Actionee HAIS

Sub Category

Subject Availability of commands on telemetry analysis graphs.

Description of Problem or Suggestion:

Is it possible to overlay commands on a telemetry analysis graph in order to correlate between executed commands and telemetry changes? One use is to overlay unit on/off commands over a plot of load current to see the effects on 1 graph rather than using separate command logs and graphs. This would be useful especially during anomalies.

Attach diagram.

Originator's Recommendation

Provide the capability for the user to request command log data to overlay over telemetry plots.

HAIS Schedule 1/13/95

HAIS R. E. J Creegan

HAIS Response Date 1/20/95

The capability to overlay commands on a telemetry graph will not be provided.

The same data can be accessed by requesting history events for the same time period as the telemetry plot, then filtering out all but the pertinent command events.
