sorting the list. There are also buttons for filtering the list.
- 3 To sort the list by **Event Type**, click on the **Event Type** link.
 - The list is displayed with the events grouped by type; **DELETE** events are listed first, followed by **INSERT** events, and then **UPDATE METADATA** events.
 - *Note:* You can now scroll down to review only **INSERT** events. However, in a long list with all the events included, it may still be cumbersome to locate the events of interest.
- 4 To filter the list for display of only events for a specific collection, click on the **Collection** option button and then scroll and click to select the desired collection.
 - The selected choice is displayed on the option button.
- 5 Click on the **Filter** button to implement the selected filter.
 - A list is displayed showing only events for the selected collection.

Table 19.4-3. Use the NSBRV GUI to List Subscribable Events

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select List Events tab	single-click
3	Use Event Type link to sort list	single-click
4	If desired, use Collection option button to select a collection on which to filter the list	click option
5	Use the Filter button to implement the selected filter	single-click

19.4.3 Use the NSBRV GUI to List and View Subscriptions in the NSBRV Database

Table 19.4-4 presents the steps required to use the NSBRV GUI to list and view subscriptions in the NSBRV database. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).
- 2 Click on the **Manage Subscriptions** tab.
 - The **Manage Subscriptions** page is displayed with a table listing all subscriptions in the NSBRV database.
 - The column headers in the table, except for **Version** and **Event Type**, are links for sorting the list. There are also buttons for filtering the list.
- 3 To filter the list for display of only subscriptions for a specific collection, click on the **Collection** option button and then scroll and click to select the desired collection.
 - The selected choice is displayed on the option button.
- 4 Click on the **Filter** button to implement the selected filter.
 - A list is displayed showing only subscriptions for the selected collection.
- 5 It may be desirable to filter the list further. For example, if you are looking for a subscription created for a specific user, click on the **User** option button and then scroll and click to select the appropriate User Id.
 - The selected choice is displayed on the option button.
- 6 Click on the **Filter** button to implement the selected filter.
 - A list is displayed showing only subscriptions for the selected Collection and any further selected filter option.

- 7 Scroll if necessary to reach the sought subscription and click on the **View** radio button for that subscription in the last column.
 - The button is filled to indicate selection of the **View** option.
- 8 Click on the **Apply** button for the subscription.
 - Detailed information for the selected subscription is displayed in a separate window.

Table 19.4-4. Use the NSBRV GUI to List and View Subscriptions in the NSBRV Database

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select Manage Subscriptions tab	single-click
3	If desired, use Collection option button to select a collection on which to filter the list	click option
4	Use the Filter button to implement the selected filter	single-click
5	If desired, use another option button to filter the list further	click option
6	Use the Filter button to implement any selected filter	single-click
7	Select the View radio button for the desired subscription	single-click
8	Use the Apply button to implement the selected option	single-click

19.4.4 Use the NSBRV GUI to Add a Subscription for Data Pool Insert

A user who wants to have data made available for downloading through the Data Pool must contact the DAAC to request that a subscription be placed so that when data of the specified type are inserted in ECS, a copy is inserted in the Data Pool. User Services or Science Data Specialists then create the subscription, adding Data Pool qualification and retention criteria to meet the user's requirement within any constraints imposed for the Data Pool at the DAAC. Table 19.4-5 presents the steps required to use the NSBRV GUI to add a subscription for Data Pool insert. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).
 - **Note:** At various points in this procedure, you may encounter a security information warning. Unless you know of a specific potential danger that you must avoid, click on the **Continue submission** button when this warning is displayed.
- 2 Click on the **Manage Subscriptions** tab.
 - The **Manage Subscriptions** page is displayed with a table listing all subscriptions in the NSBRV database.

- 3 Click on the **Add Subscriptions** tab.
 - The **Add Subscriptions** page is displayed.
- 4 Click in the **User Id** field.
 - The cursor is displayed in the **User Id** field.
- 5 Type the User Id for the requesting user.
 - *Note:* The entered User Id must be a valid registered user (i.e., must be listed in the User Profile database).
 - The typed entry is displayed in the **User Id** field.
- 6 If it is necessary to set the subscription status (typically, it is left at the **Active** default setting), click on the **Status** option button and click on the desired choice (**Active** or **Inactive**).
 - The selected choice is displayed on the option button.
- 7 If it is necessary to set the **Expiration Date** (normally defaulted to one year from the current date), click at the end of the **Expiration Date** field and backspace to delete the default information.
 - The cursor is displayed in the **Expiration Date** field.
- 8 Type an appropriate expiration date in the format **mm/dd/yyyy**.
 - The typed entry is displayed in the **Expiration Date** field.
- 9 Click in the **ESDT Short Name** field.
 - The cursor is displayed in the **ESDT Short Name** field.
- 10 Type the first few characters of the name of the collection for which the subscription is to be created.
 - The typed entry is displayed in the **ESDT Short Name** field.
- 11 Click on the **Apply** button.
 - A **SELECT Short Name/Version/Event Type** option button is displayed, along with an **Apply** button.
- 12 Click on the **SELECT Short Name/Version/Event Type** option button and then drag the cursor to select the event for which the subscription is to be created.
 - The selected choice is displayed on the option button.

13 Click on the **Apply** button.

- A block of option buttons and fields is displayed to permit selection of **Attribute Name/Type** and entry of **Min Value** and **Max Value** for any valid **Integer/Float/Date** qualifiers, string **Value** qualifiers, and **Latitude** and **Longitude** coordinates to define a bounding rectangle spatial qualifier for the subscription to be created. It may be necessary to use a scroll bar to reveal all qualifier entry fields.
- Scrolling also reveals three buttons for selection of one or more **Actions** and a block with option buttons, fields, and links for defining the selected action(s) to be taken upon occurrence of the event for which the subscription is to be created.
- At the bottom, there is an **Add Subscription** button for submitting the subscription.

14 Click on an option button for any **Integer/Float/Date** qualifiers and then scroll (if necessary) and click to select an **Attribute Name/Type** for which a qualifier is to be defined.

- The selected choice is displayed on the option button.
- *Note:* If the operator selects an attribute that is associated with a measured parameter that can be specified, a pop-up window appears with an entry field and a prompt to **Enter Parameter Name:**. It is necessary to enter a valid parameter name (i.e., one with which the attribute is associated in the Science Data Server); type the name and click on the **OK** button in the pop-up window. For the first delivery of the NSBRV, the attribute **QAPercentCloudCover**, available for some data types, is the only attribute that requires this entry.

15 Click in the **Min Value** field to the right of the option button for the specified **Attribute Name/Type**.

- The cursor is displayed in the field.

16 Type the minimum value for the qualifier.

- The typed entry is displayed in the field.

17 Click in the **Max Value** field to the right of the just-completed **Min Value** field.

- The cursor is displayed in the field.

18 Type the maximum value for the qualifier.

- The typed entry is displayed in the field.

19 Repeat Steps 14 - 18 for any additional **Integer/Float/Date** qualifiers to be entered.

20 Click on an option button for **String** qualifiers and then scroll (if necessary) and click to select an **Attribute Name/Type** for which a qualifier is to be defined.

- The selected choice is displayed on the option button.

21 Click in the **Value** field to the right of the option button for the specified **Attribute Name/Type**.

- The cursor is displayed in the field.

22 Type the string value for the qualifier.

- The typed entry is displayed in the field.

23 Repeat Steps 20 - 22 for any additional **String** qualifiers to be entered.

24 Click in the **North Latitude** field.

- The cursor is displayed in the field.

25 Type the **North Latitude** coordinate for any bounding rectangle to be specified.

- The typed entry is displayed in the field.

26 Click in the **East Longitude** field.

- The cursor is displayed in the field.

27 Type the **East Longitude** coordinate for any bounding rectangle to be specified.

- The typed entry is displayed in the field.

28 Click in the **South Latitude** field.

- The cursor is displayed in the field.

29 Type the **South Latitude** coordinate for any bounding rectangle to be specified.

- The typed entry is displayed in the field.

30 Click in the **West Longitude** field.

- The cursor is displayed in the field.

31 Type the **West Longitude** coordinate for any bounding rectangle to be specified.

- The typed entry is displayed in the field.

Note: Every subscription must have at least one action specified and may have more than one. For a Data Pool Insert subscription, the operator must click the **Data Pool** action selection button and enter data in the **Data Pool Information** portion of the **Actions** block.

32 Click the **Data Pool** action selection button and the **E-Mail Notification** action selection button.

- Each button appearance changes to depressed to indicate its selection as it is clicked.

33 Click in the **Retention Period** field in the **Data Pool Information** portion of the **Actions** block.

- The cursor is displayed in the field.

- 34 Type the desired retention period (within any Data Pool constraints imposed by the DAAC).
 - The typed entry is displayed in the field.
- 35 Click in the **Retention Priority** field in the **Data Pool Information** portion of the **Actions** block.
 - The cursor is displayed in the field.
- 36 Type the desired priority (or leave the default value).
 - The typed entry is displayed in the field.
- 37 Click on the **Science Granules and/or Metadata** option button in the **Data Pool Information** portion of the **Actions** block and click to select **science and metadata** (if the Data Pool insert is to include both the science granule and its metadata) or **metadata only** (if the insert is to be metadata only -- for example, if the data have an associated cost that must be handled with a billing and accounting function).
 - The selected choice is displayed on the button.
- 38 If the granules to be added to the Data Pool as a result of this subscription are *not* to be associated with a theme, go to Step 42; otherwise proceed with Step 39.
- 39 If the granules to be added to the Data Pool as a result of this subscription are to be associated with a theme, click in the **Check here to add theme:** checkbox.
 - The check box indicates checked status.
- 40 Click in the **Enter first few chars of name:** text entry field.
 - The cursor is displayed in the field.
- 41 Type the first three or four characters of the desired theme name.
 - The typed entry is displayed in the field.
- 42 If the user wants notification, examine the **Action Address** field in the **E-Mail Notification** portion of the **Actions** block.
 - The user's E-Mail address from the User Profile database is displayed in the field.
- 43 Click in the **User String** field in the **E-Mail Notification** portion of the **Actions** block.
 - The cursor is displayed in the field.
- 44 Type a secondary qualifier string to distinguish this request from others by users with the same user profile. (*Note:* This step is optional.)
 - The typed entry is displayed in the field.

45 Click on the **Metadata** option button in the **E-Mail Notification** portion of the **Actions** block and click on **Qualifying Metadata Only** or **All Metadata** to indicate whether only qualifying metadata or all metadata are to be included in the email notification.

- The selected choice is displayed on the option button.

46 Click on the **Add Subscription** button.

- A message is displayed confirming that the subscription was added to the database and buttons permit **Add another subscription** or **Return to Home Page**.

Table 19.4-5. Use the NSBRV GUI to Add a Subscription for Data Pool Insert (1 of 2)

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select Manage Subscriptions tab	single-click
3	Select Add Subscriptions tab	single-click
4	Place cursor in the User Id field	single-click
5	Type the User Id	enter text
6	To change subscription status, use Status option button	click option
7	If necessary, remove incorrect Expiration Date	click and backspace
8	If necessary, type desired Expiration Date	enter text
9	Move cursor to ESDT Short Name field	single-click
10	Type first few characters of collection name	enter text
11	Activate the Apply button	single-click
12	Use the Short Name/Version/Event Type option button to select event	click option
13	Activate the Apply button	single-click
14	If available, use an option button for Integer/Float/Date qualifiers to select an Attribute Name/Type	click option
15	Move cursor to accompanying Min Value field	single-click
16	Type the minimum value	enter text
17	Move cursor to accompanying Max Value field	single-click
18	Type the maximum value	enter text
19	Repeat Steps 14 - 18 as appropriate	
20	If available, use an option button for String qualifiers to select an Attribute Name/Type	click option
21	Move cursor to accompanying Value field	single-click
22	Type the string value	enter text
23	Repeat Steps 20 - 22 as appropriate	
24	Move cursor to North Latitude field	single-click
25	Type the North Latitude coordinate for any bounding rectangle	enter text

**Table 19.4-5. Use the NSBRV GUI to Add a Subscription for Data Pool Insert
(2 of 2)**

Step	What to Do	Action to Take
26	Move cursor to East Longitude field	single-click
27	Type the East Longitude coordinate for any bounding rectangle	enter text
28	Move cursor to South Latitude field	single-click
29	Type the South Latitude coordinate for any bounding rectangle	enter text
30	Move cursor to West Longitude field	single-click
31	Type the West Longitude coordinate for any bounding rectangle	enter text
32	Select action(s) in Choose one or more actions block	click(s)
33	Move cursor to Retention Period field	single-click
34	Type desired retention period	enter text
35	Move cursor to Retention Priority field	single-click
36	Type desired priority (or leave default)	enter text
37	Use Science Granules and/or Metadata option button to select science and metadata or metadata only	click option
38	If no theme association, go to step 42; otherwise continue	
39	Place checkmark in Check here to add theme: box	single-click
40	Move cursor to Enter first few chars of name: field	single-click
41	Type the first few characters of the desired theme name	enter text
42	If appropriate, examine Action Address field for user's e-mail address	read text
43	Optional: Move cursor to User String field	single-click
44	Optional: Type secondary qualifier string	enter text
45	Use Metadata option button to select Qualifying Metadata Only or All Metadata	click option
46	Activate the Add Subscription button	single-click

19.4.5 Use the NSBRV GUI to Create a Standard Subscription for Distribution/Notification

The Spatial Subscription Server was designed to replace the Subscription Server originally deployed as part of ECS. Accordingly, it offers capabilities parallel to those of the original ECS Subscription Server. Table 19.4-6 presents the steps required to use the NSBRV GUI to create a standard subscription for distribution/notification. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).
 - *Note:* At various points in this procedure, you may encounter a security information warning. Unless you know of a specific potential danger that you must avoid, click on the **Continue submission** button when this warning is displayed.
- 2 Click on the **Manage Subscriptions** tab.
 - The **Manage Subscriptions** page is displayed with a table listing all subscriptions in the NSBRV database.
- 3 Click on the **Add Subscriptions** tab.
 - The **Add Subscriptions** page is displayed.
- 4 Click in the **User Id** field.
 - The cursor is displayed in the **User Id** field.
- 5 Type the User Id for the requesting user.
 - The typed entry is displayed in the **User Id** field.
- 6 If it is necessary to set the subscription status (typically, it is left at the **Active** default setting), click on the **Status** option button and click on the desired choice (**Active** or **Inactive**).
 - The selected choice is displayed on the option button.
- 7 If it is necessary to set the **Expiration Date** (normally defaulted to one year from the current date), click at the end of the **Expiration Date** field and backspace to delete the default information.
 - The cursor is displayed in the **Expiration Date** field.
- 8 Type an appropriate expiration date in the format **mm/dd/yyyy**.
 - The typed entry is displayed in the **Expiration Date** field.
- 9 Click in the **ESDT Short Name** field.
 - The cursor is displayed in the **ESDT Short Name** field.
- 10 Type the first few characters of the name of the collection for which the subscription is to be created (e.g., **ASTL1**, **MOD04**, **MISL0**, **MOD10**).
 - The typed entry is displayed in the **ESDT Short Name** field.
- 11 Click on the **Apply** button.
 - A **SELECT Short Name/Version/Event Type** option button is displayed, along with an **Apply** button.

- 12 Click on the **SELECT Short Name/Version/Event Type** option button and then drag the cursor to select the event for which the subscription is to be created.
 - The selected choice is displayed on the option button.
- 13 Click on the **Apply** button.
 - A block of option buttons and fields is displayed to permit selection of **Attribute Name/Type** and entry of **Min Value** and **Max Value** for **Integer/Float/Date** qualifiers, string **Value** qualifiers, and **Latitude** and **Longitude** coordinates to define a bounding rectangle spatial qualifier for the subscription to be created. It may be necessary to use a scroll bar to reveal all qualifier entry fields.
 - Scrolling also reveals an **Actions** block with option buttons, fields, and links for defining one or more actions to be taken upon occurrence of the event for which the subscription is to be created.
 - At the bottom, there is an **Add Subscription** button for submitting the subscription.
- 14 Click on an option button for any **Integer/Float/Date** qualifiers and then scroll (if necessary) and click to select an **Attribute Name/Type** for which a qualifier is to be defined.
 - The selected choice is displayed on the option button.
 - *Note:* If the operator selects an attribute that is associated with a measured parameter that can be specified, a pop-up window appears with an entry field and a prompt to **Enter Parameter Name:**. It is necessary to enter a valid parameter name (i.e., one with which the attribute is associated in the Science Data Server); type the name and click on the **OK** button in the pop-up window.
- 15 Click in the **Min Value** field to the right of the option button for the specified **Attribute Name/Type**.
 - The cursor is displayed in the field.
- 16 Type the minimum value for the qualifier.
 - The typed entry is displayed in the field.
- 17 Click in the **Max Value** field to the right of the just-completed **Min Value** field.
 - The cursor is displayed in the field.
- 18 Type the maximum value for the qualifier.
 - The typed entry is displayed in the field.
- 19 Repeat Steps 14 - 18 for any additional **Integer/Float/Date** qualifiers to be entered.
- 20 Click on an option button for **String** qualifiers and then scroll (if necessary) and click to select an **Attribute Name/Type** for which a qualifier is to be defined.
 - The selected choice is displayed on the option button.

- 21 Click in the **Value** field to the right of the option button for the specified **Attribute Name/Type**.
 - The cursor is displayed in the field.
- 22 Type the string value for the qualifier.
 - The typed entry is displayed in the field.
- 23 Repeat Steps 20 - 22 for any additional **String** qualifiers to be entered.
- 24 Click in the **North Latitude** field.
 - The cursor is displayed in the field.
- 25 Type the **North Latitude** coordinate for any bounding rectangle to be specified.
 - The typed entry is displayed in the field.
- 26 Click in the **East Longitude** field.
 - The cursor is displayed in the field.
- 27 Type the **East Longitude** coordinate for any bounding rectangle to be specified.
 - The typed entry is displayed in the field.
- 28 Click in the **South Latitude** field.
 - The cursor is displayed in the field.
- 29 Type the **South Latitude** coordinate for any bounding rectangle to be specified.
 - The typed entry is displayed in the field.
- 30 Click in the **West Longitude** field.
 - The cursor is displayed in the field.
- 31 Type the **West Longitude** coordinate for any bounding rectangle to be specified.
 - The typed entry is displayed in the field.

Note: Every subscription must have at least one action specified and may have more than one. The action may be specified by indicating that the subscription is to be associated with a bundling order (i.e., a specification to accumulate data orders in a bundle until an identified volume or number of granules has been ordered, or until an identified time period has elapsed, releasing those orders to data distribution for distribution of the bundle only when at least one of the specified criteria is met). In that case, the acquire action and associated information are already specified in the existing bundling order (see Steps 33 – 35). For an unbundled acquire subscription, the operator must click the **Acquire** action selection button and enter data in the **Acquire Information** portion of the **Actions** block (see Steps 36 - 49). An acquire action includes e-mail notification when data are sent. For an e-mail notification action upon insert, the

operator must click the **E-Mail Notification** action selection button and enter data in the **E-Mail Notification Information** portion of the **Actions** block (see Steps 50 - 53).

32 If the subscription is *not* to be associated with a bundling order, go to Step 36; otherwise, proceed with Step 33.

33 Click on the selection button in front of **Bundling Order**.

- The appearance of the button changes to depressed to indicate its selection.

34 Click on the **Bundling Order Selection** option button and select the bundling order with which the subscription is to be associated.

- The selected bundling order identification number is displayed on the option button.

35 Skip to Step 54.

36 Click the **Acquire** action selection button and/or the **E-Mail Notification** action selection button.

- The appearance of any selected action selection button changes to depressed to indicate its selection as it is clicked.

37 For an **Acquire** action, examine the **Email Address** field in the **Acquire Information** block.

38 Click on the **Media Type** option button and select the media type for the distribution.

- The selected choice is displayed on the option button.

39 Click on the **Priority** option button and select the priority for the acquire.

- The selected choice is displayed on the option button.

Note: Steps 40 - 49 are to be performed only if the **Media Type** selected in Step 38 was **FtpPush**.

40 Click in the **FTP User** field.

- The cursor is displayed in the field.

41 Type the UNIX log in for the requesting user on the destination system for the push.

- The typed entry is displayed in the field.

42 Click in the **FTP Password** field.

- The cursor is displayed in the field.

43 Type the UNIX password for the requesting user on the destination system for the push.

- Asterisks are displayed in the field.

44 Click in the **Enter password again for verification** field.

- The cursor is displayed in the field.

- 45 Type the UNIX password for the requesting user on the destination system for the push.
- Asterisks are displayed in the field.
- 46 Click in the **FTP Host** field.
- The cursor is displayed in the field.
- 47 Type the UNIX host name for the destination system for the push.
- The typed entry is displayed in the field.
- 48 Click in the **FTP Directory** field.
- The cursor is displayed in the field.
- 49 Type the pathname of the UNIX directory on the destination system where the acquired files are to be stored.
- The typed entry is displayed in the field.
- 50 For an **E-Mail Notification** action, examine the **Action Address** field in the **E-Mail Notification Information** portion of the **Actions** block.
- The user's E-Mail address from the User Profile database is displayed in the field.
- 51 Optional: For an **E-Mail Notification** action, click in the **User String** field in the **E-Mail Notification Information** portion of the **Actions** block.
- The cursor is displayed in the field.
- 52 Type a secondary qualifier string to distinguish this request from others by users with the same user profile. (*Note:* This step is optional.)
- The typed entry is displayed in the field.
- 53 Click on the **Metadata** option button in the **E-Mail Notification** portion of the **Actions** block and click on **Qualifying Metadata Only** or **All Metadata** to indicate whether only qualifying metadata or all metadata are to be included in the email notification.
- The selected choice is displayed on the option button.
- 54 Click on the **Add Subscription** button.
- A message is displayed confirming that the subscription was added to the database and buttons permit **Add another subscription** or **Return to Home Page**.

Table 19.4-6. Use the NSBRV GUI to Create a Standard Subscription for Distribution/Notification (1 of 2)

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select Manage Subscriptions tab	single-click
3	Select Add Subscriptions tab	single-click
4	Place cursor in the User Id field	single-click
5	Type the User Id	enter text
6	To change subscription status, use Status option button	click option
7	If necessary, remove incorrect Expiration Date	click and backspace
8	If necessary, type desired Expiration Date	enter text
9	Move cursor to ESDT Short Name field	single-click
10	Type first few characters of collection name	enter text
11	Activate the Apply button	single-click
12	Use the Short Name/Version/Event Type option button to select event	click option
13	Activate the Apply button	single-click
14	If available, use an option button for Integer/Float/Date qualifiers to select an Attribute Name/Type	click option
15	Move cursor to accompanying Min Value field	single-click
16	Type the minimum value	enter text
17	Move cursor to accompanying Max Value field	single-click
18	Type the maximum value	enter text
19	Repeat Steps 14 - 18 as appropriate	
20	If available, use an option button for String qualifiers to select an Attribute Name/Type	click option
21	Move cursor to accompanying Value field	single-click
22	Type the string value	enter text
23	Repeat Steps 20 - 22 as appropriate	
24	Move cursor to North Latitude field	single-click
25	Type the North Latitude coordinate for any bounding rectangle	enter text
26	Move cursor to East Longitude field	single-click
27	Type the East Longitude coordinate for any bounding rectangle	enter text
28	Move cursor to South Latitude field	single-click
29	Type the South Latitude coordinate for any bounding rectangle	enter text
30	Move cursor to West Longitude field	single-click
31	Type the West Longitude coordinate for any bounding rectangle	enter text
32	If not associated with a bundling order, go to Step 36; otherwise continue	

Table 19.4-6. Use the NSBRV GUI to Create a Standard Subscription for Distribution/Notification (2 of 2)

Step	What to Do	Action to Take
33	Activate the Bundling Order selection button	single-click
34	Use Bundling Order Selection option button to select bundling order	click option
35	Skip to Step 54	
36	Select action(s) in Choose one or more actions block	click(s)
37	Examine Email Address field in Acquire Information	read text
38	Use Media Type option button to select media type	click option
39	Use Priority option button to select priority for acquire	click option
40	Move cursor to FTP User field	single-click
41	Type UNIX log in for user on destination system	enter text
42	Move cursor to FTP Password field	single-click
43	Type UNIX password for user on destination system	enter text
44	Move cursor to Enter password again for verification field	single-click
45	Type UNIX password for user on destination system	enter text
46	Move cursor to FTP Host field	single-click
47	Type UNIX host name for destination system	enter text
48	Move cursor to FTP Directory field	single-click
49	Type pathname of the UNIX directory on destination system where the acquired files are to be stored	enter text
50	Examine Action Address field	read text
51	Optional: Move cursor to User String field	single-click
52	Optional: Type secondary qualifier string	enter text
53	Use Metadata option button to select Qualifying Metadata Only or All Metadata	click option
54	Activate the Add Subscription button	single-click

19.4.6 Use the NSBRV GUI to Extend the Period of Retention in a Data Pool Insert Subscription

Table 19.4-7 presents the steps required to use the NSBRV GUI to extend the period of retention in a Data Pool insert subscription. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

1 Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).

- **Note:** At various points in this procedure, you may encounter a security information warning. Unless you know of a specific potential danger that you must avoid, click on the **Continue submission** button when this warning is displayed.

- 2 Click on the **Manage Subscriptions** tab.
 - The **Manage Subscriptions** page is displayed with a table listing all subscriptions in the NSBRV database.
- 3 Click on the **User** option button and then scroll and click to select the appropriate User Id.
 - The selected choice is displayed on the option button.
- 4 Click on the **Filter** button to implement the selected filter.
 - A list is displayed showing only subscriptions for the selected User Id.
- 5 Scroll if necessary to reach the sought subscription and click on the **Update** radio button for that subscription in the last column.
 - The button is filled to indicate selection of the **Update** option.
- 6 Click on the **Apply** button for the subscription.
 - A page for the subscription is displayed with a block of option buttons and fields to permit updating qualifiers, **Latitude** and **Longitude** coordinates, and **Actions** information. It may be necessary to use a scroll bar to reveal all entry areas.
 - At the bottom, there is an **Update Subscription** button for submitting the changes.
- 7 To change the retention period, click at the end of the **Retention Period** field in the **Data Pool Information** portion of the **Actions** block and backspace to delete the displayed number.
 - The cursor is displayed in the field.
- 8 Type the desired extended retention period (within any Data Pool constraints imposed by the DAAC).
 - The typed entry is displayed in the field.
- 9 Click on the **Update Subscription** button.
 - A message is displayed confirming that the subscription was updated and buttons permit **Add another subscription** or **Return to Home Page**.

Table 19.4-7. Use the NSBRV GUI to Extend the Period of Retention in a Data Pool Insert Subscription

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select Manage Subscriptions tab	single-click
3	Use the User option button to select User Id filter	click option
4	Use the Filter button to implement the selected filter	single-click
5	Select Update radio button for subscription to be changed	single-click
6	Activate Apply button	single-click
7	Remove incorrect Retention Period	click and backspace
8	Type desired Retention Period	enter text
9	Activate Update Subscription button	single-click

The update procedure for extending the period of retention in a Data Pool insert overlaps extensively with procedures for updating other information in an existing subscription, either for Data Pool insert (for example, to change qualifiers or to associate the subscription with a theme) or for notification/distribution of standard ECS products (for example, to change the distribution media type or other information defining the distribution). The operator accesses the subscription in the same way, makes the necessary inputs to specify the changes, and uses the **Update Subscription** button to submit the changes.

19.4.7 Use the NSBRV GUI to Delete (Cancel) a Subscription in the NSBRV Database

Table 19.4-8 presents the steps required to use the NSBRV GUI to delete (cancel) a subscription in the NSBRV database. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1** Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).
 - *Note:* At various points in this procedure, you may encounter a security information warning. Unless you know of a specific potential danger that you must avoid, click on the **Continue submission** button when this warning is displayed.
- 2** Click on the **Manage Subscriptions** tab.
 - The **Manage Subscriptions** page is displayed with a table listing all subscriptions in the NSBRV database.
- 3** Click on the **User** option button and then scroll and click to select the appropriate User Id.
 - The selected choice is displayed on the option button.

- 4 Click on the **Filter** button to implement the selected filter.
 - A list is displayed showing only subscriptions for the selected User Id.
- 5 Scroll if necessary to reach the sought subscription and click on the **Delete** radio button for that subscription in the last column.
 - The button is filled to indicate selection of the **Delete** option.
- 6 Click on the **Apply** button for the subscription.
 - A confirmation screen is displayed; a message **Are you sure that you want to delete the subscription?** appears above two buttons, one labeled **Yes** and one labeled **No**.
- 7 Click on the **Yes** button.
 - A message is displayed confirming that the subscription was deleted from the database and buttons permit **Delete another subscription** or **Return to Home Page**.

Table 19.4-8. Use the NSBRV GUI to Delete (Cancel) a Subscription in the NSBRV Database

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select Manage Subscriptions tab	single-click
3	Use the User option button to select User Id filter	click option
4	Use the Filter button to implement the selected filter	single-click
5	Select Delete radio button for subscription to be deleted	single-click
6	Activate Apply button	single-click
7	Activate Yes button to confirm deletion	single-click

19.4.8 Use the NSBRV GUI to Obtain a List of Bundling Orders and View a Bundling Order

Table 19.4-9 presents the steps required to use the NSBRV GUI to obtain a list of bundling orders and view a bundling order. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).
 - **Note:** At various points in this procedure, you may encounter a security information warning. Unless you know of a specific potential danger that you must avoid, click on the **Continue submission** button when this warning is displayed.
- 2 Click on the **Manage Bundling Orders** tab.
 - The **Manage Bundling Orders** page is displayed with a table listing all bundling orders in the NSBRV database, providing for each a **Bundling Order ID**, the **User**

ID of the person who created the bundling order, the **Creation Date**, **Expiration Date**, **Media Type**, and **Status** of the bundling order. The column headers for these data are links for sorting the list on the information in the column.

- The page also provides for each bundling order the options to **View**, **Update**, **Cancel**, and **List Subs**, with an **Apply** button to implement the selected option.
- 3 To list the subscriptions associated with a bundling order, click on the radio button next to **List Subs** in the **Choose Bundling Order Action** at the end of the row for the bundling order.
 - The radio button is filled to indicate selection.
 - 4 To implement the selected action, click on the **Apply** button at the end of the row.
 - The GUI displays a page listing the subscriptions associated with the selected bundling order, providing for each associated subscription the information identified in step 2.
 - 5 To go back to the list of bundling orders, click on the **Return to bundling order list** link.
 - The **Manage Bundling Orders** page is displayed as in Step 2.
 - 6 Scroll if necessary to reach the sought bundling order and click on the **View** radio button for that bundling order in the last column.
 - The button is filled to indicate selection of the **View** option.
 - 7 Click on the **Apply** button at the end of the row for the bundling order.
 - Detailed information is displayed for the selected bundling order.

Table 19.4-9. Use the NSBRV GUI to Obtain a List of Bundling Orders and View a Bundling Order

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select Manage Bundling Orders tab	single-click
3	Select the List Subs radio button for the desired bundling order	single-click
4	Activate the Apply button to implement the selected option	single-click
5	Use the Return to bundling order list link to go back to the list of bundling orders	single-click
6	Select the View radio button for the desired bundling order	single-click
7	Activate the Apply button to view the bundling order	single-click

19.4.9 Use the NSBRV GUI to Cancel a Bundling Order and Its Associated Subscriptions

Table 19.4-10 presents the steps required to use the NSBRV GUI to obtain a list of bundling orders and view a bundling order. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).
 - *Note:* At various points in this procedure, you may encounter a security information warning. Unless you know of a specific potential danger that you must avoid, click on the **Continue submission** button when this warning is displayed.
- 2 Click on the **Manage Bundling Orders** tab.
 - The **Manage Bundling Orders** page is displayed with a table listing all bundling orders in the NSBRV database, providing for each a **Bundling Order ID**, the **User ID** of the person who created the bundling order, the **Creation Date**, **Expiration Date**, **Media Type**, and **Status** of the bundling order. The column headers for these data are links for sorting the list on the information in the column.
 - The page also provides for each bundling order the options to **View**, **Update**, **Cancel**, and **List Subs**, with an **Apply** button to implement the selected option.
- 3 To cancel a bundling order, click on the radio button next to **Cancel** in the **Choose Bundling Order Action** at the end of the row for the bundling order to be canceled.
 - The radio button is filled to indicate selection.
- 4 To implement the selected action, click on the **Apply** button at the end of the row.
 - A confirmation message asks **Are you sure that you want to cancel the bundling order? Any associated subscriptions will be simultaneously canceled.**
- 5 Click on the **Yes** button.
 - The GUI displays a confirmation that **Bundling Order <nnnnnn> was canceled.**

Table 19.4-10. Use the NSBRV GUI to Cancel a Bundling Order and Its Associated Subscriptions

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select Manage Bundling Orders tab	single-click
3	Select the Cancel radio button for the desired bundling order	single-click
4	Activate the Apply button to implement the selected option	single-click
5	Activate the Yes button in the confirmation dialog	single-click

19.4.10 Use the NSBRV GUI to Add a Bundling Order

Table 19.4-11 presents the steps required to use the NSBRV GUI to add a bundling order. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).
 - *Note:* At various points in this procedure, you may encounter a security information warning. Unless you know of a specific potential danger that you must avoid, click on the **Continue submission** button when this warning is displayed.
- 2 Click on the **Manage Bundling Orders** tab.
 - The **Manage Bundling Orders** page is displayed with a table listing all bundling orders in the NSBRV database, providing for each a **Bundling Order ID**, the **User ID** of the person who created the bundling order, the **Creation Date**, **Expiration Date**, **Media Type**, and **Status** of the bundling order. The column headers for these data are links for sorting the list on the information in the column.
 - The page also provides for each bundling order the options to **View**, **Update**, **Cancel**, and **List Subs**, with an **Apply** button to implement the selected option.
- 3 Click on the **Add Bundling Order** link.
 - The GUI displays the **Add Bundling Order** page.
- 4 Click in the **User ID** field to place the cursor in the field.
 - The cursor is displayed in the **User ID** field.
- 5 Type your **User ID**.
 - The typed entry is displayed in the **User ID** field.
- 6 If it is necessary or desirable to change the displayed default **Expiration Date**, click in the **Expiration Date** field and change to the desired date, either by dragging the cursor to highlight the current value and typing over it or by backspacing to delete the current value and typing the desired date.
 - The desired date is displayed in the **Expiration Date** field.
- 7 Click on the **Media Type** option button to display the **Media Type** options and click on the desired option to select it.
 - The desired **Media Type** option is displayed on the option button.
- 8 Click on the **continue** button.
 - A confirmation dialog box asks **Your present values have been entered. Continue?**

- 9 Click on the **OK** button in the confirmation dialog box.
- The GUI displays a data page appropriate for the selected **Media Type**.
 - For hard media, the page provides fields to specify shipping information.
 - For FTP Push, the page provides fields to specify FTP Push parameters.
 - For FTP Pull, the page does not require media parameters.
 - The displayed data page contains fields to specify an **Email Address** and any additional **User String**. It also provides an option button to select a **Distribution Priority (VHIGH, HIGH, NORMAL, LOW, or XPRESS)**.
 - The displayed data page provides fields to specify completion criteria for a bundle (with defaults appropriate to the selected **Media Type**).
 - Minimum Bundle Size (GB).
 - Minimum Granule Count.
 - Maximum Bundle Age (days).
- 10 For each required field (identified on the GUI by an asterisk) and each field where a change is desirable, click in the field and change to the desired entry. This may entail typing a value in a blank field or changing a default, either by dragging the cursor to highlight the current value and typing over it or by backspacing to delete the current value and typing the desired value.
- The fields display entered and/or desired values.
- 11 Click on the **Add Bundling Order** button.
- The GUI displays a confirmation that **Bundling Order <nnnnnn> was created**.

Table 19.4-11. Use the NSBRV GUI to Add a Bundling Order

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select Manage Bundling Orders tab	single-click
3	Activate the Add Bundling Order link	single-click
4	Move the cursor to the User ID field	single-click
5	Type User ID	enter text
6	Optional: To change the Expiration Date , replace the date displayed in the Expiration Date field with the desired date	click-drag to highlight text; enter text
7	Use the Media Type option button to select media type	click; click option
8	Activate the continue button	single-click
9	Activate the OK button in the confirmation dialog	single-click
10	Enter required and any desirable information in the appropriate fields	click; enter text
11	Activate the Add Bundling Order button	single-click

19.4.11 Use the NSBRV GUI to Update a Bundling Order

Table 19.4-12 presents the steps required to use the NSBRV GUI to update a bundling order. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).
 - **Note:** At various points in this procedure, you may encounter a security information warning. Unless you know of a specific potential danger that you must avoid, click on the **Continue submission** button when this warning is displayed.
- 2 Click on the **Manage Bundling Orders** tab.
 - The **Manage Bundling Orders** page is displayed with a table listing all bundling orders in the NSBRV database, providing for each a **Bundling Order ID**, the **User ID** of the person who created the bundling order, the **Creation Date**, **Expiration Date**, **Media Type**, and **Status** of the bundling order. The column headers for these data are links for sorting the list on the information in the column.
 - The page also provides for each bundling order the options to **View**, **Update**, **Cancel**, and **List Subs**, with an **Apply** button to implement the selected option.

- 3 To update a bundling order, click on the radio button next to **Update** in the **Choose Bundling Order Action** at the end of the row for the bundling order.
 - The radio button is filled to indicate selection.
- 4 To implement the selected action, click on the **Apply** button at the end of the row.
 - The GUI displays the **Update Bundling Order <nnnnnn>** page, showing the **User Id, Expiration Date, and Media Type**.
- 5 If it is necessary or desirable to update the **Expiration Date**, click in the **Expiration Date** field and change to the desired date, either by dragging the cursor to highlight the current value and typing over it or by backspacing to delete the current value and typing the desired date.
 - The desired date is displayed in the **Expiration Date** field.
- 6 If it is necessary or desirable to change the media type, click on the **Media Type** option button to display the **Media Type** options and click on the desired option to select it.
 - The desired **Media Type** option is displayed on the option button.
- 7 Click on the **Update Bundling Order** button.
 - A confirmation dialog box asks **Your present values have been entered. Continue?**
- 8 Click on the **OK** button in the confirmation dialog box.
 - The GUI displays a data page appropriate for the selected **Media Type**.
 - For hard media, the page provides fields to specify shipping information.
 - For FTP Push, the page provides fields to specify FTP Push parameters.
 - For FTP Pull, the page does not require media parameters.
 - The displayed data page contains fields to specify an **Email Address** and any additional **User String**. It also provides an option button to select a **Distribution Priority (VHIGH, HIGH, NORMAL, LOW, or XPRESS)**.
 - The displayed data page provides fields to specify completion criteria for a bundle (with defaults appropriate to the selected **Media Type**).
 - Minimum Bundle Size (GB).
 - Minimum Granule Count.
 - Maximum Bundle Age (days).

- 9 For each required field (identified on the GUI by an asterisk) and each field where a change is desirable, click in the field and change to the desired entry. This may entail typing a value in a blank field or changing a default, either by dragging the cursor to highlight the current value and typing over it or by backspacing to delete the current value and typing the desired value.
 - The fields display entered and/or desired values.
- 10 If necessary or desirable, click on the **Distribution Priority** option button and click the desired option.
- 11 Click on the **Update Bundling Order** button.
 - The GUI displays a confirmation window with the selected parameters and a request to **Please confirm you want to update the following Bundling Order: <nnnnnnnn>**.
- 12 Click on the **OK** button in the confirmation window.
 - The GUI displays a confirmation that **Bundling Order <nnnnnn> was successfully updated**.

Table 19.4-12. Use the NSBRV GUI to Update a Bundling Order

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select Manage Bundling Orders tab	single-click
3	Select the Update radio button for the desired bundling order	single-click
4	Activate the Apply button to implement the selected option	single-click
5	To change the Expiration Date , replace the date displayed in the Expiration Date field with the desired date	click-drag to highlight text; enter text
6	To change the media type, use the Media Type option button to select the desired media type	click; click option
7	Activate the Update Bundling Order button	single-click
8	Activate the OK button in the confirmation dialog	single-click
9	Enter required and any desirable information in the appropriate fields	click; enter text
10	To change the distribution priority, use the Distribution Priority option button to select the desired priority	click; click option
11	Activate the Update Bundling Order button	single-click
12	Activate the OK button in the confirmation window	single-click

19.4.12 Use the NSBRV GUI to Configure Bundling Order Default Values

Table 19.4-13 presents the steps required to use the NSBRV GUI to view acquire and notification actions being processed. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).
 - *Note:* At various points in this procedure, you may encounter a security information warning. Unless you know of a specific potential danger that you must avoid, click on the **Continue submission** button when this warning is displayed.
- 2 Click on the **Manage Bundling Orders** tab.
 - The **Manage Bundling Orders** page is displayed with a table listing all bundling orders in the NSBRV database, providing for each a **Bundling Order ID**, the **User ID** of the person who created the bundling order, the **Creation Date**, **Expiration Date**, **Media Type**, and **Status** of the bundling order. The column headers for these data are links for sorting the list on the information in the column.
 - The page also provides for each bundling order the options to **View**, **Update**, **Cancel**, and **List Subs**, with an **Apply** button to implement the selected option.
- 3 Click on the **Configure Defaults** link.
 - The **Configure Completion Criteria Default Values** page is displayed.
- 4 Click in the **Change to . . .** entry field for any configuration parameter to be changed.
 - The cursor is displayed in the entry field.
- 5 Type the desired new value for the selected parameter.
 - The typed entry is displayed in the field.
- 6 Repeat steps 4 and 5 for any additional parameters to be changed.
- 7 Click on the **Change Bundling Criteria** button at the bottom of the page.
 - A dialog box requests **Please Confirm The Following Bundling Criteria Change** and lists any parameter(s) for which changes were entered, with the entered value(s).
- 8 Click on the **OK** button in the dialog box.
 - The dialog box is closed and the **Current Value** column on the **Configure Completion Criteria Default Values** page reflects the change(s).

Table 19.4-13. Use the NSBRV GUI to Configure Bundling Order Completion Criteria Default Values

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select Manage Bundling Orders tab	single-click
3	Select the Configure Defaults link	single-click
4	Move the cursor to the Change to . . . entry field for any configuration parameter to be changed	single-click
5	Type the desired new value for the selected parameter	enter text
6	Repeat Steps 4 and 5 for any additional parameters	
7	Activate the Change Bundling Criteria button	single-click
8	Activate the OK button in the confirmation dialog	single-click

19.4.13 Use the NSBRV GUI to View Acquire and Notification Actions Being Processed

Table 19.4-14 presents the steps required to use the NSBRV GUI to view acquire and notification actions being processed. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).
- 2 Click on the **List Action Queue** tab.
 - The **List Action Queue** information is displayed in a table listing acquire and notification actions that are being processed. On this page, the **Action Type** and **Subscription Id** column headers are links for sorting the list, and there are also **Action Type**, **Subscription**, and **Status** option buttons and a filter button for filtering the list.

Table 19.4-14. Use the NSBRV GUI to View the Acquire and Notification Actions Being Processed

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select List Action Queue tab	single-click

19.4.14 Use the NSBRV GUI to View Statistics on Processing of Events and Actions by the NSBRV

Table 19.4-15 presents the steps required to use the NSBRV GUI to view statistics on processing of events and actions by the NSBRV. If you are already familiar with the procedure, you may

prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the NSBRV GUI (refer to procedure 19.4.1 **Launch the NSBRV GUI**).
- 2 Click on the **List Statistics** tab.
 - The **List Statistics** information is displayed, showing **Subscription Events Left to Dequeue**, **Actions Left to Dequeue**, a **Summary of the Processing Time for Subscriptions Evaluated against Events in the Event Queue**, a **Summary of the Processing Time for E-Mail Notification Actions in Action Queue**, and a **Summary of the Processing Time for Distribution Actions in Action Queue**.

Table 19.4-15. Use the NSBRV GUI to View Statistics on Processing of Events and Actions by the NSBRV

Step	What to Do	Action to Take
1	Launch the NSBRV GUI	use Procedure 19.4.1
2	Select List Statistics tab	single-click

19.5 Using the ECS Order Tracking Tool

The ECS Order Tracking GUI provides a convenient tool to locate an order, either because a user wants to cancel it or for some other reason (e.g., a user wants to check on an order that has not been received, or it is necessary to delete one or more requests from an order). Table 19.5-1 provides an activity checklist for tasks using the ECS Order Tracking Tool.

Table 19.5-1. Use the ECS Order Tracking Tool - Activity Checklist

Order	Role	Task	Section	Complete?
1	User Services	Launch the ECS Order Tracking GUI	(P) 19.5.1	
2	User Services	Use the ECS Order Tracking GUI to Find and Review a User's Order and Request Information	(P) 19.5.2	
3	User Services	Use the ECS Order Tracking GUI to Cancel an Order or Request	(P) 19.5.3	
4	User Services	Troubleshooting: Check Log Files for ECS Order Tracking	(P) 19.5.4	

19.5.1 Launch the ECS Order Tracking GUI

Table 19.5-2 presents the steps required to launch the NBSRV GUI. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the UNIX command shell prompt, type **setenv DISPLAY *clientname*:0.0** and then press the **Return/Enter** key.
 - For *clientname*, use either the local terminal/workstation IP address or its machine name.
- 2 Start the log-in to the MSS client server by typing **/tools/bin/ssh *hostname*** (e.g., g0mss21, l0mss21, e0mss21, n0mss21) at the UNIX command shell prompt, and then press the **Return/Enter** key.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type yes (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 3.
 - If you have not previously set up a secure shell passphrase; go to Step 4.
- 3 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your **Passphrase** and then press the **Return/Enter** key. Go to Step 5.
- 4 At the **<user@remotehost>'s password:** prompt, type your **Password** and then press the **Return/Enter** key.
- 5 To change to the directory containing the utility scripts to start Account Management GUIs, type **cd /usr/ecs/*MODE*/CUSTOM/utilities**, where *MODE* will likely be **TS1**, **TS2**, or **OPS**, and then press the **Return/Enter** key.
 - The working directory is changed to **/usr/ecs/*MODE*/CUSTOM/utilities**.
- 6 Type **EcMsAcOrderGUIStart *MODE***, where *MODE* is **TS1**, **TS2**, or **OPS** (or other) as selected in Step 5, and then press the **Return/Enter** key.
 - The **ECS Order Tracking** window is displayed.

Table 19.5-2. Launch the ECS Order Tracking GUI

Step	What to Do	Action to Take
1	setenv DISPLAY clientname:0.0	enter text; press Return/Enter
2	/tools/bin/ssh hostname	enter text; press Return/Enter
3	Passphrase (or Step 4)	enter text; press Return/Enter
4	Password	enter text; press Return/Enter
5	cd /usr/ecs/MODE/CUSTOM/utilities	enter text; press Return/Enter
6	EcMsAcOrderGUIStart MODE	enter text; press Return/Enter

19.5.2 Use the ECS Order Tracking GUI to Find and Review a User's Order and Request Information

Table 19.5-3 presents the steps required to use the ECS Order Tracking GUI to find and review a user's order and request information. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the ECS Order Tracking GUI (refer to Procedure 19.5.1 Launch ECS Order Tracking GUI).
- 2 Click the selection button to the left of one of the **Query by:** options.
 - The options are **User Name:**, **Order ID:**, **Request ID:**, **MTMGW Request:**, and **Order Type:**.
 - The button appearance changes to depressed to indicate its selection, and the cursor moves to the first entry field associated with the selection. *Note:* For the **Order Type:** option, the cursor moves to highlight a pull-down arrow at the end of the entry field.
- 3 Type a search criterion appropriate to the selected **Query by:** option (e.g., user's last name, order or request ID, Machine-to-Machine Gateway External Request ID), or, for the **Order Type:** option click on the pull-down arrow and click on the desired option.
 - The typed or selected entry appears in the entry field.
 - *Note:* The search is case-sensitive.
- 4 If a selected **Query by:** option has a second entry field and it is desirable to enter information there to narrow the search further (i.e., a user's first name or a Machine-to-Machine Gateway User ID), click in that second field.
 - The cursor moves to the clicked field.

- 5 To enter information in the selected second entry field, type a search criterion appropriate to the selected **Query by:** option (e.g., user's first name, Machine-to-Machine Gateway User ID).
 - The typed entry appears in the entry field.
 - *Note:* The search is case-sensitive.
- 6 In the **Filter by Status:** area, click to select status options for the filter.
 - Selection buttons for selected options indicate selection by the appearance of being depressed.
 - *Note:* All status options are selected by default. A click on the selection button for an option deselects it. A click on the **Deselect All** button deselects all options to permit selection of one or a few by clicks on the appropriate selection button(s). If all or some options are deselected, a click on the **Select All** button selects all options.
- 7 Press the **Return/Enter** key or click on the **Query Order** button.
 - The order is displayed in the **Order List** box in the **ECS Data Order Tracking** screen.
 - The **Order ID, Home DAAC, Order Date, Order Type, Order Source, Status, Description,** and **Start Date** are displayed.
- 8 If there are multiple requests, click on the order to highlight it in the **Order List** box, then click on the **Query Request** button.
 - Every request number relating to the highlighted Order is displayed.
 - The **Order ID, Request ID, Processing DAAC, Request Type, # Files, Size, Media, Format, Status, Ship Date,** and **Description** are displayed.
- 9 Click on the **Shipping Information** button.
 - A **Shipping Information** window pops up to display information about the order, including the name of the user, order ID, shipping address, phone and fax numbers, and email address.
- 10 To close the **Shipping Information** window, click on the **Close** button.
 - The **Shipping Information** window is closed.

Table 19.5-3. Use the ECS Order Tracking GUI to Find and Review a User's Order and Request Information

Step	What to Do	Action to Take
1	Launch the ECS Order Tracking GUI	use Procedure 19.5.1
2	Select Query by: option	single-click
3	Type or select search criterion	enter text or click option
4	Optional: Move cursor to second entry field	single-click
5	Optional: Type or select search criterion	enter text
6	Select status options for Filter by Status:	click(s)
7	Activate Query Order button (or press Return/Enter)	single-click (or press key)
8	Highlight order and list requests	click-select and single-click
9	Activate the Shipping Information button	single-click
10	Activate the Close button	single-click

19.5.3 Use the ECS Order Tracking GUI to Cancel an Order or Request

Table 19.5-4 presents the steps required to use the ECS Order Tracking GUI to cancel an order. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Find and review the order or request to be canceled (refer to Procedure 19.5.2 **Use the ECS Order Tracking GUI to Find and Review a User's Order and Request Information**).
- 2 If necessary, click on the order or the specific request to be canceled to highlight it.
 - The selected item is highlighted.
- 3 To cancel a highlighted request, click on the **Delete Request** button.
 - The request is deleted from the system.
- 4 To cancel a highlighted order, first click on the **Update Order** button.
 - The Update dialog box is displayed.
- 5 In the **Update** dialog box, make sure the **Status** checkbox has a check in it (click in the checkbox if necessary).
 - The **Status** checkbox displays a check mark.
- 6 Click on the pull-down arrow to the right of the **Status New Values** text field, hold the left mouse button and dragging to select the value "Canceled."
 - The **Status New Values** text field displays **Canceled**.

- 7 Click on the **Update** button.
 - The order status is changed to **Canceled**.

Table 19.5-4. Use the ECS Order Tracking GUI to Cancel an Order or Request

Step	What to Do	Action to Take
1	Find and review the order or request to be canceled	use Procedure 19.5.2
2	Highlight the order or request to be deleted	single-click
3	To cancel highlighted request, activate the Delete Request button	single-click
4	To cancel a highlighted order, activate the Update Order button	single-click
5	In the Update dialog box, select Status	single-click
6	In the Status New Values field, select Canceled	click and drag
7	Activate Update button	single-click

19.5.4 Troubleshooting: Check Log Files for ECS Order Tracking

The ECS Order Tracking tool is part of the ECS System Management Support Subsystem (MSS), and uses database functions in that subsystem. If the tool cannot be launched, or does not function (e.g., cannot retrieve orders), you will need to ask the System Administrator to ensure that the Order Tracking Server is functioning properly. It may be necessary to have the Database Administrator check to ensure that there are no problems with the database.

It is also possible to receive error messages when using the GUI while it is apparently functioning normally. Error messages associated with the ECS Order Tracking tool are listed in Appendix A of the *Operations Tools Manual* (Document 609-CD-600-001).

Log files can often provide information that will identify possible sources of disruption in Order Tracking server function or communications, suggesting additional checks or actions that may help resolve the problem. Table 19.5-5 presents the steps required to check log files for ECS order tracking. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 To log in to the host for the server and log(s) to be examined, type `/tools/bin/ssh <hostname>` and then press the **Return/Enter** key.
 - For `<hostname>`, use `<x>0mss21`, where `<x>` = **e** for EDC, **g** for GSFC, **l** for LaRC, or **n** for NSIDC.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type **yes** (“y” alone does not work).

- If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 2.
 - If you have not previously set up a secure shell passphrase; go to Step 3.
- 2** If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your *Passphrase* and then press the **Return/Enter** key. Go to Step 4.
- The prompt reflects the login to the selected host.
- 3** At the **<user@remotehost>'s password:** prompt, type your *Password* and then press the **Return/Enter** key.
- The prompt reflects the login to the selected host.
- 4** Type **cd /usr/ecs/<MODE>/CUSTOM/logs** and then press the **Return/Enter** key.
- The prompt reflects the change to directory **/usr/ecs/<MODE>/CUSTOM/logs**.
- 5** To view a server log, type **pg filename** and then press the **Return/Enter** key.
- *filename* refers to the account management log file to be reviewed (e.g., **EcMsAcOrderSrvr.ALOG**, **EcMsAcOrderSrvrDebug.log**).
 - The first page of the log file is displayed; additional sequential pages can be displayed by pressing the **Return/Enter** key at the **:** prompt.
 - Although this procedure has been written for the **pg** command, any UNIX editor or visualizing command (e.g., **vi**, **more**, **tail**) can be used to review the log file.
 - Typically, the **<server>Debug.log** captures more detailed information than the **<server>.ALOG**. However, for some servers (e.g., **SDSRV**), there may be significant detail in the **<server>.ALOG**. It is also important to note that the **DebugLevel** setting in the **<server>.CFG** file determines the level of detail captured in the **<server>Debug.log** (**0** is off, a setting of **1** captures status and errors, a setting of **2** captures major events, and a setting of **3** is a full trace recording of all activity). If the **DebugLevel** has been set to one of the lower levels during operations, the System Administrator may set it to **3** during troubleshooting.
- 6** Review the log file(s) to determine if there are any indications of connection problems or errors at start up.
- The **EcMsAcOrderSrvrDebug.log** file for the User Profile/User Registration server may contain an error message concerning **PF Init** error or problem (notify the System Administrator).
 - The **EcMsAcOrderSrvr.ALOG** file may contain evidence of a Sybase error (e.g., **SybaseErrorCode1 =92014;SybaseErrorMessage1 ="x0mss21_srvr"** or **SybaseErrorCode2 =16;SybaseErrorMessage2 =""**) (notify the Database Administrator).

- 7 To exit the **pg** review of the log file, type **q** at the **:** prompt and then press the **Return/Enter** key.

Table 19.5-5. Check Log Files for ECS Order Tracking

Step	What to Do	Action to Take
1	/tools/bin/ssh hostname	enter text; press Return/Enter
2	Passphrase (or Step 3)	enter text; press Return/Enter
3	Password	enter text; press Return/Enter
4	cd /usr/ecs/MODE/CUSTOM/logs	enter text; press Return/Enter
5	pg filename	enter text; press Return/Enter
6	Review log file	read text
7	To exit, type q at the : prompt	enter text; press Return/Enter

19.6 Using the Data Dictionary Maintenance Tool

Requests for ECS services may come from the EOS Data Gateway (EDG) Web Client of Version 0 (V0). For example, users, including those from the ASTER Ground Data System (GDS), will submit requests for data searches and product orders using the EDG Search and Order Tool. Requests for ECS products or services (e.g., Directory Search requests, Inventory Search requests, Browse requests, Product requests) are sent to the ECS V0 Gateway. To accommodate mapping of terminology between the ECS and the V0 system, the ECS V0 Gateway reads the ECS Data Dictionary containing the terminology mapping information, ensuring that the request can be directed to the appropriate science data server. A Data Dictionary Administrator builds the ECS Data Dictionary V0 System search parameters, ECS schema, and metadata. The V0 client must have ECS Valid terminology for searchable attributes (e.g., source, sensor, geophysical parameter, data set name, data center ID, campaign, processing level, geographical coordinates, and temporal intervals) in order to search ECS holdings.

Accordingly, upon establishment of a new ECS data set, valids for the data set must be made available to V0. EOSDIS V0 IMS has a two-week valids update cycle:

- Data centers (sites) submit their new valids, definitions, and/or package Object Description Language (ODL) file(s). An ODL file is a formatted ASCII text file that contains the keyword descriptions for the data sets.
- Valids ODL files are transferred to the V0 IMS using anonymous FTP.
- The IMS team acknowledges receipt of the new valids submission and runs a syntax checker on the files.
- The files are processed and the valids are tested.

More detailed information on the cycle and the update process may be obtained at http://harp.gsfc.nasa.gov/v0ims/valids/valids_procedures.html.

There is two-way interoperability with the ASTER GDS for product search and orders. This means that ASTER GDS users can search, browse, and order ECS products, and ECS users can search, browse, and order products available at GDS. Information is also exchanged concerning price estimates and order status. ASTER GDS access to ECS products and services is through the EROS Data Center (EDC). Therefore, all ECS collection information must be available at EDC. Furthermore, ECS must be able to use ASTER GDS dataset valids.

The Data Dictionary Maintenance Tool (DDMT) is an ECS tool to support management of ECS valids and mapping of ECS metadata to V0 attributes and values, as well as to ASTER GDS attributes and values. It supports import of ASTER GDS dataset valids, and it supports export of ECS dataset valids. Table 19.6-1 provides an activity checklist for tasks using the DDMT.

Table 19.6-1. Use the Data Dictionary Maintenance Tool - Activity Checklist

Order	Role	Task	Section	Complete?
1	User Services/ Science Data Specialist	Launch the Data Dictionary Maintenance Tool GUI	(P) 19.6.1	
2	User Services/ Science Data Specialist	Use the DDMT GUI to Export Valids	(P) 19.6.2	
3	User Services/ Science Data Specialist	Use the DDMT GUI to Import Valids	(P) 19.6.3	
4	User Services/ Science Data Specialist	Troubleshooting: Check Data Dictionary Server Log Files	(P) 19.6.4	

19.6.1 Launch the Data Dictionary Maintenance Tool GUI

Table 19.6-2 presents the steps required to launch the Data Dictionary Maintenance Tool GUI. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the UNIX command shell prompt, type **setenv DISPLAY *clientname*:0.0** and then press the **Return/Enter** key.
 - For *clientname*, use either the local terminal/workstation IP address or its machine name.

- 2 Start the log-in to the interface server by typing `/tools/bin/ssh hostname` (e.g., e0ins02, g0ins02, l0ins02, n0ins02) at the UNIX command shell prompt, and then press the **Return/Enter** key.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type yes (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 3.
 - If you have not previously set up a secure shell passphrase; go to Step 4.
- 3 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your *Passphrase* and then press the **Return/Enter** key. Go to Step 5.
- 4 At the `<user@remotehost>`'s **password:** prompt, type your *Password* and then press the **Return/Enter** key.
- 5 To change to the directory containing the utility scripts to start Account Management GUIs, type `cd /usr/ecs/MODE/CUSTOM/utilities`, where *MODE* will likely be **TS1**, **TS2**, or **OPS**, and then press the **Return/Enter** key.
 - The working directory is changed to `/usr/ecs/MODE/CUSTOM/utilities`.
- 6 Type `EcDmDdMaintenanceToolStart MODE`, where *MODE* is **TS1**, **TS2**, or **OPS** (or other) as selected in Step 5, and then press the **Return/Enter** key.
 - The **Data Dictionary Maintenance Tool** window is displayed.

Table 19.6-2. Launch the Data Dictionary Maintenance Tool GUI

Step	What to Do	Action to Take
1	<code>setenv DISPLAY clientname:0.0</code>	enter text; press Return/Enter
2	<code>/tools/bin/ssh hostname</code>	enter text; press Return/Enter
3	<i>Passphrase</i> (or Step 4)	enter text; press Return/Enter
4	<i>Password</i>	enter text; press Return/Enter
5	<code>cd /usr/ecs/MODE/CUSTOM/utilities</code>	enter text; press Return/Enter
6	<code>EcDmDdMaintenanceToolStart MODE</code>	enter text; press Return/Enter

19.6.2 Use the DDMT GUI to Export Valid

Periodically, and as new products/ESDTs are added to ECS, information about the valid attributes and values for them must be made available to the V0 IMS and to ASTER GDS, so that the information can be used to search and order ECS data, including those new products/ESDTs. Table 19.6-3 presents the steps required to use the DDMT GUI to export valids. If you are already familiar with the procedure, you may prefer to use this quick-step

table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1** Launch the **DDMT GUI** (refer to Procedure 19.6.1 **Launch the Data Dictionary Maintenance Tool GUI**).
- 2** Click on the **Export Valid File** tab.
 - The **Export Valid File** screen is displayed.
- 3** Click on the **Selection Criteria . . .** button in the **1. Get list of collections** area.
 - A **Database List (Export Collections)** dialog box is displayed
- 4** In the **Database List (Export Collections)** dialog box, click on the pull-down arrow to the right of the **Characteristic Type:** field.
 - Criteria displayed in a drop-down list include: **Export Collection, Attribute, Instrument, Keyword, Platform, Sensor, and Information Manager.**
- 5** Click on **Export Collection** in the drop-down list.
 - The selected item appears in the **Characteristic Type:** field.
- 6** In the **Database List (Export Collections)** dialog box, click on the pull-down arrow to the right of the **Characteristic Name:** field.
 - A drop-down list of names is displayed.
- 7** Click on **Archive Center** in the drop-down list.
 - The selected item appears in the **Characteristic Name:** field.
- 8** Click on the **Predicate:** option button and select **Is Equal To**.
 - The selected option is displayed on the button.
- 9** Click in the **Value:** field.
 - The cursor is displayed in the **Value:** field.
- 10** Type **<Center>**, where **<Center>** is the designation for your site (e.g., **GSFC, EDC, LARC, NSIDC**).
 - The typed entry appears in the field.
- 11** Click on the **OK** button.
 - The **Database List (Export Collections)** dialog box is closed and a list of **Collections** is displayed in the **2. Select collections to export** area of the **Export Valid File** screen.

- 12 Double click on one of the collections for which valids are to be exported.
 - The selected collection is highlighted and **Export** is displayed in the **Status** column next to the highlighted selection.
 - Note: Multiple collections may be selected by use of the **Shift** and/or **Control** keys. Contiguous items in the list may be selected by holding down the **Shift** key while double clicking on additional items. Non-contiguous items in the list may be selected by holding down the **Control** key while double clicking on an additional item.
- 13 Click in the **File name for export:** field in the **3. Export collections to file** area.
 - The cursor moves to the **File name for export:** field.
- 14 Type the path to specify a directory and name for the export file to be saved.
 - The typed entry is displayed in the **File name for export:** field.
- 15 Click on the **Save** button.
 - An "error" dialog box is displayed with the message **The Query Succeeded for all the collections**, indicating that the export file was saved.

Table 19.6-3. Use the DDMT to Export Valids

Step	What to Do	Action to Take
1	Launch the Data Dictionary Maintenance Tool GUI	use Procedure 19.6.1
2	Select the Export Valids File tab	single-click
3	Activate the Selection Criteria . . . button in the 1. Get list of collections area	single-click
4	In the Database List (Export Collections) dialog box, use the pull-down arrow to display the Characteristic Type: list	single-click
5	From the drop-down list, select the desired characteristic type	single-click
6	In the Database List (Export Collections) dialog box, use the pull-down arrow to display the Characteristic Name: list	single-click
7	From the drop-down list, select Archive Center	single-click
8	Use the Predicate: option button to select Is Equal To	click option
9	Move the cursor to the Value: field	single-click
10	Type the designation for your site	enter text
11	Activate the OK button	single-click
12	Select collection(s) for which valids are to be exported	double-click(s)
13	Move cursor to the File name for export: field in the 3. Export collections to file area	single-click
14	Specify path for the export file to be saved	enter text
15	Activate Save button	single-click

19.6.3 Use the DDMT GUI to Import Valid

The **Import Valid File** tab of the DDMT GUI is used for import of ASTER dataset valids. Table 19.6-4 presents the steps required to use the DDMT GUI to import valids. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the **DDMT GUI** (refer to Procedure 19.6.1 **Launch the Data Dictionary Maintenance Tool GUI**).
- 2 Click on the **Import Valid File** tab.
 - The **Import Valid File** screen is displayed.
- 3 Under **Load Valid File.**, click in the **File Name:** field.
 - The cursor is displayed in the **File Name:** field.
- 4 Type *<validsfilename>*.
 - *<validsfilename>* is the full path for the file to be imported. It is possible to click on the **Browse . . .** button and click to select the file.
 - The typed or selected entry is displayed in the **File Name:** field.
- 5 Click on the **Check** button.
 - The system checks the syntax of the valids file and generates any collection messages.
- 6 Under **Save Syntax Error File.**, click in the **File Name:** field.
 - The cursor is displayed in the **File Name:** field.
- 7 Type *<errorfilename>*.
 - *<errorfilename>* is the full path for the file to be saved. It is possible to click on the **Browse . . .** button and click to select a file.
- 8 To save the statistics or warnings to the named statistics/warning file, click on the **Save** button.
 - The file is saved.
- 9 To submit the collection to the Data Dictionary, click on the **Update** button.
 - The collection is inserted.
- 10 Click on the **Map Attributes/Keywords** tab.
 - The **Map Attributes/Keywords** screen is displayed.

11 Click on the **Update All Collections** button.

- The ECS collections are updated with the new mappings. (*Note:* This update may take several minutes.)

Table 19.6-4. Use the DDMT to Import Valids

Step	What to Do	Action to Take
1	Launch the Data Dictionary Maintenance Tool GUI	use Procedure 19.6.1
2	Select the Import Valid s File tab	single-click
3	Move cursor to File Name: field under Load Valid s File.	single-click
4	Type the full path for the file to be imported (or select file using Browse . . . button).	enter text (or click select)
5	Activate the Check button	single-click
6	Move cursor to File Name: field under Save Syntax Error File .	single-click
7	Type the full path for the file to be saved (or select file using Browse . . . button).	enter text (or click select)
8	Activate the Save button	single-click
9	Activate the Update button	single-click
10	Select the Map Attributes/Keywords tab	single-click
11	Activate the Update All Collections button	single-click

19.6.4 Troubleshooting: Check Data Dictionary Server Log Files

The Data Dictionary Maintenance Tool (DDMT) is part of the ECS Data Management Subsystem (DMS), and uses database functions in that subsystem. If the tool cannot be launched, or does not function (e.g., cannot retrieve orders), you will need to ask the System Administrator to ensure that the Data Dictionary (DDICT) Server is functioning properly. It may be necessary to have the Database Administrator check to ensure that there are no problems with the database.

It is also possible to receive error messages when using the GUI while it is apparently functioning normally. Error messages associated with the DDMT are listed in Appendix A of the *Operations Tools Manual* (Document 609-CD-600-001).

Log files can often provide information that will identify possible sources of disruption in Data Dictionary server function or communications, suggesting additional checks or actions that may help resolve the problem. The procedure for checking a log file starts with the assumption that the operator has logged in to ECS. Table 19.6-5 presents the steps required to launch the Data Dictionary Maintenance Tool GUI. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 To log in to the host for the server and log(s) to be examined, type `/tools/bin/ssh <hostname>` and then press the **Return/Enter** key.
 - For `<hostname>`, use **e0ins02** at EDC, **g0ins02** at GSFC, **l0ins02** at LaRC, and **n0ins02** at NSIDC.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type **yes** (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 2.
 - If you have not previously set up a secure shell passphrase; go to Step 3.
- 2 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your *Passphrase* and then press the **Return/Enter** key. Go to Step 4.
 - The prompt reflects the login to the selected host.
- 3 At the `<user@remotehost>'s password:` prompt, type your *Password* and then press the **Return/Enter** key.
 - The prompt reflects the login to the selected host.
- 4 Type `cd /usr/ecs/<MODE>/CUSTOM/logs` and then press the **Return/Enter** key.
 - The prompt reflects the change to directory `/usr/ecs/<MODE>/CUSTOM/logs`.
- 5 To view a server log, type `pg filename` and then press the **Return/Enter** key.
 - *filename* refers to the account management log file to be reviewed (e.g., **EcDmDictServer.ALOG**, **EcDmDictServerDebug.log**).
 - The first page of the log file is displayed; additional sequential pages can be displayed by pressing the **Return/Enter** key at the `:` prompt.
 - Although this procedure has been written for the **pg** command, any UNIX editor or visualizing command (e.g., **vi**, **more**, **tail**) can be used to review the log file.
 - Typically, the `<server>Debug.log` captures more detailed information than the `<server>.ALOG`. However, for some servers (e.g., **SDSRV**), there may be significant detail in the `<server>.ALOG`. It is also important to note that the **DebugLevel** setting in the `<server>.CFG` file determines the level of detail captured in the `<server>Debug.log` (**0** is off, a setting of **1** captures status and errors, a setting of **2** captures major events, and a setting of **3** is a full trace recording of all activity). If the **DebugLevel** has been set to one of the lower levels during operations, the System Administrator may set it to **3** during troubleshooting.

- 6 Review the log file(s) to determine if there are any indications of connection problems or errors at start up.
 - The **EcDmDictServerDebug.log** file for the User Profile/User Registration server may contain an error message concerning **PF Init** or some other error or problem (notify the System Administrator).
 - The **EcDmDictServer.ALOG** file may contain evidence of a Sybase error (e.g., **SybaseErrorCode1 =92014;SybaseErrorMessage1 ="x0ins01_srvr"** or **SybaseErrorCode2 =16;SybaseErrorMessage2 =""**) (notify the Database Administrator).
- 7 To exit the **pg** review of the log file, type **q** at the **:** prompt and then press the **Return/Enter** key.

Table 19.6-5. Check Data Dictionary Server Log Files

Step	What to Do	Action to Take
1	/tools/bin/ssh hostname	enter text; press Return/Enter
2	Passphrase (or Step 3)	enter text; press Return/Enter
3	Password	enter text; press Return/Enter
4	cd /usr/ecs/MODE/CUSTOM/logs	enter text; press Return/Enter
5	pg filename	enter text; press Return/Enter
6	Review log file	read text
7	To exit, type q at the : prompt	enter text; press Return/Enter

19.7 (EDC Only) Creating and Managing ASTER Data Acquisition Requests

At the EROS Data Center (EDC), User Services may receive requests from users for assistance with the ASTER Data Acquisition Request (DAR) Tool or the On-Demand Form Request Manager, ECS client tools used in reference to ASTER data products and services. It is essential, therefore, that EDC User Services representatives be familiar with the tools, and be able to perform the functions necessary to create and submit a DAR, to create and submit a query to the XAR database, and to create requests for on-demand production of ASTER products.

The ASTER DAR tool permits authorized users to submit DARs, or requests for scheduling data acquisitions by the Advanced Spaceborne Thermal Emissions and Reflection (ASTER) Radiometer. The requests are submitted through the ECS client to the ASTER Ground Data System (GDS), located in Japan. The ASTER GDS controls scheduling of the ASTER instrument and provides the collected data as level 1A and level 1B data to the EDC. Table 19.7-1 provides an activity checklist for tasks using the ASTER DAR Tool.

Table 19.7-1. Use the ASTER DAR Tool - Activity Checklist

Order	Role	Task	Section	Complete?
1	User Services/ Science Data Specialist	Launch the ASTER DAR Tool	(P) 19.7.1	
2	User Services/ Science Data Specialist	Use the ASTER DAR Tool to Prepare and Submit an ASTER Data Acquisition Request	(P) 19.7.2	

19.7.1 Launch the ASTER DAR Tool

The ASTER DAR Tool is a web-based application. Table 19.7-2 presents the steps required to launch the ASTER DAR Tool. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 At the UNIX command shell prompt, type **setenv DISPLAY *clientname*:0.0** and then press the **Return/Enter** key.
 - For *clientname*, use either the local terminal/workstation IP address or its machine name.
- 2 Start the log-in to the client server by typing **/tools/bin/ssh e0ins02** at the UNIX command shell prompt, and press the **Return/Enter** key.
 - If you receive the message, **Host key not found from the list of known hosts. Are you sure you want to continue connecting (yes/no)?** type **yes** (“y” alone does not work).
 - If you have previously set up a secure shell passphrase and executed **sshremote**, a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears; continue with Step 3.
 - If you have not previously set up a secure shell passphrase; go to Step 4.
- 3 If a prompt to **Enter passphrase for RSA key '<user@localhost>'** appears, type your **Passphrase** and then press the **Return/Enter** key. Go to Step 5.
- 4 At the **<user@remotehost>'s password:** prompt, type your **Password** and then press the **Return/Enter** key.
- 5 Type **netscape** and then press the **Return/Enter** key.
 - The **Netscape** browser window is displayed.
- 6 Click in the **Netsite:** field on the Netscape window.
 - The cursor is displayed in the **Netsite:** field and its contents are highlighted to indicate that typing will replace them.

- 7 Type the entry for the ASTER DAR Tool (ADT) Uniform Resource Locator (URL) (<http://e0ins02u.ecs.nasa.gov:10400/>) directly into the **Netsite:** field, and then press the **Return/Enter** key.
 - An ASTER DAR Tool - Netscape window is displayed with the ASTER DAR Tool Welcome page.
- 8 Click on the **Launch the ASTER DAR Tool** link at the bottom of the page.
 - A Java Console dialog box with scrolling information is displayed.
 - A dialog box is displayed with **Username:** and **Password:** fields.
 - *Note:* If you have not loaded the latest Java plugin for your browser, you will be prompted to do so. Download the plugin and follow the instructions. On UNIX, run `<(sh plugin_file_name.sh)>` on the plugin file and answer the questions. Once the plugin is installed, restart the browser.
- 9 Click on the **Username:** field in the log-in dialog box.
 - The cursor is displayed in the **Username:** field.
- 10 Type `<DAAC_login_name>`.
 - The typed entry is displayed in the **Username:** field.
 - *Note:* An ECS DAAC account username and password allowing submission of a DAR must be created prior to performing this procedure. As an alternative, it is possible to access the ASTER DAR tool as "ECSGuest" to explore how most of the screens work, but it will not be possible to submit a DAR or receive a DAR ID.
- 11 Click on the **Password:** field in the log-in dialog box.
 - The cursor is displayed in the **Password:** field.
- 12 Type `<DAAC_password>`.
 - Asterisks are displayed in the **Password:** field.
- 13 Click the **OK** button or press the **Return/Enter** key.
 - An ASTER DAR tool "Welcome to the Data Acquisition Tool" dialog is displayed, with introductory information to the user. If the login is as "ECSGuest," the information indicates that submission of a DAR is not authorized, and information is given on how to apply for authorization.
- 14 Click on the **OK** button in the "Welcome" dialog box.
 - The dialog box is removed.
 - A large new window, **The ASTER DAR Tool** window, is displayed, with the **Organizer** tab as the default, showing a list of folders and the names of any previously saved or submitted DARs.

Table 19.7-2. Launch the ASTER DAR Tool

Step	What to Do	Action to Take
1	setenv DISPLAY clientname:0.0	enter text; press Return/Enter
2	/tools/bin/ssh e0ins02	enter text; press Return/Enter
3	Passphrase (or Step 4)	enter text; press Return/Enter
4	Password	enter text; press Return/Enter
5	netscape	enter text; press Return/Enter
6	Move cursor to Netsite: field	single-click
7	http://e0ins02u.ecs.nasa.gov:10400/	enter text; press Return/Enter
8	Activate Launch the ASTER DAR Tool link	single-click
9	Move the cursor to the Username: field	single-click
10	Type <DAAC_login_name>	enter text
11	Move the cursor to the Password: field	single-click
12	Type <DAAC_password>	enter text
13	Activate the OK button (or press Return/Enter key)	single-click (or press key)
14	Activate the OK button in the "Welcome" dialog box	single-click

19.7.2 Use the ASTER DAR Tool to Prepare and Submit an ASTER Data Acquisition Request

Table 19.7-3 presents the steps required to use the ASTER DAR Tool to prepare and submit an ASTER Data Acquisition Request. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch the ASTER DAR Tool (refer to Procedure 19.7.1 **Launch the ASTER DAR Tool**).
- 2 Click on the **Create/Edit DAR** tab.
 - The **Create/Edit DAR** functions are displayed, with the **General** nested tab displayed as default and **Untitled DAR** showing as the default in the **DAR Title:** field.
- 3 Highlight the title **Untitled DAR** in the **DAR Title:** field and type a name for the DAR to be created (*Note:* It is a good idea to incorporate the current date in the name, e.g., **JDARC/O_<date>**).
 - The typed title appears in the **DAR Title:** field.
- 4 Click on the **Science Classification:** option button and click-select the classification appropriate for the DAR.
 - *Note:* The appropriate classification should be provided by the scientist for whom the DAR is being created.

- The selected option is displayed on the **Science Classification:** button.
- 5 Click in the **Science Objective:** field.
- The cursor is displayed in the **Science Objective:** field.
- 6 Type a science objective.
- *Note:* Information to be entered in this field should be obtained from the scientist for whom the DAR is being created.
 - The typed information appears in the field.
- 7 Click on the **Maximum Cloud Coverage (%):** option button and click-select the desired value.
- The selected value (*Note:* obtained from the scientist for whom the DAR is being created) is displayed on the option button.
- 8 Click on the option button for **Day/Night Settings:** and click-select the desired setting.
- The selected setting (*Note:* obtained from the scientist for whom the DAR is being created) is displayed on the option button.
- 9 Click on the **Yes** or **No** selection button to indicate the **Avoid Clouds Flag:** preference.
- The selection (*Note:* obtained from the scientist for whom the DAR is being created) is indicated by the filled appearance of the selected button.
- 10 Click on the option button for **Telescope Selection:** and click-select the desired mode.
- The selection (*Note:* obtained from the scientist for whom the DAR is being created) is displayed on the option button.
- 11 If desired (as specified by the scientist for whom the DAR is being created), click on the **Show Gain Settings** check box and use the revealed option buttons to change any specified gain settings for the **VNIR** and **SWIR** telescopes.
- Option buttons are displayed for **VNIR** and **SWIR** telescopes and any selected options are displayed on the option buttons.
- 12 Click on the **Update DAR >>>** button at the bottom of the window.
- A dialog box is displayed with a field for naming the new DAR, and showing *<Name>* as the default name, where *<Name>* is the name specified for the **DAR Title:** in Step 3.
- 13 Click on the **OK** button of the **New Name** dialog box.
- *Note* If desired, the name may be changed by editing the **New Name:** field before clicking on the **OK** button.
 - The **New Name** window is removed and the parameters are saved.

- *Note:* The new values of parameters may be observed by clicking on the **Primary Attribute** toggle icon in the **DAR Summary** window on the right side of the form.
- 14** Click on the **Spatial** nested tab.
- The **Spatial** nested tab is displayed with a map showing no designated areas of interest (AOIs).
 - The **Pan the map** button is displayed in the depressed position. *Note:* A button name is displayed when the cursor is moved over the button; the **Pan the map** button is the one with the hand icon.
- 15** If desirable or necessary to pan the map, move the cursor to a spot on the map to be designated as the center point for the map and click the left mouse button.
- The map is updated to bring the designated point to the center. During the update, the **Stop update** button indicates map rotation, and may be clicked to stop the update and leave the current center point unmoved.
 - *Note:* This step may be repeated as necessary to center the map at a desired point.
- 16** Click on the **Select Area of Interest (AOI) coordinates using the map** button.
- *Note:* A button name is displayed when the cursor is moved over the button. The **Select Area of Interest (AOI) coordinates using the map** button is the one with the irregularly-shaped polygon icon.
 - The button is displayed in the depressed position and the cursor changes to the crosshairs shape when moved into the map area.
- 17** Add points to the map by clicking sequentially on the map to form a polygon.
- The clicked points are displayed on the map, connected with red lines.
- 18** Click on the **Edit Area of Interest (AOI) coordinate table** button (just below the **Select Area of Interest (AOI) coordinates using the map** button).
- An **Area of Interest (AOI)** dialog box is displayed with lat/long coordinates entered for the points selected in Step 17.
 - *Note:* An AOI may be created with precise coordinates by entering the coordinates in the **Area of Interest (AOI)** box instead of clicking the points on the map.
- 19** Click on the **Update DAR >>>** button.
- The changed spatial parameters are updated in the DAR Summary display area under the **Spatial** heading.
- 20** Click on the **Temporal** nested tab
- The **Temporal** nested tab is displayed.

- 21** In the **DAR Lifetime:** area, highlight one of the numbers in the **Start:** field and use the arrow keys or type an entry to specify a desired number; then do the same for other numbers in the **Start:** field until the desired beginning date is identified.
- *Note:* The fields represent Month, Day, and Year.
 - The **Start:** date is displayed as entered.
- 22** In the **DAR Lifetime:** area, highlight one of the numbers in the **End:** field and use the arrow keys or type an entry to specify a desired number; then do the same for other numbers in the **End:** field until the desired ending date is identified.
- *Note:* The fields represent Month, Day, and Year.
 - The **End** date is displayed as entered.
- 23** Click on the first **Repeat Interval (Note 1)** field and use the arrow buttons or type an entry to change the number to the desired number of days for the repeat interval. If the field hours are to be changed (not normally used, as stated in Note 1 on the window), click in the second **Repeat Interval (Note 1)** field and use the arrow buttons or type an entry to change the number to the desired number of hours for the repeat interval.
- The **Repeat Interval (Note 1)** field displays the entered number(s).
- 24** Click on the first **Acquisition Window (Note 1)** field and use the arrow buttons or type an entry to indicate the desired number of days for the length of the window. If the field hours are to be changed (not normally used, as stated in Note 1 on the window), click in the second **Acquisition Window (Note 1)** field and use the arrow buttons or type an entry to indicate the desired number of hours for the length of the window.
- The **Acquisition Window (Note 1)** field displays the entered number(s).
- 25** Click on the **Update DAR >>>** button.
- The changed spatial parameters are updated in the DAR Summary display area under the **Temporal** heading.
- 26** If the scientist for whom the DAR is being created has specified coverage options, click on the **Coverage** nested tab.
- The **Coverage** nested tab is displayed.
- 27** Click on any selection button(s) necessary to indicate the scientist's preference(s) for coverage options.
- Any selection is indicated by the filled appearance of the selected button.
 - *Note:* It is necessary to specify the **Yes** selection for **Multi-Temporal Observations:** if the scientist wants complete coverage of the AOI for each acquisition window specified on the **Temporal** nested tab.

- 28** Click on the **Update DAR >>>** button.
- The changed spatial parameters are updated in the DAR Summary display area under the **Coverage** heading.
- 29** If the scientist specifies a telescope look angle or an acceptable sun elevation constraint for the DAR, click on the **Geometry** nested tab and enter the specified values.
- The **Geometry** nested tab displays the specified values.
- 30** Click on the **Update DAR >>>** button.
- The changed spatial parameters are updated in the DAR Summary display area under the **Geometry** heading.
- 31** If the scientist specifies any need and justification for special treatment for the DAR, click on the **Priority** nested tab and specify the treatment and justification.
- The **Priority** nested tab displays the specified information.
- 32** Click on the **Update DAR >>>** button.
- The changed spatial parameters are updated in the DAR Summary display area under the **Priority** heading.
- 33** On the **Create/Edit DAR** tab, click on the **Submit DAR >>>** button.
- A confirmation dialog box is displayed with the information that "The DAR is about to be submitted to GDS."
- 34** To confirm the DAR submit action, click on the **Yes** button in the warning box.
- The confirmation dialog box is removed.
 - The ASTER reply **DAR ID** dialog box is displayed.
- 35** Click on the **OK** button in the **DAR ID** dialog box.
- The **DAR ID** dialog box is removed and the **ASTER DAR Tool** window is displayed as the active window.
 - The user receives email confirming that the DAR was received and containing a subscription ID.
- 36** To exit from the **ASTER DAR Tool**, select the **Netscape** window; then follow menu path **File→Exit**.
- The **ASTER DAR Tool** windows and the browser window are removed.

Table 19.7-3. Use the ASTER DAR Tool to Prepare and Submit an ASTER Data Acquisition Request (1 of 2)

Step	What to Do	Action to Take
1	Launch the ASTER DAR Tool	use Procedure 19.7.1
2	Select Create/Edit DAR tab	single-click
3	Replace Untitled DAR with a name for the DAR	drag cursor (highlight); enter text
4	Use Science Classification : option button to select appropriate classification	click option
5	Move the cursor to the Science Objective : field	single-click
6	Type a science objective	enter text
7	Use the Maximum Cloud Coverage (%) : option button to select a value for maximum cloud coverage	click option
8	Use the Day/Night Settings : option button to select a Day/Night setting	click option
9	Select Yes or No for Avoid Clouds Flag :	single-click
10	Use the Telescope Selection : option button to select a telescope mode	click option
11	Optional: Show Gain Settings and select options	single-click; click options
12	Activate Update DAR >>> button	single-click
13	Activate OK button in New Name dialog box	single-click
14	Select Spatial nested tab	single-click
15	To pan the map, select new center point	single-click
16	Select Select Area of Interest (AOI) coordinates using the map mode	single-click
17	Add points to form a polygon on the map	sequential clicks
18	Optional: Select Edit Area of Interest (AOI) coordinate table mode	single-click
19	Activate Update DAR >>> button	single-click
20	Select Temporal nested tab	single-click
21	In the DAR Lifetime : area, replace number(s) in the Start : field with value(s) to designate the desired beginning date	drag cursor (highlight); enter text
22	In the DAR Lifetime : area, replace number(s) in the End : field with value(s) to designate the desired ending date	drag cursor (highlight); enter text
23	Type a value in the Repeat Interval (Note 1) field to designate the desired number of days for the repeat interval (or use the arrow buttons)	enter text
24	Type a value in the Acquisition Window (Note 1) field to indicate the desired number of days for the length of the window (or use the arrow buttons)	enter text
25	Activate Update DAR >>> button	single-click

Table 19.7-3. Use the ASTER DAR Tool to Prepare and Submit an ASTER Data Acquisition Request (2 of 2)

Step	What to Do	Action to Take
26	Select Coverage nested tab	single-click
27	Use selection button(s) to indicate the scientist's preference(s) for coverage options.	click(s)
28	Activate Update DAR >>> button	single-click
29	Select Geometry nested tab and enter any specified data	single-click; enter values
30	Activate Update DAR >>> button	single-click
31	Select Priority nested tab and enter any specified data to indicate treatment and justification	single-click; enter text
32	Activate Update DAR >>> button	single-click
33	On the Create/Edit DAR tab, activate the Submit DAR>>> button	single click
34	Activate the Yes button in the confirmation warning	single-click
35	Activate the OK button in the DAR ID dialog box	single-click
36	In the Netscape window, follow menu path File→Exit	clicks

19.8 On-Demand Product Requests

Users can use an HTML interface to submit requests for the creation of ASTER high-level products, including, if the user is authorized, Digital Elevation Models (DEMs), and non-standard Level 1B products. For those users who need the authorization, it is granted using the User Registration GUI as part of the user registration process. To provide these on-demand products, the EOS Data Gateway and the Planning, Data Processing, and System Management Subsystems of ECS at the EROS Data Center (EDC) include specific support capabilities.

- EOS Data Gateway (EDG), which is the data search and order tool, is configured to collect the user-specified parameters for the ASTER on-demand request.
- Planning (PLS) provides a server, the On-Demand Product Request Manager (ODPRM), for creating and queuing on-demand production requests.
- Data Processing (DPS) updates the status for high-level processing of on-demand requests.
- System Management Subsystem (MSS) includes on-demand requests in its Order Tracking Database and Data Order Tracking Tool.

User Services at EDC may be called upon to assist users in use of the EDG for submitting on-demand processing requests, and to use the Data Order Tracking Tool to provide the status of on-demand product requests or cancel them. Section 19.3.1 of the 611 Document addressed the use of the EDG tool in searching and ordering data. To create an on-demand processing request, a user uses the EDG to conduct a search for appropriate input data (e.g., AST_L1B granules); any

appropriate granules for which on-demand processing is available will show the higher-level data products among the ordering options. On the results listing, the user selects one or more granules for which on-demand processing is desired to obtain a higher-level data product and adds the granule(s) to the “shopping cart.” When the user accesses ordering options, the listed options include higher-level products that may be produced from the initially located granule. Table 19.8-1 provides an activity checklist for the task of creating an on-demand product request.

Table 19.8-1. Creating On-Demand Product Requests - Activity Checklist

Order	Role	Task	Section	Complete?
1	User Services/ Science Data Specialist	Use the EDG for Submitting an ASTER On-Demand Request	(P) 19.8.1	

19.8.1 Use the EDG for Submitting an ASTER On-Demand Request

Table 19.8-2 presents the steps required to use the EDG for Submitting an ASTER On-Demand Request. If you are already familiar with the procedure, you may prefer to use this quick-step table. If you are new to the system, or have not performed this task recently, you should use the following detailed procedure:

- 1 Launch Netscape, access the EDG tool, and conduct a search for the desired input data to be processed to generate a higher-level data product (see procedure **Search and Order Data Using the EDG Search and Order Tool**, section 19.3.1, Steps 1 – 21).
- 2 When the results of the search provide one or more appropriate granules, click in the selection checkbox to the left of any desired granule.
 - The checkbox is filled to indicate its selection.
- 3 Click on the **Add selections to cart** button.
