

Appendix B. L3 RbR to Level 4 Requirements Traceability Matrix

This appendix traces the Level 4 requirements that appear in this to their parent L3 Requirements By Release for Releases Ir1, A and B.

This appendix was created by listing the links that exist within the 010396 RTM baseline database. The tables are organized in an identical manner with the Level 4 requirements in the left-hand columns and its parent RBRs in the right-hand columns starting with the RbR ID. The “#<release>” following the parent requirements indicates which release the RbR is applicable to. Note that no Release C RbRs are listed in this appendix.

All level 4 requirements irrespective of release and segment appear in this table. However, Release C RbRs do not appear in this table.

The reverse direction of traceability is provided in the main body of the document in Section 4.

Please note that references to appendices within the RbR text are referring to the F&PRS document and NOT this document.
