Actionee HAIS

Sub Category

Subject Capturing DAAC Experience in ECS development

Description of Problem or Suggestion:

HAIS expends considerable resources on interacting with the DAACs (e.g., V0 analysis, telecons, liaisons, URDB, etc.) In general, HAIS seems to be capturing M&O, V0 interoperability, and data migration issues. They do not, however, seem to be capturing DAAC experience and concerns related to development (e.g., user statistics, data ingest experience, release transitions). This cross-communication needs to be facilitated.

Originator's Recommendation

Improve communications between HAIS development staff, DAAC ECS staff and DAACs to "share" experience and concerns. Identification of "real world" issues need to occur early in design.

HAIS Schedule 5/22/95

HAIS R. E. T. Hickey

HAIS Response Date 5/8/95

The ECS Team concurs with the recommendation of this RID and, as was briefed at the wrap-up PDR, has held multiple Telecons to solicit the experience and concerns of the DAACs. Both M&O and Developer personnel from the ECS side have participated in these telecons to ensure that real world issues are factored into the design at an early stage. These telecons will continue into Jun-95 culminating in an Operations Concept/Scenario Workshop 14-16 June. See the PDR Wrap-up presentation on ECS Maintenance and Operations, charts 5-8, for additional material. (T. Hickey)
