Category Name Status-Client

Actionee HAIS

Sub Category

Subject What is a movie loop?

## Description of Problem or Suggestion:

In #S-CLS-10380, does it say that the users should be able to run a movie loop produced (automatically) elsewhere, -- or -- that they should be able to place frames into an ordered sequence to build a movie loop? In other words, will the users be able to only play a movie loop or will they be able to build one? Is this the same capability that the TV weatherman has?

## Originator's Recommendation

Rewrite the text of the requirement so that the reader knows what functionality is being required.

The requirement states that the user produces; meaning that the user can build a 'movie loop' as well as play one.

The ECS data visualization tool, EOSView, can animate, and can be used to view graphics in sequence, provided the graphics are in HDF format. The user will be able to specify the sequence through which EOSView will then loop.
