Abstract

This is Volume 2A of a series of lessons containing training material for the Earth Observing System Data and Information System (EOSDIS) Core System (ECS). This lesson provides an introduction and detailed system overview of ECS design and internal interfaces.

Keywords: training, course objective, Earth Science Enterprise, Science Data Processing, Internal Training

Introduction

Identification
Training Material Volume 2A is part of Contract Data Requirements List (CDRL) Item 129, whose requirements are specified in Data Item Description (DID) 625/OP3 and is a required deliverable under the Earth Observing System Data and Information System (EOSDIS) Core System (ECS), Contract (NAS5-60000).

Scope
Training Material Volume 2A provides an introduction and detailed system overview of ECS design and internal interfaces. It summarizes materials presented in a dynamic, animated visual presentation, and includes a copy of the visuals. The instruction briefly addresses the program context of ECS within NASA's Earth Science Enterprise, introduces the systems that make up ECS at a site, describes each subsystem and its Computer Software Configuration Items (CSCIs), including system elements and interfaces, and then describes system functioning in the context of operational scenarios. This lesson is designed to provide the operations staff with sufficient knowledge and information to satisfy all lesson objectives.

Purpose
The purpose of this Student Guide is to provide a summary and copy of the visuals for a detailed course of instruction that forms the basis for understanding ECS overall structure and function. Lesson objectives are developed and will be used to guide the flow of instruction for this lesson. The lesson objectives will serve as the basis for verifying that all lesson topics are contained within this Student Guide and slide presentation material.

Status and Schedule
This lesson module provides detailed information about training for the current baseline of the system. Revisions are submitted as needed.

Organization
This document is organized as follows:

Introduction: The Introduction presents the document identification, scope, purpose, and organization.

Related Documentation: Related Documentation identifies parent, applicable and information documents associated with this document.
Student Guide: The Student Guide summarizes the core elements of this lesson. All Lesson Objectives and associated topics are included.

Slide Presentation: Slide Presentation is reserved for slides used by the instructor during the presentation of this lesson.
Related Documentation

Parent Document
The parent document is the document from which this ECS Training Material’s scope and content are derived.

423-41-01 Goddard Space Flight Center, EOSDIS Core System (ECS) Statement of Work

Applicable Documents
The following documents are referenced within this ECS Training Material, or are directly applicable, or contain policies or other directive matters that are binding upon the content of this document:

420-05-03 Goddard Space Flight Center, Earth Observing System (EOS) Performance Assurance Requirements for the EOSDIS Core System (ECS)

423-41-02 Goddard Space Flight Center, Functional and Performance Requirements Specification for the Earth Observing System Data and Information System (EOSDIS) Core System (ECS)

Information Documents

Information Documents Referenced
The following documents are referenced herein and amplify or clarify the information presented in this document. These documents are not binding on the content of the ECS Training Material.

609-CD-610 Release 6B Operations Tools Manual for the ECS Project
611-CD-610 Mission Operation Procedures for the ECS Project

Lesson Overview

This lesson provides a brief illustration of the place of the Earth Observing System Data and Information System (EOSDIS) Core System (ECS) within NASA's Earth Science Enterprise, introduces the subsystems that make up ECS at a site, examines each subsystem and its computer software configuration items, including system elements and interfaces, and describes system function in the context of operational scenarios.

Lesson Objectives

Overall Objective - The overall objective of this lesson is to become able to describe ECS structure and function for Science Data Processing (SDP). The lesson is a dynamic, animated visual presentation illustrating subsystems, their components and interfaces, and their functions and interrelationships in the context of operations. It is not a complete description of all ECS structure and functioning, and it does not include full descriptions of specific entities in the ECS overall program (e.g., System Monitoring and Coordination Center). It is not a software development lesson and does not include an exhaustive description of ECS interfaces and event sequences. It includes no hands-on exercises, and is not intended as operator training.

Specific Objective 1 - The student will identify ECS subsystems and their computer software configuration items (CSCIs).

Condition - The student will be given a copy of document 305-CD-610 Release 6B Segment/Design Specification for the ECS Project.

Standard - The student will list 10 subsystems and specify the CSCIs that make up nine of the 10 subsystems.

Specific Objective 2 - The student will specify for each CSCI the major components and the major functions or processes for which each component is responsible.

Condition - The student will be given a copy of document 305-CD-610 Release 6B Segment/Design Specification for the ECS Project.

Standard - The student will correctly identify the major components and their functions for the CSCIs, as listed in document 305-CD-610 Release 6B Segment/Design Specification for the ECS Project.

Specific Objective 3 - The student will describe the role of ECS CSCIs and their functions or processes in the context of ECS operational scenarios.
**Condition** - The student will be given a copy of document 313-CD-610-003 *Release 6B ECS Internal Interface Control Document for the ECS Project*.

**Standard** - The student will summarize the role of the relevant ECS CSCIs and their components in selected ECS operations, including ASTER Data Acquisition Requests and expedited data support, production and distribution of data products, update of quality assurance metadata, on-demand processing, user registration, and Landsat data insertion and access.

**Importance**

Knowledge of overall ECS structure and function, and ability to locate and use relevant information in documents 305-CD-610 and 313-CD-610, can provide helpful context for conducting ECS operations and maintenance. This lesson provides the necessary overview, and an efficient summary and guide for reviewing and using the information in the documents.
Summary of the Lesson Presentation

This lesson is composed of a dynamic, animated visual presentation. It is divided into several segments.

Program Overview
The main content of the lesson begins with an overview of the place of ECS in NASA's Earth Science Enterprise, part of the U.S. Global Change Research Program. Slides 4 - 7 address this overview.

Subsystems and Functions
The lesson provides a context diagram illustrating interrelationships among ECS subsystems, and then introduces and examines each subsystem (slides 8 - 12). For each subsystem, the lesson presents major functions, CSCIs and components, and major interfaces among components, CSCIs, and other subsystems. Subsystems addressed include:

- Ingest (INS): Slides 34 - 38.
- Spatial Subscription Server (SSS): Slides 39 – 42.
- Client (CLS): Slides 49 - 56.
- Data Management (DMS): Slides 57 - 62.
- Data Processing (DPS): Slides 72 - 82.
- Internetworking (ISS): Not addressed in detail in this lesson.

ECS Operational Functioning
ECS operational functioning, introduced in slides 100 and 101, is addressed using selected scenarios. The source material in Release 6B ECS Internal Interface Control Document for the
ECS Project, document 313-CD-610, contains additional scenarios, but the ones selected for this lesson illustrate system functioning and the major roles of the subsystems, CSCIs, and components. The animated presentation for this part of the lesson consists of several series of clusters of three visual displays. In each cluster, the first display introduces a step or function at a conceptual level. The second display shows interactions at the subsystem level. The third display shows interactions at the CSCI and component level.

**ASTER Data Acquisition Request (DAR) Support**

The ASTER DAR support scenario, introduced in slide 102, illustrates ECS functioning for DAR submission, Data Subscription, and attached On-Demand Processing Request. Slides 103 - 115 present this scenario.

**ASTER Chaining and On-Demand Production**

The chaining and on-demand production scenario illustrates Data Insertion, Data Notification, On-demand Production, Standing Order Delivery, and Quality Assurance Update. Slides 116 - 168 present this scenario.

**ASTER Expedited Data**

The ASTER expedited data scenario illustrates Data Subscription, Data Insertion, and Data Notification. Slides 169 - 181 present this scenario.

**User Registration**

The user registration scenario is taken from illustrations of Landsat operations, introduced in Slide 182. Although it is not tied to Landsat, it was presented in that context in document 313-CD-610. Slides 183 - 191 present this scenario.

**Landsat Processing System (LPS) Data Insertion**

The LPS data insertion scenario illustrates Level 0 (L0R) data insertion, including Polling Ingest of data from the Landsat-7 Archive Management System (LAMS) and archiving of subinterval, scene, and browse data. Slides 192 - 213 present this scenario.

**Landsat Data Access**

The Landsat data access scenario illustrates search and order of browse data and scene data. It also illustrates data distribution by ftp pull and 8-mm tape, including the role of the PDS. Slides 214 - 247 present this scenario.

**Summary and References**

The lesson concludes with a brief summary (slide 248) and identification of references (slide 249). As noted previously, the references are documents 305-CD-610 and 313-CD-610.
Slide Presentation

Slide Presentation Description

The following slide presentation represents the slides used by the instructor during the conduct of this lesson.
