Category Name Design

Actionee HAIS

Sub Category

Subject Saving temporary configurations

Description of Problem or Suggestion:

An operator may be interrupted while using temporarily defined items like limits and displays. Recreating configurations can be time consuming after an interruption.

Originator's Recommendation

Make sure your design will allow an IST operator or an EOC workstation operator to save temporarily defined items for later use.

HAIS Response Date 1/20/95

The design allows an IST operator or EOC workstation operator the ability to recreate temporary configurations. This is accomplished through execution of local procedures. The operator can define a procedure to configure his/her environment. This procedure could be run at any time, including immediately following an interruption.
