Actionee HAIS

Sub Category

Subject Consider Internationalization requirements in Virtual Terminal service

Description of Problem or Suggestion:

Requirement C-CSS-63030 demands support for octet data, this should probably be expanded to allow for the support of wide character sets such as those used for non-Latin based languages.

Originator's Recommendation

Here and elsewhere the EOSDIS project should consider its internationalization requirements. This will become an increasingly important issue over the next few years and proper consideration at this time could result in major future savings.

HAIS Response Date 3/6/95

CSMS Requirement Specification has been amended to provide reference to the applicable internet RFC for virtual terminal.

Internationalization is not a standalone issue and needs to be considered globally. It is considered within our overall evolutionary analysis and tests.
